Genres: Caribbean and Latin America

Note regarding treatment of headings for genres found in more than one country:

- *Individual genre or form with regional variants: Genre (in Country), e.g., Son (in Mexico)*
- *Different genres with the same name in different countries or regions: Genre (Country), e.g., Bomba (Ecuador) and Bomba (Puerto Rico)*
- *International genres: Genre in Country, e.g., Hip-Hop in Mexico*

Introduction

The *Bloomsbury Encyclopedia of Popular Music of the World* had its genesis in the International Association for the Study of Popular Music (IASPM) in the mid-1980s.

IASPM was established in the early 1980s as a response to the increasing number of scholars publishing in the field of popular music. These scholars needed an organization through which to share and comment on their work, advocate the legitimacy and desirability of work on popular music, and argue for the inclusion of popular music studies in the academy.

Early in the life of IASPM there was recognition of the need for a comprehensive and reliable reference work on popular music that would serve the needs of scholars, researchers, students, and information and media professionals, as well as the general public. The *Bloomsbury Encyclopedia of Popular Music of the World* (the first eight volumes of which were published as the *Continuum Encyclopedia of Popular Music of the World*) was planned as a response to that need. The first evidence of the progress of the project was *Popular Music Studies: A Select Preliminary Bibliography*, published in 1997.

Part 1 of the *Encyclopedia* was published in 2003 and comprises two volumes: Volume I, *Media, Industry and Society*; and Volume II, *Performance and Production*. Part 2 of the *Encyclopedia*, devoted to *Locations,* was published in 2005. It comprises five volumes: Volume III, *Caribbean and Latin America*; Volume IV, *North America*; Volume V, *Asia and Oceania*; Volume VI, *Africa and the Middle East*; and Volume VII, *Europe*.

The present volume is the second in Part 3: *Genres*. Volume VIII, *Genres: North America* was published in 2012, and is now followed by Volume IX, *Genres: Caribbean and Latin America*. The remainder of Part 3 will consist of Volume X, *Genres: Africa and the Middle East*; Volume XI, *Genres: Europe*; Volume XII, *Genres: International*; and Volume XIII, *Genres: Asia and Oceania.* (Please note that some regional combinations have been changed and some volumes have been renumbered since the publication of Volume VIII.)

When work on the *Encyclopedia* began, no model existed for this kind of comprehensive, scholarly reference work on popular music, and extensive research was undertaken to develop a systematic, subject-based taxonomy for such a new field of study. Throughout the *Encyclopedia*, subjects that would have been scattered arbitrarily by employing one single alphabetical sequence across a set of volumes are brought together and organized coherently to constitute an unprecedented body of knowledge. Because the volumes are arranged in this way it is important for the reader to be aware of the overall organization of the volumes, as outlined above, and to consult the Table of Contents at the beginning of each volume. Each volume also has its own index, making it easy to locate discussions of specific subjects across a range of entries. Volume XIII, *Genres: Asia and Oceania* will contain a combined index to all six volumes in Part 3: *Genres*.

The subject-based approach makes the *Encyclopedia*'s volumes distinctive among popular music reference works. They are also distinctive in covering the whole world rather than only specific regions, a motivation responsible for the genesis and character of the volumes in both Part 2 and Part 3. The volumes manifest their scholarly nature by drawing on the expertise of a great many of the world's leading popular music scholars. It is also evident in the detailed end matter that is provided for the great majority of entries: bibliographies, discographies, sheet music listings, filmographies and listings of important Internet sites and of other visual media.

The present volume has called on the services of over 130 contributors. While the majority are based in the Caribbean and Latin America, numerous contributions have also been made by scholars in North America, Europe and New Zealand. With scholars coming from a wide range of regions and traditions, it is perhaps inevitable that alert readers may note some disparate accounts or interpretations. The editors have not attempted to reconcile these, or indeed smooth them over, believing that, with the study of such a huge subject still in its relative infancy, such variations of approaches may be used in a constructive way.

Genres

In forming part of the overall taxonomy for the *Encyclopedia,* the volumes in Part 3, like those in Part 2, are organized geographically by volume, rather than being presented in a single alphabetical sequence. Popular music genres have, however, presented a number of additional challenges to the editors, taxonomical and otherwise. Several principles of arrangement were discussed, such as organization by function or character, but were deemed unworkable. It was decided that the only workable principle of arrangement was one in broad geographical divisions – and even that raised a number of issues. In the case of a majority of genres it is possible to determine a country or region where a given genre not only originated, but also where much of its 'life' was spent. We have judged it to be inadvisable, however, to attempt to make more narrowly focused geopolitical or geo-cultural sub-arrangements within broad areas, not only because identifiable points of origin are frequently region-wide rather than confined to one country, but also because the meaningful life of a given genre often takes place on a region-wide basis, leaving point of origin with limited significance.

At the same time, it is apparent that many genres have proved to have little respect for even broad geographical or geopolitical boundaries. The importance of international and transnational dimensions in the history of many genres is reflected both in the overall taxonomy for genres across the *Encyclopedia* and in the entries themselves. In addition to the five regional volumes there is a sixth volume for 'international' entries. The majority of entries in that volume will be for genres and forms which have demonstrated an international character from their inception. Two outstanding examples are film music and pop, which therefore have no entry in the present volume, but will be extensively covered in the *International* volume. In the case of genres that have clear regional origins and history and have developed significant international and transnational dimensions in the course of that history, these dimensions are covered either in the original entry for the genre, or, where this approach would allow insufficient scope, in additional entries for that genre in other volumes. So, for example, in this volume the international history of reggaeton is included within the single entry provided, while in the case of salsa additional entries will be found in both the *North America* and *International* volumes, and in that of *tango* in both the *International* and *Europe* volumes. In the instance of one or two genres whose progress from regional and national to international and transnational history is widely understood not only to be both complex and of major global significance, but to have had profound local impact, additional entries are also found both in the *International* and in the regional volumes. A particular example of this approach in the present volume is hip-hop, which is represented by entries in the *North America* and *International* volumes, and also in the present volume by a representative set of six regional entries. Rock is unique within the encyclopedia in being a genre that is regarded as originating and occurring simultaneously in more than one country – hence its designation as international – but which has also been given several additional regional entries to reflect its subsequent impact in other areas. In the present volume, for example, the reader will find a general entry on Rock in Latin America, as well entries on several national styles of rock, such as *BRock. rock nacional* and *punta rock*. Cross-references have been inserted to guide the reader.

The case of jazz has been treated slightly differently. While it would be perfectly possible to argue that jazz should be treated in much the same way as hip-hop – as having identifiable points of origin, a complex global history and local impact – the editors have adopted an alternative approach, seeing a difference in the way in which jazz, as a substantially instrumental music, does not become regionally and locally owned in quite the same way as does hip-hop, but retains more obvious links with – and often allegiance to – its points of origin and development. As a result of this conclusion, with which some readers may disagree in all places where it applies, the majority of jazz entries will be found in the *North America* and *International* volumes.

The concept of 'genre' itself also poses editorial challenges and the decision to use it as the defining term for the volumes in Part 3 was not taken without due consideration of the debates that have taken place on the use of the term in music and of the limitations that are characteristic of labelling systems. For the most part, the term is used in these volumes in a way that complies with the description given by Franco Fabbri and John Shepherd in the 'Genre' entry in Volume 1 of the *Encyclopedia*: 'In music, genres emerge as labels for defining similarities and recurrences that members of a community understand as pertinent to identifying and classifying musical events.' We have preferred to use 'genre' rather than 'style,' as despite the common use of the latter in English to invoke a wide range of meaning, it tends to prioritize attention to recurring musical features, while 'genre' invokes, as Fabbri and Shepherd say, 'the many activities above and beyond the purely musical that are involved in a musical event.' The use of 'genre' in these volumes also allows authors of entries to reflect where appropriate on issues of power and agency that are often fundamental to the ways in which popular music is categorized.

When identifying genres for inclusion – and in recognition of the importance of naming conventions – the editors have generally abided by the useful principle of 'no name, no genre.' In some instances, however, when a tight adherence to that principle would have meant overlooking a body of music with strong evidence of shared characteristics, we have bent our rule and supplied a generic term to enable the genre-type features of that body of music to be discussed. Examples in the present volume include 'Banda de Bronce' and 'Vodou Music.'

In addition to these two types of label – genres with specific individual names and supplied generic names – one further type has been used in the *Genres* volumes. These are the collective terms that are commonly used to refer to music with an identifiable function. Examples of this type are occupational song and protest song. Sometimes, as for example in the case of marches, pieces of music that share a function also have musical features in common, but this is by no means always the case. Comic songs, for example, do not necessarily share musical features with each other. Because this type of labelling is a transnational phenomenon with no identifiable starting point or dominant region, the majority of entries of this type are treated as transnational forms and will be found in the *International* volume. There are some exceptions. Because of the vast Caribbean and Latin American region's rich tradition of songs of protest and social commitment, which is expressed in a variety of terms, some of those terms that describe a body of music in straightforward terms as 'songs of protest' have been included (see, for example, *canção de protesto* and *canción de protesta venezelano*).

One further observation on genre applies to this volume perhaps more so than to others in the set. A single term can refer in practice to various things – a genre, an event, an instrumental ensemble, a dance and differing musical conceptions – depending on the region. We have done our best to make such overlaps, and the distinctions between them, clear.

A word is also necessary on dance music. A great deal of the music referred to by genre names is in part at least music for dancing, and whenever dancing is an important element in the makeup and use of a particular genre the entry has endeavored to cover that aspect. There are also many names that refer first and foremost to a specific form of dance. Names such as waltz and polka are among the best-known examples. The sheer numbers of these names around the world have made it impossible to attempt comprehensive coverage – that is indeed a project in its own right – but the various *Genres* volumes do include entries for major international dance forms that have distinctive musical characteristics and have been defining ingredients in other genres.

A further word of explanation is in order concerning the spelling of genre names. In many parts of the world, genre names were originally an aural-oral phenomenon. The manner in which such names were then rendered in written form frequently varied both within and between locations. Variation can also be found when names are transliterated into English. The editors have not seen it as their task to impose standardization and their policy therefore has been not to strive unduly for consistency, which could be misleading, but in most cases to accept the spelling supplied by the contributor.

Popular music genres are by their nature connected in their character and histories to a wide range of performative, sociocultural, technological, economic and other activities. Previous volumes of the *Encyclopedia* contain their own entries for such activities (Volume I, contains entries, for example, on sound recording, publishing, marketing and copyright, while Volume II contains entries, for example, on instruments and aspects of musical performance, and Volumes III–VII contain entries on popular musical activity in specific places). Readers are strongly advised to consult these to complement the information given in the volumes in Part 3. *Genres* entries often provide basic contextual information, for example, in terms of location, but do not duplicate information that has already been presented in a previous volume.

Translation

A considerable number of entries in the present volume were originally written in Spanish or Portuguese, and have been translated by a team of translators (to whom the editors are deeply grateful). It has also been an editorial policy to provide English translations of all song and record titles that appear in the texts of the entries, and of all non-English items in the Bibliographies.

End Matter

The *Bibliography* for any one entry contains information on virtually all publications referred to in the body of the entry. The Bibliographies are not only lists of references, but also contain wherever possible other published items of relevance to the subject of the entry, which, in the author's judgment, readers may wish to consult. Some listings of *Sheet Music* are also provided. These are normally limited to items referred to in the text, where it is clear that the reference is to a piece of printed music. Because the availability of reference sources for sheet music and their presence in library catalogues vary considerably around the world it has not always been possible to give all the necessary information, especially when the author of an entry does not have personal access to an item in question.

A similar situation pertains with regard to *discographical* information, which has in any case never been given the kind of attention commonly given to information for printed sources.

Because the role of sound recording in the history of popular music has been so considerable, it has been the editors' policy to include discographical details that are only partially complete rather than to leave items out.

Discographical information is provided in two ways. If a particular recording is referred to in the body of the entry, details of this recording are provided in a section for *Discographical References.* A lot of effort has been made to provide information about the original recording, in the form of record label and release number, date of issue and country of issue. It has become apparent, however, as work on the present volume has progressed, that the situation regarding the existence of historical discographical information varies hugely from country to country. Most entries also have a *Discography*, which offers a list of representative recordings of relevance to the subject of the entry. In this section the details given may be those of the original recording, but the majority are reissues that were available at the point at which the entry was signed off. The transient nature of the record market makes the release details more likely than the remainder of the information to become out of date in terms of commercial availability, but while acknowledging this the editors believe the policy of listing recommended titles remains a useful one, as there is often a likelihood that a recording will be issued again or will be available as a download.

Details of all films and visual recordings referred to in an entry are also given in the *Filmography* and/or *Audio-visual Media* section. Listings in the filmographies contain information on the director and the length of the film, plus notes on the type of film and the music.

The present volume also reflects a growing use by scholars of the visual resources provided by YouTube, and despite the sometimes transitory nature of these sites it was decided to include some listings that offer both visual and audio recordings of performances that are otherwise very elusive.

Popular Music

Editing a comprehensive reference work of the world's popular music inevitably involves a consideration of what counts as popular music: in other words, of the criteria according to which topics should be included in the *Encyclopedia*. The definition of popular music is an issue which continues to be debated. As with previous volumes, the editors have resisted the temptation to attempt a precise definition, both when identifying terms for inclusion on entry lists and when offering guidance to contributors, recognizing that as terms that are discursive in character, 'popular,' 'classical' and 'folk' are used to refer to changing products of historical, social, political and cultural forces, rather than as designations of easily distinguishable musics. The question of where 'the popular' ends and 'the folk' begins has proved particularly difficult. The advice given to contributors has been that music created and disseminated in rural situations in an exclusively oral-aural fashion with little or no currency outside its location of origin does not constitute a prime focus for these volumes. It does not follow from this, however, that such music should not be discussed if it is commonly accepted as 'popular,' or if it forms a significant source for later styles or genres commonly accepted as 'popular.' While the principal emphasis of the *Encyclopedia* is on the urban, the commodified and the mass-disseminated rather than on the rural, the oral-aural and the restrictedly local, therefore, this emphasis is far from exclusive. The principal test for including music as 'popular' has been whether it has been so regarded by communities of practitioners or users. The tendency has therefore been to be inclusive rather than exclusive.

The Editors
May 2013

Acknowledgements

The Editors' first debt of gratitude is to Philip Tagg, professor emeritus of Music at Université de Montréal, who, over a two-year period at the Institute of Popular Music at the University of Liverpool in the early 1990s, developed a detailed taxonomy of popular music, its practice and its study. This taxonomy served as a basic model for developing the structure of the *Encyclopedia*, as well as its major sections and headword lists.

A special word of thanks is due to a number of individuals whose vital role in the development of the *Encyclopedia* over the years has been crucial to the Editors' ability to develop and continue the project:

- Alyn Shipton, whose vision and dedication in the formative period of the *Encyclopedia* were vital to the development and long-term viability of an ambitious publishing project;
- Janet Joyce and Veronica Higgs, both formally of the Continuum International Publishing Group, whose unwavering support and guidance were crucial to the realization of Parts 1 and 2 of the *Encyclopedia*;
- Jo Allcock, also formally of the Continuum International Publishing Group, who took over as the Encyclopedia's Managing Editor in September 2002, and who played a major and critical role in bringing Part 2 of the *Encyclopedia* to publication;
- Jennifer Wilson, who was the *Encyclopedia*'s chief editor at Carleton University from 1996 until 2005;
- Jennie Strickland, who at Carleton University was central to the commissioning of the entries for Part 2 of the *Encyclopedia;*
- David Barker, formerly at the New York office of Continuum and now at Bloomsbury's London office, to whom a huge debt of gratitude is owed for his patient and understanding support as work on Part 3 progressed.

Thanks are also due to the University of Liverpool, the University of Exeter, the University of Göteborg (Sweden) and especially Carleton University (Ottawa), all of which have made significant financial contributions, as well as contributions in kind, in support of this project.

In the context of Part 3, special thanks go to:

- Professor John Osborne, Dean of the Faculty of Arts and Social Sciences at Carleton University, who provided financial assistance in support of the guest editors and editorial assistants working on the volumes of Part 3;
- Merilyn Holme, who has acted as commissioning editor and style editor for the entries in Part 3, and in doing so has provided the Editors with an invaluable level of support and assistance;
- Ally Jane Grossan, David Barker's successor in Bloomsbury's New York office, and Kaitlin Fontana, who together saw us safely home;
- Mandi Crespo, Jessica DeVries, Crystal French and Allison Whalen, who have rendered important service in various capacities.

The Editors of Volume 9 would like to extend their thanks to all those who have contributed entries, and in doing so have often been called on to complement their scholarship by showing great patience with the editorial process. Special words of thanks are due to Maiza de Lavenère Bastos, Cristina Fuertes Goth, Dara Murphy and Zuzana Pick, who undertook a number of translations from Portuguese and Spanish, to Daniel Stanicki and Xkylyr Rauh for the notation for additional music

examples, and to several individual scholars for their help with numerous specific questions that arose over the time during which this volume was being prepared, in particular Gage Averill, Halbert Barton, Kenneth Bilby, Julian Gerstin, Juan-Pablo Gonzáles, Liliana González Moreno, Rafael José de Menezes Bastos, Robin Moore, Allan de Paula Oliveira, Jonathan Ritter, Raquel Z. Rivera, Cheryl Ryman, Nancy M. Sánchez, Carlos Sandroni and Peter Wade. It is with sadness that we also wish to mark the death of three contributors while the book was in process: Jan Fairley (to whom this volume is dedicated), Adam Krims and Michael Marcuzzi.

List of Contributors

Coriún Aharonián is the Director of the Centro Nacional de Documentación Musical Lauro Ayestarán. He is a composer and a musicologist and has been a professor at the Universidad de la República, Uruguay.

Samuel Araújo is Professor of Ethnomusicology at the Universidade Federal de Rio de Janeiro (UFRJ), Brazil.

Silvina G. Argüello is Professor of Argentinian Musical Folklore and an adjunct professor of Music History in the School of Art at the Universidad Nacional de Córdoba, Argentina.

Matthias Röhrig Assunção is a Reader in Latin American History at the University of Essex, UK, and the author of *Capoeira* (2005).

Paul Austerlitz is Associate Professor of Ethnomusicology and Africana Studies at Gettysburg College and the author of *Merengue: Dominican Music and Dominican Identity and Jazz Consciousness: Music, Race, and Humanity* (1997).

Brenda F. Berrian is Professor of Africana Studies at the University of Pittsburgh (USA) and the author of *Awakening Spaces: French Caribbean Popular Songs, Music and Culture* (2000).

Curwen Best is Professor of Popular Culture, Literary and Cultural Studies at the University of the West Indies, Cave Hill Campus, Barbados.

Nelson Blanco Manzo is a psychologist and a musicologist specializing in Latin American music. He works as a popular music performer, a composer, an arranger, a teacher and a music therapist. He is the current president of the IASPM/LA Venezuelan chapter.

Rebecca Bodenheimer is an ethnomusicologist specializing in Afro-Cuban folkloric and popular music. She has conducted research in Cuba since 2004, examining the relationship between race, place and music-making in the cities of Havana, Matanzas and Santiago.

Sathya Burchman is a PhD candidate in the Department of Ethnomusicology at the University of California, Los Angeles, USA.

Jerome Camal is Assistant Professor in the Department of Anthropology at the University of Wisconsin-Madison.

Vincenzo Cambria is researcher at the Ethnomusicology Laboratory of the Universidade Federal de Rio de Janeiro (UFRJ), Brazil.

Vibert C. Cambridge is Professor Emeritus, School of Media Arts and Studies, Scripps College of Communication, Ohio University, Athens, Ohio, USA.

Corinna Campbell received her PhD in Ethnomusicology from Harvard University in 2012. She teaches regularly at several colleges and universities in the Boston area.

Guillermo Carbó, contemporary music composer from Berklee in Boston and PhD musicologist from La Sorbonne in Paris, is Associate Professor in the Music Program at the Universidad del Atlántico in Barranquilla, Colombia.

Amaya Carricaburu Collantes is a musicologist, researcher and the managing editor for the Centro de Investigación y Desarrollo de la Música Cubana in Havana, Cuba. She is also a music producer.

Robert T. Carroll teaches guitar in Seattle, USA, where he is a doctoral candidate in ethnomusicology at the University of Washington.

Liliana Casanella Cué is a philologist and an assistant researcher at the Centro de Investigación y Desarrollo de la Música Cubana in Havana, Cuba.

Luís Fernando Hering Coelho has a PhD in Social Anthropology from the Universidade Federal de Santa Catarina, Brazil, and currently teaches in the music programs at the Universidade do Vale do Itajai and Universidade do Estado de Santa Catarina.

Alfredo Colman is an ethnomusicologist and cultural analyst of the academic and traditional musical repertoires of Paraguay and other Latin American countries. He teaches at Baylor University in Waco, Texas.

César Colón-Montijo is a PhD student of ethnomusicology at Columbia University, New York.

Mona-Lynn Courteau is a freelance editor specializing in academic works in ethnomusicology, music and social anthropology. She holds an M.A. in ethnomusicology and is based in Auckland, New Zealand.

Dominique O. Cyrille is the Head of Mission Patrimoine at the Center For Traditional Music and Dance of Guadeloupe (French Caribbean).

Carlos Dávalos is a music journalist based in Mexico City. He is also a professor in the Department of Communication at Universidad Iberoamericana, Mexico City, Mexico.

Nanette de Jong is a Senior Lecturer at the International Centre for Music Studies at Newcastle University in Newcastle, UK.

Christopher Dennis is Associate Professor of Spanish, Latin American Literatures and Cultures at the University of North Carolina Wilmington, Wilmington, USA.

Edgardo Díaz Díaz is an ethnomusicologist, journalist and musician. He is a professor in the Humanities Department of the Universidad de Puerto Rico in Cayey.

Patricia Díaz Inostroza is a journalist and a musicologist. She holds a PhD in American Studies with emphasis in Thought and Culture and an M.A. in Cultural Management from the Universidad de Santiago de Chile (USACH).

Laura Donnelly is a PhD student in Ethnomusicology at the University of Pennsylvania, USA.

Kaio Domingues Hoffmann is a PhD student in Social Anthropology in the Universidade Federal de Santa Catarina, Florianópolis, Brazil. He is a member of the study group Art, Culture and Society in Latin America and Caribbean (MUSA).

Gerardo Duarte is Assistant Professor at the Universidad de Costa Rica where he teaches piano and chamber music.

Shannon Dudley is Associate Professor of Ethnomusicology at the University of Washington, Seattle, USA.

Christopher Dunn is Associate Professor and Chair of the Department of Spanish and Portuguese at Tulane University, New Orleans, USA.

Jan Fairley was a writer, a broadcaster and a journalist, and a research fellow at the Institute of Popular Music, University of Liverpool. She was also a long-serving member of the editorial group of the journal *Popular Music*. She died in June 2012.

Heidi Feldman is a lecturer in the Department of Communication at the University of California, San Diego, USA.

José Adriano Fenerick is Professor in the Department of History at São Paulo State University (UNESP), Franca City, Brazil.

Héctor Fernández L'Hoeste is Professor of Spanish at Georgia State University in Atlanta, USA, where he teaches Latin American cultural studies.

Elisa Ferrari is a photojournalist and an ethnomusicologist. Her work has focused on Brazilian

Music and the Sami in Northern Sweden. She currently resides in California, USA.

Júlio Córdoba Pires Ferreira has a Bachelor's degree in Guitar from the Universidade Federal de Rio de Janeiro (UFRJ) and a Master's degree in Musicology from the Universidade Federal de Santa Catarina, Brazil.

Luis Ferreira (Luis Ferreira Makl) is Professor of Social Anthropology of the Instituto de Altos Estudios Sociales at the Universidad Nacional de San Martín, and of the Instituto de Investigación en Etnomusicología, Buenos Aires, Argentina.

Jane L. Florine is Professor of Ethnomusicology/Musicology at Chicago State University, Chicago. Her main areas of research are Argentinian popular music and festivals (the Cosquín National Folklore Festival).

Johnny Frías is a doctoral fellow in Ethnomusicology at the Graduate Center of the City University of New York.

Wander Nunes Frota teaches English in the Departamento de Letras Estrangeiras, and Brazilian Literature in the Master's Degree Program at the Universidade Federal do Piauí – UFPI, in Teresina, Brazil.

Igor de Gandarias is a composer, a researcher and a professor in the Art Department and the Institute of Humanistic Studies at the Universidad de San Carlos in Guatemala.

Omar García Brunelli is a musicologist specializing in tango studies, and a researcher at the Instituto Nacional de Musicología Carlos Vega, Buenos Aires.

Oscar García Guzmán is a composer, writer, a researcher and a faculty at the Conservatorio Plurinacional de Música in La Paz, Bolivia.

José Garriga Zucal is Professor and a researcher at the Universidad Nacional de San Martín, Buenos Aires, Argentina.

Julian Gerstin teaches at Keene State College, Keene, NH, USA, and the Vermont Jazz Center in Brattleboro. A percussionist and a composer, he is active in regional African, Cuban, Latin jazz and afrobeat ensembles.

Juan-Pablo González is Professor and the Chair of the Music Institute at the University Alberto Hurtado SJ, Santiago, Chile. He was the first President of the Chilean Society of Musicology (1996–2000) and of the Latin American branch of IASPM (2000–6).

Melissa Gonzalez is a PhD candidate in the Department of Music with specialization in Ethnomusicology at Columbia University, USA.

Neris González Bello is a musicologist and an adjunct researcher. Since 1999 she has worked at the Centro de Investigación y Desarrollo de la Música Cubana (CIDMUC), Havana, Cuba as a specialist in Cuban popular music in general and jazz.

Liliana González Moreno teaches at the University of Havana and the University of Arts and is a researcher at CIDMUC (Centro de Investigación y Desarrollo de la Música Cubana).

Héctor Luis Goyena is a musicologist and the director of the Instituto Nacional de Musicología 'Carlos Vega,' Buenos Aires, Argentina.

Oliver N. Greene, Associate Professor at Georgia State University, teaches courses on world music, the popular music of Africa and the Middle East, Carnival in Trinidad and Brazil, and popular American music.

Goli Guerreiro, from Bahia, Brazil, is a postdoctorate fellow in urban anthropology, a writer and an editorial consultant. She edits the blog *terceiradiaspora* about contemporary culture in the Atlantic world and leads workshops and conferences on black cultures.

Paolo Murillo Guerreiro do Amaral is Adjunct Professor in the Department of Arts, Universidade do Estado do Pará (UEPA), Brazil, and Co-ordinator of EDUEPA (Editora da Universidade do Estado do Pará).

Alexandre Herbetta is Professor in the postgraduate program in Anthropology at the Universidade Federal de Goiás, Brazil. He is also a member of MUSA, Center of Studies in Latin American and Caribbean Art, Culture, and Society.

Grizel Hernández Baguer is a musicologist with a Master's degree in Art. She is a researcher at the

Centro de Investigación y Desarrollo de la Música Cubana and a Professor at the Instituto Superior de Art and the Conservatorio Amadeo Roldan.

Evandro Rodrigues Higa is a musician, a researcher and a Professor of Music at the Universidade Federal de Mato Grosso do Sul, Campo Grande, Brazil.

David Horn is Senior Fellow in the Institute of Popular Music (IPM) and School of Music, University of Liverpool, UK. He was the Director of the IPM from 1988 until his retirement in 2002.

Dennis Howard is an ethnomusicologist working in Jamaica. A Grammy-nominated producer, he holds a PhD in cultural studies and ethnomusicology from the University of the West Indies.

Alberto T. Ikeda is Professor of Ethnomusicology and Popular Culture at the Instituto de Artes of the Universidade Estadual Paulista (IA-UNESP) in São Paulo, Brazil.

Tatyana de Alencar Jacques is a musician and a PhD student in Social Anthropology at the Universidade Federal de Santa Catarina, Brazil.

Kim Kattari has lectured at the University of Texas at Austin and Texas A&M University in College Station, USA, teaching world, popular and art music-related courses.

Randall C. Kohl is an ethnomusicologist, composer, guitarist and professor on the Music Faculty of the Universidad Veracruzana in Xalapa, Veracruz, and member of the Sistema Nacional de Investigadores of Mexico.

Adam Krims was Professor of Music Analysis at the University of Nottingham, UK. He died in September 2012.

Johana Kunin is a Social Anthropology PhD candidate at the Universidad Nacional de San Martín (IDAES-UNSAM), Buenos Aires, Argentina. Art as a tool for development in Latin America is her main research interest.

Benjamin Lapidus is a musician and a composer who performs and records throughout the world and is an associate professor of Music at John Jay College of Criminal Justice, CUNY, USA.

Orlando Laureano teaches cuatro and guitar at the Conservatorio de Música in Puerto Rico. He is a professional musician and the director of the Taller Tipico de Caguas, Conjunto Tradición. His research is in culture and folklore.

Mônica Leme is a musician, PhD in the History of Music and Professor of Music Education at the Colegio Pedro II in Rio de Janeiro, Brazil. She has authored books and articles. In her spare time she is dedicated to bird-watching and photography.

Katrin Lengwinat teaches in the Department of Music at the University of Arts (UNEARTE), Caracas, Venezuela. Born in Berlin, where she obtained her PhD, she has lived in Venezuela since 1993.

Javier F. León is Assistant Professor at the Department of Folklore and Ethnomusicology at Indiana University, Bloomington, USA.

María Teresa Linares is a notable Cuban musicologist and pedagogue. In 2000 she received the order Felix Varela, the highest honor given to researchers by the State Council of the Republic of Cuba. Author of the seminal book *La música y el pueblo* (1974), she is the vice-president of the research institution Fundación Fernando Ortiz in Havana.

Rubén López Cano is a full-time Professor at the Escola Superior de Música de Catalunya, Barcelona, Spain. He is the main editor of the *TRANS-Transcultural Music Review*.

Angela Lühning is Professor at the Music School of the Universidade Federal da Bahía Brasil, and the director of the Pierre Verger Foundation in Salvador/Bahia.

Alejandro L. Madrid is Associate Professor of Latin American and Latino Studies at the University of Illinois at Chicago, USA.

Hettie Malcomson is Lecturer in Ethnomusicology in the Department of Music at the University of Southampton, UK.

Fernanda Marcon is a PhD student in Social Anthropology and a member of the Center for Studies in Art, Culture and Society in Latin America and the Caribbean (MUSA), Universidade Federal de Santa Catarina, Florianópolis, Brazil.

Michael Marcuzzi was Professor of Music at York University, Ontario, Canada. He died in September 2012.

Wayne Marshall is an ethnomusicologist, blogger and DJ living in Cambridge, MA, USA; he coedited *Reggaeton* (2007).

Ruth Matamoros is the coordinator of the project for strengthening the training of leaders and indigenous peoples in the Bluefields Indian and Caribbean University, North Atlantic Autonomous Region, Nicaragua.

Elizabeth McAlister is Professor of Religion at Wesleyan University in Middletown, CT, USA.

Len McCarthy is a freelance writer, musician and a university instructor working on a Masters of Music Therapy. His PhD in ethnomusicology explores the relationships between Jamaican musicians' body movement patterns and reggae.

Julio Mendívil is Lecturer in Ethnomusicology at the University of Music, Drama and Media Hanover, Germany, and the Chair of the Latin American Branch of IASPM.

Emilio Mendoza is Professor of Music at the Universidad Simón Bolívar, Caracas, Venezuela, a composer (Visual Music), a researcher (folk, pop music, the Beatles) and a guitar performer of 'ecological music' with his group Ozono Jazz.

Rafael José de Menezes Bastos is Professor of Anthropology at the Universidade Federal de Santa Catarina, Florianópolis, Brazil, and the Chairman of its Center for Studies on Music, Culture and Society in Latin America and the Caribbean.

Sue Miller is Senior Lecturer in music and the head of the Popular Music course at Anglia Ruskin University, Cambridge, UK.

Amanda Minks is Assistant Professor of Anthropology and Ethnomusicology in the Honors College of the University of Oklahoma, USA.

Manuel Monestel has taught at the Universidad de Costa Rica, Associated Colleges of the Midwest and Cornell University. He is a sociologist, a singer-songwriter and a music producer in Costa Rica.

Deise Lucy Oliveira Montardo is a professor in the Department of Anthropology at the Universidade Federal do Amazonas, Brazil.

Pamela Narbona Jerez is a musicologist and singer based in San Diego, California. She is currently an independent researcher in music and a freelance translator and editor.

Luiz Fernando Nascimento de Lima is a musicologist and a semiotician (PhD, University of Helsinki), working on a freelance basis in Brazil.

María Teresa Novo is Professor of Latin American Literature at the Universidad Simón Bolívar in Caracas, Venezuela. She has written books about Venezuelan traditional popular culture and has been a guest lecturer at the University of Pittsburgh, Pennsylvania and the Université François-Rabelais in Tours, France.

Federico Ochoa is a saxophonist and a researcher of Colombian traditional music of the Atlantic and Pacific coasts. He teaches jazz at the Universidad EAFIT and is a member of the research group Valores Musicales Regionales in Medellin, Colombia.

Allan de Paula Oliveira is an anthropologist and a Professor of Social Sciences at the Universidade Estadual do Oeste do Paraná (UNIOESTE), Toledo, Brazil.

Silvia de Oliveira Beraldo is a flutist, a saxophonist and a composer. She is the director of the Compasso Aberto – Escola Livre de Música in Florianópolis, Brazil.

Carlos Palombini is a Fellow of the National Research Council (CNPq) and Professor of Musicology at the Universidade Federal de Minas Gerais (UFMG), Belo Horizonte, Brazil.

Derek Pardue is Assistant Professor in Cultural Anthropology and International Studies at Washington University in St. Louis, USA.

Daniel Party is Associate Professor in the Institute of Music of the Pontificia Universidad Católica de Chile, Santiago, Chile.

Sonia Pérez Cassola is a musicologist, a record producer and a musician in Havana, Cuba.

Ailer Pérez Gómez is a musicologist and a researcher at the Centro de Investigación y Desarrollo de la Música Cubana (CIDMUC), and a professor at the Instituto Superior de Arte in Havana, Cuba.

Mércia Pinto is Associate Professor in the Department of Music at the Universidade Nacional de Brasília (UNB), Brazil.

Daniel Piper is Curator at the Musical Instrument Museum in Phoenix, Arizona, USA, where he specializes in the museum's Latin American and Caribbean collections and exhibits.

Acácio T. C. Piedade is Professor of the Department of Music at the Universidade Federal de Santa Catarina, Florianópolis, Brazil.

Hugo Pordeus is Professor at the Pernambuco State Music Conservatory in Recife, Brazil.

Gregory Rabess is a musician and a cultural consultant. He is a Cultural Projects Officer at the Ministry of Culture, Youth and Sports, Roseau, Dominica.

Elba Braga Ramalho is Professor in the Department of Music at the Universidade Estadual do Ceará (UECE), Fortaleza, Brazil.

Tina K. Ramnarine is a musician, an anthropologist and a Professor of Music at Royal Holloway University of London.

Victoria Razak is a cultural anthropologist and Senior Research Fellow at the Center for Urban Studies, University at Buffalo, USA; she is also Research Associate at the University of Aruba, Dutch Caribbean.

Louis Regis is Head of the Department of Literary, Cultural and Communication Studies at the University of the West Indies, St Augustine, Trinidad and Tobago.

Jonathan Ritter is Associate Professor of Ethnomusicology at the University of California, Riverside, USA.

Melisa Rivière is an anthropologist and Latin hip-hop producer currently serving as an Academic Director for World Learning's study abroad programs at the School for International Training.

Gregory Robinson is Assistant Professor of Music at George Mason University in Fairfax, VA, USA.

Maria Angélica Rodrigues Ellery is Professor of Music at the UECE/UAB (Universidade Estadual do Ceará/Universidade Aberta do Brasil), Fortaleza, Brazil.

Timothy Rommen is Associate Professor of Music and Africana Studies at the University of Pennsylvania, USA.

Efraín Rozas is a musician, ethnomusicology PhD candidate at the University of New York, and the director of Perumusic.org.

Agustín Ruiz is an ethnomusicologist. He is Professor and Director of the Information System for the Management of Intangible Cultural Heritage at the Ministry of Culture, Chile.

Cheryl Ryman is a research consultant in Jamaican and Caribbean dance/music forms, a writer, a teacher and a lecturer, her specialist area being African Retentions in Dance.

Rafael Salazar Moreno is Professor of Musicology, a researcher of Venezuelan and Iberoamerican folklore and a composer. He has written books in ethnomusicology and has presented at international conferences. He received the 1988 Madrid Fifth Centennial Research Award.

Nancy Marcela Sánchez is Professor of Folklore at the Instituto Universitario Nacional del Arte, a popular music pianist and a researcher in musicology for the Secretaría de Cultura de la Nación in Buenos Aires, Argentina.

Octavio Sánchez is a percussionist, a composer, an arranger and a conductor, and a research professor in the School of Art and Design at the Universidad Nacional de Cuyo in Mendoza, Argentina.

Mauricio Sánchez Patzy is a sociologist, a researcher and a Professor in the School of Social Sciences at the Universidad Mayor de San Simón in Cochabamba, Bolivia.

Carlos Sandroni is Professor of Ethnomusicology and Popular Music at the Universidade Federal de Pernambuco, Recife, Brazil.

Carolina Santamaría-Delgado is Associate Professor of the Department of Music at the Pontificia Universidad Javeriana, Bogotá, Colombia.

T. M. Scruggs is a musician and was the token ethnomusicologist at the University of Iowa until 2009. He currently lives in Berkeley, CA, USA, and works with TheRealNews.com.

Julie A. Sellers is Assistant Professor of Spanish at Fairmont State University, Fairmont, WV, USA.

Daniel E. Sheehy is the Director and Curator of Smithsonian Folkways Recordings, the non-profit record label of the Smithsonian Institution in Washington, DC.

Malvina Silba has a PhD in Social Sciences from the University of Buenos Aires, Argentina. She is a Professor at the University of Buenos Aires and a postdoctoral fellow of the National Council of Scientific and Technical Research (CONICET).

Helena Simonett is Assistant Professor of Latin American Studies and the Blair School of Music and serves as an associate director of the Center for Latin American Studies, Vanderbilt University, Nashville, TN, USA.

Hope Munro Smith is Assistant Professor of Music in the Department of Music and Theatre at CSU, Chico, CA, USA.

Christian Spencer Espinosa is Research Professor at the Pontificia Universidad Católica de Chile, and a guest lecturer in musicology in the Arts Department at the Universidad de Chile.

Carlos Torrealba is Associate Professor in the Language Department at the Universidad Simón Bolívar in Caracas, Venezuela, where he has worked for more than 20 years. He received his PhD in Education at UPEL-Caracas Pedagogical Institute.

Elizabeth Travassos Lins is Associate Professor at the Center for Arts and Letters at the Universidade Federal de Rio de Janeiro (UFRJ), Brazil. Her research is devoted primarily to anthropological studies of music.

Joshua Tucker is Assistant Professor of Ethnomusicology at Brown University, Providence, RI, USA.

Pablo Vila is Professor of Sociology at Temple University, Philadelphia, USA.

Peter Wade is Professor of Social Anthropology at the University of Manchester, UK.

Leonardo J. Waisman is Principal Research Associate at CONICET, the Argentinian Council for Science and Technology, Buenos Aires, Argentina.

Lois Wilcken is a writer, a musicologist and the executive director of La Troupe Makandal, Inc. in New York and in Port-au-Prince, Haiti.

Fidel Wilson is an anthropologist and an educator affiliated with the Tininiska Cultural Association, the University of the Autonomous Regions of the Caribbean Coast of Nicaragua (URACCAN), and the Linguistics Research and Cultural Revitalization Institute (IPILC) in the North Atlantic Autonomous Region, Nicaragua.

Robert Witmer is Professor Emeritus in the Department of Music at York University, Toronto, Canada.

Ketty Wong is Associate Professor of Ethnomusicology at the University of Kansas School of Music, Lawrence, KS, USA.

Loo Yen Yeo is a music producer, ethnomusicologist, dance researcher and educator living in Sheffield, UK. He is a member of the Conseil International de la Danse, UNESCO.

Afoxé

The term *afoxé* is intrinsically connected to the Afro-Brazilian cultural context and has various interrelated meanings. It designates a musical idiophone in the *xequerê* family, made of a calabash covered with a net and shells, beads or seeds; it also denotes a Carnival procession with its own distinctive rhythm, reflecting the history and context of certain Afro-Brazilian religious traditions, especially those of the Brazilian North-east. Although it is not known for certain when this Yoruba-derived word became linked with these religious traditions, this connotation has been prominent since the beginning of the twentieth century (Artur Ramos, cited in Carneiro 1982, 102).

According to Risério (1981, 12), the term *afoxé* means 'the power of speech, of the spoken word' (author's translation) and reflects the importance of oral expression in the context of Afro-Brazilian religions such as *candomblé* in Bahia and *xangô* in Recife. Some authors (Carneiro 1982; Guerra-Peixe 1980) draw a kinship link between *maracatus*, the traditional Carnival groups of Recife, and *afoxés*, citing the observations of earlier researchers. The majority of sources point out that *afoxés* carry elements taken from the religious, ritualistic sphere into the profane context of the Bahian and Pernambucan Carnivals. For this reason, *afoxés* were derogatorily called 'itinerant *candomblés*' in Bahia and thus were likened to earlier groups such as the *clubes africanos* and *batuques*, mentioned by Nina Rodrigues (1977), Manuel Querino (1938) and newspapers around the turn of the twentieth century.

Composed primarily of black adherents to Brazilian religions, the *batuques* and *afoxés* were consistently viewed at this time as bothersome gatherings by other social classes who frequented Carnival balls based on European models. The religious and corporal elements of the *afoxés* together with their percussive intrusiveness were seen as threatening and disruptive in the urban setting. All the Carnival groups with fundamental ties to the Afro-Brazilian religious sphere were subject to persecution and prohibition, just as the religions themselves were. Even so, in the last decades of the twentieth century the formerly vilified musical and symbolic characteristics of these groups became powerful expressions of identity for those of African descent. Together with the music and activities of the *blocos afro*, these groups represented a movement of resistance, self-affirmation and innovation that involved people of diverse social spheres.

Yet, in contrast to the *blocos afro*, the *afoxés* have continued to preserve the same instrumentation as is found in the *candomblé terreiros* (places of worship) of Yoruba tradition, namely, the *ilus* (small, double-headed, cylindrical drums) and *atabaques* (elongated, barrel-shaped drums) accompanied by *agogôs* (double bells) and *xequerês*. Their characteristic rhythmic pattern is known as *ijexá* and is traditionally played only with the hands (for a transcription, see Crook 2005, 140). The rhythm, which is associated with the female *orixá* (Yoruba deity) Oxum, became emblematic for many people, who tend to confuse the name of the rhythm with that of the group that plays it. Thus, the *ijexá* rhythm is sometimes referred to as *afoxé*. The words are always sung in Yoruba, with a very few exceptions, and to this day belong to the religious sphere. While countless *clubes africanos*, *batuques* and *afoxés* have come and gone, one of the oldest and most renowned *afoxés* that continues to participate in early twenty-first Carnival in Salvador is the group Filhos de Gandhi, founded in 1949 and comprised exclusively of men. Other groups, like the legendary *afoxé* Badauê, can be of mixed gender and are generally smaller and more intimate. These groups have a less business-oriented character than many of the groups that take part in modern Carnival festivities. Due to their cultural and symbolic importance, many *afoxés* became the subject of the lyrics of Brazilian popular songs such as 'Filhos de Gandhi' and 'Patuscada de Gandhi' by Gilberto Gil (who was a member of the Filhos de Gandhi in the 1970s, parading with them at Carnival in 1976) and 'Sim/Não' and 'O Bater do Tambor' by Caetano Veloso, among many others.

Given this historical trajectory, twenty-first-century *afoxés* and their forerunners represent one of the oldest and, at the same time, the most dynamic and beautiful manifestations of Carnival in Salvador da Bahia. There are also newer *afoxés*, not only in Salvador but also in Recife and Rio de Jaineiro, which thus give continuity to the close link between religious expression and Carnival processions using specific instruments and striking rhythms.

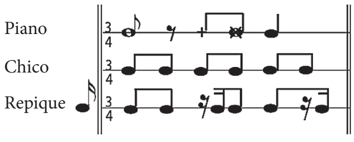
Afro

Afro is a genre found in the repertoire of Afro-Uruguayan Carnival associations. Like *candombe* and *milongón*, which these associations ('comparsas') present in popular theaters, *afro* is played by a group of the best drummers (trio, quartet or quintet), who interact with dancers as part of a prerehearsed act. *Afro* has a different musical structure from *candombe* and *milongón*, however, and unlike them is not very often sung. In the past, *afros* were not played during carnival marches but only in popular theaters, where at least one *afro* was arranged and choreographed by each *comparsa* every Carnival. In the early twenty-first century, however, it is not unusual to see big *candombe* drum orchestras stop the *candombe* drumming and the march in the street for a while by playing an *afro* (examples can be heard on recordings by Kanela y su Barakutanga [1999] and Yambo Kenia [1999]).

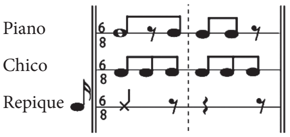
Afro is also a term used loosely by popular urban musicians and dancers in Uruguay, Argentina and the southern states of Brazil, to give a name to a music whose structure is similar to that of the Afro-Uruguayan *afro* (see below). It refers to drumming in 6/8 and 12/8 measures using mostly Afro-Cuban popular drums ('tumbadoras'), sometimes combined with jazz/rock drums and bass, guitar and keyboard ('Afro' by Jorge Trasante [1975] is a good example). It has also developed in northeast Brazil, notably in Salvador in the state of Bahia, since the 1960s and 1970s (Oliveira 1991). In Buenos Aires the 'afro dance' is an all-embracing cultural category, though based mainly on those same music structures and percussion instruments, framed by the Afro-Brazilian Orixas mythology and dances (Frigerio 2000; Balmaceda 2006).

There are four species of *afro* in the Afro-Uruguayan tradition, each one characterized by distinct musical structures (Ferreira 1997). The first structure may be represented in a single measure of 3/4 as three groups of two eighth notes each. The strokes are all made with the bare hands: open hand stroke (●); muted hand stroke (+); and closed slap stroke (X). On the big drum *Piano* (bass), a closed left-hand palm stroke (○) is followed by a closed fingers stroke (⊗) by the same hand:



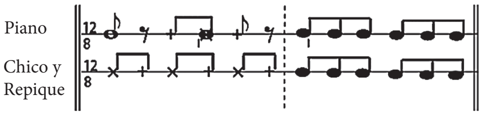
Example 1: First structure

The second structure may be represented in a faster 6/8 measure organized in two groups of three eighth notes each:



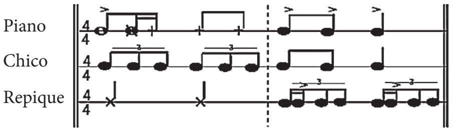
Example 2: Second structure

The third structure extends the first and second in a 12/8 measure, the first half emphasizing a two/two/two metric organization, and the second half a three/three organization. Some older drummers call this last form 'afro-macumba.'



Example 3: Third structure

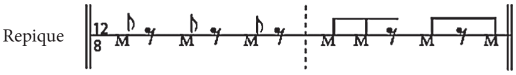
The fourth structure may be represented as a slow 4/4 measure, over which medium drum improvisation superimposes triplets and sextuplets, alternating with syncopated and non-syncopated eighth notes.



Example 4: Fourth structure

These four musical structures (illustrated on *Candombe for Export*, 1983) have formal similarities with some of the homonymous *afros* recorded in the 1950s by the Sonora Matancera orchestra, featuring Celia Cruz singing a repertoire dedicated to West African divinities in Cuba (e.g., on the recording *Tributo a los Orishás*). It is possible that these and other Afro-Cuban records influenced Afro-Uruguayan *candombe* drummers as part of the cultural flow of music (musicians, records and orchestras) circulating in the Caribbean and across the southern continent.

Nevertheless, local forms, continuities and transformations must not be disregarded. In the 2000s there is an Afro-Cuban pattern – performed either by all three drum types or by the *Repique* middle drums only, while the other two types play the 6/8 or the 12/8 structure – played with *madera* (wood) strokes, beating the stick on the wood box of the drum (M represents *madera*):



Example 5: *Repique* drum pattern

In spite of the fact that there are formal similarities between these musical structures and those of the Congados in the state of Minas Gerais, Brazil (studied by Lucas 2002), there is no verifiable connection with the *afros* from Uruguay and other regions of Brazil. Besides, according to the memory of some Afro-Uruguayan expert drummers such as Benjamín Arrascaeta, Fernando 'Lobo' Núñez and Eduardo 'Cacho' Giménez, *afros* were known to them and their predecessors at least as early as the 1950s, so they cannot be associated with the influence of the drumming patterns of Afro-Brazilian religions, which spread to Uruguay in the second half of the twentieth century (Ferreira 1997). However, since the end of the 1990s the influence from these religions on the *afro* musical and dance patterns played by the *candombe* drumming groups of many *comparsas* has been very real.

Afro-Dominican Fusion

Afro-Dominican fusion is a musical movement which arose in the Dominican Republic in the late 1970s, and continues with transnational dimensions in the new millennium. Fueled by an intellectual and artistic counterculture and a wave of folklore studies of rural Afro-Dominican ritual traditions, it is characterized by the blending of existing popular genres with elements of traditional *palos*, *salves*, *Gagá*, *congo* and rural Afro-Dominican themes. With a desire for musical innovation and a self-reflexive critique of Eurocentric Dominican identity, pioneers of the movement incorporated research, teaching and collaborations with rural musicians into their creative work. In overall terms, a concept of fusion based on a reflexive relationship with traditional music formed a loose common thread among the musicians involved, who varied considerably in their approaches to integrating ritual music or rural themes and in their use of popular genres ranging from rock, blues, funk and roots reggae to Latin jazz, *merengue*, *bachata* and Haitian *kompa*. Recording opportunities for Afro-Dominican fusion have consistently been very poor, as the music industry has continued to promote commercial *merengue* and *bachata.* Since the late 1990s, however, support for Dominican folklore and the development of Afro-Dominican fusion groups in New York City have created a transnational music scene which is gathering a broader audience and starting to revitalize the creative energy of this musical movement.

Seeds of the fusion movement were planted in the early 1970s when a few folklorists and anthropologists began turning their attention to Afro-Dominican ritual traditions, inciting several urban dancers and musicians to join them in field research and to establish the artist-collective Convite, led by sociologist Dagoberto Tejeda and singer/guitarist Luis Días. From these initial collaborative efforts the repertoire and visibility of staged folklore performance evolved and the annual Festival de Atabales was organized, presenting to the public a variety of the *palos* and *salves* groups who normally play in Afro-Dominican ceremonial contexts. Rock-influenced arrangements of traditional songs and new songs addressing rural and working-class themes were composed by Convite, including 'Obrero acepta mi mano' (Worker, Accept My Hand), which became the official theme of the 1974 Festival Internacional de la Nueva Canción. After Convite disbanded in 1978, several members and newcomers who were to become the key exponents of the genre continued the fusion experiment in the band Palemba. These early activities, coupled with the bohemian spirit of Dominican *nueva canción,* substantially nurtured and inspired the subsequent work and careers of key musicians, including David Almengod, Luis Días, José Duluc, Xiomara Fortuna, Roldán Marmol, Irka Mateo, Boni Raposo, Edis Sánchez, Toni Vicioso as well as several others since the turn of the millennium.

Luis 'Terror' Días is well known both as a Dominican lyricist and composer, whose many songs have been popularized by other singers and bands, and as a pioneer in the birth of Dominican rock, thanks to his prolific repertoire and innovative blending of rock, blues and jazz guitar patterns with a great variety of Dominican and Haitian rhythms. Among the dozens of artists and bands who have recorded his songs are Sergio Vargas, Wilfredo Vargas, Sonia Silvestre, Fernando Villalona and Marc Anthony. After the demise of Convite, Días continued to borrow melodies, song lyrics and themes from Afro-Dominican rituals and working life, weaving them into the repertoire of his rock-oriented band Transporte Urbano and later projects. An unforgettable personality who always defended black Dominican traditions and vehemently attacked racism and political corruption in his own country and abroad, Días was an inspiration for activists and Afro-Dominican fusion artists alike until his death in December 2009 at the age of 57.

Several original fusion bands were born in the later 1980s, including Irka Mateo's Irka con Bohuti, Toni Vicioso and Xiomara Fortuna's Kaliumbe, and Los Guerrero Del Fuego, which united José Duluc, Edis Sanchez and Toni Vicioso among others. Irka con Bohuti continued to explore the possibilities of rock-oriented fusion in original compositions, using a variety of Dominican percussion instruments and rhythms, a female chorus of traditional *salves* singers, electric guitar and bass. Since 2007 Irka Mateo has lived in New York, has produced the album *Anacaona* (2009) which, along a tribute to Afro-Dominican culture, is representative of her cosmopolitan identity, love of Brazilian music and personal identification with indigenous *Taíno* lifeways and history. Xiomara Fortuna's project Kaliumbe pioneered the blending of jazz harmonies and bluesy vocals with a wide variety of Afro-Dominican songs and rhythms as well as other Afro-Caribbean sounds. Jazz musician and composer Toni Vicioso later launched Asa Dife in New York City, while Fortuna continued in Kaliumbe and more recent projects such as *Balbuceos* (1994) and *Kumbajei* (2001) to define her jazz-inflected Afro-Caribbean sound. A local Santo Domingo hit until 1992, Los Guerrero Del Fuego began the move away from purely rock-, blues- and jazz-oriented fusions toward Caribbean genres that inspired Duluc and Fortuna's later work, as well as a new generation of fusion bands. After Los Guerrero Del Fuego disbanded in the early 1990s, member Edis Sánchez returned his focus to folklore research and education, and started teaching Afro-Dominican genres at the National Conservatory. With a group of student and professional musicians, he also performs his original compositions and arrangements for percussion and voice which stay close to the tradition while blending rhythms, adding ensemble breaks and virtuosic soloing.

Formed in the mid-1990s, the band José Duluc y Domini-Can was the fruit of collaboration between traditional and popular musicians. Together they created a new sound using keyboards, steely *bachata*-like guitar arpeggios, *merengue*-based horn arrangements, *palos* percussion, and vocals that wove together Duluc's poetic consciousness and melodic sensibility with traditional song lyrics and Afro-Dominican themes. This band's work is represented on *Pánico* (1995) and *A quien le creo* (2002) (Whom Should I Believe). Several of José Duluc's songs have gathered national and international attention, including: 'La Ciguapa,' recorded by Chichí Peralta; the 1997 official carnival theme 'Carnaval para gozar' (Carnival to Enjoy), recorded on *Música de Carnaval* (Carnival Music) and later interpreted by Sergio Vargas; 'Pega 'o de qué' (Stuck to What), interpreted by Diómedes y El Grupo Mío; and Duluc's own recording of 'El caminante' (The Wayfarer), heard on *Música raíz Vol. 1*. In 1998, after Duluc moved to Japan, he formed the band Ga'Caribe with Japanese musicians, recorded locally and toured for several years in Japan and internationally. This band pioneered the introduction of Afro-Dominican music to Japan, and even helped stimulate efforts to promote Japanese cultural tourism in the Dominican Republic, including a Japanese-language documentary series on the country and its traditional culture. Eager to return to the place of his cultural roots after several years in Japan and a brief period in the United States, Duluc set up residence again in Santo Domingo. There he has continued his collaborations with Marmol, Fortuna, Vicioso and others, while also playing his original compositions with a new generation of Afro-Dominican fusion musicians in a group dubbed 'Los Guerreros del Fuego' (Fire Warriors) after the band from the 1980s, but with a new lineup and the addition of electric violin.

Since 2001 the group Marassa, headed by Magic Mejía, has assembled a team of talented musicians with exceptional rhythmic skills, powerful male vocals and harmonies, and a deep understanding of Afro-Dominican folklore. Their early work on *Santeria! Música de raíz – palo* already demonstrates their superb musicianship, sensitivity to dynamic contrasts and attention to song arrangements for male vocals and percussion in a mix of *Vodú* songs, secular *palos* repertoire and originals. Since the turn of the century, Marassa have composed numerous other originals often adding to the ensemble members of the band Palotres on electric guitar, bass and drum kit. Songs such as 'Fiesta del Cristo' (Celebration of the Christ), 'La gotera' (The Drip) and 'Voy pa lla' (I'm Going There) also integrate female vocals and in the latter case tight dance-band horn arrangements and piano *montunos* that are clearly inspired by *salsa* and *merengue,* while still maintaining Afro-Dominican grooves and hand percussion. On the instrumental 'La negra' (The Black Woman), Marassa experiments with fusing *Gagá*-inspired electronic beats with guitar, keyboards and tasteful addition of acoustic percussion sounds.

Through Fundación Cultural Bayahonda and Tereke Productions, former Palemba member Roldán Marmol spearheaded several recordings and festivals representing both traditional and fusion-oriented music, including his own original fusions of *Gagá* in *merengue*-oriented compositions. The compilation *Música raíz Vol. 1* (1997) includes singles by Almengod, Duluc, Fortuna and Marmol, as well as a sampling of traditional *salves, palos, congos* and *Gagá*.

Música de Carnival (2001) includes work by Días, Duluc, Almengod, Kinito Méndez, Sánchez, Marmol and others, mostly in *merengue*-heavy arrangements incorporating carnival *comparsa* drumming, and in some cases *Gagá* rhythms and instruments or *palos* drums. *Si Gagá* (2008) contains four tracks of *Gagá* ensembles along with eight songs combining participation of Días, Fortuna, Duluc, Marassa singer Magic Mejía and others in a fusion potpourri that stretches from *merengue* to *bachata* and electronic music.

The massive emigration of Dominicans to New York City that followed the severe economic crisis on the island in the late 1980s and early 1990s, along with increasing interest in Afro-Dominican roots and identity, led to the formation of several musical fusion projects in the city, which also stimulated the movement back in Santo Domingo. Toni Vicioso's presence in New York with Asa Dife and that of Boni Raposo with La 21 Division were both pivotal in the 1990s in sharing knowledge of traditional music and stimulating other fusion projects. Asa Dife combined traditional drumming with modern guitars, bass and keyboard in an experimental jazz-infused sound, whereas Boni Raposo's group presented modern arrangements of the *salves* tradition using instruments and repertoires from several regional styles along with contemporary *Vodú* songs. In the late 1990s William Alemán formed EcoCumbé, a 'world beat' ensemble of a dozen or more musicians and dancers including some members from Asa Dife, Boni y La 21 Division and former Convite. With original melodies and innovative arrangements for voice, traditional percussion, guitars and piano and lyrics synthesizing diverse elements of Dominican culture, EcoCumbé creates a distinct blend of Caribbean/Dominican popular music and dance inspired by traditional forms including *palo, Gagá, congo, salves, bachata* and *merengue.* Since 1998 Osvaldo Sánchez has led the project Pa' lo Monte which, like many of the other Afro-Dominican music groups in New York, is not only dedicated to performance but also to cultural activism, education and support of local Afro-Dominican religious practice. While they typically perform many *Vodú* songs and traditional *palos* repertoire using a hybrid *palos-salves* ensemble of four *palos* drums, several *panderos* (small round frame drums), *güiro* scraper and sometimes *balsié* friction drum, in their 2010 production *Back to the Root* they team up with producer and rapper Chuck D to create an urban roots music sound which is refreshingly different. Accompanied by slick music videos, lyrics drawing upon the daily life and identity of urban Dominicans, a variety of Dominican and Haitian folklore percussion, influences of rap and Jamaican dancehall and eclectic arrangements incorporating keyboards and electronics, harmonica, brass and guitars, *Back to the Root* affirms the African heritage and black identity of Dominicans while also suggesting some new directions for Afro-Dominican fusion.

Having witnessed the complete lack of interest in Afro-Dominican fusion on the part of the music industry, very few highly successful commercial artists took the step of breaking conventional genre boundaries and making explicit reference to *palos, Gagá, salves* and related traditions. A rare exception was *merengue* mega-star Kinito Méndez's 2001 recording *A palo limpio* (and an earlier single), on which songs for *Vodú* spirits performed by a local female *salves* group appear on several tracks, integrated into Méndez's dance-band arrangements. The album was nominated for a 2002 Latin Grammy Award. Thereafter, original *palos* recordings could occasionally be heard in Dominican dance clubs, and during 2008 carnival season the electronic 'Mambo-Gagá,' made in a home-studio and quickly pirated throughout the country, became a top party hit. In addition to appropriation of the 'Mambo-Gagá' track by Dominican rap and reggaeton artists (e.g., Pacheman y Griselito's 'Pa Ke Suden lo' Cachetes' [To Make You Sweat]), Diómedes y El Grupo Mío arranged the 'Mambo-Gagá' groove for *merengue* orchestra in an unreleased remix of 'Estoy enamorado' (I'm in Love). Diómedes Núñez frequently blends Haitian *konpa* rhythms into his *merengues,* and also incorporated *palos* instruments and rhythms in his highly popular interpretation of 'Esto se encendió' (This Is Hot), which subsequently became a Carnival hit. Amarfis y La Banda de Atakke also have a song 'Merengue con gagá' on their 2009 album *7ma sinfonía del mambo* (Seventh Symphony of Mambo). Along with a broad palette of international influences, Juan Luís Guerra has also drawn upon Dominican folklore rhythms and themes to help create his unique and innovative *merengue* and *bachata* sound.

Among the newest generation of artists in Santo Domingo, a few creative projects influenced by the Afro-Dominican fusion movement have emerged from the experimental fringes of the Dominican rock and jazz scene. Since 2003 El Batey (assembled from members of the band Batey Cero which formed a few years earlier, then separated) have drawn heavily from traditional rhythms and songs but in contrast to earlier bands have fused these with influences of roots-reggae, soul and funk-rock. Also with a reggae, funk and rock foundation, the group Son Abril (formed in 2005) are less explicit and self-reflexive in their incorporation of Dominican folklore, but more cosmopolitan in their fusion of international popular rhythms and genres. Both have created local followings in Santo Domingo, and in 2009 Son Abril recorded the album *Libranos*. Among the most exciting contemporary musical projects to emerge from the Dominican Republic in the new millennium is the Afro-Dominican jazz group Yasser Tejeda y Palotre, whose 2009 album *Mezclansa* is a masterful synthesis of a wide variety of genres born from their dedication to musical study, exuberant creativity and instrumental virtuosity. Before *Mezclansa,* the members of the quartet Palotre formed the band for singer Xiomara Fortuna, for years have participated in Marassa, and regularly backed up Roldán Marmol, Tony Vicioso and other elder leaders of Afro-Dominican popular music and jazz. With their phenomenal rhythmic precision, artful manipulation of multiple grooves and lively musical dialogue between guitar, drums, percussion and electric bass, the young musicians of Palotre transcend their apprenticeship of Caribbean roots and Latin-jazz to surge ahead on an innovative path of their own.

Overall, the strength of Afro-Dominican fusion–eclectic blendings with Afro-Dominican traditional music – can be seen to have also been its Achilles heel. The genre has suffered from a lack of unified stylistic boundaries and a music industry monoculture focused on *merengue* and *bachata*, as well as continued widespread prejudice against Afro-Dominican rural and ritual traditions. The overwhelming majority of the Dominican elite and the urban middle-class continue to view *palos, salves* and *Gagá* as undignified rural music associated with superstitious beliefs, sorcery and Haitian 'infiltration.' Given generations of totalitarian Dominican government which propagated anti-Haitian sentiments and a whitened, Catholic and Hispanic national identity, there are many Dominicans who (despite being of African descent) have a hard time identifying with the Afro-Dominican fusion artists and their music. The island's black working-class are far more receptive to the promotion of *palos* drumming, but thus far have not been the primary audience for Afro-Dominican fusion – which tends to appeal in its eclectic musical references and progressive politics to the bohemian middle class, and to some extent a broader audience of urban Dominican-Americans. In the fusion of the younger generation, there is less feeling of political urgency and drive to 'investigate' traditional culture, but the desire for creative experimentation is certainly alive, along with a generalized identification with African-Diaspora music and culture. Although their audiences have been limited, the musical and political significance of this lineage of artists is substantial. Their insistence on consciously and often reverently incorporating a culturally rich but rejected part of Dominican culture into urban popular music has created innovative sounds and alternative messages which cut against the grain of commercial dominance and ingrained Dominican assumptions about race, class and gender.

Aguinaldo

Aguinaldo is one of the two most prominent genres of the rural or *jíbaro* music of Puerto Rico (the other being *seis*). It developed from old Spanish *villancicos* and *folías*. 'Aguinaldo' means 'gift' in most Spanish-speaking countries, and is usually linked to the Christmas–New Year season (a very important time of year in Puerto Rico), but only in Puerto Rico and Venezuela, and in places influenced by the music of these two countries, does the word also refer to a musical genre. *Aguinaldo* is not always danceable. The lyrics are composed of two variants: one with a variety of antiphonal (verse and refrain) *coplas* (*cuartetas*, quatrains) similar to the *zéjels árabes,* and another of *decimillas* (hexasyllabic verse) with *rima espinela* (see below).

Historical Outline

According to Francisco López Cruz (2011 [1956]), *aguinaldo* as a genre evolved from Spanish Christmas *villancicos.* From its origins in Spain, the precise meaning of the word 'aguinaldo,' together with its variants 'aguilnaldo,' 'aguilando,' and 'equiland,' is 'New Year's gift.' It is a mix of Celtic and Arabic terms associated with solstice festivities and with Roman festivities in honor of Saturn. Writing of its links to *villancico*, Luis Manuel Álvarez (1988) observes:

> The *villancico* is one of those phenomena archived in our folkloric memory. It reappears in our Christmas music, secretly preserving its zéjelian structure and its popular-classical dichotomy, as well as the melodic, harmonic and rhythmic elements that I have been able to discover in many *aguinaldos* and *seises*. These genres, together with their poetic structure, the décima, constitute the spine of the *jíbaro* Christmas tradition. The *zéjel* or old *villancico* is also a precursor to glosas in the form of quatrains, distichs, or of *pie forzado* [the obligatory final line that improvising singers have to include] that serves as a base for the décima. (online version, 8)

Today, *aguinaldo* is one of the foundations of Puerto Rican *jíbaro* music, a tradition that is fundamental to Puerto Rican culture. The basic instrumentation includes Puerto Rican *cuatro*, guitar, *güiro* and *bongó*. Earlier versions utilized *tiples*, *bordonúa*, *vihuelas*, *maracas*, *güícharo* and *bombo* (a percussion instrument similar to the *tambora* that is a remnant of old Spanish military drums). *Bombo* is still used in some of the *promesas de Reyes* that are celebrated in the western regions of the country (see YouTube sites below). (*Promesas de Reyes* are celebrations of Epiphany in which devotees – often families – make pledges to the Magi in return for their intervention in time of need; the music used for *promesas* is the *aguinaldo*.) In the early twentieth century the sinfonia or button accordion from Germany was added, introduced by sailors on commercial boats. (This instrument is widely used in *plenas*.)

From the 1600s to the 1710s chroniclers, clerics and scientists described the customs of the music of Puerto Rico, but there is no mention of anything resembling *aguinaldo* at least until the first years of the eighteenth century, when reports from various clerics mentioned the *cánticos* and sung rosaries, the *promesas* to the Magi and other ecclesiastical festivities (e.g., the celebration of the Virgen del Carmen, who is associated with fishermen and seamen), where religious activities such as prayer and the singing of the rosary were followed by a celebration (López Cantos 1990). Since then, these festivities and rosaries do not appear to have changed much in essence. Interviews with people whose families have sung rosaries for many generations have revealed that this tradition has not altered in the last 150 years. To this we can add the literary chronicles that were produced in the nineteenth century as a revival by a stream of writers who utilized the genre as a 'gift,' when they published the books *Aguinaldo Puerto-Riqueño* in 1843 and 1846 (two different books) and *Almanaque-Aguinaldo de la Isla de Puerto Rico* in 1857.

In *El gíbaro* (1849) by Manuel Alonso, a *costumbrista* work depicting life in nineteenth-century Puerto Rico and 'the island's first universally acknowledged Creole classic' (Márquez 2007, 70), one of the scenes or chapters is entitled 'Aguinaldos.' In it Alonso writes: '*Aguinaldos* belong to those customs that have little or nothing to highlight, and so much that deserves praise …' (1849, 129). In the scene, Alonso recalls a *trulla* in which he participated (*trulla* or *parranda* denotes the activity of a group of friends or family members who appear unannounced at a neighbor's door during Christmas to sing *aguinaldos*; *parranderos* are akin to carol singers):

> We didn't take long to arrive at the first house; we stood up, and we positioned ourselves at the bottom of the stairs: a rural music accompanied those intoning the new *aguinaldo*, whose verses were by one of the singers, reduced to the customary greetings to the masters of the house to wish upon them all kinds of prosperities, if they gave us sweets, white caramel, cakes, and a thousand more things. Once the singing was over the family appeared at the top *of* the stairs, the head of the household descended and invited us to come up to drink some refreshments, which we did with great pleasure. (132–3)

Jose Escabí (N.d.) has noted that *aguinaldo* and *villancico* are often confused, but that the two can be clearly distinguished. *Aguinaldo* 'has a 2/4 time signature; it uses as poetic medium the hexasyllabic *décima* (although at times the *copla* is utilized); it is never choral; it is performed with traditional instruments; it is of rural tradition and has no title since it is identified by the genre; performers are *trovadores* and it is not danced to.' By contrast, 'the *villancico*, which is equally not danceable, can be set in any time signature; uses any poetic form; may be choral; has no limitations on instrumentation; is urban and is identified by a title.'

Present-day *aguinaldos* differ in geographical location, the style of singing and the events at which they are performed. The popular *trullas* are accompanied by these same canticles (López Cruz [2011 (1956)] calls these *aguinaldos* 'villancicos'), where a family is given a 'serenade' but with a Christmas or religious theme alluding to Christ's birth, the Magi or the New Year. Although *aguinaldo* has been associated with the Christmas season since its beginnings, due to its proper meaning, *aguinaldos* referred to as *aguinaldos de la pasión* (Aguinaldos of the Passion) are also sung during Lent.

Singers usually improvise the *coplas* (i.e., stanza of four hexasyllabic lines), which are combined with a refrain and which have their origin in Arabic *zéjels* (strophic compositions comprising a short stanza or refrain [*estribillo*] and a variable number of three-line, monorhyme stanzas, followed by another line rhyming with the opening refrain, for example, aa-bbba). *Aguinaldos* may be sung in two ways: with *coplas responsoriales* (hexasyllabic quatrains with refrain responses) like *zéjels*, or with a *decimilla espinela* (ten hexasyllabic lines with rhyme scheme abbaccddc).

Examples of *Aguinaldo*

The 'Aguinaldo jíbaro' is one of the oldest *aguinaldos*. It has an infinite number of variants; these variants have kept the same harmonic progression but may have changed the melody, added lyrics, altered the rhythm, etc. The variants may be called 'Aguinaldo jibaro' or some other name, such as 'Aguinaldo de Cayey,' 'Aguinaldo de Aibonito and so on. Historically, there is a strong link between 'Aguinaldo jibaro' and the *folia* – a musical theme that first appeared as a dance in fifteenth-century Europe; it is normally in triple meter and in the minor mode. In a modern performance by Jordi Savall and Hesperion XX of a particular Spanish *folia*, 'Rodrigo Martínez' (compiled in 1493 by Juan del Encina in his *Cancionero de Palacios*), we can see evidence of this link. The opening section of the *folía* corresponds to the harmonic movement i-III-VI-V7 of 'Aguinaldo jíbaro' but resolves at the end of the second half while 'Aguinaldo jíbaro' does not, remaining on the dominant. We can understand that the impact that *folías* had in Europe was also felt in the Americas as a dance and musical genre. As late as the 1800s composers such as Fernando Sor and Mauro Giuliani were writing variations over Spanish *folías*.

The 'Aguinaldo jíbaro' appears in a notated version as 'Marche de Gibaros' in the composition 'Souvenir de Porto Rico' (op. 31) (Memories of Puerto Rico), written in 1857–88 by the US composer and pianist Louis Moreau Gottschalk during his visit to Puerto Rico, accompanying the famous soprano Adelina Patti. Gottschalk was known for collecting rhythms and genres from the places he visited and for writing pieces influenced by them. The 'Marche de Gibaros' is like a theme and variation of the melody of the 'Aguinaldo jíbaro' (Thompson 1970).

Another incarnation of 'Aguinaldo jíbaro' is 'Los reyes que llegaron a Belén' (The Kings Who Came to Bethlehem), also called 'Estrella del Oriente' (Star of the East). Under the latter title it was recorded by the most prolific group in the early commercial recording of Puerto Rican music, Los Jardineros, for Okeh Records (under the name of Sexteto Okeh) in 1931. This *aguinaldo* differs from other versions in being more dance-like, having a structure of *paseo* (short introduction in slow, deliberate tempo) and *merengue,* a form which also appears in the 1893 suite 'Aires del país' by Juan Morel Campos.

A similar case is the 'Aguinaldo de pastorcillos' (Aguinaldo of the Little Shepherds), another variant. It is only sung on Christmas Eve in the region of Peñuelas and was captured in *Aguinaldo viejo*, a recording coordinated by researcher and folklorist Juan Carlos 'Kacho' Montalvo, which brought together traditional singers and studio musicians.

In Puerto Rico there are many versions of 'Aguinaldo jíbaro' that have what is known as 'Andalusian cadence' (i-VII-VI-V7), which is used frequently in *fandangos* and which can also be found in Juan Morel Campos's 'Aires del país.' For this reason, 'Aguinaldo jíbaro' can be said to be one of the oldest among all these examples, which also explains why it has so many variants: 'Aguinaldo viejo,' 'villaldeño,' 'de Adjuntas,' 'de Cayey,' 'de Cidra,' 'de Aibonito,' de Villalba' and 'de Ciales' (all but the first relate to the names of towns in Puerto Rico), among many others.

Some of the most famous Puerto Rican composers were connoisseurs of the old *aguinaldos* and included them in their repertoires; among them, in addition to Juan Morel Campos, we find Braulio Dueño Colon, José Ignacio Quintón, Pedro Flores, Rafael Hernández Marín, Claudio Ferrer and Felipe Rosario Goyco (Don Felo).

One of the oldest musical references to *aguinaldos* is 'Puerto Rico de la Puebla' (from the *Códice de Saldivar*, 'Método de Cítara de Sebastián de Aguirre' ca. 1670 (as performed by Mexican Ensamble Continuo and also by Los Otros). In this work the harmonic progression of another *aguinaldo*, the 'Aguinaldo cagüeño' (IV-I-V7-I) (named after the town of Caguas), is clearly heard. In earlier times this progression was known as a dance: the Porto Rico. Like 'Aguinaldo cagüeño,' 'Aguinaldo orocoveño' is named after a town (Orocovis). The two are similar in their harmonies, but the former is in the major mode, while the latter is in the minor mode (iv-i-V7), with different melodies. (For examples of particular *aguinaldo* melodies, see Gleason 2003, 66ff.)

Cadenas (chains) is considered a style of *aguinaldo* from the nineteenth century in which *coplas responsoriales* or *de controversia* (competition) are sung by two or more singers. Initially, carters would use these *cadenas* as a sort of alert system – if one carter failed to sing a response, the caravan would stop to check that he was all right. *Cadenas* were also sung at funerals to salute the departed, and women would sing *cadenas* on various subjects while doing laundry near the river. On occasion, the topics the women chose to sing about would cause fights to break out. Many recordings of *cadenas* by *jíbaro* singers make mention of doing laundry at the river. As Nydia Ríos Remigio remembered (interview 1989): 'Estas son las cadenas del ochocientos, las cantaba mi madre cuendo lavaba' (These are the cadenas of the eighteenth century, which my mother used to sing while doing the laundry).

Finally, *aguinaldos de Reyes* or *promesas* are the oldest *aguinaldos* in which the *copla* is used and which are also antiphonal. These *aguinaldos* were already mentioned in texts dating from the 1650s.

Aguinaldo and Salsa

Around 1970 Willie Colon, Héctor Lavoe and Yomo Toro recorded what may be the first attempt at fusing contemporary urban styles with the peasant genres of Puerto Rico. *Asalto Navideño* (Christmas Assault), followed in 1973 by the second part of the set, *Asalto Navideño 2* (1973) were made in New York City for Fania Records label, and not only are widely considered to be classic salsa, but also showcase *aguinaldos* and *seises*, traditional Puerto Rican Christmas music. An important feature of the recordings is the use of the Puerto Rican *cuatro* as a main instrument, performing the part that would have normally been taken by guitar. Willie Colon himself was not familiar with the tradition of Puerto Rican *cuatro*; however, singer Héctor Lavoe was a fan and follower of the most prominent interpreters of *jíbaro* music such as Ramito, Chuíto el de Bayamón and Germán Rosario among others. In the recordings, the *cuatro* was played by Yomo Toro. Among the versions of *aguinaldos* included in this album were 'Cagüeño,' 'Jíbaro' ('Viejo'), 'de Bayamón,' 'Orocoveño,' 'de los Reyes' (style of Puerto Rican dance ca. 1875), and a variant of 'Aguas Buenas.' The recording also included traditional *seises*, the *seis chorreao*, *seis* with *décimas*, 'Fajardeño' and 'Mapayé.'

The album was hugely popular. In 1977 Colon's album *El baquiné de los angelitos negros* also featured traditional *baquiné aguinaldo* melodies (*baquiné* refers to the marking of the premature death of an infant), specifically tracks 8 and 10.

Aguinaldo Today

In 2013 we can classify almost 150 different styles of *aguinaldos*. Some are named after their geographical location (Cayey, Adjuntas, Cidra, Aibonito, Ciales, Aguas Buenas, Bayamon, Toas Alta, Naranjito, Cagüeño, Orocoveño, Mayagüezano, Isabelino, Costanero, Yumac [Camuy in reverse] and others); others by a generic name (*aguinaldo jíbaro*, *aguinaldo lamento*, *aguinaldo lorenzillo* and *aguinaldo* *viejo*); and others by the event at which they are sung (de Fiestas de Inocentes, Baquiné or Velorio de angelito, de Pastorcillos, Romería, de San Martin de Porres, del Nacimiento, los Mandamientos (Corozal) and de Rosarios Cantandos [by neighborhood], or by the region in which a *promesa de Reyes* takes place [Añasco, Moca, San Germán, Peñuelas, Cabo Rojo, Aguada, Isabela, Quebradillas (Membrillo), Mayagüez, Humacao and San Sebastián]).

Modern-day *aguinaldos* exist in various contexts. There are two *trovador* contests that foster improvisation using *decimillas* as rhymes and *aguinaldos* as a musical frame. These competitions are held in the towns of Ciales and San Lorenzo, the latter being the most prominent. *Trovadores* continue to record *aguinaldos de decimilla* and, during Christmas, a large number of *aguinaldos de trullas* or *cuartetas responsoriales* on religious or profane themes are recorded, mostly in towns located on the west coast of the island. In addition, each house or park that celebrates a *promesa* or a *velorio de Reyes* features old and well-known *aguinaldos*, a practice which has lasted over 300 years. Although there have been many changes in *parrandas* in urban areas, with a broadening of the repertoire and some commercialization, *aguinaldos* remain fundamental to the tradition.

ORLANDO LAUREANO (TRANSLATED BY PAMELA NARBONA JEREZ)

Aire típico

The *aire típico* is a mestizo (mixed Hispanic and indigenous) musical genre of lively character that emerged in the late nineteenth century. Popular in the highland region of Ecuador, it is characterized by a pentatonic-based melody, a *sesquiáltera* meter (alternation of 3/4 and 6/8 meters), preeminence of the minor mode and harmonic progressions based on simple sequences of I-IV-V-I. Because of melodic and rhythmic similarities, the *aire típico* is often considered a variation of the *albazo* and the *alza que te han visto,* two Ecuadorian musical genres derived from the Spanish *fandango*. The differences between them reside in the guitar-strumming patterns, which introduce different types of accents and syncopated rhythms through various combinations of hand movements such as downstrokes, upstrokes, stopping the strings with the strumming hand, and drawing the fingers across the strings.

The *aire típico* is considered part of the *música nacional* anthology, a selected repertoire deemed to represent the Ecuadorian national identity. Also known as *capishca* in the central and southern highland regions, the *aire típico* is usually played to the accompaniment of a guitar or guitar ensemble, though versions for wind ensembles such as military bands and *bandas de pueblo* (town brass bands) are also popular at *retretas* (open air concerts). The dance is non-embraced; the man usually waves a handkerchief, whereas the woman holds her skirt on both sides or claps her hands while dancing graciously around her partner. The lyrics are set in *coplas* (rhymed verses) and usually make humorous references to economic hardship and drinking as a way of healing the pains of love. Typical song titles include

'Sin dinero' (Without Money), 'Compadre, péguese un trago' (My Fellow, Drink a Sip) and 'Chumadito cualquiera' (Drunk, Anyone) by Guillermo Garzón Ubidia (1902–75). Other renowned composers of *aire típico* include Jorge Araújo Chiriboga (1892–1970) and Carlos Rubira Infante (b. 1921). Academic composers, such as Luis Humberto Salgado (1903–77) and Segundo Luis Moreno (1882–1972), stylized and included this dance in their nationalist compositions for symphony orchestra, especially in the Ecuadorian suite, a cyclic musical form combining Ecuadorian folk dances of different characters and tempos. Although popular in the mid-twentieth century, the *aire típico* has lost popularity and has become limited to the occasional performances by national music singers on the concert stage as evocations of Ecuadorian tradition. Few *aire típicos* have been composed since the 1980s, partly due to the emergence of new styles of music associated with the rural peasants who migrated to the city.

Albazo

The *albazo* is an urban song-dance genre of lively character popular in the coastal and highland regions of Ecuador. Most *albazos* are considered to be part of the *música nacional* anthology, a selected repertoire of Ecuadorian songs composed between the 1920s and 1950s. The *albazo* derives from the Spanish *alborada*, a music performed during the early morning hours in the context of religious festivities. In the eighteenth century government authorities prohibited performances of *albazos* due to the cheerful and noisy atmosphere they generated. The *albazo* was also played in serenades that people brought to their beloved ones.

A *mestizo* expression, the *albazo* combines musical elements from the Spanish and Amerindian cultures. It is considered a fast-tempo *yaraví*, which alternates 3/4 and 6/8 meters (*sesquiáltera*) in complex guitar-strumming patterns. These guitar patterns are formed by different combinations of hand movements – downstrokes, upstrokes, stopping the strings with the strumming hand and drawing the fingers across the strings – producing syncopated rhythms and the accentuation of specific beats. Despite its lively tempo, the *albazo* has a melancholy character due to the pentatonic flavor of its melodies and prominence of the minor mode. Other forms of *albazo* are known by the Quichua names *saltashpa*, *cachullapi* and *capishca*, terms that otherwise have no specific translation or meaning in Quichua. Usually sung to the accompaniment of a guitar, *albazos* are also played by different musical ensembles such as *bandas de pueblo* (town brass bands) and military bands.

Most *albazos* can be recognized by the song lyrics written in *coplas* or short verses that often include expressions of pain or complaint such as '*ayayay*.' The lyrical content varies from unrequited love to mischievous topics, with most centered on disappointment in love. The most popular *albazos* include 'Avecilla' (Little Bird), 'Dolencias' (Pains), 'Morena la ingratitud' (Ungrateful Dark-Skinned Woman) and 'Si tú me olvidas' (If You Forget Me). The title of the latter, originally composed by Jorge Araújo Chiriboga in 1942, was changed to 'Ésta mi tierra linda' (This My Beautiful Land), and the lyrics rewritten to praise the beauty of Ecuador's landscapes and people. This song often precedes a medley of songs devoted to various Ecuadorian cities and provinces. Famous interpreters of *albazos* in the twentieth century include Carlota Jaramillo, Dúo Benítez-Valencia, Trío Los Brillantes and Hermanos Miño-Naranjo. Academic composers such as Luis Humberto Salgado and Segundo Luis Moreno stylized the *albazo* in their nationalist compositions for piano and orchestra.

The *albazo* is danced as a non-embraced dance of short steps. The man usually dances with a handkerchief in his hand, while the woman dances clapping her hands or clutching her skirt at the sides. As a song/dance, the *albazo* is more appealing to older people than to younger generations, who find this music old-fashioned. All *albazo*s known today were composed between the 1930s and 1950s.

Alcatraz

The *alcatraz* is a Peruvian courtship dance believed to date from the end of the slave era (mid-1800s) or earlier (Tompkins 1981, 270). Slaves performed the dance for after-hours recreation in their quarters. Since the leaders of the Afro-Peruvian music revival in the 1960s and 1970s recreated the forgotten music and dance of black Peru on Lima's theatrical stages (see Feldman 2006; Romero 1994), the *alcatraz* has been a staple novelty dance in staged folklore shows.

There is some debate over the name 'alcatraz' (V. Santa Cruz 1995; Tompkins 1981, 272). The Spanish term means 'pelican,' and one theory holds that the dance emulates that bird's movements. However, many Peruvians affirm that the word *alcatraz* is a distortion of *alcartaz* (paper cone). This explanation makes sense given the choreography performed in contemporary folklore shows, in which dancers affix a small paper or cloth 'tail' to their rear ends. Dancing in male–female couples, each partner tries in turn to burn the other's 'tail' with a lit candle, while the other moves his or her pelvis and hips rapidly (Feldman 2006, 64, 135–6). According to Tompkins, in the older version of the dance couples took turns performing generally free choreography in a circle of spectators (Tompkins 1981, 270; 1998, 496–7). There is disagreement regarding whether the woman traditionally pursued the man or vice versa (see Tompkins 1981, 273).

Only a few songs are performed to accompany the *alcatraz*: the traditional 'Al son de la tambora' ('To the Beat of the Drum') (Freundt 1995; Gonzáles 1998; Rivas 1998; N. Santa Cruz y su Conjunto Cumanana 2001) and two newer songs composed by eminent Afro-Peruvian revival musicians – 'Prendeme la vela' ('Light My Candle') by Abelardo Vásquez (A. Vásquez 1995, 1998; Los Vásquez 1998) and 'Alcatraz quema tú' ('Alcatraz Burn You') by Carlos 'Caitro' Soto (Perú Negro 1998 and 2003; Soto 1995). Afro-Peruvian revival leader Victoria Santa Cruz also composed an *alcatraz* entitled 'A que muevan la cola' ('How the Tail Moves') (V. Santa Cruz 1995). On recordings, these songs are often simply identified as '*alcatraz*' rather than by their titles, and some recordings present medleys mixing lyrics from two or more songs (e.g., Aviles, Campos, Cavero n.d.; Hermanos Santa Cruz 1995). All *alcatraz* songs contain lyrics that describe the dance. 'Al son de la tambora' also refers to musical accompaniment provided by a *tambora* and a *clarin*, but it is unknown whether these instruments were originally used to accompany the dance and, if so, how they were played (Tompkins 1981, 270–1).

Peruvian musicians disagree on whether the *alcatraz* is a genre in its own right or a sub-style of the *festejo*. In performances since the 1970s, instrumentation is typically identical to that used in the *festejo* (*cajón* and sometimes congas, guitar, *güiro* or *quijada*, vocals and handclaps), and the *cajón* and guitar patterns are very similar to those in the *festejo* (and the related *ingá*) (León Quirós 2003, 169). These patterns are generally felt in 6/8, with a playful tension between triple and duple subdivisions that is characteristic of Afro-Peruvian revival music. Late Afro-Peruvian revival leader Nicomedes Santa Cruz and ethnomusicologist Javier León Quirós have both maintained that the only contemporary differences between a *festejo* and an *alcatraz* are the choreography and the lyrics that allude to that choreography (see León Quirós 2003, 169, 171–2; Santa Cruz Gamarra 1975, 22). However, some performers, perhaps influenced by its unique choreographic and thematic identity, affirm that the *alcatraz* is a separate genre. Regardless of its classification, the *alcatraz* is one of the most popular and enduring of the dances staged during the Afro-Peruvian revival.

HEIDI CAROLYN FELDMAN

Aleke

Aleke is a drum-based dance music associated with the Ndyuka Maroons, who occupy the border between Suriname and French Guyana. The Ndyuka are one of six subgroups of Maroons in this region. The term Maroon (and likewise the indigenous term Businengee) is used to denote those who escaped slavery in the sixteenth and seventeenth centuries, fleeing the coastal region to establish their own communities in the dense jungle interior, as well as their descendants. This group is one of two populations in Suriname and French Guyana of African ancestry; their counterparts are the Creoles, who are the descendants of enslaved plantation workers.

Aleke is, by and large, a recreational music, although it is also incorporated into funerals and other ceremonial occasions. It emerged in the 1950s and early 1960s in dialogue with musical styles from the coastal regions of the two countries, particularly the predominantly Creole genres *kaseko*, *kawina* and *bigi poku*. Increased interest in gold mining led many Creoles to pursue work in Suriname's jungle interior – including the Cottica River area, which is generally considered the birthplace of *aleke*. These working conditions put Maroons and Creoles in close dialogue, sparking a lively exchange of musical ideas and experimentation. The combination of this musical dialogue with important musical forebears *loonsei*, *maselo* and *lama* (themselves the products of previous fusions of Maroon music and outside influences) created the foundation for *aleke* music.

According to most local accounts, the name *aleke* arose as a shortening of the name Alexander, in tribute to Alexander Grandisson, a Creole gold worker who would join the Ndyuka workers in their music-making after work, sharing with them many of the Creole music styles that were used to inflect the Ndyuka-based drumming. Several years later, an *aleke* musician, also named Alexander, or '*Baa Aleke*,' rose to prominence among the Ndyuka, further strengthening the connection between this new style and its name. As *aleke* gained popularity, it spread to the neighboring Aluku and Paramaka subgroups of the Businengee, who by the early twenty-first century were among the ranks of musicians and fans of the style.

Aleke features three large, cylindrical drums, called *aleke* drums (*aleke doon*), which were developed in the 1970s. They are a modification of the *apinti* drums commonly employed in sacred and secular music among the Ndyuka. (The term *apinti* is, first and foremost, the name of the 'drum language' used to communicate messages through these drums. Some drums are used solely to play *apinti* and go through special rituals throughout their construction. All other drums of this shape are referred to as *doon* [drum], rather than *apinti*.) Like the *apinti*, the *aleke* drum is fashioned from a single log, its head fastened by a series of pegs. The short, squat *apinti* was elongated to a height of approximately one meter (three feet), with an appearance similar to that of the *conga* drum (which is often found in the more multiethnic coastal areas). The *aleke* drum allowed musicians to play standing, instead of semi-standing or seated, as they had done with the *apinti*. However, beyond practical motivations for the change, to many the drum also came to represent modernization (see Bilby 2001). Furthermore, the decoration of these drums has allowed groups another way to express themselves creatively within a range of ideological and musical influences. For instance, various groups have painted people, animals or characteristically Maroon geometrical patterns (*tembee*) on the sides of their drums.

The other drum particular to *aleke* is the *djas* (from 'jazz'), a bass drum that is played in combination with the hi-hat and occasionally a ride cymbal, modeled after a Western drum set. The instrumental ensemble is completed with shakers (*saka*) and a bell (*bongo*). Although the singers garner most of an audience's attention, the drumming patterns are crucial in distinguishing a group's signature style and establishing a rhythmic feel suitable for dancing.

The singing typically consists of a lead singer with backup singers (*koor*), who usually respond to the lead in close harmony. Call-and-response patterns feature prominently. Singing styles vary widely, from a largely pentatonic tonal palette similar to that found in Maroon ceremonial settings, and a traditional style of trill/vibrato known as *loli*, to largely diatonic songs that betray more of a Western influence.

Common themes for songs include romantic relationships and social issues (to give one example, during the 1990s the group Bigi Ting wrote 'Condoom,' a song about safe sex that became very popular). Other popular themes include politics and spirituality. Groups tend to be comprised exclusively of male musicians, the female singer Mien from the group Boifu a Ting being one of the few notable exceptions. As with other popular musical styles in Suriname and French Guyana, there is a lively musical community in the Netherlands as well. Lyrics are generally sung in Aukanes, the main dialect of the Ndyuka, and less often in French, Portuguese or English. *Aleke* music is circulated through CD sales and radio broadcasts as well as through live performance.

Above all, *aleke* is a dance music. The form, tempo and content of a given song are crafted so as to encourage the audience to move. Several bands have incorporated dancing into their performances, either by having dancers that tour with the band or by having the musicians showcase their own dancing abilities. The group Fondering has distinguished itself by choreographing a series of dances that the lead singers perform to their more popular hits.

CORINNA CAMPBELL

Antillean Waltz

The Antillean waltz originated on the island of Curaçao and is popular today in Aruba and Bonaire as well. Its history begins in the 1880s, when Curaçao's Dutch began importing a type of German mechanical barrel organ – called the *ka'i orgel* – to the island for use at home dance parties. The *ka'i orgel* quickly became a symbol of prestige, sought by the island's upper-class Sephardic Jews and Venezuelans (who had relocated to the Curaçao decades earlier). The Dutch, Sephardics and Venezuelans all imported organ cylinders reflecting their own musical preferences: the Dutch tended to purchase Germanic dance cylinders, the Sephardics imported cylinders featuring *quadrille* and the Venezuelans preferred cylinders containing the music of Spain. Taken as a whole, a wide variety of *ka'i orgel* cylinders found their way to Curaçao, establishing an environment reflecting eventual intercultural exchange. Instrumental in this exchange were the Afro-Curaçaoans, an economically marginalized community generally unable to afford personally owning a *ka'i orgel*, but whose interests in the barrel organ's potential developed and was maintained through their hired participation at upper-class dance parties. Expected to crank the organ at parties, the island's blacks added the *wiri* as accompaniment, an indigenous Afro-Curaçaoan instrument consisting of a long piece of serrated metal over which a thin metal stick is scraped. Its raspy timbre thickened the *ka'i orgel*'s texture of sound, its rhythms enhancing the otherwise strict pulse of the mechanical organ. The *wiri* became – and remains today – the standard accompaniment.

Native-born composers began writing original waltzes for the *ka'i orgel*, their earliest attempts simply deliberate imitations of European waltz favorites. The first to move beyond the European model was Jan Gerard Palm (1857–1907) who, in 1889, introduced syncopated waltz melodies that created rhythmic shifts in the familiar 'oom-pah-pah' pulse pattern. Later that same year, composer Abraham Capriles (1862–1936) heralded another bold technique: adding repetitive eighth-note bass lines that enabled chords to change on unexpected offbeats. This approach became standard among virtually all Curaçaoan composers of the late nineteenth century. Representing clear separation from the European waltz, these newly composed compositions acquired the name 'Antillean Waltz,' reflecting how the genre was catching on elsewhere in the Netherlands Antilles. Another compositional change occurred in the mid-twentieth century, when Edgar Palm (1905–97), the grandson of Jan Gerard Palm, established a bass line that accentuated the offbeats without the repetitive eighth-notes. This technique has remained the primary writing style used by Curaçaoans composing Antillean waltzes.

Since the mid-twentieth century, the piano has become the instrument of choice among Curaçao's elite, and the *ka'i orgel*, once a symbol of prestige, has been relegated to the lower class. In the early 2000s the *ka'i orgel* may be heard in local bars and restaurants, where audience expectations differ decidedly from those of audiences at elite piano recitals. Audiences for *ka'i orgel* performances come to dance and socialize; at piano recitals, they sit quietly, listening in silent reflection. Interestingly, the *wiri* has remained an optional accompanying instrument at the piano waltz recitals, the *wiri* musician standing politely behind the pianist, careful not to overpower the soloist rhythmically or dynamically; the *wiri*, however, is a requirement at modern *ka'i orgel* performances, functioning in a musically equal role.

NANETTE DE JONG

Avanzada

Created and developed by Paraguayan composer Oscar Nelson Safuán (1943–2007), the *avanzada* combines the rhythmic pattern of the Paraguayan *galopa* with that of the *guarania* in a 2:1 (*galopa/guarania*) measure ratio, resulting in a hybrid rhythmic structure in compound duple meter that can be applied to both instrumental and vocal music.

In the 1970s, while developing the concept of the *avanzada*, Safuán, an accomplished guitarist, harpist and *requinto* performer – and who was eventually to become a *viola caipira* player – was living in São Paulo, Brazil, where he worked as an arranger and studio musician for Paraguayan traditional music *conjuntos* and Brazilian *música sertaneja* groups recording in Brazil. Searching for a way to update the style of Paraguayan traditional music – mainly with reference to genres such as the *galopa*, the *guarania* and the *polca paraguaya* – Safuán experimented in the early 1970s with the rhythmic structure of the *guarania* and in so doing discovered a new rhythm when he placed two measures of the fast compound duple meter Paraguayan *galopa* within one measure of the slow compound duple *guarania* (Safuán 2006, 39).

According to Safuán, the sources of inspiration for the *avanzada* were essentially the rhythmic structure of the lively Paraguayan *galopa* and the melodic and harmonic principles of the *guarania* (personal interview 2002). Safuán's intention with the *avanzada* was not only to offer a new way to compose Paraguayan music based on the fusion of two distinctively Paraguayan musical genres, but also to expand further the existing harmonic vocabulary of traditional music by adding augmented, diminished and dominant seventh chords in the new genre. Thus the designation *avanzada* (which comes from the verb 'avanzar,' meaning to advance) became the composer's way to explain his innovative – and advancing – techniques as applied to Paraguayan music. Safuán also encouraged the inclusion of acoustic, electronic (electric bass, guitar, synthesizer) and percussion instruments (bongos, congas, shakers) in *avanzada* compositions. For instance, in 'Tema paraguayo' (Paraguayan Theme), Safuán uses the *arpín* – an instrument developed after the psaltery by harpist Luis Bordón (1926–2007) – acoustic (Spanish) and electric guitars, electric bass, percussion, synthesizer and violins. Although Safuán's works are cultivated by a limited group of local musicians, their appeal has been spread to the main urban centers and festivals of Paraguayan popular music. In addition to Oscar Nelson Safuán, Paraguayan composers who have *avanzada* compositions include harpists Papi Galán (b. 1939) and Francisco Giménez (b. 1972), and conductor and trombonist Remigio Pereira (b. 1961).

ALFREDO COLMAN

Axé-Music

Axé-music is a hybrid genre from the state of Bahia in northeastern Brazil that fuses the music typically performed on *trios elétricos* (trucks fitted with powerful sound systems and carrying music groups during Carnival) with that of the *blocos afro* (Afro-centric Carnival fraternities): that is, the harmonic vocabulary of Bahian *frevo* with the percussive sonorities of *samba-reggae*. This blend was originally created by *trio elétrico* bands attracted to the high profile and musical innovation of *samba-reggae*.

The language of *axé-music* is the result of the alchemy that takes place in recording studios, when the electronic equipment is used to incorporate a *samba-reggae* rhythmic base, either by means of a sampler or by the recording of live percussionists in the studio, together with the studio-recorded harmony instruments of keyboard, bass and guitar.

In addition to combining harmonic and percussive sounds, the *trio elétrico* groups also record songs of the *blocos afro,* laden with antiracist messages; the result is a kind of pop/electronic version of *samba-reggae*. This harmonic-percussive fusion, emanating from the outskirts of the city of Salvador de Bahia, found favor with the middle- to upper-class population who followed the *trios elétrico* but who had previously paid little heed to the music of the *blocos afro*.

Axé-music ushered in a new way of making music in Salvador. Commenting on the process, the founder and guitarist of the group Bloco Cheiro de Amor remarked:

> Styles began changing. In the past they were more instrumental. Then people started finding inspiration in the roots of African culture, fusing *frevo* and *salsa* with *samba-reggae*. From that point many bands began recording. That percussion thing with the harmony instruments: it was really cool, it worked, and it is still there today. (Guerreiro 2000, 134)

By the end of the 1980s the sales of *axé-music* albums were easily passing the 400,000 mark. The music garnered considerable exposure on Brazilian FM radio, as a result of powerful marketing campaigns underwritten by the record companies that also control the radio programming. Performances put on by Bahian bands attracted very large crowds to concert halls throughout Brazil.

At the same time as *axé-music* bands were making their presence felt on the Brazilian charts, the *blocos afro* and their *samba-reggae* rhythms, while never reaching high figures in commercial terms, came to be disseminated nationally, largely through the work of Ara Ketu and Olodum, the first *blocos afro* to target the Brazilian market. In this way, their work, while regional in outlook, expanded into the national market.

The expression '*axé-music*' first appeared in the Bahian press in 1987, specifically in the column of journalist and critic Hagamenon Brito, who coined the term to designate the new style. According to Brito, 'Bahian rockers called this type of music *axé*. It really was a derogatory thing. I decided to call it *axé-music* and the rest of the press followed suit' (Guerreiro 2000, 137). The term '*axé*' is a Yoruba word, specific to *candomblé* (the main Afro-Brazilian religion), meaning strength, energy and power. The national media applied the expression '*axé-music*' to both *samba-reggae* and the music created by *trio eléctrico* bands.

In the 1990s *axé-music* became all the rage in Brazilian show business. The press along the Rio de Janeiro-São Paulo axis traveled to Salvador to investigate the new Bahian musical movement. Newspaper and magazine articles drew parallels between the new musical movement and earlier movements that had transformed Brazilian music such as *bossa nova* and *Tropicália*, the latter also led by Bahians (such as João Gilberto, Caetano Veloso and Gilberto Gil).

The singer Daniela Mercury, known as the 'Queen of *Axé-Music*,' is a key figure of the movement. In 1992, after singing for a few years in *trio elétrico* groups, she released the album *O canto da cidade* (The Song of the City), reaching national prominence with a repertoire mainly consisting of compositions from the most famous *blocos afro* in Salvador. She retained the defining element of drum and percussion of these *samba-reggae* songs, stamping them with a solid pop aesthetic.

Claiming to be 'a neguinha mais branquinha da Bahia' (the whitest little blackie in Bahia), Mercury set herself apart with an important point of difference. Unlike other bands that used a sampler for the *samba-reggae* parts, she worked with live drummers in her recording sessions at WR Studios, capturing the sounds of the *surdos*, *repiques*, *tárois* and *timbaus* (the various drums of the *blocos afro* ensemble) and getting them to work in harmony with those of the guitar, bass and keyboard. Mercury's first big hit single, 'O canto da cidade,' was arranged by Neguinho do Samba, the great master of *samba-reggae*.

Besides recording songs that were either composed by the *blocos afro* or evoked them and cast them in a positive light, Mercury drew inspiration from *blocos afro* dances for her own choreographies. The video for her version of the song 'O mais belo dos belos' (The Most Beautiful of the Beautiful) was recorded in Ladeira do Curuzu, home of the *bloco afro* Ilê Aiyê, from whom she got the song. According to Carlos Albuquerque, 'The most solid evidence of the strength (and pop appeal) of *samba-reggae* would come with *O canto da cidade*, Daniela Mercury's million-dollar album' (Guerreiro 2000, 138). The album sold a million copies, the highest ever total for an album by a Bahia musician. Mercury's concert schedule took her nationwide. It was through her work that the world of Afro-Bahian percussion started to interact directly with the musical production of bands connected to the sphere of the *trios elétricos*.

Many *blocos afro* groups have also pursued a blend of harmony and percussion instruments, which translates into a reduction in the number of drummers. The volume of the drums naturally dampens the sound of the harmony instruments used in *samba-reggae*, such as guitar, bass, keyboard and saxophone. Capturing the different instruments through the use of electronic equipment is, in fact, the only way to reconcile the contrasting worlds of sound that gave rise to *axé-music*.

This dialogue of sounds, already achieved in contemporary African music, came to be part of the musical language of the majority of the artists from Salvador who attained national and international success, such as Margareth Menezes, Ivete Sangalo and

Netinho. In the early twenty-first century *axé-music* is well established as an aesthetic model and continues to play a significant role in Salvador's Carnival, its biggest showcase.

GOLI GUERREIRO (TRANSLATED BY DARA MURPHY)

Bachata

Bachata is a popular guitar-based music from the Dominican Republic that arose in the early 1960s in the urban shantytowns of the nation's capital, Santo Domingo. Long associated with the poorest and most uneducated members of society, with its production relegated to the margins, *bachata* music has only enjoyed success across class and national borders since the 1980s.

Historical and Political Background

A discussion of the modern music of the Dominican Republic is impossible without considering the profound effect of the 31-year dictatorship of Rafael Trujillo (1930–61). During his rule, Trujillo controlled every aspect of Dominican life, including music. To consolidate his power, he actively worked to create a solid national identity, and he co-opted the *merengue* genre to transmit that identity. A playful music in 4/4 time, *merengue* was highly popular among the poor although the Dominican elite shunned it. Trujillo astutely took advantage of *merengue*'s large fan base among the lower classes and began to associate himself with it from his first campaign. Later, he commissioned musicians to write and perform a more sophisticated *merengue de orquesta* style (arranged for big band instrumentation) to appeal to the middle and upper classes, while the traditional *merengue típico* with its instrumentation of accordion, drum and *güira* continued to thrive among the masses. In addition to creating a sense of solidarity, the lyrics of new compositions praised the dictator, thus spreading the message of his benefit throughout the country. During the three decades of Trujillo's rule, literally hundreds of *merengues* were written in his honor.

The Trujillo family also dominated music through mass media. Trujillo's brother, Petán, launched his own radio station, La Voz del Yuna (later renamed La Voz Dominicana). An avid fan of live music, Petán invited performers of *both merengue típico* and *merengue de orquesta* to perform on his show. These artists worked for Petán exclusively, and as a result, were not allowed to record and produce their own music independently.

Following Trujillo's assassination in 1961, Dominican society and music experienced a new-found freedom. Despite its association with the dictatorship, *merengue* continued to be popular and retained its status as the national music and a symbol of national identity. The genre continued to grow and flourish in the aftermath of dictatorship, the ensuing political jockeying and the 1965 civil war. At this time *merengue* was opened to outside influences and began to adapt them into a faster, showier style.

After the death of Trujillo, rural *campesinos* began to migrate in previously unequaled numbers to the cities. This was, in part, the result of the loss of productive agricultural land that Trujillo had expropriated for the state in 1953. It was also one branch of a trend toward national and international migration resulting from the lifting of strict restrictions both within and outside the country's borders. Dominicans migrated and continue to migrate to their primary country of destination, the United States. These Dominican Americans constitute a transnational community with a continual flow of people and goods in both directions and with a malleable sense of identity that adapts to changing locations and circumstances. As these immigrants experienced feelings of alienation, music – primarily *merengue* – continued to serve as a strong marker of identity. In addition to embracing music from home, Dominican Americans produced their own music, at times adapting genres to represent their dual identity through a blend of languages and musical forms.

Bachata's Beginnings

In the political and social upheaval that followed the end of the 30-year dictatorship, the mass migration to the nation's cities, the ensuing civil war in 1965 and continued political repression, *bachata* served as a language for articulating the harsh realities faced by the poor and uneducated in the wilderness of the urban shantytowns. In addition to painting a picture of these realities, *bachata* lyrics also served as examples of how to cope with and survive in an unfamiliar landscape.

The music that is known today as *bachata* grew out of a long tradition of romantic guitar music prevalent throughout Latin America. *Bachata*'s instrumentation includes one or two guitars and percussion supplied by *bongos* and *maracas* or *güira*. It is a romantic, ballad-style music in 4/4 time. *Bachata* lyrics are emotionally charged and the singer dramatically relates a story – usually of unrequited love – in the common, quotidian vernacular of the streets. The singer's tone and instrumentation reflect the sentiment of the lyrics, interlacing the music with emotion. This underlying bitterness in most *bachata* has contributed to its epithet, *música de amargue* (music of bitterness). Because of its content, style and humble origins, *bachata* has often been compared to North American blues music.

In fact, *bachata*'s closest relative is the Cuban *bolero*, whose similar instrumentation and romantic themes carried over into the first *bachatas*. The *bolero*'s format was particularly appealing to people of the countryside where autodidactic musicians learned to play the guitar and songs were passed on as part of the rural oral tradition. These local artists performed in public places and get-togethers in the countryside, and later carried these traditions with them to the cities.

Bachata was not originally distinguished as a separate genre within a broader musical grouping described simply as guitar music or rural *bolero*. The word *bachata* dates back to the nineteenth century when the term referred to informal parties or a fun, carefree time. In its emergence as a separate musical genre in the twentieth century, early names included *música cachivache* (knickknack music) and *música de guardia* (guard music); the latter referred to military men of low rank who spent their money in cheap brothels and bars where this type of music was played. Eventually, the middle class began to refer to the music as *bachata*. No longer did this term innocently describe a get-together; rather, its new usage charged the word with a significance denoting poverty, lack of education and low quality.

In 1962 José Manuel Calderón recorded and released the first single of the rural, guitar-based music that was later to be known as *bachata*. Friends of Calderón who worked as announcers on the Voz del Trópico radio station in Santo Domingo gave airtime to this song, 'Condena' (Conviction or Sentence), also known as '¿Qué será de mí?' (What Will Become of Me?), and soon it was being requested. Calderón was then invited to rerecord 'Condena,' along with another single, at the better-equipped studio of Radio Televisión Dominicana. At this time the music was simply considered guitar music and was not yet stigmatized.

Bachata had none of the preestablished popularity and fan base that *merengue* enjoyed, nor the support and means with which to create a product of the quality that could compete with the *merengue* stars of the day. *Merengue* had long enjoyed the advantage of state support and its official representation of the national music of the Dominican Republic added to its popularity. The different types of *merengue* – *merengue típico* and *merengue de orquesta* – also allowed the genre to reach across class divisions. In contrast, *bachata* was associated with only the lowest, least-educated and most impoverished classes. Rejected by the middle and upper classes, *bachata* was relegated to being played on records or jukeboxes in bars, brothels and *colmados* – small, neighborhood grocery stores that served as places to congregate for sharing news, playing dominoes and listening to music. Live performances consisted of small venues such as bars and parties.

Similarly, *bachata* was produced, promoted and performed entirely within the informal sector. Musicians paid to rent time and space in a recording studio, laying down the song on a single track. Because musicians paid out of their own pockets for this studio time, they tended to release singles; only rarely were LPs produced. These inexpensive *bachata* records were sold primarily on street corners or by the musicians themselves. *Colmado* and bar owners purchased the most popular songs, playing them in the background for their clients or including them in jukeboxes. Unlike the big recording stars of the socially acceptable *merengue*, *bachateros* received no royalties and only a one-time, meagre payment for their productions. Because *bachata* was also denied access to both television and the press, musicians had to rely almost exclusively on the small payment they earned from live performances in small venues.

Given the economic realities of music production, *bachateros*' exclusion from the formal music industry, and the limited economic means of *bachata* consumers, *bachata* was recorded on vinyl much longer than was the popular *merengue*. It was not until the last years of the 1980s that cassette productions of *bachata* outnumbered vinyl records. One unfortunate outcome of this form of production is that many of the *bachatas* produced on vinyl prior to the 1990s are not available to the general public.

Radio Guarachita and *Bachata*

Radhamés Aracena became one of the most influential promoters of *bachata* through his radio station, Radio Guarachita. A Dominican disc jockey and record producer with a keen sense of self-promotion and business as well as an acute understanding of Dominican tastes and idiosyncrasies, Aracena originally refused to include *bachata* on his radio shows, deeming it of poor production quality and equally poor grammar. Soon, Aracena realized that *bachata*'s popularity was growing and the music was selling better than the records he imported and produced. Aracena decided not only to play the guitar-based music on his station but also to record *bachata* artists. Astutely, he manipulated airtime to play only those artists whose releases he produced and those productions to which he held distribution rights, in this way both creating a demand and supplying the need.

Aracena controlled each step of the production and promotion of the music he produced. Hopeful *bachateros* played for him, and he recorded their songs on cassettes. If he was interested in pursuing an act, he typed up the lyrics, correcting the grammatical errors, regionalisms or linguistic indicators of class. The artist was required to relearn the song in its corrected form before recording it for release.

Radio Guarachita also served as a link between people in the urban *barrios* and the countryside. On a very concrete level, Aracena encouraged and promoted interaction between his listeners and Radio Guarachita's announcers by including a telephone in the booth so listeners could call in requests or send messages via the radio to friends and loved ones far away. At a time when the country had a limited telecommunications infrastructure and questionable service, these so-called public service announcements served to join listeners across geographical boundaries and to fill the alienating void of family felt by many urban migrants. Similarly, Radio Guarachita contributed to a sense of community transcending geographical limitations among rural and urban citizens by allowing these groups in different locations to listen to the same programming, including *bachata*.

Evolution and Acceptance of *Bachata*

In the late 1970s and the early 1980s, the lyrics of *bachata* became increasingly racy as more songs were filled with sexual *double entendre*. Although many musicians continued on in the romantic vein, others began to introduce the harsher language and images of the urban shantytown streets. Tony Santos, Blas Durán and Julio Angel were highly popular musicians of the popular *double entendre bachatas*.

Bachata of the 1980s continued to portray the realities of its producers and consumers by reflecting societal shifts. The increasingly poor economy of this decade found greater numbers of women migrating to the cities, where they often found work more easily than men did. These economically independent women often supported men, a pattern that broke with male-dominant patterns and norms. As a result, many men found themselves adrift in the new social configuration. *Bachata* of the 1980s depicted these changes. Although disillusion and betrayal still appeared as themes, lyrics increasingly found men seeking solace in alcohol and the informal, no-strings-attached encounters of the brothels. Similarly, *bachata* portrayed more and more men grieving to their friends in a bar over romantic losses. It was at this time that *bachata*'s lyrics oozed with such bitterness that the genre began to be known as *música de amargue* – music of bitterness.

The first step in *bachata*'s acceptance into mainstream society began slowly in 1983 with Luis Segura's 1983 record, *Pena por ti* (Grief Because of You), often referred to merely as *Pena*. This album brought *bachata* into the broader public eye, albeit temporarily, for the space of approximately two years. So successful was Segura that the students of the Universidad Autónoma de Santo Domingo invited him to perform a concert. Although a second concert was scheduled, the dean of the university deemed it improper for a prestigious university and forbade it. The resulting scandal gave *bachata* the press it had long been denied, but, by 1984, *bachata* had faded into the background once again.

In the late 1980s and early 1990s the sound and production of *bachata* began to change. Blas Durán's 1987 'Consejo a las mujeres' (Advice to Women) marked a milestone in the evolution of the genre. This *bachata* represents the first effort at recording in multiple tracks and was also the first one to include an electric guitar as lead. A newcomer, Luis Vargas, stepped into the limelight in 1990 with daring, bawdy lyrics and above all an innovative musical style. In addition to an accelerated *bachata*, Vargas replaced the *maracas* with the *güira* and abandoned nylon-strung guitars for steel-strung ones, inserting a microphone into the sound hole of the instrument to produce a stronger, sharper sound. These innovations and adaptations were embraced by other *bachateros*, above all those first entering the business.

Bachata began to make inroads into the mainstream again in 1989 when composer Luis Dias and the well-known and popular singer Sonia Silvestre collaborated with musician Jorge Tejada to produce *Yo quiero andar*, an album that included five *bachatas*. In addition to the better recording conditions available to Silvestre, the album featured the extensive use of synthesizers in place of most instruments, with only the guitars and *bongos* being actually played. For this reason, Silvestre called the type of *bachata* on this new album *techno-bachata*. This innovative production paved the way toward *bachata*'s eventual acceptance and success.

Bachata's fate changed completely in 1990 when the popular *merengue* artist Juan Luis Guerra released *Bachata rosa*, an album that included four *bachatas* in the synthesized techno style that Silvestre had made successful. Guerra, with his formal music education, refined lyrics and established success in the *merengue* industry, gave a new face to *bachata* steeped in the genre's traditional instrumentation and rhythm. Although Guerra's *bachatas* still included *double entendre*, their poetic lyrics made the edges less rough and more easily acceptable. *Bachata rosa* was not only a national hit that crossed class lines, but an international phenomenon as well. In 1992, *Bachata rosa* was awarded a Grammy in the Latin Tropical category.

Well-known singer-songwriter Víctor Víctor also contributed to the growing popularity and acceptance of this once-shunned genre in the 1990s. In addition to releasing a well-received *bachata* single, Víctor Víctor organized two concerts in December of 1993 entitled 'De bachata en bachata.' Held in Santo Domingo and the Dominican Republic's second largest city, Santiago de los Caballeros, these concerts included not only Víctor Víctor and Silvia Silvestre, but also traditional *bachateros* who had dedicated their careers to the genre, such as Luis Segura and Raulín Rodríguez. Selections highlighted popular *bachatas* across the decades as well as the highly popular *techno-bachatas* of the moment. In this way, the concerts served to united *bachateros* of both veins and to provide the traditional *bachateros* with a larger venue than they had previously known.

Together, these successes and activities opened the doors to *bachata*'s broad acceptance, and new and established *bachatero*s now had more opportunities to produce and perform. Now, bachateros received media coverage and could be heard on FM stations across the country. *Bachata* began to be recorded on cassette and eventually CD, and producers began to pay more attention to marketing, image and overall quality. Three young musicians, Luis Vargas, Antony Santos and Raulín Rodríguez, exemplified this new outlook with their strong voices, confident singing style and youthful image. Antony Santos became the first traditional *bachatero* to penetrate mainstream music following Guerra's success with *Bachata rosa*, and others followed.

***Bachata* of the Diaspora**

In the early twenty-first century, *bachata*'s role as an urban music has continued among the large group of Dominican transnational immigrants, above all the Dominican Americans. In the United States, the music, true to its migrant and urban roots, has evolved to express the realities of Dominican American immigrants. The group Aventura represents this expression through both image and music. Composed of four Dominican American artists, Aventura is the first *bachata* boy band. Their music represents a fusion of languages – lyrics include both Spanish and English – and musical influences through the fusion of *bachata* with blues. Similarly, these 'Kings of Bachata' introduced a contemporary style to the genre by dressing in jeans, T-shirts and hoodies, thus achieving a look more akin to hip-hop than traditional *bachata*. It is perhaps this look, so reminiscent of North American urban musicians, that has led some to term their style of *bachata* 'urban *bachata*.'

In addition to a fresh approach to music and image, Aventura has also achieved another first for *bachata* by playing in the largest venues, including being the first *bachata* group to play Madison Square Garden (2007), where the show was sold out. Since Aventura scored its first hit in 2002 with 'Obsesión,' others have adopted their approach and look. Bands such as Óptimo and Xtreme and singers Toby Love and Prince Royce have forged a similar union of languages and styles.

Conclusion

Bachata has continued to adapt to the changing situations of both those who interpret the genre and those who listen to it. Its eventual acceptance across class and national borders has provided *bachata* musicians with access to better modes of production and distribution as well as a space in prominent venues. From its roots in rural guitar-based music to its status as the music of preference in the Dominican shantytowns and its shunning by elites to the urban *bachata* produced by Dominican Americans, this music has served as a poignant form of expression for the realities of those who produce and consume it.

Baguala

Baguala is the name assigned by convention to a type of song traditionally sung by Indians and *criollos* (i.e., people of Spanish or mestizo descent) in northwest Argentina, based on a three-note scale approximating to the pitches of a major triad. Other local names for it include *vidala*, *vidalita*, *coplas*, *tono* and *tonada*, but the needs of the urban, media-transmitted folklore market have dictated the dismissal of such ambiguities, common in the oral-tradition repertoire. The alternative names now serve to designate other genres.

In its rural settings, *baguala* is performed by a solo vocalist, loudly singing to the accompaniment of a *caja* (rustic snare drum). The feast of *Carnaval* (Mardi Gras) is held to be the essential (or sometimes the only) occasion for the performance of *bagualas*: there is an idealized image of the *coplero* (*baguala* singer) marking his slow stroll on the *caja* as he comes down from the mountains where he dwells into the towns where *Carnaval* will be celebrated. However, in the provinces of Jujuy, Salta and La Rioja *ruedas de copleros* (*baguala*-singers' rings) are held all through the summer. In them, amateur singers sit for hours, taking turns to perform their stanzas, in friendly *contrapunto* (competition). They sing both traditional lyrics and their own improvised or semi-improvised verses. The tune is usually always the same for each singer, reflecting the tradition of his family or of a small region. The subjects are amatory, humorous, philosophical or political.

The revaluation of local native and Indian traditions has moved local governments and organizations to celebrate larger and more institutionalized *encuentros* (meetings) of *copleros*, which in some cases attract national and international tourists; best known is the one at Purmamarca which in 2009 was holding its 26th consecutive annual edition. Although it is an activity shared by men and women, it is the latter, the *copleras*, who have captured most national attention. Starting in the 1950s Buenos Aires-born performer and amateur musicologist Leda Valladares collected a large number of *bagualas* and initiated an unsuccessful crusade to introduce them in schools all over Argentina as a main method in the study of music. Since the 1990s some *copleras*, such as Mariana Carrizo, have been making successful appearances in the national media and in *folclore* festivals.

The singing of *baguala* prominently features *kenko,* a kind of vocal ornament akin to yodeling. Although textbooks describe the *baguala* mostly as being in binary or free rhythms (and it is performed thus by amateur and professional *copleros*), in its circulation in urban milieus it tends to employ the *vidala*'s metric (3/4) and rhythmic patterns. Keeping the slow and ponderous *caja*-beating of the *copleros*, urban practitioners transfer its heaviness to the singing style. In this they diverge from traditional performances, where the voice often resorts to gay, graceful and picaresque delivery.

As a self-standing song, the *baguala* has seldom been employed in popular *folclore* (some of the nearest examples are 'La bagualera' [recorded, for example, by Mercedes Sosa in 1966] and 'El seclanteño' [recorded by Suna Rocha in 2000] both by Ariel Petrocelli), but its distinctive scale and profile have often been included in other genres as symbols connotating region and race, as well as the idea of personal loneliness. 'Zamba del silbador' by Gustavo Leguizamón and Manuel Castilla (recorded by Duo Salteño in 2000), for example, does not, as is usual in *zamba,* repeat the music for the last two verses of each stanza: instead, it sets them to a new melody in *baguala* style when the words '*se vuelve baguala*' ('turns into *baguala*') occur. 'Vidala de la copla' (Chango Rodríguez, recorded by Los Andariegos, for example, in 1979), an impassioned assertion of regional musical identity, begins straight away in *baguala* style, with the words 'Vidala tengo una copla, no me la vais a quitar' ('I have a *vidala*, a *copla*, and no one will take it away from me').

LEONARDO WAISMAN

Baião

Baião is a genre of music with roots in the music of the rural north-east of Brazil that became hugely popular with a countrywide urban audience in the 1940s through the radio and recorded performances of Luiz Gonzaga and Humberto Teixeira in particular. By the late twentieth century it was included under the broader umbrella term of *forró.*

In the form in which it was promoted in the 1940s *baião* emerged from an encounter between accordionist Gonzaga (1917–89) and poet and composer Teixeira (1915–79). Gonzaga, who was by that time already established in the world of radio and phonograph records, had sought a partnership with Teixeira.

Both planned to carry out a joint project that would better represent the musical culture of their native Brazilian North-east and would encourage the diffusion of that tradition, which was then unrepresented in the record and radio industries, despite the large-scale migration of north-easterners to the southern cities of Rio and São Paulo.

The two men belonged to different social strata: Gonzaga (originally from the town of Exu, in the state of Pernambuco) had acquired some musical knowledge from his family experience – learned from oral tradition – which formed the basis of his transformation into a professional singer, accordionist and composer. Teixeira (born in Iguatu, in the state of Ceará) had formal schooling, practiced law and had also become a poet and amateur musician. From the fortunate encounter between these two, the song and dance 'Baião' was born – the first poetical and musical piece produced by this duo and one which made a great impact on Rio de Janeiro culture because of its originality. The first version of 'Baião,' recorded in 1946 by a group calling themselves Quatro Ases e um Curinga (Four Aces and a Joker), spread throughout Brazil and to other Latin American countries such as Cuba, Argentina and Peru (the lyrics of 'Abraço do baião' (The Embrace of Baião), recorded by Caco Velho in 1952, testify to the widespread popularity of *baião* throughout Latin America). In addition to Teixeira, other musicians and lyricists joined Gonzaga. One of the most outstanding of these was the Pernambuco-born physician Zé Dantas (1921–62), whose partnership with Gonzaga resulted in the creation of the most representative works of the repertoire.

The Term 'Baião'

The history of the term is a complex one. The terms *baiano, baiana, baianá, baião* maintain an etymological relationship with the northeastern state of Bahia. Presumably, *baião* is a contraction of *baiano* (adj. = from Bahia, that is, *baiano/baiana* = born in Bahia). *Baião* is also a regional version of *bailão* (a big ball). However, *baião* is a more specific term than *baiano* or *baiana*, since it indicates a music genre. Nonetheless, in order to define the term *baião*, it is also necessary to review the relevant definitions of *baiano*. In the most reliable source for such meanings, the *Dicionário do folclore brasileiro* (Dictionary of Brazilian Folklore; 1954), Câmara Cascudo describes *baiano* as a lively dance, requiring a high degree of improvisation and agility of movement of the dancers' feet and body. Further on, he defines *baiano* as being danced by different social classes in grand public festivities at the end of the nineteenth century. A contemporary of Cascudo, Sílvio Romero (1951, 72–3) relates *baiano* to music and dance that precede the *desafio* of the *cantadores* (improvisational musician-poets' challenge; for more on this subject see *cantoria-de-viola*). Romero highlights the presence of components from the three main ethnic matrices that are the foundations of the Brazilian racial mix (Amerindian, European and African). In turn, Baptista Siqueira (1951, 72–3) associates the term *baião* with the *caboclo* (term used to describe a mix of European and Brazilian Amerindian descent) culture in the northeastern *sertão* (backlands) by characterizing the intermezzo-style of the *violeiros* (viola's [guitar-like] players), as well as to the rhythmical patterns of instrumental groups of the region. The nationalist composer Guerra Peixe (1955, 2–3) suggests a more comprehensive definition of the term *baião*, emphasizing the characteristics of 'joy, variation and liveliness,' which achieve the same level as the other popular manifestations called *samba* and *batuque*.

From this evidence we can conclude that *baião* and *baiano* are widely defined, with an emphasis on music and/or dance, and with a particular association with entertainment from the Brazilian countryside. In some of their music, Luiz Gonzaga and his partner Zé Dantas make allusions to this, as, for example, in this passage from the lyrics of 'Tudo é baião' (All Is *Baião*, 1952):

Andam dizendo que o baião é invenção	It's said that *baião* is an invention
Quem disse isso nunca foi no meu sertão	Who said this has never been in my *sertão*
Pra ver o/os cego nesse ritmo cantando	To see the blind beggars singing in this rhythm
E o violeiro, no baião improvisando	And the *violeiro* improvising in *baião* [rhythm]

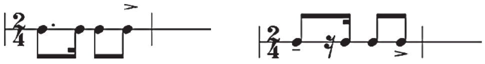
The Emergence of *Baião*

The process by which the traditional songs and rhythms of the Brazilian North-east became urbanized – of which baião is a prime example – will always be linked to the individual persona of Luiz Gonzaga. Gonzaga moved to Rio and began his appearances during the period of Getúlio Vargas's dictatorship (1937–45); according to Antônio Cândido (1987, 181), in spite of the political and cultural restrictions that were imposed at the time, a great expansion of intellectual and artistic culture occurred, in which literature and radio played leading roles. Within popular music, says Cândido, the process of cultural expansion followed a different trajectory from that which took place in other areas: it emerged from the grassroots and moved toward the higher social strata. An important element in this process was the role of the media, particularly the radio (mainly the nationwide Radio Nacional and Radio Tamoio) and record industry, which opened the market for popular musicians, enabling them to become professionals. The majority of Luiz Gonzaga's recordings were made for RCA, although he eventually joined other record companies. In order to reproduce low-cost records, mainly to reach the pockets of his fans – a great majority of whom were migrants – RCA created popular labels: Camden and Vik, for instance. Gonzaga made nearly 633 recordings (wax, vinyl, CD and DVD), a number today multiplied even further thanks to remastered versions. Nowadays Gonzaga's discography comprises circa 1,900 recordings.

These factors were crucial for the success with which Gonzaga and his partners introduced northeastern repertoire not only into Rio de Janeiro and São Paulo society in the 1940s and 1950s but all over the country. With his outstanding audacity and talent, Gonzaga was the one who designed the components of this musical genre, integrating the intrinsic poetical and musical conception – content of lyrics, melodic design, stanza structure, harmonic sequences, rhythmical standards, instrumentation – with the extrinsic aspects such as type of vocal style and costume, to name just two.

Musical Characteristics

Gonzaga's repertoire reveals the genre's essential characteristics. There is a close relationship between intonation of melody and speech itself. *Baião* is practically a recited song: its music originates from rhythm and from the content of verses, just as happened with the *cantadores* from the north-east and would later characterize rap artists. The *baião* song also has a didactic motive, in the sense that its verses teach listeners how the dance is to be performed. Its rhythm, derived from the lively dances of the *sertão* (the backlands of northeastern Brazil), acquired a new configuration through the emblematic presence of the accordion and the traditional percussion instruments such as the triangle and *zabumba* (a big drum). In terms of rhythm, not only in *baião* but in other similar dances, such as *xaxado, xote, xamego, embolada, coco* or even *toada*, the basic rhythm inserted into a binary measure has its main stress on the second beat:



Example 1: Basic rhythm of *baião*

This characteristic is widely found elsewhere, from the *habanera* to the Charleston, suggesting the influence of African music (Appleby 1983, 73–80). However, what distinguishes these examples is the variety of rhythmic combinations and stresses distributed in a frame of binary measures reinforced by different durations, which often makes precise transcription into musical notation almost impossible.

Various aspects of the performance of *baião* became hallmarks of the style, contributing to its prestige. Chief among these was Gonzaga's nasal delivery. Also emblematic was the clothing chosen by him for live performances in auditoriums and public squares, which included a combination of the typical apparel of the two main idols of the *sertão*: the *vaqueiro* (a kind of 'cowboy') and Lampião (the symbolic figure of northeastern banditry). From the former Gonzaga chose the leather jacket, and from the latter the sandals and hat. All these resources – the rhythmic characteristics, the 'tissue' of the melody and the other elements mentioned above – are basic features of the musical language of the northeastern *sertão*, which was disseminated throughout Brazil through the power of the main radio station, the nationwide *Radio Nacional.* Another important component in that dissemination was the adherence, in the 1950s, of the singer Carmélia Alves (b. 1923), who was crowned 'queen of the *baião*' (*rainha do baião*) by Gonzaga. She became the ambassador of the *baião* genre at the main show houses attended by the Rio de Janeiro elite.

Later History

The process which Gonzaga and others unleashed, whereby northeastern popular music moved to the center of Brazilian music, was continued in various ways by those simple re-producers of his style and his typical group – nameless professionals who breathed life into *forró* dances in the remotest small towns; those who produced more refined work by maintaining the 'musical accent' of the north-east, such as Dominguinhos (b. 1941) and the young Waldonis (b. 1972); and those who boldly combined Gonzaga's influence with other sources, producing a fusion of new styles and new technologies, as in the case of the *Tropicalistas* (1970s). Gonzaga himself, toward the end of his artistic life (in the 1980s), knew how to be flexible and to accept the changes resulting from the different readings of his repertoire, incorporating some of that influence into his own music, a development which contributed to the emergence of new versions of the traditional *baiões, xaxados, chamegos* and so on becoming part of the contemporary *forró* style.

Most of Gonzaga's albums from the 1980s mention the word *forró* on their covers as the main title.

The 1999 compilation *Baião de Viramundo*: *Tributo a Luiz Gonzaga,* featuring groups from Brazil and abroad, offers a good sample of the continuity of *baião* when it is no longer limited to the faithful reproduction of its matrices. Alternatively, one might say that it demonstrates an updating of a tradition resulting in a new language. Contemporary musicians include Gonzaga in their memory banks, which encompass both globalized musical standards and those matrices that originated from their own cultural experience. They represent that category of individuals who traverse transculturality, with freedom from restraint. They are the new *mestiços* who, in Nouss's view (2002, 104–14), exercise crossbreeding as a means of building their tomorrow. In the same way that *baião* originated from a true anthropophagic process with regard to the cultural elements that preceded it, its absorption by the new generations has solidified *forró* as a genre, and it has renewed itself, as can be seen in other varieties of songs and dance.

ELBA BRAGA RAMALHO

Bailanta

Bailanta is used to refer to two highly related but different things: a musical genre that encompasses what in Argentina is considered *música tropical*, and the physical place where people go to dance those styles of music. In the first usage, people (often derogatorily) refer to *música tropical* as *música de bailanta* (*bailanta* music). *Música de bailanta* includes *cumbia, merengue,* salsa, reggaeton and a local hybrid called *cuarteto cordobés* (which mixes variously Spanish *pasodobles* and Italian genres with *merengue, salsa* and other Latin genres).

From the 1930s *bailantas* were the dance halls where rural migrants living in Buenos Aires (most of them from indigenous backgrounds – the Argentine *negros*) gathered to dance their choreographies (usually *chamamé* from the provinces neighboring Paraguay and Brazil). In other words, in its derogatory usage what the word *bailanta* and the noun *bailantero/a* does is to address the migrant character of *música tropical* artists and followers.

Within white, middle-class discourse, *música de bailanta* is viewed as lower-class 'black' music (*música de negros*), where often *negro* and *bailantero* are considered synonymous (alongside the other derogatory name this population is usually given: *villero* [the inhabitant of the shanty towns]). In this context, *negro* does not refer to people of African ancestry (who supposedly do not exist in Argentina – a myth quite widespread in the country), but to mestizos, that is, to the racial and cultural admixture of indigenous people and Europeans that forms the majority of Latin American populations. Followers of *música tropical* often proclaim their *bailantero*, *villero* pride by adopting and then reversing stigmatizing labels, such as *negro*. *Música de bailanta* is also the music of choice of many immigrants from Bolivia and Paraguay.

Although different *música tropical* genres are played at the *bailantas*, since the late 1980s *cumbia* is, without a doubt, the music most people dance to in these dance halls. In the late 1980s and early 1990s the most important *bailanteros* were singers such as Alcides, Miguel 'Conejito' Alejandro, Pocho la Pantera, Ricky Maravilla, Sebastián, Los Cartageneros, Grupo Sombras, Grupo Cali, Gladys 'la bomba tucumana,' Lía Crucet, Koli Arce y su Quinteto Imperial, Adrián and his Black Dice, Malagata, Karicia, Green and Red. All of them were of humble origins and, at least at the beginning of their careers, they still worked part-time in other jobs, such as waiters, electricians, construction workers. Although *bailanta* music is clearly dominated by men (most of the producers, musicians and owners of dance halls are male), there are some female figures who were and still are quite important. One of them in particular, Gilda, acquired a saint-like status after her tragic death in an automobile accident in 1996. Such accidents are not infrequent given that *bailanta* groups often travel rapidly between venues, sometimes miles away from each other. *Bailanta* groups usually offer short sets (of about 20 minutes each) and play in several *bailantas* (5 or 6 on average) per night. They travel in minivans and are often followed by some of their (usually female) fans who move with them from one *bailanta* to the next. Rodrigo, one of the most important *bailanteros* of the 1990s, died in one of those frequent car accidents.

By the late 1990s the most important *bailanteros* were Daniel Agostini, Comanche, Los Chakales, Ráfaga, Tambó Tambó, Amar Azul, Los Charros, La Nueva Luna and Leo Mattioli (the last ones representative of the 'romantic' variant of *cumbia* from Santa Fé).

Cumbia romántica encompasses various instrumentations, with the common trend to perform a romantic repertoire. There are several varieties of 'romantic' *cumbia* including Colombian *cumbia*, *cumbia norteña, cumbia santafecina* and *cumbia saniagueña*. As Alejandra Cragnolini (1998) suggests, *cumbia norteña* is characterized by the use of syncopated rhythms that come from Andean *huaynos* and *carnavalitos*. Its lyrics tend to encompass romantic topics. The most important instruments are keyboards, electric guitar, electric bass, drums, *cencerro* and *tumbadora*. While *cumbia peruana* is very similar to *cumbia norteña* in terms of rhythms, instrumentation and romantic topics, *cumbia peruana* involves more complex percussion parts in its songs. *Cumbia santafecina* is a little different in terms of instrumentation, because the accordion predominates and sometimes trumpets and trombones are incorporated. *Cumbia santiagueña* adds keyboards to the accordion and keeps the other basic instruments as well (guitar, bass, cowbells and so forth). It mixes the genre of *cumbia* with *guarachas* and *merengues*. Several *cumbia santafecina* bands were formed in the mid-1990s and became famous by the end of that decade: Los Leales, Los Lamas, Los Cadiz and Los del Bohio. However, by the late 1990s *bailantas* were witnessing the appearance and success of a new *cumbia* subgenre: *cumbia villera*.

Cumbia villera has several distinctive features. The groove is basically the same as the Colombian *cumbia*, but it is often played at a slower tempo. This characteristic gives the style a relaxed pace and feeling that is mildly reminiscent of Jamaican reggae. In terms of instrumentation, drum machines and electronic or sampled percussion are used in combination with acoustic percussion instruments. Nevertheless, perhaps the single most important characteristic in the instrumentation of *cumbia villera* is the use of the lead synthesizer taking the melodic role (that had hitherto been taken by the accordion). The performance technique on the synthesizer makes extensive use of the pitch bend control. This feature allows the keyboard player to 'bend' the notes expressively (like rock guitarists). In terms of its melodies, *cumbia villera* uses a limited register – generally a fifth – and is very accessible to untrained voices. The binary meter supports, in a moderate tempo, two rhythmic levels: the quarter-eight-eight figures that represent the Andean element which, at the same time, serve as a background for the rhythmic intervention of the Afro-Colombian level – a splutter of syncopated rhythms performed by the Latin percussion. All these musical resources are enveloped by the sophisticated electronic sound that plays a major role in severing many popular musics from their places of origin, and to making them apt not only for their international circulation, but also for their local re-territorialization, as is demonstrated by *cumbia villera*. In the case of the development of the genre in Argentina, a very important nonmusical element – the lyrics – helps to confer on *cumbia* its local specificity, because the topics of violence, drugs and hard-core sex are unique characteristics of *cumbia villera*.

The popularity of *cumbia villera* between 2000 and 2006 was immense, declining for a couple of years from 2006 to 2008, before increasing again. Middle-class audiences continued to look upon *bailantas* negatively, but with the advent of *cumbia villera* the stigma of being *bailantero*, *negro* and *villero* became enshrined as positive characteristics by some musicians and the working-class public. In this way *cumbia villera* seeks to make explicit the condition of poverty and social problems of its constituency denouncing the stigma at the same time. Accordingly, *cumbia villera* does not hide the characteristics associated with poverty, unemployment, illicit activities like robberies and drug use, but rather transforms them into lyrics that constitute an aesthetic ideal. The sexism that is sometimes rampant among *bailantas*' male constituency is also enshrined in *cumbia villera* lyrics. At the same time, young females have an ambiguous relationship with those same lyrics, ranging from totally disliking them to enjoying them because they portray sexually empowered women. Yet most young females are somehow in the middle of these extreme positions, claiming that the lyrics do not portray them but 'other females,' accepting the lyrics only as jokes, and the like.

The most important groups of this *bailanta* genre are Flor de Piedra, Damas Gratis, Los Pibes Chorros, Yerba Brava, SupermerK2, Meta Guacha, La Piba, Altos Cumbieros, La Base Musical, La Repandilla, El traidor y los pibes and Una de Kal. While *cumbia villera* eclipsed all other varieties of *cumbia* in terms of mass-media exposure for several years, those other varieties in general, and the different versions of *cumbia romántica* in particular (*santafecina*, *norteña*, *colombiana*), never disappeared in the *bailanta*. At the beginning of the twenty-first century, there is a trend toward a kind of 'romanticization' of some bands or soloists, who previously played only *cumbia villera*, but keeping the musical base of *villera*, insert romantic lyrics into the format. The most important artists of this trend are Néstor en Bloque, El Polaco, El Original and Los chicos de la vía.

The more popular 'romantic' representatives of the *bailanta* movement in 2008–9 were Amistad o Nada, Sebastián Mendoza, Uriel Lozano, Jambao, Karina and the Mexican bands Los Ángeles de Charly, Rayito Colombiano and Los Ángeles Azules. Other bands, such as Agrupación Marilyn, La Banda del Lechuga, El Empuje, El Tecla and 18 Kilates, mixed *cumbia villera* with romantic *cumbia* and, sometimes, politically inclined lyrics.

The culture industry and promotion networks related to *cumbia villera* are dominated by two Argentine record companies, Magenta and Leader, although since the 2000s others have begun to enter the market. Magenta and Leader have 'invented' several soloists and groups, and marketed them unremittingly in the television program they are related to and the *bailantas* they own. In general, the songs and musical arrangements of these 'invented' new artists are created by a musical-producer who then 'constructs' a group with the personal characteristics appropriate to the repertoire and the 'image' he wants to convey.

Finally it is worth mentioning that immigrants from Paraguay, Bolivia and Peru have their own *bailantas*, mostly in Greater Buenos Aires, where they enjoy *música tropical* with the regional twist of their own countries of origin.

PABLO VILA AND MALVINA SILBA

Bailecito

The *bailecito coya* is a folkoric genre representative of the provinces of Jujuy and Salta in northwestern Argentina. Its name differentiates it from the *bailecito norteño* which is typical of the Santiago del Estero and the northcenter regions of the country. Although both use the same music, during the early part of the twentieth century the latter incorporated figures and gestures (*saludito*) appropriate to salon dances.

Originally from the Bolivian high plateau, the term *bailecito* was given during the nineteenth century to the majority of picaresque dances in Peru and Bolivia, creating confusion because – as reported by musicologist Carlos Vega – even the *gato* and *carnavalito* were known by this name. In the early twenty-first century the *bailecito* is recognized as a distinct expressive form, marked by its gentle character, moderate tempo and delicately simple display. In its traditional versions, the structural and stylist components (musical sonorities, choreographies, morphologies and metric) are relatively fixed or crystallized.

The typical sonority of the region is formed by the convergence of *charango*, *bombo* and *quena*, together with solo singing or two voices in parallel thirds. This *criollo* repertory is characterized by a bi-rhythm resulting from the superimposition of 6/8 and 3/4 meters, in simultaneous and successive forms.

Most *bailecitos* are in the minor mode; however, within the general harmonic context it is perceived as ambiguous, due to the oscillation between the tonal and modal systems of chord arrangements. This produces an effect of estrangement when listening to the particular introduction: VII III V Im, a sensation that is reinforced by the use of South American scales like the bimodal minor scale and other mestizo modes derived from Andean notation.

In the dance, the use of the handkerchief constitutes a special courtship language with its ability to sustain a bodily dialogue between dancing couples. Throughout the dance, the public provides accompaniment in the form of rhythmical hand-clapping and refrains fashioned by popular and peasant culture.

The literary content and the sociocultural representations of the *bailecito* include ancient as well as modern texts of a picaresque or humorous nature. Among them is worth noting the masculine aim of avoiding marital commitments, as in 'Casi casi' (anonymous) or committing infidelities, as in 'El picha picha' (W. Villagarcía/Jorge y Rolando Jiménez). Reference is also made to the *sirviñacu* (a trial marriage, in Kolla-Aymara culture).

The most popular of the *bailecitos*, 'Viva Jujuy' (anonymous) evokes the landscape of the puna – the high plateau – while others tell of promiscuous situations that occur during Carnival or of the painful separations caused by the working conditions characteristic of the region.

Since the 1960s prestigious authors have appealed to other emotional registers; for instance, 'La Huarmillita' (Jaime Dávalos and Eduardo Falú; the title comes from the Quechua 'warmi' meaning 'woman' and 'warmilla' meaning 'good, nurturing woman') highlights the identity and importance of the *coya* woman, while the feminine point of view is represented by the Salta composer Sara Mamaní in 'Noches de San Lorenzo' (San Lorenzo Nights) and 'Corazón de arena' (Sand Heart). Also, Enrique Benavídez in 'Abra del Zenta' makes explicit the prevailing social inequality of the region by paying homage to the shepherd boys who freeze to death in the mountains. Another distinctive feature denoting the mestizo origins of the *bailecito* derives from the mixing of Quechua words and *gaucho* speech expressions.

During the last 40 or so years the *bailecito* has been included in the major festivals of popular and folkloric music, like those of Cosquín and Baradero, that are broadcast throughout the country on television and radio. Similarly, international dance festivals have featured the *bailecito* followed by the *carnavalito* and the *cueca,* as signature numbers of the Argentine Northwest. As a result, national record labels have been interested in capturing the genre in live situations in folklore *peñas* (public spaces featuring dance and songs) and neighborhood cultural centers. Within education, the teaching of the *bailecito* is included in the official curriculum of upper-level and university education establishments, such as the Escuela de Música Popular de Avellaneda and the Departments of Folklore and Musical and Sound Arts of the National University Institute of Art.

Some young composers regard the *bailecito* as music to be listened to and have created ensembles that require a more demanding technical execution on the part of performers, include innovative instrumental additions such as the *bandoneón*, clarinet and transverse flute, and break with the standard, harmonic and stanza models.

The traditional instrumental formations include *quenas* or *pincullos*, *bombo criollo*, *charango* and guitar, although occasionally one of these instruments can be omitted or replaced by another. In the Santiago del Estero region, the interpretation frequently includes the indigenous harp or the violin. It is worth nothing that the expression *aire de bailecito* ('in the style of bailecito' or 'like a bailecito') is issued in sheet music and recordings of folkloric nature.

Twentieth-century composers and performers whose work has included *bailecitos* for piano or in chamber music arrangements include Gustavo Leguizamón, Waldo de los Ríos, Remo Pignoni, Uña Ramos, Melania Pérez, Dúo Salteño, Tomás Lipán and Bruno Arias.

Balada

Balada is a cosmopolitan and transnational genre of pop music in Spanish. A hybrid of Mexican *bolero romántico,* Italian and French orchestrated love songs and early rock 'n' roll ballads, *balada* emerged simultaneously in Spain and throughout the Americas in the late 1960s. *Balada* is most often performed by a solo singer accompanied either by a rock ensemble or a studio orchestra. The tempo is slow to moderate, and the voice is foregrounded in the musical texture (Stigberg 1985). *Balada* lyrics are invariably about love and lack references to sociopolitical issues and local events.

Balada arose in the late 1960s as a modernized alternative to the by-then old-fashioned *bolero*. It was developed at around the same time in several countries: with Carlos Lico and Armando Manzanero in Mexico, with La Lupe in the United States, with Raphael and Julio Iglesias in Spain, with Roberto Carlos in Brazil, with Leonardo Favio and Sandro in Argentina, and with Los Ángeles Negros in Chile.

Mexican Armando Manzanero is a key transitional figure between *bolero* and *balada*. He began his career in the mid-1950s as composer and piano accompanist for major *bolero moderno* stars, such as Lucho Gatica and Marco Antonio Muñiz. His first solo album *A mi amor … con mi amor* (1967) included *boleros* he had composed for other artists as well as new songs, which were recorded with modernized orchestral arrangements. The arrangements, by Eduardo Magallanes, evidence the influence of early rock 'n' roll, as they incorporate the use of electric guitar, drum set and 12/8 meter. The impact of rock 'n' roll can also be found in Manzanero's lyrics. Addressing the newfound teenage audience, his songs tell stories of naive and happy – though still sexual – love, quite unlike classic *bolero*'s adult topics.

Raphael, one of the first *baladistas* and the first Spanish singer to target a teenage mass audience successfully, became an international sensation after his successful participation in the 1966 edition of the Eurovision Song Contest. In Pacini Hernández's words, Raphael's music 'emphasized sophisticated production and lush, densely textured arrangements, setting a new standard for romantic song' (1997, 102). Raphael's signature sound was developed in collaboration with Spanish composer, arranger and producer Manuel Alejandro. Madrid-based Alejandro is the most influential songwriter/producer of *balada*, having collaborated with the best Spanish and Latin American artists, such as Julio Iglesias, Rocío Jurado and José Luis Rodríguez. Through the mid-1980s Alejandro continued to score huge successes as composer, arranger and producer for Emmanuel's *Íntimamente* and José José's *Secretos*, both Mexican singers. The flux of musicians within Latin America and between Latin America and Spain helped to give *balada* an international quality, devoid of local markers (Stigberg 1985).

Following in the footsteps of Raphael, the international career of Spain's Julio Iglesias began after he won the Benidorm Song Festival in 1968 with the *balada* 'La vida sigue igual' (Life Remains the Same). Although often regarded as less gifted vocally than Raphael, Iglesias was to go on to become the best-selling Spanish singer of all time, and his performance style and aesthetics defined the standards for *baladistas* in the 1970s. He performed with an almost static posture, holding the microphone at eye level with one hand, with his head tilted upward and his eyes closed. Iglesias's elegant and sophisticated dress code – designer tuxedos and suits – made him distinct from contemporary rock stars.

The 1970s are often considered *balada*'s golden age. In Mexico, the first crop of romantic crooners with no background in *bolero* emerged, including José José and Juan Gabriel (Geirola 1993). Brazilian Roberto Carlos abandoned an early stint as a rock 'n' roller and adopted *balada* (Araújo 1988). Singing in Portuguese and Spanish, Carlos became one of the most successful *baladistas* of the decade (Araújo 1988; Ulhôa 2000).

The *balada* of the 1970s has a characteristic lush sound, resulting from sophisticated orchestral arrangements and studio wizardry. This much sought-after sound was developed by producer Rafael Trabucchelli – known as the Spanish Phil Spector – and arranger Waldo de los Ríos while working for the Spanish label Hispavox. Hispavox Studio was based on Torrelaguna Street in Madrid; thus, their sound was known as 'Torrelaguna Sound.' Two albums that exemplify the 'Torrelaguna Sound' are Spanish José Luis Perales' *Para vosotros canto* (Song for You, 1975) and Mexican Yuri's *Llena de dulzura* (Full of Sweetness, 1982). Other important producer/composers of the decade include Juan Carlos Calderón, Luis Gómez Escolar and Danilo Vaona.

As *boleristas* had utilized the new technology of radio 30 years earlier, so *baladistas* embraced television. Both then and later, *baladistas* were frequent guests on TV talk shows throughout Latin America. Moreover, *balada* has been the soundtrack to many Latin American *telenovelas* (soap operas) since the 1970s, and many *baladistas*, for example José Luis Rodríguez, Chayanne and Daniela Romo, have played roles in *telenovelas*.

The 1980s saw the largest number of female *baladistas* up to that point in history, including artists such as Spanish Paloma San Basilio, Massiel, Ángela Carrasco; Mexican Ana Gabriel, Lucía Méndez, Yuri, Lucero;

Argentine María Marta Serra Lima; and Cuban-American Gloria Estefan. *Balada* has allowed female singers to voice their position on issues of gender, sexuality, love and infidelity (Foster 2000). Male singers, however, have continued to dominate the genre. As Pacini Hernández suggests, 'male singers and points of view predominate; yet *baladas* suggest the more sensitive, emotional side of men, clearly appealing to women, *balada*'s most important consumers' (1997, 103; see also Tupinambá de Ulhôa 2000).

The most significant development in *balada* during the 1980s was the concentration of *balada* production in Miami, Florida, a development that affected every aspect of the genre, from sound to distribution to reception. The *balada* industry was one of many enterprises that chose Miami for their Latin-American headquarters. Along with the corporations' business offices, people engaged at every level of *balada* production also moved to Miami. Singers Julio Iglesias and Venezuelan José Luis Rodríguez were among the first to make Miami their home. Once in Miami, *balada* as a genre was absorbed by the rising Latin Pop category. The most noticeable change involved in the 'miamization' of *balada* is that Latin Pop albums are not limited to slow romantic ballads, but they also include up-tempo, dance-oriented tracks (Party 2008).

Since its emergence in the late 1960s, *balada* has enjoyed a mixed reputation. On the one hand, millions of fans have made it 'the most widely consumed and commercially successful music in Spanish America' (Pacini Hernández 1997, 103). On the other hand, *balada* has been harshly criticized by intellectuals and music historians for its mass-produced quality, uninspired lyrics and predictable music (see, for example, Acosta 1988; Évora 2001; González 2000; Monsiváis 1988, 1995). These criticisms most often present *balada* as a watered-down, commercialized and North-Americanized copy of *bolero*.

Balada has also been criticized for its alleged ties to authoritarian regimes during the 1970s and 1980s. Although cases of *baladistas* explicitly supporting Latin American dictatorships are rare, *balada*'s apolitical quality gave it easy access to radio and TV, taking over spaces left by music and musicians who were censored by the regimes. A paradigmatic example is the annual Chilean Viña del Mar song festival, one of the most visible outlets for Latin American and Spanish *baladistas* since the late 1960s. The festival reached its peak in the early 1980s as a result of the support provided by General Augusto Pinochet's regime –the roster of guest artists for the 1981 edition included Julio Iglesias, Camilo Sesto, Miguel Bosé and José Luis Rodríguez, all at career-high moments (Party 2009).

In the mid-1990s a revival movement of classic *balada* was begun, including *balada* radio shows, live and TV appearances by *baladistas*, and the release of CD compilations and cover albums by contemporary rock artists. The revival was spearheaded by the generation of Latin Americans born around 1970 that had grown up with *balada*. For the first time musicians of this generation began acknowledging publicly the influence of *balada* in their music. Because of *balada*'s negative reputation, outlined above, these artists' adoption of *balada* was a self-conscious transgressive act. Across Latin America tribute albums were recorded as homage either to one *baladista*, such as *Volcán: Tributo a José José* (1998) in Mexico, *Tributo a Sandro: Un disco de rock* (1999) in Argentina and *Rei*, a homage to Roberto Carlos in Brazil (1994); or to the genre as a whole, such as *AM*, a cover album by Chilean band Javiera y Los Imposibles. The revival can be interpreted as a generation's search for an alternative to the divisive, polarized political binaries of the 1970s that were still present in the 1990s through official memory (Pino-Ojeda 2004; Party 2009).

DANIEL PARTY

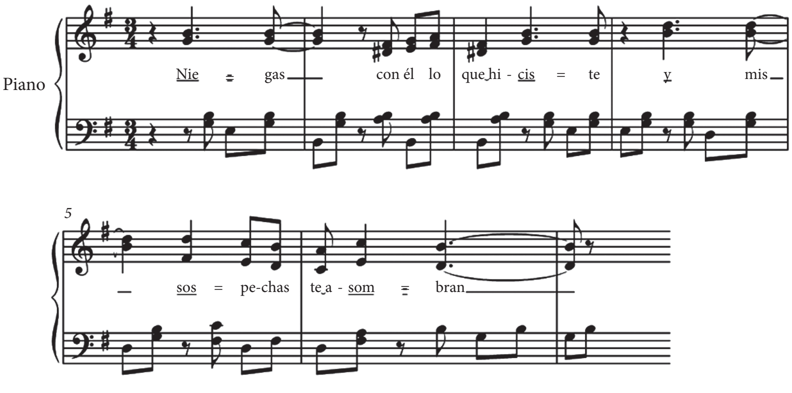
Bambuco

The *bambuco* is the most widespread traditional music genre of the Andean region of Colombia, the country's most populated region, where the largest urban centers, the political administration and the industrial hubs are all located. Although mainly regarded as an instrumental genre involving string duets or trios comprising guitar, *tiple* (a small twelve-string guitar with four-courses, which provides a percussive chordal accompaniment) and *bandola* (a fourteen or sixteen-string mandolin related to the Spanish *bandurria,* used as leading melodic instrument), *bambuco* can be performed by a large variety of vocal and instrumental formats. In rural contexts in the Cauca *departamento* (province), for example, *bambuco* continues to be performed in the early twenty-first century by small bands of winds and drums, while in urban centers it has developed into a popular song as well as an instrumental genre performed at upper- and middle-class music venues such as concert halls.

Historical data indicate that the most likely origins of *bambuco* lie around the late 1800s in the south-west of Colombia, in the culturally heterogeneous area of the nineteenth-century Greater Cauca province, where distinct indigenous groups persisted alongside an opulent slave-owner aristocracy. Such cultural and racial diversity explains *bambuco*'s endurance in the wind-and-drums repertoire of the Nasa or Paeces peoples, in the Afro-Colombian marimba ensembles (where it is known as 'currulao' or 'bambuco viejo') and in the mestizo European-influenced traditional string trio. The diffusion of *bambuco* throughout the Colombian Andes coincided with the movement of patriot troops during the wars of independence (1810–19), an indication of its inclusion in the repertoire of military bands. Probably it was that early connection with partisan politics that brought *bambuco* to the forefront in the construction of national identity during the second half of the nineteenth century. By the 1850s *bambuco* had already entered refined salons in Bogotá both as dance music and as a stylized piece for piano. A few years later the struggles around *bambuco*'s racial identity began, stirred up by the publication of *María* (1867), a Romantic national novel by Caucan aristocrat Jorge Isaacs, who described *bambuco* being performed by black slaves. The 'whitening' of *bambuco* was fundamental for its consecration as a national symbol, hence the significance given to its racial status in the literature about the genre produced up to the 1980s. Racial politics have continued to play a role in the conception of *bambuco* and *currulao* as two distinct and historically disconnected musical traditions. In spite of elitist debates on identity politics, after the late 1800s *bambuco* spread out as rural dance music through the Andes, reaching areas in Venezuela and Ecuador also.

Composer and accomplished *bandola* performer Pedro Morales Pino (1863–1926) was a key figure in gaining the acceptance of urban audiences for Andean traditional music genres, including *bambuco*, *pasillo* and *danza.* He was the first trained musician to try to convey *bambuco*'s intricate syncopation in staff notation; his choice of a 3/4 signature over one in 6/8 is still very controversial. In the 1890s Morales Pino conceived a chamber instrumental ensemble called *Lira* or *Estudiantina,* which combined modern European instruments such as violin, cello and flute with guitars, *tiples* and *bandolas*. His famous *bambuco*-song 'Cuatro preguntas' ('Four Questions,' 1914) became a paradigm for popular composers and songwriters as well. *Bambuco*'s national status was at the core of intense aesthetic debates between art-music and popular music composers in Bogotá and Medellín between the 1910s and 1930s. Although they did so uneasily, the former group admitted *bambuco* as a compositional source for national art music, but were hostile to any idea of recognizing artistic value in the work of the latter. In spite of this, popular composers and performers obtained some modest commercial success with *bambuco* song up to the mid-1930s, when the popularity of foreign genres such as tango-song and *bolero* curtailed any further expansion. Nevertheless, from the 1940s to the 1960s *bambuco*-song duets maintained their own niche in radio broadcasting and the recording industry. With the success of tropical dance genres from the Caribbean coast such as *cumbia* and *porro* in the 1950s, some Andean urban performers attempted to recover the rural usage of *bambuco* as dance music, labeling it as 'bambuco fiestero.' This exclusively instrumental and very fast type of *bambuco* in 3/4 time was very popular in the central *departamentos* of Tolima and Huila.

The syncopation found in *bambuco* has provoked many discussions among Andean musicians since the time of Morales Pino. Its rhythmic pattern features a *sesquialtera*, common in other Latin American rhythmic patterns, and usually notated either in 3/4 or 6/8. However, the uniqueness of *bambuco* lies in an apparent dislocation, or rather, a superposition of two metric accents: phrases and articulations in the melody (favoring the accents in the poetry in *bambuco*-song) rarely if ever coincide with accents in the bass and with the harmonic rhythm. Consequently, when transcribing *bambuco*, one has to choose what accent has to be represented as the first beat, a difficult task since the melodic flow constantly evades falling on strong beats. A good example of this ambiguity can be seen in the first phrase of Morales Pino's *bambuco*-song 'Cuatro preguntas,' in which the piano imitates the *tiple*'s strumming (see Example 1).



Piano
Nie = gas con él lo que hi - cis = te y mis
5
sos = pe-chas te a - som = bran

Example 1: The first phrase of 'Cuatro preguntas,' by Morales Pino

Even though problematic from the point of view of the transcriber, such ambiguity is a central part of the richness of *bambuco* in live performance; musicians learn to jump from one accentuation to the other in the middle of a piece, for example, emphasizing the 3 to indicate important steps for the dancers.

Although chamber *estudiantinas* ensembles have become rare, Morales Pino's instrumental tradition has been maintained by numerous performers mostly gathered in smaller groups such as trios and quartets. In spite of their technical and harmonic sophistication, most instrumental *bambuco* arrangements are not notated. Oral tradition is very strong among Andean performers, who regularly come together in festival circuits created to preserve the tradition; the Festival del Mono Núñez (Ginebra, Valle del Cauca) is the most important venue for Andean traditional music. Festivals are also very important markets for the distribution of (mostly) self-produced recordings.

Although the performance of *bambuco* has attained a certain level of standardization throughout the Colombian Andes due to recordings and festivals, local scholars have pointed out the need to study its regional varieties. Ironically, this would be a good way to question the nineteenth-century construction of *bambuco* as a unique, whitened symbol of a *mestizo* nation, a nation that nonetheless still maintains its great cultural diversity.

CAROLINA SANTAMARÍA DELGADO

Banda (Mexico), *see* **Banda (Volume II, Performance and Production)**

Banda de Bronce

Music for *bandas de bronce* (brass bands) is found in many town squares throughout Latin America and the Caribbean, for example in Mexico, Cuba, Peru and Bolivia. Many of the bands are municipal bands, such as Mexico's Zapotec Banda Musical de la Ciudad Netzahualcoyotl and de Santa Caterina Albarradas, and other such groups notably around Oaxaca Mexico; or those found in each city in Cuba, such as La Banda Municipal de Santiago de Cuba. Most armed services and police forces maintain brass bands, which are usually all-male. At times up to 3,000 musicians of such orchestras have met up in Mexico alone, representing numerous community and language groups.

While many brass band players have learned to play their instruments during military service, in the twenty-first century music schools increasingly run by orchestras guarantee the ongoing tradition, and some public schools have brass band education. In Cuba most local musicians in a given region are brought together in Municipal Bands, playing a common and popular repertoire emblematic of the country and region, including national hymns and other such celebratory musics. In Mexico this will include *sones* and *jarabes*; in Peru *yaravis* and *huaynos*; in Cuba classic *son*, *danzón*, *habaneras*, *boleros*, *congas, trova, chachachá, mambo* and other popular styles. Some bands have reported an active repertoire of over 180 pieces. Performances frequently take place on Sunday afternoons in the central town squares, for the benefit of all, with all members of the band wearing uniform shirts: in Santiago de Cuba they all wear the 'guayabera' shirt (the shirt of the guava gatherers, with its sewed-in pleats and pockets and button-down front) popular throughout the Americas and Spain.

Bands include trumpets, clarinets, trombones, baritone, alto, soprano and tenor saxophones, cornets, tubas and usually some percussion instruments including *timbales*, *bombo* drums and metal castanets called *platillos* and more. While members of such bands are professional in their approach and skills, they are most often *aficionados* who are usually unpaid and work at other day jobs. They rehearse regularly and learn their repertoire from scores, which in procession in Peru are often pinned to the back of each player in line. They may pay their own membership fees and may receive hospitality and minor payments for certain performances. They may own their own instruments or the band itself may own the larger instruments. In Cuba members of such bands are salaried by the state and will work in other local ensembles, teaching and playing to all members of the community. Cuban town bands have included musicians who have later become famous, notably *trova* musician Compay Segundo (1907–2003) who played clarinet in a municipal band in Santiago early in his career in 1939. Most brass bands play for town fiestas, municipal and calendar events, for the annual Carnival, in churches on occasion, and in Mexico are often found playing in town squares at weekends. Members of such bands often form smaller groups, such as Cuba's Cuarteto de Saxofones de Santiago.

A more detailed account of the *bandas de bronce* in one particular country, Bolivia, is offered below, to demonstrate how the ensemble and its musical repertoire take on a character of their own, in response to a variety of historical, social and cultural factors within that country.

Banda de Bronce (Bolivia)

Bandas de bronce are the most prevalent type of musical ensembles featured in popular and religious festivities across Bolivia. The success of this type of ensemble has eclipsed the presence of traditional Andean instruments in the most important urban festivities since the mid-twentieth century. Brass bands are also inseparable from folk dance fraternities (*diablada*, *morenada*, *caporales*, *llamerada*, *tobas* and others) that perform during the 'entradas folklóricas,' dance processions that are part of popular festivities such as the Oruro Carnival, *Entrada del Gran Poder* ('Entrance of the Great Power') and the *Fiesta de la Virgen de Urkupiña.*

The origin of popular *bandas de bronce* is connected to the emergence of the Bolivian army and of military brass bands. During the Bolivian War of Independence (1810–25), the army became one of the main avenues for the improvement of one's social standing. Thus, the occupation of ensemble musicians in a war band enjoyed widespread social acceptance and recognition. In the War of Independence all battles were fought alongside brass bands, with drums and cornets playing a crucial role in the communication between the troops. Julio Sanjinés (1989) asserts that the first military band in Bolivia belonged to war commander José Miguel Lanza and was made up of 'twenty volunteer musicians from the provinces of Ayopaya, Inquivisi and Yungas who were given flutes and drums' (Sanjinés 1989, 30). This band, along with the Second Infantry Battalion, occupied the city of La Paz on 29 January 1825. Brass bands played an important role in keeping up the morale of the combatants during wartime. They also became sources of employment for children and youths living in poverty by allowing them to join a band at an early age as drummers and to become professional musicians as they entered adulthood.

While military bands were active during the first governments of the new Bolivian republic, by 1840 the quality of small military bands had decreased. President José Ballivián, a hero of the Ingavi Battle (1841), hired Italian composer Leopoldo Benedetto Vincenti to reform the military band system, which the composer labeled as 'calamitous.' Vincenti's vision was to found a military music school to 'benefit low-income families and contribute to their children's acquiring of an honorable profession' (Escuela Militar de Música del Ejército [online] 2012). Under these incentives, musician soldiers would soon enjoy social respect, and music by brass bands would become a sign of distinction among popular social classes in Bolivia. During the government of José María de Achá (1861–4), performances by military bands during Thursday, Sunday and Holiday retreats became official; this move cemented the popularity of military bands, which were an important component of the social and festive life in the main cities of Bolivia. Musical retreats featured works belonging to the national repertoire as well as works that were in fashion. Julio Sanjinés writes: 'retreats in those times were, in practicality, the only entertainment available in cities and villages, around which families gathered bringing food and drinks to share with the musicians, a custom that became expressly forbidden after the Pacific War' (Sanjinés 1989, 32). In cities such as Sucre retreats were maintained without alteration until the 1970s, which may explain why the sound of brass bands is so popular in this city. The history and tradition of brass bands in Bolivia lie behind the people's predilection for music by this type of ensemble.

The Academy of Military Music was founded in the altiplanic village of Viacha in 1889 under the presidency of Aniceto Arce (1888–92). During this time the state sought to professionalize the Bolivian army, which caused the training of military band musicians to become strictly regulated. In the following decades (1899–1920) liberal governments advocated military formation as a civilizing agent for natives and mestizos. Through mandatory military service, the state believed natives could be 'civilized' by way of military tutoring, which would provide them with patriotic values and the required discipline to become righteous men (see Quintana 1998, 33; Sanchez Patzy 2006). However, the implementation of mandatory military service in 1907 only strengthened social hierarchies between natives, mestizos and *criollos* (i.e., locals of pure Spanish ancestry). On the other hand, Bolivian authorities placed most army regiments in the altiplanic areas of Oruro and La Paz to crush indigenous revolts by the Aymaras in the late nineteenth century. The obligatory enlisting of indigenous peoples in the army allowed for many of them to receive musical training and to become proficient in military band instruments. As they returned to their villages and communities they brought with them a taste for brass instruments, which led some natives and Aymara and Quechua *cholos* to create their own popular brass bands. These bands, with more or less stable memberships, performed during local festivities and rituals and were hired by the 'pasantes,' people who would personally carry all the expenses related to a specific festivity. Band music became a profitable activity that complemented the Aymara mestizo's regular occupation as farmer or artisan.

In the Quechuan cultural arena, the teaching of military band brass instruments became centralized in the School of Music of Tarata (Cochabamba), which was founded in 1909. According to Walter Sánchez (2000, 141–3), starting in the twentieth-century brass bands performed popular music that was fashionable in retreats as well as 'music of the land,' or *criollo* music, in order to entertain the population while projecting a positive image of the army. The important presence of bands helped shape popular taste for the sound of brass, which was adapted to fit the aesthetics of mestizo music.

The first popular brass bands in Bolivia were formed by musicians returning from boot camp or from the Chaco War (1932–5) to accompany dancers during *fiestas patronales* (i.e., patron saint festivals) in altiplanic regions, Andean valleys and tropical plains of Bolivia. Slowly, these bands became institutionalized and their operations became stable and more organized. Brass bands replaced traditional wind ensembles such as *sikus*, *lichiguayus*, *mohoceños* and *tarkas* in the accompaniment of mestizo or indigenous dances such as the *cullaguada*, *morenada*, *waca waca* and *diablada*, among others. Many of these dances are so inextricably connected to brass bands that without them their identity would be lost. The predilection for brass bands over traditional wind ensembles in the performance of Andean dances resulted from the triumph of the tastes of the mestizo-*cholo* population over those of indigenous peoples.

It is possible that during the Virgin of Candelaria of Oruro festival (which was later merged with the Oruro Carnival) in 1900 the *diablos*, *mineritos* and other dances were accompanied by small brass bands. Similarly, army bands in the 1920s were influenced by traditional Andean music to the point that in 1928 the Banda de la Séptima Compañía del Regimiento Pérez 3 de Infantería, led by musician Adrián Patiño, recorded songs using an ensemble of *zampoñas* (pan flutes) for the Victor label. The flexible boundaries that existed between military music and traditional Bolivian repertoires allowed for both to shape the country's taste for the sound of brass bands performing music with an Andean flavor. During the Chaco War, brass bands carried out similar tasks as the bands in earlier wars: encouraging soldiers who were being deployed and collecting funds. According to band director Rigoberto Sainz Castro, writing in 1945, bands in combat 'contributed to the exaltation of a nationalistic sentiment, transporting warring men from Chaco to the limits of paroxysm from which heroic actions are born, the fruit of exacerbation, mysticism, a mix of supreme courage and supreme resignation' (Sainz Castro 2002, 13). The nascent spirit of nationalism found in military bands and in the sound of brass a tool with which to plant the seed of a national mystic in all Bolivians.

In the 1940s and 1950s *bandas de bronce* became consolidated among the indigenous and mestizo populations as complements to their religious and social festivities. This consolidation came hand in hand with the adaptation of the formal characteristics of war bands by popular Andean bands. The music performed by *bandas de bronce* is an amalgam of Western musical elements with a peculiar Andean sensibility. For instance and as a general rule, brass band musicians can read sheet music without difficulty. However, their interpretation cannot be reduced to the correct execution of the written notes; *cholo* musicians of Quechuan or Aymaran descent do not use perfect intonation in the attack of a note, but rather they approach attacks using varying levels of pitch precision. When trumpets, trombones, tubas and helicons play together, the effect is strident; this effect has been studied by ethnomusicologist Gérard Arnaud (2002, 481–95) in the specific case of traditional Andean wind instruments. Musicians in wind ensembles such as *sikus*, *pinkillos*, *tarkas*, *lecheguayos* and others, blow with diverse intonation, which generates an unpleasant dissonance if one listens to each instrument individually, or a brilliant and tense sound if one listens to the sound as a whole. A similar attitude could be present in the execution of brass instruments: notes need not have a perfect, well-tempered tuning in the attack of notes as Western ears require, because their strength lies in these small harmonic variations. On the other hand, *bandas de bronce* perform music for dancing during *entradas religiosas* for many blocks and sometimes even for days. Thus, melodies follow a question-and-answer binary model in which theme A is played by the trumpets, while theme B is the answer played by the trombones and tubas. This simple structure, which is similar to the antiphonal performance by *siku* Andean ensembles, has allowed musicians to play for hours while walking and even dancing along with folk dance fraternities. Their endurance and their dancing have turned brass bands into attractions in and of themselves.

The most important brass bands in Oruro and La Paz were created in the 1960s. Bands from Oruro were among the first to organize themselves as stable enterprises; bands from *Gran Poder* celebrations in La Paz soon followed. From Oruro, the Banda Pagador de Oruro, founded in 1964 by Gumercindo Licidio and Demetrio Choque, is the most important. Other important bands from Oruro (see Sánchez C. 2000, 143) are Real Imperial, Super Imperial, Poopó, Alianza, Ases Gitanos, 25 de julio, 10 de febrero (who participated in the inauguration of the 1994 FIFA World Cup), Collas Andinos, Ases Diamantes, among many others. In La Paz, bands are divided into two categories: heavy (corresponding to the more expensive dances *morenada* and *diablada*) and light (corresponding to dances which are less expensive or with simpler costumes such as *caporales*). Among the heavy bands are Super Rebeldes, a band that by 1995 had recorded nine LPs (see Martínez 1996, 10); Super Explosión; Intercontinental de Sonido Latino Marisma Mundial, which was very famous in the 1970s; Unión Magistral; and Los Intocables, who are characterized by their 1920s Chicago mobster attire. Among the light bands are Mayas Amantes del Folklore, Mirlos Nacientes del Folklore, Destellos, Gallardos, Raimis del Folklore and Caporales Centralistas de La Paz. There also exist many others in Santa Cruz, Cochabamba, Sucre and Potosí, although their styles are very different.

Attesting to their popularity, some of these bands acquire long-term contracts for religious festivities in Peru, Chile and Argentina, where devotees to a specific saint or holiday fight over the best bands from Oruro and La Paz. Lázaro Huampu, in his mid-1990s research on the festivities of La Tirana in Chile, writes:

> *Prestes* (i.e. festivity sponsors) are present and in a day of celebration the assisting bands are concentrated in a large field. The dance competition begins in tandem with the band competition, and all ensembles strive to perform their best. They also compete to hire the best Bolivian bands – Chileans prefer to pay up to double to be able to dance well with the bands that come from Bolivia to this place (Huampu, quoted in Martínez 1996, 10).

Bolivian *bandas de bronce* are also very successful in the south of Peru. Huampu asserts that one of the ensembles to be featured in the Tacna festival of 1995 is the band Real Imperial de Oruro, which was hired six months in advance. 'There the *prestes* are present and they prefer Bolivian bands because they play in a professional manner' (ibid.). Bolivian bands are exported for celebrations; with them, the characteristic sonority of Bolivian religious festivities arrives in other countries and is appropriated by tourism and with nationalist interest by the host country.

In large Bolivian *entradas folklóricas*, part of a dance fraternity's status is measured by the type of band that accompanies it, or by the number of bands. These may involve from 30 to more than 100 musicians, or 'operarios' (operators) as they are commonly known. This is the case of the Banda Pagador de Oruro, one of the most famous bands. When it was founded in 1964 it was made up of 20 musicians; by 2006 the band had 102 (*La Prensa*, 10 February 2005). Naturally, the larger the number of operators involved, the higher the cost (and splendor) of the band.

In 2012 it was still common to see recruits, army men and police spending their time playing in popular bands. In the Banda Pagador, there are at least 20 police members and military personnel who, according to Silvestre Martínez, a member of the Banda Pagador, 'ask for permission (from their superiors) because they like to participate in the Carnival' (*La Prensa*, 10 February 2005). Martínez, who plays the helicon, says: 'when I was young I also did that, but then I dedicated myself only to the band, because they increased the number of musicians and the commitments; we traveled to Peru, Chile, and Argentina' (ibid.). In the space of Bolivian festivities, the relationship between the military and civil spheres is fluid.

In summary, popular Bolivian *bandas de bronce* are another way in which the mestizo culture produces a visual and aural spectacle that is magnificent and startling, where people are shaken up by the bands as they parade through the streets on the day of the *Entrada*. Brass bands follow the aesthetic of excess wherein lies their great vitality: they cause music to penetrate the body, they make music and rhythm to awaken the body in a collective trance ritual that is both religious and sensual.

WITH JAN FAIRLEY (INTRODUCTION)

Banda de Pífanos

The *banda de pífanos* (fife and drum band) is a traditional instrumental ensemble that has historically occurred throughout the north-east of Brazil, providing music for both religious and secular occasions of the *caboclo* (mixed Indian and European) and mestizo populations, especially in the countryside and the small towns. It has its own repertoire, but will also interpret other appropriate music, both religious and secular.

The ensemble generally comprises two transverse cane fifes of the same size (*pífanos*, or *pifes* as abbreviated in local usage), *zabumba* (a type of double-headed bass drum) and a *tarol* (a type of snare drum). Other instruments are added, such as a *surdo* (a type of tenor drum) and a pair of *pratos* (clash cymbals); sometimes a triangle replaces the clash cymbals or is simply added to the ensemble. This ensemble may be known under several names: *zabumba* (bass drum band), *banda cabaçal* (gourd band), *terno* (trio), *terno de zabumba* or *terno de pífanos*, (bass drum or fife trio), *banda tabocal* (bamboo band), *banda de couro* (band of leather), *banda de negro* (black band), *esquenta-mulher* (warm-up woman band – jokingly used), *carapeba* (a type of fish), *quebra-resguardo* (break the 'post-pregnancy care period' band) and *mutilada* (mutilated, these last three being pejorative terms), among numerous other regional variations.

The sound of *bandas de pífanos* is characterized particularly by the acute tones of a pair of flutes playing in parallel and modally. Although this is considered by Brazilians from different regions of the country (including the band members themselves) to be an indication of traditional musicianship, regionalism, folklore, purity, primitiveness, naiveté and cultural wealth, among other positive notions, as well as a source of pride, all these concepts also have their derogatory counterpart, which is expressed (mainly by the urban population) through a widespread impression that the music performed by *bandas de pífanos* is systematically out of tune, and that their musical culture, when not a vestige of musical practices of the past, is only a parody of modern urban models. The derogatory terms used to describe the band usually refer to the technical skills of its performers, which are regarded as inferior to urban standards, each band sounding like it is following its own rules. They are seen to have subordinate status, by virtue of being small-scale rural workers, poor, mestizos, blacks or of indigenous descent.

Researchers propose three types of hypotheses about the emergence of the bands (and the fifes) in Brazil: an indigenous origin, because of the great importance and spread of the flutes in indigenous culture (Cajazeira 1998; Caneca 1993; Crook 1991); a Portuguese colonial import, mostly because of the strategies used to convert the indigenous population to Catholicism through music, as well as the organological similarity of the bands with Portuguese *bombo* groups and *zé-pereira* groups (Cascudo 1972; Crook 1991; Oliveira Pinto 1997); traces of African musical practices, be it by a similarity to instrumental ensembles from the São Tomé and Príncipe islands, by the presence of the bands in festivities and religious rituals of blacks in the north-east of Brazil, or by the participation of Afro-Brazilians as musicians in fife-and-drum bands or similar groups (Cajazeira 1998; Duarte 1974; Oliveira Pinto 1997). However, research analyzing acoustic frequencies emitted by the fifes (Pires 2005) shows that they originate from the European baroque transverse flute, which helps to strengthen the theory of Portuguese origin. The geographical spread of the bands varies with time, mainly because of intermittent population migration.

The musicians of the *bandas de pífanos* generally come from the lower working classes of the rural and urban inland north-east and tend to be mestizo. The musical culture developed by this population consists of two basic types: music provided for to adaptations of Roman Catholic rituals such as novenas, prayers, processions, feast days of saints and pilgrimages; and music for secular activities such as dancing. The religious musical genres are based on the music for the saints, which is devotional and accompanies canticles: hymns and praise songs. For the strictly instrumental religious music – that of the novena – the genres are *marcha*, *dobrado*, *agalopada*, *baiano* and *valsa* (waltz). The secular genres are those of the northeastern dance music *abaianada*, *baião*, *forró*, *arrasta-pé*, *xote*, *xaxado, frevo, chorinho, côco, samba, rancheira* (fast waltz), *martelo, galope, mazurca*, *polca*, *quadrilha*, *bolero*, Brazilian *tango*, *música romântica*, or any other popular genre or form distributed by means of mass communication that appeals to *pifeiros* (fife players), and which can be transformed into their own sound. They are played at events such as seasonal festivals of St John, in Carnival, in civic festivals, band concerts in public squares, stage presentations or private celebrations (baptisms, birthdays, weddings). A small number of fife bands play an indigenous repertoire, either mestizo (*caboclo* music – a generic term covering many types of pure or hybridized indigenous repertoires) or original compositions. There are also rare reports of bands participating in Umbanda rites (a syncretic Afro-Brazilian religion, see Oliveira Pinto 1997).

Most of the secular music provided by the *bandas* is of the f*orró* complex and repertoire adapted from mass media broadcasting. There is generally little difference in the way religious repertoires are performed compared to secular ones. Their sound tends to be stable in amplitude given that, in situations where the instruments are not amplified (as is generally the case when the bands appear on stages erected in public squares), the intention is to command as much attention as possible from passers-by, for example, when performing acoustically outdoors or participating in street processions. Because of this, the *pifeiros* favor the higher ranges of their instrument and blow as hard as possible (which explains their preference for the smaller, higher-pitched instruments – the three-quarter and half-size versions – requiring less effort to achieve the desired effect). On the other hand, rhythms tend to differ between the two repertoires, with the religious tending toward slower, simpler rhythms coinciding with the marching of the feet, and the secular favoring faster, more syncopated rhythms appropriate for dancing.

Teaching and learning methods and the fabrication of instruments are usually done by observation, imitation, experimentation, self-education and oral transmission (family, between neighbors or friends) in a nonformal way. The degree of technical mastery of musical knowledge is entirely dependent upon the interest and insight of the musician to learn or uncover the hidden features of the instruments or the extension (and invention) of repertoires.

Instruments may be hand crafted, but the construction of percussion in particular is becoming industrialized. All fifes are handmade by the *pifeiros* or ordered from others. Currently there are four types of flutes: *regra* or *régua inteira* (standard full-sized), *três-quartos de regra* (three-quarter size, primarily used today), *meia regra* (half size) and *aproveito* (the smallest size, literally meaning 'taken advantage,' named after the way that the *pifeiro* takes advantage of scrap material to craft a smaller instrument). They are used in pairs of equal size according to the timbre preference of the *pifeiros*, the expertise of each *pifeiro* and the repertoire (Pires 2005). These flutes are traditionally fashioned out of various types of gramineous plants (bamboo), PVC (polyvinyl chloride) or metal pipes. The flutes making up each pair are not tuned to exactly the same frequency.

Each type of transverse flute has its own tuning system due to anthropometric and nonindustrial methods of construction. Acoustic measurements of the frequencies emitted by fifes show that the basic scale system is true to the system of equal temperament, with subtle variations. The northeastern scale (the major mode with a raised fourth degree and a lowered seventh) has no direct relationship with the fifes' own frequencies, but is derived from an unconventional use of modes and is a nationalistic ideological Brazilian construction (Pires 2005). The 'dissonant' sound of the fifes is caused by these 'interval accents' from the variant of the well-tempered system that is recurrent in the musical culture of *pifeiros*. This goes to show that the city dweller's stubbornly held view that the *bandas* are out of tune is due not so much to an actual technical deficiency on the part of the musicians, but rather to the fact that their tuning system is alien to the musical system pervasive in the urban environment.

Although *bandas de pífanos* are present throughout the Brazilian North-east, especially in the interior, their importance to, and influence on, other musical genres has not been sufficiently studied. Those who have looked into the subject generally agree (see, for example, Guerra-Peixe 1970) that *bandas de pífanos* were modeled on military bands, virtually omnipresent in every northeastern city at least by the nineteenth century. *Pifeiro* Egildo Vieira (Pires 2005) opined that *bandas de pífanos* view themselves as playing the same musical role as military bands on the bandstands of small centers: that of being the local orchestra. This spread through rural contexts and peripheral urban areas where the people have limited financial means. For the urban population, the sound of these bands is one of the elements that make up the northeastern musical soundscape (Oliveira Pinto 1997), especially the music of the backcountry, which is where folkloric culture from this part of Brazil originated. This soundscape, especially the sound of the fifes, has been imitated music of a diverse array of artists and aesthetic trends, from the influence of Mário de Andrade up to the present times, in order to evoke feelings of nationalism and ancestry. This influence was manifested in the recorded works of various urban artists of both regional and national stature (such as Mestre Ambrósio from Movimento Mangue, Carlos Malta [contemporary instrumental music], César Guerra-Peixe, Cussy de Almeida, Clóvis Pereira from Movimento Armorial), in literal or adapted form, using direct or indirect means, and exploring modal melodies or timbre, for example, in classical, semiclassical (as part of the Movimento Armorial, a cultural movement that aimed to create high art based on vernacular culture) and popular (MPB, *Tropicália*, regionalism, *mangue*, post-*mangue*) genres. The use of folkloric elements in the creation of a national classical music has always been a touchstone for nationalist aesthetic movements in Brazil, from late Romanticism up until the post-*mangue* period of the present day, with greater or lesser degrees of emphasis, conscious or otherwise. In this way, the influence of the *bandas de pifanos* on other music has most frequently been to quote or evoke a particular type of Brazilianness, However, with the exception of the work of Rio de Janeiro musician Carlos Malta, the founder of Pife Muderno, an instrumental group that features this type of flute as lead instrument, inserting passages and developing the musicality of the instrument in a nontraditional manner, the bands themselves, and the artists closely derived from them, continue to restrict themselves to traditional musical practices – sticking with small contracts, remaining within the ambit of small local radio stations, independent recordings, the support of individuals and government and the urban populace's view of them as a kind of folkloric curiosity or as musically obsolete. This situation is only partially overcome by the virtuosity of the *pifeiros* of a very small number of groups, for example the Banda de Pífanos Dois Irmãos, based in the city of Caruaru and led by João do Pife, which tours frequently throughout the country and has performed in more than 22 countries.

(TRANSLATED BY DARA MURPHY)

Bele

Bele is a widespread term in the Creole-speaking Caribbean, and refers to a number of folk or traditional dances and their associated music found from Trinidad to Grenada, Carriacou, St Lucia, Martinique, Dominica and St Thomas (Gerstin 2010). The dances may be accompanied by a variety of instruments, often drums, sticks played on bamboo or the side of drums, shakers, triangle, scrapers and call-and-response singing. As folk styles, these dances have had little direct impact on popular music – less than has been reported in much of the literature – but are of great historical and artistic interest in themselves.

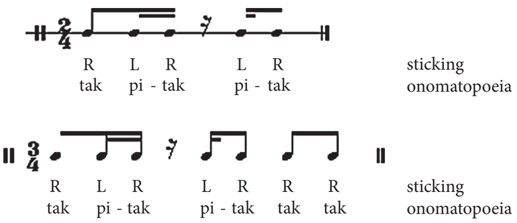
The name *bele* appears in numerous variant spellings: *bèlè*, *bélé*, *bélè* and the French *belair* ('pretty tune'). Most *bele* styles seem to have crystallized during the height of the slave era; there are few references to the name before the late 1700s or early 1800s. The various dances share several characteristics. They are secular, and are largely sung in Creole. Dancing involves flirtatious display by a succession of couples in the center of a dance circle, or competition between dancers and drummers, who must match the dancers' steps. In several places, such as Trinidad and northeastern Martinique, *bele* has syncretized with contradance and quadrille, which were introduced to the Caribbean beginning in the early 1700s. In St Lucia and Dominica, by contrast, *bele* and quadrille are separate genres; Dominicans consider them 'African' and 'European' respectively (Guilbault and Embert 2007; Wason 2010).

Musically, many *bele* dances are accompanied by large-bellied goatskin drums (fatter and shorter than the congas that are widely used across the Caribbean and elsewhere), plus sticks beating a timeline on the drum's side or on a piece of bamboo. In some styles drummers may lay the drum on its side, sit on it and use their heel to change the pitch, a technique likely of Kongo or Angolan origin. On most islands, women's costume for *bele* is the French colonial-era outfit of long skirts and petticoats, a madras plaid waistcloth, lace-trimmed blouse and madras headscarf. Men's costume often includes the madras worn as a belt, plus a high-crowned straw hat. All of these details suggest that *bele* represents a creolization one step removed from more directly African-derived New World dances.

The *bele* continuum overlaps with other widespread colonial Caribbean dances, notably *djouba* and *bamboula*. For example, Trinidadian *bele* is also known as *juba* (Herskovits and Herskovits 1964, 159), and *bélé juba* is one of several *bele* dances in Dominica (Guilbault 1998, 841). In Haiti, the *djouba* ensemble is also known as *tanbou matinik* (Martinican drum), and features a large-bellied goatskin drum turned on its side and heeled; this ensemble plays for contradances, as in Martinique. On Guadeloupe, a similar type of drum and drumming, known as *gwoka*, was formerly known as *bamboula*. Puerto Rican *bomba* also features this drum type, as well as a timeline played by sticks and competitive display dancing; one *bomba* variation is known as *belén*. Such overlapping is indicative of the historical and cultural connections between Creole-speaking islands, and the importance of French colonial influence throughout the region.

The many dances named *bele* vary from place to place, but it is worthwhile looking at one of these in more detail. In northeastern Martinique, *bele* adopted quadrille choreography during the first half of the 1800s. Several related substyles exist today: *bèlè*, *bidjin bèlè*, *bèlia*, *gran bèlè*, *bèlè pitché*, plus a few others in certain towns or among certain families. Each substyle has its own songs, drum rhythms and dance steps, but they share a general choreography. Four couples enter the dance space in a counterclockwise circle, then split into two squares (*kwadril*, quadrilles). The dancers in the first quadrille go through a sequence of dancing together and changing places; then the second quadrille dances. Next, each couple in turn shows off its best moves, dancing toward one another and then toward the drum. At the end, the dancers return to their counterclockwise circle. The African circles enclosing the European quadrille make this version of *bele* a wonderful symbol of creolization.

The *tibwa* stick patterns are considered the basic rhythm of the dance. The two most frequent *tibwa* patterns are shown in Example 1:



Example 1

The binary (2/4) pattern is quite widespread in Africa and the African diaspora, and is often called *cinquillo* in the Spanish-speaking Caribbean.

Bele songs may be about relationships between the sexes, gossip or political and social events. Some songs persist for generations, while others are topical and more short-lived. *Bele* songs are in call-and-response form. While anyone may join the chorus, 'good' lead singing requires a large repertoire and the ability to improvise lyrics in Creole, adjusting songs to current events or to the performance itself as it unfolds. For instance, at an early 1990s event where the elderly drummer Féfé Maholany, who had not performed for several years, played one song, singer Siméline Rangon altered the chorus of the song 'Bélia manmay-la' ('Bélia of the People') to 'Bélia temps Féfé' (Bélia in Féfé's Time'). The chorus immediately picked up the new response, and Rangon improvised lines honoring Maholany: 'Temps Fèfè man kontan wé-ou/Temps Fèfè ou sa majô/Pou nou bat tanbou-a/Pou mwen dansé bèlè' (In Fèfè's time, I'm happy to see you/In Fèfè's time, you're a great one/ Play the drum for us/So I can dance bèlè).

Bele in Martinique remained a rural style well into the twentieth century, kept alive mainly by a network of subsistence-farming families. After World War II rural agriculture went into steep decline, and many people departed for the capital of Fort-de-France and for metropolitan France, threatening *bele*'s continuance, since the dance was rarely performed in urban settings. In the early 1980s a younger generation began to take pride in and revitalize its own 'heritage.' At the beginning of the twenty-first century, a number of grassroots non-profit organizations such as the Association Mi Mes Manmay Matinik, run by *bele* aficionados in Fort-de-France and smaller towns, strive to teach, document and promote *bele* and other local arts. At a contemporary *swaré bèlè* (evening of *bele*), you may find up to 200 people gathered to enjoy the skills of the performers. Dancing, percussion and lead singing are specialized skills, and only those with the requisite knowledge will join in. Singing the chorus, on the other hand, is open to anyone who wants to participate.

Returning to Martinique, some authors have claimed that *bele* is the origin of the popular dance *biguine*, but this connection needs to be clarified. The binary *tibwa* pattern is common to both *bele* and *biguine*, but *bele* and *biguine* share only one dance step, and the signature drum patterns of *bele* do not appear in *biguine*. If there is a connection, it is in the secular context of songs. French colonials used '*belair*' (presumably the origin of the Creole term '*bele*') to refer to folk and popular melodies and lyrics, that is, songs of the black and Creole poor, both rural and urban. In Martinique rural and urban life have long interconnected, and influences have flowed in both directions: *bele* songs became *biguines*, and urban *biguines* became *beles*. So it is too simple to say that one was the source for the other.

A similar misconception arises in connection with the late twentieth-century dance style *zouk*. Many popular journalists have mentioned *bele* as a source of *zouk*, but this claim is a romanticization, seeking out local roots that the evidence does not justify. In the present author's view not one of the thousands upon thousands of *zouk* recordings in existence uses a *bele* drum, nor even the rhythms of *bele* drumming adapted to other instruments. If a *zouk* song includes a local hand drum, it is invariably the *gwoka* drum of Guadeloupe. The *tibwa* timeline appears in *zouk*, but it came there from *biguine*, not *bele*. Moreover, many *zouk* songs do not use *tibwa*; they use the 3-3-2 timeline known in Spanish as *tresillo*.

Before *zouk* emerged in the 1980s, a few Martinican musicians did adapt *bele* into popular music. The 1960s–1970s singer Francisco added a *bele* drum and Cuban-style *son* accompaniment to his *biguine*-based melodies. His sound was considered revolutionary simply because it included the drum, at that time held in low status. In the 1970s and 1980s singer/flautist Eugene Mona expanded his early repertoire of rural *biguines* into music that included a *bele* drum as well as other local percussion, incorporated genres such as blues, reggae and rock, and featured outspoken lyrics about politics, race and spirituality. Many Martinicans found Mona's music profound, yet neither he nor Francisco had much direct impact on the larger commercial phenomena of *zouk* or today's ragga. The only group today adapting *bele* music to a modern setting is the band Bèlènou, whose leftist political songs have a small but devoted following. One compilation CD, *Bèlè Boum Bap (*2005), combined *bele* singers and samples with rapping in a ragga/hip-hop setting. CDs such as *Les Maîtres du Bèlè, Vol. 1 & 2* reach a small audience interested in folkloric music and are only available locally.

Daniels' contributions (2009, 2010), while not focused specifically on *bele*, provide an excellent perspective on the panorama of Caribbean contradance-related styles, with their intricate overlapping histories. Authoritative discussions of Martinican *bele* in English include work by Cyrille (2002, 2007, 2009) and Gerstin (2000, 2001). Gerstin 1998 provides music and dance analysis. Liner notes to *Les Frères Rastocle* and the two volumes of *Les Maîtres du Bèlè*, while lacking contextualization, provide lyrics in Creole with French translations. For other islands, see Guilbault (1998) and Guilbault and Charles (2007) regarding Dominica and St Lucia, and Herskovits and Herskovits (1964 [1947]) on Trinidad. In addition, liner notes to Alan Lomax's recordings in the *Caribbean Voyage* series and Jocelyne Guilbault's notes to *Musical Traditions of St Lucia, West Indies* (1993) provide a wealth of information.

Bigi Poku

Bigi poku (spelled *bigi pokoe* in Dutch) is a secular Surinamese music developed by the Creoles, the descendants of African slaves, who live primarily along the country's more populous northern coastline. The genre was developed in the 1930s by instrumentalists who played in military and police bands and would congregate after hours to experiment with new styles. It is also enjoyed and performed by many Maroons, the descendants of African slaves who escaped into the rainforest interior. Besides Suriname, *bigi poku* can be found in neighboring French Guyana, as well as among the Creole and Maroon populations abroad, most notably the Netherlands. Lyrics are most commonly sung in Sranan, Suriname's lingua franca or one of the other regional dialects. English, Dutch and French are used less often.

Early musical influences on the formation of *bigi poku* included local styles *winti* and *kawina*, with New Orleans-style brass band music also playing a key role in the genre's development. Besides the brass instruments, *bigi poku* bands of the 1930s typically consisted of a lead vocalist, backup vocalists (*koor*), guitar or *cuatro*, snare drum and a percussion instrument developed in conjunction with *bigi poku* called *skratjie* (also known as *skrantjie*). The *skratjie* is a bass drum with a hand cymbal attached to the top of the drum frame. It is played with a padded mallet and a small hand cymbal. Together with the snare drum, the *skratjie* sets up a driving syncopated rhythm that propels the song forward.

While most Afro-Surinamers agree about the genre's origins and early instrumentation, there are varying opinions about the characteristics of its modern form. In early twenty-first-century Suriname, the term *bigi poku* is used to classify a wide range of music, some of which retains the brass-based sound of earlier groups, while others are more directly influenced by contemporary musical styles including pop ballads and *kaseko*.

The older brass-based sound is primarily performed live, most often for celebrations such as landmark birthdays and anniversaries. Often, the music will be interspersed with short speeches, in which event participants impart a *bosikopu* – a message or bit of advice appropriate to the occasion at hand. The music is usually played by an ad hoc group of experienced players assembled for a particular event, rather than by a group with a relatively consistent membership. For the most part, the core repertoire of this style of *bigi poku* remains fairly stable, consisting of well-known songs that have been passed down from the genre's earliest decades. This music is associated with older generations (people upward of 40 years). Recordings are rare, and seldom aired on Surinamese television or radio.

Alternatively, the name *bigi poku* has been applied to contemporary popular music styles with influences ranging from *kaseko* to pop ballads. Brass instruments may be included in these bands; however, they do not characterize the overall sound as in 1930s *bigi poku*. Many bands use brass effects on a keyboard rather than actual brass instruments. The *skratjie* drum remains, a mainstay of both *bigi poku* and *kaseko* music. In fact, *kaseko* and this version of *bigi poku* share so many characteristics that many people use the two names interchangeably. Others claim that *bigi poku* has a slower tempo than does *kaseko*, and although the former maintains a danceable groove, it is not as closely associated with dance as the latter – *bigi poku* is also well suited for quiet enjoyment and appreciation of the lyrics.

As with the *kaseko* and pop music that influences these bands, it is the lead singers in this style of *bigi poku* who tend to attract the most attention. Contemporary concerts and recordings will often advertise the singer with little to no mention of the band with which they perform. One example of this trend is the 2008 compilation CD *Pump It* and the subsequent concert tour, in which the lead vocalists – Damaru, Timothy, Chano, Brio and Koloni – were the only musicians to receive recognition in print. Indeed, with the help of a knowledgeable sound engineer, a recording can be made without any live instrumentalists at all. Musicians are constantly creating new songs, drawing their subject matter from situations in everyday life and romantic relationships.

The two interpretations of *bigi poku* vary in the ways in which they reach their audience. Whereas the brass-based music is predominantly heard live, the latter is widely recorded within the country and disseminated through radio and television broadcasts, to be consumed by a younger audience. In live performance, the latter might be performed alongside such locally popular styles as reggae, *kaseko* or *aleke*.

Sabakoe is a successful Netherlands-based *bigi poku* band that features a considerable brass section; popular singers in the more electronified contemporary style include Damaru, Prince Koloni, Timothy, Chano and Brio. The latter perform with *kaseko* bands Aptijd (Timothy) and Ghabiang Boys (Chano and Brio).

CORINNA CAMPBELL

Biguine

The *biguine* is the most renowned dance music of French Guiana, Guadeloupe and Martinique, three overseas departments of France located in the Caribbean. In this region, the term 'biguine' denotes an urban song of social comment and dance music in 2/4, performed primarily at popular festivals and cultural events.

In Martinique, *biguine* is additionally a rhythmic sequence played on the *tibwa* or the drumset. (The term '*tibwa*' refers to a pair of sticks and is also the name of the rhythmic ostinato that sets the tempo in all the musical genres of Martinique. In the *bele* traditions of northern Martinique, the *tibwa* is played on the side of the *bele* drum. In the rest of the island, however, the *tibwa* is struck against a bamboo branch.) Southeastern Martinicans also call 'biguine' a European-derived dance music to which they perform *haute-taille*, a set dance introduced by French planters in the late eighteenth century. Rural counterparts to the *biguines* are the *bidjin bele* of northern Martinique, the *toumblak* (a.k.a. *boulawon*), a *gwoka* rhythm from Guadeloupe and the *débòt* in French Guiana. *Débòt* is also found in St Lucia, an island nation that neighbors Martinique. All these rural drummed genres are characterized by the same rhythmic ostinato as the urban *biguines*. Other dance music based on comparable rhythmic ostinati exists throughout the Caribbean: the Puerto Rican *plena* and the *danzon* from Cuba are but two examples.

The Development of the *Biguine*

The origins of the *biguine* and the exact moment of its emergence remain uncertain. Oral history recorded in Martinique by members of the *Association Mi Mès Manmay Matnik*, an association for the preservation and transmission of Martinique music and dance traditions, links the genre to old-time African-derived *calendas*. (In Martinique, there are three types of drummed dances called 'calenda.' Members of the *Association Mi Mès Manmay Matnik* propose that the *biguine* may be a variation of yet another *calenda* that is no longer practiced.) In Guadeloupe, on the other hand, an article written by ethnomusicologist Marie-Céline Lafontaine on the local music repertoires mentions *sobo* as the local African-derived antecedent to the *biguine* (Lafontaine 1983, 2155; see also Lafontaine 1986). (*Sobo* is an African-derived drummed dance that used to be part of the Guadeloupean *gwoka* suite.) However, in her study of the European-derived repertoires of Martinique, Dominique Cyrille has also suggested a connection with turn-of-the-nineteenth-century French *contredanse* (Cyrille 1988). All these possibilities appear equally plausible, and further research is needed to elucidate the early developments of the *biguine*.

The genre seems to have emerged in urban areas of the French Caribbean in the mid-nineteenth century, when thousands of newly freed blacks left the plantations to look for employment in the cities. It was then associated with the drum dances and public celebrations that marked the abolition of slavery in 1848. The name 'biguine' appeared in an account of life in St-Pierre (the former capital of colonial Martinique) between 1870 and 1902, authored by the Martinican writer Virgile 'Salavina' Savane (Salavina 1986) to designate both a popular dance style and a type of satirical song frequently heard in St-Pierre. The eruption of Mount Pele, which completely destroyed St-Pierre in 1902, brought the golden era of the Martinican *biguine* to an abrupt end.

Up to the 1950s, however, *biguines* remained part of daily life in the French Caribbean. They were often sung in the streets and in marketplaces to spread both serious news and gossip. Because many French-Caribbean musicians then traveled between the Caribbean and Paris, the music trends that were developing in the French capital at the same time also made an impact on the evolution of the *biguine*. After World War I, indeed, many middle-class blacks left the Caribbean to pursue their college education in Paris. Some of these French Caribbeans played music as a side activity while others were full-time musicians. A number of musicians settled in Paris where they performed in cabarets and dance halls, while others preferred to stay in the Caribbean and traveled to Paris only when they had to represent the islands at the 1931 Exposition Coloniale or at the 1937 Exposition Internationale, for example. However, no matter how long they stayed in Paris, they all seized the opportunity to play music with performers from the United States and other Caribbean islands.

Documents published by Louis Garaud (1895) and by Salavina (1986) reveal that *biguines* were commonly performed with small ensembles of three to five musical instruments. In St-Pierre of the late nineteenth century, popular balls were at times led by a trombone and clarinet accompanied by a large military drum. At other times, a violin or an accordion superimposed their lively melody to a polyrhythmic accompaniment of triangle, tambourine and *chacha*. (The *chacha* or shak-shak is a shaker made out of a metallic tube closed at both ends and filled with grains or small nails. The *chacha* plays rhythmic ostinati throughout the traditional *biguines* and *mazouks*.) There was no limitation, on the other hand, to the number of instruments that constituted the street bands performing biguine during the Carnival parades.

In the 1920s, the Martinican-born clarinetist Fructueux Alexandre, 'Stellio' (1885–1939) introduced traditional *biguines* of the St-Pierre style to Parisian audiences. Also a member of the Parisian jazz scene, Stellio was familiar with the jazz style that the French liked. He thus replaced the tambourine with a drumset and gave the clarinet a leading role in his orchestrations of instrumental *biguines*. Until then, the clarinet had been primarily an accompanying instrument. Nevertheless, Stellio perpetuated the traditional use of melodic instruments such as the guitar, banjo, piano and violin as contributors to the overall rhythm of the *biguine*. Each played its own highly rhythmic countermelody, some of them in *détaché* style, to accompany the melody played by the clarinet. On the other hand, in Stellio's sung *biguines*, the role of the clarinet was often limited to playing only an introductory segment called 'ritournelle,' and to short melodic transitions in between the sung verses. For about two decades, Stellio's band and orchestrations remained a model followed by most bands playing the *biguine*.

The *biguine* entered the next phase of its development in the late 1950s. Cuban music had been dominating the French-Caribbean soundscape for some time when Frantz 'Francisco' Charles-Denis, a Martinican pianist and composer, proposed innovations that put the *biguine* back into the repertoire of fashionable dances. Francisco replaced the superimposed countermelodies that were Stellio's trademark with rumba-like accompaniments played on the piano. He also added the Cuban *conga* drum and the Martinican *bele* drum to the traditional *biguine* band and relegated the banjo and violin to providing occasional backup. Meanwhile, in Paris, Guadeloupean trombonist Al Lirvat (b. 1916) was enjoying a certain success with the *biguine wabap*, a new variant he had created. As Lirvat explained in a television documentary broadcast by RFO (Réseau France Outre-mer – French Overseas Network), the national French television network in Guadeloupe in 2004, the term '*wabap*' is an onomatopoiea meant to evoke a rhythmic break that Josephine Baker had introduced in her choreography of the *biguine*. Indeed, as perhaps an influence from the Cuban dance music of which Parisians were found in the 1950s, a break occurs every four bars in the refrain section of *biguine wabaps*. *Biguine* musicians nonetheless view *biguine wabap* as resulting from the influence of bebop. This is because Al Lirvat found inspiration for the *biguine wabap* after he heard Dizzie Gillespie in a Parisian concert hall in the late 1940s. In addition to the breaks that are reminiscent of the rhythm of a Cuban *conga* dance, *biguine wabap* is characterized by bebop-like rhythms uttered on the drumset in the central section of the piece. The rhythmic hybridity of *biguine wabap*, however, failed to seduce audiences in the French-Caribbean islands.

International Impact of the *Biguine*

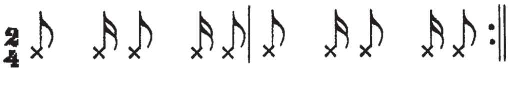
The 1930s witnessed the golden era of the Parisian *biguine*. The arrival of musicians from the French Caribbean coincided with the introduction of jazz to Paris. Soon afterward, Cuban sounds also appeared in Parisian nightclubs. From the late 1920s until the early 1960s, Parisians craved exotic sounds so much that fashionable nightclubs often hired two bands each night: one a US band, the other from the Caribbean. During this time, French-Antillean musicians were in high demand. They played jazz in US bands, Latin music with Cubans, and their own *biguines* in bands made up of French-Antillean artists. This is how, for example, Guadeloupean *biguine* composer Félix Valvert became famous as a Cuban *rumba* musician and Robert Mavounzy came to play the saxophone with Bill Coleman in Paris. Adding to this, *biguine* musicians played an important role in the nascent French music industry. From Stellio and Honoré Coppett, who made several recordings with the Odeon label, to Sam Castendet, who signed with Columbia and Eugène Delouche, who recorded at Pathé in the late 1920s and 1930s, the *biguine* was so fashionable that all the recording studios wanted to secure contracts with French-Antillean musicians. Furthermore, given their versatility, which allowed them to perform their own music as well as jazz and Cuban genres, Martinican and Guadeloupean *biguine* musicians were featured in the large majority of jazz and Cuban music recordings that were made in Paris during the first half of the twentieth century.

However, despite the strong impact of the *biguine* in Paris during the first half of the twentieth century, very few musicians outside the French-Antillean sphere composed and recorded *biguines*. While many songs from the mid-twentieth century in France and the United States were entitled 'beguine,' none fits the description of a *biguine* except for 'Biguine à bongo,' recorded by French singer Charles Trenet in 1938. For example, 'Beguine Erotic,' recorded by Sven Gyldmark in 1969, J. Bock's 'Boston Beguine,' Joe Loco's 'Grenada Beguine' and Cole Porter's 'Begin the Beguine' were all slow-tempo love songs, most of them in the style of Cuban boleros. At this time, 'biguine' seemed to be a generic term to signify Caribbean music propitious for a romantic or amorous mood. Yet, many of the musicians who composed such 'beguines' had worked with French-Antillean biguine composers. Another exception is provided by a suite for two pianos entitled *Le bal martiniquais*, composed by Darius Milhaud in 1943. In this suite, in addition to the melodic lines that were borrowed from traditional songs of Martinique, the second piece of the suite, entitled 'Biguine,' is a stylized version of a popular Martinican *biguine*.

The emergence of *zouk* in the 1980s marked another step in the history of the *biguine*. *Zouk*, which immediately received full support from the music industry, conquered audiences worldwide and precipitated the disappearance of the *biguine* from the dance repertoire. At the beginning of the twenty-first century, learned French-Caribbean musicians such as Alain Jean-Marie and Mario Canonge were composing new *biguines* that were not destined for the dance floor but for the concert hall. Their compositions generally adopt the structure of what Martinicans call 'classic' *biguine*, and are not sung.

Stylistic Features

Classic *biguines* in Stellio's time often began in a manner somewhat similar to that of the rural *bele* and *sobo* dances to which they have been linked. The band joined in after a soloist had introduced the piece with a short phrase called '*ritournelle*,' sometimes based on the characteristic rhythm of the biguine. These *ritournelles* usually began on the downbeat and sometimes borrowed their melodic lines from the refrain. Modern *ritournelles* generally incorporate the rhythm of the *biguine* (see Example 1).



Example 1: Characteristic *tibwa biguine* (a rhythmic ostinato common to all biguines)

Biguines are generally made up of two sections, A and B, which are repeated. Section A and section B are sometimes contrasting. They consist of segments that last approximately 4–8 bars. These sections correspond to the refrain and couplet of the sung *biguines*. In sung *biguines*, however, stanzas can last up to 12 bars to accommodate the text. In addition, purely instrumental *biguines* in Stellio's style frequently alternate leading instruments. Stellio's 'Paris Biguine' or 'En sens unique, s'il vous plaît,' for example, follow this pattern closely.

The short melodic transition that was previously played before the return of sections A and B in Stellio's time has since become a fully developed central section which musicians often take as an opportunity to improvise new variations of the main themes. A short conclusion sometimes ends the *biguine*, but most pieces end with the last occurrence of section B. 'Sérénade,' a *biguine* composed and recorded by Alain Jean-Marie in the 1990s, illustrates the recent evolution of the genre.

Biguine Lyrics

Biguines are part of the long tradition of songs of social comment that were brought to the Caribbean by enslaved Africans although, at the turn of the twenty-first century, many *biguine* composers created purely instrumental pieces. The topics that they cover range from lovers' disputes, as in 'Jilo fout ou jalou,' recorded by Orphélien, to community events, as Stellio demonstrates in 'En sens unique, s'il vous plaît' and national politics, as in, for example, 'Voici les loups' by Djo Dézormo. While some *biguine* lyrics carry beautiful love poems, such as Al Lirvat's 'Doudou pa pléré,' most are satirical lampoons of ambitious politicians, betrayed lovers or gossipmongers. No matter the topic they address, however, *biguine* lyrics are most frequently in the Creole language, and often contain *double entendre*. Antilleans often use words in an oblique fashion in satirical *biguines*, because the real message is not supposed to be understood by children or people outside the community to which the message is addressed. Songs with a comparable function are mentioned in Father Labat's 1695 descriptions of Martinique, as well as in other travelogues of past centuries, such as Thibault de Chanvallon's *Voyage à la Martinique*, written in 1751, or father Dutertre's *Histoire Générale*, written 100 years earlier. Lafcadio Hearn's *Two Years in the French West Indies*, a book which he wrote between 1887 and 1889 while residing in Martinique, provides lively descriptions of the everyday use of these songs at the end of the nineteenth century. Although Hearn did not use the word 'biguine,' many of the excerpts he quotes come from *biguines* that were still sung in Martinique and Guadeloupe in the early years of the twenty-first century. On the other hand, Martinican writers of the late nineteenth century did use the term 'biguine' in their accounts. It is in addition in their chronicles that the reasons why specific *biguines* were created can be found. Salavina, for example, described the 1881 political scandal that led to the making of the biguine, 'La Défense ka vini fol' (1986, 107–22; 257–8). Victor Coridun wrote a transcription of this song which can be found in Léona Gabriel-Soïme's *Ça c'est la Martinique* (1966, 117). In another chapter of his memoirs, Salavina (1986, 251–63) recounted the ways in which the turpitudes of several well-known people of St-Pierre were ridiculed in *biguines* that have now become part of the traditional repertoire of Martinique. 'Mana,' one of the *biguines* that Salavina quotes (1986, 254–5), is also featured in Léona Gariel-Soïme's book under the title 'Marca' (1966, 115). In keeping with this tradition, many *biguines* composed during the twentieth century are comparable in their subject matter.

Biguine lyrics adopt one of two main forms, depending on the occasion for which the song was created. When *biguines* are destined for the dance hall or for the marketplace, they usually adopt the form of the French chanson with stanzas that are four–eight lines long, followed by a chorus of equivalent length. When *biguines* are created for Carnival street parades, on the other hand, the refrain section of the song usually comprises short phrases in call-and-response form, and are sung by the lead singer and chorus or crowd, as illustrated in the song 'Léchel poul,' which Stellio recorded in the early 1930s.

Conclusion

At the beginning of the twenty-first century *biguines* were making a timid comeback in Martinican functions. Although most adults have continued to appreciate the *biguine*, it has had a limited appeal for French-Caribbean young people and has not, therefore, been a viable commercial product. As musicians have turned to the more profitable *zouk*, only a handful of newly composed biguines have been recorded each year. The *biguine* has been more frequently heard in concert halls than in popular ballrooms. However, the rhythmic basis of *zouk* comes from the Carnival variant called *biguine-vidé*. The rhythm of the *biguine-vidé* is like a *tibwa biguine* ostinato, in which the second half note is not played, thus accentuating the resemblance of the *biguine* to the Puertorican *plena*. Hence, far from disappearing, the rhythm of *biguine* has continued to drive popular dance parties worldwide.

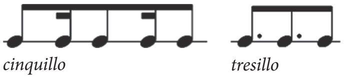
Bolero

Bolero is the quintessential Latin American romantic song of the twentieth century. From its starting point in Santiago de Cuba, *bolero* evolved into a cosmopolitan and international style taking full advantage of the new technologies of recording, radio and film. Between 1930 and 1960 it enjoyed ubiquitous presence in each and every Spanish-speaking country – the only Latin American genre to enjoy such popularity. As a result of its wide diffusion and the privileged position which it occupies across the Spanish-speaking world, *bolero* is the most studied of all Latin American popular music genres.

Cuban Origins

Bolero first appeared in Santiago de Cuba in the late nineteenth century. A hybrid of *criollo* and Afro-Cuban musics, *bolero* was originally a duple-meter dance song in binary form. Performance of *bolero* occurred in a troubadour-like style with two voices in thirds or sixths, accompanied with two guitars. One guitar would strum the *cinquillo* rhythm and the other pluck a *tresillo* (see Example 1). Most historians agree that Cuban *bolero* is unrelated to Spanish *bolero* (Kahl and Katz 2001; Pineda Franco 1996). The musical characteristics of early Cuban *bolero* and its manner of performance marked it as a low-class dance genre. Most performers were Afro-Cuban men; the middle class regarded the guitar as a low-class instrument; the elites considered the *cinquillo* rhythmical pattern as a 'savage Africanism' (Béhague and Moore 2001); and as *bolero* composers often forced the verses to match the *cinquillo*, sometimes altering the natural rhythm of the text in the process, the middle class considered its lyrics 'poor' and 'outlandish' (Pineda Franco 1996).



Example 1: *Cinquillo* rhythmic pattern and *tresillo* rhythmic pattern

José Sánchez, a member of a group of composers and performers later known as *Vieja Trova*, wrote the first published *bolero*, 'Un beso' (A Kiss) (aka 'Tristezas'), in 1885. At the turn of the twentieth century many *trovadores* migrated to Havana, taking *bolero* with them. A sign of *bolero*'s popularity in Havana is the 1906 production of a show titled 'The Triumph of *Bolero*' (*El triunfo del bolero*) at the Teatro Alhambra (Rico Salazar 2000). In the 1920s the popularity of *son* relegated *bolero* to a secondary role. Although many outstanding and lasting Cuban *boleros* were composed during the 1920s and 1930s – such as Eusebio Delfín's '¿Y tú qué has hecho?,' María Teresa Vera's 'Veinte años' and Miguel Matamoros's 'Lágrimas negras' (a *bolero–son* hybrid) – it was a series of Mexican composers who were the most influential *bolero* authors in the second quarter of the century.

Bolero in Mexico

Bolero first arrived in the Mexican province of Yucatán in the 1910s, most likely taken to Mexico by Cuban artists and circus troupes who crossed the 135-mile-long strait between the two countries (Torres 2002). By the mid-1920s musicians from Yucatán had embraced the genre and began adapting it to local taste. *Boleros yucatecos* featured a slower tempo and gave more emphasis to the romantic quality of the text. Rather than writing their own lyrics, *bolero* composers from Yucatán followed a local tradition of setting texts by poets or professional lyricists. Thus, Yucatán *boleros* show a strong influence from modernist poetry and its imagery.

The most important early Mexican *bolero* composer was the Yucatecan Guty Cárdenas (1905–32). Like many other musicians of the time, Cárdenas migrated to Mexico City in search of better opportunities, including the possibility of working in the emerging medium of radio (Bazán Bonfil 2001). In 1930 RCA (Radio Corporation of America) founded the radio station XEW, 'The Voice of Latin America,' where Cárdenas performed in a show called *Calendario Artístico*. The strong XEW signals could be heard as far away as Guadalajara, Texas, Cuba and Colombia, where musicians eagerly awaited each new song. Upon listening, they would transcribe the melodies and, soon after, premiere them locally.

Agustín Lara

The untimely death of Guty Cárdenas at the peak of his popularity – he was killed in a brawl at age 27 – allowed Agustín Lara (1900–70), another well-known XEW composer, to take center stage. Lara, widely considered the most influential *bolero* composer of all time, developed an urban variant of the genre, quite different from the regional style of Cárdenas and his predecessors. Lara had worked as a cabaret piano player in the 1920s, and his new urban *bolero* can be traced to his interest in Mexico City's nightlife of cabarets and brothels. In his lyrics, Lara replaced the muse of early *bolero*, the unapproachable virgin, with the unapproachable prostitute. Some examples include songs such as 'Imposible' (1928), 'Aventurera' (1930) ('Sell your love at a high price, dear'), 'Santa' (1931) and 'Pecadora' (1947) ('Why did destiny turn you into a sinner if you don't know how to sell your heart?'). Mexican author Guadalupe Loaeza suggests that Lara's popularity lies in part in '[treating] ladies like prostitutes and prostitutes like ladies' (quoted in Velazquez and Vaughan 2002).

In Lara's world, the woman is never a friend, always an unreliable lover. Iris Zavala posits that, 'Lara plays on the archetype of the modernist femme fatale, and on the traumatic woman of black cinema, the woman who with her capricious demands wrecks man, who hates and loves her' (Zavala 2000, 129). From Lara onward, *bolero* came to be known as a genre of lovelorn songs. Rodrigo Bazán Bonfil argues that with Lara '*bolero* abandons the cult of a sublimating love and adopts a taste for suffering and crying in and of themselves' (Bazán Bonfil 2001, 33).

Lara's early *bolero*s, starting with 'Imposible' (1928), show a clear influence of the Yucatán – provincial – style of Guty Cárdenas. Characteristic are the adaptation of Afro-Cuban rhythms at the piano and the choice of Caribbean settings for the lyrics, for example, 'Lamento jarocho' (1933) and 'Oración caribe' (1934). By the end of the decade, Lara's songwriting and arranging had become more and more cosmopolitan, devoid of regional traits. The piano or an ensemble replaced the guitar as accompaniment, the *cinquillo* disappeared, and a slower 4/4 replaced the original 2/4 meter. In terms of tonal structure, Lara favored *bolero*s that open with 16 bars in minor (verse) and then modulate to major for the following 16 bars (chorus), (see for example his 'Noche de Ronda'). In the bass line, Lara frequently uses a rhythmic pattern consisting of a half note and two quarter notes, accenting the first and third beats of every measure (Pineda Franco 1996, 124). His *bolero*s redefined the genre and became a compositional model for future *bolero* composers.

Lara was a pioneer in mass distribution of popular music in Mexico: his music was listened to by all social strata, and for the first time in Mexican history, 'a standard selection of songs became popular simultaneously across the country' (Moreno Rivas 1989, 142). Moreover, Lara was part of the first generation of Latin American composers and performers who worked in radio and movies, recorded songs and toured the continent. Lara hosted his own radio show, 'Agustín Lara's Intimate Hour' (*La hora íntima de Agustín Lara*) at XEW station; he personally chose his own singers, such as Pedro Vargas and Toña la Negra; his *bolero*s provided plots and titles for films, in some of which he played roles or himself (e.g., *Pecadora*, 1947 and *Perdida*, 1950); and he was even censored by the Secretaría de Educación Pública for his rowdy lyrics (Pedelty 1999, 50). This combination of factors resulted in an impressive popularity, unimaginable before the 1930s.

Trios

The most important development in *bolero* performance during the 1940s was the popularization of the trio style. Since the early 1940s it was common practice to perform *bolero*s in a *serenata* (serenade) style, with two or three voices, and two or three guitars. This ensemble was known as a *trio*, and in less than a decade it became the standard and most recognizable sound of *bolero*. To a large extent, the popularization of the trio sound is due to the international popularity of Los Panchos, a trio of two Mexicans (Alfredo Gil and Chucho Navarro) and a Puerto Rican (Hernando Avilés), formed in New York City in 1944 (Fernández 2005).

The importance of Los Panchos for the development of *bolero*'s performance practice cannot be overstated. George Torres confers on them an importance equal to Agustín Lara: 'If Agustín Lara was responsible for defining a standard for *bolero* composition, then Los Panchos were responsible for defining the standard for *bolero* performance in the 1940s and '50s' (Torres 2002, 160). Los Panchos popularized sophisticated three-part vocal arrangements, accompanied by two guitars, a *requinto* (a smaller guitar tuned a fifth higher) and a percussion section consisting of claves, maracas and bongos.

Los Panchos were the first trio to move beyond the serenade and bar scenes into middle- and upper-class spaces (Moreno Rivas 1989, 162). This was achieved through a 'detropicalization' of *bolero*'s sound. By downplaying the role of Afro-Cuban percussion – which was prominent in much, though not all, of Lara's music – and bringing to the fore a virtuosic guitar technique, Los Panchos were able to reach the higher strata of Latin American society (Bazán Bonfil 2001, 67). Following the footsteps of Los Panchos, *bolero* trios mushroomed throughout Latin America. Some of the most important are Los Tres Diamantes, Los Tres Ases and Los Tres Caballeros.

Jazz Influence and Crooners

In the mid- to late 1940s, first in Cuba and then in Mexico, *bolero* composers and musicians began incorporating elements of US jazz, such as extended harmonies, chromaticism and more complex melodies, into *bolero*. This hybrid style is known as *filin* in Cuba and *bolero moderno* in Mexico. In terms of lyrics, this jazz-inflected *bolero* moved away from the topics of idealized love and unapproachable lovers common in earlier *bolero*s and instead focused on the pain cause by separation from a partner.

American-style big bands were very popular in Mexico City in the 1940s, and *bolero*s were arranged to follow this trend, distancing the *bolero* still further from the provincial styles of the early 1930s. Moreno Rivas argues that it is this more international sound, devoid of 'local color,' that made *bolero* exportable to foreign countries (Moreno Rivas 1989, 130–1). Songs such as Lara's 'Solamente una vez' (Only Once, 1941), Alberto Domínguez' 'Perfidia' (Treachery) and 'Frenesí' (Frenzy) (both 1939) and Consuelo Velázquez' 'Bésame mucho' (Kiss Me a Lot, 1941), were the first worldwide hits of the *bolero* tradition. They were recorded in English and also performed instrumentally by bands in the United States, Europe and all over Latin America. 'Frenesí' was recorded by the big bands of Benny Goodman, Jimmy Dorsey, Glenn Miller and Artie Shaw, who took it to the number one position of the Billboard Singles chart in 1940; and 'Perfidia' was played in the dancing scene at Rick's café in the 1942 film *Casablanca*.

Along with the use of orchestral arrangements came the emergence of the *bolero* crooners. The first Mexican crooner was Fernando Fernández (1916–99), whose singing style was described as a unique way of 'saying songs' (*decir las canciones*) (Rico Salazar 2000, 440). In Latin American genres that were community based, such as Chilean *cueca* and Argentine *tango*, the singing style stayed relatively unchanged by the arrival of microphone amplification, but as happened with popular singing elsewhere in these years (e.g., in the United States), *bolero* crooners' creative use of new technology effected a profound change in the vocal performance of *bolero*, making it more intimate and colloquial (González 2000). Crooning, as exemplified by the style of Lucho Gatica (1928), eventually superceded the previous generation's bel canto technique of tenors such as Juan Arvizú (1900–85), Ortiz Tirado (1893–1960) and Pedro Vargas (1906–89).

Internationalization

In the 1950s singers from all over Latin America traveled to Mexico and Cuba to record with famous *bolero* bands and orchestras. This international roster of *bolero* singers, which included Chilean Lucho Gatica, Argentine Leo Marini and Bolivian Raúl Shaw Moreno, contributed to the perception that *bolero* belonged to all Latin Americans. Unlike other contemporary popular genres, such as *ranchera*, *tango*, *chachachá* and *mambo*, which evoked a nation or region, *bolero* in the 1950s tended to avoid textual or musical references to specific locales. The continental popularity of trio, big-band and orchestral *bolero*, thanks in part to a transnational music industry, transformed *bolero* into an international genre.

An important countercurrent to *bolero*'s internationalization is the development of the Mexican *bolero ranchero*, a commercially successful hybrid of *bolero* and *ranchera* that was very popular during the 1950s. At first, *bolero ranchero* was simply a *bolero* composition sung accompanied by a *mariachi* ensemble, such as the 1949 recordings of Mexican film star Pedro Infante. As composers such as Rubén Fuentes and José Alfredo Jiménez began to write specifically in this new style, *bolero ranchero* became a distinct genre characterized by its straightforward, unpretentious lyrics and preference for the major mode. *Bolero ranchero* songs, such as Fuentes' 'Cien años' (A Hundred Years) and Jiménez's 'Un mundo raro' (A Strange World), can be considered a return to the provincial roots of Mexican *bolero* pre-Agustín Lara.

Rock 'n' Roll and Armando Manzanero

In the late 1950s *bolero*'s footprint can be found in early rock 'n' roll ballads, such as Frankie Avalon's 'Venus' (1959) and Bobby Darin's self-penned 'Dream Lover' (1959) (Torres 2002). *Bolero* borrowing is even more explicit in the Beatles' 'And I Love Her,' from the soundtrack of the movie *A Hard Day's Night* (1964), which features Ringo Starr on bongos and George Harrison playing *claves* and a Ramírez classical guitar.

Latin American middle-class youth embraced rock 'n' roll as a symbol of first world modernity, and as a result, *bolero* became démodé. The only *bolero* singer/songwriter who was able to compete with the strong presence of music in English was the Yucatecan Armando Manzanero (b. 1935). Manzanero modernized *bolero* and made it appealing to a younger generation, as exemplified in his first solo album *A mi amor … con mi amor* (1967) (To My Love … with My Love), in which he sang and played the piano with Eduardo Magallanes's orchestra. Magallanes's orchestral arrangements incorporated the instrumentation of rock 'n' roll, such as drum set instead of Afro-Caribbean percussion and electric instead of acoustic guitar. There was not a single *requinto* solo that would remind people of the 1950s trio Los Panchos on this album. The arrangements sound less like an orchestrated *bolero à la* Lucho Gatica, and more like a mid-1960s Anglo pop ballad by Brenda Lee (e.g., 'Losing You,' 1963), Tom Jones, Dusty Springfield or Paul Anka.

Manzanero's innovations, which also include the use of lighter, teen-friendly lyrics, made his music appealing to a new generation, and thus he became a transitional figure between *bolero* and the new genre of *balada* (Moreno Rivas 1989). Musicologist Juan Pablo González argues that *bolero* 'phenomena produced [after Manzanero] are revivals, rather than renovations' (González 2000, 37; author's translation). González blames Latin American music's 'excessive commercialization' in the 1970s and 'Western music's growing deterritorialization' for the demise of *bolero* at the hands of *balada*. At the time, however, genre distinctions between *bolero* and *balada* were less clear than most *bolero* histories seem to suggest (Party 2006).

Revival

In the 1990s *bolero* experienced a strong comeback, with old *boleros* being newly recorded and updated for a new generation. The origins of the *bolero* revival can be traced to 1985's *Primer Festival del Bolero*, celebrated in Miami (Évora 2001, 21). Similar festivals followed in Cuba (1987), Mexico (1987) and Venezuela (1994). The watershed event in the revival was the unexpected success of Mexican *baladista* Luis Miguel's album of classic *bolero*s entitled *Romance* (1991). Labeled by Luis Miguel as a 'transition record,' *Romance* became an overnight sensation in the Spanish-speaking world, selling 4.5 million copies worldwide. After *Romance*, countless artists recorded modern versions of older *bolero*s, among them Mijares, Lucero, Ana Gabriel, Linda Ronstadt, José Feliciano, Gloria Estefan, Celia Cruz, José Luis Rodríguez and Spanish tenor Plácido Domingo.

Bolero's main figures, song titles and lyrics have found a secure place in popular and *avant-garde* culture internationally, ranging from the soundtracks of Pedro Almodóvar's films such as *Tacones Lejanos* (High Heels) to postmodern novels such as Manuel Puig's *El Beso de la Mujer Araña* (Kiss of the Spider Woman) and Luis Rafael Sánchez' *La Importancia de Llamarse Daniel Santos* (The Importance of Being Daniel Santos) (Knights 2002). In the twenty-first century the *bolero* repertoire is still a staple of live music making, from serenades in restaurants to house parties throughout Latin America.

Bolero Moderno

Bolero moderno is a jazz-influenced style of Latin American *bolero* composition that developed in Mexico in the 1950s. The new sound of *bolero* was immediately perceived as an attempt at modernizing the by then old-fashioned genre, *bolero*, hence its name. Among the jazz features of *bolero moderno,* each of which played a part in distinguishing *bolero moderno* from its predecessor, are extended harmonic language, slower tempi, greater use of rubato and melodic chromaticism. The most important *bolero moderno* composers are Vicente Garrido (1924–2003) ('No me platiques' [Don't Tell Me], 1952, 'Todo y nada' [Everything and Nothing], 1958, 'Una semana sin Ti' [A Week Without You'], 1948), Álvaro Carrillo (1921–69) ('Amor mío' [My Love], 1956, 'Sabor a mí' [Taste of Me], 1959, 'Un poco más' [A Little More], 1961, 'La mentira' [The Lie], 1965), Roberto Cantoral (1930–2010) ('El preso no. 9' [Prisoner no. 9], 1955, 'El reloj' [The Clock], 1957. 'La barca' [The Boat], 1957, 'Regálame esta noche' [Give Me Tonight], 1958) and Luis Demetrio (1931–2008) ('La puerta' [The Door], 1957).

Bolero scholars, such as Cuban Leonardo Acosta and Mexican Dueñas Herrera, suggest that *bolero moderno* is not an original Mexican development, but rather an extension of Cuban *filin* (Acosta 2001; Dueñas Herrera 1993). Composer Vicente Garrido, however, claims that the two styles developed independently as musicians in Cuba and Mexico adopted American jazz harmonies in their compositions (Garrido 2001; Contreras 2002).

Like Cuban *filin*, *bolero moderno* presents a more optimistic view of love and relationships than the one often found in the work of Agustín Lara, the principal composer of *boleros*. Notably, the topics of prostitutes and low life, emblematic of the world often evoked by Lara's songs and some of the films for which he wrote the scores, were abandoned. *Bolero moderno* changes the focus from idealized love and unapproachable lovers, both so common in earlier *boleros*, to the pain caused by the separation from a partner (e.g., 'El reloj' and 'La mentira'). More so than earlier *bolero*, *bolero moderno* texts avoid gender specificity by favoring the neutral second person 'tú' (you).

The preeminent representative of *bolero moderno* performance style is Chilean singer Lucho Gatica (b. 1928), who relocated to Mexico in the late 1950s. Gatica discovered the *filin* repertoire by way of Cuban Olga Guillot, whom he met in Chile in 1949 (González 2000). Thereafter, Gatica specialized in *filin* and *bolero moderno*, with only a few incursions into earlier *bolero* repertoire. The characteristics of Lucho Gatica's *bolero* recordings are exemplary of the style: first, a very slow tempo, rendering *bolero* almost undanceable; second, arrangements for string orchestra and winds, in the manner of Frank Sinatra's performances; third, an anguished vocal delivery; and fourth, a mastery of the use of the microphone to achieve expressive effects (e.g., Gatica's 1957 recording of 'Encadenados' [Chained] by Carlos Arturo Briz) (González 2000).

The popularity of *bolero moderno* declined in the face of the rock 'n' roll invasion of the 1960s. *Bolero moderno* singer/songwriter Armando Manzanero (b. 1935), however, was responsible for hybridizing *bolero* songwriting with rock arrangements to develop the genre that would eventually replace *bolero* as the ubiquitous Latin American love song: the *balada*.

DANIEL PARTY

Bomba (Ecuador)

In Ecuador, the term *bomba* denotes a musical genre that identifies the Afro-Ecuadorian population from the Chota Valley in the northern highland provinces of Imbabura and Carchi. It is also the name of the musical ensemble that plays this music, a particular type of drum that is part of this ensemble, and the couple dance that this music accompanies. With regard to its origin, it is generally agreed that the song-dance emerged during the colonial period among the slave population at the sugar plantations owned by the Jesuits. As a genre, the *bomba* synthesizes musical elements from Ecuador's tri-ethnic heritage – Spanish, Amerindian and African – which is observed in the use of guitars and rhymed verses, pentatonic melodies and percussion instruments, respectively. The choreography resembles a courting scene in which the woman, carrying a glass bottle on top of her head, avoids the man's advances with strong hip movements that keep him away from her. The *bomba*'s rhythmic pattern alternates 3/4 and 6/8 rhythms (*sesquiáltera*). The basic pattern can be rendered in 3/4 meter as quarter note, eighth note, accentuated eighth note, quarter note. As an instrument, the *bomba* is a middle-sized, double-headed drum held between the knees and played with the hands. The instrumental ensemble, called '*conjunto de bomba*,' is made up of a *bomba*, a guitar, a *requinto* (small five-stringed guitar) and a metal *güiro* (scraper). Although *bomba* lyrics have traditionally dealt with themes of love, contemporary lyrics also deal with economic and political concerns such as migration, lack of employment and disillusionment with the government. The *bomba* 'Carpuela' by Milton Tadeo, for example, talks about the need to look for work in other regions of the country because a river flood devastated the town of Carpuela.

The most popular composers and performers of *bomba* are the Hermanos Congo and Milton Tadeo. Although the *bomba* is not considered a national music genre *per se*, since the late 1990s it has entered the repertoire of Ecuadorian singers who are associated with national music. Segundo Rosero's recordings of *bombas* in the late 1990s have given the *bomba* commercial visibility at the national level, such as 'Sabor a miel' (Taste of Honey) and 'Pasito Tun-Tun' (A Dance Step Called Tun-Tun). Since the early 2000s *tecnocumbia* singers from the middle-lower classes have mixed the *bomba* with the *tecnocumbia* rhythm. Unlike the Chota Valley *bomba* ensemble, the commercial *bomba* is arranged for synthesizers, electric guitars, *requinto* and a drum set. Because the *bomba* is usually performed and listened to by working-class people, Ecuadorian music scholars tend to regard it as *música rocolera*, a style of music associated with drunkenness. The *bomba* is the emblematic music of the Afro-Ecuadorian population of the highland region, and as such is markedly distinguished from the Afro-Ecuadorian *marimba* music of the coastal region.

KETTY WONG

Bomba (Puerto Rico)

Bomba is an African-derived drum-dance tradition from Puerto Rico that incorporates call-and-response singing, polyrhythmic drumming and a distinctively percussive dance style. For more than 300 years, *bomba* has provided the foundation, or template, on which Puerto Rican music and dance have continued to evolve. Like its kindred African diasporic dance music genres elsewhere in the Caribbean, *bomba* developed in the lowland plains of the island where sugarcane was cultivated. The labor-intensive process of cutting, hauling and refining the cane created a huge demand for workers, many of whom were brought over as slaves from West Africa, a great proportion coming from the Bantu-Kongo cultural area of Central West Africa. These coastal areas became population centers where an increasingly mixed group of workers with African, Spanish and Island-Arawak ancestry brought together their talents for singing, drumming and dancing in the birth of Puerto Rican *bomba*.

Historical Overview

The first written reports of *bomba* date back to the early 1700s. Sporadic mentions of *bomba*, often referring to it as a 'congo' dance, continued among travel writers throughout the slavery period, which ended when slavery was abolished in 1873. Because *bomba* was largely associated with enslaved Africans in the eighteenth and nineteenth centuries, and was performed immediately prior to several insurrections, the genre was tightly regulated by the colonial government and in some cases banned outright in certain municipalities. Moreover, no one was writing about *bomba* as an autochthonous Puerto Rican genre of popular music in the nineteenth century, and this widespread prejudice and rejection of *bomba* was fairly constant up until the mid-twentieth century.

An early twentieth-century offshoot of *bomba*, called *plena*, became popular among the island working class and Manuel 'Canario' Jimenez (1895–1975) gained some commercial success in recording this music in the 1930s. Bomba is closely related to *plena* and musical recordings of *bomba* are often linked to *plena*, to the point that they are often mentioned in the same breath (*bomba y plena*). The genres are quite distinct, however, and use different instrumentation, rhythms, lyrical structures and dance steps. Nevertheless, the few *bomba* songs that were recorded in the 1930s and 1940s were arranged and listed as *plenas* in the repertoires of artists such as Canario and César Concepción (1909–74). In these arrangements, they also replaced the traditional goatskin '*barriles*' (barrel drums) with congas. The popularity of the *plena* recordings, however, paved the way for *bomba* songs to be performed and recorded as part of a stage concert repertoire.

The emergence of '*bomba de salón*' (ballroom *bomba*) in the 1950s and early 1960s coincided with the ascendance of Rafael Cortijo y su Combo as the most commercially successful interpreters of the genre. As musical director and arranger, Rafael Cortijo (1928–82) incorporated *bomba* (and *plena*) songs into the popular *conjunto*-style, Afro-Cuban format popularized by Arsenio Rodriguez. While Cortijo's arrangements also used congas instead of *bomba* drums, he greatly expanded the market for this music as a distinct genre. His magnificent lead singer and collaborator, Ismael 'Maelo' Rivera (1931–87), also known as 'El Sonero Mayor' (The Master Singer), breathed new life into old *bomba* songs (some composed by the *bomba* 'Patriarch' Rafael Cepeda [1910–96]; others in public domain). Also during this time *plenero* Mon Rivera (1899–1978) had success with several *bomba* recordings in a similar vein from the late 1950s through the mid-1960s. These groups laid the groundwork for the salsa boom of the 1960s in which Puerto Rican artists such as El Gran Combo (founded and directed by Cortijo's former pianist Rafael Ithier in 1962) prominently included and listed *bomba* songs in their albums for the first time.

The 'folkloric' period of *bomba* began in the 1950s when *bomba* finally became recognized as a genre worthy of institutional recognition by the Institute of Culture. In folkloric presentations, *bomba* drums came to be used on stage for the first time. Unfortunately, on the rare occasions that folkloric *bomba* was visible it was also being represented as a picturesque vestige from the past, both quaint and exotic. Yet even then, *bomba* was vastly underrepresented in stage presentations of Puerto Rican folklore. During the 1960s and 1970s *bomberos* such as Félix Romero of Teatro Otra Cosa in New York agitated for the inclusion of *bomba* in folk festivals and community events, with some success. Today, the image of folkloric *bomba*, evoking the fashions of the late nineteenth-century Puerto Rico, has continued as 'formal wear' in many stage representations, especially in tourist venues and folk festivals.

Throughout *bomba* history, the genre has been passed down through oral traditions of families and their extended relations. The two most well-known families are the Cepedas and Ayalas, representing the areas of Santurce and Loíza, respectively. (The Discography below reflects this history.) Meanwhile, enthusiasm for the genre beyond these family networks has been stoked not only by commercial recordings of the music but also by awareness of kindred genres throughout the Caribbean cultural area.

Since the 1980s *bomba* songs have become part of pan-Caribbean repertoires (Tacuafán, Batacumbele, Anthony Carrillo, AfriCaribe et al.), that is, in ways that both defy the 'folkloric' label and go beyond the salsa category. Since the late 1990s *bomba* has also been embraced by Puerto Rican jazz musicians such as William Cepeda and David Sánchez, not to mention reggaeton artists such as Tego Calderón. These artists have returned to the use of the goatskin barrel drums in place of congas. In doing so, they have not only drawn attention to, and shown respect for, *bomba* in its traditional format, but have also expanded the market for this music.

Since the early 1990s a 'post-folkloric' period has come into the picture as young people from inside and outside the already established folkloric groups have created their own groups and have recast the genre with contemporary meaning alongside other popular-commercial genres. This new energy fed into and drew inspiration from the CICRE Bombazo Project (1998–2002), led by the present author and José Emmanuelli and supported by dozens of young *bomberos* in the San Juan Area. This project also spawned additional groups and non-profit organizations such as Restauración Cultural (led by Pablo Luis Rivera) that have been dedicated to organizing and promoting '*bombazos*' (community drum-dances where all are invited to participate). The result has been an island-wide and mainland '*bombazo* movement' that has continued into the second decade of the twenty-first century and has been well documented (Barton 2000, 2002, 2004; Cartagena 2004; Ferreras 2005; López 2009; Rivera 2010). By returning *bomba* to its roots as a drum-dance tradition worthy of being embraced and appreciated on its own merits, the 1990s generation of *bomba* performers have created their own markets for the music, one that extends beyond those that already exist for *plena*, *rumba*, *merengue* and salsa. This process has been accelerated in the early twenty-first century through the use of digital reproductions (audio and video), communications technologies (email and text messaging) as well as social networking (Facebook, Myspace, etc.), newsgroups, websites (see below) and Youtube videos. These technologies have enabled more people to get involved, keep in touch with each other, spread news about events, stay informed and increase participation.

Concurrent with these developments, several documentaries on *bomba* and its contemporary resurgence in the form of *bombazos* have been produced (see Filmography). These films also include discussion of the reactions *bomba* provokes among people of different social backgrounds about subjects such as the gender, race and class aspects of *bomba* performance.

Bomba as Music

While *bomba* songs are most commonly heard in salsa repertoires, especially among Puerto Rican musicians, the genre in its fullest expression is much more extensive. The historical and regional continuities of *bomba* may be complex, but there are a few constants that most can agree on, such as that any *bomba* tradition worthy of the name must include certain features in order to be recognizable as *bomba* by most practitioners. The basic elements of *bomba* music are songs, instruments, rhythms, protocols/conventions, improvisations and markings.

Singing

Call-and-response singing is the norm, mostly on a pentatonic scale. The lyrical 'call' tends to be focused on common everyday themes that emphasize the dignity, self-respect and aspirations of the singers. Once the lead vocalist introduces the main theme and announces the refrain to be sung, they will often improvise lyrically and melodically around the central theme and refrain. While comedic put-downs and romance are occasional themes, sexuality in the form of explicit references or *double entendres* is conspicuously absent compared with more commercialized genres such as salsa and *merengue*. The choral refrains that alternate with each verse tend to be relatively short (setting a mood rather than telling a story as in *plena*), and many have a short and percussive, chant-like chorus.

Bomba singing includes *coro* (what the chorus sings: a refrain) and *voz* (what the lead sings: verses on a theme dictated by the *coro*). The lead singer, who traditionally plays the maraca to announce the tempo, starts with the chorus of a song (the 'call,' which may be either a known song or improvised on the spot), and in the space of that chorus the drummers (in a *bombazo* context) are challenged to identify and play the rhythm given by the *metrica*, or characteristic swing, of the lyrics. The drummers and chorus come in at the same time, followed by the lead singer in the next sequence. The lead singer will often start with a few well-known verses before venturing off into lyrical and melodic improvisation. *Bomba* songs are mostly in Spanish, but often mix in words and phrases of Afro-French *kreyol* and some in Bantu-related Kongo dialects (LaSalle 2007).

On rare occasions, a *bomba* song may start with an opening litany; some variants (e.g., *calindá*) have refrains that are short, suggestive, percussive and chant-like while other variants (e.g., *cuembé*) have refrains that are longer and more flowing, lyrical and melodious. *Bomba* singing most often uses simple melodies on a pentatonic scale and may, or may not, include vocal harmonizing. In the south (Ponce and Guayama), it is customary for a woman to sing lead vocal (Dufrasne 1994); elsewhere, anyone who is able may sing.

The most difficult part of *bomba* to learn in depth is undoubtedly the lyrical aspect. Highly skilled lead vocalists, who have a large repertoire of songs and are able to improvise lyrically and melodically, are almost always in short supply. Moreover, an effective interpreter of *bomba* songs must go beyond both vocal skill and the ability to time elocution in the heat of performance. To be an effective lead vocalist in *bomba* also requires an in-depth knowledge of the lyrics, their contexts and their meaning. Lead vocalists such as Modesto Cepeda of Cimiento Puertorriqueño, José Emmanuelli of Bombazo de Puerto Rico and Alexander Vale LaSalle of Alma Moyó, each have *bomba* repertoires that consist of several hundred songs across over a dozen rhythmic variations (*seises*).

In stark contrast to the more explicit social commentary to be found in *plena*, *bomba* lyrics do not easily lend themselves to interpretation, even by respected local experts (see Dufrasne 1994, 36–43). This aspect of *bomba* is only beginning to be widely understood among *bomberos*. Leading the way in the early 2000s is a younger generation of *bomberos*, mostly under 40, who are more inquisitive and embracing of *bomba*'s translocal, transcultural, transnational and multilingual origins. Many traditional *bomba* songs are recited without knowing the meanings or the stories behind the songs. Through conversations with multilingual *bomberos* such as Tato Conrad, Yvan Francois, Miguel Sierra, Pedro 'Unico' Noguet and Alexander Vale LaSalle, the present author has become aware that to reconstruct the lost meanings of these songs would require multiple fluencies and an understanding of not only local and regional vernacular dialects but also of Afro-French *kreyol* and Congolese. For many years, the literal meanings of songs such as 'Anaízo' and 'Deloyé' have been referred to by folklorists as 'nonsensical,' or more generally 'African,' that is, words that are no longer understood by people in the *bomba* community. Through cultural-historical and linguistic research, hypotheses about the meanings of the traditional songs are slowly being developed (Lasalle 2007).

Instrumentation

Bomba comprises a three-part basic instrumentation: at least two goatskin barrel drums, one *cuá*, or stick drum and one large gourd maraca. The barrel drums include at least one *buleador* (low drum, from the verb 'bulear,' to play the drum) which repeats an ostinato rhythmic phrase (sometimes called *bomba larga*) and one *primo* (high drum) or *subidor* (from the verb 'subir,' to raise up) which improvises on top of, and in conversation with, the basic rhythm played by the *buleador*. The *subidor* is also used to interpret a solo dancer's movements sonically (see below). The *cuá* uses two sticks on a hollow bamboo log, on the side of a skinless drum, or on the side of a *buleador* played horizontally in the typical Kongo style. The *cuá* plays a pattern that corresponds to the basic rhythm of the *buleador*. The gourd maraca keeps the basic pulse corresponding to each rhythm. In professional ensembles there are usually three drums being played (i.e., two *buleadores*), whereas in a community bomba dance called a *bombazo* there can be many more. In 2010 there was even a contest to have a *bombazo* with the greatest number of *barriles* (over 100).

Polyrhythmic Drumming

Bomba consists of three basic rhythm complexes, of which there are over a dozen extant variations across all three categories. These rhythms also vary according to region, some variations being more highly developed in particular places. The most established lexicon for talking about rhythms was developed by the great *bomba* master, Don Rafael Cepeda. His children, students and followers have further elaborated on this system to be more inclusive of regional variations.

Bomba's polyrhythmic drumming comprises variants of 2/4, 4/4, 6/8 and 12/8, with interlocking and multilayered rhythms formed by the three-part basic instrumentation and the percussive call-and-response vocal ensemble. The rhythms and their variants may be grouped into three main rhythmic complexes – the *sicá* and *holandés* groups in 2/4 and 4/4 time and the *yubá* group in 6/8 and 12/8 time. Because skilled drummers and singers have a highly developed sense of polyrhythm, some songs may be performed in a variety of different rhythms, or the drum rhythm may be switched in mid-song, depending on the context. Also, in Mayaguez, some *yubá* songs, for instance, may also have deeply personal or spiritual meanings for participants and would be performed in public using a more public or 'secular' rhythm such as *guembé*. In these situations, the lead vocal will still sing in 6/8 or 12/8 time but over a 2/4 or 4/4 drum pattern.

There are a total of at least 16 variations called *seises* or *sones* (in the south) that are still known and performed in the twenty-first century. Alvarez Nazario (1971 [1961]) in his magnum opus on the African presence in Puerto Rican Spanish also listed several others which were already unknown by the late 1950s. The *seises* within each rhythm complex refer to a distinct metric of composition (e.g., the characteristic swing of the chorus) and performance style (whether *piquetes* are performed, whether sticks are used, when it is performed and how fast or slow).

- The *sicá* complex is the largest. The basic rhythm is the most familiar to salsa aficionados and is often referred to as 'bomba' – it consists of at least 12 variants or *seises*: *paulé* (the slowest), *sicá* (the namesake), *gracimá, danué, calindá, cunyá, balancé* (traditionally danced without *piquetes*; pure *paseo* with *repiques*), *cocobalé* (danced with sticks similar to Brazilian *maculele*), *bambulaé* (the fastest in this group), *cuembé* or *güembé* (in the south) and finally *belén* (the 'last dance,' also played in honor of those who have passed away). In Loíza, which has its own distinct traditional *bomba* style, the corresponding rhythm in the *sicá* family is *seis corrido*, played similarly to *cuembé* but at lightning speed in the modern version that the Ayalas developed in the 1960s.
- The *yubá* complex refers to all *bomba* songs in 6/8 and 12/8 time: *leró* (slowest), *yubá* (faster), and in Loíza, the *corvé* or *corbé* (fastest), also called *rul* or *roulé*. The *yubá* rhythm complex is not to be taken lightly, it is performed with an extra air of seriousness, and therefore is known for having the most 'character' (as Alba Cepeda states in the film *Bomba: Dancing the Drum*). The best and most experienced dancers in any group or gathering often can be found jockeying for position to dance the *yubá*, the highlight of most group repertoires.
- *Holandés* is its own rhythmic complex – it is the fastest of all the rhythms and the most challenging to play. This complex is most fully developed in Mayaguez where there are as many as a dozen existing variations. Because the Mayaguez region is one of the richest, yet least popularized, *bomba* traditions, there is little agreement, between and even within groups, as to the actual number of variations, their names and what they signify. The CICRE Bombazo Project first drew attention to the depth of the Mayaguez *holandés* tradition in its collaboration with the late Don Felix Alduén that resulted in his stunning performance in the 'Raices' Banco Popular 2001 Christmas special and on tour with AfroRican jazz pioneer, William Cepeda. In 2010 his grandson, Machito, and a newly assembled group of Mayaguez veterans, Grupo Yagúembe, began bringing their regional style and rhythms to the public's attention. *Holandés* is also heard frequently in Cataño and Santurce but with only one variant. This complex is less common in the southern region (Ponce, Guayama, Arroyo), and virtually unheard in Loíza.

Dance as Music

Dance is integral to *bomba*; hence, dancers have been fundamental to the growth of the genre. Through the drum-dance dialogue, dancers perform as musicians.

In *bomba*, the role of the lead drummer is not only to play inspired combinations on the drum that motivate dancers; the lead drummer's task is also to 'mark' the dancer's movement, that is, to read the dancing body as a musical text to be interpreted and make sounds on the drum that correspond to particular movements of the dancer. The dance, which invariably is the focus of attention in live *bomba* performance, consists of basic steps that correspond to the basic rhythms being played. Dancers may approach the lead drummer as individuals, pairs or even groups, and take turns challenging the lead drummer to make beats on the drum that correspond to the dancer's movements. While the improvised dance steps ('*piquetes*') may vary a great deal, they generally follow certain established protocols and conventions that emphasize grace and elegance rather than raw sexuality.

The best dancers know how to create exciting music on the drum. The early twenty-first-century resurgence of *bomba* in Puerto Rico is significant for musicians as well as for dancers. Rarely have popular music and social dance been so intertwined.

Bomba Research

Although *bomba* has been in Puerto Rico for several hundred years, very little scholarly attention was paid to the genre until the later twentieth century. Doctoral dissertations about *bomba* by scholars such as McCoy (1968), Vega-Drouet (1979), Dufrasne-González (1985), Barton (1995) and Ferreras (2005) laid down a basic structure from which research has proceeded. While much of this work is in English, since the 1980s there have been several publications in Spanish that deal with the basic aspects of *bomba* performance, and a few articles in newspapers on the island. But many major developments in *bomba* scholarship have occurred since the late 1990s as interest in the genre has expanded beyond its primary social origins.

Conferences (based on academic/practitioner collaborations) that highlight *bomba* have been taking place in the United States since at least 1998 when Long Island University in Brooklyn, New York, sponsored such an event. Since that year LIU has also hosted an annual 'Gran Bombazo' that has regularly drawn hundreds of participants throughout New York City and the North-east. Since 2002 Hostos Community College in the Bronx has hosted a biannual 'Bomplenazo' (*bomb*a and *plena* workshop and performance series). And a community-based event sponsored by the Puerto Rican Organization for the Performing Arts (PROPA) has created a Bomba Research Conference in Chicago that has met biannually since 2005. In Puerto Rico itself, local universities have sponsored occasional symposia dealing with *bomba*, but the first island-wide *bomba* congress was formed in 2004 as an annual event, primarily aimed at disseminating knowledge of the genre to performers and educators. These events, taken as a whole, have not only furthered appreciation of the genre, but have also led to greater awareness of and mutual respect for regional variations, a development from which all groups benefit, not to mention the general public.

Conclusion

Whether *bomba* is thriving or vanishing in the second decade of the twenty-first century depends to some degree on how the genre is defined. *Bomba* performance can vary a great deal in sound and appearance, depending on the context. The main distinction has to do with where the music is performed. For most of the past 50 years *bomba* has been performed mostly on a concert stage as a presentation of Puerto Rican folklore. Starting in the early 1990s, the stage form (special costumes, separation of performers and audience, etc.) has largely receded and become arguably supplanted by the 'street' form in which all the lines that separate the public from the musicians are blurred if not obliterated. As a result, even in stage presentations the public expects audience participation. *Bomba* groups in the pubs and clubs of San Juan, New York and Chicago always make sure that there is space (a *soberao)* in front of the ensemble for a drum-dance exchange between musicians and dancers. This process has been extensively documented, a rich resource for the next generation of *bomberos*. As a result, popular enthusiasm for *bomba* music and dance has become very widespread, in the street and on the web, and the genre enjoys perhaps the greatest popularity it has ever had.

Bossa Nova

Bossa nova developed in Rio de Janeiro, Brazil, during the second half of the 1950s and was transformed into a musical movement that modernized Brazilian popular music. Thus, it acquired great historical importance and is seen by many people as an independent genre (Marcondes 2003; Castro 2001). *Bossa nova*, however, is better viewed as a specific way of playing *samba*, with many changed elements. *Bossa nova* is a subgenre of *samba* characterized by the expressive economy of its vocal style and instrumentation when compared with other *samba* subgenres. Unlike many *samba* subgenres, such as *samba-canção* and the *partido alto*, *bossa nova* is sung with a vibrato-free and 'low' (quiet) vocal style (compared to these *samba* subgenres, the vocal style of *bossa nova* is almost a whisper) and its instrumentation does not feature strong percussion. *Bossa nova* instrumentation, centered around solo acoustic guitar or small ensembles of piano, bass and drums, is more closely related to US jazz than it is to traditional *samba*.

Bossa nova's importance, besides transforming *samba*, is that it provided a musical expression of a discourse about Brazilian music that surfaced in the 1960s and was centered around MPB – *Música Popular Brasileira* – a movement within Brazilian popular music. This discourse proposed that the modernization of Brazilian popular music should begin with the confluence between *bossa nova* – with its international connections – and Brazilian traditional genres. This confluence is the basis of MPB and it is central to understanding the field (Bourdieu 1993) as a space of symbolic struggles in popular music in Brazil between the 1960s and 1980s.

Musical Elements: Description and Analysis

Some of the musical elements that describe *bossa nova* and its relationship with *samba* and other Brazilian music of the 1940s and 1950s include the following:

1. A Softer Singing Style

Bossa nova is known for a soft, low and vibrato-free style of singing. This approach opposed the singing style predominant in Brazilian music throughout the 1950s: a loud style with a heavy use of vibrato influenced by *bolero*. This more aggressive style was very popular beginning in the 1940s and was cultivated by important Brazilian singers at that time: Nelson Gonçalves, Linda Batista, Ângela Maria, Cauby Peixoto and others. Many people have observed that the more economical style of *bossa nova* may have been influenced by jazz, chiefly the more sophisticated jazz styles of the 1950s, such as cool jazz (Castro 2001). However, it is interesting to note that it was American crooners of popular song that were popular in Brazil throughout the 1940s and 1950s. Bing Crosby, Frank Sinatra and Nat King Cole, for example, were more popular than jazz singer and horn player Chet Baker (who is often cited as an example of the cool jazz influence on the *bossa nova* singing style), and many Brazilian singers in the 1950s, such as Lúcio Alves, Dick Farney or Tito Madi, were influenced by the crooning style. Furthermore, some singing styles within *samba* were less influenced by *bolero* (Caldeira 1987). For example, singers such as Ciro Monteiro and Orlando Silva, very popular in Brazil in the 1940s, sang more softly than *bolero* singers, but not as softly as *bossa nova* singers João Gilberto, Nara Leão or Silvinha Telles, whose style was described as 'singing very low.'

2. A New Way to Play *Samba*

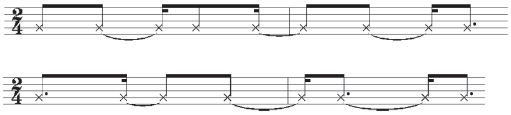
Bossa nova introduced a new way to play *samba*, described by musicians as the '*bossa nova* beat.' This beat can be observed in the right-hand pattern of acoustic guitar players – the central instrument of *bossa nova*. The *bossa nova* beat simplified traditional *samba*'s rhythm patterns and minimized its accents, eliminating the sense of movement typical of *samba*. Unlike other types of *samba* such as *samba-enredo* or *samba-do-morro* (both strongly marked by the presence of percussion instruments), *bossa nova* did not involve dance.

Bossa nova is marked by the work of guitarist João Gilberto, seen as the creator of the so-called *bossa nova* beat. In many of his records, one can listen to this beat and study its differences from rhythm patterns of traditional *samba* (see Example 1). One example is 'Eu vim da Bahia' [I Came from Bahia], a *samba* recorded by João Gilberto in 1973. Example 2 demonstrates the rhythmic work of João Gilberto.

Example 1: A rhythm pattern of *tamborim* [tambourine] in the *samba-do-morro*

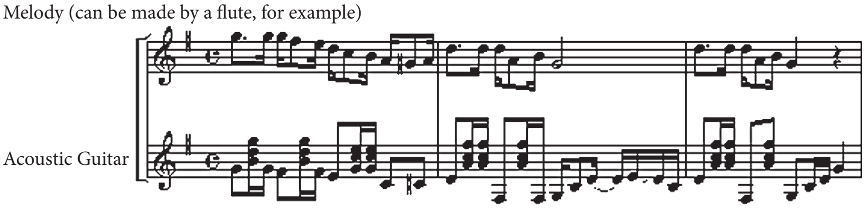
Example 2: A rhythm pattern from João Gilberto's recording 'Eu vim da Bahia' (1973)

Other authors have documented other rhythmic patterns, all variations of traditional *samba* patterns. Behague (1973), for example, cited some variations that can be heard in *bossa nova*, presented in Example 3.



Example 3: Some *bossa nova* rhythms cited by Behague (1973)

An important feature of *bossa nova* guitar style is the absence of *baixaria* – a kind of movement of bass notes (called *baixos*) in the acoustic guitar that is very common in *choro* (which employs a seven-string guitar with an added bass string) and *samba-do-morro* and characterized by a very strong sense of movement (Taborda 1995, see Example 4, measure 2). João Gilberto played without *baixaria,* and for many *samba* musicians this was a striking difference. Therefore, *bossa nova* created a new style in acoustic guitar in Brazil, very different from other traditions related to *choro*. In fact, many *choro* musicians described *bossa nova* as a way to play *samba* with no groove, inspiring a controversy among musicians and critics that was discussed in the press (Tinhorão 1966; Brito 1968).



Example 4: Example of *baixaria*, typical of *choro* tradition (Becker 1996)

3. New Instrumentation

Compared to instrumental patterns common in the *samba* of the 1950s, *bossa nova* is a more economical style (Naves 2000). In the 1950s four types of instrumentation were used in *samba*. The most traditional type was related to *choro* and its classical instrumentation: *violão* (acoustic guitar), *cavaquinho* (a small acoustic guitar with four strings), *flauta* (flute) and percussion (often represented by a kind of tambourine called a *pandeiro*). The second type was represented by brass bands, very popular in Brazilian music since the 1930s. In the 1940s this style became more popular under the name *gafieira* – a kind of dance hall where these orchestras played. The third type was represented by orchestras in which the stringed instruments, such as violins and violas, held a central position. This was the instrumentation typically used for *samba-canção*, the *samba* style influenced by *bolero*, and the orchestra's sonority was perceived to give a romantic flavor to the music. The fourth type was more related to carnival and very marked by percussion instruments, bringing its sonority closer to that of the *samba* schools of Rio de Janeiro. An example of this type was found in the work of Monsueto Menezes, an important *samba* artist of the 1950s.

Bossa nova either avoided these instrumental combinations or used them with great economy. The song 'Corcovado' (Tom Jobim), recorded by João Gilberto in 1960, is an example of typical *bossa nova* instrumentation. There is an acoustic guitar, played by João Gilberto, drums, played *pianissimo* and emphasizing cymbals and an orchestra of violins and violas, with minimal interventions by the strings. Sometimes bass and piano are employed, but like the drums and the orchestra, their interventions are minimal. Compared to traditional *samba*, *bossa nova* sounded less percussive and, in comparison with *samba-canção* and *bolero*, less effusive.

The central instrument of *bossa nova* was the acoustic guitar, João Gilberto's instrument. Castro (2001) wrote that *bossa nova* was responsible for the popularization of acoustic guitar among the middle class and the elite. Up to that point, the acoustic guitar was viewed negatively due to its association with the popular classes. João Gilberto and the *bossa nova* turned this vision upside down, and the middle-class youth of Rio de Janeiro and other cities began to play the acoustic guitar. A generation of singers and composers who played acoustic guitar – including Caetano Veloso, Gilberto Gil, Chico Buarque, Milton Nascimento, Edu Lobo and others –was inspired by João Gilberto.

Another type of instrumentation typical in *bossa nova* was instrumental trios of piano, bass and drums – sometimes a quartet with the addition of an acoustic guitar. These trios or quartets, influenced by jazz, often were used in the recordings of singers – but they recorded solo works too. Many groups of this type became famous in *bossa nova* history: Zimbo Trio, Jongo Trio, Tamba Trio, Quarteto de Oscar Castro Neves, among others. Piedade (2003), in a study about instrumental music in Brazil, pointed out that *bossa nova* created a new paradigm in the practice of instrumental music in Brazil, different from other traditions such as *choro* and *frevo*. This new paradigm was more related to US jazz sonorities – small groups with piano, bass and drums rather than *choro*'s guitar ensemble or *frevo*'s brass band – and more open to practices such as improvisation. For a generation of Brazilian instrumentalists including Hermeto Pascoal (multi-instrumentalist), Amilton Godoy (piano), Airto Moreira (percussion), Paulo Moura (saxophones) and others, *bossa nova* opened important work opportunities related to this new paradigm of instrumental music and its connections with US jazz (e.g., Hermeto Paschoal and Airto Moreira worked closely with the US free-jazz scene beginning in 1970).

4. New Harmonic Patterns

The song 'Desafinado' (Tom Jobim-Newton Mendonça) was audacious in its chromatic melody and, for many people in 1959, the song seemed strange – *desafinado* is the Portuguese word for 'out of tune.' This created the idea that the *bossa nova* initiated a revolution around the melodic patterns of Brazilian music (Castro 2001; Severiano e Homem de Mello 1997). However, studies (Becker 1996; Taborda 1995) show that *samba* melodies employed chromaticism before *bossa nova* emerged. *Bossa nova* did not introduce great melodic innovations in comparison with *samba*, which often employed diatonic scales with a flat 7. Further, songs by composers including Nelson Cavaquinho in the 1950s, or even Noel Rosa in the 1930s, include passages with unusual melodic movements. Nevertheless, *bossa nova* was viewed as a kind of 'melodic revolution,' and highly chromatic songs such as 'Desafinado' contributed to the growth of this reputation (Severiano e Homem de Mello 1997).

What was new in *bossa nova* was not the melodic line but the harmonization, which was marked by a great use of tension in chord construction. For example, chords employing the major 7th, 13th (and flat 13th), sharp 11th and 9th (and flat 9th) scale degrees are very common in the compositions of Tom Jobim, Roberto Menescal and others. Traditionally, *samba* harmonies employed triads (organized around the tonic, third and fifth), eventually including the flat 7 in the dominant chord. *Bossa nova* introduced a more intensive use of four (or more)-note chords. However, the movement of inverted chords (with the third or fifth in the bass), typical in traditional *samba* and the related practice of *baixaria,* was less common in *bossa nova* harmonization.

5. A New Lyrical Style

Bossa nova is characterized by a distinctive lyrical style. *Bossa nova* songs did not contain narratives such as those composed by Noel Rosa, Ismael Silva and other great *samba* composers of the 1930s and 1940s. Instead*, bossa nova* lyrics explored themes related to the state of the soul, impressions of love's enchantments and nature's beauty. Again, it is necessary to view *bossa nova*'s style more as a tendency than as a new musical invention. While these types of themes were also present in *samba* lyrics in the 1930s and 1940s, *bossa nova* made a more profound use of this style. In comparison with the very expressive style of the *samba-canção* of the 1950s, *bossa nova* represented something new. If *samba-canção* lyrics narrated death, passion crimes and hopeless love, *bossa nova* explored what became known in Brazil as the aesthetics of '*o sorriso, o amor e a flor*' (the smile, the love and the flower). Classic *bossa nova* songs such as 'Corcovado' (lyrics by Tom Jobim), 'Garota de Ipanema' (The Girl from Ipanema) (lyrics by Vinicius de Moraes) and 'O barquinho' (The Little Boat) (lyrics by Ronaldo Bôscoli) emphasize the natural elements of Rio de Janeiro, such as the sea and the beach. Leftists in the 1960s strongly criticized this aesthetic, which they viewed as alienated and disconnected from the social environment. However, this style of lyrics became an important point of reference for many subsequent musicians.

History

To understand *bossa nova*'s history and significance to Brazilian music, it is necessary to look at the musical context in which it emerged (Tinhorão 1998; Napolitano 2007). Brazilian music in the 1950s included two very popular musical genres: *samba-canção* and *baião*. Other important genres were clustered around seasonal events (e.g., the *samba-enredo* during Carnival) or areas (e.g., *musica sertaneja* for São Paulo and the Brazilian southern region, or *samba-de-morro* for neighborhoods with black populations in the northern area of Rio de Janeiro). *Samba-canção* and *baião*, however, were widespread throughout the country, and their great artists, including Ângela Maria and Luiz Gonzaga, were nationally successful. Nevertheless, for many members of the elite and middle classes, these genres were too popular and not sophisticated enough to be used as a sign of distinction. In the 1950s Brazil underwent an intensive process of urbanization and an urban middle class interested in signs of distinction emerged (Napolitano 2007). The *samba-canção*, with its aesthetics of excess, and the *baião*, with its references to the northeastern region – seen as the rural countryside by Rio de Janeiro – were viewed as bad taste by this urban middle class. So in the second half of the 1950s there was a favorable social field for the emergence of a modern musical genre (Mammi 1992) and the *bossa nova* was seen as a sophisticated musical product, able to provide a distinction – as theorized by Bourdieu (1984), that is, a higher position in the social field – to the urban middle class.

The pivotal year for *bossa nova* was 1958, when singer and acoustic guitar player João Gilberto made two 78-rpm recordings with the songs 'Chega de saudade/Bim Bom' (No More Blues/Bim Bom) (July 1958) and 'Desafinado/Ho-ba-la-lá' (Out of Tune/Ho-ba-la-lá) (November 1958). In 1959 he recorded his first LP, *Chega de saudade*. This album is credited as the starting point of *bossa nova* and became a legend in Brazilian music history. Between 1960 and 1961 João Gilberto recorded two other LPs. In all of his recordings, he included many songs by Tom Jobim. Therefore, Gilberto and Jobim are seen as the central figures of *bossa nova*.

However, these recordings by João Gilberto did not suddenly invent *bossa nova*. They represented the turning point for a tendency that had existed for a generation of musicians from Rio de Janeiro since the late 1940s. Some elements of *bossa nova* – the style of singing, for example – are recognizable in the works of certain singers of the late 1940s and early 1950s, such as Lúcio Alves and Dick Farney, and in compositions by Johnny Alf, Dolores Duran and Dorival Caymmi. These artists are seen as the precursors of *bossa nova* (Castro 2001), but their work also demonstrates the fact that some central elements of *bossa nova* already existed before João Gilberto's recordings. In fact, 'Chega de saudade' opened a field of possibilities and new directions in harmony and instrumentation for many professional musicians, including composers Tom Jobim, Newton Mendonça and João Donato, vocal group Os Cariocas, singer Silvinha Telles and musician Luiz Bonfá. Furthermore, the success of João Gilberto's recordings signaled the commercial possibility of the low style of singing. Singers such as Silvinha Telles and Lúcio Alves, who had already worked, before 1958, with this type of singing, became more visible after the success of João Gilberto.

To younger musicians who had not yet achieved professional recognition, João Gilberto's recordings opened a new door. These young people were very critical of *samba-canção* and its relationship to *bolero*. For them, 'Chega de saudade' had the modern sound they were looking for, and they transformed *bossa nova* into a musical movement between 1959 and 1960. Singing and playing guitar in the style pioneered by João Gilberto while making their own songs, some of these young people became very important in *bossa nova* history. Singers Nara Leão and Alaíde Costa; composers and guitar players Roberto Menescal and Carlos Lyra; lyricist Ronaldo Bôscoli; and pianists Oscar Castro Neves, Eumir Deodato and Sérgio Mendes among others produced some of the classic songs of the movement, including 'O barquinho' and 'Maria Ninguém' ('Maria Nobody') (Carlos Lyra).

The designation of *bossa nova*'s specific manner of playing and singing was reinforced by recordings of João Gilberto in which he played old *sambas* in the *bossa nova* style. Examples include 'Samba da minha terra' ('Samba of My Land') (Dorival Caymmi) and 'É luxo só' ('It's Such Luxury') (Ary Barroso), recorded by Gilberto in 1959 and 1961. These records show how *bossa nova* attempted to modernize the traditional (Garcia 1990; Napolitano 2007).

Record companies including Odeon and Philips viewed the works produced by the musicians mentioned above, between 1959 and 1961, as lucrative products for the youth market. In fact, *bossa nova* is frequently described as the first musical product directed to young people in Brazil. With the interest of record companies, this period saw the birth of many songs that became classics in Brazilian music: 'Desafinado' ('Out of Tune,' translated for the US market as 'Slightly Out of Tune' or 'Off Key') (Jobim and Mendonça), 'Insensatez' ('How Insensitive'), 'Corcovado' (the name of a mountain in Rio, translated for the US market as 'Quiet Nights of Quiet Stars') and 'Este seu olhar' ('This Your Sight,' translated for the US market as 'That Look You Wear') by Jobim, 'O barquinho' by Boscoli and Menescal, 'Maria Ninguém' (released in the US market with its Portuguese name) and 'Lobo bobo' ('Silly Wolf') by Carlos Lyra, and 'Chora tua tristeza' ('Cry Your Sadness') by Oscar Castro Neves. At the same time, *bossa nova* expanded beyond Rio de Janeiro to other Brazilian cities including São Paulo, Porto Alegre and Belo Horizonte.

If between 1959 and 1961 the consolidation of *bossa nova* took place, in 1962 two events were very important to its history. The first was the release of 'Garota de Ipanema,' a composition by Tom Jobim and Vinícius de Moraes that became a kind of anthem of *bossa nova* and the most famous Brazilian song in the world. This song was performed for the first time at the only concert in which Jobim, Moraes and João Gilberto appeared together – with the vocal group 'Os Cariocas' in August 1962. The first recording of the song was released by the Brazilian singer Pery Ribeiro in 1963. That same year the song was recorded by Tom Jobim for the US market, with English lyrics by Norman Gimbel and the title 'The Girl from Ipanema.' But the song's worldwide fame resulted from the recording made by Stan Getz and João Gilberto in 1964, with Portuguese and English vocals by Astrud Gilberto. This recording won the Grammy Award for Record of the Year in 1965 and reached high positions on the pop charts of many countries (e.g., on the 1964 US pop charts the song reached number five). Thereafter, 'Garota de Ipanema' became both a symbol of *bossa nova* and a musical symbol of Brazil, recorded in many languages (French, Italian, English, Spanish and so on). Furthermore, the song was recorded by renowned artists including Ella Fitzgerald, Sarah Vaughan, The Supremes and Frank Sinatra, among others.

The success of 'Garota de Ipanema' was directly related to the second important event that took place in 1962: the *bossa nova* Concert at Carnegie Hall, in New York, held in November of that year. This show was presented to the Brazilian public and, chiefly, to Brazilian musical critics – including many conservatives who opposed *bossa nova* – as a consecration of *bossa nova*. To the Brazilian urban middle classes, the American attention to *bossa nova* was important because it implied recognition of the modernity of Brazilian society. In this sense, *bossa nova* was presented as the first modern musical product developed in Brazil and exported abroad. Furthermore, it had an advantage: unlike other music that obtained early international success – Carmem Miranda's songs, for example, in the 1940s – *bossa nova* sounded modern and not exotic. To the *bossa nova* generation, Carmem Miranda was an example of Brazil's cultural underdevelopment, with her use of stereotypes related to Brazilian culture and her tropical aesthetics (they despised her singing 'Yes, We Have No Bananas'). The advantage of *bossa nova*, to its fans, was its modern sonority: its cool and sophisticated aesthetics, without tropical stereotypes and without signs of underdevelopment. The Carnegie Hall concert was viewed by its musicians and fans as the victory of this modern image.

It is important, however, to perceive this concert as only a sign of a broader process: the entry of *bossa nova* into the US market and its connections with US and European pop music in the 1960s. Between 1959 and 1961 US musicians playing in Brazil had come in contact with *bossa nova* – for example Lena Horne, Barnie Kessel, Sarah Vaughan, Nat King Cole, Sammy Davis, Billy Eckstine, Tony Bennett, Charles Byrd – and this contact was very important for *bossa nova*'s export. At the end of 1960 Capitol released the LP *Brazil's Brilliant João Gilberto* in the United States. In March 1962 Stan Getz and Charles Byrd released a version of 'Desafinado' that sold very well. So, the Carnegie Hall Concert in November 1962 was only an element of this broader process.

However, the fact that this concert was the first time that the principal names of *bossa nova* played outside of Brazil (Tom Jobim, João Gilberto and Roberto Menescal), and the additional fact that the audience included Miles Davis, Dizzie Gillespie, Herbie Mann and other important figures of the US jazz scene, transformed the occasion into a mythical event in narratives about *bossa nova* history. To *bossa nova* musicians, the concert represented the international possibilities of *bossa nova* music – João Gilberto and Tom Jobim, for example, after the concert, signed recording contracts to work in the United States. If between 1959 and 1961 *bossa nova* was presented to foreign audiences, its consecration, from the point of view of its fans and musicians, occurred at the Carnegie Hall Concert.

Between 1960 and 1965 *bossa nova* was very prominent in US and European popular music, including the jazz scene. During this time, many US artists released versions of *bossa nova* songs: for example, Lena Horne (1963: 'Meditation' by Tom Jobim and Newton Mendonça), Miles Davis (1962: 'Corcovado' by Jobim), Charles Byrd (1963: the LP *Once More: Bossa Nova*), Oscar Peterson (1964: 'Girl from Ipanema' by Jobim) and the LP by Frank Sinatra and Tom Jobim (1967).

The popularity of *bossa nova* brought about a change in its public. Between 1959 and 1961 it was known by a small public that was involved in the jazz scene. After the recordings by Jobim and João Gilberto in the United States beginning in 1963, the many versions made of *bossa nova* songs (cited above) and the great commercial success of 'The Girl from Ipanema' with João Gilberto, Astrud Gilberto and Stan Getz, *bossa nova* became an element of US and European pop music in the second half of the 1960s. Arrangers such as Leroy Holmes (who worked with popular singers of the 1960s such as Connie Francis and Shirley Bassey), Si Zentner and Martin Denny used elements of *bossa nova* (chiefly its rhythm) in their arrangements (some of these arrangements can be heard in the compilation album *Ultra Lounge Bossa Novaville*). Two examples of this relationship between *bossa nova* and US and European pop music in the second half of the 1960s were the recordings made by Claudine Longet in 1967 and 1968 and the success of Brazil'66, a group led by Brazilian pianist Sérgio Mendes. Longet, a French singer who had great success in the United States with her debut album, released Jobim's songs as 'How Insensitive' (Insensatez) and 'Meditation' (Meditação) in 1967. She sang not only songs by Brazilian composers but also other songs in the *bossa nova* style. Sérgio Mendes and Brazil'66 introduced *bossa nova* elements in arrangements of pop songs such as 'Fool on the Hill' and 'With a Little Help from My Friends' by the Beatles and 'Look of Love' by Burt Bacharach. With this formula, Sérgio Mendes became extremely popular in the United States and Europe between 1967 and 1972.

While *bossa nova* was becoming an international musical genre, in Brazil other important changes involving the genre were occurring. It is important to note the beginning of the collaboration between the poet Vinícius de Moraes and the acoustic guitar player Baden Powell, which would result in many songs recorded later, in the 1966 LP *Afro-Sambas*. These songs were influenced by *bossa nova* aesthetics but also used unusual musical elements for the genre. Some songs, for example, were influenced by rhythmic patterns from black traditions of Bahia, such as *capoeira* (a kind of danced martial art form) and *candomble* (an important Brazilian religion with many connections to African traditions). These 'Afro-Sambas,' received as a 'different thing' between 1962 and 1966, indicated the new tendency of Brazilian music: the confluence of some *bossa nova* elements – such as the singing style – with other musical styles, such as traditional *samba* or certain rural genres. This confluence was developed on different levels – singing style, lyrics, performance – and was the basis, around 1964 and 1965, for the emergence of a new musical tendency and associated discourse about Brazilian music called MPB (*Música Popular Brasileira*) (Brazilian popular music). A landmark for the emergence of MPB was the show *Opinião*, in 1965, which united an important *bossa nova* personality, singer Nara Leão, a traditional *samba* singer, Zé Kéti, and a singer of rural music from the northeastern region, João do Vale.

MPB expressed a more intimate relationship between music and politics in Brazil. In the second half of the 1950s and throughout the 1960s a debate about Brazilian culture and its modernization in the context of the Cold War flourished in Brazil, producing a new interest in Brazilian traditions among the youth (Contier 1998; Napolitano 2007). *Bossa nova* was accused by members of the press and intellectual circles of being elitist and too closely related to US jazz music (Tinhorão 1966). MPB developed as a response to this, with its confluence of some *bossa nova* elements with other traces seen as more traditional. *Afro-Sambas* in 1962 and the program *Opinião* in 1964 pointed to this confluence. However, *bossa nova* fans and critics viewed this LP and program not as *bossa nova*, but as another genre. Around 1965 *bossa nova* was described as a style of the past and a precursor of MPB.

Conclusion

After 1965 *bossa nova* was heard more in other countries than it was in Brazil. The international career of many *bossa nova* musicians such as João Gilberto, Tom Jobim, Sérgio Mendes, João Donato and others helped create the image of *bossa nova* as a modern musical symbol of Brazil. Furthermore, as the first musical genre related to the youth market in Brazil, it laid the groundwork for subsequent musical discourses. In 1967 Caetano Veloso, beginning his musical production and the *Tropicalismo* movement, declared that he wanted to 'retake the evolutionary line of *bossa nova*,' continuing its modernization project (Pinheiro 1992).

Bossa nova is popular in many parts of the world, and is an important influence on the works of many international artists: the French group Nouvelle Vague, the Philippine singer Satti Navarro, the American-Brazilian singer Bebel Gilberto (João Gilberto's daughter) and so on. *Bossa nova* also is a foundation for lounge music and easy listening background music. In addition, the *bossa nova* classics are top sellers in many parts of the world. In Japan, for example, sales of Brazilian music consist chiefly of *bossa nova* records. For many people, in many places of the world, Brazilian music is *bossa nova*. But *bossa nova* also holds an important place for Brazilians in the history of Brazilian popular music. In 2008 many festivals and recordings took place in Brazil to celebrate the 50th anniversary of the genre, which denotes its historical importance.

ALLAN DE PAULA OLIVEIRA

Bouyon

Bouyon is a dance music genre that originated in Dominica in the Eastern Caribbean toward the end of the 1980s. It was created by the Dominican band WCK by combining elements from *jing ping*, the traditional folk music of Dominica, and *cadence-lypso*, a modern Dominican genre created in the 1970s by another Dominican band, Exile One. The term *bouyon* is derived from the French Creole word, meaning soup and/or broth, reflecting the mixing of different musical 'ingredients' that went into its creation. With its characteristically upbeat rhythm and strident sound, *bouyon* quickly became the main dance hall and party music in Dominica and spurred the creation of new bands performing the genre. In the early 2000s *bouyon* functions alongside calypso as the main 'jump up' (street dancing) music of Dominica's carnival. It is also known as 'jump up' music in the neighboring French Departments, Guadeloupe and Martinique, an apt description that reflects its upbeat rhythm and its popularity as a street dancing music of carnival and fetes.

Origins

One of WCK's founders, keyboard virtuoso and top rate sound engineer Cornell Phillip, recalls that an early impetus in the development of *bouyon* occurred when the band shared a rehearsal venue with a *jing ping* band, and took the opportunity to experiment with the earlier genre (personal interview February 2008). Coincidentally, WCK had been seeking to create an authentic original sound to differentiate it from other bands and to fill the void left by the decline of *cadence-lypso* as a popular homegrown genre. According to Phillip, he and fellow WCK musicians explored the various elements, timbres and rhythms of *jing ping* and reproduced them using electronic instruments, synthesizers and sound technology, in some cases sampling original *jing ping* drum or accordion phrasings. They also explored the *cadence-lypso* sound of the 1970s and *lapo kabwit*, the traditional street dancing music of carnival. The WCK album *Culture Shock* (1990) represents the first commercial release arising out of these efforts and 'set the stage for defining *bouyon*' (Cornell Phillip, personal interview February 2008).

Bouyon is typically very strident and fast paced. A slower version exists but this has not been accorded its own 'brand' name, as happened in the cases of *zouk love* and *konpa love*. *Bouyon*'s primary melodic timbre is derived from the accordion of *jing ping* music. Its percussion elements are derived from *jing ping* and *cadence-lypso*. The core beat is laid down by the snare and kick drums, the snare in particular replicating the *tanbal* in *jing ping*. Bass lines at times replicate those of the *boum* (bamboo instrument) of *jing ping* but also include styles from *cadence-lypso*, *soca* and *zouk*. Compared to *cadence-lypso*, there is a limited presence of the guitar both as lead and as rhythm instrument. The overall structure is typical of Caribbean verse-chorus call-and-response, with melodic phrasings on the accordion, and steel drums and synth brass leads as timbres of choice. The music is strongly percussive but includes vocals, keyboard and horn phrases as well.

Bouyon lyrics are expressed in *Kweyol* (French Creole) and English Creole. The main themes are current social issues, cultural awareness, local gossip and the lighter party 'jump and wave' theme. While the musical and sound engineering skills of keyboard maestro Cornell Phillip were critical for the instrumental aspects of the genre, the contribution of WCK drummer and lead singer Derek 'Rah' Peters (who began his career in the 1970s) was pivotal in setting the *bouyon* lyrical style. There is some borrowing from Jamaican Creole and the raggamuffin dancehall vocal styles, a feature common to much contemporary Caribbean music. Indeed, a 'Bouyonmuffin' subgenre was touted with WCK singer Skinny Banton as one of its leading proponents.

Developments and Impact

Building on WCK's success, other Dominican bands rallied around the new sound. These included First Serenade, Tripple Kay, Rough and Reddy, Seramix and Raw Riddeem. The availability of home studios meant that the bands were able to release records in a steady stream. The widespread availability of FM radio and, later, the internet helped *bouyon* spread throughout the Eastern Caribbean, including Barbados and Trinidad, as well as among the Caribbean diaspora in the United States, Canada and Britain. WCK's 'Conch Shell' (1993) and 'Balance Batty' (1995) were particularly big hits in the Eastern Caribbean region. In the French Caribbean, *bouyon* developed a following particularly in Guadeloupe where there is a significant Dominican population. It resonates with the youth in these French Departments in a similar way as reggae dancehall.

Energetic and frenetic, *bouyon* is clearly the music of celebration. The dance formulas are very much like those in *soca* and dancehall, 'jump and wave,' 'wine and jam,' and offer quite a contrast to those of *cadence-lypso* or *zouk*. Because of this, *bouyon* remains young people's music. The older generation continue to prefer *cadence-lypso*. The slower form of bouyon, which might have appealed to this age group, has not taken off, most likely due to the fact that *zouk love* fills in the gap for a slower groove in the dance halls.

Not surprisingly, given that many Dominican calypso recordings are made at Imperial Studios operated by Cornell Phillip, *bouyon* has also influenced calypso music in the island. Early twenty-first-century recordings by calypsonians Dice, Observer and Hunter make use of *bouyon* drumbeats and accordion timbre, thus giving Dominican calypsos a musical character which differentiates it from the calypso of Trinidad. Interestingly, calypsonian 'Hunter' has also explored the *lapo kabwit* genre with considerable success, showing a possible way for both genres to feed from each other as the music evolves. *Bouyon,* with its fresh appeal and timbre, has also influenced the *soca* sound, so much so that, since about 2005, Dominican musicians have become concerned at what they see as the importing of bouyon by Trinidadian musicians and its rebranding as *soca*.

Bouyon is nurtured by the proliferation of Caribbean carnivals, which may be found taking place either in the Caribbean or in the Caribbean diaspora at any time of year. With improved air travel, *bouyon* bands are a regular feature of annual Caribbean carnivals in London, New York and Toronto, for example. These and similar events bring with them a great demand for street dancing music such as *bouyon* or *soca*, both genres with 130–140 bpm. *Bouyon* and *soca* nights also feature in pubs and clubs in Caribbean neighborhoods in these and other cities.

As a brand, *bouyon* is well established in the early twenty-first century. Dominican and Caribbean radio stations, available online, help to disseminate the music to global audiences, and the internet is increasingly used by Dominicans in the diaspora to buy and distribute the music and circulate information about it. In the view of WCK's Cornell Phillip, the key issue facing the ongoing development of *bouyon* is the further marketing of the product, placing greater emphasis on reaching global markets and on positioning the brand on the international music landscape, something that competition from *soca*, with its incorporation of the *bouyon* sound, makes especially urgent.

GREGORY RABESS

Brega

An apparently new category was introduced to the field of Brazilian popular music in 1984. With the release and success of rock singer Eduardo Dusek's album *Brega-chique, chique-brega*, the word *brega,* which did not appear in the best Portuguese dictionaries of the time, started puzzling popular music critics, journalists and the public in general. Often asked to define it, the singer himself pointed out that, although *brega* was an informal term applied to a whole body of mass-oriented popular music, its meaning had roots in broader socioeconomic phenomena.

According to Dusek (see Xexéo 1984), *brega* as a musical term would mean *música periférica* ('peripheral music') for 'the great masses of the interior,' interior in this case being much more an economic category (i.e., relatively distant from the metropolis) than a geographical one (a small coastal city or the poor neighborhoods and slums of a big city would be considered 'interior' under this criterion). There was also, affirmed Dusek, a social meaning in *brega,* a term used in Rio de Janeiro as a derogatory substitute for domestic servant. As an extension of that sense, the term might also be applied to anything vulgar, dated, kitsch or, in a more abstract way, to any 'representation of nothing' (Xexéo 1984, 78).

Perhaps due to the fact that the album in question contained explicit references to the name and repertoire of singer/songwriter Amada Batista (side 1, track I), the latter was promptly singled out in the media accounts as the consummate representative of a '*brega* genre.' A popular music critic, in a pioneer review of Batista's eighth LP, *Casamento forçado* (Forced Marriage), observed that Dusek's success caused the public to become 'acquainted with the existence of the word only, since the *brega* genre remains ignored' (Kubrusly 1984, 69, author's translation) and provided a very generic description of its features. According to Kubrusly's perception, the 'genre' was obviously modeled after the 1960s *Jovem Guarda* movement, involving a singing style which immediately evoked the early Roberto Carlos and the repetition of textual (naive romanticism) and musical (inspired by American and British rock groups of the late 1950s and early 1960s) *Jovem Guarda* cliches; distinguishing *brega* from its model, still following the same source, there was the 'crude language' employed in the texts. This very concise description, despite the further interest on the *brega* issue, was apparently the only attempt to specify the main features of the correspondent musical 'genre' made to that point. Amado Batista's own recollections (see Anonymous 1984b) of his first exposures to music when still living and working on a farm seem to confirm the impact of *Jovem Guarda* upon him. Besides the dance music played for local *bailes* (country balls) on *violas* (ten-string guitars) and *sanfonas* (accordions), he remembers singing Roberto Carlos's hit 'O Calhambeque' (1963) while working with his shovel, thinking about becoming an 'artist.' In 1976 he managed to record a song symptomatically called 'Desisto' (I Give Up), which would eventually become his first hit and the beginning of a commercially successful recording career.

If one listens to 'Desisto' with a degree of familiarity with the *Jovem Guarda* idiom, a direct association may be observed between the two. For example, each stanza of the song's enigmatic text basically comprises a rather simple rhyme scheme of AABCCB, which may be commonly found in many samples from the *Jovem Guarda* repertoire. The same observation applies to the trivial character of the lyrics, properly conveyed by the nasal and contrivedly inhibited vocal tone, a Roberto Carlos trademark. It is, however, the musical component that causes a closer relationship with the *Jovem Guarda* style to emerge. Characteristic of the latter, for instance, is the rhythmic accentuation in quadruple meter provided by the drums, the anticipation at the end of the melodic phrases and subphrases, and the repetition of the introductory instrumental solo before each repetition of the basic structure.

An examination of 45 pieces recorded by Amado Batista and released between 1984 and 1986, some of which (including 'Desisto') are reissues, reveals that the repetition, sometimes with slight variations, of the musical features highlighted above is found in at least 38 of them. The song texts in the same sample are mostly love songs, alternating between an introspective mood close to that of 'Desisto' and, less often, a more erotic tone. A few lyrics eventually convey tragic situations in a very direct manner, as is the case of the controversial song 'O fruto do nosso amor' (literally 'The Fruit of Our Love'; for an analysis of this song see Araujo 2007).

Another top-selling singer picked in the mid-1980s as representative of *brega* was Carlos Santos, who, in an unusual fashion in that period, recorded on his privately owned label, Gravasom, established in Belém, the capital city of the Northern state of Pará. Santos's output was distributed solely in an area relatively remote from the main urban centers such as Rio and São Paulo, and only three out of the 24 songs included in two of his albums, released in 1984 and 1985, would allow immediate associations with Amado Batista's *Jovem Guarda*-modeled style. Generally, however, Santos's repertoire consists of quite contrasting material, with most of the songs in both albums drawing upon popular genres from northern Brazil such as the *lambada,* with its characteristic Caribbean-like rhythmic accent. In those pieces, the usual *Jovem Guarda* instrumental ensemble of electric guitar, electric bass, drum set and, occasionally, piano or organ is often reinforced by brass (mainly trumpet and saxophone) and percussion instruments (congas), as heard in 'Só pra você' (Just for You) (1984). Thus, even in the songs (the majority of the repertoire) consisting of elements that apparently come from sources other than *Jovem Guarda*, influences of the latter may still be felt partially in the composition of the accompanying ensemble and, perhaps more effectively, in the contents of the lyrics.

Similar intersections with *Jovem Guarda* elements may be found in other extremely popular trends emerging in the 1980s such as the *samba-romântico* of Agepê and Wando, or the *brega sertaneja* of Milionário and José Rico, setting long-standing patterns in Brazil to this date.

SAMUEL ARAÚJO

BRock

'BRock' is a contraction of 'Brazilian rock' and refers to 1980s Brazilian pop-rock, a genre noted for the engagement of its exponents with social and political issues in Brazil. This defining aspect of the genre led to its understanding and acceptance by intellectuals and musicians, thus helping to legitimize the integration of rock into Brazilian music.

In 1964 the Brazilian army took power and established a dictatorship that imposed high levels of civil repression. Many artists protested against the government, but to avoid military censorship composers penned metaphorical lyrics with implicit meaning that might be understood by their audiences. The military dictatorship lasted until 1985, when President Tancredo Neves was elected and the Nova República (New Republic) was established. Subsequently, Brazilian social problems could be discussed more openly, resulting in changes in the way artists communicated with their audience.

When rock 'n' roll emerged in Brazil in the 1950s and 1960s, it was not engaged with Brazilian politics. Most rock 'n' roll songs were about love, cars and youth rebellion against adults. As a consequence, rock 'n' roll was considered by some Brazilian musicians and intellectuals to be a form of alienation and Americanization that could lead to the destruction of Brazilian popular music. BRock emerged from the new opportunity that occurred with the transition to the Nova República. Freedom of expression was regained, and some musicians wrote lyrics that addressed social problems and criticized the Brazilian establishment. BRock demonstrated that rock could be integrated creatively into Brazilian music, addressing Brazil's political problems. Thus, BRock changed rock's status in Brazil from that of an alienating music to that of a music with revolutionary power.

BRock bands assumed different musical features, but they shared the use of electric and bass guitars and drums as their basic instruments to integrate pop, rock, punk and new wave styles. Two main trends developed simultaneously in BRock. One trend, exemplified by bands such as Blitz, Gang 90 and Kid Abelha, was related to pop rock and new wave, and its exponents appropriated disco music, synthesizers and electronic drums. The other trend, adopted by bands such as Legião Urbana, Capital Inicial, Titãs and DeFalla, was closer to punk music and punk values, with much harsher criticism of Brazilian social issues. Some BRock bands, such as Paralamas do Sucesso, created their own style by combining both trends.

Although the BRock movement comprised bands with different musical projects and goals, common features included humor as well as irony as a form of criticism, the latter being an essential element of Brazilian art and the construction of national identity in both the Brazilian Modernism movement of the 1920s and the *Tropicália* movement of the 1960s. Since Brazilian rock originated in Brazil's big cities, city life also was an important theme. Cities appeared romanticized or as cruel places. Urban themes opposed BRock to Brazilian genres that idealized the countryside, such as *caipira* and *sertanejo* music. Therefore, BRock relied on continuity, especially with regard to irony, but at the same time broke away from other forms of Brazilian popular music.

Regional BRock Movements and Bands

BRock originated simultaneously in Rio de Janeiro, São Paulo and Brasília. An early BRock band from Rio was João Penca & seus Miquinhos Amestrados, a rockabilly band from the 1950s and 1960s that returned in the late 1970s with the participation of Leo Jaime. Another Rio band, Blitz, emerged in 1980. In São Paulo, Gang 90 was established in 1981. Blitz and Gang 90 adopted the musical styles of British and US new wave bands from the 1970s and the 1980s, including the use of synthesizers and electronic drums, along with a flamboyant dress style and the alternation of male leading vocals with female backing vocals. Blitz achieved great national fame. After the band broke up in 1986, its leader Evandro Mesquita became a relatively successful solo singer and television actor. Fernanda Abreu, one of Blitz's female backing vocalists, became an eminent dance music singer; and Lobão, the drummer, started a singing and a songwriting career of his own, becoming a key figure in BRock and, later, in the development of contemporary rock. While João Penca & seus Miquinhos Amestrados, Blitz and Gang 90 were not characterized by the social protest that was to strengthen BRock, one of the distinctive features of these bands was their humor.

The other three bands that were fundamental to Carioca (Rio-based) BRock were Kid Abelha, formed in 1982, Paralamas do Sucesso, formed at the end of the 1970s and Barão Vermelho, formed in 1981. All continued their careers into the early twenty-first century. Kid Abelha, famous for female singer Paula Toller's sweet vocals, integrated disco and new wave, through the use of synthesizers and electronic drums, with lyrics focused on love and teenage life. Paralamas's musical style was a mix of pop, new wave, Afro-Brazilian rhythms and reggae, relying on reggae bass lines combined with offbeat guitar and keyboard. Their lyrics were characterized by humor, and later, by an ironic manner of criticizing the establishment. For example, the song 'A Novidade' (The New, 1986) attacks social inequality by describing class-based responses to the arrival of a mermaid on the beach: the rich desire the 'goddess kisses' while the poor want her 'fishtail for supper.' Paralamas achieved great fame in South America, especially in Argentina, Uruguay, Chile and Venezuela. Barão Vermelho mixed new wave with hard rock, blues and rock 'n' roll. The band was strongly influenced by the music of the Rolling Stones. Cazuza, Vermelho's former vocalist, a bohemian and polemical figure, became famous for his poetic and creative lyrics criticizing the bourgeoisie's way of life.

In Brasília, an early BRock band who appropriated British and US punk was Aborto Elétrico, formed in the late 1970s. This band lasted a few years and left no recordings. However, after the breakup of Aborto Elétrico, in 1982 its former members founded Legião Urbana and Capital Inicial. These two bands, also integrating punk, became the leading BRock bands from Brasília. In 1985, the year of the establishment of 'Nova República,' Legião Urbana released its first record, *Legião Urbana* (*Urban Legion*), strengthening the critical approach that was to be the main feature of BRock. The deep voice of Renato Russo is one of Legião Urbana's distinctive features. Like Cazuza, Renato Russo was celebrated for the combination of lyricism and protest in his songs. Criticizing the government and the establishment, Renato Russo's lyrics also dealt with love (including homosexual love), sex and the relationship of teenagers with their parents. For example, the lyrics of *Legião Urbana*'s hardcore song 'Geração Coca Cola' (Coke Cola Generation), which legitimized rock as a form of political protest, argued that 1980s youth, the generation born and raised under the dictatorship and 'contaminated' with Coca Cola and rock's Americanization, had the potential to change the country. The song 'Que país é este?' (What Country Is This?) (from the album *Que país é este?*, 1987) bitterly addresses the Brazilian government's corruption and hypocrisy vis-à-vis the Brazilian Constitution. In the same album, the song 'Tédio' (Tedium) criticizes the characteristic way of life of the city of Brasília (the Brazilian President's home), opposing Brasília's hypocritical morality against the band's hedonistic way of life.

São Paulo's main BRock bands were Titãs, formed in 1982 with a mixture of new wave, MPB, reggae and punk; Ira!, formed in 1981 with punk leanings; and Ultraje À Rigor, formed in 1983 with a blend of punk and surf music styles. These bands still existed at the time of writing in the early 2010s. The most prolific of São Paulo bands, Titãs's style features harsh lyrics and, frequently, profanity. A typical example of Titãs's anti-lyricism and amorality is the Dadaist song 'Bixos escrotos' (Scrotum Beasts), from the album *Cabeça dinossauro* (*Dinosaur Head*, 1986), which describes disgusting images of beasts such as rats, cockroaches and fleas. In the same album, the hit song 'Polícia' (Police) addresses the usual violence perpetrated by police, who – in theory – should protect the people. Ultraje À Rigor's song 'Inútil' (Useless), from the album *Nós vamos invadir sua praia* (*We Are Going To Invade Your Beach,* 1985), is a typical example of the use of irony as a form of criticism. In the song, Ultraje À Rigor ridicules the Brazilian citizen's lack of autonomy, especially with regard to the choice of leaders under the dictatorship. The title song 'Nós vamos invadir sua praia' addresses the social inequalities of Rio de Janeiro, especially the elitist exclusivity of some of Rio's beaches.

Porto Alegre also generated important BRock bands, including pop/rock bands Engenheiros do Hawaii, launched in 1985, and Nenhum de Nós, formed in 1986; and also the punk/funk/hard rock band De Falla, formed in 1984. Engeneiros of Hawaii is the Porto Alegre's band that achieved the highest level of popularity. The use of poetic and critical lyrics, especially addressing the nonsense of violence and war, is the most distinctive feature of this band.

Conclusion

In spite of the revolutionary intent of its early leaders, BRock became established as a mainstream genre in Brazilian popular music by the 1980s. As a result, BRock's critical stance and relationship with punk lost credibility in the eyes of many twenty-first-century rock musicians. Thus, in the 1990s and twenty-first century, critically engaged rock and punk bands attempted to differentiate themselves from BRock, despite its recovery of freedom of expression in the post-military dictatorship era and its role in legitimizing rock as a Brazilian popular musical genre.

TATYANA DE ALENCAR JACQUES

Bugio

Bugio is an instrumental genre from the southern Brazilian state of Rio Grande do Sul. It is performed by either the '*gaita-ponto*' (a diatonic button accordion) or the accordion, together with an instrumental lineup that includes the guitar and, in some cases, bass and drums. The blades that produce the sound of the two types of accordions are made of different materials – metal for the accordion, and wood, for the *gaita-ponto* – creating an important timbral difference between them.

Bugio is part of the Brazilian popular music repertoire that is known as *música gaúcha*/*gauchesca*.

As Lucas (1990) has noted, during the nineteenth century European travelers, journalists and local intellectuals observed the existence of a party called *fandango* in rural communities in Rio Grande do Sul, during which a suite of dances was executed. The local folklorist João Cezimbra Jacques documented these dances extensively at the end of the nineteenth century. In a book first published in 1911 he described them as 'tap-danced dances' played with a 10- or 12-string viola (Jacques 1979 [1911]). Jacques investigated dances such as *cará*, *serrana*, *anu*, *tatu*, *tirana* and *chimarrita*. Among the *fandango* dances, the *chimarrita*, the *tirana* and the *anu* were the only ones that persisted until the second half of the nineteenth century. By the end of the century the European dances such as mazurka, waltz and polka, and the Cuban *habanera* had replaced the old fandango dances in the rural areas.

The Movimento Tradicionalista Gaúcho (Traditionalistic Gaucho Movement), which started in the early 1940s in Rio Grande do Sul, also undertook research on the genres that would be considered the 'roots' of *música gaúcha*. In 1956 Paixão Côrtes and Barbosa Lessa (members of the MTG) published *Manual de Danças Gaúchas* (Manual of *Gaúchas* Dances). In spite of the controversies concerning the authenticity of the genres they presented, the study became an important reference work and was responsible for identifying a few folkloric rhythmic and melodic patterns which were a source of inspiration for regional music and its component genres.

Bugio's foremost characteristics are the timbral and rhythmic inflections extracted by the accordion player from the bellows of the instrument. A low sound is played holding the bass buttons and shaking the bellows, imitating the howl of the *bugio* monkey, a red howler monkey found in the forests of the Rio Grande do Sul mountains and mission areas and known for the distinctive howl with which it marks its territory. This sound is called the *ronco da baixaria*, the snore of the basses. Another common effect is a simulation of a kind of question-and-answer pattern through the alternation between the right- and left-hand buttons. (Lucas 1990, 224). The *bugio* 'O Casamento da Doralice' (Marriage of Doralice) was the first recording of the genre, made in 1955 by a group called *Irmãos Bertussi*. Nowadays, two cities (São Francisco de Assis and São Francisco de Paula) dispute the title of place of 'origin' of the genre. The musicologist Bangel (1989) believes that *bugio* has its roots in the *lundu* and in the *modinha* – genres of the popular music performed during the nineteenth and twentieth centuries.

FERNANDA MARCON AND
KAIO DOMINGUES HOFFMAN

Bumba-Meu-Boi

Bumba-meu-Boi is a folk dance and pageant in northeastern Brazil. It is one of Brazil's most aesthetically and socially significant *folguedos* (traditional street festivals), involving community participation in music, poetry and theater. The term '*Bumba*' is an interjection indicating a roar, a knock or an invitation to dance.

Bumba-meu-Boi is a kind of folk opera, the content of which centers around the legend of a rancher who owns a beautiful and intelligent ox (*boi* in Portuguese) that knows how to dance. One of the rancher's cowboys steals the ox in order to satisfy the craving of his pregnant wife, who feels like she must eat the ox's tongue or else will lose her baby. The rancher notices the disappearance of the ox and, with the help of Indians and *Caboclos* (Brazilians of mixed European and Indian ancestry), finds out that the ox is already dead. The animal is brought back to life with the help of some traditional religious practices and starts to dance again.

The oldest reference to a performance of *Bumba-meu-Boi* is found in the 1 January 1840 edition of the newspaper *O Carapuceiro,* published in Recife, capital of the state of Pernambuco (Barroso 1996, 43). There is a consensus among scholars, however (Andrade 1968a; Barroso 1996; Brandão 1962; Mello 1946), that this festivity appeared in the north-east of Brazil at the end of the seventeenth century, with the first appearance of cattle as an economic factor in the populating of the backlands. Along with that, there appeared collections of ballad poetry (known as *romanceiros*) dedicated to the life, passion and death of oxen with famous names, all known for their bravery. Barroso (1996, 42) also formulated the hypothesis that *Bumba-meu-Boi* was originally performed by *reisados* (*reisados* are small theatrical groups that go into the streets to dance and sing on the eve of the Epiphany), who united their *intermezzos* (interludes) to form a single *folguedo* in which *Bumba-meu-Boi* would be the main feature (there are still many locations in the north-east of Brazil today where '*Reisados*' are called '*Bois*'). Through migration, this form of entertainment spread throughout other states under different names: *Bumba-meu-Boi* in the state of Maranhão, *Boi Bumba* in the states of Amazonas and Pará, *Boi Surubim*, *Boi Calemba* and *Boi de Reis* in the northeastern states, *Boi de Mamão* in the state of Santa Catarina, and *Bumba* or *Boisinho* in the state of Rio Grande do Sul. It also took on different forms of performance, costumes, characters, music, dance and props; was performed at different times of the year (during the June Festivities [*Festas Juninas*] or Epiphany [January]); and incorporated different themes. Told and retold within oral tradition, the founding legend acquired the contours of satire, comedy and tragedy, introducing allegorical characters where conflict almost always has a happy outcome.

The Parintins Festival (on Tupinanbarana Island, in the state of Amazonas), which is considered one of the most popular events in Latin America in the early twenty-first century, is centered on the performance of *Boi Bumbá*. Over 35,000 people gather at the Bumbódromo (a kind of parade stadium) to watch the dispute between participants of the drama about two oxen (*bois*) named 'Garantido' (predominantly red in color) and 'Caprichoso' (predominantly blue). The two rival groups march under special lighting and sound effects for around 3 hours, singing of the feats of the two animals (represented by an enormous puppet in the shape of an ox with a person inside its body controlling the dance), and the legends, myths and modes of life of the forest peoples. The orchestra of each group has more than 400 rhythm-makers. Along with various metallic instruments and indigenous idiophones (including the *pau d'água*, which imitates the sound of rainfall, and the *xeque-xeque*, a type of rattle), are drums called *treme-terra* (trembling earth), made from oil barrels, which provide the backbone of rhythm in the orchestras of both groups.

In *Bumba-meu-Boi* in the state of Maranhão there is no rivalry between the groups and the costume colors are left to the discretion, taste and purchasing power of each association. In addition, performances are given in town squares and streets. The festivities run from June to September, when the death of the *Boi* is celebrated. The fabric that covers the framework of the animal is removed so it can be painted and embroidered again during the following year, and new tunes are composed, thus renewing the cycle of celebration. The confluence of Amerindian, African and European ethnicities is perceived through the orchestral instruments, costumes, choreography and melodies of cowboys' calls and tunes. Local styles of *Bumba-meu-boi* are characterized by 'sotaques,' differences in rhythm, instrumentation and instrumental timbre. The '*Bois*' of São Luís Island, for example (where the state capital of Maranhão is located), are characterized by the use of *matracas,* percussion instruments made from wooden blocks derived primarily from a local hardwood tree called *pau-d'arco* (yellow trumpet tree) and played by striking one block against the other (known as the '*matraca* accent'). In addition, performers also use maracas (made from tin cans full of lead shot or seeds), as well as the *tambor onça*, or 'jaguar drum' (a type of gourd played by pulling a small rod that is attached to a piece of leather inside the instrument, imitating the bellowing sound of the ox) and the *pandeirões* (big tambourines). There are also '*Bois*' accented with the *zabumba* (a large drum of African origin, also known as *bombo*). These are typical of the town of Guimarães, located in the northwestern part of the state. They also use the maracas, the 'jaguar drums' and the 'fire drum' (*tambor de fogo*), which is made of a wood log covered by ox leather attached by tuning pegs. The *Boi* orchestra has a widely varied instrumentation and uses metal percussion instruments, plus banjos and *tarol* drums. In all *Bumba-meu-Boi* groups in the state of Maranhão, the use of polyrhythm is a fundamental, defining characteristic.

In Florianópolis, the capital city of Santa Catarina state, the *Boi de Mamão* is performed in public squares in January, as part of the Epiphany celebrations. Each neighborhood presents its version of the drama. A musical group made up of guitars, ukuleles and sometimes wind instruments and percussion instruments accompanies the melodies (with about 12 bars, a range limited to a maximum of 7 notes, and with I-IV-V-I harmonies), which identify each character in the story. The use of animal allegories (bears, giraffes or fantastic animals, as in the case of *Beluga*, a kind of lizard that swallows children), masqueraders and folkloric groups from the city is also frequent.

Despite its age, the *Bumba-meu-Boi* drama in the north-east of Brazil continues to maintain a strong involvement with the life of small places. The tendency toward entertainment and comedy, the use of irony and social criticism, the longer dialogues and the comparatively modest instrumentation are some of the most remarkable aspects. In the state of Amazonas, the spectacles which characterize the *Boi-bumbá* – the lighting and sound effects, the transformation of the singers (cowboys and ranchers) into true regional idols, the exaggeration in the number of characters, the dispute between rival groups and the exploitation of the event by the tourist industry – have resulted in a distancing of *Boi-bumba* from the original northeastern event. In Maranhao, where the variety of colors, the timbre of the *caboclas*' voices, the strong use of percussion and the gradual deterioration of dialogues in function of the presentation of the danced parts, the cowboys' calls and chants continue to be part of the *Bumba-meu-Boi,* the biggest contrast with other areas is the way local politicians support the *Bumba-meu-Boi* group (with food and money, and by participating in events), in return for the expectation of votes.

Buru

Buru is a multifaceted set of Jamaican cultural practices that evolved into two fairly distinct but parallel traditions, one involving a combination of masquerade, dance and music, and the other involving processional music (drumming and singing). The drums – the *fundeh*, bass and repeater – are the common links between the two. In time, Buru has come also to carry generic meanings signaling the strong Afro-centric orientation of the music, dance and masquerade traditions performed in both religious and secular environments. Buru made a direct contribution to the emergence of the Rastafari movement and its music prior to and immediately following Jamaican independence in 1962, in terms of the set of drums, drumming patterns, drumming style and the drummers themselves, and so can be seen as playing a significant role in the development of Jamaica's popular music.

In the hundred years between Emancipation in 1838 and the 1940s an increasing movement of population from rural/plantation areas to urban areas such as the parish of St Catherine and the adjoining parish of Kingston saw the largely processional rural musical tradition evolve into Buru bands performing in a quasi-popular music context for entertainment, at wakes and 'nine-nights' (a dance music celebration for the deceased performed nine nights after the death of a person). Meanwhile, a second tradition, that of masquerade, continued in the rural areas, and up to the early 2000s was still to be found primarily in the centrally located parish of Clarendon.

The Buru Music Tradition

The processional musical form of Buru continues to be performed during the Christmas season in St Catherine. Besides the signature drum set of *fundeh*, bass and repeater or *akette*, other instruments that may be included in the ensemble are a variety of calabash shakas, bamboo scrapers and a rhumba box or marimba – closely related to the variety of 'thumb pianos' found throughout sub-Saharan Africa. Garth White (1982, 58) makes reference to some Buru bands incorporating a 'saxa player' whose instrument comprised a 'broken bottle with cellophane (or saran wrap) stretched over its mouth. The actual notes were produced with the voice.' The most common form of accompaniment to this percussive music is the singing of topical songs about events of the day or recent past, as well as critical commentary on individuals or institutions that the performers find oppressive or unseemly in their behavior.

Buru as a musical tradition is processional in nature, featuring nomadic troupes of musicians who would begin playing in a private environment the night before (usually Christmas Eve night) 'going public' in the morning. They would move first to the homes of important members of the community while playing and singing en route, ending with a final performance for the larger community in a central part of the town. In this respect, Buru performers closely parallel the Jonkonnu performance tradition. This practice was observed by musicologist/anthropologist Kenneth Bilby (2006) in Old Harbour Bay, St Catherine – a parish near Kingston in the south-east of the island. In the musical/singing form of the Buru tradition that had evolved into the twenty-first century, masquerade figures were rarely or no longer in evidence.

Bilby's pioneering research into the combined religious-secular Jonkonnu retentions throughout the Americas and in the Caribbean in particular also involved the closely related Buru musical tradition. Bilby (2005) speaks of the Buru festival in Old Harbour Bay, St Catherine, where still vibrant rites for community ancestors take place featuring African-derived Buru drumming, dancing, singing, offerings of food and rum at the graves of the "'ol' sumaadi" (old people), and nonstop parading from dusk to dawn along a route carefully chosen by these same ancestors' (2005, 8–9). This account confirms a continuing synergy between the sacred and the secular. Of note, literally or symbolically, is that the repeater or *akette* lead drum is perceived by both Buru and Rastafari nyabinghi drummers to be the 'carrier of the spirit.'

The Buru Masquerade Tradition

Although not specifically identified by name in early records, Buru is believed to have had its 'masquerade' origins as one of the distinct 'ethnic' groups that performed at Christmas time in the hills where 'Horsehead' bands were most commonly reported. Buru masquerade bands were sometimes called 'Horsehead' bands, a designation that overlaps with a similar one for some Jonkonnu bands. The 'Horsehead' nomenclature refers to the menacing solo character who leads the procession, followed by his own musicians. The 'Horsehead' structure is a tall effigy created with the skeletal head of a mule with teeth intact, dried and painted to assume a frightening appearance. The male performer is concealed under a colorful piece of material which is attached at the bottom of the horse's head and flows from there to the ground. The jaws are manipulated to open and snap menacingly during the performance, and as the Horsehead character bobs and weaves through the crowd, sometimes it bends over to snap its jaws terrifyingly close to children in particular.

The Buru masquerade tradition also features a set of unique horizontal figures, such as a cow, horse or donkey, a reindeer and an alligator. These were observed by Ryman and Gordon between the 1970s and 1990s in Hayes and Bowens, Clarendon. The horizontal animal forms are worn around the waist of the male performers and bear similarities to the British 'Hobby Horse,' the East Indian 'Kathgora' and the African Efik masqueraders. These characters augment the main Buru masquerade 'play' – a traditional dance-music event – involving a distinctive and often dominant fertility figure called Mada Lundy.

Buru, like Jonkonnu, carries both spiritual and fertility connotations. The strong retention of the fertility element in Buru is evidenced in the large, 'pregnant' Mada Lundy effigy, which is controlled and danced by a male dancer hidden under the billowing skirt of the figure whose upper torso is partially supported on the dancer's shoulder. Mada Lundy is surrounded by her 'children' – an entourage of young, virile female dancers who unashamedly display provocative pelvic movements. The rolling, seductive Buru rhythm, resonating from the *fundeh* and repeater drums, demands no less of the dancers.

In the Buru dance, the front foot is placed flat on the ground with the back foot placed on the ball of the foot – in a fourth-position parallel stance. The continuous rotation of the pelvis is punctuated by small hops in sync with a distinct slap of the *fundeh* drum. This deliberate and continuous pelvic rotation of the young dancers is broken up by repeated hops which propel them forward in a circle around Mada Lundy. Intermittently, a repetitive rhythm sequence will ask the dancers to remain on the spot – the pelvic rotations continuing uninterrupted – while slowly lowering their bodies to the ground. The emphatic slap of the drum signals a 'break' – a climax to the repetitive rhythm and dance pattern. This 'break' engenders a specific response from the dancers by way of a strong ascending hop which allows the dancer to return to their original position or level. The young female dancers move anticlockwise around the Mada Lundy figure which is made to bob up and down, turn, twirl and shake – sometimes vigorously in response to the Buru drumming patterns.

These elements, together with the suggestive movement of the dancers, provoked much ridicule and disdain in modernizing Jamaican society, and the gap between such traditions and contemporary attitudes became even more heightened during the pre-independence era of the 1940s and 1950s.

Buru's Influence on Modern Jamaican Popular Music

Buru, like mento, is both a traditional and a popular music form, and indeed mento and Buru bands overlapped with each other in their secular/entertainment functions prior to Jamaica's Independence in 1962. Both bands played at private and public functions such as 'Coney Island' and country/village fairs. In the urban context, Buru came to epitomize Afrocentricity. In rural society and among the emerging urban working class, Buru was highly valued, but among the growing ranks of 'civil' society its reputation was rather low, thanks not only to the eroticism of its dance but also to its association with the music that was played to welcome prisoners home on their release from incarceration. As a result, music and dance engendering what might be thought of as either 'vulgar' or 'indecent' movement came to be referred to as 'Buru.' This meant that Buru had already secured an important place in the Jamaican popular dance-music environment of West Kingston during the 1940s and 1950s, before the emergence of the modern Jamaican popular ska-rock steady-reggae genre.

Buru's direct influence on the urban popular music forms of ska, rocksteady and reggae was inevitable, when the evolving Rastafari movement adopted the Buru *fundeh*, bass and repeater (*Akete* or *kete*) set of drums and many Buru musicians began to adopt the Rastafari beliefs and lifestyle. Out of the growing synergy that was taking place from the 1950s to the 1970s, a number of significant hand drummers provided a bridge between the traditional and emerging musics. Among them was the primary elder Watta King and his protégé, Brother Job, as well as Seeco Patterson, Skully Simms, Ras Michael (of Ras Michael and the Sons of Negus) and Bongo Herman, to name but a few. Perhaps the most significant links between the traditional and the modern popular Jamaican music genre were Rastafarian master drummer Count Ossie and the Skatalites' drummer Lloyd Knibb, who, in Bilby's words, '… helped to indigenize the emerging ska form by incorporating neo-traditional Rastafarian rhythms' (2006, 2).

Count Ossie (Oswald Williams) came under the early and sustained influence of Brother Job, himself a Rastafari elder and master Buru drummer. Watta King, a Buru master drummer and drum maker of Kongo descent, migrated from Clarendon to West Kingston and became the primary mentor for Brother Job and to a lesser extent for Count Ossie. Watta King's place in Jamaican popular music is described by Bilby (2010b, 3) as that of a 'crucial link between the rural Buru tradition of St Catherine and Clarendon and the nascent nyabinghi [Rastafari music] tradition of West Kingston.' Although not a Rastafarian himself, he was among the '… main drummers for the earliest grounations, or ceremonial gatherings, in the Rasta hotbeds of Salt Lane and Back-o-Wall [West Kingston]' (ibid.).

However, it was Count Ossie who took up the baton from his mentors and, as early as the 1950s, formed the bridge between traditional music – the Afro-centric Buru in particular – the nyabinghi music of Rastafari and the emerging Jamaican popular music. In the opinion of Garth White, '... Count Ossie and his band of drummers were to wield an influence surpassed, so far, only by Don Drummond [famous founder of and trombonist in the Skatalites band], by The Skatalites [as a group], and latterly, by Bob Marley' (1984, 63). This primary influence was cemented by Count Ossie and his African Drummers' rhythmic accompaniment to the groundbreaking Folks Brothers (aka Folkes Brothers) 1960 ska classic recording of 'Oh Carolina.' Its inclusion on the debut *Grounation* album in 1973 of what would become Count Ossie and The Mystic Revelation of Rastafari (COMRR), now joined by Cedric 'im Brooks and some of his 'Mystics' drummers, propelled the song to even greater prominence. But it was the 1993 rearrangement of the song by popular Jamaican DJ/reggae recording artist Shaggy that brought the song international acclaim.

Another important figure in the development of ska and rocksteady with strong roots in traditional Buru drumming was Lloyd Knibb. He was reputed to be the 'inventor of the ska beat at Coxson Dodd's Studio One' (Van Belt and Batman 1998, 1). Knibb, according to Bilby, 'created a whole new substyle of ska based on a fusion of all three Buru parts with trap drum techniques; this variant also influenced ska more generally over time' (Bilby 2011). Knibb was not only a founding member of the groundbreaking Skatalites but also played frequently with Count Ossie and the Mystic Revelation of Rastafari in the hills (Wareika Hills – the Kingston sanctuary of early Rastafari brethren) and in clubs by himself, as well as with other members of the Skatalites. Bilby also offers a typical ska arrangement of 'Smiling' by the Skatalites and Don Drummond as an example of Knibb's Buru-influenced playing (ibid.).

The rapid development of Jamaica's popular music with the approach of independence, leading to a peak in the 1970s and on to its unique and enduring place in contemporary world music, may be attributed to the fermentation process that took place when the interweaving roots, shoots and branches of Afro-centric traditional music were brought by migrating musicians from the rural areas into the West Kingston enclave. Buru undoubtedly played a pivotal role in this movement.

CHERYL RYMAN

Cadence-Lypso

The creation of the genre *cadence-lypso* is usually credited to the Dominican group 'Exile One,' led by singer Gordon Henderson, in the period 1973–4. Henderson defines *cadence-lypso* as a 'synthesis of rhythmic patterns, Caribbean in particular and Black in general' (Henderson 2005, 149). Though drawing on many influences, *cadence-lypso* is primarily a fusion of calypso music of Trinidad and Tobago and *cadence rampa* (or *kadans rampa* – a variant of *konpa*) of Haiti. *Cadence-lypso* was the main party dance hall music in Dominica during the 1970s. Top groups in the *cadence-lypso* era were Exile One, Grammacks, Midnight Groovers, Belles Combo, Liquid Ice and Bill-O-Men.

Origins

Cadence-lypso was created in 'exile,' so to speak, by Dominican musicians then based in the neighboring French overseas department of Guadeloupe. Gordon Henderson, who was already based in Guadeloupe and sang with the group Les Vikings, decided to create his own group Exile One by recruiting top-rate musicians from Dominica. The decision to operate out of Guadeloupe had to do with economic and social factors such as a larger population base, a lucrative music market, a developed music and nightlife entertainment infrastructure.

Initially, Exile One experimented with a fusion of calypso and African highlife, dubbed 'Afro-calypso,' as reflected in the first hit 'Don't Bite the Hand' (1973). Eventually, the need to connect their brand of fusion pop with the dancing public led them to incorporate the popular rhythms of the French Caribbean into their repertoire. *Cadence-lypso* was thus created and so named in recognition of the two major genres, *cadence* (*kadans*) *rampa* and calypso, that contributed to its genesis. Exile One's musical experimentation led to its first self-titled *cadence-lypso* album (1974) with hits such as 'Ah Ta Ta' and 'Jamais Voir Ca.' This was quickly followed by the album *Face au public* (1975) which proved to be an even bigger success and established the aesthetics and timbre of the new sound. This sound, now firmly branded '*cadence-lypso*,' became an instant hit in the French Departments and back home in Dominica.

Musical Style

Cadence-lypso is marked by the steady 4/4 rhythm characteristic of Haitian *cadence rampa*, in which the guitar and cowbell play critical roles. The guitar fuses calypso and *cadence* styles to produce a very upbeat and distinctive rhythm. The cowbell provides a steady pulse as in 'tok to-tok tok tok tok.' The drums maintain more or less the *cadence rampa*/*konpa* styles of tapping the cymbals and high hat, with the kick drum on the beat. The floor tom is sometimes played in unison with the cowbell as in *konpa* music, and is played on the offbeat. The keyboard functions as both a melody and a harmony instrument. At times it mimics the rhythm of the guitar but its main role is to fill up the spaces in the music. It also solos and employs phrasings reflecting the styles of Osibisa and Santana, both of whom were strong influences on Dominican musicians at the time. Exile One and the other pioneers made little use of congas. It was Belles Combo and the newer bands, Mantra and Wafrikai, who eventually incorporated congas and *timbales* to the sound. The dance format was typically close couple dancing as in the styles of beguine and Haitian *konpa*.

A few *cadence-lypso* songs have English words but the vast majority are in Kwéyòl (French Creole), the hybrid of French and West African languages developed during the period of plantation slavery in the Caribbean. A typical song usually has two verses and follows the 'verse-chorus-verse-chorus' format. This draws on the calypso tradition as opposed to the *konpa* genre which relies more on chorus lines, snippets and chants to create atmosphere or ambience. The themes address political and social issues, a reflection of the calypso tradition of social commentary as well as of the particular political conjuncture of the time. The 1970s was a period when the region saw the growth of many social and political movements – Black Power, Negritude, Rastafarianism, socialism, anticolonialism. Like roots reggae, *cadence-lypso* is distinguished by its politically and socially conscious lyrics. The love theme was limited to sexual anecdotes often expressed as *doubles entendres*. It was later in the *cadence-lypso* era that Ophelia released 'Chanson d'amour' (1981), a song penned by Gordon Henderson which opened up new possibilities for the love theme and female singers. This was eventually exploited by *zouk* in the subgenre *zouk love*.

Initial Impact

Cadence-lypso sparked a revolution on the music landscape in Dominica and in the French Departments in the Caribbean. The success of Exile One and *cadence-lypso* resulted in a great demand for Dominican musicians and bands in the French Departments. Home-based Dominican bands such as The Grammacks, Liquid Ice, Milestone and Black Affairs relocated to Guadeloupe and Martinique. Bands such as Belles Combo and Midnight Groovers honed their distinctive styles but chose to remain on Dominica. Opportunities increased as promoters from the French departments journeyed to Dominica, seeking out and contracting Dominican bands for recordings and gigs. New bands such as Naked Feet, Mantra, Wafrikai and Black Machine emerged, among others. Recordings flourished and radio, which was now developing strongly, served to disseminate and popularize the genre. Performances by Dominican bands were phenomenal events in the context of the French Departments as well as in Dominica, drawing unprecedented media hype and crowds. Dominican musicians thus took center stage in the Eastern Caribbean as they achieved one hit after another. The Grammacks' signature hit 'Wooy Mi Deba' (1976), for example, was a number one hit from Guyana through to St Kitts and as far afield as Bluefields in Nicaragua.

The French market, music industry and media played a significant role in the dissemination of *cadence-lypso*. There were no studios in Dominica (there were burgeoning attempts at best, as in the case of Nature Island Studios); thus, there was an absolute reliance on studios in Martinique and Guadeloupe not just for recordings but for popularizing the bands and their music and helping them to obtain gigs. Ironically, this strong reliance on the French industry was later to contribute to the demise of the genre.

As *cadence-lypso* music evolved, recordings revealed a wide range of styles in keeping with the Henderson thesis of *cadence-lypso* as synthesis and fusion. The Midnight Groovers, for example, were unique in their African guitar and percussive rhythmic sound. Exile One, Grammacks and Bill-O-Men experimented with many styles – rock guitars, funk bass and horn styles and soul-style vocals. The Creole jazz band Mantra brought in jazz and *salsa* to the sound. Black Machine sought to draw in *bele*, a traditional Dominican music genre of African origin. Wafrikai explored a Latin-African rock style. Belles Combo made use of congas and *timbales* and Haitian *konpa* guitar styles. Exile One's experimentation with soul, funk and Afro-rock styles resulted in recordings of covers of songs by Osibisa, Commodores and similar groups. In the early 1980s Exile One musician Julie Mourillon experimented with a *cadence-lypso* variant dubbed 'Island Boogie.' *Cadence-lypso* was truly the vanguard of Caribbean music at the time, pushing the musical boundaries.

Regional and International Impact

With its range of styles, *cadence-lypso* began to have an impact both regionally and internationally. It influenced the development of *soca* in Trinidad as a result of a stint in Dominica in the early 1970s by *soca*'s creator Lord Shorty, following which he released one of his first *soca* hits 'E Petee.' Over in Haiti, *cadence-lypso* had a transforming impact on combo-type bands. Exile One's use of a three-piece horn section and myriad horn styles from funk and soul had such a success in Haiti that bands such as Tabou Combo incorporated horns into their music. In the *zouk* era, many bands, including Kassav, adopted this model.

Exile One have the distinction of being the first Antillean band to be signed by a major label in France. Their signing with Barclay and relocation to Paris in 1975 brought the band into contact with African musicians there and served to spread *cadence-lypso* to countries of West and Southern Africa, including

Congo, Cape Verde and Angola. In the Caribbean region, *cadence-lypso* spread beyond the Antilles to Central America, to countries such as Nicaragua and Panama. The Nicaraguan group Dimension Costeña, for example, released an album made up of covers of *cadence-lypso* hit songs (1983). The legacy of *cadence-lypso* in Cape Verde is reflected in the popularity of *zouk* in this island chain.

Meanwhile in Dominica itself, female singer Ophelia emerged. With two hits, 'Aie Dominique' and 'Chanson d'amour,' Ophelia won the prestigious French 'Marracas D'Or' award in 1981, the first Antillean female singer to do so. The rise of Ophelia had two critical impacts: one, paving the way for female singers to become front singers and professionals in a number of genres and formats in Dominica and its neighbors; and two, the eventual creation of the subgenre *zouk love*.

Exile One are credited with the introduction of the new digital sound technologies such as the synthesizer to the genre. *Cadence-lypso* had developed in the analogue age, in terms of both musical instruments and recordings. Due to the band's international presence, Exile One were able to access the new emerging sound technologies, incorporate these into the music and set standards for other bands.

In the mid-1980s Exile One and Gordon Henderson experimented with *jing ping* and *lapo kabwit*, two traditional music genres of Dominica, seeking to reproduce them using modern electronic instruments and sound technology. The songs 'Ba Dang' and 'L'hivernage' from the album *Fraiche* (1987) reflect these efforts. 'L'hivernage,' with its *lapo kabwit* rhythm, was a spectacular hit in Dominica and became the unofficial roadmarch of the 1986 carnival celebrations. Exile One and Gordon Henderson continued this trend on subsequent recordings, but the most radical leap forward came a few years later with the creation of *bouyon* by another Dominican band, WCK.

The impact of *cadence-lypso* went beyond music into the social and political arenas. The music fed off the nationalist fervor of the times and fed into it as well, in a dialectical manner. According to Henderson, the song 'Twavay Pou Anyen' from Exile One's *FISM* album (1976) became a cult anthem in the French Departments, whose nationals were dealing with issues of identity and political autonomy in relation to metropolitan France. The messages in the songs resonated among the respective populations, provoking a new sense of cultural awareness and identity. In Dominica, *cadence-lypso* became a source of national pride. It represented a 'badge of honour for Creole peoples, Dominicans and others as a token of their credibility, identity and pride' (Henderson 2005, 15). The music united the generations as both old and young shared the same space in the dance halls.

In the 1980s, however, the popularity and influence of *cadence-lypso* began to wane. This was in part due to the changing situation in the French market and music industry and the breaking up of the top bands. French promoters reduced or terminated their investments in Dominican bands. In Dominica in 1979 Hurricane David devastated the economy and made it harder for home-based bands to survive. Bands broke up and new hi-fi sound systems took their place. With few new recordings and live bands, *cadence-lypso* lost its dominance of the dance floor to the new *soca* genre as performed by the Burning Flames of Antigua. In Guadeloupe and Martinique, the Kassav project emerged, resulting in the new genre *zouk*.

Beginning in the mid-1990s efforts have been made in the context of the World Creole Music Festival and otherwise to reinvent or revitalize the genre. These have had limited success precisely because times have moved on. The production values and aesthetics of *cadence-lypso* were of the analogue age of the 1970s. With *zouk* and *bouyon* firmly established as brands of the times, *cadence-lypso* will no doubt continue to exist as an optional style, a nostalgic piece, an occasional song on an album but not as the popular genre it was and in the place it commanded in the 1970s.

GREGORY RABESS

Calipso Venezolano

Calipso venezolano is a style of music used for the Carnival celebrations in Venezuela. The name *calipso* principally indicates the music that originated from the town of El Callao in the state of Bolívar in the south-east of the country – hence its other name, '*calipso de El Callao*' – but which also appears in two cities on the eastern coast, Güiria in the state of Sucre and Tucupita in the state of Delta Amacuro. In Güiria, the *calipso* is performed with steelbands as in Trinidad, but in Tucupita the *cuatro* (a small, four-string, strummed chordophone), long bamboo tubes and triangles are added and the mixture of these instruments with steelband *calipso* is called the *cambulé* (Alemán 1998, 255).

Carnival is celebrated throughout the country as a national holiday, and major cities organize the *carnavales turísticos* (tourist Carnivals) on a short-term basis through local government or private initiatives. These celebrations are culturally heterogeneous and the music includes Brazilian *samba*, Trinidadian calypso, *calipso venezolano* and any type of dance music that may be in fashion at the time.

In El Callao, by contrast, the *calipso* is part of a strong tradition of Carnival celebrations that developed with a certain degree of isolation from the mainstream of Venezuelan musical culture, partly as a consequence of the long distances between the town and the main inhabited regions, and partly because the *calipso* is differentiated from most Venezuelan traditional music: the latter is in ternary-subdivided rhythms, whereas the *calipso de El Callao* is a binary-subdivided rhythm and is sung mainly in English. From the middle of the nineteenth century migratory waves from Caribbean French and English-speaking islands, especially Trinidad, arrived in the region around the Yuruari River – where El Callao was a growing town – thanks to the attraction of gold mining in the area (García 1993, 19).

A cultural tradition developed, characterized by a collection of specific, interrelated expressions, forming the context to which El Callao *calipso* music belongs and in which it continues to function. Prominent in this tradition are the *comparsas* (carnival associations which march and dance in the streets of the town, identified by their costumes, each representing a wide variety of themes), in particular the recurring-theme *comparsas* which appear every year, such as *Agricultura* (which comes out only at the break of dawn with its members carrying parts of plants, trees, vegetables and fruits, and singing the *calipso* of the same name), the *Madamas* (women dressed in nineteenth-century Creole apparel), the Miners and the *Diablos* (devils), with elaborate, fire-spitting masks and whips, who keep order in the streets. Local people and the crowds of visitors who come to El Callao for the Carnival season happily and freely join in participative and collective but still individual street marching/dancing behind the moving *comparsas,* with or without the thematic disguise. Important personalities from *calipso* history, such as the Negra Isidora, are persistently treated as figures of remembrance in the *comparsas* themes and/or in the *calipso* lyrics. The festivities are also characterized by particular foods: acrá (small cod pancakes), kalalú (goat meat, ham, coconut milk preparation); and drinks: ginger beer (cocktail with lemon and maize seeds), monky pi (lemon, white rum eggnog). During the weeks preceding the Carnival as well as during the festivities, a calendar-administered program may include the Thanksgiving Mass, the coronation of the queens of the music groups and children's *calipso* singing/performing competitions. During the night, dancing continues despite the threat of the *Mediopintos,* black-painted, half-naked children and teenagers who tar people on the streets with a charcoal-syrup mix when their demand for a small tip is not fulfilled.

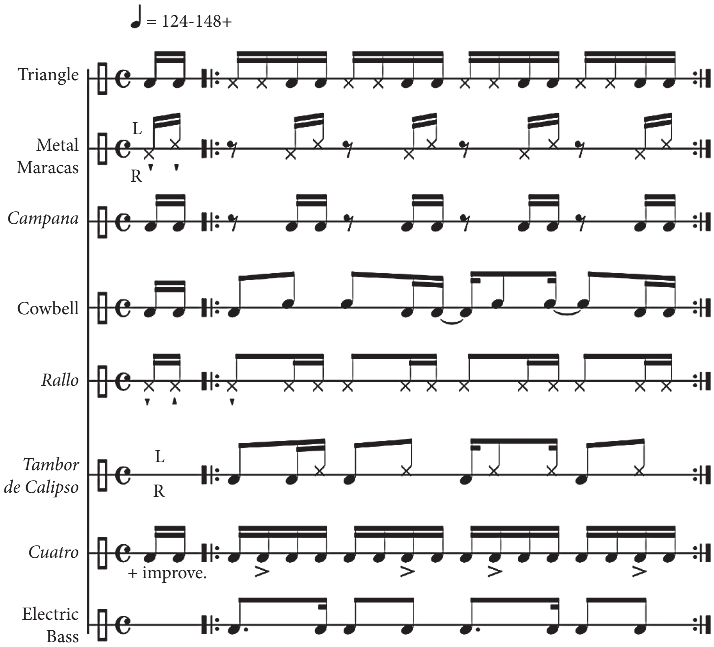
The *calipso venezolano* has a distinctive four-beat, binary-subdivided, syncopated music (see Example 1). It is performed at a moderate walking/dance speed

(124–148 bpm). Usually structured into alternating solo and chorus (verse and refrain, respectively), it uses tonal harmony mostly in the major mode and parallel-third harmonization in the voices. It is preferably sung in English and/or more recently in Spanish, and includes some words in the hybrid patois of the town (now largely out of use, except for traces in song lyrics) which incorporates variants of words from French and English (Barreto 1994, 116–17). For example:

> The Dusty Band coming down (x 3)
> Clear the way
> let them pass down there
> Uay ay ay ay Cecilia
> Uay ay ay ay Cecilia
> Si ue me me mue
> puma ie mande mama mue
> Ue sau fe, see what you do
> you put under your bed
> you make your mako
> cut off my head
> Mama mue ce sen lucien
> papa mue ce marticien
> Si ue me me mue puma ie
> mande mama mue

(1940 *calipso* by Luis Giraud for the Dusty Band *comparsa*) (Garcia 1993, 187.)

Instrumentation has changed gradually over the years. According to Carlos Small and Kenton St Bernard (Barreto 1994, 91), *calipso* was initially played with acoustic guitar, *cuatro*, *rallo* (large metal rasp), triangle and a single-skin, open-ended drum called the *bumbac*. A *tambor largo* (larger drum) was added to the *bumbac*, forming the ensemble *tambores de calipso*. The performers of these latter instruments walk with them on their sides, held in place by a shoulder strap, playing them with both hands on the skin. Also integrated into the ensemble are two metal maracas, a *campana* (a metal bell usually made from the lid of a vertical domestic gas tank), a cowbell and a police whistle (Barreto 1994, 90). The ensemble produces the catchy, dancing rhythm for which the *calipso venezolano* has gained its reputation. Although the rhythmic patterns are closely related to those of its Caribbean cousins, the sound of the fast-strummed *cuatro* gives the music its distinctive Venezuelan quality, since this instrument is a trademark of Venezuelan music. In a parallel sense, it may be said that the *cuatro* also gives the *calipso* a Brazilian touch when it is coupled rhythmically with the triangle, since it reminds the ear of the fast-playing *cavaquihno* of the *samba* ensemble (Example 1).



Example 1: Simplified rhythmic base of *calipso venezolano* (transcription: E. Mendoza, 2006), showing instrumental roles

The preferred themes of *calipso* lyrics are descriptions of El Callao, the Carnival and the *calipso* itself, as well as phrases inviting the people to participate, sing, dance and have fun (Barreto 1994, 128). Less often, *calipsos* are devoted to special persons related to the Carnival, and topics such as friendship, political and economical problems or the town's history are always focused through the Carnival theme. Love is treated from a sexual, rather than a romantic point of view, with irony and phrases with hidden meanings. *Comparsas* and music groups usually sing *calipsos* describing the theme of their disguise or band's name (Barreto 1994, 131–2).

The gold mining town of El Callao has suffered a typical succession of financial peaks and troughs – the last crest occurred around the 1940s – and has declined without a break since the 1970s (García 1993, 184). With the exodus created by the waning of the gold mining industry, the attraction of the Carnival festivities for tourism represented the only option for the town's survival, and an updating of the tradition was brought about through a renovation initiative on the part of various cultural leaders of the town. Pressure for change to add to the tourist appeal of the event resulted in a series of appropriations from the pop music culture of the late 1960s and 1970s, which was then extending its mass-media reach. The direction was set for the traditional Carnivals in El Callao to become, at the same time, a *carnaval turístico.*

Although two types of Carnival celebrations, traditional and *turístico*, can be found in El Callao in the early twenty-first century, both have the same entertainment function and do not come into conflict with each other; however, the negotiation between them is in constant redefinition, and in a larger sense the reconfiguration that is occurring in the traditional elements, brought about by the needs of the tourist industry, is not yet being reflected in the way the town's services and facilities cater for the massive invasion of tourists in the few days of Carnival, thus creating an urban chaos (Rosas 2009, 15). Since the 1970s a major change has consciously been engineered in the process of 'popularizing' the *calipso* tradition, as new instruments such as electric bass, electric guitar and keyboards have been added to the acoustic ones, and amplification has then become necessary for the voice and *cuatro* (with contact microphone). Up to 2012 (the last Carnival visited by the author) percussion instruments had not been amplified but some instruments, such as the metal maracas, the triangle and, as Lulú Basanta (a *calipso* singer and composer) confirms, even the short drum *bumbac* (Barreto 1994, 93) have been dropped. Wind instruments such as saxophone, trumpet and trombone are also occasionally included, an influence from the salsa boom in Venezuela of the mid-1970s. Despite all these changes, the *calipso de El Callao* does not as yet include steelbands, as other *calipsos venezolanos* may do (see above), contrary to what has been stated (Hill 2007).

The integration of sound amplification for the *comparsas* created a new element, the *carrito*: tall, mobile, self-contained amplification equipment, including an electric generator, mixing console, amplifiers and speaker cabinets. The *carrito* has to be pushed around the streets followed by the acoustic instruments and dancers. The top of the 4-meter-tall cabinets usually accommodates the bass player, singer, *cuatro* player and a boy who takes care to lift the street cables with a stick to avoid the risk of electric shock.

Bands were established searching for a new sound, in many cases imitating Caribbean pop, with the result that the tempo increased, up to 148–152 bpm. Names emphasizing renewal were popular among the new groups, for example 'Nueva Onda' (New Wave), 'Nueva Generación,' 'Renovación.' A call to tradition was also present in group names such as 'The Same People,' 'The Young People,' as well as 'Family Ground,' 'Cuatro y Bumbac' and 'Raíces Callaoenses' (Callao Roots). These groups formed *comparsas* that included their names, adding to those with the traditional allegoric themes. The influence of the live pop music concerts of the late 1960s and 1970s can be seen in the adoption of presentations of live or recorded, highly amplified music on *ad hoc* open-air stages (*tarimas*) at street-ends or in plazas, which became at the same time the headquarters for each *calipso* group.

Two types of *calipso* coexist in the early twenty-first century: the *calipso comparsero,* the more traditional version, performed in the *comparsas*, and the *calipso de tarima*, more mixed in nature and performed on stage. The use of the *tarimas*, more typical of the *turístico* Carnival, encourages heterogeneous show culture with its audience–performer relationship and contrasts with the all-inclusive dancing of the traditional *comparsas*. The music groups generate hit singles every year, performed on their own *tarimas* and by their own *comparsas*, distributed through the local mass-media and sold by informal copied-CD vendors. For this purpose, the new *calipsos* are increasingly sung in Spanish. A competition aspect has been introduced, making music groups rival each other, thus dismembering the previously existing music community of El Callao. The music group *comparsas*, together with the music group *tarimas* and any other *tarimas* built by the beer companies or the local government, all amplify their music at the same time, competing in size and power. The *carritos* provide amplification for some instruments (voice, *cuatro*, bass and keyboards) but not for the percussion instruments, producing an unbalanced sound where the drums, bells and rasps are only heard by the performers. There is no monitoring of the amplified instruments in the *carritos,* so there is a marked difference between what is heard in front or behind the *carrito*, and musicians and dancers often move in time with the louder plaza *tarima* sound system rather than with its own *comparsa* music from the *carrito*. A sonic chaos in the festivities ensues and the speeding up of the *calipso* makes it harder for the dancers to be able to follow behind the *comparsas*.

Negotiation is ongoing in the performance of *calipso* music in El Callao between divergent practices: acoustic versus electric instruments, amplification and sound chaos; live versus recorded music; *comparsa* versus *tarima* performance; belonging to local tradition versus widespread national reach. *Calipso* groups are trying to escape the seasonal limitation on the number of performances, arranging concerts outside the Carnival dates, mixing the music with temporary external influences, but *calipso* has not yet become an all-year-round pop music for Venezuelans, or one that is internationally known. Nevertheless, some neofolklore groups or solo artists not directly identified with El Callao have included *calipso venezolano* in their mixed repertoire, such as Serenata Guayanesa in their second album (1974), with the hit 'Calypso del Callao,' and Carlos Baute in his two first albums (1994 and 1997), both produced in Venezuela. *Fusión* music has modestly worked around the *calipso*; for example, jazz pianist Ernesto García and the group Patas Jazz in Garcia's 'Calipsofacto,' and the jazz group Akurima with a *calipso* insert in its track 'Campanelas.' *Grupos de proyección* such as Convenezuela and Yurauri in Caracas have devoted their concerts and recordings to the traditional *calipso*. The Bigott Foundation, one of the main private supporters of folk music in the country, has produced a CD with traditional *calipso* music by Yuruari, which this institution supported until 2002.

EMILIO MENDOZA

Calypso

The calypso is a song-dance complex which evolved in urban Trinidad in the latter decades of the nineteenth century. It is the product of the continual cross-fertilizations of several kindred West African musics and neo-African hybrids, Creolized by the experience of plantation slavery in the Caribbean. Successive waves of immigration brought these to Trinidad, which was the locus of migrations from West Africa, Europe, North America, Asia and the Caribbean.

Claims of origin have been made for other Caribbean islands and territories which have similar musics (Crowley 1959b, 117–19), but it is clear that the calypso was generated in the cauldron of post-Emancipation Port of Spain (the island capital). In the decades following full emancipation in 1838 colonialism, Anglicization and other social pressures forced a levelling of ethnic identities and a concomitant collapsing of several musical forms into one. The resultant form later incorporated melodies and rhythms from the European and Asiatic musics which shared the Trinidad space during and after the post-Emancipation period, when the society underwent major demographic transformation.

Although the islands that make up the republic of Trinidad and Tobago boast of calypso being the republic's national song, in the early twenty-first century it is mostly associated with the pre-Lenten Trinidad Carnival, when it is presented publicly at shows and competitions; together with its derivative, soca, calypso provides music for the numerous pre-Carnival parties and street parading on Carnival Monday and Tuesday. Calypso shows, showcasing offerings created for the year, are produced by teams of singers organized into 'tents,' while numerous competitions are staged by the National Carnival Commission, schools, commercial houses and other interested organizations. These competitions involve a range of singers from children to professional practitioners. Although calypsos are presented primarily at Carnival and are often festive in nature, many others engage a universe of themes dealing with all aspects of national life and matters of regional and international interest.

Formally, a calypso consists of three or more stanzas/choruses sung to 2/2 timing. Stanzas can be as short as four lines or as long as fourteen; choruses are generally shorter than stanzas and may be invariable or may continue an idea developed in the preceding stanza. Calypso beats have been influenced by African, Latin and Caribbean rhythms and continue to be influenced by musics of metropolitan mainstreams as well as Caribbean margins. The difficulties of defining a calypso precisely are captured in Crazy's 'What is a Calypso' (2004).

The Word 'Calypso'

The first 'official' mention of the term occurred on 20 January 1900, when the *Port of Spain Gazette* published the lyrics of '1900 Masquerade Calipso' in English and French Lexicon Creole (Hill 1997, 61). Forty years later, when researchers, cognoscenti and other aficionados investigated the origins and aesthetics of the calypso, claims were advanced for a variety of sources.

In 1944 novelist Alfred Mendes advanced a theory of Spanish origin with African inputs (Rohlehr 1990, 388–9) while Espinet and Pitts (1944) proposed Afro-Cuban roots. Sociologist Dom Basil Matthews created a tenuous morphology from the French *carrousseaux* (Rohlehr 1990, 387). In 1988 Rafael de Leon, better known as calypsonian the Roaring Lion, promoted an untenable and unconvincing theory that the calypso is merely another word for the *ballade* which, according to him, was developed and standardized in France.

Folklorist Mitto Sampson traced the calypso to the Carib *carieto*, a joyous song used 'to heal the sick, to embolden the warrior and to seduce the fair' (Pearse 1956, 256). According to Sampson, African slaves found in Trinidad a form of singing which they took up and added to their own repertoire of songs: '[t]hey introduced more pep, more vigour, more liveliness and more animation' to the *carieto* (257). Pioneering ethnomusicologist J. D. Elder, who investigated the Trinidad calypso exhaustively, refuted this theory, claiming, 'it seems very unlikely that Trinidadian traditional music, as it stands today, has retained any but the slightest traces of aboriginal Indian music, let alone Carib music' (1966a, 62).

Sampson also proffered a theory of African origin, tracing its presence to the late eighteenth century, when songs were performed by African slaves to entertain and appease their master St Hillaire Begorrat, a colorful historical character who migrated to Trinidad from Martinique in 1784:

Legend has it that Lawa (King) Begorrat used to hold court in his cave, to which he would adjourn with favorite slaves and guests on occasions and indulge in a variety of entertainments. The court was attended by African singers of 'Cariso' or 'Caiso,' which were usually sung extempore and were of a flattering nature, or satirical or directed against unpopular neighbors or members of the plantation community, or else they were 'Mepris,' a term given to a war of insults between two or more expert singers. Gros Jean is said to have [been] the first of these bards or 'chantwels' to be appointed Master of Caiso or Mait Caiso (Pearse 1956, 253).

While Sampson uses *cariso* and *caiso* interchangeably, Elder describes the *cariso* as 'a song performed during resting periods in *kalinda* (stickfighting) contests by females entering the circle and singing lewdly erotic songs accompanied by obscene dancing' (1966a, 90). Elder claims that after the Canboulay riots of 1881 male singers co-opted the *cariso* and adjusted it rhythmically for street parades (ibid.).

The word calypso has been credited to the West African *kaiso* or *kaito,* and linguist/lexicographer Richard Allsopp believes that it derives from the Efiks, a people located on the southern coast of Nigeria (Rohlehr 1969, 3). Accepting a West African origin, Rohlehr concludes that the name 'calypso' is 'an attempt to provide a rendition of the earlier African term [kaito] suitable to Anglo and Anglo-Saxon intelligentsia' (1969, 1).

The *Kalinda*

Elder, one of the pioneers of Afro-genesis, cautions that the similitude between the calypso and certain forms of African music is confined to theme, rhythm, tempo, rhyme and other nonstructural characteristics such as function and social status (1986, 1). He adds that, to the date of his research [1986], no one had established any specific structural parallelism to any African music but that the nearest, genetically speaking, is the *kalinda*.

The *kalinda* has been described as 'the Trinidad stickfight which pits two men [or women] against each other in a ritualized form of combat with a somewhat balletic element' (Warner-Lewis 1991, 190). This song-dance complex became the music of Port of Spain's underclass, whose numbers were swollen by hundreds of Africans and Creoles, dispossessed by harsh land tenancy laws in the post-Emancipation period.

The *kalinda* became a ritual of empowerment, a site for misplaced aggression and a rite of initiation into manhood for those otherwise disempowered Africans. In 'backyards' and 'barrack-yards,' the *kalinda* was the major source of recreation and on Carnival days the stick-fight 'batonniers,' led in song by their 'chantuelles' ('chantwells' and 'shantwels'), took to the streets in public celebration of an ethos of manhood as much as of the memory of liberation from plantation slavery. The *kalinda*, the perfect music for an embattled people, summoned and excited the masses to resist attempts to suppress the *kambule* (derived from the Ko *kambula*, meaning procession [Warner-Lewis 2003, 222]). Denied its own festive time and space, *kambule* grafted itself on to the European Carnival and the word was Europeanized into Canboulay and conflated with the French Creole *cannes brulees* (burnt canes).

After the Canboulay Riots of 1881, when lower-class masqueraders successfully fought the police in Port of Spain, the *kalinda* was formally banned but remained alive in the countryside and in those areas of Port of Spain unsupervised by the police. The *kalinda*'s legacy to the modern calypso consists of: call-response; poly-rhythms (consistent syncopation); 2-2 timing; and the minor mode (pentatonic scale). Maureen Warner-Lewis traced the development of the minor key in calypso to Yoruba songs by providing examples of tone, pitch, inflection and lexicon (1981).

The *kalinda* has bequeathed attitudinal postures to the calypso. These include ritualistic challenging, boasting and grandiloquence, the privileging of the male or masculine mode, a defiance of authority and an emphasis on the power of the individual supported by the group. Daniel Crowley (1959a, 64) records one stickfighter as boasting 'I Lawa with stick, with fight, with woman, with dance, with song, with drum, with everything.'

Up to the emergence of the iconoclastic David Rudder in 1986, the need for and the choice of sobriquet reflected the calypsonian's need to assume a dominant persona. While some calypsonians chose monikers like The Roaring Lion, The Growling Tiger and Lord Executor, which reflected ferocity, others chose or were given sobriquets such as Iron Duke, Richard Coeur de Leon, Atilla the Hun and Lord Kitchener, which reflected European history; still others had names like Eisenhower, Stalin and Chiang Kai Shek, which reflect contemporary history. Even when the names became gentler (Caresser, Melody, Sparrow), more homely (Cro Cro, Sugar Aloes), indicative of profession (Chalkdust), or simply reflecting nicknames (Cristo, Delamo, D Alberto), they were still preceded by The Lord or The Mighty. When women began singing professionally, they chose sobriquets such as Lady Trinidad and Lady Iere, but up to the 1980s the general practice was to add 'Singing' or 'Lady' to legal first names (e.g., Singing Francine) or to an abbreviated version of the first name (e.g., Lady B). Some, such as the great Calypso Rose, added 'Calypso' to their legal name or nickname. At present, women generally use their legal names but some sobriquets reflect the impulse for greatness (e.g., Marvellous Marva, Tigress, Lady Wonder, Princess Monique) and to sexualized self-projections (Sexy Susie).

'Chantuelles' prepared themselves for the instrumental violence of the stickfight by ritualistic and expressive use of the word. Ruth Finnegan and Roger D. Abrahams have commented on the Africans' sensitivity toward sophisticated use of language, and the preludes to the stickfight offered a context for the display of language. Mastery of the word was as important as mastery of the stick and this important skill was passed down to the 'true-true' calypsonian who prides himself/herself on the ability to compose, which is valued more highly than the ability to perform.

The *kalinda* form remains as part of the collective property available to any composer who wishes to use it. In the 1930s, in the face of a scare that the traditional calypso was dying, singers revived the *kalinda*. Invader's 'Ten Thousand to Bar Me One' (1939) is an excellent example of this practice. Still later, Kitchener used it in his masterpiece 'Is Trouble' (1954). The call-and-response format is still employed in the chorus of many calypsos.

The Single Tone and Double Tone

The Canboulay Riots of 1881 catalyzed the development of the modern calypso by releasing several creative impulses that manifested themselves in the domains of form and theme. Composers doubled the *kalinda* lines to form rhyming couplets such as those retained in Caresser's 'Edward VIII' (1937). Experiments with the *cariso* and other forms resulted in the single tone, which was sung mostly in French Lexicon Creole or *patois*. Jules Sims's 'Bagai Sala que Pocheray Moin' (1914) is an excellent example.

In the post-Canboulay period, calypsonians freely incorporated traditional melodies from other West Indian islands. According to Raymond Quevedo (Atilla the Hun), whose history *Atilla's Kaiso* was published posthumously in 1983, the melody of 'L'annee Passer …' was imported from Martinique during the 1890s, while 'Tobo Jestina' was borrowed from Tobago, 'Sly Mongoose' from Jamaica and 'Everytime A Pass' from St Lucia (Quevedo 1983, 14–19). During this period, and even later, calypsonians recycled their own melodies and freely used those of their colleagues.

Quevedo claims that,

> From 1903 onwards till about 1921, the kaiso followed the oratorical pattern, that is to say, the kaiso was in the nature of a rhetorical recitative sung in the minor key, with eight lines to the stanza. The oratorical pattern was otherwise called a double tone. Sometimes singers like Inventor, Executor and Mentor would actually lapse for effect into speech rhythm. (Quevedo 1983, 20)

The double tone or ode was essentially a sophistication of the rhetorical tendencies noted by Abrahams (1967, 1970), who highlights the importance of the man-of-words in traditional performances and differentiates between the 'good talkers' and 'good arguers.' The former are characterized by 'the use of long speeches suffused with overly decorative diction,' while the latter are characterized by 'strong colloquial diction and the rapid thrust of invective' (1970, 507). Abrahams adds that, although one man could be both a good talker and a good arguer, he was rarely called on to be both on the same occasion. 'The man-of-words,' he notes, 'not only provides the tone and subject for traditional performances but also serves as principal organizer of the activity. He has an equivalent in the man-of-action, the physically adept one who focuses the proceedings by his leadership and performance abilities' (1967, 458).

Nineteenth-century 'chantuelles' doubled as men-of-words, the Caribbean equivalents of the West African griots, and as men-of-action. Twentieth-century singers took inordinate pride in their mastery of English, the imperial language of prestige. Their song duels were variations on the traditional verbal battles of the nineteenth-century 'chantuelles' and of oratorical masquerades such as the Pierrot and Pierrot Grenade, as well as the twentieth-century Midnight Robbers. Classic illustrations of the ode form are Chinee Patrick's famous derogation of Executor in *An Evening of Calypso Lore* and Executor's own derogation of his protégé Atilla (Quevedo 1983, 93).

The ode required quick intelligence and erudition, which may have been beyond the reach of many would-be practitioners. One complaint published in the *Port of Spain Gazette* of 25 February 1914 was that 'none of the Carnival bards sang any properly composed song, most of them being merely a jingle of words uttered with lightning-like rapidity and ending with the monotonous "sans humanité"' (quoted in Liverpool 2003, 135).

Quevedo's 1921 date for the decline of the ode (1983, 20) corresponds with the emergence of the ballad form conventionally credited to Railway Douglas; this form better suited recording than the oratorical exchanges. Extemporaneous singing ('extempo') still held a place in the tent, however, and until the late 1950s it was the closing act. After this it was kept alive mainly by Pretender, Relator and Gypsy, until a partial revival in the 1980s.

Some practitioners have employed the first six lines of the ode for developing narrative or commentary and reserved the final two lines as a chorus, either invariable or changing, to suit the development in the first six lines. The Atilla-Beginner duet 'Iere Now and Long Ago' (1935) is a fine example of the first, while Tiger's 'Money Is King' (1935) is an excellent example of the second. The ode added its form to those already existing, and the calypsos from the 1930s onward reveal that singers were indiscriminately employing rhyming couplets, four-line single tone stanzas sometimes with four-line choruses, eight-line double tone stanzas with or without choruses. Calypso folklore has claimed the eight-line stanza accompanied by a chorus of four or six or eight lines as the definitive form for the traditional calypso.

The Advent of the Calypso Tent

The post-Canboulay period witnessed the emergence of social unions, the origins of which, Donald Hill explains, were 'partly the outgrowth of the African and grass-roots Creole voluntary associations that existed decades earlier and partly the new creations of middle-class Creoles, perhaps based on ethnic associations, in their attempts to upgrade Carnival' (1993, 50). Among middle-class Creoles were 'jacketmen,' who sought the company and comfort of the underclass. Businessmen such as Ignacio 'Papa' Bodu and business interests such as Fernandez and Co. financed social unions which retained 'chantuelles' to lead them in song on the Carnival days. A space in the band tent was reserved for the rehearsal of songs to be used by the band for the parade; seating was organized for the comfort of patrons.

A clear class – and perhaps racial – distinction obtained in respect of these social unions. According to Quevedo (1983, 35), the upper-class Shamrock Syndicate employed Richard Coeur de Leon, while the middle-class Crescent hired The Duke of Marlborough, and Whiterose, financed by Papa Bodu, was led in song by Julian Whiterose. These 'chantuelles' were either self-employed or held jobs in the private commercial sector. Lower-class 'chantuelles' such as Red Box and Lord Baden-Powell 'could not in their wildest dreams aspire to become chantwells of such bands' (Quevedo 1983, 35).

Beginner explains the fine distinction between 'chantuelle' and calypsonian which developed in this period: 'The difference lay in the audience. Singing for the upper class masqueraders and rich whites at their headquarters in preparation for Carnival made one a 'chantuelle'; singing for the poor at street corners, rumshops, barbershops and in calypso tents made one a calypsonian' (Liverpool 2003, 23). He also adduces the factor of race/ethnicity: 'Many calypsonians aspired to be chantuelles but many could not achieve that high standing because of their low social status, their jobs being the domain of mostly "the fairer-skinned fellows"' (Liverpool 2003, 31). Iere, however, has a different take: 'A chantuelle in those days was more important than a calypsonian. A calypsonian was a dog, so I preferred to sing as a chantuelle' (Liverpool 2003, 76).

While there was a great social gulf between middle-class organizations such as Crescent, Shamrock and Whiterose and lower-class outfits such as Red Dragon, Hit the Deck Sailors and Demonites, some singers served out their apprenticeships in the lower-class establishments. Little is known about Fanto, Cat the Beginner and many others whose names feature in the accounts of Atilla, Beginner and Iere but who did not graduate, like them, to Silky Millionaires, Salada Millionaires or Railroad Millionaires, the three most prestigious calypso tents of the 1930s. Atilla acknowledges Fanto's popularity, which was based on 'his showmanship, his remarkably sweet voice and the appeal of his presentation of sex symbolism in kaiso' (Quevedo 1983, 36). He cites two of Fanto's octets which are stylistically different from the ode. Unfortunately he does not date these and we have no way of knowing if they were influenced by Douglas's ballads or the other way around. Similarly, Atilla describes the innovations of Cat the Beginner, which must have formed the basis for the calypso duets which Atilla claimed to have invented (Quevedo 1983, 37, 40). These dimly remembered singers may have impacted the development of calypso far more than is now acknowledged. Elder, Atilla and other commentators may have marginalized them because they sang on parochial matters or on sexual themes of female derision, rather than develop the nationalist project.

'Chantuelles' parted company with the masquerade bands in the 1930s when the singers queried their share of the gate (Quevedo 1983, 39). They then adopted the model established by Railway Douglas, who in 1921 established The Railroad Millionaires and Calypso Tent at Duncan St Port of Spain. Douglas catered for middle-class patrons and to this end he covered his bamboo structure with tarpaulin borrowed from his railroad employers, rented chairs and gas lanterns, and hired musicians to play the flute, clarinet and violin. He also banned goatskin drums, chac-chacs and other instruments used in underclass (African) entertainment. He strictly excluded picong, the playful but sometimes acrimonious banter or exchange of words which was the main attraction of the masquerade camp tents. In order to support a two-hour-long calypso tent show, featuring himself and a few helpers, he employed the ballad form for telling stories of lower-class living for the entertainment of his middle-class audience. He became, as Quevedo (28) puts it, the *kaiso*'s novelist, retailing sordid stories of the lives of the underclass for the entertainment of his upper-class clients.

The period from the late 1920s to the end of the 1930s, years which saw the heyday of Executor and the emergence of Atilla the Hun, Lion, Tiger, King Radio, Invader, The Growling Growler, The Caresser and Lord Pretender, is regarded as a golden age in calypso. Singers voiced a range of concerns in a variety of song styles from the *kalinda* through to composed calypsos featuring single-tone quatrains and double-tone octets. Singers were known for their themes and their approaches but they were not limited to their pet themes or peeves.

Lion, for example, was famous for his risqué and salacious compositions such as 'Netty Netty' (1937), 'Dorothy Went to Bathe' and 'The Lost Watch,' but he was also well known for his experiments and his incorporation of the beat and feel of New Orleans in 'Bing Crosby' (1939) and 'Four Mills Brothers' (1936). Atilla was feared and loved for his relentless political polemics, but his sublime 'Graf Zepplin' (1934), which celebrates in double-tone styling the visit of the dirigible to Trinidad, is a classic calypso. Radio has been described as a sort of sex symbol (Liverpool 1987, 67) but 'Sedition Law' is a defining calypso statement against the censorship of the day; his 'Matilda' (1939), a single-tone lament of a betrayed lover, remained popular for three years. Executor is as well known for his commentaries on topical happenings of the years as for his signifying song, 'They Say I Reign Too Long' (1938). Tiger protested against the Italian invasion of Abyssinia in 'The Gold of Africa' (1936) and declared neutrality in World War II in 'Let Them Fight for Ten Thousand Years' (1940); his 'Money Is King' (1935) is a philosophical statement on the importance of money in a money economy. Collectively these singers provide detailed maps of meaning into the folkways of urban lower-class Africans in the 1930s. Through their songs, we get a sense of contemporary popular attitudes to male-female relationships, to African and neo-African religions, to Afro-Indian race relations and to the 1930s cycle of black consciousness, and of their awareness of their role in the emerging protonationalist movement. They sang praise songs to athletes and artistes as well as to British royalty and nobility. They also registered the impact of international events on the local community even as they fantasized about the good life.

Most of these songs are rendered in one or other of the four traditional minor keys, namely D (re-minor), E (mi-minor), F (fa-minor) and G (sol-minor). Most are in English or in Trinidad English Creole but some employ a macaronic mix of French Lexicon Creole (patois). Many use violins, clarinets, flutes and instruments introduced to the calypso in the 1920s; some use big band orchestration. Lion's use of New Orleans rhythms adds a cosmopolitan touch to the period, as does his use of vocables and vocal scatting and whistling in 'Bing Crosby.'

The Internationalization of Calypso

In 1912 the first recording of Trinidad's music was made by Columbia Records in New York and featured a string orchestra, Lovey's Trinidad String Band rendering what can be considered a calypso version of the popular folk song 'Mango Vert.' Two years later, in Trinidad, the first vocal recording was made by Julian Whiterose (Henry Julian), aka The Iron Duke, who recorded 'Iron Duke in the Land' for the Victor Talking Machine Company, under the name of J. Resigna, with Gerald Clark accompanying him on guitar. Issued as 'Single Tone Calipso,' the record was paired with a recording by bandleader Lionel Belasco, who was later to popularize many instrumental versions of calypso. On the same day in September 1914 Jules Sims recorded 'Bagai Sala que Pocheray Moin,' under the title 'Native Trinidad Kalenda.' No further recordings appear to have been made in Trinidad until the late 1920s–early 1930s. In the United States, further instrumentals were recorded in the years before World War I, but it was in the late 1920s, thanks to exposure on recordings, that calypso vocalists created a minor craze. Wilmouth Houdini, who emigrated to the United States in around 1927, became a prolific recording artist, making a total of over 134 recordings. His uncredited use of the work of resident Trinidadians caused bad feeling between himself and them, a situation which was dramatized in his own calypsos 'Executor Doomed to Die' (1929) and 'War Declaration' (1934) and in Executor's 'My Reply to Houdini' (1937) and the Executor-Caresser-Atilla-Lion 'War' (1937).

In March 1934 Sa Gomes, the local Trinidad agent for Decca and Brunswick records, sent Atilla and Lion on a recording tour of the United States. There they hobnobbed with Hollywood stars of radio and screen, and were heard on American national radio. Lion's 'Ugly Girl' was used in the movie *Happy Go Lucky* (1943) where it was rendered by Sir Lancelot, a Euro-Trinidadian *kaisonian* then resident in the United States. The delight of the calypsonians is immortalized in the Lion-Atilla duet 'Guests of Rudy Vallee' (1935). Their tour initiated a period of popularity abroad and kindled the dream of making it to Broadway and to the Grammy awards, a dream that local calypsonians have not realized, although plagiarized and cover versions of some calypsos have done so. The best examples are the Andrews Sisters' version of Invader's 'Rum and Coca Cola' (1945) and The Baha Men's 2000 cover version of Anselm Douglas's 1998 song 'Who Let the Dogs Out.'

The popularity of calypso earned it the distinction of being the omnibus name for West Indian music abroad for many years and singers of all genres of Caribbean music passed off their music as calypso and themselves as calypsonians, much to the chagrin of authentic calypsonians (Crowley 1959b, 117–18). The classic example was Harry Belafonte's best-selling album *The Calypso* (1956) on which he, of Jamaican/Martinican/American descent, rendered a wide range of folk songs and island music. Ella Fitzgerald, Louis Jordan and Robert Mitchum were among the American artistes who recorded calypso songs. The calypso achieved tremendous popularity in the Anglophone West Indies. Jamaican artistes advertised themselves as calypsonians and individual singers such as Small Island Pride of Grenada and King Fighter of British Guiana (now Guyana) performed at Trinidad tents in the 1950s and 1960s. They paved the way for many other Caribbean singers, including Arrow of Monsterrat, Beckett of St Vincent, Swallow and Short Shirt of Antigua, and Gabby, Grynner and Red Plastic Bag of Barbados. In the 1970s and beyond, when the individual islands developed their own versions of Carnival, the calypso and its derivative soca became and remain a major attraction.

World War II and After

In Trinidad itself, in the years before the outbreak of war, calypsonian support for the nationalist movement had ignited the wrath of the colonial administrators, who in 1934 passed the Theatre and Dancehalls Ordinance, yet another in the series of legislation aimed at (black) populist expression. Atilla claims that the legislation was triggered off by the public embarrassment when Radio performed 'Country Club Scandal' (1933), which drew public attention to an adulterous affair rumored to implicate a high-ranking member of the police force. The advance publicity provoked a showdown between calypsonians and police in the Silky Millionaires tent where Radio was appearing, and it was only thanks to the intervention of nationalist politician Captain Arthur Cipriani that Radio was allowed to sing unmolested by the police officers then present (Quevedo 1983, 56–64). The Theatre and Dancehall Ordinance invested tremendous power in the hands of the state officials who practiced an overt censorship. Paradoxically, the tents were kept open during the war years because the colonial authorities valued calypso for its propaganda value in the Allied cause.

During World War II, the Americans leased lands in Trinidad for military and naval bases. This was a response in part to the need to protect the export of Trinidad petroleum, which was vital to the Allied war effort. Calypsonians welcomed the Americans as generous clients whose patronage of the tents catalyzed the emergence of the professional *kaisonian*. But the same calypsonians deplored the alienation of the affections of their paramours, who like many others were caught up in 'working for the Yankee dollar' as Invader termed it in 'Rum and Coca Cola' (1943). Invader's 'Yankee Dollar' (1946) and Kitchener's 'My Wife Went away with a Yankee' (1946) testify to the resentment of the locals at being abandoned by their lovers.

The litigation over the Andrews Sisters' 1945 cover version of Invader's 'Rum and Coca Cola' caused a sensation. Invader contended that his song had been stolen by Morey Amsterdam, who came to entertain the American troops stationed in Trinidad in 1943 (Hill 1993, 234–40). Invader was awarded $100,000, some of which he generously shared with friends (ibid.). One positive outcome from Amsterdam's initiative may have been the further promotion of the calypso, especially in the coveted American market. In New York on 21 December 1946 pioneering ethnomusicologist Alan Lomax hosted a concert, as part of the 'Midnight Special' series sponsored by Peoples' Songs and held at Town Hall. Recordings were rediscovered in the 1990s and subsequently released by Rounder Records as *Calypso at Midnight* and *Calypso after Midnight*. These featured the much-celebrated Lord Invader as well as Macbeth the Great and The Duke of Iron, two calypso singers resident in the United States. Invader was also recorded in the 1940s and 1950s by the founder of Folkways Records Moses Asch, like Lomax a strong supporter of calypso. (Invader's Folkways recordings were reissued by Smithsonian Folkways in 2000 as *Calypso in New York*.)

After the war, Pretender and Killer established The Young Brigade in Port of Spain (Liverpool 2003, 104). Kitchener's 'Professor Kitch' (1954) pays tribute to that movement by naming the singers and stating the feature(s) that made them outstanding. Several of these singers either emigrated or died in the 1950s and 1960s. Kitchener, probably the best-known young *kaisonian* of that generation, left Trinidad for performances in Curacao, Aruba and then Jamaica and was, with Lord Beginner, among the batch of pioneering

West Indian immigrants who sailed from Kingston for England on the *Empire Windrush* on 21 June 1948. Kitchener first played the pub circuit, then appeared at a London nightclub and later opened his own establishment in Manchester. Among his many fans was Princess Margaret, younger sister to Queen Elizabeth II. At first he re-recorded old hits, but under contract to the Parlophone, Melodisc and Lyragon labels he produced new material such as 'The Birth of Ghana' (1955), which was adopted spontaneously by the Ghanaian people, and 'Is Trouble [in Arima]' (1954), which was a hit back in Trinidad. In his stay in England, Kitchener worked with outstanding West Indian musicians, including Freddy Grant, Cyril Blake and the legendary jazz guitarist Fitzroy Coleman.

In the public mind, the outstanding memory of this period was Kitchener, guitar in hand, leading a group of West Indians in a triumphant dance march across the hallowed Lords cricket ground in London following the historic Test Match victory over England in 1950, immortalized in Beginner's 'Victory Test Match' (1950). Beginner, Invader and Lion individually sought fame and fortune in Europe as did Mighty Terror, another member of the Young Brigade who joined Kitchener in metropolitan exile in 1953. Songs performed by them and other singers based in England, if only temporarily, have been collected on the CD *London Is the Place for Me: Trinidadian Calypso in London, 1950–1956*.

The impetus started in the United Kingdom by the generation of 1948 was not sustained after the 1960s, when Kitchener and Terror returned to Trinidad. The emergence of the Notting Hill Carnival gave a boost to calypso singing but black British calypsonians did not make as distinct an impression on the music scene and on their communities as Steel Pulse and other black British reggae groups have done in Britain and elsewhere. Despite the existence of a calypso competition, the contemporary Notting Hill Carnival is largely serviced by Trinidad-based acts.

In the 1950s the vacuum which was created in the Trinidad calypso scene after the departure of Kitchener and others was filled by Lord Melody and the incredible fantasist The Mighty Spoiler. Melody later left to join Harry Belafonte's camp as a songwriter and Spoiler drank himself into an early grave in 1960, but the void in calypsodom was already filled by The Mighty Sparrow, who has continued to style himself the Undisputed Calypso King of the World. In an undated television interview, Sparrow himself revealed that he owes his stage-name to an unidentified patron who complained angrily that the singer hopped about the stage 'like a blasted little sparrow,' unlike most other singers who sang from one spot on stage. Within two years of his arrival Sparrow metamorphosed into The Mighty Sparrow and, thanks to his victory at the annual Calypso King competition in 1956 with the immortal 'Jean and Dinah,' dominated the world of calypso, which acclaimed him as King Sparrow.

As an adolescent Sparrow had listened attentively to the Young Brigade and applied all the lessons he learned from them. He instituted the new age of professionalism, elevating the *kaisonian* into person, citizen and professional entertainer. Among his innovations were costuming for the national Calypso King competition held on Carnival Sunday night (Dimanche Gras); extended touring; major collaboration with songwriters; marketing and promotion; and ownership of recording plant. In 1960, however, his experimental 'Rose' was adjudged to be a ballad rather than a calypso and he was placed second in the annual Calypso King competition. Enraged, he recorded a defiant 'Robbery with V' (1961), which defined his perception of his role in the elevation of the calypsonian to professional.

When Kitchener returned for the 1963 Carnival and Terror for the 1965 season, both immediately scored major successes with calypsos on the steelband, which had made tremendous strides while they were abroad. Kitchener's 'The Road on Carnival Day' (1963) placed him second in the national calypso competition (to the all-conquering Sparrow) and won him the first of three consecutive road march crowns. Perhaps more importantly 'The Road,' although challenging the endemic steelband violence of the day, established the phrase 'The road make to walk on Carnival day' as the most enduring calypso affirmation of the Carnival; his 'Steelband Music' (1964) initiated the tradition of calypso panegyric on the steelband. Terror's 'Pan Talent' (1965) and 'Steel Band Jamboree' (1966) continued in the vein established by 'Steel Band Music'; both won him appearances in the finals of the national calypso king competition with 'Steelband Jamboree' being one of the prize-winning tandem.

Kitchener's return from England gave a timely impetus to the Road March, which was formally established in Trinidad in 1963. Before this, masqueraders danced along to popular calypsos and the composers of these claimed that they ruled the road. After, the Carnival Development Committee (CDC) counted the songs which were played at the Queen's Park Savannah, Port of Spain, by bands competing for the Band of the Year. Kitchener's amazing skill in composing melodies for the steelband, the premier agency in road march-making, was instrumental in his 10 road march triumphs between 1963 and 1976. By the mid-1970s, however, the steelband had declined as the major provider of music for masquerade bands. Although displaced as Road March King, Kitchener remained extremely popular with the steelbands, providing a string of melodies for the annual Panorama competition. His Calypso Revue tent, established in 1966, has proven to be the most permanent organization in calypso, surviving his death in 2000. Stalin, Valentino, Relator, Pink Panther, The Original Defosto Himself, Sugar Aloes, Denyse Plummer and others have publicly praised him for his mentorship.

Soca and Chutney Soca

In 1974 Lord Shorty announced at a press conference that he had developed a new beat, which was featured on his new album *Endless Vibrations*. Ivor Ferreira, a prominent journalist, listening to the title track of the new album, felt that it incorporated calypso and soul, and so in his report on the launching wrote the world 'soca.' Five years later, Shorty himself claimed that he intended *sokah* to be a mix of calypso and Indian music to which he was exposed as a child in Lengua, an agricultural village in South Trinidad which boasts a large Indo-Trinidadian community (Blackman 1979). *Sokah* finds expression in 'Shanti Om' (1979), Wanderer's 'Premattee' (1983, written by Shorty) and Bro Marvin's 'Jahaaji Bhai' (1996).

The phenomenal success of the title track of *Endless Vibrations* signaled the acceptance of the new forms by the public, especially Trinidadian youth, who constituted a viable market thanks to the unexpected liquidity afforded by the oil boom of the early 1970s. Within a short time, despite the fulminations of the traditionalists such as Chalkdust, Lion and Kitchener and the ambivalence of others such as Sparrow, Stalin and Shadow, other calypsonians slipstreamed behind Shorty. Maestro, at first critical of Shorty's use of Indian rhythms, wrote the first soca album, *The Anatomy of Soca* (1977), which featured among other variants of soca, the soca reggae 'Not Call Them Name' and the soca ballad 'Cher.' Kitchener chipped in with 'Sugar Bum Bum' (1978), Merchant with 'Norman' (1978) and Rose won the road march with 'Soca Jam' (1978).

In 1979 Crazy performed the tremendously popular 'Parang Soca.' (Parang is the music of the descendants of the Venezuelan *peones* who had come to Trinidad to work on the cocoa estates at the foothills of the northern and central ranges.) The commercial success of 'Parang Soca' inspired Reynold Howard to compose a string of soca *parangs* for Singing Francine, until the form found its own fulfilment in Scrunter, who had grown up in a *parang* tradition.

Arrow of Monsterrat experimented with *ka-dance*, later known as *zouk*, while Swallow of Antigua contributed soca rocker, a fusion of soca and Jamaican rockers. Arrow and Swallow headed another influx of singers, including Short Shirt of Antigua and a little later the Barbadians Gabby and Grynner.

Composers, looking for a beat and for a niche in the overcrowded market, turned to chutney, the Indo-Trinidadian music which was brought into the musical mainstream by Soondar Popo in the mid-1970s. After some contestation, especially from Indo-Trinidadian religious and social elites, chutney was championed as an Indo-Trinidadian response to the popularity of calypso. The desire to capitalize upon the market for a calypso-type music generated soca chutney as well as chutney soca, and from these fusions came huge hits such as Droopattie Ramgoonai's 'Mr Bissessar (1988) and 'Hotter Than a Chulha' (1989).

Rapso, created by Lancelot Layne in the 1970s in response to African American rap music, was extended by Brother Resistance, Shortman, Karega Mandela and their Network Rhythm Band. In the late 1980s entertainers on the increasingly popular gospel circuit generated gospelypso, which is in part a response to soca, in part a response to the waves of pop-based gospel messages emanating from the United States. In the early 1990s ragga soca, another fusion of soca and Jamaican dancehall, was created in Kenny Phillips' music laboratory with the assistance of Byron Lee, the Jamaican musician and cultural entrepreneur.

Most of the movements of soca met and found fulfillment in the genius of David Rudder whose 'Calypso Music' (1987) remains an outstanding example both of the extension of the form and of the poetics of calypso. A younger Machel Montano has inspired another generation of singers with his eclecticism, which includes performances and recordings with Jamaican dancehall acts as well as with African-American hip-hop artistes. His 'Real Unity' (2000), performed jointly with Drupatee Ramgonai, is a beautiful illustration of the possibilities inherent in the interface of calypso, Indo-Trinidadian music and world beat. On the recording, Drupatee sings stanzas of the traditional Indian melody 'Aap Jaisa Koi Meri,' while Machel chips in with dancehall-style interjections and with a repeated chorus declaring that nothing is wrong with 'wineing' on a woman of any nationality. This entire effort was meant to defuse the tensions arising from the controversy surrounding Iwer's 'Bottom in the Road' (1998), to which some Indo-Trinidadian elites took offense.

A major feature of the new age has been the reinterpretation of traditional beats or beats rooted in the

Afro-Trinidadian/Tobagonian experience. A peculiar dialectic constantly operates in the calypso, such that whenever avant-garde composers seek to loosen the calypso from its moorings in traditional Carnival music, some artistes react to this by reaffirming the rooted beats and thereby anchor the calypso within traditional and reinterpreted sounds. This happened in the 1970s, perhaps as a consequence of the soca experiments. Shadow's phenomenal 'Bassman' (1974) pioneered the re-emergence of a traditional African sound with which he was deeply familiar, having grown up in Tobago, which retains a strong African vibration. This return to roots also happened in 1980 when Blue Boy of the Baptist community of Point Fortin performed the highly popular 'Soca Baptist,' which among other things draws attention to the similarities of soca music and the music of the Shouter Baptist religion.

Super Blue, as Blue Boy styled himself later in the 1980s, experimented with crossover fusions of soul and R&B before returning to traditional calypso beats in 1987 with 'Jingay.' Still later he made an enormous contribution to 'dancehall soca,' the music which has driven the Carnival industry from the late 1980s and beyond. To create the new Carnival music of the 1990s Super Blue incorporated the riffs used by big bands during the 1950s and 1960s. 'Bacchanal Time,' the road march of 1993, is testimony to the experiments in this direction. It also testifies to the ceaseless reinterpretation of calypso and other mainstream Trinidadian music that has always been the feature of the Calypso.

The 1980s witnessed the re-emergence of the devil masquerade that had horrified some onlookers in the mid-nineteenth century. One group of devil band organizers, 3canal, launched their song career with the acclaimed 'Blue' (1996). Percussive ensembles, called rhythms sections, catered to the new craze for rooted beats. New age rapso acts, represented by Kindred and Ataklan, fused hip-hop and dancehall into their soca mixes.

Simultaneously, the dance hall began to rival the calypso tent as a performing space for calypsonians. Dances had escaped their narrow confines and had become massive events barely contained in large indoor and outdoor facilities. By the 1980s, too, women had taken over the dance halls as well as the Carnival streets, thanks to the economic independence earned from capitalizing on improved educational opportunities. They transformed the festival spaces for public celebration of their sexuality, thus reversing a trend of domination by their male counterparts. Female calypsonians and soca artistes such as Allyson Hinds of Barbados, Destra Garcia, Denise Belfon, Sanelle Dempster and Faye-Ann Lyons-Alvarez came into their own.

The composition of the dance hall audiences, together with the flourishing of the gym subculture that facilitates the glorification of the female body, has shaped the instructional soca songs, in which revelers await and obey commands in the same way as gym devotees follow directions from their instructors. Mindful of the potential for damage caused by the instructionals' 100 + heartbeats per minute, composers/performers have introduced 'wheeling' which incorporates the rest period in aerobic sessions or 'burnouts.'

The mass demand for Carnival music has revived the practice of 'sampling.' In the early years of the twentieth century when the emphasis was on the word, the practice was to recycle a handful of calypso melodies, but as the century progressed and audiences demanded variety of melody, composers were challenged to develop entirely new melodies for new calypsos. This enormous pressure to meet the demands of insatiable Carnival audiences has forced some composers to adapt or borrow melodies from each other as well as from world music. Sampling other music has been derided by 'true-true' *kaisonians*, whose contemptuous labeling of contemporary sampling as 'Xerox soca' testifies to their resentment toward the popularity and commensurate financial remuneration enjoyed by those who borrow melodies successfully.

In 1998 Wayne Rodriguez won the road march with 'Footsteps' which samples Sean 'Puff Diddy' Coombs's eulogy to 'Notorious B.I.G.,' which itself samples the 1980s Police hit 'Every Breath You Take.' In 2003 Destra Garcia incorporated parts of the melody of Cyndy Lauper's 'Time after Time' with great success in her recording with Machel Montano 'It's Carnival,' and Maximus Dan's reworked Gypsy's 'Soca Train' (1980) into his 'Soca Train' (2004). Both these artistes reaped the rewards of live appearances during the Carnival season in Trinidad and abroad.

In the early twenty-first century soca is the preferred music for Carnival and the International Soca Monarch rivals the traditional Calypso Monarch show, which is held on Dimanche Gras, the Sunday immediately preceding Carnival Monday. Traditionalists have derided this form of soca for its monotony, its absence of 'sense' and its over-dependence upon hooks and facile catchcalls, but this form of dancehall soca dominates the Carnival fête scene and the parade of the bands. Other Caribbean acts such as Kevin Lyttle have benefitted from the proliferation of carnivals in North America and Europe. Chutney soca is staking its claim and crossover bands like Karma, Dil-e-nadaan, Gayatones and Melobugs are headlining mainstream soca events in Trinidad and abroad.

In conclusion, the calypso is a living folk/urban tradition. To quote Rohlehr (1990, 54): 'It grew out of [a] milieu of confrontation and mastery, of violent self-assertiveness and rhetorical force; of a constant quest for a more splendid language, and excellence of tongue.' This fine statement encapsulates the movement from the *kalinda* through the single tone to the ode and later the ballad. It is in a continuous state of evolution as it strives to retain its popularity in a world of music dominated by other Caribbean and foreign influences. The experimentation of Lion, Kitchener, Sparrow, Shorty, Maestro, Super Blue, Rudder and Machel, to name the more outstanding experimenters, has been a consistent attempt to guarantee that the calypso would continue to enjoy its status as the premier music of Trinidad and Tobago.

Calypso Limonense

Calypso limonense is a form of calypso that developed among the Afro-Caribbean population of the port city of Limón on Costa Rica's Caribbean coast, and subsequently spread to other parts of the country. From the 1980s it was increasingly present in the cultural life of people of Costa Rica not of African descent. Evidence of its continuing impact on a wider spectrum of Costa Rican musical culture can be seen in the existence of calypso combos in the streets of the capital San José and in San Pedro de Montes de Oca, along with its presence in the tourist areas on both the Caribbean and Pacific coasts.

The arrival of the first black migrants from the Caribbean islands of Jamaica, St Kitts and Barbados into the port of Limón in 1872 marked the beginning of a process of cultural reciprocity between Costa Rica and several of the English-speaking islands. Marginalized both economically and culturally, the anglophone black population of Limón developed its own local musical resources from those provided, first by Jamaican mento and then by Trinidadian calypso. In due course a locally specific form of calypso emerged from a fusion of the two Caribbean genres, later given the name *calypso limonense*. In its early stages, calypso in Limón was also influenced by US swing and blues, and by music from Cuba, including *rumba* and *son*. In terms of instrumentation, it was (and has largely remained) an acoustic music. Its instrumentation consisted of banjo or guitar, *conga* drums, cowbell, maracas and a string box bass known as a *quijongo.*

When calypso began to spread from Limón to San José and other cities in the 1980s, as a result of migration on the part of Limón's black population, it took on other meanings and social uses, transforming some of its original features in order to fit the demands of non-Afro audiences. Calypso combos often worked the streets in groups of three or four, drawing audiences to their music and taking control of small environments where listeners listened and danced without great awareness of what they were hearing.

Description

Possibly influenced by recordings of Trinidadian calypso and written descriptions related to Carnival and other cultural activities of that island, poet-musicians in Limón assimilated both the ethics and slang of the original, adopting the idea of the calypso as a form of social expression and the calypsonian as projecting and defending himself through his songs. The role that they appropriated was one invested with prestige and social importance, an idea with which contemporary calypsonians have continued to work – Cyril Sylvan, for example, in a calypso from the 1960s:

> I sing you me song, hear me song this town,
> I'm going to demonstrate to everyone,
> For the calypso now is me,
> And I'm the Master and Ruler in this country

Or, as another contemporary calypsonian, Walter Ferguson, puts it, 'Tell di people I say I am the King of Calypso.' In his 'Tacuma and Anancy's Party,' Ferguson links the calypso to ancestral African stories, evoking 'Anancy playing the fiddle/Tacuma beating the drum,' while alongside them 'Breda Donkey giving a riddle/Breda Monkey drinking the rum.'

The life of the Afro-Caribbean population in Limon was reflected both in the songs and in the contexts of their performance. Lelé remembered:

> I used to listen to calypso during the carnival, at the market, my neighbourhood Cieneguita, the slaughter house. ... I was born in the very centre of Limón, in the block 44, then (the 1950s) calypsonians like Pitún and Papa Tun would show up and start to sing. ... I listen to them everywhere, Pitún, Papa Tun, Charro Limonense and others. In Cieneguita there were so many that played with ukulele, banjo and it always at the beach, we used to sit and cook in pots, fish, everyone ate ... or we go behind the slaughter house, where there were boats, there we got ourselves into singing calypso. (Monestel 2005, 62)

Carnival itself was a space of coexistence where for a short time there was an illusion of equality; as Ferguson sang, 'Everybody running to the Carnaval.'

Hard work and poverty are common themes. In Herberth Glinton 'Lenkí''s 'The Next Creation' (1959), he tells us that 'From I was 10 years old, Lord, I working hard up to now,' before adding:

> I like the right to stop work
> Work can not please me at all.

Hundreds of small farmers were pushed into poverty and had to sell their properties in the 1970s and 1980s when monilia, a disease of the cocoa plant, reduced the harvest to one-third of its normal yield. Ferguson personalized this in a 1978 calypso:

> I knew a gal she name Irene
> She had a mighty family
> Monilia plagued the gal
> Until she walk and lean
> She had to sell out all of she property, me say.

Despite his image of his own status, the calypsonian was not always lucky in love; Ferguson tells how his 'young gal' 'started to pitch me things out the door':

> She made me to understand
> She will not support a calypsonian
> I going buy a pass
> Packing up me things and going to Bocas.

Normally, calypso songs have three major chords. The tonal organization is often I-IV-I-V with variations such as I-V-I-IV or I-IV-V-I. In its early days, calypso performance took the form of a contest, in which one calypsonian tried to defeat another by using better rhymes or by coming out with some kind of argument that would leave the other at a disadvantage.

Contemporary Calypso

Calypso in Costa Rica has tracked the cultural and social history of the Afro-Caribbean people of the country with pertinence and dynamism. In the modern era, calypso plays an important role as a channel through which the multicultural profile of the Costa Rican society is expressed. The recognition of its importance has been reflected in the inclusion of authors of calypsos such as Walter Ferguson in the lists of artists who have received recognition and official prizes (Gallery of Popular Culture 1997 of the Ministry of Culture, Prize Ancora of the newspaper La Nación 2002). Papaya Music have produced a number of successful recordings, featuring Walter Ferguson, Cyril Silvan, Herberth Glinton 'Lenkí,' Congoman Watts, Reynaldo Kenton 'Shantí' and Cantoamérica.

The influence of *calypso limonense* on the music of Costa Rica as a whole can be reflected in the works of musical artists of non-Afro-Caribbean descent such as Cantoamérica, Manuel Monestel, Carlos Saavedra, Mario Ulloa, Edin Solís and Manuel Obregón. Cantoamérica, founded in 1980 in San José, became the first non-Afro-Caribbean band to include Afro-Caribbean calypsos, such as those of Walter Ferguson, in its repertoire. Its performances have often included guest appearances by calypsonians from an earlier generation. The band has toured internationally, taking *calypso limonense* to four continents.

Up to 2003 the only publications on *calypso limonense* were some isolated articles, the majority journalistic in nature. Although the situation has since improved, much work remains to be done to fill gaps in our knowledge of the origins and development of this important genre in the cultural life of Costa Rica.

Canção de Protesto

Canção de protesto (protest song), *música engajada* (engaged music) and, more commonly, *música de protesto* (protest music) are terms used in Brazil which, in their narrowest and historically rooted sense, refer to the popular 'songs' of political and/or social criticism produced, above all, between the 1960s and 1970s, but also including the 1980s. During this time the country was under a military dictatorship, which lasted from 1964 until 1985.

The political tendency of protest music prevailing at that time was linked to the political, pro-socialast left. It was directly opposed to the military regime and, more broadly, opposed to capitalism and what were often referred to as its 'mazelas' (sore spots or warts). Although there were, therefore, specific reasons for the rise of this music in Brazil, political protest was occurring in many other places in the world around this time, especially in the West, going beyond music to other forms of expression, including film, theater, visual arts and poetry, as a result of the strong tensions and ideological polarization in evidence.

It is important to note that forms of protest are not only the prerogative of the times or places mentioned, but have been present in virtually all human communities, since remote times. One such example from Brazil is the ritual with music and dance held at the Feast of Iamuricumá by indigenous women of the Kamayurá, Kuikuro, Trumai and several other tribes in the Xingu National Park, Mato Grosso, Central Brazil, who 'rebel' against men.

The Brazilian protest music movement did not imply a musical specificity associated with any particular genre (formal rhythmic pattern). However, its most famous composers tended to create music using models considered to be Brazilian, which were generically identified as *MPB – Musica Popular Brasileira* – including rhythms and styles already established, such as *samba*, *toada*, *marcha*, *choro*, *canção* and others. Although the use of the generic term 'song' predominated, implying vocal music with text, in practice a *canção* could be of any genre. On the other hand, the ideological point of view of these songs tended to line up with at least some programmatic partisan principles of the political left, such as the Partido Comunista Brasileiro (Brazilian Communist Party) (PCB, founded in 1922), the Partido Comunista do Brasil (Communist Party of Brazil) (founded in 1962) and the Partido dos Trabalhadores (Workers' Party) (founded in 1980). Activist music pervaded various movements and important musical events of those decades, including *bossa nova, Tropicalismo* and popular music festivals, shifting its focus as of the second half of the 1980s on toward hip-hop, through the use of rap. The main actors thus moved toward those excluded from mainstream society, to the mostly black peripheries of large cities, while the movement identified as political MPB was concentrated more among composers belonging to the middle classes in general, and appealed to a more intellectualized audience, particularly university students.

The most revered figures in protest music in Brazil are two composers of *MPB*, Chico Buarque de Hollanda (b. 1944) and Geraldo Vandré (b. 1935). The former is the most prolific and the main representative of political music, recognized nationally and internationally. *Canções* such as 'Apesar de você' (In Spite of You), a 1978 *samba* (originally from 1970 but officially forbidden for several years), and the 1976 *choro* 'Meu caro amigo' (My Dear Friend) by Francis Hime and Chico Buarque and dozens of others have been huge hits. Chico Buarque's activism crossed borders and his songs were recorded by singers from different countries. For his part, Geraldo Vandré was noted for a song called 'Pra não dizer que não falei das flores' (Not to Say I Did Not Speak of Flowers), also known as 'Caminhando' (Walking), from 1968, with lyrics opposing the military. The song is a kind of *guarânia* (a genre of Paraguayan origin, well established in Brazil's midwest region), which achieved unparalleled success and became a true symbol of protest music in Brazil, establishing itself as the 'revolutionary anthem' of the country. Both composers experienced serious political problems – censorship of their music and persecution by police – and were exiled to other countries.

In view of prohibition, activist composers resorted to every possible device to circumvent the restriction on freedom of expression, using various techniques in their lyrics such as allegory, irony, caricature, using pseudonyms and other devices. One such example was Chico Buarque's use of the pseudonym Julinho da Adelaide to gain permission to record and release some of his music.

Brazil has a strong Catholic tradition, and a type of protest music of great importance and far-reaching influence but one that has not been consolidated through the market and cultural consumption through standard media systems is that disseminated in the activities of 'progressive' sectors of the Catholic Church from the 1970s with Liberation Theology and the 'emphasis on the poor.' Consolidated in Comunidades Eclesiais de Base (Basic Ecclesial Communities) (CEBs), scattered throughout the national territory, these sectors widely use many activist chants to denounce social and political ills and promote political awareness, even incorporating them into religious offices of the Mass. Also deserving of mention are the activities of some Centros Populares de Cultura (Popular Culture Centers) (CPCs) in the early 1960s, linked to the União Nacional dos Estudantes (National Students' Union) (UNE), to promote popular political awareness through the arts, including music, notably that of composer Carlos Lira (b. 1936), who was connected to the *bossa nova* movement.

After the mid-1980s, with the end of the dictatorial regime in the country, the central themes of protest song lacked the dynamism they had before, and moved to less direct political concerns, such as environmental and women's issues, the antiracist causes of black groups and other matters. On the other hand, a highly dynamic form of social criticism arose and has been maintained through rap, that great force in the denouncing of the iniquities of the contemporary world.

ALBERTO T. IKEDA (TRANSLATED BY DARA MURPHY)

Canción de Protesta (in Venezuela)

The term *canción de protesta* is used in Venezuela to describe, in a broad sense, a song with a political and ideological message or with a marked social criticism, usually expressed through its lyrics. Other terms are known to represent to a lesser extent the same type of music, for example *canción política* (political song), *canción de contenido* (song with contents), *canción revolucionaria* (revolutionary song) and *canción necesaria* (necessary song), the latter promoted in the 1970s by the singer/composer Alí Primera. The *canción de protesta* first appeared as a relevant genre in the country's popular music from the mid-1960s to the mid-1980s, within the context of the global countercultural media explosion of the 1960s, by way of influences from Bob Dylan, the Beatles' psychedelic period and the era's emphasis on the importance of social and political meaning in the lyrics. It was a music trend similar to that of the *nueva canción latinoamericana* that occurred at the same time in other Latin American countries, especially in Argentina, Chile and Uruguay. It also ran parallel with *nueva trova* in Cuba, linking the message with left-wing, socialist ideologies and political movements. In this respect, the *canción de protesta* also reflected the Venezuelan socialist *guerrilla* activities of the early 1960s.

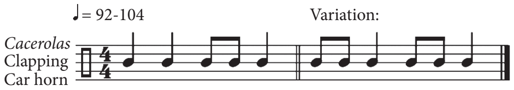
Within the context of President Hugo Chávez's socialist government (1999–2013), however, the genre acquired a different, additional type of function. The process by which music styles, genres or songs linked with a protest function change roles from subversive to system-compliant was to affect the *canción de protesta* in Venezuela: the movement that originated in the mid-1960s became relevant in a second guise as a genre of mixed popular music that shared some characteristics with the songs of the first countercultural period, but was no longer an expression of a minority in disagreement with the Establishment, rather a tool in a complex machinery for the perpetuation of the ideology and power of the ruling system within Chávez's regime. In this process, the songs of the late Alí Primera achieved higher media exposure than they had during his lifetime, and the *canción de protesta* was adopted as a characterization in sound of the 'Bolivarian revolution' of Chávez and manipulated in the hands of the regime as a mass-gathering device for left-wing political propaganda. This development was different from the eventual and expected absorption of this type of music into the Establishment by way of the media industry, an inherent contradiction characteristic of the genre of protest songs overall when they become involved with the music industry.

An important antecedent of Venezuelan *canción de protesta* is found in the *canciones patrióticas* (patriotic songs) that were used by the revolutionary movements in Caracas around 1811 seeking independence from Spanish rule. They are exemplified by 'Gloria al bravo pueblo' (Glory to the Brave People) (music by Juan José Landaeta and text by Vicente Salias), an insurgent song that was officially declared the Venezuelan

National Anthem in 1881 by the President Antonio Guzmán Blanco, and must be sung every morning in all schools and heard at midnight in all radio and television stations of the country.

The *canción revolucionaria* is considered by the musician Daniel Gil to include anthems of Communist movements and organizations in the world, songs from the Spanish Civil War and the Mexican Revolution, and songs of political prisoners (see the CD *Antología de la canción revolucionaria* [Anthology of Revolutionary Song] of 2007, which contains two songs adopted by Venezuelan political prisoners of the 1960s and 1970s as their anthems, 'Bandoleros' and 'Himno del Calabozo').

It also needs to be considered that political movements and parties in Venezuela have made extensive use of short songs as effective propaganda during the elections, in close similarity to the *canción de protesta*, as well as longer songs as their anthems. The thin line between *canción de protesta* and propaganda changes with the historical and functional context in which it appears, and of course there are other types of music with no text that imply protest by their reiterated use in marches and rallies, such as particular rhythms performed by hitting cooking pans (*caceloras*) in the streets and on balconies or patios, hand-clapping and sounding car horns. The resulting sound is called *cacelorazo* (see Example 1):



Example 1: Rhythms of *cacelorazo*

A further variation is straight sixteenth notes at 69 bpm.

The First Period (1960s–1985)

In the first period of the *canción de protesta* in the mid-1960s, two different types of popular musicians can be identified as belonging to the genre: the singer-composer, who was usually also a political activist, and the singer-only type of musician, who was involved in the musical and political activities of the times but changed genres thereafter with the coming trends. The most important examples of the first type, the singer-composer, are Alí Primera, Gloria Martín and Xulio Formoso. Primera and Martín wrote the lyrics to their songs, while Formoso worked closely with political poets such as Farruco Sesto. The center of activity of the *canción de protesta* was based in the country's universities where concerts, rallies and marches took place. The singers also attended national and international song festivals, usually competing with a specific title to win a prize and the corresponding media recognition. Gloria Martín also composed cantatas and Formoso was also involved in composing music for the theater.

By far the most influential personality in the first period of the *canción de protesta* was the singer and composer Alí Primera, whose singing career, which began in 1967, ended suddenly in a car accident in 1985. His style of music, developed as a student in the Universidad Central de Venezuela, Caracas, featured his voice with the guitar or *cuatro*, folk elements (instruments, rhythms and genres) and hybrid ensembles of his own configuration consisting of folk and symphonic instruments. His large output of songs included over 14 albums. Primera called his music *canto necesario* (necessary song/singing), expressing the idea that he was not only a singer of the political left, but a singer for all the poor people. He was an intense, national political activist and member of three Venezuelan Communist parties. He created his own record label, Cigarrón, in 1977 for promoting his music as well as for new talents, after established record labels, radio and TV stations banned his production. The music of Primera carried a mix of Bolivarian messages of unity, left-wing ideology, Cuban sympathy, anti-USA slogans, folk values of the regions of the country and love. From his first solo album *Lo primero de Alí Primera* in 1973 until his last *Entre la rabia y la ternura* (Between Rage and Tenderness) in 1984, his work included many hits, such as 'Canción mansa para un pueblo bravo' (Tame Song for a Brave/Angry People) (1984). He also dedicated his work to popular poets, painters and social activists such as Aquiles Nazoa and Cesar Rengifo, among many others.

The other important singer-composers of that period within the *canción de protesta* movement of Venezuela were two Spanish-born artists who arrived in Venezuela while still young. Gloria Martín was very active in national and international festivals from 1969 until 1992, as well as in social-cultural activities, writing songs and mixed-media works such as the *Cantata a Fabricio Ojeda* in 1977 and later becoming a university professor and author. Xulio Formoso started in 1970 with six *canciones de protesta* in the record *Galicia canta*, in the Galician language (the first recording of sung Galician poetry made in Latin America), and established the *nueva canción gallega* (Galician New Song), with texts by Farruco Sesto and Celso Emilio Ferreiro. He produced the music for a successful political theater work by Antonio Miranda, *Tu país está feliz* (Your Country Is Happy) in 1971, and a series of ten albums of his songs with texts in Spanish by Farruco Sesto among other political poets. In 1978 Formoso abandoned his singing career to become a systems engineer. Under Chávez's presidency, Sesto was appointed the Venezuelan Cultural Minister in 2005 and since 2007 Formoso has led CENDIS, the national center for the production of compact discs. In such positions, as employees of the socialist government, Formoso and Sesto have continued with the left-based political beliefs that they had jointly expressed earlier through *canciones de protesta,* and in 2002 they joined forces again to produce Formoso's CD, *En el J.B. Plaza*.

A large number of followers of the revolutionary trend in the 1960s belonged to the second type of musicians identified earlier, that of the singer-only, the main figure being Soledad Bravo. Of Spanish origin, arriving in Venezuela as a child, she appeared in 1968 as a singer within the movement centered at the Universidad Central de Venezuela in Caracas. Her first recording (*Soledad Bravo canta*) was an album that included Spanish and García Lorca songs of the Spanish Civil War. On her second album in 1969 (*Soledad*), she included a repertoire of *canciones de protesta* and in 1973 she made an all-*nueva trova* album, *Canciones de la nueva trova cubana*. In 1974, however, she turned to a neofolklore repertoire (urban arrangements of traditional folk music), following the awakening folk trend of the *grupos de proyección* (folk music performed by recording artists and professional music groups, sounding as close as possible to the original). Bravo has developed an extensive and important international career as a singer, characterized by continuously changing styles and genres.

The Second Period (1999–2013)

Since 1999, with the arrival of '*Chavismo*' in Venezuela, the figure of the socialist-related singer Alí Primera became the *cantor del pueblo* (singer of the people), and also generally – though the term was not exclusive to this type of music – *cantautor* (singer-author). This second cycle of the *canción de protesta* in Venezuela originated as part of a revolutionary-tagged government following in Cuba's footsteps, but 40 years later. Alí Primera's songs and iconography were extensively used in the media, in a way similar to the recycling of the famous Che Guevara photographs of the 1960s, to promote governmental policies and Communist ideology, and to acquire support mainly from the poorest segments of Venezuelan society, which account for 80 percent of the country's population.

Primera's music and concepts fitted perfectly within Chávez's Bolivarian revolution and served for the construction and promotion of value objects and symbols. Although Primera died almost 15 years before the Chávez era, and had been remembered to that point mainly via sporadic homage concerts, he became nationally famous again in the early twenty-first century through the governmental use of the same recordings of his songs that he had produced in the earlier countercultural times. This was achieved by means of a government-established network of community television and radio stations as well as the main television channels that, with one exception, were all controlled by or were in compliance with the government.

Other newcomers have since been promoted through the television and have gradually extended the *canción de protesta* repertoire to include any folk or pop genre, especially rock, reggae and hip-hop. These include the revised *grupo de proyección* Grupo Madera, and new singers and groups, all in different mixed styles from romantic ballad to salsa, to represent the new pro-government *canción de protesta*. In 2006 Madera produced the salsa banner-song for rallies in support of Chávez, '*Uh, ah, Chávez no se va*' (Uh, Ah, Chávez Is not Leaving). *Cantora del pueblo* Hanoi has reached exposure through the government television channel VTV Canal 8 with her video 'Aquí andamos' (Here We Go), proclaiming the Bolivarian revolution, as has the romantic Gustavo Arreaza with his revolutionary theme 'La verdad' (The Truth).

Since 2007 the music group Dame Pa' Matala (which literally means 'pass me the joint to smoke to its end'), with a mixture of Caribbean music and hip-hop influences, has made music with national and Latin American '*contenido*' (contents), featuring '… messages of peace, unity and conscience-awakening …,' and are one of the favorite groups of the regime's media stations. In the group's most recent music and video production *Movimiento Latino* (Latin Movement) of 2013, the promotional song 'Piel sin silicón' (Skin Without Silicon) criticizes the wide extent of beauty surgery among contemporary Venezuelan women. This new development, after 14 years of socialist *canción de protesta* 'imposed' by the government, marks a definite change, with groups choosing to continue with a critical edge but no longer obliged to do so within the politics of left and right.

On the other side, hip-hop in the hands of Leonardo Viloria 'NK Profeta,' author of the nation-wide video made in 2009, *Documental de hip hop de Venezuela* (Documentary of Hip-Hop in Venezuela), has become a major vehicle for dissent against the government. In 2010 NK Profeta created a controversial song 'Sr. Presidente' (Mr President) which attracted much media attention in Venezuela and in *El Nuevo Herald of Miami, FL*. Apart from his national and international concerts, NK Profeta performs live during political rallies against the regime in Caracas.

In Chávez's bombastic burial ceremony after his death on 5 March 2013, many musicians performed live by the side of the coffin, their repertoire consisting mainly of *joropo* music with political texts, and songs from Alí Primera. Florentino Primera's son chose to sing his father's 'Canción en dolor mayor' (a play on words between 'Song in Pain Major' and 'Song in Great Grief') for the event. For seven days after Chávez's death, radio stations were allowed to play classical music and Alí Primera's songs.

Other genres of popular/folk music in Venezuela carry a protest or critical message in their texts, but do not serve this function exclusively and were not part of the counterculture movement of the 1960s. Traditionally, *joropo llanero* music (triplet-based folk music from the flat-land region performed with diatonic harp, a small guitar called the *cuatro*, maracas and voice), places a high prominence on the lyrics and the singer's ability to improvise them with philosophical turns, so it has invariably included protest meanings in its long existence, responding to contextual, political and economical problems abundant in the country. The same applies to *joropo oriental* (a type of *joropo* from the eastern part of the country performed with mandolins, *cuatro*, guitar, maracas and voices), especially with Francisco Mata y sus Guaiqueríes of the Margarita Island, and with many *gaita* productions (folk music genre from the Zulia state) at Christmas time. In a country drastically split in two halves between those who are for and those who are against the Chávez government, artists took sides and some *joropo* singers formed part of the government's promoting forces, as did Cristóbal Giménez with his release *Amor, llano y revolución* (Love, Flat-lands and Revolution) in 2004, while on the other side, the anti-Chávez songs of Reynaldo Armas were banned from the media. Rock sung in Spanish has provided social criticism among other themes, especially in the leading figure of Pedro Vicente Lizardo (PTT) with his group La Misma Gente, who from 1967 have continued without interruption to produce a large number of songs independently of the changing movements in music, for example 'Esperando el autobus' (Waiting for the Bus). Perhaps as a consequence of the long, sustained and overwhelming cult of the Chávez personality in the media, including the promotion of his 'revolution,' another *canción de protesta* is emerging in Venezuela in reaction to this state of left-political saturation. Different genres are involved, such as hip-hop, rock and reggae, but in this parallel line of development, the music is characterized by a global sense rather than the previous left-right political antagonism linked with socialism, as can be seen, for example, in the music of the successful Venezuelan reggae group Papashanty Saundsystem with 'Música de paz' (Peace Music).

However that may be, the continued importance of music in political propaganda in the media and especially in the street rallies and marches was prominent in the short but intense month-long period of presidential elections which took place in April 2013, after Chavez's death. The role of the *canción de protesta,* including Alí Primera's compulsory repertoire, was shadowed by the up-to-date styles of the pop industry involved. Music artists openly took sides and performed in the massive street rallies, taking advantage of the additional media exposure, and these events functioned more like an enormous open-air concert than as a political meeting with speeches and the like. In the 14-year-long period of Chavez's rule, his charisma was sufficient to sustain many hours of solo speaking, singing and joking to a multitude. Now, the new political personalities, lacking Chavez's magnetism and experience, were using music as a tool to capture the attention of huge audiences, and to make their attendance worthwhile. Such developments suggest that the pop music industry has once again devoured *canción de protesta*, even on its own political territory.

EMILIO MENDOZA

Canción Popular Uruguaya

The second half of the twentieth century saw the growth in Uruguay of a strong movement of popular music with a particular interest in stressing factors of identity. To some extent, the idea of maintaining musical particularities in contemporary popular music drawn from the local tradition stemmed from the work of Uruguayan musicologist Lauro Ayestarán (1913–66) and the diffusion of his work through essays, articles, lectures and radio broadcasts. Many young musicians found in this convincing information the necessary background to elaborate models different from those of the Argentinian north-west imposed by the music industry based in Buenos Aires.

This movement of popular song based on folkloric traditions began in the 1950s. The musical forms adapted into the new popular music were mainly those of the Uruguayan folkloric tradition: *vals criollo*, *cielito*, *gato*, *huella*, *vidalita*, *cifra*, *polca*, *chotis*, *chimarrita* and especially *milonga*, which was to become, in its different variants, the core genre of the Uruguayan popular song in the 1960s and 1970s. Some new forms appeared, such as the *litoraleña* (a relative of some forms of expressions of the Argentinian region covered by the rivers Paraná and Uruguay, and perhaps also of the *guarania*), the *serranera* (which brings together two different genres, one binary, lively, in polka style, and another belonging to the complex of genres that superimpose 6/8 meter over 3/4), and the *media serranera* (a slow, *bolero*-style 4/4 with an implicit three-three-two feel).

This new musical activity may have been linked with the work, in the two previous decades, of singer Néstor Feria (1894–1948) and others whose names remain in obscurity. Amalia de la Vega (1919–2000) led the way with performances on the radio (especially), in theaters and on record, followed by others such as Víctor Santurio (1923–) and his Los Carreteros ensemble, Osiris Rodríguez Castillos (1925–96), Aníbal Sampayo (1927–2007) and Anselmo Grau (1930–2001). The strong Uruguayan tradition of guitar playing marked the path of popular music in the second half of the century, but there were some particularities as well. For example, Sampayo introduced the Paraguayan harp technique into his work, thus renewing a historical link with that sociocultural region, while Amalia de la Vega took up Carlos Gardel's model of accompaniment of a trio or quartet of guitars played with *púa* or plectrum, in an Uruguayan context where finger plucking has been preferred. Other composers of the same generation who were not performers, such as Víctor Lima (1921–69) and Rubén Lena (1925–95), came a little later; their works were performed by younger musicians, principally Los Olimareños.

The interest in folkloric music traditions continued with the next generation, which began to take over in 1962. Taking advantage of an already-present interest in social issues, this generation developed a protest song – or rather, a 'proposal song,' as Daniel Viglietti explained it in 1967. In a historical moment of great political restlessness, four singers and guitarists became emblematic for their influence on society, especially as an enormous growth in audience interest (and a consequent boom in the popularity of their discs) began between 1967 and 1968: Alfredo Zitarrosa (1936–89), Daniel Viglietti (1939–) and the duo Los Olimareños (Braulio López (1942–) and José Luis 'Pepe' Guerra (1943–)). These musicians continued to cultivate the musical genres of the folkloric tradition, adding their interest in the music of other Latin American countries. Los Olimareños introduced the Afro-Uruguayan *candombe* with a particular type of guitar accompaniment, as well as elements of the Montevidean *murga*. Zitarrosa adopted the accompaniment principle of an ensemble of guitars played with a plectrum, while Viglietti and Los Olimareños continued the tradition of plucking the strings with the fingers. Viglietti developed a virtuoso mastery of the guitar and enriched his compositional resources with contributions taken from twentieth-century art music. All of them kept the guitar (or guitars) as the central instrument, and preferred to perform their recitals without other instrumentalists, even if their recordings included more diverse arrangements.

Among the many other composer-performers who took part in this important folkloristic movement in Uruguayan popular song, mention should be made of Marcos Velásquez (1939–2010), Yamandú Palacios (1940–), Wáshington Carrasco (1941, later in duet with Cristina Fernández), Roberto Darvin (1942–), José Carbajal 'El Sabalero' (1944–2010), Numa Moraes (1950–) and, a little later, Santiago Chalar (1938–94) and the Los Zucará duet. With the advent of a dictatorship in Uruguay at the end of 1967, the explicit political commitment of most of the musicians became an important factor in the actions of the censors.

The rock movement that grew up during the 1960s, developing original solutions by 1970, reached a creative peak by 1971. By 1973, the year in which the military powers took up the dictatorial government, the movement had slowly died away.

A heavy silence was imposed in the country. Nevertheless, a few musicians continued singing, and little by little in the mid-1970s a new generation of courageous young performers began to appear. Eduardo Darnauchans (1953–2007) composed and sang delicate melodies with elaborate texts, Carlos 'Pajarito' Canzani (1953–) experimented briefly with interactions between traditional genres and rock, and Carlos María Fossati (1946–), Carlos Benavides (1949–) and the duo of Eduardo Larbanois (1953–) and Mario Carrero (1952–) worked to renovate the folklore-based angle of the popular song.

In a period when the dictatorship was at its most repressive, 1977 was the year of the emergence (principally in the capital city, Montevideo) of an important and new movement of popular song, which was mechanically labeled by some disc jockeys under the confused category of *canto popular uruguayo* (Uruguayan popular singing). It had an impressive number of participants, many of whom demonstrated a high level of creativity. Beyond the folkloristic stream which continued to be their principal influence, these young musicians established new points of reference: for example, Rubén Rada (1943–), with his fusion of *candombe* with jazz and rock; Eduardo Mateo (1940–90), with his own mixture of these same sources plus *samba* and *bossa nova*; and the local rock movement of the early 1970s, especially Dino (Gastón Ciarlo, 1945–), with his search for an interaction of blues and rock with *milonga* and *candombe*. This new song movement explicitly set itself up as a symbol of resistance against the cruel dictatorship. The search for quality and the demands imposed by musicians on themselves became concrete ways to resist spiritual annihilation. Thousands of citizens, mostly young, transformed the musicians' shows into massive covert political acts; the aforementioned new generation was enlarged by individuals assuming real risks, both musically and politically, and beginning to develop a renewed social (and therefore political) commitment.

The explosion of 1977 began with Los que iban cantando, who used to define themselves as a 'group of individuals,' and who were to remain active on and off until 1987. Its principal members were Jorge Bonaldi (1949–), Jorge Lazaroff (1950–89) and Luis Trochón (1956–). Others, active for shorter periods, were Carlos da Silveira (1950–), Jorge Di Pólito (1952–), Wálter Venencio (1949–) and Eduardo ('Edú') ('Pitufo') Lombardo (1966–). These musicians sought an interaction between avant-garde elements and a strong Latin American identity (a legacy of interest in the wider continent received from the previous generation), and tried to use resources not only from popular music, including *candombe*, *murga* and *tango*, transformed into *tanguez* or 'tango-ness' (this especially in Bonaldi's music), but also from contemporary art music (especially in the work of Lazaroff, Trochón and da Silveira). Except for Lombardo, who acted as percussionist, the main instrument of these musicians was the guitar, but they used many other instruments, and invented some. Other interesting ensembles, such as Contraviento and Rumbo, also elicited an enthusiastic response from the audience.

In 1977 Jaime Roos (1953–), living at the time in Europe, began a series of recordings that would transform him into the most important of the new figures, especially since 1985. Roos (who had worked previously with Venencio, Canzani, Bonaldi and Lazaroff, and whose instruments are mainly the electric bass and guitar) balanced the course of folklore-based song with that of rock, retaining the important role of the *milonga*, and stressing the presence of *murga* (with authentic *murga* choirs) and *candombe* (with virtuoso *llamada* drummers). The scale of his success, in a product which, like that of others of the *canción popular uruguaya* movement, has not made concessions to the transnational music industry, has interesting implications for theoretical approaches.

Other important songwriters-performers of this generation included: Jorge Galemire (1951–), who bridged *candombe* and *murga* with rock; Rubén Olivera (1954–), a fine composer, singer and guitar player as well as a committed theoretician and influential teacher; Fernando Cabrera (1956–), involved in subtle and risky innovations in different musical and lyrical parameters; Mauricio Ubal (1959–), who was particularly interested in exploring the fields of *candombe*, *murga* and also *tango*; and Leo Maslíah (1954–), a songwriter and virtuoso keyboard player with a frankly expressed avant-gardist attitude, who worked intelligently with nonsense and humor and acted also as a prolific writer of prose and poetry and as a playwright.

It is also important to mention the connection between the Uruguayan popular song movement and local poets, which began as early as the 1960s. Among the important writers whose works have been used as lyrics are Líber Falco, Serafín J. García, Juan Cunha, Idea Vilariño, Mario Benedetti, Mercedes Rein, Circe Maia, Wáshington Benavides and many others from younger generations.

The dictatorship ended in early 1985, but half a year beforehand exiles had already begun to return home. From this turning point, however, the generation that had been at the center of the resistance between 1977 and 1985 felt disappointed at what was happening politically in the country. Some protagonists of the dark years stopped composing (Trochón) or decided to compose only for children (Bonaldi), while many of them experienced a feeling of crisis. At the same time, and taking advantage of the fact that, by including such a huge number of participants, the label '*canto popular uruguayo*' also gave shelter to mediocre musicians, some reactionary journalists and disc jockeys began to use that label (and its apocopation '*cantopopu*') as a pejorative expression, thus trying to discredit every artist engaged with his historical time.

Since 1985 some performers, such as Laura Canoura (1957–) and Pablo Estramín (1959–2007), have obtained huge success in very different styles. Among the many figures are Estela Magnone (1948–), Esteban Klísich (1955–), Wálter Bordoni (1962–), Fernando Ulivi (1963–), Gastón Rodríguez (1964–), the ensemble Asamblea Ordinaria, and especially Mariana Íngold (1958–), Alberto Wolf (1962–) and Jorge Schellemberg (1962–), all three of whom are interested in exploring diverse ways for a renewed *candombe*, and Jorge Drexler (1964–), a delicate composer and a refined singer and guitar player who has lived in Spain since 1995.

In the early twenty-first century Uruguayan popular song has shown, among other things, the impact of home recording and production technology, which has underlined the potential for electroacoustic elaboration of the music.

Canción Ranchera/Ranchera

The genre commonly called *canción ranchera* ('country song'), or simply either *canción* or *ranchera*, is regarded as Mexico's quintessential popular music genre. Although this type of song goes back to the mid-1800s, the term was first coined in 1910 by nationalist composer Manuel M. Ponce as *canción mexicana* (Spanish for 'Mexican song'). The *canción ranchera* is characterized by its lyrical, and often sentimental, quality in both song text and melody. Although usually accompanied by *mariachi*, a regional ensemble type that had become Mexico's national music style in the 1930s, *canciones* are performed by all regional Mexican music ensembles. *Música ranchera* ('ranchera/country music') is a popular umbrella term used to designate all kinds of rural-rooted Mexican music, including genres such as *canción*, *corrido* (a folk ballad from northern Mexico), *son* (a danceable regional tune), *jarabe* (a dance tune) and the urban hybrids *bolero ranchero* and *canción romántica* ('romantic song').

History

Mexico's repertory of popular music, from its very beginnings in the nineteenth century, cannot always be sharply distinguished from those of folk music traditions and art music, as these categories overlap substantially. In fact, popular music genres in Mexico were often urban renditions of folk genres, whereas the most popular 'folk songs' were influenced by nineteenth-century European salon music. Indeed, both European Romanticism and Italian opera (particularly the music of Rossini, Bellini and Donizetti) have influenced the *canción*, which reached a high level of popularity by the mid-century when it was heard in the opera houses, the salons of the aristocracy and the middle class, as well as throughout the rural villages and urban neighborhoods. Mexican musicologist Vicente T. Mendoza (1961) proposed a distinction between the simple *canción* of the rural mestizos (people of mixed race) and the Italianate *canción romántica* or *canción sentimental* in operatic *bel canto* style of the European upper class. Because of *canción*'s widespread popularity, various musicologists have termed the second half of the nineteenth century the 'Golden Age of Mexican Song' (Mendoza 1961). Nineteenth-century Mexican composer Melesio Morales published simple *sones* which he called *aires nacionales* ('national airs'). It was fashionable for salon music composers of the time to put folk melodies together in suites and arrange them for piano. In the third part of the nineteenth century, folk tunes were set in either the European-derived waltz and polka rhythms or the Cuban-derived *danza habanera*, in slow 2/4 or lively 6/8 time.

During the first decades of the twentieth century the works of composers such as Miguel Lerdo de Tejada, the director of Mexico City's *Orquesta Típica* (an ensemble formed in 1884 consisting of an array of string instruments, wind instruments and marimba, with musicians dressed in folkloric garb), acquired an intensely 'Mexican flavor,' which distinguished them from the European models of the earlier *canción,* mainly due to the (folk) instrumentation and the way the composers treated dance rhythms. Lerdo de Tejada arguably wrote the first true *canción mexicana* ('Perjura,' 1902). José López Alaves's 'Canción mixteca' (1917) shows clear traits of the later *canción ranchera*. 'Adiós mi chaparrita' (Farewell My Little Darling) and 'La borrachita' (The Tipsy Girl) (1918), compositions by Ignacio Fernández Esperón ('Tata Nacho'), became prototypes of the emerging *canción ranchera*. In the mid-1920s Los Trovadores Tamaulipecos, a string band from northeast Mexico, spearheaded the creation of the new *ranchera* style.

The *canción mexicana* developed its modern characteristics during the post-revolution period (1920s and 1930s), when it was transformed into a simpler and more rural-based song type. These songs, by then called *canciones rancheras*, or peasant/country songs, appealed to the recently urbanized rural masses as well as to the middle-class city dwellers in post-revolutionary Mexico. As momentary recreations of a simpler and romanticized folk heritage, *rancheras* were able to evoke feelings of nostalgia and patriotism, and for that, Mexicanness. The post-revolutionary period in general was characterized by the rise of a strong national identity. The mestizos came to form a part of the longed-for 'national spirit' and through them popular music experienced a renewed vigor.

The musical characteristics of the modern *canción mexicana* or *canción ranchera* include the use of tonic and dominant harmonies, a preference for the major mode, 2/4 and 3/4 meters, a melodic style that showcases a strong vocal technique, affected falsetto, *gritos* (yells), wide leaps, and elements such as *portamento*, *sforzado* and *ritardando* at the end of the phrase. Male singers typically sing in a high register (preferably tenor), while women sing in alto with a hoarse voice (*voz ronca*). The songs are mostly of melodramatic content (unrequited love, abandonment, torment, etc.), eulogize the nation and the region and romanticize the kind-hearted hacienda owners, gallant macho lovers, decent women and happy peons (Velázquez and Vaughan 2006).

The theater had already played an influential role in the dissemination of uniquely Mexican popular music styles from the late eighteenth to the late nineteenth century, with the replacement of the Spanish *tonadillas* (interludes between scenes) by *sonecitos de la tierra* (little country tunes). After the revolution, the *teatro de revista* (revues, vaudeville shows) kindled the public's interest in both regional and idealized, pseudo-regional music. In 1927 the Teatro Lírico in Mexico City organized the first competition (Concurso de Canciones Mexicanas) to encourage the production of new songs in the *estilo ranchero* (country style).

From its inception in Mexico in 1923, radio broadcasting played an important role in the construction of Mexican nationalism. The Mexican government quickly realized the power of the new medium to reach the millions of Mexicans who had not yet been incorporated into the modern nation-state. Efforts were made to develop an official folklore which was intended to help blur regional differences, so as to create a more integrated society. Cultural missionaries were sent out by the government to study and collect folk songs and dances throughout Mexico. The *mariachi*, one of many regional musical expressions, was eventually established as the national musical ensemble in the late 1930s.

In 1930 the commercial radio station XEW, first a subsidiary of the Radio Corporation of America (RCA) and then affiliated with the National Broadcasting Corporation (NBC), was established in Mexico City and developed into the most powerful Latin American radio station. Advertised as 'La Voz de la América Latina desde México' (Latin America's Voice from Mexico), XEW was heard as far as the southern United States, the Caribbean and South America. At first broadcasting international genres such as *tango*, *danzón*, foxtrot and one-step, XEW responded to the longing of Mexico's growing urban immigrant masses for a musical expression that spoke to both the anonymity of modernity and the nostalgia for the lost country life by transmitting more music interpreted by trios (Trío Calaveras, Trío Garnica-Asencio, Trío Tariácuri), as well as romantic Mexican music (Agustín Lara, María Grever) and the newly developed orchestral *mariachi* with solo vocalist (Jorge Negrete, Lucha Reyes, Pepe Guízar). Mexico City's expanding broadcasting activities in the 1930s attracted many musicians and singers, some of whom found work at XEW or some smaller radio stations. Nationalistic radio laws issued by the Mexican government in the 1930s privileged certain popular cultural forms in order to ensure that the medium would disseminate a uniquely Mexican culture and thereby promote a sense of national solidarity. President Lázaro Cárdenas and his administration (1934–40) had a centralized control over the content of the mass media. They initiated numerous propaganda and entertainment programs that were broadcast by the state-sponsored radio station XEDP, the commercial XEW, and rebroadcast by every station in the country. Moreover, commercial broadcasters in 1936 were required by law to include at least 25 percent 'typical Mexican music' in each program (Hayes 2000). This regulation had cultural consequences as it provided fertile ground for the dissemination and construction of a Mexican national culture.

Emerging in the 1930s, the *comedia ranchera* (ranch comedy), the most enduring genre of Mexican cinema, helped to facilitate the nation-wide establishment of the *canción ranchera*. With box-office hits such as *Allá en el rancho grande* (There, at the Big Ranch) (1936), *¡Ay Jalisco, no te rajes!* (Ay Jalisco, Don't be Scared) (1941) and *Como México no hay dos* (There Is Only One Mexico) (1944), the folk-derived but urban *mariachi* ensemble, which included one or more trumpets, and the singing *charro* (horseman) – similar to the singing cowboy in Hollywood movies of the time – began to replace the trios and *orquestas típicas*, which had been the preferred interpreters of *canción ranchera* until then. The new media of sound pictures helped to expand the initial realm of popularity of the genre, transitioning from the working class to the middle and upper classes. In the 1940s, the heyday of this genre, *mariachi* had fully incorporated *canción ranchera*. The orchestral *mariachi* ensemble served perfectly to accompany the two *canción ranchera* styles: *el estilo bravío* (the fierce style), dominated by trumpets, and *el estilo sentimental* (the sentimental style), dominated by string instruments. The movie industry demanded a solo vocalist and singing in three parts, which replaced the folk-rooted duo singing in thirds and sixths. Singer-actors such as Jorge Negrete, Pedro Infante and José Alfredo Jiménez turned into superstars during the golden era of Mexican cinema in the 1940s and 1950s. The prominent female *ranchera* singer Lucha Reyes (who made her film debut in 1936 with *Cielito lindo*) paved the way for a number of *ranchera* queens, such as Lola Beltrán, Amalia Mendoza and Lucha Villa.

The 1940s and 1950s are also considered the golden age of Mexican romantic music. Parallel to the consolidation of the *canción ranchera*, the romantic *bolero*, a more cosmopolitan music with roots in the lyrical poetic tradition and tropical (Caribbean) rhythms, quickly conquered the urban audiences. Composers such as Agustín Lara and performers such as Trío Los Panchos and Trío Los Ases created national and worldwide audiences for the *bolero romántico*, the Mexican appropriation of the Cuban *bolero*. Founded in New York City in 1945, Los Panchos developed a *bolero* style that reflected the taste of the urban Latino audience at the time. The romantic-trio genre reigned as the supreme form of popular music in Latin America until the end of the 1950s (Torres 2002).

After World War II, the country-oriented, proud and fierce *canción bravía* gave way to a sleeker, romantic music that better reflected the new urban lifestyle and aspirations of the masses. The *canción romántica* (romantic song), a more refined version of the *canción ranchera*, emerged and gained in popularity, particularly among the middle-class urbanites. In film, too, there was a clear shift of focus from the *rancho* to the urban *barrio* (neighborhood). In the early 1950s the guitar-based vocal trios popularized the hybrid *canción-bolero*. At the same time, the urban *canción ranchera* fused with the lyrical poetic *bolero* to create the *bolero ranchero*, a song type appropriated and 'countrified' by *ranchera* soloists (such as Pedro Infante and Javier Solís) accompanied by *mariachi*, although the repertory was not originally written for *mariachi* (e.g., 'Amorcito corazón' [Beloved Sweetheart] by Manuel Esperón and Pedro de Urdimalas, which became a huge success after it was performed by Pedro Infante in the 1947 blockbuster movie *Nosotros los pobres* [We the Poor] and recorded with *mariachi* arrangement in 1949). In contrast to the *canción ranchera*, the *bolero ranchero* stresses the minor mode, more modulations and dominant-seventh harmony. Although featuring a basic *bolero* rhythm, it is lacking in sophisticated counterpoints, and instead of the smooth *bolero* voice, the *bolero ranchero* is sung in the typical hoarse solo voice of the *canción bravía*. These romantic genres and subgenres flourished for more than a decade until they had to give way to new musical developments in the 1960s. With the death in 1973 of *ranchera* legend Jiménez, the era of the *canción ranchera* came to its end, although the genre never lost its appeal as Mexico's quintessential musical expression.

With a young generation of singers such as Alejandro Fernández, Juan Gabriel, Pedro Fernández and Pepe Aguilar, *ranchera* music experienced a comeback in the 1990s. This revival was also carried by the emergence of Mexican regional (and until the 1990s marginalized) popular musics such as the brass-driven *banda (sinaloense)* and the accordion-based *norteña*.

Diffusion Beyond Mexico

Mexico's powerful radio, recording and film industries helped *ranchera* music to become popular beyond national borders. The Mexican radio station XEW and its nationalistic program was heard throughout the Caribbean islands, where it inspired local musicians to recreate and, to various degrees, appropriate the Mexican genre. The *canción ranchera* has continued to be popular in the Western provinces of Cuba where professionals as well as aficionados compete in annual festivals dedicated to Mexican *ranchera* music. In the Dominican Republic, the Mexican *ranchera* has left its mark on *bachata*, the musical expression of people of the lower working class who had been transplanted from their rural homes to the cities' shantytowns in the second half of the twentieth century. *Bachata* is reminiscent of several guitar-based Latin American genres such as the *bolero*, the (Cuban) *son* and the Mexican *ranchera*. Popular *rancheras* have also been incorporated into the *merengue* orchestra repertory.

During the conservative administration of President Miguel Ávila Camacho (1940–46), the Mexican film industry was put on a commercial footing through state support for private producers. This opening of the market and the economic opportunities presented by World War II were a major impetus for the Mexican film industry. The war created a demand for national films, and Mexico and Argentina stepped in to supply national and foreign Spanish-language markets with a commodity previously produced by Hollywood and in Europe. The popularity of the movies made in the 1940s shows that Latin American audiences responded to and enjoyed seeing Latin American themes on the screen, even if the settings were not in their own particular countries. Hence, Mexico's film industry was not only crucial for shaping a national cultural consciousness, but also for the international success of the *ranchera* genre. Latin American identification with Mexico has largely been mediated through the *canción mexicana*. In Latin America, the adjective 'mexicano' refers to the musical repertory of the popular Mexican singers of the classic *ranchera* genre. It includes *corridos, rancheras* and the *vals ranchero* (waltz). Melody, harmony, the priority of the lyrics and the sentimental and melodramatic content speak to Latin American interpreters and audiences as well. Mexican music, together with their own traditional or folk music styles, is still practiced spontaneously at family gatherings, in *peñas folkóricas* (folk music clubs) and at festivals.

The widespread popularity of and familiarity with *ranchera* music in Latin America goes back not only to the diffusion of Mexican music in the 1940s via radio and cinema, but to live performances as well. In Chile, for example, the presence of musicians from Argentina, Peru, Brazil, Cuba and Mexico between 1910 and 1940 helped spread the Latin American folklore repertory (González and Rolle 2004). Touring ensembles were easily integrated into revues performing in vaudeville tents, theater, cinema and radio programs. While the early *canción mexicana* (the folklorized salon music disseminated as sheet music) was performed on the piano, in later decades the guitar became the favorite instrument to accompany any kind of Latin American *cancionero* (folk-derived song repertory). The public was especially attracted to Mexican popular music because it was able to identify with the rural, patriarchal and passionate topics, the orchestral music of the urban *mariachi*, as well as the macho *bel canto* singer. The Chilean country people instantly adopted the *charro* singing stars of the Mexican cinema (Tito Guízar and José Mojica [1930s], Jorge Negrete and Pedro Infante [1940s] and Miguel Aceves Mejía [1950s]). Chilean ensembles soon formed their own *mariachis*, and starting in 1944 began to record Mexican *ranchera* music on the Santiago-based Odeon label (González and Rolle 2004). The strong presence of Mexican music in Chilean radio programs in the 1940s resounded in Argentina's northwestern provinces. Moreover, star singers such as Jorge Negrete and Miguel Aceves Mejía toured Latin America with sensational performances; the latter visited Argentina several times, performing at Radio El Mundo in Buenos Aires and promoting his films (Goyena and Giuliani 2001).

Ranchera's influence in Brazil is mainly manifested in *música sertaneja*, a type of country music from Brazil's hinterlands, on which the Mexican *canción* began to leave its traces in the 1940s and 1950s. Mexican *ranchera* singer Miguel Acevez Mejía was extremely popular in the Portuguese-speaking country, urban duos began to interpret Mexican *corridos* and *rancheras*, and the typical *mariachi* sound was emulated by Brazilian singers and orchestras (Carvalho 1993). There are many parallels between the Brazilian *música sertaneja* and the Mexican *ranchera*. Both genres were originally rural-rooted musical styles that changed dramatically under the impact of urbanization, industrialization and the modernization of transportation and communication during the first part of the twentieth century. *Música sertaneja*, like its Mexican counterpart, helped rural migrants to adjust to urban life and society by facilitating the absorption of new cultural values. Moreover, the Brazilian government, too, used the radio networks in the 1930s as a tool to 'nationalize' the masses through the broadcasting of certain types of regional musics.

Considering the wide-ranging diffusion and unparalleled influence of the Mexican *ranchera* throughout Latin America, it is surprising that, apart from the few regional studies listed in the bibliography below, no comprehensive or comparative analysis on this phenomenon exists.

Candombe

Candombe is a polysemic term in Uruguayan music, referring to a musical genre, a specific set of drumming and dancing practices, and certain stylistic characteristics and musical patterns in the country's popular music. It is connected in particular with the history of people of African descent. *Candombe* drumming is found in three principal areas of activity, identified in 1968 by musicologist Lauro Ayestarán as being the formative elements of an Afro-Uruguayan musical system. The first area is that of the drum orchestra marches that occur in some *barrios* (urban districts) on free-labor days throughout the year in Montevideo, the capital of Uruguay, and in the great annual parade – the 'Desfile de Llamadas' (Callings Parade) created in 1956 – of the black and multiracial carnival associations known as 'comparsas' (drum and marching corps). A second area occurs in the domestic sphere, when singing and dancing with one, two or more drums takes place in family gatherings. A third area involves the popular theater presentations staged by the *comparsas* during Carnival, where the repertoire includes several dances and songs given the name of *candombe*, plus a *milongón* and an *afro*, composed and choreographed by each comparsa every Carnival (Ferreira 1997). Thus, *candombe* concerns collective drumming, dancing and singing.

In the early twenty-first century there are other phenomena also called *candombe,* such as traditional religious rituals with drumming, dancing and singing in some urban and rural localities in southeast Brazil (Carvalho 1993; Lucas 2002) and northeast Argentina (Cirio 2003) by peoples of African descent. In Buenos Aires, certain dancing with drumming and singing based on a pattern similar to the Afro-Cuban 3-2 *clave*, developed in private spaces by people of African descent during the twentieth century, has also been known as *candombe* (Frigerio 1993). However, it is only the Afro-Uruguayan *candombe* that may be described as a fully-fledged popular genre, on account of its great popularity, its extensive social diffusion and its presence in and influence on several other popular genres. Its collective drumming practices have been disseminated to several countries via Uruguayan migration, most notably to Argentina, where it was initially taken by Afro-Uruguayan migrants but was quickly embraced by younger generations, mostly white middle-class Argentinians (Frigerio 2000). In these transculturation processes, the new actors intentionally take the Afro-Uruguayan *candombe* drumming styles as their points of reference, and hence the musical structure and organizational principles seem to have been maintained.

Historical Background

The musical structure and expression of *candombe* drumming groups, from trios to big orchestras, is first and foremost the result of transformative processes between different African peoples in Montevideo, mainly those from West Africa (Mahí, Nagó, Calabarí, Hausa), West Central Africa (Congo-Angolan, Cabinda, Benguela) and East Africa (Mozambican). These processes were conditioned by the slavery regime in Montevideo, from the end of the eighteenth century up to its abolition in 1842–6, and by social exclusion and racism that endured throughout the second half of the nineteenth century (Rama 1971). The term *candombe* was used in that period to refer to the ethnic rituals of the African Societies, known as Nations, both in Montevideo (Ayestarán 1953; Rama 1971) and in Buenos Aires (Andrews 1980). The Nations elected their kings and queens in public festivals and acted as mutual aid and burial societies; they also served as religious organizations, often merging with the lay brotherhoods which were dedicated to the worship of one or another Catholic saint. Later, in the last quarter of the nineteenth century, in the context of important social and cultural changes that followed the modernization projects imposed by the white Uruguayan elites, the social function of the Nations' music, instruments and dance changed from one of belonging to their inner rituals, to being central to carnival associations performing in the street. Drums were maintained and also developed, as their acoustic properties provided a greater sound for outdoors, while the use of other instruments such as the *mazacallas* (metallic maracas) declined and the instruments were lost in the process. As a consequence, the Nations disappeared but their drums, drumming and dancing practices were adopted by Afro-Uruguayans for their carnival association parades and stage representations in the public sphere (Montaño 1997; Olivera and Varese 2000; Goldman 2008). People of African descent also appropriated and elaborated elements from popular genres that had developed elsewhere, with which they were familiar through the circulating flow of musicians, records and orchestras in the Caribbean and across the southern continent, and with which they identified both racially and aesthetically: the *habanera* from the end of the nineteenth century, and during the twentieth century the Afro-Cuban *son* and *rumba* and the Puerto Rican *plena*.

The black *comparsas* emerged in the carnival of Montevideo around the 1870s. By 1876, black-faced white upper- and middle-class subjects, fascinated by black music and dance, had begun forming their own *comparsas* in imitation. The term 'lubolo' referred, initially, to those subjects and the names they gave to their *comparsas*. But soon it also designated white male European migrants participating in black *comparsas*, integrated into Afro-Uruguayan's kinship and neighborhood *barrio* networks. Thus, between 1865 and 1930, the *candombe* – including drums, marching corps and carnival stage presentations – was developed by three groups of social actors: Afro-Uruguayans; some upper- and middle-class Euro-Uruguayans; and urban workers among whom were many European immigrants searching to define their place into the Uruguayan national state (Andrews 2007). In the twentieth century the *comparsas* were officially called 'Sociedades de Negros y Lubolos' (Black and Lubolos Societies), or merely 'comparsas lubolas' by society at large. Thus, Afro-Uruguayans had to accommodate to changing social and cultural situations, looking for greater visibility in a representation of the Nation that was otherwise characterized as of white Euro-descent (Ferreira 2003), while often paying the price of being exoticized and stigmatized (Andrews 2007; Frigerio 1996).

The *comparsas* march with banners, flags, images of the moon and stars, the dance and symbolic gestures of the central figures of the *candombe*, a dancing corps (mostly female) and the drum orchestra. The 'typical' figures are the 'Gramillero' (representing the patriarch of the group, the sage and the medicine man, characterized by top hat, frock coat and gloves; he trembles, resting on his cane), the 'Escobero' (representing the master of ceremonies; he leads the drums with a broomstick twirling around his body) and the 'Mama Vieja' (Gramillero's mate, representing the matriarch of the group, characterized by a simple, handmade gown and headwrap; she dances with soft and slow movements but fans herself nervously). Contemporary reinterpretations by Afro-Uruguayan cultural activists see in the 'Escobero' not only the master of ceremonies of a Nation but also an exorciser cleansing the evil spirits away with his broomstick; they see also in the 'Gramillero' and the 'Mama Vieja,' respectively, the King and the Queen of a Nation.

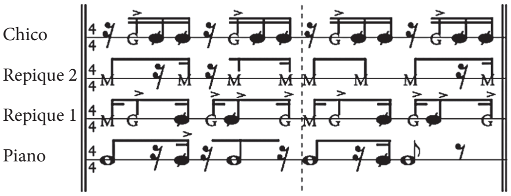
In the second half of the twentieth century the number of *comparsas* in Montevideo was less than ten per carnival, with a few more from other cities. However, by the early 2000s, due to Carnival's increasing popularity among young people from all social classes, the number of *comparsas* in the great Carnival parade had quadrupled, building new forms of social identity and of being-in-the-world by means of strong participation, playing drums or dancing. From being rejected, exoticized or folklorized up to the 1990s, *candombe* drumming and dancing have come to be considered as a characterizing feature of Uruguayan popular culture and of its national identity.

The Music of *Candombe*

The typical drumming group, called 'cuerda' (rope), 'batería' or 'batea' (battery), is a formation in lines and columns of up to 60 musicians, mostly men, each one playing a drum with *palo* (stick in the right hand) and *mano* (bare left hand) and producing very specific sounds. They march in the street following a route from one district to another, returning afterward to their starting point. The orchestra consists of three types of drums: small, medium and big, called 'chico' (little), 'repique' (ricochet, chime) and 'piano.' A repertoire of 'toques' (musical patterns) is reproduced in the course of performance. Children and young musicians learn by listening and observation, though indications of norms and special skills may be transmitted verbally by an elder after the performance.

Besides this traditional form of transmission, many private percussion schools have emerged in the early 2000s (Aharonián 2007).

A strict combination of contrasting patterns and sounds constitutes the basic principle of musical organization, comparable with African traditional music and other popular music systems of the African Diaspora in Latin America, such as the *conga* of the carnival *comparsas* in Cuba (Ferreira 2005). Basic patterns occur cyclically and each cycle corresponds to 16 elementary pulses (representable as sixteenth notes in a 4/4 measure). When played together, they create a unique music and sound. In the march, footfall occurs on each interval of a quarter note.



Example 1: Basic drumming patterns in *candombe*

In Example 1, the *chico* small drums (treble) share the same pattern (G represents a *galleta* stroke, a strong left-hand open slap; ● represents a clean open stroke with stick); *chico*'s slap strokes guide the tempo of the whole ensemble. The *piano* big drums (bass) play one or two specific patterns which identify each district at a distance (○ stands for *masa*, a firm palm stroke close to the center of the drumhead, often played in combination with a stick stroke; ● stands for an open stroke with stick); it provides the base for dancers. The *repique* medium drums improvise and regulate the dynamics of the whole (M represents *madera* (wood), a stroke with the stick on the wood box of the drum; G stands for a *galleta* left-hand open slap stroke; ● stands for a *palo* open stroke with stick).

Pairs of medium drums take turns 'talking' in a call-and-response system, each call or answer having a variable extension, from one to several cycles. As shown in Figure 1, while one drummer (Repique 1) plays a *repicado* pattern ('speaking,' 'lifting-up'), a second one (Repique 2) plays a *madera* pattern ('waiting,' 'going down'); *madera* patterns are functional equivalents to the Afro-Cuban *clave* pattern (in fact, the 3-2 *clave* pattern of the *son* is very frequently played). Among the big drums, senior players may also interchange alternate patterns ('grumbling'), but in contrast to the medium drums, in this case the time for every call or answer is strictly limited to one cycle for each drummer (Ferreira 1997, 2007, 2011).

Twentieth-century master drummers and 'rope' chiefs all belonged to certain Afro-Uruguayan's kinship networks – Giménez, Gradín, Martirena, Ocampo, Oviedo, Pintos, Silva, Suárez are among the most-remembered surnames. They developed the *candombe* drumming styles of the three main barrios, Ansina, Cuareim and Cordón (Ferreira 1997. For recorded examples, see Cuerda de Ansina 2003; Comparsa Morenada 2000; Comparsa Sarabanda 1999).

Besides the drum groups, there are five popular music manifestations that take the term *candombe* and employ, wholly or partially, distinct musical elements of the drumming system: *comparsas*' stage presentations; 'Orquestas Tropicales'; 'Orquestas Típicas'; 'Candombe Beat'; and 'Canto Popular' (Aharonián 2007). The first of these refers to the *candombes* (music and dance pieces) presented on stage by the *comparsas* in carnival, with drums, voices and other instruments; more than six *candombes* are composed and choreographed by each *comparsa* every Carnival. For these *candombes*, in addition to a drum trio, quartet or quintet, soloist singers (male or female) and a chorus (male and female altogether with first and second voices or, sometimes, with *divisi* in male and female sections), there are electric bass and guitar, synthesized keyboard and, often, brass instruments. The soloist's melodies are full of syncopated eighth notes, following the drive of the *chico* and *repique* drums. The chorus refrain may repeat one of the soloist's melodic lines or, alternatively, introduce a contrasting melody following the *madera* or the big drum patterns.

Several songs and innovations such as brass instruments and arrangements were introduced by Afro-Uruguayan composer and musician Pedro Ferreira (Pedro Rafael Tabares) in the 1950s, taking elements from Cuban popular music. He was followed in the period from 1980 to 2000 by composers and singers Hugo Santos, Ricardo Piedrahita, Rodolfo Morandi and Eduardo da Luz, and also by outstanding female singers such as Lágrima Ríos, Esther Fernández and Carmen Abella. Other remarkable *comparsa* composers and singers include Julio César Di Bartolomeo, Emilio López Rey, Heber González Píriz, Elbio Olivera, Gustavo Balta, Néstor A. Silva, Hugo Alberto Balle, Carlos Silva and Isabel Ramírez. (See Discographical References for a selection of recordings.)

The other four manifestations occur when *candombe* is used as a categorizing term for certain pieces which are related in some way to the *candombe* drumming system. Despite the fact that the minimum substitution for a *candombe* drum orchestra is a drum trio, some of their patterns may be adopted, for example, by a combination of a single percussionist, guitars, jazz/rock drummer, bass and keyboard.

Candombes performed by 'Orquestas Tropicales,' such as the 'Orquesta Cubanacán' and Jorge Ramos and his 'Sonora de Oriente' in the 1960s, are closely related to those of the *comparsas*; both were developed by Pedro Ferreira in the 1950s. A song that became a referent for Afro-Uruguayans is Pedro Ferreira's 'Birincunyamba' (recorded, for example, by Cachito Bembé). These orchestras played *sones*, following the Cuban *sonora* model of brass arrangement and instrumentation, with *tumbadoras* and *timbaletas* in the rhythm section. In the 1960s they also adopted *plenas,* following the influence of Puerto Rican Rafael Cortijo's orchestra, and after the 1970s mainly local versions of Colombian *cumbias.*

The *candombes* by the *tango* orchestras, both in Uruguay and Argentina, were developed between the 1930s and the 1950s by Pintín Castellanos, Romeo Gavioli, Carmelo Imperio, Gerónimo Yorio, Carlos Warren and Luis Sgarbi, and also popularized by the 'Orquestas Típicas' of Francisco Canaro and Alberto Castillo in Argentina. They often included at least a trio of *candombe* drums (see for example the recording 'Baile de los Morenos' (Morenos' Dance Party) by Romeo Gavioli [2000]).

The *candombes* in 'Canto Popular' are connected with the *milonga* genre in Uruguay, and are represented by Alfredo Zitarrosa (see, for example, his 1984 recording 'Candombe del olvido' [Candombe of Oblivion]), José Carbajal, Roberto Darvin and the duo Los Olimareños in the 1970s, followed in the 1980s by several composers and singers (see Aharonián 2007). The 'Candombe Beat' was created in the 1970s by Ruben Rada and Eduardo Mateo, followed by Jaime Roos, Hugo and Osvaldo Fattoruso, and Jorginho Gularte (e.g., his 'Solo quedar' [Alone], 2003), among many others composers, singers and musicians in the 1990s and 2000s (Ferreira 1997; Aharonián 2007). The percussion instruments used in both types, 'Canto Popular' and 'Candombe Beat,' vary from the body of the acoustic guitar, Cuban *bongós* and *tumbadoras*, and jazz/rock drums, to a trio of *candombe* drums or in some compositions a little 'rope' (which can be heard, for example, on Jaime Roos's 'Pirucho' [1984] and Hugo Fattoruso's 'El Gramillero' [1999]).

The boundaries between these various types are very porous and not always as clearly distinguishable as a classification system would suggest. Rodolfo Morandi, for example, a recognized artist among Afro-Uruguayans, who recorded with a funky style of electric guitar with wa-wa effects, added 'Orquesta Tropical' brass arrangements and harmonic sequences and a trio of the best Ansina *candombe* drummers. Meanwhile, Eduardo Da Luz sings with a little 'rope' of six noted drummers and a chorus, plus some synthesized flute sounds and harmonic sequences, supported by electronic keyboard and guitar. On his 2003 recording *Música negra de la ciudad de Montevideo*, Sergio Ortuño recorded with a 'rope' of the best nine Ansina *candombe* drummers (including Ortuño himself), and singing and song compositions by known *comparsas* artists; instead of a chorus, he hired some of the best local jazz and 'Candombe Beat' young musicians. Both 'Candombe Beat' and 'Orquesta Tropical' instrumental musicians are hired for *comparsas*' stage presentations, as are singers of *tango* and *candombe* (such as Lágrima Ríos, until her death in 2006) and, sometimes, opera singers. Thus, Carnival, with its long rehearsals in *barrio* locations, promotes a constant process of hybridization in the *comparsas*, while maintaining the drumming style, musical structure and organizational principles of the *candombe* drumming system.

As well as being an important period for the cultural production and reproduction of drumming, dancing and singing skills, and for experimentation with new *candombe* songs, arrangements and choreographies, the two months of rehearsals before Carnival constitute very important occasions for social encounters among families, friends and neighbors. During Carnival, the competition between *comparsas* inspires strong passions, comparable to that of local softball teams. Meanwhile, for Afro-Uruguayans family parties and holiday gatherings constitute important occasions for the transmission of values and the activation of embodied memories. Salsa and *cumbia* records, the latter by local orchestras, are heard and danced to, and *candombes* from earlier carnival repertories of the *comparsas* are sung, danced and played with drums. When collective enthusiasm rises in a gathering, the drummers stand up and begin to follow the dancers, soon forming a little 'rope' going out into the street. More drummers and dancers will join in, summoned by the powerful sound of the drums, and a spontaneous parade – 'una llamadita' (a little call) – will occur in the *barrio*. Family parties, daily rehearsals during the pre-Carnival period of January and February, local drum parades on holidays all the year round, all constitute means of building a strong community and sense of identity. In addition, the annual grand parade and the carnival competition represent opportunities for *comparsas* to build contrasting identities with respect to other carnival groups (such as *murgas*) and society at large. *Comparsas* and the *candombe* drumming groups of their *barrios* thus constitute the main social and cultural referents for Afro-Uruguayan people.

During the twentieth century, as social and cultural changes and government policy resulted in a de-ethnicization of Uruguay (in contrast, for example, to the 'melting pot' of Brazil), only *candombe* stood as a significant pointer to the continued existence of racial differences. The huge popularity of *candombe* in the early 2000s, with people from across society participating in *candombe* drumming practice and forming new *comparsas*, led to a shift in which *candombe* began to be considered representative of the nation as a whole. In this context, Afro-Uruguayan activists and organizations, who had begun mobilizing at least as early as the 1990s, asked the government to give official recognition to *candombe* as one of the main Afro-Uruguayan contributions to the cultural formation of the nation, and a historical form of resistance to the marginalization and social exclusion suffered by black people in the country. Since 2006, 3 December has been celebrated as Candombe National Day in Uruguay by National Act. Furthermore, in 2009 UNESCO declared *candombe* to be 'Intangible Cultural Heritage of Humanity.' The recognition these developments have brought comes with a measure of ambiguity, due to the risk of reification it introduces into a very dynamic culture, while at the same time revealing an important political and cultural shift: the will on the part of the state and organized civil society to conserve and strengthen the *candombe* as a phenomenon of national importance.

LUIS FERREIRA

Candomblé

Candomblé, one of the best-known Afro-Brazilian religions, was first observed in the state of Bahia in northeastern Brazil in 1896 (Rodrigues 2005 [1896]) and has since been described there by various authors (Rodrigues 1935; Querino 1955; Bastide 1945; Carneiro 1948). In the early twentieth century it is practiced in nearly all of the states of Brazil and its initiates have also taken it abroad to other countries. As well as representing ideas of ancestrality and experiences of a collective, communal nature, *candomblé* has come to be accepted as both a direct and indirect symbol of the role of Afro-Brazilian musical traditions, because of its rich, African-matrix musical repertoire.

There are other African matrix religions in Brazil, including *jarê*, practiced in the interior of Bahia, *xangô* and *xambá* in Recife, *tambor de mina* in Maranhão, *encantaria* in northern Brazil, *macumba* in Rio de Janeiro, *candombe* in Minas Gerais and *batuque* in Rio Grande do Sul (Carvalho 1993; Prandi 2001; Rosa 2010; Santos 2008; Verger 1991). For its part, *candomblé* is subdivided into various 'nations' of different ethnic origins: *candomblé angola, candomblé de caboclo, candomblé ijexá, jeje* and *nagô-ketu*. The songs of each one of these branches uses a ritual language from a different region of Africa: the Bantu peoples of Central Africa, the Yoruba of Nigeria and the Fon of Benin. In each of these religious traditions, music plays a fundamental role and is present in nearly every ritual, from the most private (such as the initiation ceremonies, the *bori* and others), to those that are open to the public (such as the public ceremonies in honor of the *orixás* [deities]), making it worthy of special attention (Lühning 1990).

In all of these religious expressions, the music must be understood in the context of the dances that are part of many of the religious complexes and other ritual elements that work together to bring on the state of trance. A common element uniting all of these traditions is the use of a set of three drums of different sizes whose names differ depending on the nation or tradition. In *candomblé* the drums in contemporary use, called *atabaques,* are crafted using barrel-making techniques rather than being carved from a single piece of wood, as was frequently observed up until the mid-twentieth century (Herskovits 1946).

The music of the different nations of *candomblé* varies in terms of the performance style and melodic and rhythmic structures (Alvarenga 1946; Merriam 1956–57). Most rhythms can be best understood using the concept of a time-line pattern (Kubik 1984), generally with a rhythmic base of 12 or 16 pulses or 'beats': 'x . x . x x . x . x . x' of West African traditions or the 'x . x . x x . x . x . x . x x' of Central African music (where 'x' represents the beat and the '.' the absence of a beat), as well as other variations. In the case of *candomblé angola,* the drums are always played with the hands rather than with sticks, as in *barravento, cabula* and other rhythms. In general, the chants are more tonal and elements in common with other Afro-Brazilian musical forms, especially the *samba*, are often evident (Pinto 1991). *Candomblé ijexá* has been reduced to a few isolated temples but the rhythm that bears its name is present in all of the temples belonging to the *nagô-ketu* tradition. *Ijexá* is also played with the hands, and for more than half a century it has also been played during the pre-Lenten celebrations as the rhythmic base of Afro-Brazilian carnival groups known as *afoxés*. In the *jeje* and *nagô ketu* forms of *candomblé*, the drums are played with sticks called *aguidavis,* sometimes using only the sticks or sometimes with one hand and one stick. The *jeje* rhythms, such as *bravum, sató, ramunha* and *adarrum*, are complex and more rapid than their *ketu* counterparts, such as *batá, jincá* and *aguerê;* however, the *ilú* and *alujá* rhythms are also fast-paced. In both traditions, the songs tend to be pentatonic, having a greater melodic extension than in *ijexá* and *angola* (Behague 1984).

Candomblé and other Afro-Brazilian religions were historically persecuted and socially stigmatized. Given that most followers of these religions are of African descent and from economically disadvantaged sectors of society, this may be understood as a result of the general context of racial and class discrimination. This situation led to limitations and even prohibitions regarding audio recordings in ritual contexts. This partially explains the limited number of recordings of the musical heritage of *candomblé*, even when recorded by the temples themselves. Moreover, the dense sound context between the drums, which are deeper and the voices, more high-pitched, performed during rituals that go on for long periods of time, present serious, almost insurmountable technical difficulties. Because of this, most recordings have been made in studios rather than during rituals (Lühning/Mata 2010). As a result, recordings rarely communicate the powerful feeling that is aroused when ceremonies are witnessed first-hand, with accompanying multisensory stimuli that not only enhance but also go far beyond merely musical forms of perception and representation.

Although this musical repertoire is closely tied to the religious sphere, historically there were also contacts with other musical forms, especially *samba* and *capoeira*, which have undergone direct and constant musical exchanges (Sousa 1998). Furthermore, since the mid-twentieth century the music of *candomblé* has been utilized in popular music, inspiring artists such as Os Tincoãs, Gilberto Gil, Gerônimo, Margareth Menezes and Carlinhos Brown, all from Bahia. For many, this exchange, using rhythms, melodies and parts of song texts, is merely a question of artistic and aesthetic expression, but today it is also being discussed by members of Afro-Brazilian religions from the perspectives of representativity and appropriation, generating intense discussions, since the songs of the musical realms are entering other spheres. Through songs with lyrics or melodies borrowed from *candomblé*, the world of Afro-Brazilian religion is stimulating the popular music industry. From this, we may conclude that the complex relations between Brazilian society and the music of *candomblé* and other Afro-Brazilian religions continue to constitute a topic of intense discussion, representing a challenge for those involved in negotiating the use of this cultural legacy.

ANGELA LÜHNING (TRANSLATED BY LISA EARL CASTILLO)

Canto Nuevo

Canto nuevo is a musical movement that arose in the mid-1970s as a form of resistance against the military dictatorship of Augusto Pinochet in Chile. The movement developed its agenda based on the principles of the Latin American *nueva canción* movement that had preceded Pinochet's coup, viewing song as art, without the intervention of the music industry's parameters, and at the same time viewing the composer as an active interpreter of his or her time.

With the name *canto nuevo*, the genre's performers and producers sought to differentiate the genre generationally and stylistically from the earlier *nueva* *canción chilena* movement. The artists linked with *canto nuevo* sought to interpret the social reality of Chile under Pinochet and the melancholy feeling of people living through the Chilean political State of Emergency, by way of a sung poetry that combined popular contemporary and classical sounds and was influenced by jazz, Baroque music, pop, *bossa nova* and folk, distancing themselves from the rigid rhythmic elements inherited from traditional Chilean folklore.

The constant challenge of *canto nuevo*, self-imposed by its creators, was to conceive a body of song whose lyrical themes addressed contemporary contingencies while not compromising aesthetic, poetic and musical principles. This led the genre to distance itself from a public that was not interested in songs of esoteric poetry but preferred a popular music identified with the immediate, the ludic and the festive. After *canto nuevo* did succeed in permeating the mass media, despite being repressed by the government, a new generation of youth emerged in the mid-1980s. Small children at the time of the military coup, this generation identified neither with the proposals of the Chilean Left nor with nostalgic visions of an ideal Chilean society. As a result, Chilean pop replaced *canto nuevo* in the media, conquering not only the public but also the Chilean music industry.

History

Following the military coup of September 1973, Chilean popular song, which had been acting as a kind of musical representative of Latin America through the *nueva canción chilena* movement, fell into a distressing period of abject silence. The repression carried out by Augusto Pinochet's regime was brutally expressed in the cultural sphere, especially in the area of song, since song gave expression to the symbols of a revolutionary process that were evidently absorbed by the public – a phenomenon that had been instigated by Violeta Parra in the 1960s and continued manifestly by Victor Jara from the late 1960s until his death in 1973.

Nueva canción chilena effectively went into exile. Those artists who remained in Chile did so either because they were unable to find the means of going into exile or because they had made the risky decision to stay and continue with their songs in clandestine spaces. The military regime prohibited the use of folkloric instruments from the *altiplano* (the highland plateau in the Chilean north), since these represented the 'protest' music that was associated with Unidad Popular, the political left-wing coalition whose iconic figurehead was Salvador Allende, the Chilean President (1970–73) who was overthrown – and who lost his life – in Pinochet's military coup. This fact is very relevant because one of the characteristics of *nueva canción*, during and after Allende's presidency, had been the use of folkloric Latin American instruments such as the *antaras* or *zampoñas* (Andean panpipes); *charango* (small Bolivian nylon-stringed, five-course lute with an armadillo shell as resonator); Venezuelan *cuatro* (a lute with four nylon strings made of the stem of the banana tree); Colombian *tiple* (a four-course lute with metal strings); *bombo legüero* (Argentine drum with an animal-skin membrane); and – very emphatically – the *quenas* or *lakitas* (cane aerophones) which tended to sound the main melody in a sorrowful and anguished manner that was intended to represent the suffering of an oppressed population. A good illustration of this use of folkloric instruments is the emblematic piece 'Cantata Santa María del Iquique,' composed by Luis Advis. This epic musical work is a homage to the struggle of the laborer from the Chilean plains and his or her heroic immolation. The song chronicles the early-twentieth-century massacre of saltpeter workers and their families by the Chilean army. Its great success, both upon release and after it was featured on the group Quilapayún's 1970 album *Cantata Popular Santa María de Iquique*, contributed to the linkage of the movement with revolutionary processes and demands for civil rights. Hence, when the military junta took power, it applied the force of the law through a series of edicts and decrees and prohibited any music that resembled the *Cantata*. The junta also ordered the incineration of books, records and master recordings from the areas of folklore and *nueva canción*.

The first signs of *canto nuevo*, although it was not yet known as such, arose in 1974. First came Barroco Andino, an instrumental group led by Jaime Soto León that combined elements of European classical music with Latin American rhythms and Andean instruments. In this way, these banned Andean aerophones were subjected to a sort of process of reclamation and were able to reappear on the Chilean musical scene, but without the social implications. Then, the group Aquelarre, whose members were humanities students in university, took up and performed the songs of banned *nueva canción chilena* composers such as Osvaldo 'Gitano' Rodríguez ('Valparaíso') and Patricio Manns ('El cautivo de Til Til'); these songs were very popular.

Later, the singer Osvaldo Díaz, who was considered one of the most notable voices of commercial Chilean popular song and was the youngest artist of the mass movement known as *Nueva Ola* (New Wave), began to appear at festivals and on television shows with *trova* songs. In 1976 Díaz performed with the group Kámara (whose members were jazz musicians) in recitals organized by commentator and former disc jockey Ricardo García. García, who had played a major role in the establishment of *nueva canción* when he organized the first festival by that name, also coined the term '*canto nuevo*' to refer to this new trend. According to García, 'It was necessary to name, to label this movement in a way that would fulfill two requirements: that it be easy to remember and that it suggest a link with Chilean *nueva canción*. And so arose a name that alerted the public to the existence of a group of artists working with similar goals in mind' (cited in Acevedo 1995, 62). The previous year, Nano Acevedo, *nueva canción* singer-songwriter, had inaugurated, practically clandestinely, the Casa de Canto Doña Javiera (Doña Javiera's Song House), which would become the first port of call for *trovadores* and folklorists. Later, additional venues appeared where this music could be played, operating under the constant threat of repression.

This encounter with censorship, which was a part of daily life in Chilean society, paved the way for the development of a cryptic poetic style, laden with metaphors which acted as codes that were established between *canto nuevo* artists and their audiences. While *trova* song employs an expansive, refined, academic poetic style, in the case of *canto nuevo*, the style became even more exaggerated, becoming a hallmark of the genre during this period, as demonstrated in the following lyrics by Luis Pato Valdivia from the 1983 song 'La penumbra de mi ciudad' (The Darkness of My City): 'La penumbra de mi ciudad/ No es paso bajo de la bruma/ Es manto negro que cubre las verdades desnudas' (The darkness of my city/Is not a passing fog/It is the dark veil that covers naked truths) (Grupo Abril 1983).

This characteristic was heavily criticized by advocates of the Chilean pop that replaced *canto nuevo* in the mid-1980s with lyrics that were more simple and direct. Nonetheless, *canto nuevo* fulfilled a demonstrable and practical need for a public that urgently required representation. It was important to make visible feelings of discontent, rage, rebelliousness and hope. In terms of content, the poetry drew on contemporary realities and was laced with feelings of frustration and powerlessness. Its spirit of freedom could only be redeemed through song. Some of the themes that emerged included the citizens who had 'disappeared' after being detained by military police, human rights, peace, forsaken childhood, the city under siege, forbidden streets and the yearning for freedom. When there was humor in the lyrics, it tended to take on an ironic, irreverent character, an attempt to fight back at the system with its 'sung chronicles' and its weapon of poetry, as is the case in the lyrics of Nelson Schwenke's 1986 song 'Mi rey' (My King): 'Mi rey se ofende; si digo que no es justo; que solamente Augusto; sea santo venerado' (My king is offended if I say it is unfair that only Augusto [Pinochet] is a venerated saint).

Canto nuevo artists also charged themselves with keeping at the forefront the work of those who were no longer present – Víctor Jara, poet Pablo Neruda and Violeta Parra – whose songs and poetry, despite being prohibited, were transformed into weapons of combat. These figures lived on in the memory of the *canto nuevo* artists as well as that of their audiences. The active maintenance of their musical and poetic legacy was an attempt to blur the dividing line drawn in time by the military. It represented a drive to use song and music to reconstruct an artistic discourse in support of social justice and recover a heritage that had been silenced and made invisible. *Canto nuevo* artists acted as chroniclers of their history, artists committed to their works and their times. This stance harked back to the *canción de gesta* (epic song) of old, descended from the original function of troubadour poetry. In a contemporary setting and woven into the unfolding story of modernity, during an exceptional period of dictatorship in its country's history, *canto nuevo*'s lyrical focus and musical codes went beyond the *canción de gesta*'s concern with aspects of conflict and battle.

Musical Styles

Toward the end of the 1970s the movement was redefined. The songs of Violeta Parra and the Chilean *nueva canción* were set aside and newly composed music emerged that reflected the desires and needs of a new generation. While the earlier period had seen the fusion of Latin American sounds and instruments with classical ones (contrabass, cello, violin, transverse flute and piano) and the mixing of folkloric rhythms with classical composition styles from the Baroque and Classical periods, by 1980 there was a clear compositional tendency toward jazz and symphonic rock. These styles required the use of keyboard, drum kit and electric bass, superseding the dominance of acoustic instruments. The classical guitar remained the main instrument, though it traded its traditional sound for an electroacoustic one, principally the nylon-stringed Ovation guitar and, later the Takamine guitar, which is closer in sound to the classical guitar. Only at the end of the 1980s, when the movement had practically died out, was the steel-stringed guitar brought into the music, a fact that only serves to underline this type of guitar's lack of relevance to the movement. The use of the guitar as its main instrument is one of *canto nuevo*'s signature characteristics, and playing it required technical mastery and great virtuosity. Most *canto nuevo* artists had studied music at the postsecondary level or at one of the country's conservatories. Some were also university students in the humanities. This phenomenon harks back to that characteristic of troubadour music of the twelfth-century European courts: a cultured song type straddling the general populace and the nobility.

The increasing resemblance of the sound of the music to that of the popular music that could be heard on the radio turned away certain niche audiences while attracting a larger, more general one. This openness to new audiences beyond those reached through *peñas*, university gatherings or musical events held by community organizations, was mainly thanks to Ricardo García. In 1976 the radio host founded the Alerce record label, which turned out to be highly effective in bringing these artists to the attention of the public. At first most of Alerce's releases were folkloric; later, after establishing itself as a player in the Chilean popular music industry, Alerce focused its releases more on *canto nuevo*. With radio programs relying on professionally recorded material, it was possible to include this music in the radio stations' daily playlists. This opened the door to television exposure and to more commercial avenues, though censorship continued to be a threat. Only certain artists were accepted by official media and these artists were subjected to many constraints. This situation created division within the movement, which ultimately proved to be the beginning of the end. It also revealed two specific musical styles present among the artists that provided the inspiration for *canto nuevo*:

1. Folk-classical: The blending of Latin American folklore with elements of Classical and Baroque music, strongly following this same tendency within *nueva canción chilena*.
2. Folk-jazz-pop: The incorporation of electronic and experimental instruments and the harmonies of jazz along with popular music rhythms such as blues, *bossa nova*, soul and funk.

Though the musical styles were eclectic, they were held together by the subject matter of the songs, the use of poetry and the quest for an artistic song: that is, the genre was approached from an aesthetic and ethical standpoint, without regard for commercial outcome. For example, Santiago del Nuevo Extremo, perhaps the movement's most representative group, was closer to rock in sound, style and instrumental color than was Ortiga, another emblematic *canto nuevo* group, but one that was committed to using folkloric instruments in its works and much less inclined to incorporate electronic ones. Of the variety of musical forms used within the genre, emphasis was placed on the *balada* (AABAA), which accounts for a subsequent inclination toward the *canción de autor* (songwriter style) descended from the *nueva trova cubana*; along with the *bossa nova*; Chilean folkloric rhythms including *tonada*, *vals* and *huayno*, but featuring jazz harmonies (drawn from swing and bebop); and, on occasion, tropical rhythms such as *salsa* and *son*. Some groups also employed more classical forms such as the secular cantata and even composed purely instrumental pieces; both these tendencies were inherited from Chilean *nueva canción*.

Composers and Performers

The movement featured solo singer-songwriters as well as ensembles (duos, trios and groups with up to eight members). Ensembles either were predominantly all-male or contained both men and women; all-female ensembles existed but were exceptions. Most artists were between 18 and 30 years of age.

The main composers, those whose works have become entrenched in Chile's musical memory, are singer-songwriters Eduardo Peralta, Luis Lebert, Daniel Campos and Hugo Moraga, as well as composers whose songs were performed by well-known bands and solo singers, such as Luis Alberto 'Pato' Valdivia, Nelson Schwenke, Osvaldo Leiva, Osvaldo Torres and Amaro Labra. The most well-known groups were Aquelarre, Ortiga, Napalé, Wampara and Barroco Andino, whose sound was much like that of Chilean *nueva canción* groups because of their heavy use of traditional folkloric instruments; Cruz del Sur, Cantierra and Huara, known for the quality of their performances and musical arrangements in terms of both the virtuosity with which they wielded their instruments and the innovation and creativity they injected into their contemporary compositions, a sign of their high levels of musical training; and groups closer in sound to rock, folk and pop, such as Santiago del Nuevo Extremo, Grupo Abril, Antara, Amauta and Schwenke & Nilo.

The musical characteristics of nearly all these groups were centered on careful attention to polyphonic vocal harmonization, a practice found in Chilean popular music since the time of the neofolklore movement and intensified with the involvement in *nueva canción* of classical composers such as Luis

Advis and Sergio Ortega, and demanding instrumental work. Exceptions were Sol y Lluvia, Transporte Urbano and Los Zunchos, groups that were active during this period in Chilean music and were considered part of *canto nuevo*, but whose works were simpler and more accessible to listeners, given that their emphasis was on songs that were direct, aimed at the masses, and more oppositional than poetic. Their work might be considered a form of protest song, with an emphasis on social justice.

The solo singers of this period in Chilean music were almost all women. They were Capri, Isabel Aldunate, Clara Domínguez, Tati Penna, Cecilia Echenique, Katty Fernández, Lilia Santos, Natacha Jorquera and Cristina González. Male solo singers included Patricio Liberona, Pancho Caucamán, Juan Carlos Pérez and Osvaldo Díaz. Artists that were active in Chilean *nueva canción* and also were part of *canto nuevo* were Nano Acevedo, Guillermo Basterrechea, Pedro Yánez, Dióscoro Rojas, Eduardo Yánez, Tita Parra, who returned to Chile from exile in 1979, and Payo Grondona, who returned in 1983.

Canto Nuevo and Collective Memory

A large number of works were created by the artists associated with this movement, and there were many more groups, composers and performers involved than those named above, but not everything has passed down from one generation to the next. On the basis of appearances in compilations, in live performances and on websites, a small number of some 20 or so songs can be identified that are considered classic songs and continue to elicit an emotional response in contemporary audiences when performed by contemporary musicians. Examples of these songs include 'A mi ciudad' (Santiago del Nuevo Extremo), 'El viaje' (Nelson Schwenke), 'En un largo tour' (Amaro Labra of Group Sol y Lluvia) and 'Juan González' (Eduardo Peralta).

One work deserving special mention is *Cantata por los derechos humanos* (Cantata for Human Rights) by twentieth-century 'new music' composer Alejandro Guarello, with lyrics by poet and Jesuit priest Esteban Gumucio. This major work was premiered in 1978 at the Santiago cathedral by the group Ortiga and the Symphonic Orchestra of Chile. A certain historical similarity with *nueva canción chilena* is suggested because, like the *Cantata Santa María de Iquique*, this work serves as a model for the interpretation of the meaning of their song. This meaning is imbued with discourses of individual freedom and the protection of human rights through peace and active nonviolence. While *Cantata Santa Ma. de Iquique* elevates workers and their rights, *Cantata por los derechos humanos* encourages people to remember, to never forget.

The Decline

In the mid-1980s *canto nuevo* succumbed in the face of media expectations by refusing to compromise its values, both aesthetic and with respect to content, electing instead to return to its intimate *trova*-esque settings or disappearing from the scene completely. Popular protests in the streets of Santiago represented a new strategy for resisting the dictatorship; it was time to leave behind melancholy and metaphor in favor of action and direct talk. The task of reflecting the mood of that moment in time would pass on to another generation. Nonetheless, the musical legacy of *canto nuevo* stands as a testament to the feeling and artistry of a generation of musicians who were the witnesses and interpreters of their times.

Cantoria-de-Viola

Cantoria-de-viola is a form of sung poetry centered on a poetical-musical duel between two performers, the great majority male, accompanied by the *viola* (a guitar-like instrument) or other instrument. It is part of the rich oral tradition of the rural areas of northeastern Brazil, where it continues to have a presence in the twenty-first century. The terms *cantoria*, *desafio* (challenge) and *repente* (improvised performance) are also widely used as alternative names.

Historical Outline

Cantoria-de-viola belongs to the wider tradition of *cantoria* (improvised sung poetry) that came to Brazil from Portugal and appears to have taken root in the north-east. Originally performed by traveling *cantadores*, it developed several forms, including an *a cappella* version sung by cattlemen, known as *aboio* (Crook 2009, 194).

The emergence of *cantoria-de-viola* took place in the nineteenth century in rural areas and small communities of the northeastern interior, where the original context for performance was domestic. In the twentieth century it began to be exposed in the form of *folhetos de cordel*, small printed pamphlets displayed on strings (*cordel*) at markets. Migrants fleeing periods of droughts also brought the practice to the cities. Formal, staged competitions began in the mid-century, and the emergence of the festival phenomenon at much the same time provided a platform for *cantoria-de-viola* along with other northeastern music, such as *forró*. Subsequently, festivals provided the main (and enduring) opportunity for the *repentistas* (the name for the improving singer-poets of *cantoria-de-viola)* to perform. Its presence continued, too, on radio, where it first began to appear in the 1960s, followed later by television. Broadcast programs are still produced by *cantadores* themselves (Crook 2009, 197). Through media exposure it became known outside the northeastern region.

Oral delivery and ephemerality are fundamental traits of the way the music is presented and elaborated; its propagation beyond that point is at the mercy of the listeners' auditory memory. Nevertheless, much of the study of *cantoria-de-viola* has tended to focus on the written forms that appeared in the *folhetos de cordel* for popular consumption. Since the pioneering research of Mario de Andrade (1928) and other scholars, however, musicologists have focused on attempting to retrieve the sound-and-music event. The role of *cantoria* in the context of oral tradition is well defined in the work of Ronald Daus (1982), Elizabeth Travassos (1988, 1989, 1997a, 1997b) and Marcia Abreu (1999). All considered it to be the source of several strands: the *repente* (poetic improvisation in verse), the *épica* (epic) and the *folhetos de cordel*. According to Daus, *cantoria* represents a formal elaboration of epic northeastern poetry; in the nineteenth century this encompassed both the *repente* and the epic poems. These complemented the poetic-musical dispute, with the improvisers making use of both forms. In the early twentieth century, thanks to its exposure in the form of *folhetos*, epic poetry achieved a primacy over *repente* in the north-east. This resulted in an initial division of work that favored the poets over the singers. At the same time as this loss of prestige of *repente* occurred in the *sertão* (northeastern outback), there was an awakening of interest among researchers of the time in sung improvisation. It was a major reason why *cantoria-de-viola* continued to be a significant force. Successive generations of singers have also demonstrated its vitality through renewed interest in traditional forms and the incorporation of others.

Desafio

Central to the *cantoria* tradition is that of the *desafio*, an improvised poetic-musical contest between two alternating singers. In several regions of Brazil, the *desafio* appears as a poetic musical duel within traditional dances, such as the *cururu* (São Paulo and Central Brazil), or even as an autonomous genre with different names (*trova* [ballad]) in Rio Grande do Sul; *jogar versos* [playing with verse] in Minas Gerais, etc.). In the north-east, however, with its *cantoria* tradition, it became part of the *cantoria-de-viola* poetic-musical dispute, and in doing so helped to forge an art form that is particular to northeastern poet-musicians.

Poetical Structure

The *cantoria-de viola* consists primarily of organizations of stanzas into lines of five, seven, ten and eleven poetic syllables, with rhymes and diverse poetic rhythms. The prosodic variations in the verse maintain the rhythmic structure. (Note that the Portuguese system of versification is based on a model of accentual organization. Also, in the Portuguese language the poetic syllable count of the line differs from that of Spanish-speaking countries. In Portuguese, poetic syllables are counted up until the last tonic syllable of the line, contrary to Spanish practice, which includes all syllables.)

Among the different types (or modalities, as *cantadores* call them), the *sextilha* (sextain, i.e., six-line) and the *décima* (ten-line) forms are predominant, and both allow the singer to demonstrate his improvisatory skill. The former, in which the stanzas contain lines of seven monorhymed syllables, is considered the most popular, while the latter, which contains lines of seven to ten syllables, places greater emphasis on the different decasyllabic forms. The decasyllabic form is used in the Martelos type or modality, with its variants Martelo Agalopado (a strophe of ten lines in decasyllable following the same order of rhyme as the lines of the *décimas*), Martelo Alagoano, Martelo Miudinho and Galope à Beira Mar ('gallop beside the sea,' a stanza of ten lines of eleven syllables, with a chorus where the final word is 'mar').

All of these categories mentioned above contain a refrain and are bound by strict poetic norms, as in 'Galope Soletrado.' The refrain helps to create a particular atmosphere in which the *desafio* can take place.

It generates the issue at hand, even the ambience. In the *Gemedeira* modality, for example, the presence of the refrain 'AI! AI! HUM! HUM!' inevitably gives rise to a variety of humorous verses, with an emphasis on those of disreputable character.

Musical Aspects

Each *repente* (improvised poetry performance) has a *toada* (tune). *Cantoria-de-viola* has a rich repertoire of *toadas*, which generally consist of a melodic line that allows the verse to flow, and that acts as a means of unifying the content of each strophic form. Within *cantoria-de-viola* as a whole, the *sextilhas* (those structured in sextains) have a diversity of *toadas* to choose from, while most of the 'poetic genres,' as the singers call the various types of strophic structure (*Martelo, Galope-à Beira-Mar, Mourão* etc.), possess few of their own *toadas*, which significantly limits the *cantador*'s options. The melodic contour of a *toada* is not treated rigidly and allows for variety of treatment. The dueling pairs of *cantadores*, who are required to produce a correct rhyme so that the poetic context is properly executed, never reproduce the *toada* in an identical way.

As well as a *toada*, the poetic dispute between the two performers requires the presence of an accompanying instrument: traditionally a *rabeca* (a traditional fiddle of the north-east), a *viola* with six double strings or a modified *violão* (acoustic guitar). The function of these instruments is mainly to provide elementary harmonic support to the most important activity, which is that of improvising verses.

Cantoria de viola in Performance

Contemporary *cantoria-de-viola* performances either occur according to a traditional model – the *cantoria de pé-de-parede* (held in informal settings) – or are integrated into the calendar of artistic activities in the urban centers of northeastern states, especially in festivals and conferences. The degree of continuity and change in these events depends on the integration between the components of the *cantoria* system – the listening audience and the singers. In producing an event, the singers and the listening audience relate continuously to each other, thus establishing an intersubjective communication link encouraging sociability.

Cantoria audiences comprise a very heterogeneous world in terms of social status, but they can and do remain unified in the face of the poet-singers, no doubt because they symbolically represent the living memory of their culture. This diverse audience is made up of rural people (*ruricola*), cattlemen, fishermen, small shopkeepers, farmers, politicians, liberal professionals, priests, businessmen – in effect, representatives of the various social groups that identify with the rural world, despite their different modes of living, by means of region-specific language, common habits of social life, relationship with nature, shared religious sentiments and traditional Christian morality.

Among the audience are the enthusiasts who mediate the relationship between the singers and the rest of the audience. These are the *apologistas* ('apologists'), the main articulators of *cantoria*. They organize the event, welcome the singers at their homes with special honor and have the skills to deal with the public and to conduct the event. *Apologistas* are familiar with the techniques of the art of poetic improvisation; more than that, they represent a category of listener who possesses a keen artistic sensibility. Often the way to becoming a singer is via experience as an *apologista*, because the *apologista* is a different kind of listener. *Apologistas* reveal themselves as poets among the singers, learning from them, releasing their enthusiasm with interjections, suggesting *motes* (lines to be used in the *desafio* – either their own creations or those of more timid listeners) and even expressing criticism or praise in a strong voice.

The singer is the ultimate expression of the art of *cantoria-de-viola*. The singing *repentista* with his viola tells of the events of the world in which he lives and the fantasies that people his imagination. The singer is the protagonist of northeastern Brazilian history. He is the one who keeps his people informed, the critic of social injustices, the bastion of traditional morality, the interpreter of events beyond the boundaries of the rural north-east, transforming what is happening in the world into common parlance. Even radio and television are no substitute for the account of the *repentista* poets. People still feel strongly that the poet is the best analyst of society from an empirical viewpoint, and often a more reliable source than the media. Indeed, the singer, with his typically declamatory style, has increasingly become the interpreter of the general sensitivities of simple folk, the propagator of society's facts and deeds and a harsh critic of those who undermine the community's interests with reprehensible acts – constructing himself *ipso facto*, as 'journalist' with viola, unofficial public announcer, the legitimate representative of his peers.

Thus the *cantoria-de-viola* preserves the primary cultural traits of its art as a collective heritage, in which aesthetic standards are more representative of the will of a community than of the artist's personal taste. In *performance*, despite the protagonists being opponents before an audience, competing to be the best improvisational singer, they express an art form that remains independent of their individual aspirations. The expression of their subjectivity still denotes the collective subjective of society. The northeastern *repentistas* are spokespersons for the collective imagination of the social environment they represent.

Poetic modalities and melodies, whether traditional or newly introduced, are collectively owned. Only in the way the improvisation is elaborated is there individual originality. Sung *desafios* that relate to the individual aspirations of the artist are unknown. The exception is the explicit demonstration of a swagger, a boasting of the possession of the gift of knowing how to improvise. In general, individuals speak on behalf of the public, on behalf of the group. Thus, *cantoria-de-viola* demonstrates, with great openness and visibility, a force inherent to art: its relationship with the collective, with culture, with the general, both rural and urban.

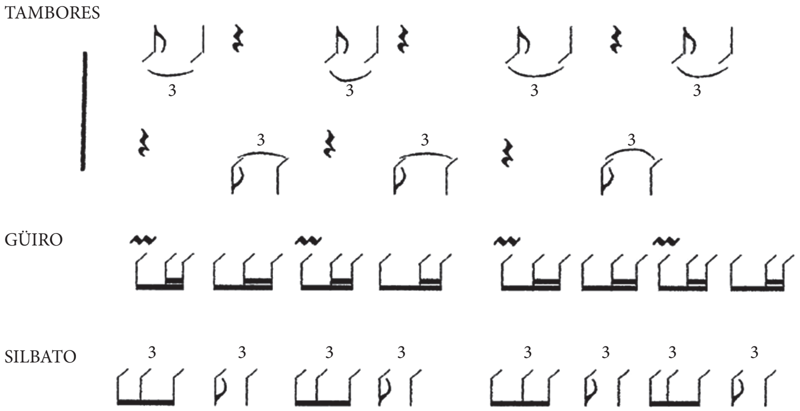
ELBA BRAGA RAMALHO (TRANSLATED BY DARA MURPHY)

Caporales

Caporales is a Bolivian neofolkloric genre that emerged in the second half of the twentieth century when university and professional groups and guilds in the departmental capitals founded the mixed associations called 'Fraternidades Caporales.' In the 1980s it migrated to Peru, Chile and Argentina. In its development, *caporales* adopted elements from other traditional dances from Bolivia such as the *negritos*, the *tundiki* and the *saya* from the region of La Paz. Also called *saya de los caporales*, it is represented in Argentina, southern Colombia and Ecuador by Bolivian immigrants and their descendants.

Caporales is a modern genre comprising music and choreography that is practiced by young people during Carnival street parades as well as religious festivities and national holiday commemorations. This collective dance is energetic and can be performed solely by men or by mixed groups. In both cases men sport luxurious costumes and make ostentatious displays of their vitality through their acrobatic figures, while women accompany them with the sensual movements of the *saya*. The rhythmic pattern known as 'ritmo de caporal' (see Example 1) is also used as a base for the composition of romantic songs for a listening audience or for people to dance to in nightclubs.

As genres, both *caporales* and *saya* are grouped together or kept separate according to the message and the context in which the discourse and the performance practice are presented. In catalogues of commercial music and videos they appear as *sayas-caporales*, an imprecision that supports the belief that these two represent a single genre. However, while *caporales* and the urban *saya moderna* are quite similar, the *saya negra* in particular (which continues to be danced by people of African descent in rural areas) and *caporales* are two very different genres, in their musico-poetic content and the place and historic moment in which they developed, as well as in their interpretive modes, ethnic-racial composition and the age and social standing of the population that practices them. More importantly, they differ in the function attributed to each genre (Sánchez, N. 2005, 2–3). The traditional Afro-Yungan *saya* is a hybrid, the product of *mestizaje* between Aymaras and Afro-Americans. It is a generic system rooted in other forms which are native to Africa and which are as old as the *nsaya* (Sánchez, W. 1998). Starting in the 1960s



Example 1: 'Ritmo de caporal,' showing drums in different tunings, with accompaniment of *güiro* (scraper) and *silbato* (whistle)

new musical and danceable expressions developed from these forms, such as the *morenada*, the *saya moderna* (modern *saya*) – urban and large-scale – and the dance of the *caporales*.

The choreographic representation of *caporales* took the figure of the 'caporal' from the traditional Afro-Bolivian *saya*, as well as the basic rhythmic pattern played by the drums. The *caporal* was originally the overseer, a figure of authority, in charge of patrolling the slaves who were brought to Yungas (a department in La Paz) from Africa during colonial times to work on plantations. In many cases *caporales* were mestizos or mulatos. In modern representations of the dance, the *caporal* is the leader of the dance and the *fraternidad*, and is characterized by the whip he carries, his boots with large rattles and the mask – typical of the *caporales* – that distinguishes him from the other dancers who are impersonating slaves.

Representations Around a Multidimensional Genre: Contemporary *Caporales*

Young people get together in *fraternidades* to learn the dance and organize the performance, which takes place during the traditional 'entradas' of carnivals, religious festivities of patron saints and national holidays. To belong to a *fraternidad* implies paying for expensive outfits as well as the cost of financing the orchestras, the choreographers and the trips to the different areas of the country or abroad, not forgetting community gatherings. While the associations are motivated by personal display, they also compete for monetary awards or because they are a setting for youth practices of social gathering and entertainment.

Research on the multiple meanings and values represented in the dance, within an arc containing symbols originating in the Andean religious syncretism of Aymara, *criollo*-hispanic and African ritual sources, reveals shifts of signification. For instance, readings of certain scenes reveal predictable associations between offerings to the Virgin, beliefs about the Pachamama (see *tinku*) and the female Andean figure. However, the sensuality of the feminine movement in *caporales* is much more provocative. The classical hat of the *cholitas* contrasts with extremely short skirts which, in a far cry from the modesty of the *kolla* woman, reveal the undergarments all the way to the hips. The profusely decorated outfit, the sparkling hair and the high-heeled shoes bear no resemblance to *saya*.

All evidence points to the influence of the mass media and the municipal organizers of the pageants demanding that the genre's staging matches the Rio Janeiro and Venetian Carnivals. For them, innovations in the choreography, makeup and costuming are synonymous with improvement. This view manifests itself in the incorporation of elements belonging to the aesthetics of pop culture or revue-theater.

Glamor, color and excess in the outfits are integral to the urban aesthetic of *caporales*. The dance is complemented by acrobatic movements and unusual accessories, such as colored smoke flares and cables or whips with burning ends. At the same time, the lyrics of the songs reflect the ostentatious character conveyed by the arrogant gesturing of the *caporales* themselves. In contrast, dancers in religious settings accompany the Virgins of Urkupiña and de Copacabana, flanked by national flags (of the country of residence and of Bolivia) and Catholic Church banners. Close affiliations with the sacred image and the patriotic symbols signify that the genre is deserving of social recognition and viewed as representative of Bolivian-ness. At the same time, the publicity posted by national organizations on the internet and the tourism promotion of carnivals such as those of Oruro and La Paz, advertise *caporales* as national or traditional Bolivian folklore.

In this way, this polysemic genre assumes multiple functions in the dynamics of migration, becoming a vehicle for significations shaping the formation of subjectivities. The performance becomes a political device aimed at cultural integration and legitimacy, social merit or economic status.

Communities of Bolivians residing in different countries endeavor to have a dance group even if it is reduced in size and performs to prerecorded music. The music of *caporales* is also played in discotheques, at family gatherings and community fairs.

The musical components of *caporales* are the same as those of *saya afroyungüeña*: drums, *güiro,* whistles, rattles. Neofolklore groups such as Los Kjarkas, Sayanta, Yara, Los Tekis, Tupay and Amaru also add electronic keyboards and military band instruments (trumpets, sax, tuba and big drum) and perform well-known themes. Because this is a genre that is urban, modern and large-scale, hybridization is evident in the sonority. Musical arrangements combine traditional Andean instruments such as *charango*, *siku* and *zampoña*, with others which are identified with pop and rock such as bass, drumkits, electronic keyboards, as well as '*bases techno*' (tracks created using electronic loops). It is evident that the *cumbia tropical* has incorporated the dancing steps and outfits of the *caporales* and, in turn, the genre uses the voice in a suggestive manner similar to the *cumbia*.

Social, Racial and Ethnic Representations within the Genre

According to Walter Sánchez (1999), the indigenous sectors in the colonial period also participated in the mechanisms of exclusion and racial mocking of the Afro-Americans and this trend persists in current practices. The 'inventors' of the new genre belong to urban sectors, to middle-class and elite social levels. They select svelte youth (possibly tall), of white or mestizo skin who with their painted bodies personify the slaves and their overseers – the *reyes caporales*. In this fictional scenario, these 'theatrical negroes' use masks (with exaggerated fleshy lips, protruding tongue and eyes out of their orbits) to hide their complexion as they characterize the overseers or *caporales*. Some scholars have interpreted these features as remnants of the ethnocentric colonial views that attributed witchcraft powers to the black *zambos* or considered them as intellectually and spiritually inferior. The general public interprets these features as symbols of avaricious, lascivious or primitive attitudes.

Be that as it may, the genre sidesteps a historical reality: the regulations by which the *criollo* sectors displaced the black *afroyungüeños* from the Carnival parades of La Paz y Oruro, the same who are reclaiming this space in the early twenty-first century. The matters have negative repercussions for most of the population, causing antipathy or resistance toward what the figures of the *caporales* represent.

In Bolivia and Argentina a large portion of modern popular music on CD and video is produced and distributed in the form of pirated editions, which often makes it virtually impossible to acquire an original version. In sectors with a high number of Bolivian immigrants, these items are often sold on street stands and some can be found in local street markets where informal economic practices – which form part of the culture and the tradition of the original population – are still maintained. Recorded and audiovisual material that does not originate from official commercial chains can also be obtained in concerts of famous performers such as Los Kjarkas – for instance, some albums and DVDs are produced under the label of 'compilations' of the top hits by famous groups. Even though market and tax authorities prosecute these cases and seize the counterfeit merchandise, these modes of production and circulation are habitual, especially in Buenos Aires as well as in other large cities in South America.

Carnaval Cruceño

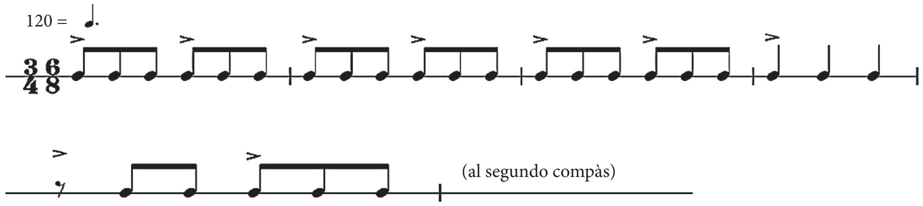
The *carnaval cruceño* is a danceable genre, similar to the polka, from the city of Santa Cruz de la Sierra in Bolivia's tropical east. *Carnaval cruceño* is, as its name suggests, the characteristic music of the area's Carnival celebrations. Carnival is extremely important in the region, with Santa Cruz's social life, economy, culture and politics revolving around the annual production of what is widely known as the '*fiesta grande*' (great party). *Carnaval cruceño* is in 2/4 time with a fast tempo and is danced by embraced couples leaping from side to side, as well as by groups of people holding hands as they participate in the Carnival procession.

According to historian Alcides Pareja Moreno, the musical sphere of the Santa Cruz Carnival consists of three genres: *carnaval cruceño*, *takirari (taquirari)* and *chobena* (1999, 26). The dance corresponding to *carnaval cruceño* originated in the nineteenth century. Carnival celebrations provided the perfect setting for the introduction of danceable genres that had become fashionable overseas. Local elites, always on the lookout for novelty and keen to keep up to date, took up the *guachambé* dance, later called the *polca*, influenced by music bands from Paraguay in the early twentieth century (Terceros Rojas, cited in Pinto 2008). According to scholar Hernando Sanabria Fernández, an 1875 source mentions that 'the townspeople perform an energetic dance called *huachambé*, whose music is similar to music we heard in Corrientes [northeast Argentina] and Paraguay' (in Pareja Moreno 1999, 27). Sanabria Fernández also found two original scores from 1885 pertaining to the genre '*polca-carnaval*' (*idem*), predecessors of today's *carnaval cruceño* (henceforth referred to as simply '*carnaval*').

The first known *carnavales* date back to the early twentieth century: 'Carnaval grande' (attributed to Mateo Flores and Félix Soleto), 'Félix Soleto' (Mateo Flores 1915) and 'Ojos negros' (Dark Eyes) (1917, Feliciano Cabral). The genre has stood the test of time, evidenced by the fact that as these compositions are still performed in the second decade of the twentieth century by brass bands during the Carnival period. The composers, many of them members of Santa Cruz's elites, began to write *carnavales* (as well as *takiraris*), and the style soon took root as an enduring favorite among the people. The first *carnavales* with lyrics turned up in the 1920s, though Sanabria Fernández suggests that the first one with lyrics 'worthy of the music' was 'Palomita de Arrozal' (1936), with music by Jorge Luna and lyrics by poet Raúl Otero Reiche (Pareja 1999, 28). Since the 1940s poets and composers have created exquisite works inspired by the *carnavales*, *takiraris* and *valses* of east Bolivia.

While the *takirari* projects sentimentality and nostalgia, the *carnaval* evokes the festive cheer of Santa Cruz. Sanabria Fernández describes the music of *carnaval* as 'lively, appealing and lighthearted, undoubtedly of Spanish origin' (ibid.). Rogers Becerra describes the Santa Cruz *carnaval* as consisting of 'three sections with eight measures each, or where they feature imperfect cadences, 16 measures. The first two sections are played by the *pistoneros* and the third by the *bajeros*' (ibid.). This description makes it clear that the *carnavales* are generally composed for brass band musicians playing for Carnival party dancers. The term '*pistoneros*' (valve players) refers to the trumpets, while '*bajeros*' (bass players) refers to the tubas, trombones and helicons.

As with other brass band genres in Bolivia's Andean region, *carnavales* are created with long marches in mind, since the musicians must spend entire days, sometimes over the course of weeks, playing in the streets. Most *carnavales* begin with a drum roll and feature the cymbals and bass drum on the weak beats of the measure, with the trumpets carrying the melody and the basses rendering a characteristic ostinato. Later a second melody is played by the basses. Normally the theme is repeated as many times as necessary, according to the dancers' level of enthusiasm. *Carnavales* often combine 6/8 with 3/4 meter,



Example 1: Rhythmic pattern of the *carnival*

superimposing duple over triple as is characteristic of many genres in South America. The final product is a rich rhythmic feel that emphasizes the strong beats and adds expressive color to the melodies, encouraging couples to dance (Example 1).

The 1940s saw the first recordings of *carnaval* music, appearing as 78-rpm records on the label Méndez de la Paz (Terceros Rojas 2006, 14–15). The duo Voces del Oriente, (formed in 1942 by Luis Eugenio Velasco and Ángel Camacho), soloist Carlos 'Trueno' Saucedo, the duo Aliaga-Domínguez, the trio Los Llaneros and the group Cordillera began recording music from Bolivia's eastern lowlands, including a number of *carnavales*. Singer Gladys Moreno made her first recording in 1948 and went on to become a venerated figure with her renditions of *carnavales*, *takiraris* and *valses cruceños*. In the 1950s and 1960s there was a major boom in recordings of *carnavales*. New singers began to record and many groups were formed in Santa Cruz and the neighboring department of Beni, especially duos and trios, reaching audiences around Bolivia through radio and recordings and contributing an 'eastern' flavor to Bolivia's national music palette. Santa Cruz musicians performed for enthusiastic audiences at traditional venues such as La Pascana, the Peña de Blooming (La Bamba), the Palace Theater and the *peña* Los Penocos, and recorded EPs and LPs on labels such as Lyra (Discolandia), Lauro, Imperio, RCA Victor, CBS, Panamericana Discos and Discos Méndez. Terceros Rojas (2006) explains that it was between the 1940s and the 1970s that new artists recording the music of the eastern lowlands appeared with the most frequency. In the 1940s 11 solo artists emerged (6 duos, 8 trios and one larger group) followed in the 1950s by 9 soloists, 7 duos, 18 trios and 7 larger groups, and in the 1960s by 12 solo artists, one duo, 13 trios and 4 larger groups. In the 1960s the figures began to drop: 3 solo artists, 3 duos, 2 trios and 4 larger groups; and by the 1980s there was only one trio and 3 larger groups on record (2006, 21).

It was not until the first decade of the twenty-first century that eastern lowlands music re-emerged as part of the so-called '*nueva música camba*' (new eastern lowlands music), closely linked with notions of rescuing tradition, but also with the development of new styles of music aligned with the tastes of youth and with the political ideology of the '*nación camba*,' which espouses regional autonomy for the departments of Santa Cruz, Pando and Beni from the governmental centralism of La Paz (see Sanchez Patzy 2011). The phenomenon of *nueva música camba* is not limited to CDs and radio but is linked in particular to television. During Carnival celebrations, *carnaval* shares the limelight with new danceable genres such as the *brincao*, made popular by the musician Aldo Peña.

Well-known and frequently recorded *carnavales* include 'Jumechi' (an alcoholic drink) (written by Godofredo Núñez); 'Noches de luna llena' (Full-Moon Nights) (Susano Azogue); 'A Cotoca' (For Cotoca) (Mateo Flores); 'Cuando muere el Carnaval' (When Carnival Dies) (Zoilo Saavedra); 'Novia Santa Cruz' (Santa Cruz, My Lover) (Jorge Luna Pomier); 'El aguilillo' (The Womanizer) and 'Pan de arroz' (Rice Bread) (José René Moreno); and 'Maraca Mateo' (Play the Maraca, Mateo), 'Flor de Santa Cruz' (Flower of Santa Cruz) and 'En el arenal' (In the Sands) (Gilberto Rojas, a composer from the highland city of Oruro).

The *carnaval* arouses a profound sense of identity and sentiment among the people of Santa Cruz because of its strong associations with the Santa Cruz region, and it is thus viewed as emblematic of Santa Cruz's aspirations for autonomy. This is supported by radio, television and the recording industry in Santa Cruz, which display the *carnaval* and the *takiirari* as quintessential to a regional identity constructed around Carnival fraternities, known as 'lodges' (*logias*) in reference to the strong links between power, exclusive access and popular culture within these festive institutions.

It is worth noting the existence of a regional variation on the Santa Cruz *carnaval*, the *carnaval vallegrandino*, rooted in Vallegrande, a province within the department of Santa Cruz. This genre combines the festive character of Santa Cruz's *carnaval* with an Andean expressiveness and is exemplified by 'La ovejerita' (The Little Ewe) by Misael Guevara. Los 4 Del Valle's recording of that song was one of Bolivia's most successful releases in the 1970s.

Carnavalito

The *carnavalito*, also known as *carnavalito jujeño*, is a music and popular dance form from the north-west of Argentina that is intimately linked to the vernacular ancestral celebration of Carnival. In the summer, especially in the north of the provinces of Jujuy and Salta, the region transforms itself into a tourist center of national and international interest, attracting mass media, musicians and scholars of different disciplines all wishing to participate in this phenomenon.

The *carnavalito* is a hybrid genre with complex identity affiliations. In its traditional version, it retains strong indigenous features mixed with *criollo* and Spanish choreographic and musical components. Musical groups and social, political and religious organizations of various types view the *carnavalito* of La Quebrada de Humahuaca as a marker of Argentine authenticity aligned to nationalist sentiment; this is because La Quebrada de Humahuaca is normally identified with indigenous and mestizo communities who traditionally occupied the area, and who used to perform dances such as the 'old' *carnavalito* in the context of farming rituals, especially within the Quechua culture. In these dances, people would hold hands and dance in a circle. In addition, the titles of the most popular modern *carnavalitos* produced by the record and entertainment industries feature the Quebrada in one way or another: 'El Huamahuaqueño' by E. Zaldívar and 'El Quebradeño' by Los Hermanos Ábalos, for example, are two *carnavalitos* that are associated with the central region of Jujuy and the Quebrada itself. In the folk imagination as well as in narratives by natives and scholars alike, the sound of Andean wind instruments, such as the *siku* and the *quena*, and of the string *charango* represent Andean cultures and point directly to these regions in the Argentine north-west. In the 1970s and 1980s, when it attained international recognition, the *carnavalito jujeño* (i.e., of Jujuy) was integrated into the imaginary of 'being Latin American.' Among the devotees of the genre, one side of the spectrum is represented by the traditionalist movement and the other by avant-garde and national rock musicians.

The main musical features of *carnavalito* are its duple rhythms, the predominance of 2/8 and 4/8 meters, musical phrases of irregular length (which are a characteristic feature of the traditional *carnavalito* from rural areas [Nancy Sánchez 2011] and pentatonic or mestizo modal melodies (i.e., harmonic systems which combine modal scales with tonality). Although most are in the minor mode, some, such as the 'Carnavalito del mercado' (Market Carnavalito) by Sara Mamaní, are in the major. All include a distinctive introduction and a harmonic development similar to the *cueca* and the *bailecito kola,* an affiliation reinforced by the northern sonority of Andean wind instruments (*quena*, *pincullo*, at times the *siku*), the *charango*, the guitar and the *bomb*o, and rattles made from goat hooves called *chaj-chas.*

Influences of Other Genres

The first and most direct precursor of the *carnavalito* is the *huayno* (*wayño*, *wayñu*) a genre which originated in Peruvian Inca culture and is affiliated to other colonial musical and dancing forms that migrated to Bolivia before arriving in the north of Argentina. The name *carnavalito* was given to many other colonial rhythms and musical forms in northern Argentina, Peru and Bolivia. In this regard, Carlos Vega (1998 [1944]) affirms that the genres or types of music belonging to the American pentatonic repertoire do not correspond strictly to their denomination. On the contrary, 'almost all the names used by the Indigenous people refer to the dance or the pantomime or the instrument, or the dancers, or the object, or the circumstances of its execution' (ibid., 149) among other factors; these names are then transferred to the music. This process explains why ancient *carnavalito* of the nineteenth century has been called *bailecito, caracolito, huanito, huachitorito, cacharpaya*, to list but a few names.

José Díaz Gainza (1977) indicates that the *carnavalito altiplánico* (from the high plateaus) should not be confused with the *carnaval cruceño* (a genre from the Bolivian department of Santa Cruz) because the latter adopted and maintained the ternary rhythm (6/8) and other European elements.

The Dance

The *ronda* – dancing in a circle while holding hands – was a symbol shared by the majority of the founding or tribal societies for their ritual practices and was the preferred figure in the *wayño kolla* of the seventeenth century. The *carnavalito* adapted this formation, with dancers marching in rows holding hands (called *serpentina* or *viboritas),* in order to engender both merriment and unity.

In popular outdoor representations, participation is spontaneous. The dance is accompanied by whistles and burlesque calls characteristic of the Carnival's 'mascaritas' (dancers wearing masks) and 'diablitos' (dancers disguised as devils). Abundant drinking generally drives the festivities into unruliness. The tradition of throwing flour and water into the audience and onto the stage continues to this day in rural settings. A modified version of this expression is also found in the theater.

The *Carnavalito* in the Twentieth Century

The creation of *carnavalitos* by individual authors, and the compilation and publication of this repertory, were integral to the discourses on nationality that were constructed in the years preceding and following the successive waves of immigration (at the end of the nineteenth century and the early decades of the twentieth century) from Europe, which drastically changed the demographic composition and the way of life in Argentina, taking the country to the threshold of modernity. On the one hand, these discourses were intended to construct an image of Argentina as a product of the mixture of the Hispanic and the 'Indo-American,' a nativist representation originating in an idealized vision inherited from late European romanticism. On the other hand, the image of 'primitivism' was adopted. However, in the 1940s the *carnavalito* was a sign of distinction. Members of the elite, elegantly dressed, danced in the exclusive folkloric *peñas* (bars) that existed in the center of Buenos Aires.

The period from the mid-1940s to the mid-1950s, overlapping with the governments of General Juan D. Perón, was characterized by the influence of the state on the artistic and educational fields. Music benefitted substantially from Decree Number 33.711, proclaimed in 1950, which required radio stations to broadcast all styles of national popular music up to 50 percent of its total programming. Owners of dance halls, theaters, clubs or any other setting where music was heard or interpreted were also obliged to respect this law. Within this framework, starting in 1951, numerous successful television programs emerged, presenting contests of Argentine popular and folkloric music. In the 1960s the first large festival was established at Cosquín (and has continued without interruption from 1961 to the present day). The publishing industry printed folklore magazines containing lessons on how to play the guitar and sing these genres, as well as interviews with national singers and authors.

A number of composers were attracted by the opportunities that Buenos Aires had to offer in terms of shows, radio stations, publishing and music recording companies, among them Edmundo P. Zaldívar who composed one of the most popular *carnavalitos*, 'El Humahuaqueño.' On the score, published in 1943, the name *carnavalito* appears in parenthesis and below it is written 'typical indio-creole dance' (a generic classification evoking the views held in the 1920s). Los Hermanos Ábalos, a group who remained artistically active during the 1950s, made the genre known in the United States, Japan and Europe. They created 'El quebradeño' (*carnavalito*) which was included in *La Guerra Gaucha* (1942), a historical drama marking a watershed moment for the Argentine film industry. This film, set in the northwestern province of Salta in 1817 and depicting the attempts by the *gauchos* to obtain independence from the crown, is significant because it represents the first example of a film based on historical events in Argentina, and was produced at a time when the Argentinian film industry was run by large international distributors. In addition, it is widely considered to be an outstanding cinematographic achievement.

During the 1960s folklore boom in Argentina distinguished musical and singing ensembles from Salta, Cuyo, Santiago del Estero and Buenos Aires created new lyrical or instrumental pieces. The 'Gloria' of the *Misa Criolla* (with music by Ariel Ramírez and lyrics by the priests Catena-Mayol and Segade) is a *carnavalito* born 'in accordance to the 1963 Papal Encyclical that established the use of regional languages in religious ceremonies' (Portorrico 1997). Its stylized and ostentatious aesthetic (for large chorus and authochtonous instruments and piano) reflects the nationalist ideology of the bourgeois, white, European and Catholic sectors. Widely seen as a masterpiece, it achieved worldwide circulation and was recorded in various languages by prestigious interpreters.

Most of the popular and anonymous verses in the public domain ('coplas populares') are sung in the *carnavalito* style. The mode of interpretation and the vocal expression are similar to those found in the *canto vallisto* or *canto con caja chayera*, another representative genre of the region. In recent versions of *carnavalitos*, saxophone and drums have been included, for example in the 'Huayno de la quebrada' by Raúl Olarte (a typical *carnavalito*, despite its title). The female group Las Electroautóctonas performs the traditional 'La vi por vez primera' (I saw Her for the First Time), by Justiniano Torres Aparicio (1906–92) as a *carnavalito* in the *kolla power* style with percussion, bass and electric guitar.

Conclusion

The *carnavalito* and its *coplas* summon the people without making class, social, ethnic, age or religious distinctions. A noteworthy characteristic of *carnavalito* is its ability to adapt to various periods and aesthetics, and to different social, economic and cultural settings. The rhythm of the *carnavalito* has transcended its ethnographic origins moving from the field of popular modern urban music to massive commercialization. In spite of its transformations, its rhythmic pattern remains as a unique and distinctive referent of Argentine nationality. The popular singer Mercedes Sosa has made famous worldwide a medley of *carnavalitos* that includes 'Pollerita colorada' (Little Red Skirt) (J. Espinosa), 'Carnavalito del duende' (Elfin Carnavalito) (Leguizamón-Castilla) and 'Pollerita' (Little Skirt) (Shaw Moreno). In addition, Jaime Torres, Raíces Incas, Tomás Lipán, Hilda Herrera, Los Tekis and Raúl Olarte have traveled to all continents, taking the *carnivalito* with them as an emblem of Latin America.

Catira and Cururu

Catira and *cururu* are musical genres from *caipira* culture, the rural culture of the Brazilian states of Goiás, the north of Minas Gerais and the interior of São Paulo, which, according to its adherents, is of indigenous, African and European origin. *Catira* is also known as *cateretê*. Records of both *catira* and *cururu* exist going back to the colonial period, and both have a place in modern *caipira* culture.

Catira is a dance performed by six to ten dancers dressed as cattle drovers or farm laborers, along with a pair of *viola* players. Originally performed by men only, in the modern era *catira* groups perform with both men and women and with only women. The accompanying *violeros* (viola players) also perform a vocal-instrumental genre called *moda de viola,* which alternates with the dance.

The dancers are arranged in two lines facing each other. A *viola* player/singer is positioned at one end of one of these lines, with his '*segunda*' (another *viola* player/singer, whose role is to complement the tune a third below or above) at the end of the other line. The *viola* player or players begin with the '*rasqueado*,' a playing technique in which the strings are '*rasgadas*,' that is, played all at the same time using a combination of strumming and stopping (Oliveira 2004). Specific rhythms are executed through this technique, which the dancers will follow with the '*escova*' (brush), a combination of tap dancing, hops and hand-claps. Then the singers come in with a *moda de viola*, on a variety of subjects in narrative style according to the norms of this autonomous musical genre. The song concluded, the musicians then repeat the *rasqueado*; the dancers repeat the foot-stamping, hand-clapping and hops. The dancers rest during the sung sections and listen for the return of the *rasqueado* signaling that they should begin dancing again.

Once the *moda* is over, the *catireiros* perform the '*serra abaixo*' figure, in which they form a circle and turn, alternating foot-stamping and hand-clapping and ending with the dancers in their original positions. The *catira* ends with the '*recortado*': the lines, headed by the musicians, switch places, do a half-turn and return to their original positions. At that point, everyone sings a song known as the '*levante*,' which varies from group to group. After the *recortado* the dancers repeat the foot-stamping, hand-clapping and hopping (Volpatto 2008).

The *cururu* is a kind of improvised poetic challenge from the middle region of the Tietê River in the state of São Paulo. The *cururu* also exists in the state of Mato Grosso, where the accompanying instrument is the *viola de cocho* (a type of lute), whereas in São Paulo it is the *viola caipira* and a *pandeiro* (a type of tambourine).

The term '*cururu*' is of Tupi origin and refers to a type of frog. While in the past the *cururu* was recorded as a type of dance, in the modern era the term refers to a kind of improvised song without dance. This shift, according to authors cited by Oliveira (2004), can be attributed to the urbanization of the *cururu*. According to Oliveira, a *cururu* singer is given the title of *canturião* or *canturino*, depending on experience, the latter term being in diminutive form. The *cururu* is in two parts: the *baixão*, which is comprised of a brief introduction with sextains or strophes with eight verses, and the *maião*, which is improvised.

DEISE LUCY OLIVEIRA MONTARDO (TRANSLATED BY FABIO CHADAD)

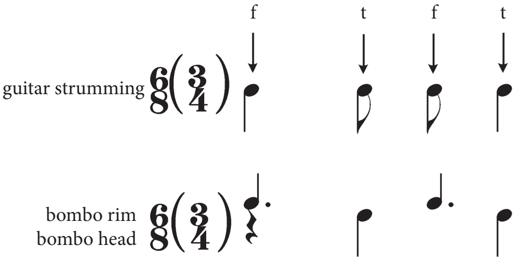
Chacarera

Chacarera is a song form with associated dance identified with the province of Santiago del Estero in the center/north-west of Argentina. Its origins are unclear: it emerges in the late nineteenth century in the west and north-west of the country. Within a group of genres that are widely taken to constitute Argentinian *folclore*, the *chacarera* has a nationwide popularity second only to that of the *zamba*. In the twentieth century it spread to the Bolivian Chaco (south/southeastern Bolivia), where it has developed its own variants. Moderately fast and with a simple choreography, *chacarera* has long been the most often danced type within *folclore*; nevertheless, it is more frequently performed simply as a song or instrumental piece.

Unlike the *zamba*, the form of *chacarera* lyrics is fully standardized: it consists of two sections (*primera* and *segunda*), each of which contains four octosyllabic quartets, the last one functioning as a refrain. Following the Spanish *romance* tradition, the second and fourth lines of each stanza are linked by assonant or consonant rhyme. Deviations from these norms are quite exceptional and tend to correspond to pieces whose music is also considered 'avant-garde' (e.g., 'Del 55' by Pepe and Gerardo Núñez). An accepted variant is the *chacarera doble*, with stanzas of six lines each, the last two of which may or may not function as a refrain.

The music of the standard *chacarera* consists of a single eight-measure period, repeated four times for each of the two sections. Before the first three stanzas of each section there is a simple instrumental prelude/interlude, traditionally also eight measures long and consisting of a measure-by-measure alternation of tonic and dominant; the refrain is attacked without a previous interlude. Rarely, the interludes are replaced by sung stanzas, with different music and extra lyrics (e.g., 'Campo afuera' [Out There] by Carlos di Fulvio).

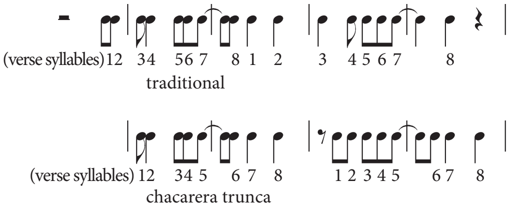
Example 1 shows the basic accompaniment pattern, usually embellished by a variety of subdivisions, short measured rolls, strumming effects and counterrhythms. In the older melodies, verses are paired so as to configure two phrases for each stanza. Since the music consists of a single stanza repeated seven times in a row, interest is focused on the text and on the rhythmic variants introduced in performance, usually including irregular values. The melodic profile is narrow, often only a fourth or a fifth; repeated notes and alternation between two neighbor notes predominate.



f: 3rd, 4th and 5th fingers (often damping simultaneously with palm);
t: thumb

Example 1: Basic accompaniment pattern for *chacarera*

Example 2 presents a typical rhythmic pattern for a pair of lines, showing the characteristic melodic anticipation of the strong beat; it includes also a standard pattern for the *chacarera trunca*, a subtype marked by phrase endings on the third beat (since most Spanish words are paroxytones, this means an accent on the second beat of the 3/4 measure). While the phrases of simple *chacareras* usually begin with one or two upbeat syllables, those of *truncas* begin on the first beat or on its second half.



(verse syllables) 12 34 56 7 8 1 2 3 4 5 6 7 8
traditional
(verse syllables) 12 34 5 6 7 8 1 2 3 4 5 6 7 8
chacarera trunca

Example 2: Melodic rhythms for a pair of verses in *chacarera*

Chacareras are often sung in an unassuming vocal style, bright and open, that contrasts with the darker and more rounded sound of *surero* (southern) folklore.

The *chacarera* is danced by male-female couples who may or may not be coordinated in pairs. With arms up and with finger snapping that reinforces the basic rhythm, the dancers follow a series of simple evolutions fixed in a standard choreography. During the sung stanzas, the male shows his abilities in *zapateo* (heel-and-toe tap dancing), while the female gently strolls around him, waving her skirt in *zarandeo*.

The *santiagueño chacarera*, which is especially associated with several families of musicians (Ábalos, Gómez Carrillo, Farías Gómez and Carabajal), is performed at a moderate speed and relies on what Vega (1988 [1944]) identified as the 'bi-modal' scale (for a full explanation, see the entry on *folclore*). It is based on lyrics mainly concerned with extolling the beauties of Santiago del Estero, *santiagueño* localities or customs (including the *chacarera* itself), or describing the longing of émigré *santiagueños* for their native land (because Santiago is a poor province, many seek their fortunes in large cities elsewhere). Quechua words and phrases are sometimes integrated into the Spanish texts. These folksy lyrics have also long since included irony and outright jokes. In the 1960s the comic element was developed into a second strain of *chacarera*, mostly stemming from the neighboring province of Córdoba (e.g., Chango Rodríguez), but also exploited by the Buenos Aires-born Rodolfo Zapata. These fast (seldom danced) songs, sometimes referring to current events or contrasting the idealized country folk to modern urban realities, abandoned the bi-modal setting in favor of simple major mode harmonizations. On the other hand, the rhythmic complexities of the genre made it a favorite for experiments with twentieth-century musical language; a famous piece in this vein is 'La oncena' (The Eleventh) (Eduardo Lago and Juan Goñi), in which each stanza ends on an augmented 11th.

In the 1990s, several decades after *folclore* had retreated from the mass media, the exuberant, poncho-swinging performances of Soledad Pastorutti (a teenager from Santa Fe province) and the pop aesthetics of Peteco Carabajal's shows (lighting and smoke effects, showy costumes, female chorus), in which he played and sang his fairly traditional *chacareras*, awakened a new wave of enthusiasm among teenagers and college students, who danced free versions of the traditional choreography in their night clubs. In a more conservative vein, Chaqueño Palavecino has extended the popularity of *chacarera* into the twenty-first century.

During the *folclore* boom of the 1960s chacareras were usually performed or recorded in a judicious mix with other genres (especially *zambas*); since the revival of the 1990s they have often been regarded as hegemonic or even exclusive. Titles such as 'El Chacarerazo' (the name of several shows and festivals in the 1990s and early 2000s, and of a compilation album by various performers), or 'La Chacarerata Santigueña' (the name of an ensemble) are witnesses to the popular appeal of the genre.

Chacarera in Bolivia

Chacarera in Bolivia is rooted in the Chaco Boreal, or northern Chaco, situated in the south/southeastern region of Bolivia. In that area the *chacarera* has become a marker of regional identity. The Bolivian part of the Gran Chaco, a large area divided between Argentina, Paraguay and Bolivia, is adjacent to the Argentinian border and the area is receptive to Argentinian culture, music and dances, especially in terms of the consumption of recordings and musical hits. The Argentinian influence on the region intensified in the 1990s with the rise of a new version of Argentinian *folclore*, led by artists such as Soledad, Los Nocheros and El Chaqueño Palavecino. Many musicians from the Bolivian Chaco responded to this influence and were able to enhance their careers by cultivating the music of the Chaco and the *chacarera*. The most important of these were Juan Enrique Jurado, Carlos Miguel 'El Negro' Palma, Yalo Cuéllar, El 'Chúcaro' Sandoval and Dalmiro Cuéllar. Because of these musicians, the Bolivian *chacarera* became popular throughout the rest of Bolivia, as well as in other countries. Equally important are the 'folkloric ballets' and dance troupes that have helped spark an interest in the *chacarera* dance in Bolivia's larger cities, especially among high school and university students. Also worth mentioning are Taricanto and Los Carahuatas del Pilcomayo, contemporary musical groups from the city of Tarija who specialize in *chacarera*.

The success of *chacarera* recordings in the 1990s and afterward has to some degree obscured the fact that the genre has a long history in the Bolivian south-east. In 1962, Argentine musicologist Carlos Vega wrote, 'There has been no indication that the *chacarera* exists outside Argentina. We did once hear of *chacarera* in Bolivia, but it turned out to be an incidental borrowing from Argentina' (1962, 64). In reality, however, that borrowing was not so incidental. *Chacareras*, *cuecas* and other danceable genres had long been habitually performed in the rural Chaco, using only a basic ensemble of *bombo* drum and violin. It took some time for the *chacarera* to reach the region's urban areas. In the early 1970s the guitar was introduced into the ensemble. Soloists such as Juan Enrique Jurado and groups such as Los Hilachas, Los de Algarrobilla and Los Siripis began to travel to the city of Cochabamba to record with Lauro Records. In 1972 Los 4 de Camiri won first place at the Cuarto Festival de la Canción Boliviana [Fourth Bolivian Song Festival] in Oruro. In 1978 in Yacuiba, Los Canarios del Chaco was formed, led by violinist Omar Baldivieso. With 12 albums over a 30-year career, this group contributed to the dissemination of Bolivian *chacarera*. The success of their recordings had an impact on the strengthening of collective identity in the Chaco, which has natural gas and has been the frequent target of political interests.

Chachachá

Chachachá (or *cha-cha-chá*) is a genre of dance music developed in Cuba in the mid-twentieth century. Its creation is often credited to a single individual – composer, violinist and orchestra director Enrique Jorrin – and although much of the literature on *chachachá* sustains this proposal, scholars have progressively challenged that view. In Cuba, where controversy about the authorship of *chachachá* occupied much space in the press for decades, Leonardo Acosta (2004) argued that it may be more accurate to consider the emergence of *chachachá* as a collective and gradual process in which several elements and personalities were involved, culminating in Jobin's contribution (see the chapter entitled 'Los inventores de nuevos ritmos: mito y realidad' [The Creators of New Rhythms: Myth and Reality]). Acosta's 2004 study partially agreed with the previous study of Dora Ileana Torres (1995) and the ongoing research of Ricardo Oropesa Fernandez (eventually completed in 2007 but unpublished) as to the collective origin of *chachachá*.

History

Chachachá was created and fleshed out within the *charanga* orchestras that played primarily in the halls of recreation societies (places where groups of people from particular social classes, trades or racial groups would gather to socialize with each other and to listen and dance to live music), such as Silver Star and Prado y Neptuno in Havana – names that were perpetuated in many *chachachá* compositions – reaching the dance halls some time later. Its source lies most obviously in the rhythmic scheme of *danzón de nuevo ritmo* (literally, 'danzón with a new rhythm'), a sound developed within the Orquesta Arcaño y Sus Maravillas by Arcaño and the Lopez siblings Israel, Coralia and Orestes in the 1940s, which also influenced the development of *mambo*. This type of *danzón* (for instance, 'Angoa' composed by Felix Reina) had the rhythmic figure played by the *güiro* (see Example 1 below) and other similar schemes that were later to characterize *chachachá* also.

The first *chachachá* is often said to be Jorrin's composition 'La engañadora' (The Deceiving Woman), composed sometime between 1949 and 1953 (when it was first recorded), though on the record label it is described as 'mambo-rumba.' Other claimants are songs by Ninon Mondejar, such as 'Yo no camino más' (I Don't Walk Any More) and 'La verde palma real' (The Royal Green Palm Tree), which were registered and described as *chachachás*.

All these compositions are significant markers in a development in which Jorrin was the most stable and persistent creator. What is certain is that in his early career Jorrin worked as a violinist for Arcaño's Orquesta, with its new and more rhythmically complex *danzón*, moving later to the Orquesta América. It was here that he worked together with Ninón Mondéjar, the leader and vocalist, and here too that he brought his previous experiences to bear in the creation of pieces that have come to be considered milestones of *chachachá*. The evolution of the genre can be traced in the modified *danzóns* which Jorrín composed, such as 'Silver Star' and 'Unión cienfueguera,' both of which were originally written as instrumentals during his time in the Orquesta de Arcaño y Sus Maravillas, and to which he later added lyrics, during his time in Orquesta América.

As to the name, the word 'chachachá' itself was already in everyday use before it was made 'official.' It is said to have been coined by Vicente Amores, promoter of dance music and owner of the dance hall in Havana located at the corner of Prado and Neptuno and leased to the Prado y Neptuno society. Mondéjar adopted the slogan 'Los creadores del chachachá' for the Orquesta before Jorrin proclaimed himself the sole creator of the new genre. The term is obviously onomatopoeic and seems to have come from the rhythmic pattern played by the *güiro* and the cowbell, from where it was adapted by dancers in their movements.

The heyday of the genre in the 1950s was achieved to a large extent through the success first of the Orquesta América and then of the Orquesta Jorrín, in playing for dances and on radio, and in the record sales of both ensembles. Cuban record companies such as Panart and Gema, and the US companies RCA Victor and Palladium included *chachachás* in their catalogues and distributed them in Cuba, the United States and across Latin America. In Latin America the movie industry contributed to the spread of its popularity by using *chachachá* pieces in movies such as *Mi noche de bodas*, *Amor y pecado*, *Club de señoritas* and *Las viudas del chachachá*, among others.

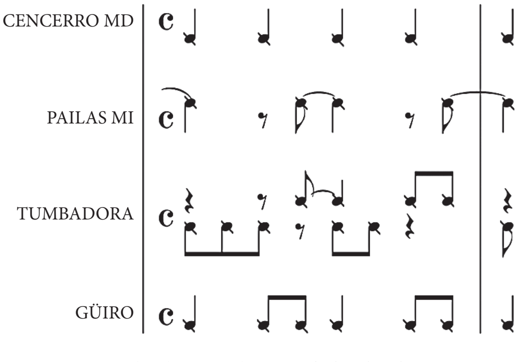
The Orquesta América and Orquesta Jorrín both traveled to Mexico between 1954 and 1958, where their music attained huge success, becoming the dance of the moment for a long time and being taken up by Mexican groups. Meanwhile, in Cuba these two orchestras were losing ground to Cienfuegos-based Orquesta Aragón, which took *chachachá* to its stylistic peak in the mid- to late 1950s, achieving a level of popularity never matched by any other Cuban *charangas*. This band, also called Los Estilistas del Cha Cha Chá, succeeded in creating a unique style through the musical arrangements and orchestration of its director Rafael Lay Apezteguía and its flute player Richard Egües. Alongside the Orquesta Aragón, important performers include the bands of Fajardo y sus Estrellas, Sensación and Sublime, among many others famous Cuban *charanga* ensembles. In dance music, performers such as Chucho Valdés, Juan Formell, Giraldo Piloto, Paulito FG, Issac Delgado and José Luis Cortés included *chachachás* in their creations.

During the 1950s the leading *chachachá* bands in the United States were those of Machito and His Afrocubans and José Curbelo, while in Puerto Rico those of Joe Loco and Pupi Campos and in Venezuela that of Aldemaro Romero were the most popular. In Chile, *chachachá* was widely performed by important bands such as Ritmo y Juventud, Los Peniques and Huambaly. Later, other bands whose repertoire belonged within the *nueva canción* (new song) movement, such as Quilapayún, made several *chachachá* protest songs such as 'No se para la cuestión' (The Thing Doesn't Stop) and 'Las ollitas' (The Little Pots) between 1968 and 1973. In Africa, bands such as Maravillas de Mali and Baobad imitated the style and repertoire of the Orquesta Aragón. In the international arena, the genre has appeared occasionally in the repertoire of Latin musicians such as Puerto Ricans Tito Puente and Gilberto Santa Rosa, Mexican-American Santana, Dominican Juan Luis Guerra and Panamanian Ruben Blades.

During its evolution, *chachachá* has interacted with other national and international genres, guaranteeing its continued presence in some form. The repertoire of Orquesta Aragón has included combinations with non-Cuban genres such as *tango*, and genres and dances from further afield such as Charleston, flamenco and, more recently, rap. The genre has served as a base for multiple genre combinations such as *bolero-cha*, *el danzón-cha*, *mambo-cha* and *son-cha*, developed by Cuban music groups. Since its heyday, *chachachá* has been used sporadically as an ingredient in the music of Cuban musicians. Sometimes it is used as a variation in their music or it has been adapted to the style of the group. In neither case have the compositions become hits.

Musical Characteristics

In the definitive configuration of *chachachá*, a specific 'march' prevails in which the bass plays a pattern in 4-beat measure. Elements of identity include the rhythmic pattern of the *güiro*, the *cencerro* (cowbell), the *pailas* (*timbales*) and the *tumbadora* or *conga* (see Example 1).



Example 1: Rhythmic scheme of *chachachá*

This pattern was so successful that it has been copied or imitated ever since by Cuban and international bands of different formats: from jazz bands to pop-rock and hip-hop groups to ensembles with an open format. The structure of *chachachá* varies, but the most recurring form consists of an introduction, two sections of singing (repeatable or not) and a final part resembling the *montuno*, usually repeating only one chorus line. The flute usually appears as a solo instrument in *chachachá* pieces. The lyrics typically take the form of a narrative and are often humorous, based around daily events and basic characteristics of human behavior.

In Cuba the *chachachá* is danced by couples, separately or together. The steps coincide with the rhythm of the *güiro* and cowbell.

Contemporary *Chachachá* in Cuba

In contemporary Cuban music *chachachá* has lost its earlier prominence in the dance music scene. However, elements of *chachachá* are frequently employed as a marker of identity, often mixed with pop-rock and hip-hop. Historically, these combinations have resulted from the juxtaposition (e.g., Orquesta Aragon's 'Guacharumba' [1999]) or superimposition (e.g., Orishas' 'A lo cubano' [1999]) of different genres. The most recent hybrid compositions may also incorporate this element as a form of intertextuality (López Cano 2005). Among the most outstanding early twenty-first-century composers of *chachachá*, the names of José Antonio Fajardo and Félix Reyna deserve a particular mention.

Conclusion

Since its introduction in the 1950s *chachachá* has occupied an important and constant place in Cuba. Aided by the record industry and media, which have both played important roles, it has demonstrated a capacity to adapt its sound to the most diverse discourses, venues and audiences and to insert itself into the processes of change that characterize popular music.

Chamamé

Chamamé is the traditional music and dance of the Argentine littoral. It is deeply rooted in the provinces of Corrientes, Formosa, Chaco, part of Santa Fé, Entre Ríos and Misiones. The genre's historical background is related to the process of cultural and folkloric integration of the geographic area shared by the Argentine north-east and the Republic of Paraguay. It is also found in Brazil in the states of Rio Grande do Sul, which borders Argentina, and more especially in Mato Grosso do Sul, which borders Paraguay.

In the 1930s this regional music spread into Capital Federal and Greater Buenos Aires in Argentina through Paraguayan music groups, whose members also participated in major popular music orchestras. At this time the music of the littoral region (Correntinean *polcas,* Paraguayan *polcas* and *valseados*) was negated by traditionalist groups that accepted only the Creole music of the Pampa, Cuyo and northcentral regions. Music of the littoral was also absent from recording catalogues. However, the industry recognized an opportunity to reinvent a repertoire that represented the region.

Visconti Vallejo (1977) and Emilio Portorrico (1997) affirm that *chamamé* originated in Buenos Aires in 1932 in an almost spontaneous way when the Paraguayan composer Samuel Aguayo was hired by RCA Víctor to record a theme intended to captivate the public in Corrientes, one of the largest markets for recordings. In this way the first *chamamé*, 'Corrientes Poty' (with music by Francisco Pracánico and lyrics by Novillo Quiroga), appeared on the national stage. Under the name *chamamé*, the recording industry began to spread a genre similar to that which had previously been known as the Correntinean *polca.*

Since 1950 the *chamamé* or Correntinean *polca* has spread more intensively across all the regions of the country through urban and media groups who profited from the intense migration of Correntinean and Paraguayan workers living in Buenos Aires. Then, *chamamé* was considered to represent low-income working sectors (farmhands, maids and construction workers), who experienced isolation in the metropolis because of their condition as immigrants, their ethnic and cultural affiliations, their Guaraní language and their dark-skinned features (for which they were called '*cabecitas negras*' or 'black heads').

It is evident that the mass media played a central role in the spread, acceptance and consumption of littoral music among the urban and 'learnt' sectors, although the media facilitated this process by manipulating public taste when it invented the name '*chamamé correntino*' in order to attract urban audiences to the 'new' genre. At the same time the new name carried derogatory connotations that reinforced urban attitudes about the genre's rural origins. *Chamamé,* in Guaraní, means 'improvised, or carelessly or wrongly done thing.' Osvaldo Sosa Cordero and Constante Aguer have argued against this denomination, publishing recordings of the genre under the name *litoraleña*, but the public has not embraced this alternative name.

Origin and Development of *Chamamé*

Theories about the origins of *chamamé* are diverse and respond to traditions, social imaginaries and political and commercial interests. One line of argument affirms that it is related to Creole music (including the Correntinean *polca*, the *rasguido doble* and the *valseado)* and other genres of European derivation that arrived in Río de la Plata beginning in the mid-nineteenth century, such as the schottische, the polka, the mazurca and the *habanera*.

Curiously, Marily Morales (1972) asserts that an orchestra of gypsies and Polish people introduced the polka in Paraguay at the end of the nineteenth century, where it adopted local rhythmic and melodic structures, spreading later over the border area of the Argentine littoral as a new cultural product. On the other hand, Enrique Piñeyro (2005) attributes the origins of *chamamé* to a mixed identity with contributions from Guaraní aboriginal culture and influences from the local courtly dances and music of the Compañía de Jesús missions that settled in the littoral for over a century and a half beginning in 1600.

Carlos Vega (1944) and Pérez Bugallo (1996) coincide in their claims that *chamamé* is the result of the ternarization (passage from binary to ternary rhythmic units) of the Correntinean *polca* that derives from the Paraguayan *polca* which in turn comes from the European polka. These authors explain how the European polka might have adopted the ternary rhythmic unit from the influence of the colonial Creole Peruvian repertoire which affected most of the dances that became folkloric with the combination of 6/8 and 3/4 measures. Cerruti (1963) believes that the change of rhythmic units is due to the technical requirements of Paraguayan harp techniques.

Musical Characteristics, Performance Styles and Thematic Material

The genre includes different styles. The *chamamé cangï* is slower and more cadenced, while the *chamamé* 'maceta' or *kyre'ỹ* is livelier, with the emphasis placed on the rhythm. Traditional *chamamé*s were played with accompaniment by the one-row accordion and guitar. Later, the two-row accordion, *bandoneón* (German button accordion) and double bass were incorporated. Instrumental interpretation features the use of melodic themes played with arpeggios, with quick jumps and intervals of eighths, tenths and sixths with *grupetos* and *mordents* as ornaments.

The 'dragged' sonority typical of the bellows instruments imprinted a distinctive feature onto the genre. This expressive character is imitated by the sung cries at phrase endings. In the same way the interlaced couple dance alternates swinging steps of the *polca* style with some sinuous, slow or 'dragged' steps.

The male vocal duet is prevalent in the traditional style, with shrill *falseteo* vocal timbre. According to Perez Bugallo (1996, 126) the *chamameceros* copied this modality from Cuyano singing brought to Buenos Aires around 1910, which was also adopted and disseminated by the duo Gardel-Razzano.

After the first chords, verses or (*glosas*) are recited, connecting ideas that evoke Correntinean identity, such as references to the liberator San Martín, the Virgin of Itatí, the landscape and rural labors. The tradition is linked to a remote past, where a sacralized aspect of the Guaraní culture converges with the warrior aspect, reflected in the daring and prolonged shout called *sapucai* that is an obligatory part of the *chamamé* performance. Musicians who have enhanced the genre and played a fundamental part in the ritual include Tránsito Cocomarola, Constante Aguer, Ernesto Montiel, Isaco Abitbol, Damasio Esquivel, Chamorro, Antonio Tarragó Ros, Cuarteto Santa Ana, Monchito Merlo, Miño, Maciel, Maria Elena, Ramona Galarza and music groups such as Los de Imaguaré and Ivotí.

The Renovators of *Chamamé*

In the 1960s a hybrid and more poetically elaborate variant of the *chamamé* song appeared. Older themes that had focused on bucolic evocation and the farming life of an idealized past changed in the 1980s when the compositions of León Gieco, Antonio Tarragó Ros and Teresa Parodi became popular. These new compositions addressed the subjects of the continuous littoral floods, exploitation and the vicissitudes experienced by the Correntinean immigrants in the great cities.

Antonio Tarragó Ros recorded with the ensemble La Banda Pueblera in 1984, revitalizing the genre with arrangements that incorporate electric bass, keyboards, drums, saxophone, trumpet and trombone. This prolific composer and respected performer produces television series, mass recitals and educational videos that are freely distributed at schools in order to contribute to the national and international diffusion of *chamamé*. In the 1990s another renewal took place when groups such as Los Alonsitos and Amboé not only incorporated saxophone and electronic drums, but also embraced urban topics that were bound up with young people's codes, fusing *chamamé* with rock or *candombe* elements. On the other side of the spectrum, Chango Spasiuk aims at a more stylized and virtuosic accordion style, creating ensembles with Peruvian *cajones* (box drums), drumsets with African-derived percussion (African drums, *tumbadoras* and rattles with seeds) and amplified violin. Residing in Europe, the duo formed by Rudi and Niní Flores, along with Raúl Barboza, have become the *chamamé* ambassadors. These musicians have developed the performance technique and explored the compositional language with musicians of *tango* and academic music fields, as exemplified by recordings such as Barboza and Alter Quintet's *Dos Orillas* (2008).

Chamamé is a genre in continuous process of transformation and it constitutes a fundamental aspect of Correntinean identity. Among *chamameceros* who have devoted their lives to the genre, performance embodies a reverential character. Just as in the past the Corrientes *polca* was danced at children's funeral ceremonies (*velorios de angelitos*), it continues to form part of community religious belief, frequently associated with the popular cult of the Gauchito Gil. Pablo Cirio (1997–2000) documented performance of *chamamé* in the context of the popular cult of San Balthazar in Empedrado (Corrientes), along with *charanda* and the *cumbia*. In the cities of the interior and of greater Buenos Aires, in the 1990s, *chamamés* are incorporated into the suburban dance venues known as '*bailantas*,' along with other genres including the *cuarteto cordobés*.

Chamamé in Brazil

In Brazil, the repertory of *chamamé* became popular first in the state of Rio Grande do Sul, and by the end of the 1960s *gaucho* migrants brought it to the state of Mato Grosso do Sul, bordering Paraguay. One of the most important musicians responsible for incorporating *chamamé* in Mato Grosso do Sul was accordionist Zé Corrêa (1945–74), nicknamed 'The king of chamamé' ('O rei do chamamé'), whose parents were born in the '*missionera*' region of Rio Grande do Sul (bordering northwestern Argentina). The *chamamé*'s structural similarity with Paraguayan genres such as *polca* and *guarânia* enabled its rapid assimilation by the neighboring population of Mato Grosso do Sul, where it is also designated by the name of *rasqueado*. In the early twenty-first century *chamamé* is considered one of the principal musical genres that characterize the cultural identity of Mato Grosso do Sul and songs such as 'Merceditas' (Ramón Sixto Ríos) and 'Kilometro once' (composed by Constante Aguer and Tránsito Cocomarola) are among the most popular.

Seeking to maintain the traditions of *chamamé correntino* without negating the Paraguayan *polca*, *rasqueado* and *gaucho* genres such as *vaneira* and *xote*, musicians of Mato Grosso do Sul such as Dino Rocha, Elinho do Bandoneon, Maciel Corrêa and Marcelo Loureiro have excelled as composers and performers of *chamamé* in Brazil and have maintained intense exchanges with the *chamamezeira* scene in Argentina.

Efforts to institutionalize the *chamamé* as local patrimony include the creation of the Cultural Center of the Chamamé of Campo Grande in 2008, the establishment of Chamamé Day (19 September) by the government of the state of Mato Grosso do Sul in 2009 and the organization of the 1o. Encontro de Chamamé do Pantanal (First Meeting of Chamamé in Pantanal) in the town of Miranda and the First Festival of Chamamé of Mato Grosso do Sul in Rio Brilhante in 2011. In Campo Grande, the Capital FM radio station presents the weekly program 'The Hour of *Chamamé*' which, in addition to *chamamés*, also presents Paraguayan *polcas*, *guarânias* and *rasqueados*.

Chamarrita/Chimarrita

Chamarrita (also known by other variants, such as *shimarrita* in Uruguay and, especially, *chimarrita* in Brazil) is a song-and-dance form for independently embraced couples, common to the sea coast and northeast region of Argentina, Uruguay and the south of Brazil. Popular in the nineteenth century, it declined in usage during the twentieth, and in the present day found mainly in the re-enactments and in the repertoire of those involved in southern Brazilian *musica gauchesca* festivals.

Various research has established that the origins of the genre are linked to immigrant groups from the Azores Islands of Portugal who initiated the settlement of the present state of Rio Grande do Sul in Brazil in the eighteenth century. From there it became popular and spread through Santa Catarina, Paraná, São Paulo, and also to Uruguay and the Corrientes and Entre Rios provinces of the Argentine Mesopotamia region. In Brazil in the nineteenth century, *chimaritta* was known as one of the *fandango* dances, a specific term that, in the states of Rio Grande do Sul, Santa Catarina, Paraná and São Paulo (located in the south and in part of the southeast regions of the country) nominates a set of traditional circle dances and mixes, in a more general sense, with the idea of a popular dance (Béhague 1995, 237).

Pinpointing the establishment, starting points and points of diffusion for these kinds of music-dance genres is a difficult and sometimes controversial task (Béhague 1995, 235). (One well-known *chimarrita* mentions its place of birth as Argentina ['Os Monarcas' 1996].) What seems certain, however, is that in Rio Grande do Sul, the popularity of *chimarrita* and other *fandango* dances among different social classes was evident by the second half of the nineteenth century (Lucas 1990, 211–12). Musically speaking, Lucas notes the following characteristics: 'Duple meter, two contrasting 8-bar phrases, corresponding to the text organization stanza/refrain. The melodic line is based on the reiteration of the rhythmic figure dotted 8th16th and/or 8th–two 16th. The accompaniment figures are two 8th notes8th–rest' (1990, 224–5).

Coriún Aharionian (2005, 340) observes that in the nineteenth century in Uruguay the *chimarrita* bears a close resemblance to the form of *milonga* that was being developed for use in dance, being, however, 'more clearly binary' in meter. Lauro Ayestarán affirmed that in Uruguay at the end of the nineteenth century, the *chamarrita* '… was danced with the step of the polka as a holding-embracing couple dance' (1967, 142). In Argentina, where it was also given the names of '*chamarra*' or '*chimarra*,' it reached its highest point of popularity around the beginning of the twentieth century, from which point it began a slow decline, as corroborated by the field research of musicologist Carlos Vega in Entre Rios and Corrientes between 1940 and 1950 where, among the numerous songs and dances he recorded, only two were *chamarritas*, obtaining also very imprecise data on its choreography. From the 1960s on, the *chamarrita* was reactivated in Entre Rios, thanks to the effort of a group of nativist poets and musicians such as Linares Cardozo, the Cuestas brothers and Santos Tala, seeking to transform it into a representative musical genre of the province. Commercial recordings containing *chamarritas* were produced in Argentina in the 1960s and 1970s. Worth mentioning among these first recordings is the LP *Canto a Entre Ríos* (1974) with compositions by Linares Cardozo and interpretations by Los Hermanos Cuestas Brothers, of which the most notable is 'Chamarrita del Chupín.' From that moment, the Cuestas became the main promoters of the *chamarrita* through their radio, TV and musical festival appearances and their numerous recordings. Something similar happened in Uruguay where the main promoter of the genre was the composer Anibal Sampayo.

In Argentina, comparisons between the ancient and recent *chamarritas* compiled by Vega have revealed differences in their peculiarities. The earliest are in the major mode, in 6/8 time signature, and comprise an introduction and a section of eight bars sung in octosyllabic quartets with consonant rhymes between the second and fourth lines accompanied by a guitar. The more recent ones, in a slower tempo, share their musical characteristics with the binary polka and its basic accompaniment formula with the *milonga*.

In the early twenty-first century the choreographed form lacks popular currency in the three countries. When its appears in re-enactments by dance ensembles in theatrical shows or screen projections, these ensembles develop very free and varied choreographic patterns, including free-moving couples, hand-clapping, foot-stamping and tapping. It is executed today on the accordion and guitars to which in Brazil the harmonica is often added, but the *chamarrita* is mainly a vocal genre with guitar accompaniment. The content of the texts, Portuguese in Brazil and a Spanish-Portuguese dialect on the Uruguay-Brazil border and Spanish in the rest of Uruguay and Argentina, has frequently a comedic or satirical character, but it also includes romantic and *costumbrista* elements descriptive of local themes and landscapes.

Especially in the south of Brazil the genre is present nowadays in the repertoire of music groups whose performances are directed at the festivals of *música gauchesca/nativista*, and recordings made for these events. The *viola* (a type of guitar with 10 strings, less used nowadays in the southern region of the country, and more common in the north-east), known as the most traditional instrument in *chimarrita*'s accompaniment and other *fandango* dances, is often substituted in these new contexts for the common instrumentation of these groups, which includes accordion, acoustic and/or electric guitar, bass, drums and keyboards. Rhythmical variations on the accompaniment described by Lucas (1990) are not uncommon, with a tendency to use dotted rhythmic figures in the bass lines.

HÉCTOR LUÍS GOYENA (TRANSLATED BY ZUZANA PICK)
AND LUÍS FERNANDO HERING COELHO

Chamego/Xamego

Chamego, also spelled *xamego* (both pronounced in the same way), is closely associated with the accordionist from the north-east of Brazil, Luiz Gonzaga, who introduced the music to Rio de Janeiro, then Brazil's capital city, in 1941. It may be considered a 'satellite' genre of *baião*, a major genre from the same part of the country (Tapajós 1995, 4). The instrumental accordion piece 'Vira e mexe' (Turn and Shake, 1941), described on the 1941 recording as 'chamego,' opened the musical world of Rio de Janeiro to Gonzaga, a skilled accordionist who had a mastery of many popular repertoires of the day.

The *Novo Dicionário Eletrônico Aurélio* provides several definitions of the word '*chamego*' – which is derived from the word '*chama*,' meaning flame – including excitation for libidinous acts, close friendship, intense passion, courtship, excitation, any act that reveals haste or precipitation and (in the state of Maranhão) attraction, seduction. When lyrics (by Miguel Lima) were added to 'Vira e mexe' in the 1944 version, the lexicographical meaning became more focused, signifying a high level of sensuality and libido. In this version, described on the record as a *samba* song and featuring the voice of Carmen Costa, the instrumental accompaniment was under the charge of a Conjunto Regional (Regional Group) – as the chamber groups of popular music in the south-east were then called – in a manner typical of the *choro* ensemble, consisting mainly of a nylon-string guitar, ukulele, mandolin and tambourine. Into this group Gonzaga inserted his accordion as the solo instrument.

The invention of *chamego* is a good example of Luiz Gonzaga's bold approach to maintaining his leadership with the media and the listening public. According to Dreyfus (1996, 89) Gonzaga 'would manage to impose a repertoire ..., and as if that weren't enough, he would even invent a new musical genre without paying much attention to recording companies' (author's translation). In Dreyfus's view, '*chamego/ xamego* never existed and, even today, it is not registered anywhere, not even in popular memory. In fact, 'Vira e mexe' was a *chorinho*-style song' (ibid.). As choro/ *chorinho* and *baiao* are closely related, because of the resemblance of *baiao*'s rhythmic-melodic design to that of *chorinho*, *chamego/xamego* could be considered as a variation of *baião.*

Nevertheless, *chamego/xamego* did establish a representative recorded repertoire not only under its own name but also as *samba-chamego, choro, choro-chamego* and even *catimbó* (a type of African ritual). This was a consequence of the reciprocal influence that occurred between the musical repertories that were in vogue at the nightclubs of Rio de Janeiro and those coming from the Brazilian North-east, a process in which different modalities of genres and musical styles were mingled, with no clear-cut boundaries between them.

In the early twenty-first century *chamego/xamego* is essentially a music for dancing, especially in the north-east of Brazil. It is present in the repertoire of *forró* bands, where it is given spicy, *double entendre*-laden lyrics, and its performance is marked by contagious rhythmic patterns that insinuate great intimacy among dance partners.

ELBA BRAGA RAMALHO

Champeta

In the context of Afro-Colombian Spanish, the word 'champeta' literally means a long and wide knife, the kind often used in violent incidents among hoodlums frequenting a seaport district. Within a certain social context – Caribbean Colombia's upper and middle-class sectors – the word also designates something coarse, cheap or unpolished, lacking prestige or social currency, usually associated with Afro-Colombian segments of the population. Correspondingly, the term *champetudo* or *champetúo* describes individuals associated with this aesthetics or the corresponding musical context. In the Colombian music scene, *champeta* is a musical genre born in the slums of the northern port city of Cartagena de Indias that began to gain visibility during the early 1980s. Also known as 'terapia criolla' (literally, Creole therapy, given its 'soothing,' 'curative' quality), it is a synthesized sound blending rap, raggamuffin and a series of African beats such as Congolese *soukous*, South African *mbaqanga*, Cameroonian *makossa*, Nigerian *juju* and Ghanaian highlife. Most of this music arrived in Cartagena as a result of trade with distant seaports throughout the Caribbean and the west coast of Africa, empowering musical fusion and experimentation. While sailors brought these musical genres along from their journeys, Afro-Colombian working-class DJs did most of the mixing, popularizing the music as an autochthonous cultural expression.

Initially, *champeta* developed as a very marginal cultural practice, outside of the mainstream of Colombian music. The music was played using *picós* (Spanish for pickups), huge sound systems favored for dances in the working-class neighborhoods of Colombia's Caribbean ports such as Barranquilla, Cartagena and Santa Marta. Along the way, it integrated additional influences: in particular, music from Haiti and Trinidad, such as *konpa* or soca. *Champeta* lyrics are strongly influenced by native dialects of Afro-Colombian Spanish and archaic forms of Bantu from communities such as San Basilio de Palenque, a former settlement of slaves near Cartagena. In musical terms, some of its trademark features are a throbbing bass and a penchant for electric guitar and percussion solos; in fact, *champeta* sounds more like Trinidadian soca or calypso than any other Colombian genre, given its steady, cheerful beat. Throughout the 1980s the audience for *champeta* grew, helped by its strong presence and participation in Cartagena's Festivales de Música del Caribe (Festivals of Caribbean Music). To begin with, most *champeta* recordings were produced and distributed by small independent labels. In 1998 Palenque Records, an independent label started by Lucas Silva to popularize this music, released *Champeta criolla Vol. 1*, the first *champeta* record released outside the Caribbean. After the turn of the century, given general interest in the genre, several *champetúos* (the name for *champeta* performers) signed contracts with major national and international labels. Some of its main bands are Son Palenque (led by Justo Valdez), Anne Swing (led by Viviano Torres) and Kussima (led by Hernando Hernández). An exclusively male cast of performers includes Cándido Pérez, Elio 'Boom' Corrales, Álvaro 'El Bárbaro' Almario, Melchor 'El Cruel' Pérez, Sayayín, 'El Afinaíto' and Mr Black.

As a result of its fiercely working-class, Afro-Colombian origin, *champeta* has suffered since its early days from an association on the part of the upper and middle classes with what they consider an illicit lifestyle. Backlash against the genre, supported to a substantial degree by various public institutions, has been race- and class-oriented. In 1999 the mayor of Malambo, a small town near Barranquilla, prohibited *champeta* during carnival festivities, arguing that the music transmitted 'subliminal messages to consumers and dancers, transforming them into violent and aggressive persons' (*El Tiempo*). Soon afterward, voices from Bogotá, such as Enrique Santos, owner and columnist of *El Tiempo*, Colombia's main national newspaper, emerged in support of this measure, claiming to defend more traditional genres, such as *porro* and *cumbia*. In his newspaper columns, Santos labeled *champeta* 'mediocre and dull' and condemned it as symptomatic of cultural degradation and foreign contamination. In the same year, Cartagena's authorities began confiscating sound systems, arguing that they caused noise pollution; the measure was the first of a lengthy streak of actions against the *champeta* music scene. In 2000 Cartagena's administration outlawed the use of *picós* for four months. Simultaneously, cultural institutions and several key political figures – among them, Araceli Morales López, Colombia's Minister of Culture – came out in defense of the genre. Unlike the local technocrats, Morales López, a native of Cartagena, and her fellow supporters of *champeta* incarnated a more enlightened, festive attitude toward the cultural production of marginal Afro-Colombian musicians. The first massive concert exclusively dedicated to *champeta* was held at Cartagena's Plaza de la Aduana, with 20,000 participants. In 2001, when *champeta* began to gain international renown, thanks to its distribution in the United Kingdom and Europe, more equipment was confiscated and authorities implemented the so-called Plan Picó, seeking to tone down popular festivities during the month of November. In the same year the first *champeta* video was broadcast on Latin American music networks, and commercial demand from Mexico, Venezuela and the United States became evident. Meanwhile, local authorities mandated the rationing of *champeta*: at dance halls, *champeta* was forcibly played alongside other genres such as *merengue* or *vallenato*, in the hope of moderating its popularity. By 2002, just as the music sparked wider interest in Europe, national demand for *champeta* declined. As a result of a generally hostile environment and widespread stigmatization, radio airplay diminished and, despite releasing new compilations, record labels such as Codiscos and Sony Music began treating *champeta* as a passing trend; some even claimed its demise. Nevertheless, *champeta* producers introduced artistic contests, seeking new talent and a generational renovation. Although at the national level interest in *champeta* decreased, within Cartagena's local context – and various urban neighborhoods of Colombia's Caribbean coast – *champeta* has continued to embody a thriving, lively cultural scene, nourished by its European following. Overall, the experience of *champeta* exemplifies the impact of repressive measures and narrowly conceived cultural policies over an impoverished segment of the Colombian population.

Chanchada

Chanchada is a genre of musical film comedy that was very popular in Brazil between the late 1940s and the 1980s. Up to about 1960 it was a very important Brazilian film genre, being seen by all sectors of society. It also formed the basis of a cinema industry in the country, providing the *Atlântida*, the biggest Brazilian movie studio in the 1940s and 1950s, with its principal product. Around 1960, with the emergence of *cinema novo* (New Cinema) – a movement for the renewal of Brazilian cinema, influenced by the European avant-garde – and with the rise of TV, the *chanchada* lost its place as an entertainment for all areas of society. Thereafter, it became associated with the poorest sectors and was viewed with consequent prejudice by others.

The structure of *chanchada* echoed older forms of entertainment, such as minstrel shows, vaudeville and revue, which had been popular in Brazil since the nineteenth century. During its 40-year history, one of the main characteristics of *chanchada* was its simple narrative, which was developed chiefly in burlesque comedies. In the popular usage, the term has the connotation of a poor thing or something in bad taste. The characters were caricatures: the unfaithful wife, the good husband she has betrayed, the unscrupulous lover, the humble redneck, among others. It was common to parody US movies: for example, Cecil B. Mille's *Samson and Delilah* (1949) became *Nem Sansão, nem Dalila* (Neither Samson nor Delilah). The directors of the more important *chanchadas* included Watson Macedo, Luís Barros, Moacir Fenelon, Wallace Downey and José Carlos Burle.

The *chanchada* played an important role in Brazilian popular music history. In the late 1940s and 1950s the typical structure of a *chanchada* was a sequence of dramatic scenes and musical numbers. Many great names in Brazilian popular music performed in *chanchadas* between 1947 and 1959, among them Carmem Miranda, Luiz Gonzaga, Jackson do Pandeiro, Ataulfo Alves, Orlando Silva, Mário Reis and Linda Batista. In the 1960s, as television became more important to the way popular music was produced and consumed, the musical element of *chanchada* was reduced and *chanchadas* in effect became film comedies.

The historiography of Brazilian cinema (Ramos 1990; Paiva 1989; Augusto 1989; Tinhorão 1972) points to the movie *Este mundo é um pandeiro* (This World Is a Tambourine), produced in 1947, as the first Brazilian *chanchada*. The cast included singers Ciro Monteiro, Bob Nelson, Alvarenga and Ranchinho, Nelson Gonçalves and Emilinha Borba. This movie consecrated the form in which comedy and music were mixed.

The music in *chanchadas* reflected the different popular musical genres of the time, including *samba*, *marchinha*, *baião*, *samba-canção* and *música sertaneja*, among others. In their heyday, *chanchadas* were used to launch songs for the next Carnival.

Changüí

Changüí is a music and dance genre primarily performed in the city of Guantánamo, Cuba and throughout the rural regions of the province such as Yateras, Manuel Tames, El Salvador and Las Cidras, among many others. To a lesser extent, the genre is also performed in the areas of Holguín and in the Santiago de Cuba province, both of which are close to Guantánamo and were once part of the greater Oriente (Eastern Cuba) province. The word *changüí* derives from the Congolese word *quisangüí*, meaning to jump or dance with joy. In contemporary usage, the word *changüí* refers to a party or social gathering where *changüí* is performed and danced to while roasted pigs, chickens, rice and beans, and rum are served. Historically, these events could last for weeks between Christmas Eve and Three Kings Day (6 January). Locals also refer to these events as *cumbancha*, *parranda*, *rompía*, *bachata* and *rumba* among other terms. The word *changüí* can also imply deception or trickery. In the past, Cuban scholars such as Olavo Alén, Danilo Orozco, Jesús Gómez Cairo and Leonardo Acosta considered *changüí* to be a variant of Cuba's national genre, the *son*, but this view has been modified due to the genre's many specific performance, choreography, composition and organological expectations that are unique identifying characteristics and that differentiate it from *son*.

Origins

Guantánamo, and the greater region of Oriente (Eastern Cuba), were the site of mass migration from throughout the Caribbean beginning with the Haitian revolution in the eighteenth century. In addition, the region saw extensive migration from the English Caribbean with a constant back and forth flow beginning in 1902 that coincided with the construction of the US Naval Base and the expansion of the sugar industry and the need for more laborers after the end of slavery. Hence *changüí* and its related genres reflect Afro-Haitian and English-Caribbean musical influences. Several families have been active culture bearers in the *changüí* scene and their heritage reflects the aforementioned history. Important musicians are from the families Latamblé, Odio, Speck, Jay, Creagh, Durand and others.

The earliest written references to the genre occur in colonial accounts from the mid-nineteenth century. One account from the Ten Years War (1868–78) indicates that a rebel commander, Policarpo Pineda, was caught and taken prisoner while dancing to *changüí.*

Musical, Dance and Lyrical Characteristics

In current practice, *changüí* is performed with the Cuban *tres* (a guitar-like traditional instrument tuned gG-cc-Ee or up a whole step, aA-dd-F#f#), the *marímbula* (a large lamellophone of Bantu origin), a metal scraper called a *guayo*, a pair of *maracas* and the *bongó de monte* (country *bongó*) that is deeper in pitch than a *bongó* with metal tuning lugs due to its construction and the manner in which the skins are tacked onto the resonating chambers. The musicians playing the *guayo*, *bongó* and *tres* also serve as the vocal chorus; the lead vocal part can be sung by any of these three with the chorus rendered by the remaining two musicians. In current practice, ensembles have added more vocalists. In the nineteenth century and early twentieth century, prior to the adoption of the *marímbula*, blowing into a clay jug provided bass tones. Also at this time, a single-headed *bokú* drum was used rather than the *bongó de monte*, and the lead vocalist was almost always the *tresero* (tres player).

Certain stylistic characteristics are typical of the form and playing approach that is identified with *changüí*. A *changüí* song traditionally begins with the *llamada de montuno* played by the *tres* followed by the collective entrance and the main body of the song. Then, the lead vocalist improvises every other *montuno* (refrain) with choral response. This is followed by a *tres* solo and a return to the vocal improvisation and choral refrain. The ensemble ends with a long decrescendo. Extended vocal improvisations may occur at any point. During the musical climax of the piece, the *bongosero* sometimes increases his or her activity during the *tres* solo. Finally, in modern practice, the ensemble may end the piece with a complicated rhythmic and vocal ending called *cierre*.

An overview of the roles of specific musical instruments in the performance of *changüi* provides insight regarding the complex layering of syncopated rhythmic patterns that characterizes this genre and separates it from other Cuban styles such as the *son*. The music is highly syncopated and both the musicians and dancers accentuate upbeats in their parts. The five-stroke two-measure pattern called *clave* – the rhythmic basis for all phrasing in *rumba*, *son* and related genres of Cuban music – is strikingly absent as an organizing principle in *changüi.*

The *tres* begins each piece with the two cycles of the *llamada al montuno* (the melody of the choral refrain without the lyrics) before the rest of ensemble enters. Almost every note that the *tres* plays is an upbeat. The *tres* plays arpeggios known as *pasos de calle* between each new line of a melody. The *bongocero* always enters with a five-stroke roll and then improvises throughout the performance, only returning to a steady pattern between improvised musical ideas. During the *tres* solo, the *bongocero* plays a steady pattern with a *bramido* (glissando or rubbing the finger across the drum head) on beat 4. In current practice, the *tres* player and b*ongocero* improvise simultaneously in a type of musical duel. The *guayo* and *maracas* play the downbeat of beats 1 and 3, but the consecutive eighth notes on beats 2 and 4 render a triplet feel to the music. Immediately before the *bongocero* executes the five-stroke roll, the *guayo* or *maracas* player shouts to alert the ensemble of the impending entry. The *marímbula* mostly executes a steady pattern that accents beats 2, 4 and the second eighth note of beat 4, while slapping the face of the instrument to add rhythmic counterpoint on beats 1 and 3. However, the *marímbula* also improvises with triplet figures and even converses musically with the *bongocero*. Traditionally, the vocal line follows the *tres* part note for note in unison, but in current practice Grupo Changüí de Guantánamo and other groups harmonize voices with each other and with the *tre*s. In addition to the obligatory vocal improvisations between each cycle of the choral refrain, vocalists often sing extended improvisations called *reginas* that are based on either *coplas* (ABBA) or *décimas* (ABBAACCDDC). Extended improvisations between vocalists are called *controversias.*

When couples dance to *changüí* music, they typically step with the *marímbula* following the pattern left-right-left, right-left-right. Usually, dancers shift their weight without allowing their feet to leave the ground, but this is not always the case in rural styles and variants. All turns are executed below the shoulders and in many ways the steps are similar to those observed in the *mason* of the *tumba francesa*. *Bongocero*s mark the steps of the dancers with drum hits or vice versa.

Changüí song lyrics often recount the events at parties where legendary musicians battled one another. Some songs address the genre itself, its peculiarities and demands, while others memorialize musicians through *homenajes* (homages), local historical events, romantic entreaties and, on rare occasions, politics.

Diffusion

As a result of the expansion of the sugar industry after 1898, roughly 500,000 Haitians and large numbers of Jamaicans and other West Indians came to Cuba. Many also worked on the US Naval Base in Guantánamo starting in 1902. Since the work was seasonal, many returned home to their islands either when forcibly repatriated or of their own volition. The instruments used in *changüí* were given new contexts in Haiti and Jamaica and thus contributed to the development of *twoubadou* and *mento*. In the Palenque region of Colombia, the presence of Cuban Orientales in the local sugar industry has been well documented as having contributed to the development of local Colombian *sextetos*.

Elio Revé Matos and Lilí Martínez Griñan are the two individual musicians who had the greatest international impact on the diffusion of *changüí* throughout the world. Lilí Martínez Griñan was a pianist, composer and arranger who incorporated *changüí* and *nengón tres* parts into his playing and composing. Some of his best-known songs discuss local musicians and specific places in the Guantánamo region. Beginning in the 1930s, before joining Arsenio Rodríguez in Havana, Martínez performed regularly on the radio station CMKS with his group Los Champions. Rodríguez used Martínez's compositions and arrangements, and performed and recorded throughout the Americas. Once Rodríguez left for the United States, Felix Chappottin continued to use Martínez and his music in his international appearances and recordings, as did Estrellas de Chocolate and other important national groups.

Elio Revé left Guantánamo in 1955 and began his Havana-based group in 1956. He adapted the characteristic patterns of the *changüí bongó de monte* to the *paila* (Creole timpani or *timbales*) and sang about Guantánamo in numerous hits of the 1950s and 1960s. His success was largely due to the combination of a constant influx of new musical talent into the lineup of his band and the group's reputation for playing great dance music. Proud of his Guantánamo roots, Revé continued to record and produce hits, even covering classic pieces from the traditional *changüí* repertoire such as 'Fiesta en Cecilia.' His untimely death in 1997 brought the band under the direction of his son Elito, who has continued to make the band one of the most popular in the island and abroad. Recent recordings and videos have featured collaborations with Estrellas Campesinas and other traditional *changüí* groups. At the bi-annual national *changüí* festival, Orquesta Revé performs in La Loma Del Chivo, an important historic neighborhood for *changüiseros*.

Founded in 1945, Grupo Changüí de Guantanamo is the principal standard-bearing performing group for the genre. They continue to perform nationally and throughout the world and they have released numerous recordings. Estrellas Campesinas is another important group that often represents the more rustic style of *changüí* from the mountains of Yateras. Juan Formell and Los Van Van recorded the best-known *changüí*, 'El Guararey de la Pastora' [Pastora's Grudge], written by the *changüí* composer Roberto Bauta Segarra, bringing the song to dancers around the world since the 1970s.

Cuban rap group Madera Limpia has incorporated *changüí* into their vision of hip-hop. Musical groups beyond Cuba such as Jane Bunnet, Sonido Isleño, Ray Barretto, Poncho Sanchez and others continue to record *changüí*.

Charanga

Charanga refers to both a Cuban dance music ensemble and the music performed by this ensemble, though given the general promiscuity with which early twenty-first-century *charanga* ensembles embrace a wide variety of dance genres, the latter designation is generally far too broad to be informative (see Murphy 1991, 125). The original *charanga* ensemble configuration – the *charanga francesa* – appeared at the end of the nineteenth century and typically consisted of the five-holed wooden flute, violin(s), piano, contrabass, timbales and güiro. Contemporary ensembles (such as Ritmo Oriental) augment this instrumentation, adding voices, *tumbadoras* (congas), cowbell and at times viola or violoncello, features of the ensemble that began to take hold after the 1920s. The changing instrumental configuration of the *charanga* over the years is inextricably connected to the formal and stylistic shifts in the dance genres performed by the ensemble.

The *Orquesta Típica*

Although the violins and flute remain emblematic of the *charanga* ensemble, scholarship on its origins points to the nineteenth-century Cuban *orquesta típica*, in which neither instrument could be said to appear with any consistency. The nineteenth-century Cuban *orquesta típica* was primarily comprised of the clarinet, cornet, trombone, baritone horn, contrabass, *güiro* and timpani, the latter gradually replaced by the *paila* (timbales). Though some ensembles, such as Los Hermanos Barani of Matanzas, performed with an ensemble of as many as twenty-two members (León 1974, 246), the *orquesta típica* was essentially a streamlined wind ensemble (Orovio 2004) of between seven and ten players, well suited to performing in the salon settings of nineteenth-century Cuba.

In the first half of the nineteenth century, the baritone horn (*bombardín*), a valved instrument, was not likely included in the ensemble, or was preceded by one of its 'keyed' relatives. Though the earliest appearance of the valved baritone horn in Europe remains an issue of historical contention, Adolph Sax's patent appeared in 1843, suggesting that the baritone was, at least for Cuban ensembles, more likely a phenomenon of the second half of the nineteenth century. Though unrelated to the baritone, it is plausible that in some cases the ophicleide (*figle*) was used (and had some lasting appeal, appearing alongside the baritone in the later *típica* orchestras such as those of Miguel Failde, Enrique Peña and La Flor de Cuba). In addition to the ophicleide, other instruments were at times added to the orchestra, a pair of violins and/or a second clarinet being the more frequent choices.

The *contradanza*, the preeminent dance music of early nineteenth-century Cuba, soon evolved into the internationally influential *danza* (*habanera*) (Gadles 1988, 37), and then the *danzón*. Crucial to this development was a performance practice within the orchestra that was associated with the rhythmic sensibilities of Afro-cuban musicians, which is not surprising since musicians of African descent were most often employed in these ensembles (Carpentier 1988, 128). The inherent syncopation of the *cinquillo* rhythm (2:1:2:1:2; m. 1 of Example 1 below) and the isorhythm of the *baqueteo* on the timbales (Example 1) – which extends the *cinquillo* by a second measure and subsumes the Cuban *son clave* rhythm (Example 2 below) – were gradually brought to the fore in the compositions and performance practice of nineteenth-century Cuba, reaching an apex in the *danzón*.

Odilio Urfé (1984, 179) has suggested that the *cinquillo* is a direct vestige of the *tumba francesa* of Cuba's Afro-Haitian communities. However, given the independent and overwhelmingly ubiquitous presence of this rhythm throughout other Afro-Cuban musical traditions and the larger circum-Caribbean region, the idea that the diffusion of this rhythm came from a single sociocultural source is rather facile, in spite of its obvious presence in the Haitian-Cuban repertoires. Though these rhythmic cells are also evident in the melodies of the *danzón* repertoire, it was their percussive delivery on the *güiro* and the *timbales* – by late century having replaced the timpani – that injected an undeniable Cuban sensibility into the century-long musical trajectory of the *contradanza* and ensured the *güiro* and *timbales* a continued presence within the *charanga francesa*, despite the instrumental changes that were to displace the *orquesta típica*.

The *Danzón* and the *Charanga Francesa*

It was not until the end of the nineteenth century and two decades after Miguel Failde's 'Las Alturas de Simpson' (1879) – circumspectly accepted as the first *danzón* – that the *charanga francesa* began to take hold as the ensemble of choice for the popular dance genre. The adjective 'francesa' is a twofold reference. It links the ensemble to the French *contredanse* and to the distinct French cultural heritage in the eastern regions of Cuba, where such dance forms were maintained among the Haitian-Cuban population. The initial waves of Haitian immigrants to Cuba during the Haitian Revolution (1791–1804) were predominantly French colonists and creoles settling in the eastern region of Cuba to re-establish their sugar-growing plantations. With them came the French *contredanse*, and in fact, many of its dance formations, where lines of men and women are set up in opposing fashion, appear in modified forms within secular dances such as the *mason* that were established in Cuba by Afro-Haitian immigrants (Gadles 1988, 13–35; Witmer 1995).

The *danzón* brought about an end to the gendered line formations of the earlier Cuban *contradanza* in favor of a couple dance, which was in turn accompanied by changes to the musical form. The repeated binary form (AA^1-BB^1) of the earlier styles was extended with additional musical materials that were introduced in a different multistrain form, in this case a repeated rondo form (AA^1-BB^1-AA^2-CC^1 etc.). It would, however, be misleading to ignore the fact that many musical changes in nineteenth-century Cuba, instead of being initiated by strictly musical concerns, were in response to innovations in dance repertoires or changes in the musical tastes of the public, such as paying tips to band leaders to extend the musical forms for more dance time (León 1974, 256).

By the close of the nineteenth century the *charanga francesa* was on its way to becoming the preferred ensemble of the *danzón*, Cuba's *de facto* national dance of the period. The wind bands carried on well into the twentieth century, and though many of these ensembles, like that of *danzón* composer José Urfé (1879–1957), introduced changes to the *danzón* (especially the *montuno* section borrowed from *son*), the *orquesta típica*'s days were numbered. In no small part due to the increasing social stratification of Cuban society over the course of the nineteenth century (León 1974, 235), the *charanga* gained in popularity among the middle and upper classes both for the gentrified regard it brought to the social setting and its more genteel sound, which foregrounded the wooden flute,

Example 1: The accented notes of the *baqueteo* rhythm

Example 2: The *clave*

violin(s) and piano. The more decorous sounds of this new *danzón* orchestra became a musical ideal for an emerging elite in the new Cuban Republic, shored up by composers such as Antonio María Romeu, who favored both the *charanga* orchestra and anticolonial themes in his titles. Paradoxically, the *charanga* exuded a more 'European' performance practice just as Cuba sought to shed its Spanish colonial mantle.

The *charanga* also became the perfect foil for the social discord that would soon arise in response to the immensely popular *son*. The more African-sounding *son* figuratively burst in on the waves of Cuban radio after 1921. For some members of Cuba's elite, the *son* was seen as a marker of not only musical, but social, miscegenation and was to be rejected in favor of the more European-sounding, European-looking *charanga* '*francesa*,' in spite of the very mixed cultural heritage of its musical mainstay, the *danzón*. Ironically, this fear of miscegenation was intimately linked to the pervasive fear among Cuba's nineteenth-century elite that they too could 'fall victim' to a 'black' revolution akin to what had occurred in Haiti in 1804, and yet, the Haitian musical and cultural presence in Cuba was called into service in gentrifying the 'French' *charanga*.

The *Charanga* in the Age of *Son*

Since the 1920s the *son* has never really left the forefront of Cuban dance music, even constituting the musical base of nearly every contemporary *charanga* (Murphy 1991). Nonetheless, crucial stylistic innovations in Cuban and Cuban-derived musics continued to appear throughout the twentieth century, instigated by some of the finest and most creative proponents of the *charanga* tradition. Aniceto Díaz, with his composition 'Rompiendo la rutina' (Breaking the Routine 1929), achieved a minor renaissance of the *charanga* in the face of the rising popularity of *son*. The composition was the first *danzonete*, and it formalized a final vocal section that was added to the *danzón* – including an *estribillo* (*montuno*) borrowed from the *son* – which was followed by a short coda. Up until the *danzonete*, the introduction of a final vocal section to the form had only been an incidental feature of the *danzón*, part of what León refers to as the genre's 'decadent course' (1974, 264), and one that had been more popular in published sheet music of *danzones* written for the piano. The Díaz composition was the first instance in which the *charanga* ensemble instituted a vocal dance genre as part of its repertoire, and 2–3 voices were eventually added to the standard *charanga* instrumentation of many ensembles, a feature that is commonplace at the beginning of the twenty-first century. This final sung section of the *danzonete* drew attention to a lead singer, as opposed to instrumental soloists, and often featured an *accelerando* to introduce the *estribillo*, alluding to the more rapid *guaracha*.

Undoubtedly, one of the most significant *charangas* of Cuba's radio heyday was the ensemble of flautist Antonio Arcaño (1911–94). Founded in 1937, the 'Maravillas,' the name of Arcaño's ensemble, gained its fame as a radio orchestra, boasting one of the largest string sections of any *charanga*, including viola and cellos. Their 1938 performance of 'Mambo,' a *danzón* composition by cellist-pianist Orestes López (brother of bassist Israel 'Cachao' López), sparked the *mambo* dance genre (see Waxer 1994), the success of which was driven by the introduction of the *tumbadoras* and the cowbell (mounted on the timbales) into the *charanga* ensemble. Like the *danzonete*, the López composition was an extended form of the *danzón*, only this time with the adjoined 'mambo.' According to Arcaño, due to the limited recording time of the 78-rpm records (2m 45s), the tune was not recorded until 1951 (Salazar 2001).

Though the *charangas* were initially rejuvenated by the new genre, the *mambo* soon took on a life of its own, distinct from the *danzón* and dominated both in Cuba and on the international scene (particularly Mexico and the United States) by the popular big bands of the 1940s and 1950s. Yet, in spite of the common link between *mambo* and the big bands in the public imagination, Arcaño's orchestra continues to be remembered as one of the finest *charangas* of all time (Salazar 2001), particularly for Arcaño's own virtuosity and members such as the López brothers, Felix Reina (1921–98) and José Fajardo (1919–91), who later came to replace the ailing leader as flautist.

The 1950s saw the introduction of another *charanga*-based dance genre, the *chachachá*. Stylistically a clear progeny of the *danzón*, the genesis of the *chachachá* is often exclusively attributed to violinist Enrique Jorrín (b. 1926), an alumnus of Arcaño's orchestra, who started the dance craze with his composition 'La engañadora' (The Beguiling Woman 1951). Though his work with the *charanga* Orquesta América in the 1950s helped popularize the genre, the formal space allotted to the flute improvisations and its more relaxed tempi made the *chachachá* an ideal vehicle for many of Cuba's flute virtuosos of the 1950s. Not least among these were José Fajardo (y sus Estrellas) and Richard Egües (1926–2006) of Orquesta Aragón, which became one of the leading proponents of the new genre under the musical direction of violinist Rafael Lay, Sr.

Though the post-revolutionary period in Cuba has been marked by a rather diminished flow of musical interchange with the United States, the *pachanga* seemed to be the last musical style to really straddle both sides of this fissure. First composed by Eduardo Davidson (1929–94) and arranged by Richard Egües in 1959, 'La pachanga' was an instant hit in Cuba for the Orquesta Sublime under the direction of flautist Melquiades Fundora. Interestingly, the musicians themselves introduced the new dance steps while performing on stage – a novelty at the time for a *charanga* ensemble that subsequently became commonplace in *charanga* performances.

José Fajardo also covered Davidson's 'La pachanga' with Panart in 1961, and then again with Columbia (ES-1769) the following year. (Fajardo resided in the United States after 1961.) The *pachanga* had, however, reached New York's South Bronx before Fajardo. By 1961 pianist Charlie Palmieri had already formed his *charanga* 'La Duboney,' which featured flautist Johnny Pacheco (co-founder of Fania Records). La Duboney successfully entered the New York scene as a novel ensemble (vis-à-vis the Latin big bands of 1950s New York) and with a newly minted *pachanga* LP (Alegre 1961). The *pachanga* has often been written out of the *charanga* musical lineage (see León 1974), likely due to the rather short-lived nature of the dance fad and the eroded link between the *pachanga* and the *charanga* ensemble: 'pachanga' was quickly inserted into the song titles performed by various other ensemble types so as to eclipse the original connection to the *charanga*.

Conclusion

The twenty-first-century *charanga* can be both hard to define as an ensemble type and even more difficult to assess in terms of a shared musical language. Certainly traditional *charanga* ensemble types – foregrounding the flute soloist and string sections – are heard both in Cuba (Orquesta Aragón, Ritmo Oriental) and in North America (Hansel y Raúl, Orquesta Broadway, Jesús Alejandro 'El Niño'); however, they generally perform an eclectic variety of Cuban dance musics mostly driven by *chachachá* and *son*-influenced compositions, and performed in a more traditional or *típico* (typical) style (Murphy 1991). In addition to these contemporary *charanga* ensembles, however, are groups with a more idiosyncratic instrumentation such as Los Van Van which includes the percussion instruments of *son* (maracas, *bongó*), drumset, keyboards and a horn section.

As dance ensembles expand their instrumentation and musical offerings, it is perhaps timely to reconsider what defines the *charanga* at the beginning of the twenty-first century. For example, the name La Charanga Habanera would seem to indicate a clear musical intention, yet this Cuban ensemble, as reconceived under the direction of David Calzado (formerly with Ritmo Oriental) after 1997, is anything but a *charanga* in its repertoire or instrumentation. And, Los Van Van, with its violin *and* trombone sections, has clearly distinguished itself outside the traditional dance genres associated with the *charanga*, being one of the major proponents of *son*, *songo* and *timba* since 1969. Though it would be contentious, for example, to propose that Los Van Van is a *charanga*, it is fair to say that the *charanga* legacy, which director Juan Formell received during his early years with Orquesta Reve, is not entirely lost within its corpus of recordings. It is what musicologist Argeliers León referred to as a 'type of potpourri' (1974, 275) that has made the *charanga*'s musical lineage rather untidy in post-revolutionary Cuba, supporting the notion that 'nothing hybridizes more readily than dance music' (Van der Merwe 2004, 232). Perhaps it is an inevitable result of repeatedly adapting the *charanga* in order to assimilate the many styles derived from the popular Cuban *son*, which continue to divert audience attention away from the tradition of mid-twentieth-century dance genres – *mambo*, *chachachá*, *pachanga* – that somewhat defined the *charanga*. In the end, this flexibility may in fact be the most 'stable' feature of the *charanga* both as an ensemble type and as a musical style.

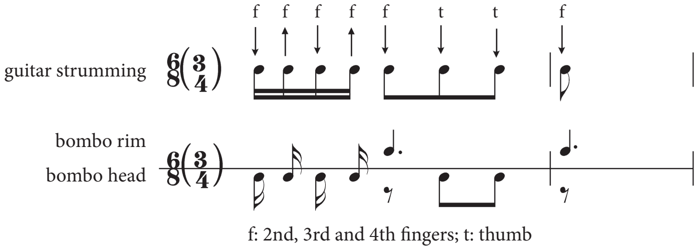
Chaya/Vidala Chayera

Chaya or *vidala chayera* is a song form considered typical of La Rioja province in the Andean north-west of Argentina, where it is one of the main attractions of the annual *Fiesta de la chaya* during Mardi Gras (*Carnaval*) week in the capital city of La Rioja, as well as featuring in similar celebrations in other cities and towns. The *Fiesta de la chaya* is of pre-Columbian origin and involves thousands of people dancing, singing and throwing water, flour and basil at each other (in Quechua, '*ch'allay*' means to splash with liquor, as an offering to Mother Earth). It includes traditional rural singers, amateur and professional *folclore* performers, as well as other, more modern, popular dances.

The *vidala chayera* is one among many different traditional genres performed at these celebrations, but is the one that has gained widest currency in the media and spurred new compositions in urban, media-transmitted *folclore*. La Rioja-born composers and performers, such as Chito Zeballos and Ramón Navarro (father and son), have especially favored the genre, but perhaps the most popular exemplar is 'Vidala de la copla,' by the Córdoba-based 'Chango' Rodríguez. Most soloists and ensembles within the *folclore* field have included a few *chayas* in their repertoires.

The lyrics vary in their constitution, but each stanza very frequently begins (and sometimes ends) with an octosyllabic line, whereas the central lines are shorter, mostly hexasyllabic. The music tends to treat these shorter lines as brief, repeated melodic cells that stress the highest notes in the register and quickly descend. The *vidala chayera*'s hemiola-marked rhythms are lively and crisp, but (so say traditionalists) should not be rushed: a metronome tempo of about 60 dotted quarter notes per minute is preferred by specialists, while performers from outside La Rioja often perform it much faster. Its accompaniment and melodic gestures are akin to the *cueca* of the neighboring Cuyo region. Professional soloists and groups tend to accompany it with guitar strumming and *bombo*, a tubular drum (see Example 1); those who practice *fusión* add to the basic complement keyboards, electric bass, etc.



Example 1: Standard accompaniment pattern for *chaya*

Topical references to *Carnaval* and its rites are frequent in the lyrics; although other *chayas* deal with wholly different subjects (love, poverty, landscape), the genre has not been found suitable to express the circumstances of modern urban life or use its language.

LEONARDO WAISMAN

Chicha

The term *chicha* is generally applied to a style drawing upon Peruvian *huayno* music, Colombian *cumbia*, and occasionally other Caribbean or Andean idioms, performed using electric instrumentation and 'tropical' percussion. Also commonly called *cumbia andina* ('Andean cumbia'), it was a distinct cultural manifestation largely created by and for members of Lima's growing Andean migrant community, beginning in the 1960s. It achieved national prominence in the 1970s, with a second local scene developing in the highland city of Huancayo, but it has remained closely associated with the phenomenon of Andean migration to the capital. At the beginning of the twenty-first century, the word 'chicha' has come to denote aspects of migrant culture more generally, though this usage is usually disparaging. *Chicha* music peaked in popularity and public profile around the middle of the 1980s, but in the early twenty-first century it still attracted a large audience, and new groups continued to appear alongside artists who established their careers decades ago. Key elements of *chicha* instrumentation and performance style have also been adopted by contemporary artists in other stylistic fields, most notably *huayno* music.

In its heyday the style was interpreted by many scholars and journalists as a symbol expressing the new social identity of Andean migrants in Lima. This interpretation rested upon its blend of rural-Andean and urban-cosmopolitan elements, and also a corpus of song lyrics describing the marginal social milieu of the migrant community. Such commentators often argued that the style's hybridity, with its ludic adaptation of local and foreign sounds, made it both a vehicle for migrant social integration and an effective example of popular cultural resistance to globalizing homogeneity. Others, especially musicians and intellectuals involved with traditional Andean music and other 'folkloric' endeavors, instead interpreted the style as a direct threat to Peruvian cultural integrity. From this point of view, *chicha* was a prime example of the way that the transnational media and the commercial marketplace had contributed to the cultural alienation of migrant youth, encouraging an aspirational identification with trendier global idioms instead of local roots.

In part because of such debates, an exact definition of *chicha* is difficult to come by. There is some disagreement about whether *chicha* and earlier, uniquely Peruvian versions of *cumbia*, should be conceptualized as distinct musics, or instead as a unified stylistic group that attained a new name in the 1970s, with the term 'chicha' being retroactively applied to these earlier *cumbia* styles. These disagreements are heavily inflected by ideological factors. Lima's non-Andean residents saw the city change drastically and rapidly under the pressures of Andean migration, especially after mid-century. The city's infrastructure was quickly overwhelmed, and a largely ostracized migrant community was forced to innovate new lives using the detritus of the established order. Rough, improvised dwellings occupying unused land, 'informal' street vendors often selling pirated merchandise, public transportation relying upon battered and outdated vehicles and other results of improvisatory survival strategies irrevocably changed the face of the city. In the public sphere, *chicha* was seized upon as an emblem of all that Lima's elites perceived as crass, lowbrow and cheap about an emergent migrant culture. For this reason, using or avoiding the term in the twenty-first century often indicates a political stance. Some musicians and commentators prefer to describe all Peruvian *cumbia*-based music as '*chicha*,' in a politically motivated desire to assert the creative validity of the Andean migrant identity associated with the term. Others prefer to reserve the label 'chicha' for certain subvariants of Peruvian *cumbia* (or '*música tropical*'), in order to separate their own music and their identities from the word's undesirable associations. Whether or not a version of Peruvian *cumbia* that draws more self-consciously on Andean traditions should reasonably be separated from earlier *cumbia*, and described as 'chicha' proper, is thus more of a sociopolitical than a musical issue.

While this entry will focus largely on Peru, it should be noted that *chicha* has been either avidly adopted or stylistically influential in some other South American countries, including Ecuador (discussed below), Bolivia and Argentina, where the style has influenced the local *cumbia villera*. Some bands from these countries, notably Bolivia's Los Ronisch and Argentina's Ráfaga, have also become popular among Peruvian *chicha* fans.

The Development of Chicha

The roots of *chicha* date to the late 1960s. Colombian *cumbia* had become popular throughout Peru in the early years of the decade, and was quickly assimilated into the repertoire of urban *música tropical* combos, as well as traditional rural ensembles. By 1963 Andean artists such as Los Pacharacos had created a local variant by performing *huayno* tunes over *cumbia* rhythms, using a Central Andean ensemble of saxophones, clarinets and harp. Close on the heels of this 'Andean' *cumbia*, a distinctive 'coastal' style emerged in Lima, associated with musician Enrique Delgado and his group Los Destellos. In a 1968 recording, Los Destellos pioneered an innovative sound that retained the melodic style, rhythmic base and other key structural elements of Colombian *cumbia*. However, electric guitars, played with a clean tone and noticeable reverb, replaced Colombian *cumbia*'s brass and winds as lead melodic instruments, performing over a foundation of bass, organ and mixed percussion. Also in the late 1960s a third variant emerged in the cities of the Amazonian region, associated with artists such as Juaneco y su Combo and Los Mirlos. This '*cumbia selvática*' ('jungle *cumbia*') was similar in most ways to the coastal version. It was differentiated mainly by references to Amazonian customs and culture in song lyrics and band members' attire, on the one hand, and by a lively, often raucous performance style, on the other.

Such music became immensely popular among second-generation migrant youths in Lima, and it continued to retain a primary identification with young consumers into the twenty-first century. Commentators have suggested that it appealed to young listeners precisely because, as an 'international' music that was not closely tied to highland roots, it offered a new symbol of identification that was less stigmatized than traditional Andean *huayno*. While artists did not initially present themselves as the creators of a distinct local genre, a terminological shift from '*cumbia*' to '*chicha*' took place over the late 1960s and early 1970s, and appeared to mark an emerging generation of Andean-influenced *cumbia* artists as different from their forebears. The term, denoting an Andean corn beer, was drawn from a 1965 record entitled 'La chichera' (The Chicha Seller) by Los Demonios del Mantaro, a group who performed in the 'Andean *cumbia*' style. By the early 1970s 'chicha' had been adopted as a colloquialism for distinctly Peruvian styles of *cumbia* in general, though in this usage the term tended to include artists whose careers and styles predated its existence. The connection between 'Andean' and earlier, coastal styles of *cumbia* was only reinforced in the early 1970s, when Los Destellos joined Los Demonios in playing *cumbia* versions of Andean tunes, in their uniquely 'coastal' instrumental format.

Perceiving the growing popularity of *chicha* music, Peru's large record companies began to record it in the 1970s, and soon smaller specialized record companies, such as the influential label Horóscopo, emerged as well. In the peripheral sectors where Lima's migrant communities tended to reside, large open-air venues called *chichódromos* conducted a booming business presenting artists for the migrant public, setting up in parking lots, circus tents and any other available space. By the early 1980s *chicha* was so prominent that many radio stations devoted to traditional Andean music had converted primarily to *chicha* broadcasting, with Radio Inca emerging as the leading channel of dissemination. Over the same period, *chicha*'s 'Andean' variant emerged as the clear front-runner in terms of popularity, and performers increasingly adapted themselves to this style. It achieved its peak with the two groups that are retrospectively recognized as *chicha*'s greatest exponents, Los Shapis del Perú and Chacalón y la Nueva Crema.

Chacalón (Lorenzo Palacios Quispe), a cosmetologist and tailor whose distinct vocal delivery was heavily influenced by the plaintive style of *huayno* music, began his singing career in 1977. Eventually nicknamed 'El faraón de la cumbia' (The Pharaoh of Cumbia), something of his popularity can be gleaned from the fact that his 1994 funeral was attended by a reported 20,000 people. His personal and musical style marked a new tendency in the development of *chicha*, with its confident assertion of a distinct and valuable migrant identity. Adorning his imposing physique in flamboyant clothing, sporting long hair and gold chains, and singing frankly about the combative resilience of migrant ingenuity, his '*migrante achorado*' ('uppity migrant') stance was fervently admired by his legions of fans. It was equally reviled by others, especially elitist commentators, who described it as 'aggressive,' and often dubiously attributed a growing link between *chicha* music, hooliganism and gang activity to the model provided by Chacalón's onstage persona.

Los Shapis, by contrast, embodied a more conciliatory thread within the *chicha* stylistic field. This group emerged initially in the Andean city of Huancayo in 1981, illustrating the extent to which *chicha* had spread beyond the immediate precincts of Lima. Initially following Los Destellos in terms of their sound, Los Shapis have recorded well over 20 LPs. They began with the explicit goal of chronicling, and singing for, Lima's poor and marginal, and became the country's most popular *chicha* group by the mid-1980s. At this time, they were able to draw crowds of over 10,000 on a regular basis, and after a performance in Lima's soccer stadium they were invited to represent Peru at a World Youth Festival in France in 1986.

By the mid-1980s *chicha* was so popular, and *chicha* artists so influential, that they were recruited for campaigns by politicians such as presidential contender Alán García, in an attempt to draw votes from Peru's working classes. At the same time, however, the decreasing cost of studio equipment, combined with the financial success of *chicha* musicians, facilitated the establishment of small independents by the artists themselves. While such studios allowed artists greater control over their recordings and their finances, they soon glutted the market with *chicha* records, even as multinational companies began aggressively to market *salsa romántica*, *balada* and other pan-Latin American styles within Peru. Entrepreneurs began to create more media-friendly *chicha* bands, putting together slicker, more 'professional' and market-friendly groups. A certain homogeneity began to take hold, as recordings were largely realized with the same set of studio players. As a result of all of these factors, the style is usually held to have lost its initial impetus, and it had declined significantly in popularity by the early 1990s. While groups have continued to work since then, stylistic change within the *chicha* scene itself has been minimal. Most artists desirous of musical innovation have moved into the related, but somewhat distinct, *tecnocumbia* market, and many left for other countries over the 1990s. Argentina, in particular, with its comparatively strong economy and a large migrant population hailing from Bolivia and Peru, attracted many *chicha* performers and impresarios, who contributed significantly to the development of the *cumbia villera* style in and around Buenos Aires.

Musical Structure and Style

In Peru, the label '*chicha*' is often casually applied to a variety of musics made with electronic instruments and targeting a working-class audience, but the style of Los Shapis and Chacalón is most widely recognized as prototypical of *chicha* per se. In overall structure, tunes are often modeled on traditional *huayno* music from the Peruvian highlands. Nearly all of the following formal properties pertain to *huayno*, and early *chicha* artists often simply set traditional *huaynos* to the unique instrumentation and rhythmic accompaniment of Peruvian *cumbia*. Such is the case, for example, with Los Shapis' 1982 hit 'El aguajal' (The Swamp), a light reworking of the huayno 'El alizal.'

Such songs are in either strophic or simple verse-chorus forms, and verses are most commonly structured, both melodically and textually, in an AABB form (or a simple variant such as AABC). Performances often end with a short, distinct section, slightly elevated in terms of tempo and rate of harmonic change, recalling the *fuga* section of *huayno* performances. Melodies are predominantly pentatonic, and usually imply an alternation between major and minor modes, with basic harmonies closely following the melody line. This modal ambivalence, a defining trait of Andean popular music more generally, is particularly evident at the termination of 'B' sections within verses, where the first iteration generally ends on the major tonic, and the second on the tonic of the relative minor. Though all songs are in a simple binary rhythm, melodies are generally highly syncopated. They are set syllabically, with very little use of melisma, and they are occasionally harmonized, especially during choruses. Finally, singing style tends toward the vocally tense and somewhat plaintive interpretation prominent among Andean mestizo performers of *huayno* music.

Though this description fits the bulk of the output of Los Shapis, and other *chicha* artists with a conspicuously 'Andean' orientation, many *chicha* songs are more obviously indebted to Afro-Cuban melodic principles, harmonic structures and singing styles. Many of the greatest hits of Chacalón y la Nueva Crema, such as 'Soy provinciano' (I'm a Migrant Kid), feature irregular verse structures, rely upon a simple alternation between tonic and dominant harmonies, use the full diatonic scale, or frequently feature call-and-response between Chacalón and his chorus.

In terms of instrumentation, *chicha* music is so dominated by the sound of two electric guitars, often augmented by the use of wah-wah effects, that this timbre has become the genre's key sonic signifier. Recordings usually feature guitar introductions and instrumental interludes between verses, ranging from short fills to long, verse-length passages: guitars also provide countermelodies, often elaborate, during sung verses and choruses. The basic instrumental texture is rounded out by electric bass, electric organ or synthesizer and percussion, generally including some combination of *timbales*, congas, cowbell and *güiro*. Synthesized sounds, at times recalling video game sound effects, and at others recalling Andean instruments such as pan flutes, appear frequently in recordings from the 1980s. Bass and percussion instruments usually play the same role in *chicha* as in Colombian *cumbia*. Bass lines emphasize the strong beats of a binary rhythmic pattern, while percussion instruments perform either the eighth-and-two-sixteenth pattern common to both *cumbia* and *huayno*, or else play simple rhythmic patterns in 2/4 time. Complex polyrhythm is virtually nonexistent, though there is occasional use of features derived from Caribbean musics, such as passages recalling *salsa montunos*.

Within Peru, *chicha* lyrics are distinctive for their prosaic and colloquial language, which contrasts starkly with both the highly figurative language of much *huayno* music and the refined expressivity of coastal *criollo* music. Commentators have often highlighted the content of *chicha* music in their efforts to argue for its social importance. Despite the fact that the vast majority of songs deal with themes of love and heartbreak, in a highly pessimistic vein (particularly in the work of Chacalón), a certain portion has also treated the problems of the migrant community. Issues of racism, marginalization and poverty are raised in songs such as Chacalón's 'Soy provinciano,' Los Shapis' 'El mundo de los pobres' (The World of the Poor) and their 'Ambulante soy' (I'm a Street Vendor). However, the attitude expressed in such songs is rarely one of outright condemnation: instead most such songs affirm the desire to overcome societal limitations through hard work and perseverance.

Finally, the style of dancing performed by *chicha* audiences has by custom been fairly subdued, consisting mostly of light shuffling of the feet. It features very little movement in the upper body and arms, in contrast to other 'tropical' styles, and no rhythmic stamping of the feet (*zapateo*), in contrast to *huayno* music. However, *chicha* artists were noteworthy for introducing a distinctive mode of spectacle into their presentations. Sporting matching costumes in garish, often fluorescent colors, which were repeated in logos and advertising, bands performed coordinated but simple moves onstage. These elements have become a key part of *chicha* stylistics.

Conclusion

Though it has seen a notable retreat from the Peruvian public sphere, *chicha* never disappeared. Moreover, it has significantly influenced both traditional *huayno* music and later *tecnocumbia* music. The style was and is widely reviled by much of Peru's bourgeoisie due to its perceived vulgarity, as well as its perceived links to violent and criminal behavior, widely understood to be endemic at performances for the country's lower classes. However, it generated significant interest among certain sectors of the intelligentsia, who saw in it a new kind of urban folklore, and a key to investigating rapid social change. As the first mass culture form tied to an emerging social group, such commentators often hailed it as embodying the creativity of the dispossessed. Peru's traditional left remained less enthusiastic, seeing in *chicha*'s ethos of hard work, and chronicling of efforts to escape poverty through labor, a fatalistic and disempowering acceptance of the capitalist status quo. In 2006 it was thrust back into the mainstream by the broadcast of a *telenovela* (soap opera) treating the life and legacy of Chacalón, who has become something of a folk saint. As of 2008 the style seems to be on the road to a nostalgic pseudo-institutionalization, perhaps reflecting the long-overdue mainstreaming of Lima's Andean migrant majority within the national imagination.

Ecuadorian *Chicha*

Although Ecuadorian and Peruvian *música chicha* share a name, they have different sounds, imageries and meanings. In Ecuador the terms '*música chicha*,' '*música chichera*' and '*música nacional bailable*' denote modern renditions of national music genres such as the *sanjuanito*, *yumbo* and the *pasacalle*. The label points to many types of music considered low-class and associated with the indigenous population. It emerged in the 1970s with the massive migrations of indigenous peasants to the city, which were caused by the effects of the 1964 Agrarian Reform. Since the 2000s *música chicha* has been refashioned with arrangements that include electronic instruments and remixed sounds. Some *chicha* songs are recycled *sanjuanitos* that were popular in the mid-twentieth century. Others are new songs with lyrics chronicling the experiences of Ecuadorian migrants, who have left the country *en masse* since the 2000s. Ecuadorian *música chicha* arrangements include synthesizers (with organ-type timbres), bass and percussion, and there are two types of performances: live bands, and solo singers who perform to the accompaniment of recorded tapes.

While *chicha* music in Lima emblematized a distinctive and modern urban identity at a distance from 'Indianness,' in Ecuador *música chicha* singers accentuate their indigenous origin. They sing in the Quichua language, and dress in outfits that point to their ethnic background such as hats, vests, ponchos and boots. The most popular Ecuadorian *música chicha* singers in the 2000s include Bayron Caicedo and Ángel Guaraca. The latter promotes nationalist feelings by hailing indigenous cultures as national cultures.

Choro

Choro or *chorinho* is a Brazilian instrumental musical genre that appeared in Rio de Janeiro in the early twentieth century and continues to be played a century later, retaining its main characteristics. Its continuous history has given *choro* an important role in Brazilian music, and since the 1970s there has been an impressive growth in the number of *choro* groups and musicians, especially among young musicians.

Origins and Emergence

During the second half of the nineteenth century the word *choro* had three meanings: (i) it referred to a specific musical ensemble, also called *trio de pau e corda* (wood-and-string trio), consisting of one guitar, one *cavaquinho* (a small, four-string guitar, similar to the ukulele), used together to provide the rhythmic-harmonic basis, and one instrument to play the melodies, usually a flute; (ii) it was used to denote the characteristic style which these ensembles used to play European dances, especially polka; (iii) it was used to refer to the festive family gatherings at which this music was played. These three meanings of the word characterized the formative period, before *choro* became recognized as a musical genre.

The origin of the use of the word *choro* in Brazilian music is disputed. In Portuguese, '*choro*' literally means the act of weeping, and according to Tinhorão (1974) there is a connection between this and the melancholic properties often ascribed to the main melody of *choro* as a consolidated genre and to its contrapuntal second voice, as well as of the improvised descending bass lines of the guitars, the so-called *baixaria*. Against this, Almeida (Mariz 1983) argues that *choro* derived from *xôlo*, the name given to the dancing parties of the African slaves on Brazilian farms. For Vasconcelos (1977), however, *choro* could be a simplification of the expression *charameleiros*, which refers to the members of *charamela* old bands, often formed by African slaves. In Neves's view (1977), *choro* could be taken as a corruption of the word *chorus*, meaning instrumental ensemble. The same author also mentions Mozart de Araújo, for whom the word refers to the loose and tearful way of playing adopted by the ensemble.

During the nineteenth century various popular dances originating from Europe spread throughout the Americas – dances such as *tango*, *habanera*, schottische, mazurka, waltz and polka. Some of them gradually acquired national and regional aspects, due to the blending with local cultural traits. In Brazil, the fusion of genres such as *modinha* and the Africa-derived *lundu* resulted in new genres such as *tango brasileiro* (Brazilian *tango*), *maxixe* and *polca-lundu*, each of which was later to play a part in constituting the *samba*. The polka, however, became so popular that the word was sometimes used to label almost all other dances. These dances were played basically by three instrumental formations: the military and military-like brass bands, the *pianeiros* (popular piano players) and the *choro* ensembles.

The first *choro* ensembles appeared during the early stages of the process of urbanization which took place in Brazil in the second half of the nineteenth century, when a new social class emerged, consisting of bureaucrats, laborers and foreign company workers. There was 'not much social discrimination' (Tinhorão 1998, 195; authors' translation), a situation that allowed multiethnic participation in social life. This lower-middle class, which wished to attain the conditions of the European bourgeoisie (ibid.), promoted gatherings (mainly family ones in the home) that included music performances of the aforementioned European songs and dances, which were played on the guitar and *cavaquinho*. Alongside this amateur practice, these ensembles were also hired to perform for private parties and balls.

The introduction of the flute to the *choro* ensemble is attributed to Joaquim Callado (Joaquim Antônio da Silva Callado Jr., 1848–80), a renowned flautist who was very much in demand at *choro* gatherings. In the 1870s in Rio de Janeiro Calado formed the 'Choro Carioca,' a group that is considered the very first *choro* ensemble. The composition of the first *choro* piece, 'Flor amorosa' (Loving Flower), is also attributed to him. As the *choro* flautists were usually the only musicians able to read music and frequently took the role of soloist, they felt responsible for the musical development of their partners. Many playful provocations occurred, when the soloist challenged the other instrumentalists to adapt to the rhythmic changes and modulating melodies.

The *choro* style also became an ingredient in military brass band music and in piano music. Performances of military brass bands had taken place since the early nineteenth century (Binder 2006). The bands played for official events in city squares as much as for carnival balls. Such events 'were rare opportunities for most of the Brazilian population of the larger cities to hear some kind of instrumental music' (Tinhorão 1998, 182; authors' translation). The most remarkable of these bands was the Banda do Corpo de Bombeiros do Rio de Janeiro (The Rio de Janeiro Fire Brigade Band), founded in 1896 by the composer and arranger Anacleto de Medeiros (1866–1907). Medeiros is considered a father of Brazilian musical arrangement and his musical style mixed brass band music and *choro*. His best-known works are the schottisches such as 'Três estrelinhas' (Three Starlets) and 'Iara.'

The piano was very popular among the Brazilian urban middle class throughout the nineteenth century. The pianists' repertoire did not consist only of European classical-romantic music, but of Brazilian popular dance music as well, as sheet music publishing was a very active business at that time. Consequently, there arose a new kind of pianist, the so-called *pianeiro.* This term was often used in a pejorative sense, instead of the term *pianista*, which referred to a performer of traditional European repertoire. The *pianeiros* gradually became professional by performing at parties and private balls and in theaters and music halls. Among them, two of the most important are Ernesto Nazareth (1863–1934) and Chiquinha Gonzaga (Francesca Edwiges Neves Gonzaga, 1847–1935), both considered pillars of the *choro* as a genre. Nazareth's music has fine pianistic writing, and he wished his work to be considered art music. The best-known pieces from his extensive work are 'Odeon' and 'Brejeiro,' two milestones of the early *choro*. On the other hand, Gonzaga's music tends more to dance and an informal style. His best-known works are 'Ó abre-alas,' (O Open Wings), 'Atraente' (Attractive) and 'Gaúcho (Corta-jaca).'

The Consolidation of *Choro*

During the modernization period of the early twentieth century Brazilian urban spaces were transformed and with that new forms of entertainment were developed, provided by theater, cinema, radio and the recording companies, mainly in provincial capitals but particularly in Rio de Janeiro. It was in Rio in 1902 that the Fire Brigade Band, under the baton of Anacleto de Medeiros, first recorded *choro* music for Casa Edison, the first Brazilian recording company. Among the pieces recorded there were waltzes, schottisches, polkas, Brazilian *tangos* and other genres (Cazes 1998; Franceschi 2002). At the same time, a nationalistic search for a Brazilian identity was taking place. In the 1930s this political, artistic and intellectual movement started to make a positive contribution to the merging of ethnicities, and hence to the birth of a new concept of 'Brazilness' which demanded the establishment of national symbols. In terms of music, the genre which emerged as national symbol was the *samba*. The origins of *choro* and *samba* are deeply interwoven, both having roots in a mixture of polka and other European dances with African-derived styles such as *lundu*, and both were suitable for evoking a national feeling (Vianna 1995). The consolidation of *choro* as an individual genre in the 1930s is perhaps related to a shift in the *samba* style of the time, when the old *samba-maxixe*, which dated from the mid-1800s, gave way to a more 'white' *samba* (Sandroni 2001; Piedade 2003).

Alfredo da Rocha Viana Filho, best known as Pixinguinha (1897–1973), is the most famous representative of this phase and his name is associated with the affirmation of the *choro* as a genre. Pixinguinha was a flautist, saxophonist, arranger and composer, who worked in various musical ensembles such as Os Batutas, Orquestra Victor Brasileira, Grupo da Guarda Velha, Orquestra Diabos do Céu, and made records and radio broadcasts. In 1922 he and his already famous ensemble Os Batutas traveled to Paris, where they exchanged musical ideas with jazz bands and jazz musicians of the day who were living in the city (Menezes Bastos 2005). To Pixinguinha, this episode represented a shift in many ways, for he adopted the saxophone as his main instrument and started composing in new idioms such as foxtrot, shimmy and ragtime. Two of Pixinguinha's most remarkable pieces are 'Carinhoso' (Loving, 1916–17) and 'Lamentos' (1928). His reputation grew to such an extent that he was turned into an icon of the golden era of *choro* (Bessa 2005; Cabral 1978; Menezes Bastos 2005), and his birthday (23 April) has been celebrated as the National Day of *Choro* since 2001.

The introduction of percussion in the *choro* ensembles is attributed to João Machado Guedes (*João da Bahiana*, 1887–1974), a friend of Pixinguinha. This development resulted in a new ensemble formation that was to become significant to the culture of Brazilian music, the so-called *regional*, which consists of guitar, *cavaquinho* and *pandeiro* (tambourine).

The *regional* usually played to accompany solo instruments or singers in recordings or radio broadcastings.

From the period of crystallization and the heyday of the *choro* – from the 1930s to the 1950s – some of the most significant instrumentalists and composers to mention are Jacob Pick Bittencourt (known as Jacob do Bandolim, 1918–69) and the ensemble Época de Ouro; Aníbal Augusto Sardinha (known as Garoto, 1915–55); and Waldir Azevedo (1923–80).

The Music of *Choro*

The *choro* is an instrumental music characterized by the use of a binary beat and a small rondo form in three parts (A-B-A-C-A), although the form in two parts (A-B-A) also became common from around the 1940s. Frequently there are modulations to closely related keys (change of mode in I, relative keys III or VI, IV, etc.) in the intermediate parts (B and C). Besides the typical sound of *regional*, *choro* musicality is primarily enacted through melodic characteristics, which emerge through a particular shaping of the melody by means of ornamentation and arpeggios. The essence of *choro* expresses a scherzando and nostalgic spirit, for the sound of *choro* evokes the purity and simplicity of old times. The dances that originated the genre – waltz, schottische, polka, *habanera* and others – were played by *choro* musicians in a way that offered a distinct contrast with their originals, and there were also many improvisations, usually in one of the three parts. Another essential characteristic of the *choro* is the improvisatory bass line of the seven-string guitar, a counterpoint to the melody.

Choro in the Twenty-first Century

Early twenty-first-century Brazilian musicians have much respect for *choro* performers, especially great masters such as Pixinguinha, yet some argue that *choro* has become too conservative, resulting in a kind of roots music that has been preserved from exotic influences and has not evolved. Maybe it was this stability that caused the genre to enter a long eclipse, from the 1940s until the 1970s, during which it was restricted to families and friends and few professional groups, until *choro* festivals (organized by a nationalist government effort to promote Brazilian culture) started to give a boost to its re-emergence. The art music composer Radamés Gnatalli (1906–88) also played a central role in this rekindling of *choro*. In the early 1970s he led the Camerata Carioca, a group formed by young musicians playing sophisticated arrangements that gave a new, chamber-music character to the music.

Choro is undergoing an impressive revival, mainly in the cities of Rio de Janeiro and Brasília, with a new generation of groups such as Trio Madeira Brasil, Arranca-toco, Trio Brasília Brasil, and artists such as Maurício Carrilho and Yamandú Costa, as well as specialized record labels such as *Kuarup Discos*, *Acari Records* and *Biscoito Fino.* Contemporary *choro* explores new repertoires, while attempting to maintain its traditional sound in what seems to be a rebirth of the old concept of *choro* as a way of playing.

Chouval Bwa

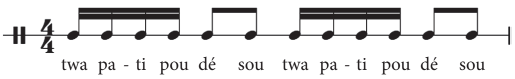
The term *chouval bwa* encompasses two musical genres: traditional and modern *chouval bwa*. '*Chouval bwa*' is Creole for 'wooden horse' (*cheval bois*) or merry-go-round. On the islands of Martinique and Guadeloupe in the French Antilles, merry-go-rounds used to travel from town to town, accompanied by small bands playing a style also called *chouval bwa* or *mizik chouval bwa*. Beginning in the early 1980s a handful of Martinican musicians fashioned elements of this music into a popular dance style.

Traditional *chouval bwa*

The old-fashioned merry-go-rounds of Martinique and Guadeloupe featured hand-carved, brightly painted wooden horses. They were small, with only about a dozen seats, and were pushed by hand. This may sound like sweaty work, but in fact the apparatus was so well balanced that a few shoves kept it spinning. Inside the circle, where US audiences might expect a calliope, the proprietors and their assistants sat to play music.

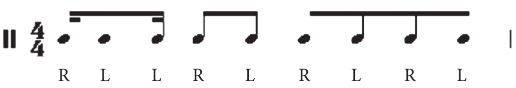
Instruments varied depending on the availability of workers and what they played. A typical ensemble might include bamboo flute, accordion or violin for the melodies, all three instruments being widespread in rural music. Percussion might include triangle; *chacha*, a metal shaker; *syak*, a three- to four-feet long bamboo rasp with ridges on both top and bottom; *tibwa*, a pair of sticks played on a short length of bamboo (not, as in Martinican *bèlè* drumming, on the side of a drum); *tanbou dé bonda*, a drum adopted from Carnival bands; and *ka* or *gwoka*, a hand drum from Guadeloupe. This list makes the bands sound large, but in fact no more than four or five instruments at a time were used.

On many songs, the *tibwa* played a distinctive timeline – known onomatopoeically as *twa pati pou dé sou* ('three turns for two sous [small coins]'):



Example 1: *Twa pati pou dé sou*

Tanbou dé bonda means 'two-cheeked drum,' referring to the cheeks of one's butt, that is, the drumheads, which the drummer 'spanks.' Played with a heavy stick in the right hand and a thin switch in the left (or vice-versa), the prototypical rhythm was:



Example 2: Tanbou dé bonda pattern

This rhythm is characteristic of carnival music throughout the Eastern Caribbean, all the way to northern Brazil, where it can be heard in *maracatu* and *samba-reggae*.

However, these were not the only rhythms played. The repertoire for *mizik chouval bwa* consisted of a wide range of local styles, mainly the complex known as *mizik kwéyol* ('Creole music'): *biguine*, *mazouk* and *valse kwéyol*. All three have their roots in eighteenth-century European couple dances, indigenized in the Antilles. *Mazouk* is adapted from French mazurka and is a quick 6/8 dance; *valse kwéyol* is, of course, waltz; and *biguine* is a local invention in 2/4 or 4/4 meter.

Mizik kwéyol is played by a wide variety of groups, from rural bands with instrumentation like that of *chouval bwa*, to urban bands featuring clarinet, saxophone, trombone, piano, bass and so forth. Songs originate among either rural or urban bands, and pass freely from one setting to the other.

As of the 1990s, only one merry-go-round was still in existence, that of Claude and Joselita Germany. The Germanys continued to travel between the two islands, setting up for a few weeks at a time in different towns, and even venturing to Louisiana for the New Orleans Jazz and Heritage Festival. The Germanys' sole CD adds electric bass, synthesizer and drum set to the band, and the repertoire is a typical mix of *mizik kwéyol* songs.

Modern *Chouval Bwa*

By the 1970s the *mizik kwéyol* repertoire had fallen out of fashion, and imported styles such as Haitian *konpa direk* and Dominican *kadans* dominated Guadeloupean and Martinican popular music. Local musicians struggled to find a distinctively Antillean sound. One response arose out of the grassroots artistic movement known as the *retour aux sources* ('return to sources'). Partly inspired by Martinican poet and philosopher of *négritude* Aimé Césaire, at the time mayor of the capital, Fort-de-France, and a deputy to France's National Assembly, musicians, playwrights, dancers and visual artists of all sorts turned to a celebration of African and diasporic culture. On Guadeloupe, musicians began revitalizing the local *gwoka* drumming tradition. In Martinique, musicians continued to ignore the local drumming traditions, but founded several percussion-based groups featuring *gwoka*, congas (from Cuba) and *djembe* (from West Africa), as well as bamboo flute. A key group of this type was Pakatak, led by the Martinican drummer/singer/flautist Dédé Saint-Prix (b. 1953).

When Pakatak dissolved in about 1982, Saint-Prix founded a new group, Avan-Van. The new band drew ideas from traditional *chouval bwa*, chiefly employing some of the percussion instruments and the lively Carnival-derived rhythm of the *tanbou dé bonda*. Saint-Prix added two electric basses, and occasionally synthesizer, but he kept the focus on the acoustic sound of the percussion, bamboo flute and singing.

The other major bandleader in this style has been Marcé (Bernard Pago) (b. 1949), a Martinican percussionist and singer who adopted Saint-Prix's instrumentation for his band Toumpak.

Chouval Bwa and *Zouk*

Popular journalists have claimed that the *chouval bwa* of Saint-Prix and Marcé influenced the modern dance style *zouk*, but this is overstating the case. *Zouk* emerged at around the same time as modern *chouval bwa*, in response to the same set of circumstances: the domination of the Antillean music scene by external styles. Rather than being a direct influence on *zouk*, *chouval bwa* probably just showed Antillean musicians that it was possible to create something of their own. It is possible to hear the typical rhythm of the *tanbou dé bonda*, illustrated above, in some *zouk* songs. But this rhythm originated in carnival music, not *chouval bwa*. It is found both in Martinique's *tanbou dé bonda* and, in Guadeloupe, in the carnival rhythm *mas a Sen Jan* (Guilbault 1993, 215). *Zouk* musicians used this rhythm to evoke the sense of *défoulement* (letting-go, craziness) of Carnival, and it was only one of many rhythmic devices in *zouk*.

Both Saint-Prix and Marcé have enjoyed successful tours of Europe and the United States. Saint-Prix lives primarily in France and, as of 2010, continues to record regularly (such as 2007's *Melanj*). However, the importance of *mizik chouval bwa* should not be exaggerated. Saint-Prix and Marcé are well-established and well-loved musicians in the Antilles, yet in contrast to the huge success of *zouk*, *mizik chouval bwa* has always had a more limited presence, both at home and abroad.

Chucu-Chucu

In the late 1960s, after the climax of the golden age of the tropical musical *orquesta*, a new kind of *música tropical* emerged in Colombia, known as *chucu-chucu* or *raspa*. The name *chucu-chucu* is an onomatopoeic and somewhat derogatory allusion to the relatively unsyncopated rhythm of this music, with its repetitive character, much like the sound of a locomotive, which, in Spanish, is described with this expression. The name *raspa*, in turn, alludes to an increased reliance on a *guacharaca* (a tube-like instrument with ridges scraped with a fork) as the source of the beat. At times, it is also called *música galega* (Galician music), hinting at the simplistic, dull nature of its arrangements (a reference to the cultural stereotype of people from Galicia in Spain). In music circles concerned with naming origins, it is known as the *sonido paisa* (the Medellín sound, *paisa* being the term for residents of this city), a phrase associated with Colombian literary icon Andrés Caicedo, who playfully disparaged this music in *Que viva la música* (1977), a best-selling novel chronicling the rise of salsa in Cali.

After the arrival of the recording company Discos Fuentes in Medellín in the 1950s, as the city sought to establish itself as the center of the Colombian recording industry, new musical formulas were constantly being explored and implemented. In the case of *chuchu-chucu*, the music involved an abridgment of the *orquesta* sound of *música tropical*, with the adoption of electric instruments (usually bass and electric organ), a drum kit and two or three horns, instead of the customary saxophones and/or trumpets of the traditional ensemble. In the process, the sound of *música costeña*, the tropical dance music emerging from Colombia's Caribbean coast, was reduced to a pattern of a quarter note and two eighth notes, played on a scraper, while arrangements relied heavily on electric instruments – usually, the keyboards – for melodies and harmonies. The emergence of *chucu-chucu* in the late 1960s was the product of the rise in popularity of Colombian bands such as the Sonora

Dinamita, Los Hispanos, Los Black Stars, Los Teenagers, Los Tupamaros, El Combo de las Estrellas and Los Graduados, and Venezuelan bands such as the Billo's Caracas Boys, Nelson y sus Estrellas and Los Mélódicos, all of whom favored more modern musical equipment – as well as suits and hairstyles more in keeping with the spirit of 1960s – thus marking a clear break from the influence of big band aesthetics that underpinned acts such as the *orquestas* of Francisco 'Pacho' Galán and Lucho Bermúdez.

In musical terms, *chucu-chucu* was generally interpreted as a concession to the consumer tastes and dancing preferences of the middle-class audiences in Bogotá and Medellín (much like *porro* in the 1950s, thanks to its slower pace). From the perspective of many conservative critics, *chucu-chucu* embodied a degradation of *música tropical* and generated negative responses within more conventional music circles. Nevertheless, it proved more adept at crossing borders than traditionally styled bands, whose repertoire focused on rhythms with florid melodic styles, such as *porro*, *cumbia* or *merecumbé*. In the 1960s and 1970s *chucu-chucu* was readily exported to Mexico, and Central and South America. As a result, throughout much of the continent, *chucu-chucu* became the style most commonly identified with *cumbia* and served as the foundation for new varieties of this musical genre. Perhaps paradoxically, a style of music that was viewed pejoratively by many Colombians enhanced the international profile of the national music industry and contributed substantially to the establishment of *cumbia* as one of the most popular music genres of the western hemisphere.

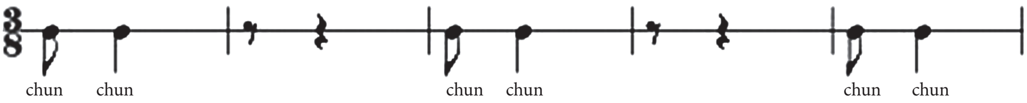
Chuntunqui

Chuntunqui (*chunktunki*) is a Bolivian dance performed during the Christmas season. It is also a type of song popularized by the neofolklore ensemble Los Kjarkas in the 1970s.

Chuntunqui originated in Sucre and Potosi and is a regional version of the Christmas *villancico*, equivalent to the *tundiqui* from La Paz. According to Julia Elena Fortún (1957), *chuntunqui* is also known as *chunchuna*. *Chuntunqui* is a traditional form of worship of the infant Jesus, consisting of a dance that is executed in small leaps while facing a nativity scene. Although a dying custom, it continues to be practiced in the city of Sucre and in various provinces such as Villa Serrano, where *chuntunqui* festivals are still celebrated around Christmas time.

Traditionally, *chuntunquis* were performed through December until Epiphany on 6 January of each year. The dance was associated with the Adoradores (worshippers), groups of children disguised as indigenous people, shepherds, old men and other characters, who wandered through the streets of Sucre dancing in front of the Nativity scenes that decorated most homes. *Chuntunquis* were also performed by military or police bands during the procession of Jesus the Child every 24th of December (Costa Arguedas 1977, 65). The procession started at the cathedral and moved through the main avenues in Sucre. Costa Arguedas (1977, 65) recalls that during the early years of the twentieth century it was common to have fights break out between rival gangs of Adoradores, who threw stones and beat each other with sticks until police arrived to separate them.

By the 1950s children danced *chuntunquis* using castagnets, empty cans and an occasional *charango*, in addition to two traditional instruments: *chullu-chullus*, which were rattling toys made with bottle caps; and *pajarillos* ('little birds'), small contraptions initially made out of tin that were filled with water to produce a whistling sound when blowing air through them. Tin *pajarillos* were later replaced by plastic toys in the shape of birds. The common rhythmic figure played by *chullu-chullus* was transcribed by Fortún in 1957 (Example 1).



Example 1: Basic rhythm of the *chuntunqui* or Christmas *chunchuna* from Chuquisaca, Bolivia (Fortún 1957)

Following this rhythmic pattern, the child worshippers sang melodies and *coplas* about the infant Jesus (who was also called *Niño Manuelito*) and shouted festive onomatopoeias such as '¡fuerza, fuerza!' (strength, strength!). Costa Arguedas describes a typical worship scene: 'It is danced in front of the manger in the form of Chuntunkis, facing the small altar, in pairs or one at a time, boys and girls jumping to and fro never turning their backs to the Infant Child, yelling at him "aján cascañas!"' (1977, 73). Also frequent was the use of the *armonio* (harmonium), the sound of which is still associated with Christmas celebrations in Sucre and Potosí.

Chuntunqui as a musical style was revived in the late 1960s by Ernesto Cavour, a noted *charango* player and member of the folk ensemble Los Jairas, founded in 1965 by Gilbert Favre. Inspired like others of his generation by traditional Andean music and seeking to give it new meaning for a modern age, Cavour wrote an instrumental piece titled 'Chuntunqui' circa 1970, which was recorded by the ensemble Los Chaskas around the same time. 'Chuntunqui' revisited the *chuntunqui* as a new genre of Bolivian neofolklore music. In 1980 the Cochabamba ensemble Los Kjarkas, founded in 1965 by brothers Gonzalo and Ulises Hermosa and Édgar Villarroel, adopted the idiom of Cavour's 'Chuntunqui' in the song 'Pequeño amor' (Small Love) on their album *Cóndor Mallku*. The previous year the group had recorded two songs inspired by the *chuntunqui* style: 'Manuel triste' (Sad Manuel) and 'Burro villanciquero' (Caroling Donkey), both written by Julio Lavayén and Ulises Hermosa. However, it was the version of 'Pequeño amor' by Gonzalo and Ulises Hermosa that became the first hit of the new genre; *chuntunqui* was now a love song in Andean style expressing nostalgia for young love.

In the 1980s *chuntunquis* became popular among young fans of Los Kjarkas and their neofolkloric style from Cochabamba. Songs such as 'Cuando llega el amor' (When Love Arrives) and 'Ave de cristal' (Crystal Bird) by Gonzalo Hermosa; 'Canto a la mujer de mi pueblo' (Song to the Women of My Village) and 'Siempre he de adorarte' (I Will Always Adore You) by Gonzalo and Ulises Hermosa; 'Sin ella' (Without Her) by Edwin Castellanos; and 'Pueblos perdidos' (Lost Villages) and 'El árbol de mi destino' (The Tree of My Destiny) by Ulises Hermosa are some of the most famous *chuntunquis* recorded in Bolivia. These songs laid the foundation for the contemporary genre.

After the 1980s, and following the example set out by Los Kjarkas, many ensembles wrote and recorded music in the style of the *chuntunqui*. The genre problematized the existence and love life of younger generations, turning it into an emblem of youth identity. Eventually, the genre migrated from Bolivia into other Andean countries, especially Peru, Ecuador and Chile, where young listeners became ardent fans. The reason behind the success of this *balada andina* (Andean ballad) among young people is that through the music two identities were reconciled: the identity of Andean ancestry and the new identity of younger generations in modern society (Sánchez Patzy 1999).

The recording success of this music led to the original connection between *chuntunquis* and Christmas to be all but forgotten, a change which represents one of the most significant cultural transformations in Bolivian popular music. A similar fate befell the *tundiqui* or *villancico paceño* (*villancico* from La Paz), which, by the end of the 1960s, came to be known as *tuntuna* or *saya-caporal*, a genre fictitiously associated with blackness in a presumed Afro-Bolivian rhythm (Sánchez Patzy 2006).

Chutney

Chutney emerged as a popular Indian-Caribbean musical genre in Trinidad and Tobago, Guyana and Surinam during the 1970s. By the 1990s chutney had been established as a medium through which questions about identity, politics, diaspora and postcolonial sensibility could be articulated. It is also performed in other parts of the Indian Diaspora, particularly in Mauritius (Servan Schreiber 2010) and in Fiji. It has been influenced by and influences the music of Indian cinema such as the Bhojpuri film industry and Bollywood.

Chutney is often represented by practitioners as having its origins in the Hindu wedding, specifically in the *mathkor* ceremony (a ritual space which was the preserve of women and an Indian cultural practice that has been preserved in diasporic contexts). However, chutney is not a clearly defined genre. Many songs that add a few Hindi words or an 'Indian' drum may be labeled 'chutney' and there are several related forms, such as chutney soca, ragga chutney and jamoo chutney. Some commentators suggest that soca in fact emerged from chutney, since the calypsonian Lord Shorty (later Ras Shorty I) promoted a genre he called 'sokah' (calypso and *kaherwa taal*) in the 1980s. His aim was to combine 'African' and 'Indian' musical characteristics as a way of promoting social unity. As a form of musical activism, this shows how much these genres are interrelated, while, as a form of musical description, it points to the sociopolitical dynamics in these contexts.

One of the first major chutney singers in Trinidad and Tobago was Sundar Popo. One of his early popular chutney song texts ('Rosie gal, what you cooking for dinner, she making *choka* [mashed vegetable], it don't have no salt') can be interpreted in relation to the *double entendres* of calypso, further highlighting the ways in which chutney might be contextualized within Caribbean popular soundscapes. Chutney is not just an Indian diasporic form. It is also a Caribbean popular music performed in the Caribbean Diaspora. By the beginning of the twenty-first century it had been incorporated in Carnivals both in Trinidad and in Caribbean Diasporic centers such as London, Toronto and New York.

Historical Outline

To trace the history of chutney is to explore the history of Indian migration to the New World through the nineteenth-century labor system of indentureship. During the period 1838–1917, as a result of British colonial policies, more than half a million Indian migrants were taken to the Caribbean as indentured (or contracted) laborers to maintain plantation agriculture. Yet the migrants were not a homogenous group for they came from different regions, spoke different languages and dialects and were members of different castes. The majority came from the northern Indian provinces of Uttar Pradesh and Bihar where Bhojpuri was spoken. The Bhojpur tradition, therefore, which had produced religious heroes such as Rama, Krishna and Buddha, as well as the epics, the *Ramayana* and the *Maha Bharat*, became dominant in Trinidad.

The logbooks of ships' crew-members provide glimpses into musical interactions of the kinds that characterize chutney. The captain of the *Sheila* on its voyage of 1877, for example, was Angel, in whose diary (1921) there are references to the musical activities of the sailors (singing sea shanties) and of the Indian migrants. For him, Indian musical expressions sounded strange. But the Indian migrants had learned his crew's sea shanties by the time they disembarked in the Caribbean. Chutney displays influences from diverse sources. While some musical elements can be traced to India and can be analyzed as examples of musical preservation, others have emerged as a result of cultural interaction in the Caribbean. Chutney musicians draw upon ideas from Indian musical traditions, devotional songs and film music, as well as from calypso, soca and rap. These are the kinds of creative musical interactions that were already evident during the voyage of the 'Sheila' (see Ramchand and Samaroo 1995).

Musical memory and questions about the origin of the genre are important dimensions of chutney, which are expressed in song texts and in historical representations of the origins of this genre. Sundar Popo composed a song to mark Indian arrival in Trinidad, singing about the *Fath al Razack* – the first ship transporting Indians to Trinidad, in 1845. On board this ship were 227 Indians. Their contracts initially lasted for a period of five years after which they could work for a further five years in order to claim a free return passage to India. When indentureship was abolished, less than a quarter of the Indian laborers returned to their homeland. Most of them decided to exchange the passage to India for a grant of land. Popo's song text is an expressive historical narrative.

Within these discourses on the history of chutney as an Indian diasporic genre, many performers trace its origins to the wedding ritual known as *matikor* (or *muti kurwa* or *mathkor*), in particular. As women's pre-wedding celebration, with ritual bathing, drumming, singing and dancing, *maticore* can be traced to cultural practices in India. While an early description of the ritual in the Indian context is found in George Grierson's *Discursive Catalogue of Bihar Peasant Life* (1885, 362), one of the earliest written references to this ritual in Trinidad dates from the 1960s. Harry Ramnath provides a comprehensive description and explanation of *mathkor* (which literally means dirt-digging) in the Caribbean context, in which ritual participants are noted as drumming and dancing (see Ramnath n.d., 97–8).

Musical Characteristics

Chutney singer Sundar Popo emphasized the importance of instrumentation in the music. Another singer, Rikki Jai, emphasized melody and text. The traditional chutney ensemble consists of a singer, *dholak*, harmonium and *dhantal*. The instruments constitute a sound world of timbres, which are, respectively, associated with India, Europe and the Caribbean. The *dholak* is the double-headed cylindrical or barrel drum of South Asia. The harmonium was patented by the French instrument maker Alexandre François Debain in 1842, and it was widely disseminated in India and Africa by colonial powers (Owen and Dick 1984, 131). With fixed, diatonic pitch, the incorporation of the harmonium in the chutney ensemble has exerted a strong influence on concepts of pitch and on melodic presentation. The *dhantal* is an iron or steel rod struck by a horseshoe-shaped beater. The top is tapered to a fine point to allow greater resonance and the end is shaped into a circle, which rests on the ground, table or other surface when it is played. Its length is around a meter. The origin of the *dhantal* is unclear. It is described in *The New Grove Dictionary of Musical Instruments* as a percussion idiophone of north Indian origin found in Trinidad and Surinam (Brandily 1984, 541), but this definition is contested by Trinidadian commentators, who have suggested that the instrument is not found in India (although similar percussion instruments are). In the Caribbean, theories concerning the origin of the *dhantal* include the view that the instrument was invented by Indian laborers who began to use rods from estate oxen or horse carts as a percussion instrument on the Caribbean sugar plantations. The beater for the rod, according to this origin theory, was literally the horseshoe, a shape which has been retained in contemporary contexts. In this view the origin of the *dhantal* is bound up with experiences of the sugar plantation around which the laborers' lives revolved. In another origin theory, performance context is stressed for the steel rod which was used to hold large cooking pots over the fireplace and is seen as eventually being struck as another percussion instrument during festive occasions (see Ramnarine 2001, 63–8).

There seems to be no documentation that proves conclusively whether the first migrants from India brought the *dhantal* with them, or whether they and their descendants only started to play this instrument in the Caribbean. While there are some similar north Indian models and the name given to the instrument is a literal term: *dandtal* (stick percussion; *danda* – stick, *taal* – act of striking from which the sense of rhythmic cycle may originate), the symbolic importance of the *dhantal* is in the Caribbean, not in the Indian, context. Chutney soca and ragga chutney are usually marked by the addition of instrumental timbres, particularly brass and electronic instruments.

The overall structure of many chutney songs is that of the verse and chorus format. The *taal* (cycle of beats) is usually *kaherwa* (simple quadruple time, 4/4). The metric structure tends to be syllabic and settings can be closely related to speech rhythms. The melodic range of chutney songs generally falls within an octave. Melodic movement by step, recurring melodic cells, which revolve around a central note and diatonicism, are also general features. The harmonium's part follows the vocal line closely, sometimes anticipating the vocal line and sometimes slightly behind the singer.

Chutney Song Texts

Chutney song texts deal with diverse themes: historical, social, topical, ribald and individual experience, referring to Indian cultural practices and objects, the experience of migration and kinship systems. The interpretation of these song texts often relies on knowledge of Indian-Caribbean people's kinship relations and social concerns. One frequently explored theme in chutney song texts is that of the *dulahin* (daughter-in-law, bride). Depictions of the *dulahin* do not generally provoke criticism of the kind often directed at songs like 'Loota La,' chutney singer Sonny's Mann's song about the *bhowi* (sister-in-law) who behaves with abandon. Such songs are regarded as being disrespectful, but they do reveal radical changes in gender imagery. Once seen as the keeper of tradition, the *dulahin* is now seen as an agent who is increasingly independent from her male counterpart, who flaunts her sexuality openly and consorts with whomever she likes. In doing so she is not necessarily portrayed as abandoning tradition but as bringing it with her into a public performance space. An example is the song by Double D, 'Ragga Dulahin' which describes the *dulahin* who still wears her sari as well as her miniskirts.

Many contemporary chutney song texts are in English with a few Bhojpuri or Hindi words added. Sometimes a Bhojpuri or Hindi text intermingles with its English translation. Double meanings (similar to the *double entendres* of calypso) together with chutney dance style add to controversies surrounding the performance of chutney. Textual and choreographic aspects are taken into account in discussions concerning appropriate private and public boundaries of chutney performance. These discussions include research perspectives on gender negotiations in chutney song texts (Mohammed 2007) and on chutney performance spaces in theorizing Caribbean sexualities (Puar 2009).

Performance Spaces

Chutney is performed at parties, private events, on the radio, on television talent-spotting competitions such as *Mastana Bahar*, and it has also found a performance space in Carnival, together with calypso, soca and steelband. Performers such as James Ramsawak, Sundar Popo, Drupatee Ramgoonai, Lilly Ramcharan, Sonny Mann and Rikki Jai have promoted the public performance of this genre. Companies such as JMC (Jamaican Music Connection, otherwise known as Jamaica Me Crazy, based in New York), and local promoters such as the Trinidadian record retail entrepreneur, Ajeet Praimsingh, are involved in making commercial recordings of chutney. Since 1995 chutney musicians have been able to compete in a 'Chutney Monarch Contest' (following calypso competition models), performing different types of chutney, categorized as 'original, traditional chutney' sung in both English and 'Hindi,' 'open category chutney' and a test piece, which is a song composed specifically for the competition.

Chutney, having emerged as a distinct genre in the 1970s, invites a mixed reception. Some people enjoy dancing to the music and regard chutney as a principal form of Indian-Caribbean expression. Others regard chutney performance with disapproval and even with horror. The Hindu organization, the Sanatan Dharma Maha Sahab, has been critical of chutney. Representatives of the Hindu Women's Association have protested strongly against chutney performances, claiming that they lead to a breakdown in family life and encourage the development of extra-marital relationships. This organization has called for police control over chutney dancing. Other commentators have described chutney as being 'a degenerative trend in Indian music' but one that nevertheless displays local (Caribbean) musical innovations that have been positively received by Indian musicians (Ramaya 1990, 2). Mungal Patasar, famous for his experiments in fusing different musical traditions, combining steel pan and *sitar*, for example, describes chutney as a popular adaptation of Indian folk music and is critical of its commercial dimensions which are 'pointing Indian music in a new direction' (Patasar 1995, 82). But like Ramaya, he regards the development of chutney as vital to people in the local context of Trinidad and Tobago, because it is a folk expression and, as such, is the music of the people. Other scholars have highlighted the influence of Indian classical as well as folk traditions on chutney (e.g., Maharaj 1994; Samaroo 1996). This genre has also been described as the Indian response to calypso. Critiques similar to those leveled against chutney have been extended during the mid-1990s to *pichakaaree* (also songs in English with a few Hindi or Bhojpuri phrases which draw on Indian folk melodies or film songs and are accompanied by instruments such as the *dholak*, *dhantal*, harmonium and limited electronic resources), which has been promoted by the Kendra Phagwa Festival. This genre has been seen by organizations such as the Sanatan Dharma Maha Sahab as reducing the religious celebrations of Phagwa (or Holi) to an inappropriate emulation of Carnival (Ramnarine 2007, 173–8).

Having emerged into the public performance spaces of Caribbean popular musical genres, chutney has begun to engage ethnomusicological interest. Researchers who have studied chutney include Manuel (2000), Myers (1998), Niranjana (2006) and Ramnarine (1996, 2001). Audiences are also found in India, where listeners are interested in hearing an Indian diasporic genre. Singers such as Rikki Jai and the ensemble D' Bhuyaa Saaj have undertaken concert tours in India. Chutney performers also reach out to audiences globally using internet technologies. The Guyanese singer based in New York, Terry Gajraj, can be seen in a recorded performance of a chutney musician meeting Indian classical performers 'laff til yuh belly bust' on YouTube. Though this is presented as a musical comic sketch, there is some evidence that chutney can also be traced to the classical traditions of India (Samaroo 1996), and musicians in the New World perform Indian classical genres such as *dhrupad* as well as the Caribbean popular genre, chutney.

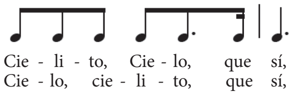
Cielito

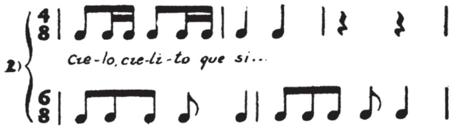
At the beginning of the nineteenth century the most important popular music genre in Uruguay was the *cielito*, a dance and song genre of the revolutionary period (1810–25) in 6/8 meter. It was also present on the Argentinian side of the Río de la Plata. Even though the first written document relating to the presence of the *cielito* appears in what is today Uruguay (at that time a part of the Río de la Plata territories), Argentinian musicologist Carlos Vega (1952) understood the *cielito* as appearing 'in the Argentinian pampas,' later moving across the river to Uruguay. It persisted until the mid-nineteenth century or a little before and disappeared shortly thereafter. In the early twentieth century, *cielito* survives in two ways. As a nondanceable music, it comprises one of the sections of the *estilo*. As a dance, it is one of the movements in the *pericón*, and also a kind of waltz. The choreography of the *cielito* was related to European country dance.

The early nineteenth-century song seems to have had a verse-and-refrain structure, each of these comprising four octosyllabic lines corresponding to four musical phrases. It is very likely that the principal characteristic of the *cielito* of the 1810s was a rhythmic cell at the beginning of the refrain, fitted to a line of text such as '*cielito, cielo, que sí*,' '*cielo, cielito, que sí*,' or '*allá va cielo y más cielo*' (at least, according to texts of *cielitos* by the poet Bartolomé Hidalgo [1788–1822]). The formulations that are found in some *estilos* (the anonymous 'Memorias a Artigas,' for instance, collected around 1950 by Uruguayan musicologist Lauro Ayestarán in the region of Minas) provide evidence of a melody consisting of four eighth notes followed by a dotted eighth note and a sixteenth note and ending in a dotted quarter note (as rendered in 6/8 time):



Cie - li - to, Cie - lo, que sí,
Cie - lo, cie - li - to, que sí,

In some cases, the dot is not explicit or simply does not exist (see the four *estilos* recorded by Ayestarán on the recording *Un mapa musical del Uruguay*). Nevertheless, Carlos Vega maintained that the song had a polyrhythmic basis, with binary vocal melody and ternary guitar accompaniment, in which neither the dot nor its particular relation with the '*que sí*' appear.



As this second type of *cielito* is also found in the *estilo*, it may be supposed either that different versions coexisted or that the species forked at some point into two versions, one dotted and another non-dotted. In any case – as can be seen, for example, in *cielitos* by Osiris Rodríguez Castillos, by Numa Moraes (on lyrics by Mario Benedetti) by Daniel Viglietti (on lyrics attributed to Bartolomé Hidalgo or written by Juan Capagorry, and not forgetting his innovative solution to some verses by Benedetti), and by Rubén Olivera and Pollo Píriz – in rescuing traces of the *cielito* in the collective memory, the popular musicians of recent decades seem to suggest the dot and respect the 6/8 meter (with references to an accompaniment similar to that indicated by Vega – with beats in the bass notes – or one that uses it every second measure, preceded by a measure of six eighth notes).

The most prestigious songwriter of the Independence period (or at least the most recognized author of lyrics) was Bartolomé Hidalgo, supposedly a mulatto, who is usually considered to be the first poet in the popular regional language of the Río de la Plata. In his work, the lyrics of the *cielitos* achieved a high level of elaboration in the treatment of the popular language.

Cifra/Estilo

Cifra is a form of solo song with guitar accompaniment that developed among male musicians in the *sureño* or *surero* (fertile southern *pampa* – lowland regions of Argentina and Uruguay) in the nineteenth century, and may still be found there. Ventura Lynch (1883, 40–2) was the first scholar in Argentina to document some of its characteristics and provide notated examples. It was prevalent until the end of the nineteenth century, the point in time when *payadores* (guitar-playing troubadours) began to prefer the *milonga* for their improvised *payada* duels – although in the late twentieth and early twenty-first centuries the *cifra* is used sporadically by some professional *payadores* as an alternative to *milonga*.

Closely related to *cifra* is the form known as *estilo* (or *triste* in Uruguay), which, like *cifra*, is a solo song with guitar found in the southern *pampas* in the nineteenth century. The singing style, which came to a peak in the early twentieth century, enabled performers to move from normal register to falsetto. The style was associated in particular with Carlos Gardel, who used it in his vocal interpretation of *tango*.

The *Cifra*

Cifra is a syllabic song. The most commonly used stanza structure is the *décima*, called 'espinela' after the main promoter of this poetic form, the Spanish poet, writer and musician Vicente Espinel (1550–1624). It consists of ten octosyllabic lines and an assonant rhyme in the following scheme: abbaaccddc. Versification in *sextillas* (stanzas of six lines each) and *octavillas* (stanzas in eight lines) was also used but it failed to become rooted in a widespread fashion, as, years earlier, did the octosyllabic quatrain with consonant rhyme between the second and fourth lines, this last form being called *media cifra*.

Cifra is performed in a declamatory style, sometimes approximating or being replaced by recitation, and among its strongest features are the rapid guitar flourishes that precede and separate the lines of the song, during which the instrument falls silent, except at phrase ends, where the voice is sometimes underlined by chords and parallel tenths. The effect is of a dialogue between the singer and the instrument.

Each stanza is performed as follows: After a strummed introduction, the first line is sung without accompaniment and the guitar responds with a flourish. The singer repeats the first line and continues with the second. Another flourish follows. The remaining eight lines are sung two at a time, with guitar flourishes as interludes between the pairs. The number of stanzas depends on the topic being developed. Rhythm tends to be free, accelerating or decelerating according to the expressive intention and seeking to emphasize the intonation on specific verses. The harmonic accompaniment is simple, using tonic, subdominant and dominant chords. The asymmetric strumming that punctuates the lines sets up a 6/8 rhythm with syncopations, occasional hemiolas and strategically placed 2/8 and 4/8 cells.

The poems cover a range of themes that have varied according to the historical period. During the wars of independence, the poems had a defiant or *bravío* character, describing heroic or patriotic actions; currently narratives about the everyday tasks of the gaucho or containing allusions to his sentimental life are prevalent.

The *Estilo*

Twentieth- and twenty-first-century *estilos* are based on stanzas in the *décima* poetic form (for further information see the entry on *payada*), beginning with an instrumental introduction which later functions as an interlude between stanzas. Musical phrases, covering more often than not two lines, take the form of an arch, invariably concluding with a two-note slow descent (a second or a third); if the last word is end-accented, it falls over the penultimate note and is stretched over the last one. Extremely common, both in the introduction and in the sung portions, are passages in parallel tenths. Harmony mostly keeps to tonic and dominant chords or to the simplest harmonization of the 'bi-modal' system (see Vega 1998 [1944]). The rhythm of sung portions is extremely free; it is difficult to discern a regular meter or even beat; nevertheless, brief interventions of the guitar between vocal phrases clearly mark a *milonga* accompaniment pattern.

In more traditional surroundings, *estilos* are sung at home gatherings, *pulperias* (general stores-cum-drinking parlors) and patron saint festivities. In the early twenty-first century they are performed at massive festivals, in theaters and *peñas*, and recorded by standard commercial labels. The genre, however, is not usually included in the repertoire of artists from outside its region of origin.

Conclusion

The subject, tone and vocabulary of both *cifra* and *estilo* remain anchored to the rural scene, or very often to an idealized rural past, an idyllic happiness recalled by the poet. The singing style of both – as well as of the *surero* repertoire (as performed by the most noted performers, for example, Argentino Luna, José Larralde, Alberto Merlo, Suma Paz) – retains in the early twenty-first century much of the '*campero*' (country) style that can be heard in recordings of the 1920s by Carlos Gardel. The sliding notes, the increased speed in the middle of the verse and the characteristic intonation are now part of a more relaxed vocal production, discarding the opera-like voice projection of the older singers.

Ciranda

Ciranda is a Brazilian song and dance genre characterized by the formation of a large circle of dancers. In the state of Pernambuco, where it takes its typical form, *ciranda* is danced and sung to the sound of the slow and repeated rhythm of percussion instruments. An emcee (called *Mestre Cirandeiro*) stands in the center of a large circle of people, animating the other participants and improvising verses, while the dancers repeat the refrain. The dance can last for several hours. *Ciranda* or *cirandinha* (little *ciranda*) is also used to designate a children's round-dance (composer Villa Lobos integrated the form into various compositions, for example *Cirandas* [1926] and *Cirandinhas* [1925]), which began losing its creative force and popularity in the 1950s. The dance is Portuguese in origin. The term *ciranda* comes from the Castilian word *zaranda* – a flour-sifting device – which itself is an evolution of the Arabic word *çarand* (Borba and Graça 1962). In Brazil it has several variations, known as *sereninha* (in the state of São Paulo), *seraninha* (in the state of Minas Gerais) or *sarande* (in the state of Goiás). It is also quite popular in the state of Amazonas, and there is an annual festival dedicated to this dance in the town of Manacapurú (located on the banks of the Solimões River, 80 kilometers from the state capital, Manaus).

The adult *ciranda,* danced on the beaches of Recife (the capital of Pernambuco), was at first limited primarily to venues such as beach-side areas, bar terraces and street corners. However, it became widely known in the 1960s as a result of the Popular Culture Movement, or 'MCP' (created in September 1961), which united intellectuals with the objective of developing and systemizing the popular culture of Pernambuco. The 1961 performance of *cirandas* in public squares by an emcee called Mestre Baracho, who was unknown to the *Recifenses* (residents of Recife) as he came from outside the area, unleashed a craze for *ciranda* dances throughout the city. Following the Military Coup of 1964, the MCP was extinguished and many of its members were arrested. Also in 1961 Teca Calazans, a successful singer from Recife with an interest in local folk traditions, began to include *cirandas* in her repertoire, following a meeting with a singer called Lia (Maria Madalena Correia do Nascimento) on Itamaracá island, near Recife. In 1967 Calazans's LP *Aquela rosa* (That Rose) included a *ciranda* among other songs. Lia herself adopted the stage name Lia Itamaracá and made her first recording, *A Rainha da Ciranda* (The Queen of Ciranda), in 1977. Another important singer of *cirandas*, Dona Duda (Vitalina Alberta de Souza), similarly steeped in the tradition, made no recordings, but her influence was recognized in the recording *Cirandas de Dona Duna* (1975).

In the 1970s the main participants in *ciranda*, both those from the working class (fishermen, construction workers and odd-jobbers) and from the intellectual class, abandoned this form entertainment, as a result of which the dance changed into a spectacle for tourists. The *cirandeiro* and the dancers left their circles to perform on stages, using microphones and sound systems, now with specific time limits for their dances. In the 1990s, however, the *manguebeat* movement, with its reference to folk entertainment, served as a catalyst for the formation of new groups, who found inspiration in the use of original rhythms. This moment was a favorable one for the appearance of new composers. Middle-class youths as well as old-time *cirandeiros* created new fields of activity (*Ciranda da saúde* ['Health Ciranda'], *Ciranda Mimosa* ['Sweet Ciranda'], *Ciranda do acalanto* ['Lullaby Ciranda'] and *Ciranda da Maria Farinha* ['Maria Farinha Ciranda']), with the recreation of *ciranda* songs and dances. Groups of composers and even social projects flourished, involving *ciranda* as a means of fostering social integration (e.g., the NGO called *Cais do Porto*). Later, the record industry brought in several singers to record *cirandas* (Elba Ramalho in 2001, Ney Matogrosso in 1993).

One of the most remarkable features of the dance is its slow 4/4 tempo, with beats marked by the bass drum and accompanied by the *tarol* (a type of drum), *ganzá* (a cylindrical rattle) and *maracá* (maracas). The choreography is characterized by the formation of a circle of dancers who rotate sideways with two steps backward and forward, always marking the strong beat with their left foot in front. The movements of hands and body are free, but three of the best-known steps can be identified: the *onda* ('wave'), the *machucadinho* ('little mash') and the *sacudidinho* ('little shake'). The emcees who command and lead the dance are called *Mestre* and *Contramestre* (as in most Brazilian folk manifestations of this type). They are the ones who start the event, improvise and preside over the dance. Directed toward the center of the circle, the dancers all hold hands and move around clockwise and counterclockwise. The lyrics of the *cirandas* can be improvised on the spot or can be from an already known song. Generally there is an instrumental introduction, then the solo and chorus alternate. The major/minor or modal/tonal binomial is strongly present, and the scope of the melody reaches, at most, 10 notes.

Clube da Esquina

Clube da Esquina (The Corner Club) was a musical movement that originated in the mid-1960s in Belo Horizonte, Minas Gerais, in southeastern Brazil. Like *bossa nova*, it has continued to have an important presence in Brazilian music. The expression 'Clube da Esquina' refers to the meeting point of musicians, composers and poets on the corner of Paraisópolis and Divinópolis streets, in the Santa Tereza district of the city. Among them were individuals who were to be of great importance for Brazilian music, such as Milton Nascimento (composer and singer), Toninho Horta (composer and guitarist), Pascoal Meirelles (drums), Paulo Braga (drums), Nivaldo Ornelas (flute and saxophone) and Márcio Borges (songwriter). Despite the musical diversity of its members, *Clube da Esquina* produced music with a distinct sound (see below). Hispano-American music, rock – especially the music of the Beatles – and jazz were important influences on music that would later be called *música mineira* (music from Minas Gerais).

Historical Outline

In Brazil as a whole the 1960s was a decade of considerable musical change and development. *Bossa nova*, consolidated in Rio de Janeiro, had revolutionized Brazilian music with dissonant harmonies and a particular way of singing and playing, and by the mid-1960s was prospering on the international market. Meanwhile rock 'n' roll entered the country, generating the *Jovem Guarda* movement, while the union of Bahian musicians Gilberto Gil and Caetano Veloso, among others, with São Paulo avant-garde artists such as Décio and Rogério Duprat, was giving birth to the *Tropicalismo* movement. In 1964 a military coup instigated a dictatorship in the country, engendering a response from musicians in the form of the so-called *canção de protesto* (protest song) where music began to have a significant political role. A year later, in 1965, TV Excelsior, and later TV Record, both based in São Paulo, promoted the *Festivais da Canção* (song festivals), which were to launch a new generation of singers, who later came together in the so-called MPB (*Música Popular Brasileira*).

The various musical strands represented contrasting alternatives: the *bossa nova* movement was hallowed as 'Brazilian music par excellence,' *Jovem Guarda* presented itself as the music of rebellious youth, *canção de protesto* spoke in terms of political engagement, and *Tropicalismo*, which besides music comprised visual arts, cinema and theater, placed itself in the vanguard of artistic development across the arts.

At this time, Belo Horizonte was a provincial city, with a preponderance of dance orchestras; the city's musicians often frequented a sidewalk off the main avenue of the city called Ponto dos Músicos, to discuss contracts, exchange information or simply to socialize. But it was also caught up in the cultural and political fervent that characterized the decade, nationally and internationally. At the end of the decade, a group of musicians and poets, including Milton Nascimento, Lô Borges (Márcio Borges's brother), Toninho Horta and Nivaldo Ornelas, created songs that crossed the boundaries between regional (folk and traditional Minas Gerais music), national (*bossa nova*/Jovem Guarda) and international music (rock/jazz). Those who participated also included Márcio Borges (lyricist), Beto Guedes (composer and guitarist), Fernando Brant (lyricist), Tavinho Moura (composer, guitar player and *violeiro* (*viola* is a type of guitar with five strings), Flávio Venturini (composer and pianist), Ronaldo Bastos (lyricist), Wagner Tiso (composer and pianist), Murilo Antunes (lyricist), Nelson Ângelo (composer and guitarist), Novelli (composer and bassist) and Tavito (composer and guitarist).

Introduced to the Rio de Janeiro music scene in the mid-1960s by Pacífico Mascarenhas, a musician from Minas Gerais who participated in the *bossa nova* movement, Nascimento achieved a big break at the second *Festival Internacional da Canção* (International Song Festival) in 1967, with the song 'Travessia' (Crossing; lyrics by Fernando Brandt). In 1968 he recorded the album *Courage* in New Jersey in the United States, launching his international career.

In 1969, in Belo Horizonte, the *Festival Estudantil da Canção* (Student Song Festival) consolidated the group of singers and songwriters from Minas. Their music began to exhibit a *mineira* identity, characterized by the construction of melodic lines with large interval leaps, the predominance of compound binary and ternary meters, alternating meters, sophisticated harmonic progressions and elaborate arrangements, and began to be known nationally. It was not until 1972, however, with the release of double album *Clube da Esquina* by Nascimento and Lô Borges, that the work of the young composers would gain national prominence. On this album, the collaborative work and instrumental versatility of the musicians is a central feature. Friendship and partnership were also essential elements of the group dynamics and were not confined to people from Minas. The *Clube de Esquina* numbered musicians from Rio de Janeiro, such as Ronaldo Bastos, Robertinho Silva (drums) and Luiz Alves (bass) and Bahians Danilo Caymmi (flute player and composer) and Nana Caymmi (singer); it also included figures such as the photographer Cafi, who was responsible for several album covers, including *Clube da Esquina*, and the filmmaker and writer Rui Guerra.

The lyrics of many *Clube da Esquina* songs clearly spoke of rebellion, the dream of freedom and a desire for change; themes that marked the music of the 1960s and continued to be a feature of the 1970s both nationally and beyond. The songs, 'Tudo que você podia ser' (All You Could Be) (Márcio Borges and Lô Borges) and 'Clube da Esquina n° 2' (Lô Borges, Milton Nascimento, Márcio Borges), both on the album *Clube da Esquina,* as well as the songs 'Nau sem Rumo' (Ship Without Direction) (Lô Borges) on the album *Via Láctea* (The Milky Way) and 'Sacramento' (Milton Nascimento and Nelson Angelo) on the album *Nana Caymmi*, are all good examples.

The Music of *Clube da Esquina*

The music of *Clube da Esquina* has its own identifying characteristics. Alternating meter and use of compound and triple meter are frequent. On the album *Clube da Esquina*, 'Cravo e canela' (Clove and Cinnamon) by Nascimento and Bastos, for example, is a *samba* in triple time, while 'Tudo o que você podia ser' uses alternating triple and double meter 3-3-2, and 'Lilia' (Nascimento, Brandt) is in quintuple time.

Another striking feature is the construction of melodic lines with wide intervals. Toninho Horta's 'Beijo partido' (Parting Kiss) from the album *Terra dos pássaros* (Land of Birds) uses major thirteenth leaps, and the song 'Nascente' (Rising) by Flávio Venturini from the album *Clube da Esquina 2* begins with a minor seventh leap. The harmonization is also very sophisticated and typical of this music. There is a preference for tension, suspended chords, augmented fifths, diminished chords, augmented elevenths and minor and augmented ninths. 'Nascente' (Venturini, Murilo Antunes), 'Beijo partido' (Horta), 'Aqui Oh!' (Here Oh, Horta, Brant) and 'Bons amigos' (Good Friends, Horta, Bastos) from the album *Toninho Horta*, 'Novena' (Nascimento, Márcio Borges) from *Ângelus* and 'Litoral' (Coast, Horta. Bastos) from *Joyce*, are some examples.

The use of the lower pedal can often be seen in *Clube da Esquina* songs, for example 'Novena' (*Ângelus*), 'Fé cega faca amolada' (Blind Faith Sharp Knife, Nascimento) from the album *Minas,* 'Vera Cruz' (Nascimento) from *Courage*, 'Besame' (Kiss Me, Venturini, Antunes) from *Flávio Venturini ao vivo*, among others. The inversion of the bass in order to construct the melodic line in counterpoint with the melody is also a characteristic of this music and can be seen in 'Paixão e fé' (Passion and Faith, Moura, Brant) on the album *Clube da Esquina 2*, 'Cruzada' (Crusade, Moura, Márcio Borges) on *Como vai minha aldeia* (How Goes My Village), 'Beco do Mota' (Mota's Alley, Nascimento) from *Milton Nascimento*, among other songs.

The strong presence and influence of the Catholic Church is reflected in the music of the *Clube da Esquina*. Many songs, such as 'Paixão e fé' and 'Novena' (Nascimento, Márcio Borges) from Bueto Guedes's album *Amor de Índio*, 'Igreja majestosa' (Majestic Church, Nivaldo Ornelas, Wagner Tiso) from *Wagner Tiso*, among many others, refer to the Church and to religious belief. Instrumentation and arrangements can also reflect the same influence, as for example the use of the organ and choir in 'Sentinela' (Nascimento, Brant) from the album *Milton Nascimento*.

The importance of folk arts in Minas Gerais also influenced the music. Adaptations of folkloric themes are frequent, for example in songs such as 'Calix Bento' from Moura's LP *Como vai minha aldeia*, and 'Peixinhos do mar' (Fish of the Sea) from his *Tavinho Moura* (the latter also recorded by Milton Nascimento on the *LP Sentinela*), 'O sapo' (The Frog), on the LP *Os Borges,* 'A lua girou' (The Moon Turned) on Nascimento's LP *Geraes* and 'Caicó' on his album *Sentinela*. In terms of instrumentation, the *viola caipira* (a type of guitar typical of *música sertaneja*, popular all over rural Brazil) is widely used by Tavinho Moura. On the LP *Como vai minha aldeia* he recorded the song 'A véia (The Old Woman) by the violist Zezinho da Viola and on *Tavinho Moura* he recorded his 'O sonho' (The Dream).

Many composers in the *Clube* had a strong connection with jazz. This can be evidenced through many ways, for example by the fact that US jazz musicians Wayne Shorter and Herbie Hancock participated in several recordings with Milton Nascimento, among them the albums *Milton* and Shorter's *Native Dancer*. Nivaldo Ornelas toured the United States in 1978 along with Brazilian jazz musicians Flora Purim and Airto Moreira. He also participated in the Newport Jazz Festival and the first São Paulo International Jazz Festival (1978). Toninho Horta was voted by British publication *Melody Maker* one of the ten greatest jazz guitarists two years in a row (1977 and 1978).

Beto Guedes, Lô Borges and Flávio Venturini were more influenced by rock, especially the music of the Beatles. This influence – typically in the beat and chord progressions – is evident in the songs 'Nuvem cigana' (Gypsy Clouds) (Lô Borges and Ronaldo Bastos), 'Um girassol da cor de seu cabelo' (A Sunflower the Color of Her Hair) (Márcio and Lô Borges), 'Paisagem da janela' (The View through the Window) (Lô Borges and Fernando Brandt) from the album *Clube da Esquina* and 'Lumiar' (Beto Guedes, Ronaldo Bastos) from the album *Relâmpago elétrico* (Electric Lightning). Beto Guedes recorded 'Norwegian Wood' (Lennon, McCartney) on the album *Sol de primavera* (Spring Sunshine) and Milton Nascimento recorded the same song on the album *Minas*. In 1972 Venturini participated in the progressive rock group *Terço* and in 1979 formed the pop rock group *14 Bis*.

In addition to influences shared with other musicians, Milton Nascimento's work regularly showed strong traces of African and Hispano-American traces of Brazilian music. In the song 'Raça' (Race) (Nascimento and Brant) from the LP *Milton*, Robertinho Silva (a musician who accompanied Milton for many years) adopted a percussive drum style, overtop a percussion arrangement referencing the sounds of Afro-Brazilian music, typically in terms of rhythm. The lyrics of this song pay homage to various black Brazilian artists. 'Maria Maria' from the LP *Clube da Esquin*a 2 refers to the suffering of black women in Brazil. Later, Milton recorded the LP *A Missa dos Quilombos* (The Mass of the Quilombos). Most of the songs on this album are written by Pedro Casaldáliga and Pedro Tierra, and show Milton's concern with racial issues.

Hispano-American elements are also very present in Milton's work. This is particularly evident in the lyrics and rhythm of the song 'San Vicente' (Nascimento, Brant) from the album *Clube da Esquina*. On the same album, Milton recorded 'Dos cruces' (Two Crosses) by the Spanish composer Carmelo Larrea. The rhythm and arrangement of the flutes in the song 'Credo' also reflect a Latino influence. On the same album 'Canción por la unidad de Latino América' (Song for the Unity of Latin America), with the participation of Pablo Milanes and Chico Buarque, reflects Nascimento's concern with and involvement in wider Latin American issues, as does his participation in the album *Corazón americano* (Heart of America) with Mercedes Sosa and Leon Gieco.

Another compositional element of Milton Nascimento's music is the recurrence of the same melodic material in more than one song. For example, the introduction to 'Credo' also appears as a section of 'San Vicente,' both on the LP *Clube da Esquina 2*, and 'Saídas e bandeiras No. 2' is a variation of 'Saídas e bandeiras No. 1' from the LP *Clube da Esquina*.

Nascimento's vocal quality is central to his music. The singer Elis Regina once remarked that 'If God had voice it would be like Milton Nascimento's' (quoted in Arcanjo 2011). His voice is limpid and bright and has a big range, his falsettos being extremely clear. It has a very affecting quality. In addition, Nascimento is an outstanding interpreter, his performance ranging from the epic to the lyric. Lacking a formal education in singing, he undoubtedly became one of the most outstanding singers in the world.

The role of instrumental music is also important in *Clube da Esquina,* both in terms of instrumental composition *per se*, as for example in 'Aquelas coisas todas' (All Those Things) from Toninho Horta's album *Terra dos pássaros* and in the vocalized arrangements used by Nascimento in various songs such as 'Lilia' and 'Clube da Esquina n°2' (both from *Clube da Esquina*) and also in 'Nascente' from the album *Clube da Esquina 2*. In 1968, when the lyrics of songs from Nascimento's album *Milagre dos peixes* (Miracle of the Fishes) were censored, he released it as an instrumental album, with the instrumental arrangements and interpretation bearing the entire emotional weight of the absent lyrics.

Wagner Tiso, Nivaldo Ornelas, Toninho Horta, Flávio Venturini, among others, had a solid musical education, which is reflected in their orchestrations and arrangements. In the album *Terra dos pássaros*, Toninho Horta was both the orchestrator and conductor.

The song 'Sentinela' (Nascimento, Brant) can be seen as presenting a synthesis of many of the diverse features in *Clube da Esquina*. At the beginning of the song, the arrangement of the *a cappella* choir and organ reflect the influence of the Church, the introduction of the drums points to their importance in Afro-Brazilian music, the rhythmic structure is created with alternating meter, the string arrangements are elaborate and there is even a jazz guitar solo.

Musicians from *Clube da Esquina* were also involved in other artistic areas. Fernando Brant created the scripts and Milton Nascimento composed the soundtrack for the ballets *Maria Maria* (1976) and *Último trem* (Last Train) (1981) by the ballet company *Grupo Corpo*. Tavinho Moura is the author of several film soundtracks, many of which were award-winning (*Cabaré Mineiro* and *Minas Texas* from director Carlos Alberto Prates).

Conclusion

In 1979 the last albums were released in which group participation was still significant: *Clube da Esquina 2*, by Milton Nascimento, *A Via Láctea*, by Lô Borges, *Sol de primavera* by Beto Guedes and *Terra dos pássaros* by Toninho Horta. Thereafter, the musicians parted in order to pursue independent careers.

Until the 1980s the market for popular music in Brazil was restricted to the Rio–São Paulo circuit. The fact that most of the *Clube da Esquina* members refused to leave Minas Gerais made it difficult for this music to gain a strong foothold in the national market. At the same time, in Minas Gerais itself music production grew considerably and consolidated, putting Belo Horizonte among the major music markets in Brazil. *Clube da Esquina* continues to exert a great influence on the music scene in Minas Gerais. A new generation of musicians, composers and singers such as Chico Amaral (composer and saxophonist), Celso Adolfo (singer and composer), Samuel Rosa (composer and singer of the band Skank), Marina Machado (singer), Telo Borges (composer and pianist), Neném (drums) work with musicians from *Clube da Esquina* while also developing their own ways.

Coco

The word '*coco*' is used throughout northeastern Brazil to refer to a wide variety of recreational songs and dances. Some researchers of folklore relate the origin of the *coco* dance, somewhat speculatively, to the harvesting of the fruit of the *coco* (coconut) tree. The first written record of the use of the word in a musical sense occurred in 1829. By 1915 commercial *coco* recordings had begun to be made, but unlike *samba coco* never established itself as a modern popular music genre. The earliest form of *coco* is accompanied by percussion only, while recordings include harmonic instruments such as guitar, mandolin and accordion. The two best-known types of traditional *coco* are *coco-de-roda* (danced and sung) and *coco-de-embolada* (only sung). Both present a binary rhythm cycle (four sixteenth notes plus four sixteenth notes), syncopatively stressing the fourth sixteenth note.

In the *coco-de-roda*, a soloist sings one, two or four verses, answered in chorus by the rest of the participants. The response is the same length as, or shorter than, the verse sung by the soloist, and melodically simple enough to be learned quickly by any participants that are unfamiliar with it (tonic-dominant harmonies are generally implicit). The subjects are many and varied, including love, work, religion, humor and the everyday life of fishermen, cattle workers and other poor people. The accompaniment is generally provided by *bombo* (a cylindrical two-headed bass drum), *caixa* (snare drum) and *mineiro* (closed cylindrical shaker, also known as *ganzá*). It is performed as a *roda* – that is, all the participants form a circle – in which a couple (usually male-female) will dance, in a non-embraced manner, in the center of the circle, then choose new dancers to take their place, and so on until everybody participating has danced.

Coco-de-embolada is based on *embolada*, a poetic form comprised of two stanzas, each of which contains one four-syllable line and three seven-syllable lines. These are sung in a fast tempo and often improvised. A refrain is added after each *embolada*. *Coco-de-embolada* is sung in the streets of large cities and towns by pairs of singers in the form of a poetic duel, often of a humorous nature, alternating between the *embolada* and the refrain and accompanying themselves on *pandeiros* (single-headed frame drums with jingles).

In the first decades of the twentieth century the new recording industry in Rio de Janeiro explored a variety of traditional genres, including *coco*, adapting them to a commercial environment. At this time in Brazil, making commercial recordings that did not include harmonic accompaniment was unthinkable, so genres without melodic instruments, like *coco*, saw their instrumentation expanded or changed in this new environment. There were no written arrangements, however. The arrangements were simply harmonic and rhythmic patterns, plus a melodic introduction composed *ad hoc*.

The *embolada*, which was treated as a separate genre of popular music, had some prestige and was included in the repertoire of groups such as Bando de Tangarás, and of individual singers such as Minona Carneiro (Severino de Figueiredo Carneiro, 1902–36) and Manezinho Araújo (Manuel Pereira de Araújo, 1913–93). Fewer songs recorded from the 1920s were labeled as *cocos*, although the difference between '*coco*' and '*embolada*' as genre designations in recordings of this period seems unclear.

In the second half of the twentieth century the most important *coco* singer, well known for his recordings, was Jackson do Pandeiro (José Gomes Filho, 1919–82), whose mother was a traditional *coco* singer from Alagoa Grande, a small town in the state of Paraíba. His first hit, 'Sebastiana,' a *coco* by Rosil Cavalcanti (a song composer who wrote in various genres), was recorded in 1953 in Rio de Janeiro and included accordion in the arrangement.

As of the late 1990s *coco* enjoyed renewed importance as a popular genre and saw a resurgence in recorded activity, especially in Pernambuco, partly due to the rise of the *mangue* artistic movement which combined traditional local influences with international sounds and included *coco* as one of its feeder genres. The group Faces do Subúrbio, for example, creatively related *embolada* singing to rap.

Recordings of traditional *coco* made since the resurgence of interest in the genre, unlike Jackson do Pandeiro's or those of the first half of the century, favor a purely percussive accompaniment devoid of melodic/harmonic instruments; as such, the musicians involved claim a greater adherence to the sound of traditional *coco*. Important artists of this ilk have been the singer Selma do Coco and the group Samba de Coco Raízes de Arcoverde, both from Pernambuco. The former recorded her first CD in 1998 (*Minha história*), when she was already more than 60 years old. She favors the *coco-de-roda* as it is sung and danced in the coastal region between Cabo de Santo Agostinho (Pernambuco state) and João Pessoa (Paraíba state). Unlike in traditional *coco*, however, Selma adds to these a pair of *congas*. The group Samba de Coco Raízes de Arcoverde is from Arcoverde, a town 300 kilometers west of Recife (Pernambuco state). They released their first CD in the year 2000 (*Raízes de Arcoverde*). They also use call-and-response, but with greater emphasis on the soloist's part than in coastal *coco-de-roda*, approximating it to *embolada*; the chorus responds in parallel thirds. The accompaniment is provided by *pandeiro*, triangle, *surdo* (two-headed cylindrical bass drum played with beaters) and *ganzá*.

CARLOS SANDRONI

Comback

The *comback* party is a Cuban-based music and dance event that evolved in Curaçao during the mid-twentieth century. Its origins lay with the 1920s Afro-Curaçaoan migration, when over half the male Afro-Curaçaoan workforce migrated to Cuba in search of work. Slavery had been big business on the island; when it was abolished in 1863 meaningful employment was virtually impossible to find. Most white Hollanders returned to the Netherlands, while Afro-Curaçaoans were forced to travel outside the island for work. Of the various destinations, Cuba became the most popular, with Afro-Curaçaoans joining Chinese, Mexican, Haitian and Jamaican nationals seeking employment in Cuba's lucrative sugar industry. The music that gained the most popularity among Afro-Cubans during this time – including the *son*, *guaracha*, *guajira* and *danzón* – was embraced with equal enthusiasm by Afro-Curaçaoan migrant workers.

When, in the 1930s, employment opportunities improved on Curaçao (through the establishment of Dutch Shell Oil refineries), the emigrant Afro-Curaçaoan workforce returned to their home island, bringing with them favorite 78 rpm recordings of Cuban music. These recordings became a popular commodity on Curaçao, receiving considerable airplay from local disc jockeys. Afro-Curaçaoan musicians also organized numerous dance bands emulating the traditional Cuban genres, usually incorporating Cuban instruments, like the *tres* and *marimbula*. Cuban-styled dance clubs emerged and private dance parties flourished, with club owners and hosts either hiring bands or playing 78s.

Although Cuban culture had been associated exclusively with Afro-Curaçaoans, this shifted in the 1970s, when Curaçao's white and black populations, united through mutual discontent regarding governmental bureaucracy, joined forces, relying on Cuban culture to strengthen their collective struggle. Bands made famous decades earlier, including Nilo Rivero y Su Conjunto and Martijn 'Shon Ma' Salsbach y Su Conjunto, reorganized, with white and black musicians reaffirming their earlier commitment to imitate closely original 1920s Cuban recordings. With the *danzón*, *son*, *guaracha* or *guajira* providing the rhythmic base, they also composed new melodies and attached texts which, written in Spanish, *Papiamento* (the Creole language of Curaçao) and even English, communicated stories distinctive to Curaçao. Weekly radio programs were organized by Frank Casimiri, highlighting the Cuban music from his prized collection of 78s, interspersed with newly recorded selections by local Cuban-inspired bands. During the shows, Casimiri invited audiences to 'Come back to the music you know and love. Come back to the music of your past.' The popularity of Casimiri's show was tremendous, with neighborhood parties often organized around these radio shows. These parties borrowed Casimiri's famous call by assuming the title *Comback*, a vernacular version of the English term 'comeback.'

Comback parties generally are held outdoors in a *hòfi*, the garden grounds of a former slave plantation home. All *comback* parties must have a disc jockey, the most sought after of whom own large and diverse collections of old Cuban recordings, and many also hire live bands. The dancing continues to reflect an assumed Cuban tradition: steps are small but fast-paced, with the man seemingly floating across the dance floor, the female dancer's upper torso bent backward, her right arm pinned behind her head, while her partner's right arm is stretched over her left shoulder.

Comedia Musical Argentina

Argentina was the first country in South America to establish its own distinctive form of musical comedy. It began to do so in the 1930s, but its antecedents were already in place at the end of the nineteenth century, due to Argentine theater's adherence to the features of the Spanish *género chico*. This term refers to short works falling under diverse denominations – *zarzuela, sainete lírico, paso lírico, opereta, revista* – in which the dramatic action was complemented by musical numbers. In quite a short period of time the Creole *género chico* replaced the older Spanish repertoire. Music played an important role in the dramatic construction, whether to characterize a protagonist or a situation or simply to position the spectator within a determined time and space. To achieve this objective, the composers used local popular musical genres, such as the *tango* and the *milonga* for those pieces centering the action in the urban environment and style, and the *estilo*, the *vidala* or the *vidalita* for those setting the dramatic development in rural or peasant areas.

Several of the first composers of the genre were Spaniards who had settled in Buenos Aires and quickly assimilated contemporary Argentine popular music. Notable among them was Antonio Reynoso (1869–1912), who composed music for the *zarzuel*a *Justicia criolla* (Creole Justice) in 1897 with a libretto by Ezequiel Soria, and in which the *tango* was danced on stage for the first time. At that time, the *tango* was in its gestation period, which explains why the first theatrical examples are significantly affiliated to the *tangos* of the Spanish *zarzuela* which in turn stemmed from the Cuban *habanera.* Another distinguished composer was the Argentine Eduardo García Lalanne (1865–1937) who achieved a resounding success with *Gabino el mayoral* (1898), with words by Enrique García Velloso, in which the *tango* 'No me vengas con paradas' (Don't Stand Me Up) was performed, prompting its widespread circulation.

Another composer of Spanish origin José Carrilero (1870–1932) composed the music for *No hay tierra como mi tierra* (There Is No Country Like My Country) with words by José Antonio Saldías. Premiered in Buenos Aires in 1921, its plot was presented in six parts, taking place in different settings – the Argentine *pampa*, Seville, London and Paris – which Carrilero evoked through various musical genres, including a motif inspired by a *vidalita* from the *pampa* that functioned as a *leitmotiv* to identify the leading character.

José Padilla (1889–1960), also Spanish, developed part of his career in the theaters of Buenos Aires. In 1920 he premiered the operetta *La viuda de Mendizábal* (The Widow of Mendizábal), with words by Alberto Vacarezza, in which the majority of the musical numbers were based on the *tango*.

The premiere in 1932 of *La muchachada del centro* (The Downtown Boys), with music by Francisco Canaro (1887–1956) and words by Ivo Pelay, initiated a defining stage in the development of the Argentine musical comedy. In his 14 musical comedies (the last being *Tangolandia* [1957]), Canaro made the *tango* the dominant musical form, also introducing new variants such as the '*tangón*' and the '*tango sinfónico*.' By featuring the *tango* in the majority of the musical numbers and using it with greater intensity than previous composers, he made the *tango* the central musical pillar or essence of the shows. Canaro also made use of other popular genres, such as *rancheras, valses, milongas* and *marchas* and, along with the conventional theater orchestra, also included a typical *tango* orchestra, consisting of four *bandoneónes*, four violins, a double bass and a piano. Many numbers quickly became popular beyond the stage, including the *tangos* 'Casas viejas' (Old Houses) and 'La copla porteña' (The Copla of Buenos Aires) and the *vals* 'Tu y yo' (You and I), all performed in *Rascacielos* (1935), the *tango* 'Todo te nombra' (Everything Calls Your Name) from *El muchacho* *de la orquesta* (The Orchestra Boy [1939]), the song 'Apasionadamente' (Passionately) from *La historia del tango* (1941), the *milonga* 'Se dice de mí' (They Say About Me) from *Buenos Aires de ayer y de hoy* (Buenos Aires from Yesterday to Today [1943]), the *tango* 'Adios Pampa mía' from 'El tango en París' (1945) and the fantasy *tango* 'Pájaro azul' (Bluebird) from *Con la música en el alma* (With Music in the Soul [1949]).

Composers of art music also ventured into the musical comedy, as is the case of Carlos López Buchardo (1881–1948) with *Madama Lynch* (1932) and *La Perichona* (1933), both with texts by Enrique García Belloso and Agustín Remón. Centered on historical figures, the first tells of the romance between Elisa Lynch and the Paraguayan field marshal Francisco Solano López, and the second, the love affair of Ana Perichón and Santiago de Liniers in Buenos Aires during the colonial period and the uprising against Spanish domination. In both works, the author used various numbers in traditional and Creole musical genres.

Another significant musical comedy was *El patio de la morocha* (The Morocha's Courtyard), premiered in 1953, with texts by Cátulo Castillo and music by Aníbal Troilo. It also features the *tango* as its main musical component.

Following a period during which the genre lost its popularity, at the end of the 1970s a new stage began for the Argentine musical comedy, as a result of the creations of author and theatrical director Pepe Cibrián Campoy and composer Ángel Mahler. Their works are inspired by world literature themes, such as *Drácula, el musical* (1991), *El jorobado de París* (The Hunchback of Notre Dame [1993]), *Las mil y una noches* (One Thousand and One Nights [2001]), *Calígula*, *Dorian Gray, el retrato* (Portrait of Dorian Gray [2005]), *El fantasma de Canterville* (2007), *Otelo* (2009) and *Excalibur* (2012). In these productions any reference to local musical genres is absent, employing a stage construction and musical language more closely associated with the conventions imposed on the North American musical comedy.

Compuesto

The *compuesto* is a Paraguayan storytelling genre set to traditional music. A counterpart to other descriptive balladry practices found throughout Latin America, it became highly popular in Paraguay during the late nineteenth century and the first half of the twentieth. Although its composition practice has declined, the genre survives mostly through the performance of the old *compuestos*, usually featured as part of local music festivals.

The *compuesto* is centered on a dramatic, epic or tragic *suceso* (event). *Compuestos* can be performed in 6/8 (compound duple) meter using the melodic, harmonic and rhythmic features of the Paraguayan *polca*, or in simple duple meter, in the style of *rasguido doble* (double strumming). Usually of anonymous authorship and structured in *coplas* (four-line verses) or *décimas* (ten-line verses) with a refrain in the middle or at the end of the text, the *compuesto* is sung in Guaraní or in Jopará, a local language that combines words and phrases in both Guarani and Spanish.

The traditional *compuesto* ensemble includes two singers accompanied by guitars, harp and accordion. *Compuesteros* (performers of *compuestos*) usually receive their musical training through oral tradition, and although most of them travel to the capital, Asunción, for work purposes or occasional musical presentations, they appear to have been influenced very little by musical urban practices. Some *compuesteros* perform individually, accompanying themselves on the guitar, harp or *rabel* (spike fiddle). Such was the case with Roquito Mereles (1889–1985), who, with the accompaniment of his *rabel* and that of fellow musician Anselmo Orué on the guitar, sang about events related to the Chaco War with Bolivia (1932–35) and current events at the Plaza Uruguaya – a staple for social interaction – in Asunción. Another example is that of *arpero popular* (popular harp player) Agapito Morínigo 'Tacho'í' (ca. 1910–93). In *compuesto* performances, the diatonic harp, the accordion and the guitar serve as accompanying instruments, providing an introduction as well as musical interludes between stanzas, but very rarely featured as solo instruments during performances.

Two of the most popular *compuestos* are 'Guyrá compuesto' (The Compuesto of the Birds) and 'Pancha Garmendia.' Collected by ethnologist León Cadogan (1899–1973) in the Guairá region, the anonymous 'Guyrá compuesto' is a satire against the local authorities of a small town. In the story, a group of birds organize a party that unfortunately ends tragically. The song comments on the corrupt authorities that punish the innocent and leave the guilty one free of charge (González Torres 1998, 50–3). 'Pancha Garmendia' has a text by the Paraguayan poet Narciso R. Colmán (*Rosicrán*) (1876–1954) and music of anonymous authorship. It gives an account of the execution of Francisca 'Pancha' Garmendia (d. 1869), mistress of Francisco Solano López (1826–70), president of Paraguay at the time of the Triple Alliance War (1864–70).

ALFREDO COLMAN

Congas and Comparsas

Comparsas are street ensembles that perform in Carnivals and parades. In Cuba, the dance-music genre and/or generic-type that characterizes the *comparsa* is the *conga*.

The term *conga* has more than one meaning. According to Fernando Ortíz, 'we say conga to refer to the Afro-Cuban drum, but we also apply the word to a dance, song and music that is performed, danced to or sung as well as to the comparsas that use this instrument. A conga means "a drum that is used to play the conga, or the marching or dancing music that is named in this way"' (Ortíz 1952, 392).

The word 'conga' dates back to at least the seventeenth century and is derived from the Congolese 'kunga' meaning revelry. In nineteenth-century Cuba the word 'conga' was used as a synonym for *tango* (Pichardo 1976 [1836], 570). So far, it has not been determined whether Cuban *conga* – as a festive musical manifestation in popular culture and as a genre and/or generic type – took its name from the *conga* drums of Bantú origin which were manufactured in Cuba, or if the drums were named after the specific type of music that was performed by dancers and musicians in popular street events.

The role of the *conga* in the activities of the *comparsas* provides an excellent illustration of the concept of generic type outlined by Orozco (2006, 3):

> … constructed on the social musical praxis of a group or participating community (realized in specific spaces, even media spaces characteristic of contemporary globalization), where the interlocking of expressive music-human reactions results from: creative and subjective processes; the variable participatory interexchange; the open role of performance; the tendency to find a relative consensus according to the nature of the actions, whose validity is determined by the nature and sedimentation of the process; a degree of secular ritualization; flexible and changeable musical and psychosocial regularities; unambiguous codifying habits; and lastly, thresholds and fields of action which are mobile or blurry…

The Instrument

The *conga* drum was brought to Cuba by African slaves and was first constructed from a hollowed-out trunk with a hide membrane nailed onto the upper opening, similar to the drums traditionally used in Africa. To this day, this rudimentary manner of building drums is preserved in some Cuban localities by community members championing traditional popular music. *Conga* drums exist in various heights and diameters, depending on the desired sonority. The largest is the *makuta* drum, also known as *caja* or *ngoma* among performers who seek to preserve Bantu tradition. (The Bantu word 'makutu' designates one of the types of performances and/or festive-ritualistic manifestations that occurred in the *cabildos congos* (Congo Councils) until the first half of the twentieth century.) The *makutu* has been identified as a possible ancestor of the Cuban barrel-shaped drum known as 'conga' – calling attention to its possible origin in the region of Congo. The word *conga* is used as a generic term for all *tumbadoras* that are part of carnival ensembles. It is also used assiduously to refer to industrially made *tumbadoras* that are commercially available in the international market. *Tumbadoras* (or *congas*) resulted from a process of synthesis and development of morphological and functional features of a number of dissimilar drums of African ancestry that were present in Cuba (CIDMUC 1997, 377).

The *conga* is the percussion instrument most widely used in the Caribbean and beyond. Originally the instruments were made out of wood and the leather was nailed. Tuning was done by heating up the hide, a technique still used today in some manifestations of Cuban traditional popular culture. Today, the cover may be synthetic (this is generally the case with industry-manufactured congas) and tension is achieved through a set of tensioning screws. Recent, ongoing ethnomusicological fieldwork in the Cuban region of Quiebra Hacha in Mariel revealed *congas* made of metal (iron) (see Perez Cassola 2012).

Congas exist in many sizes, but the three most popular are (organized in diameter from large to small and in pitch from low to high) the *tumbadora* (low *conga*), *conga* (three-two medium *conga*) and *quinto*. Because improvising drums in folkloric manifestations of Afro-Cuban descent are those with a lower sonority, the latter is not considered to be a *conga* by some historians, due to its higher register. However, in modern usage, when one speaks of '*congas*' to refer to these membranophones, most players agree to include the three types described above. In *congas* (i.e., performances and especially the genre and/or generic type), it is common to use *tumbadoras* or *congas*.

These instruments constitute the most notable contribution that Cuban percussion has made to the development of the music. The *conga*'s malleability allows it to execute any given repertoire including symphonic music, but more importantly the repertoire of Afro-Cuban and Afro-Caribbean music.

Conga as an Event

As a genre and/or generic type, *conga* unifies festive, ethno-historical and ritual connotations. The genre is defined by the presence of musical articulations with semantic content as well as performative texts and actions. *Conga* is a musical manifestation that is popular by nature, attracting a large number of people. Like other genres it occurs in specific contexts, and it develops essentially (though not uniquely) as part of Carnival *comparsas* in towns and cities across Cuba. *Conga* involves singing and percussion – mostly membranophones and various ideophones, and occasionally aerophones including Chinese trumpets and traditional trumpets, trombones, whistles, etc. One account, by Emilio Roig de Leuchsenring (1940–46), makes reference to the use of chordophones such as guitars and *treses* in *comparsas* in Havana in 1937. Instrumentation, therefore, will vary according to the type and context of a given performance. All *congas* incorporate a type of boisterous group dancing that responds, generally speaking, to a rhythmic march where participants mark the beat 'in a music-human integration where the specific functions of the creators, instrumentalists and singers, musicians, (dancers), audience members, and co-creating participants are joined and interexchanged' (Orozco 2006, 7; item in parentheses added by the author). They do so with a rich array of poly-articulated movements, projected both individually and as a collective, and sometimes incorporating different choreographic figures.

In Cuba, the use of the *conga* as a musical and social event or manifestation had its origins around 1580 when black slaves were first allowed to sing and dance outside their living quarters on their days off. This is the case of the festivities of Corpus Christi. In colonial times there was in Havana a systematization of the processions and festivities of the *cabildos* (associations of slaves of different ethnic groups); as a result they were allowed to process on the streets with their instruments, songs and dances in the same manner as their Spanish counterparts during the festivities of their Catholic patron saints. The celebration of Epiphany (Day of the Kings) on 6 January became customary. With time, this event became increasingly more detailed and splendid, with blacks celebrating and dignifying their music-dance traditions and customs. These performances became more frequent and more widely disseminated, slowly appearing and becoming systematized in various cities and regions within the island. In each place these celebrations developed specific features and characteristics. This process began in the sixteenth century and eventually expanded to include patron saint days, which began to be celebrated in each village in a similar manner. In cities such as Santiago de Cuba and Guantánamo, and especially between 1790 and 1820, these festivities became enriched by the influx of thousands of black and white immigrants from Haiti. This phenomenon triggered a process of evolution and development of these festivities that was influenced by the music and culture of the immigrant population. These elements impacted on, intervened in and overlapped with the local performances. In other cities such as Havana and Matanzas, the Abakúa (or Ñáñigos) secret society would end their rituals with a street parade that became very popular, singing and dancing in costumes to the sound of drums. The *diablito* or *íreme* costume, one of the most representative figures of the society, became popular in carnival *congas* in these cities. Personal research by the author bore witness to these celebrations in the locality of Cárdenas in the Matanzas province during the 1960s.

These festivities are reproduced in Cuban musical iconography. Visual information in the form of paintings and etchings dates from colonial times to the present day. The archive collection at the National Museum of Arts in Cuba, for example, includes among the work of Basque artist Patricio Landaluce (1828–89) his oil on canvas 'Día de Reyes en La Habana' (Epiphany in Havana). Among works that do not belong to this particular collection but have been cited by other authors, are oils by this artist dedicated to the Día de Reyes en Guanabacoa festivity, and his sketch and watercolor 'Plaza de la Catedral el Día de Reyes' (Cathedral Square in Epiphany). In lithography, the album *Isla de Cuba* by Federico Mialhe (1818–80) includes the etching 'Día de Reyes (Habana)' depicting the dance of the *cabildos* in the San Francisco square. In addition, iconography on cigarette packs addressed these popular urban manifestations through themes such as the *culebra*, *baile de cabildos*, *íremes Abakúa*, among others (Guanche 1997).

Conga and the *Comparsas*

The *comparsa* is an artistic manifestation or performance that arises as part of socio-musical processes. According to Diana Taylor (2003, 2–3), 'Performances function as vital acts of transfer, transmitting social knowledge, memory, and sense of identity through what Richard Schechner [1985, 36] has called "twice-behaved behavior"' [date and page added]. She continues: 'As a term simultaneously connoting a process, a praxis, an episteme, a mode of transmission, an accomplishment, and a means of intervening in the world, it [i.e., performance] far exceeds the possibilities of these other words offered in its place' (ibid., 15). These processes are perceived as social, creative and participatory activities that exist in different contexts and with specific spatiotemporal implications and with elements that are particular to this occurrence. *Comparsas* are street ensembles that perform in carnivals and parades, and it is indispensable that they follow a concept, portray a story or have an otherwise predetermined purpose; they entail a *mise-en-scène* that serves to communicate different messages, and where music, choreography, costuming and props such as streetlights, dolls, banners and even floats are combined to illustrate a specific theme. *Comparsas* are lively artistic expressions in which the visual arts, dance and musical and other forms of theater are condensed. In Cuba, they normally involve a large number of people and are usually organized by neighborhood or village. This gave rise to *comparsas* that are representative of each location and act as both symbols of identity and of diversity – themes, costumes, music, choreographies and other forms of expression vary from one *comparsa* to the next.

In various moments in the sociohistorical development of Cuban government, authorities and institutions – first Spanish, later American during the two interventions at the beginning of the century – censored or prohibited *congas* and *comparsas*. During the first American occupation, the mayor of Havana enacted a decree in April 1900 forbidding the use of African drums and the street transit of 'tangos, cabildos, and claves,' all terms referring to groups dancing *congas*. In his study of 'Las comparsas carnavalescas de La Habana en 1937,' Leuchsenring (1940–46) included references to these prohibitions and their reappearance and development in 1937. However, the carnival *conga*, due to its popular character and ability to mobilize large crowds, was used in political propaganda. Starting in the 1920s and through the 1940s, some presidential candidates used *congas* and the convocation power of music and dance in their election campaigns to attract people to their activities. Some of these *congas* became famous and were disseminated via oral tradition. One example is 'La Chambelona,' used between 1916 and 1917 by the Liberal Party with the following text: 'Aé, aé, aé la Chambelona/Azpiazu me dió botella y yo voté por Varona' (Aé, aé, aé the Chambelona/Azpiazu gave me bottle but I voted for Varona). It was also used to satirize the politician *du jour*: 'Aé, aé, aé la Chambelona/Batista no tiene madre porque lo parió la mona' (Aé, aé, aé la Chambelona/Batista has no mother because he was birthed by a she-monkey). This *conga* remains popular today in the voices of the people, who change the text to fit their specific expressive needs, with lyrics such as 'Aé, Aé, Aé la Chambelona/yo no tengo la culpita, ni tampoco la culpona' (Aé, aé, aé the Chambelona/I am not guilty in any way whatsoever).

Characteristics of *Congas*

The instrumentation used in *congas* differs according to the region – as do the songs, drum-playing techniques and the type of march of the dancers – and its characteristic features vary depending on the expressive needs of the participants as well as on the spatiotemporal context. In Cuba, *congas* from eastern regions differ from those performed in the west in their instrumental configuration, the types of instruments that are used, and in their musical, textual and gestural contents. Beyond these larger zones, *congas* also show unique and specific traits within each locality. For instance, the shape of the *bocú* drums (conical-tubular drums with a single membrane with either nails or keys for hide tensioning) used in the *congas* of Santiago differs from the barrel shape of the *tumbadoras* commonly used in the western regions of the country. Similarly, there are marked differences in the marching and dancing styles, as well as in the interpretation of the music itself. It is important to remember that the *conga* as a genre and/or generic type is derived from sociocultural and socio-musical processes where groups of people – each with their own images, creativity and influence in their space-time – act, intervene and participate, generating changes and transformations.

Congas can exist in any given scenario, from *barrios* (neighborhoods), salons or other dance halls, to theaters. Also, this genre and/or generic type is developed by professional musical ensembles of various sizes, from traditional trios, groups, Cuban bands, to versions for symphony orchestras, each arranged according to instrumentation and as a function of the space, time, expressive needs and competence of its creators and performers. In the same manner, one can admire and enjoy the dance in a popular Carnival *conga* or in a theater setting displaying elaborate choreographies. A *conga* may manifest itself in different types of music and musical styles. In fact, during the 1940s and 1950s the *conga*, along with the *rumba*, was widely used in cabaret stagings and entertainment salons in the United States. It was also embraced and disseminated by the film industry and from here the 'inter-genre' *rumba* (to use Orozco's term for a genre that possesses a high degree of hybridity, volubility and mobility [2006]) was developed. With the *rumba*, the *conga* was encircled by similar processes, especially the *conga* that features three strong marked steps and a fourth with strong body movements, a foot raise and loose arms, first on one side, then on the other, while shouting EEH! in a catharsis-like festive revelry. This was described by Orozco as 'exotic-trivial in the dance version in cabarets or in the Hollywood scene' (ibid.). This *conga* is also known as scenic *conga* 'a la del paso chévere' – uno, dos y tres, EEH! qué paso más chévere, qué paso más chévere, el de mi *conga* es EEH! (One, two, three, EEH!! what a cool step, what a cool step, of my *conga* this is EEH!)

Conclusion

As a genre and/or generic type, the *conga* is created and developed in the socio-musical practices of subjects – creators and participants – that are part of social groups and communities that have established specific spaces and times for its realization; and 'through contacts varied in nature, inter-influences, inter-exchanges, appropriations and reinsertions, traverse various social sectors, transforming itself into a national, regional or international expression' (Orozco 2010, 64). The *comparseros* and *congueros* in Cuba have transmitted their tradition to the next generation, and the most famous *congas* and *comparsas* from colonial time have remained relevant. Some of these *congas* have retained the essence of their characterizing features in their performance (i.e., their space-time character). Among these we find 'El Alacrán' (The Scorpion), 'Las Bolleras' (The [female] Bakers), 'Los Marqueses de Atares' (The Marquises of Atares) and 'Las Jardineras' (The Gardeners), among many others.

SONIA PÉREZ CASSOLA (TRANSLATED BY PAMELA NARBONA JEREZ)

Congos

A distinctive and localized variant of Dominican long-drum music (*palos*), *congos* are played at funeral rites and the annual patron saint festivities of the black *cofradia* (religious brotherhood) of Espíritu Santo, situated just north of the capital city, Santo Domingo. *Congos* are distinguished from other *palos* music in instrumentation and rhythm, phonemes and words derived from African languages in song texts, and a relatively stronger emphasis on ritual structure and religious significance. During the *Fiesta del Espíritu Santo*, and latter stages of funeral rites, *congos* accompany a traditional dance by the same name. In recognition of its historical significance, excellence as a cultural tradition, and risk of disappearance, UNESCO in 2001 proclaimed the cultural space of the *Cofradía del Espíritu Santo de los Congos de Villa Mella* a Masterpiece of the Oral and Intangible Cultural Heritage of Humanity. Since the Afro-Dominican folklore movement of the 1970s, the *Congos de Espírito Santo* have been presented on festival stages, and on Dominican radio and TV broadcasts.

Congos de Villa Mella refers both to members of the *cofradía* and to the instruments and music used in their ceremonies. Funeral rites and music of the *congos* date back at least to the end of the eighteenth century, coinciding with an increase in Dominican slave trade from the port of the Congo River. Davis (1976, 70) argues that *Espíritu Santo* is syncretized with the Congo-Angola high deity Kalunga, noting, along with other evidence, a ritually significant song of the *congos* which mentions Kalunga repeatedly.

The musical ensemble is composed of one long, cylindrical, wooden drum (*congo mayor),* a second drum of similar construction but one-third the length (*conguito*), a wooden idiophone similar to the Cuban *clave* (*canoíta*) and several *maracas.* Both women and men sing, dance and play *maracas,* and men of the *cofradía* play the drums, using hands only. With an accent on the syncopated second stroke, the *canoíta* propels forward musical time with a Caribbean *tresillo* rhythm (3+3+2 eighth-note count), while the *maracas* outline the beat and its duple subdivisions. Along with the *conguito*, which combines the pulse and *tresillo* in its drum pattern, these instruments form the rhythmic foundation for the vocalists and the extended improvisations of the *congo mayor* player. While there are dozens of songs, with one exception *congos* are sung to the same rhythmic foundation, alternating variable solo verses with a fixed chorus response every couple of cycles of the percussion. Texts make reference to the spiritual voyage of the deceased, to ancestors, other members of the fraternity, Kalunga and *Espíritu* Santo, as well as to numerous more secular and mundane interests.

The combination of timbres in the *congos* ensemble is unique. Unlike other Dominican long drums (*palos)*, the *congo mayor* and *conguito* are double-headed drums, one head of goatskin and the other cowhide, though only the goatskin is struck. The drum timbres occupy the middle and lower register of the ensemble sound. A *canoíta* is larger than a Cuban *clave* and is shaped like a canoe, partially hollowed out in the center, giving it a somewhat lower and more resonant sound, though still focused. Many chorus melodies are sung in a tenor or alto register, with men and women in unison, and begin with an accented vocable held several beats before any word(s) are sung. Combined with several swishing *maracas*, the ensemble sound is rich and distinct.

The purpose of *Congo* funeral rites and music is to integrate the deceased peacefully into the world of ancestors, through a series of phases including a *novena* (nine-day ritual), a one-year anniversary of death and a final grand banquet held typically after three years. In the musical activities of the *cofradía*, *congos* are most significant, but occur alongside other types of Dominican traditional music, varying from semireligious *tonadas* and *salves,* to secular *pri-pri* (a southern regional variant of *merengue* using a *balsíe* friction-drum) and *son*. Though there are serious and solemn moments, the funeral rites and patron saint festivities of the *Cofradía del Espíritu Santo de los Congos* are on the whole celebratory, with an abundance of food, drink and laughter.

Contradanza Cubana

The Spanish *contradanza*, French *contredanse*, English contradance and other variant spellings denote music and dances performed in Europe, the Caribbean, the Americas and beyond since the seventeenth century. The position of *contradanza* as art, light-classical and popular music has been flexible since its emergence. *Contradanzas* were created specifically for salon and concert performances, as well as for social dances. Eighteenth-century *contradanzas* were danced lengthways by lines of female and male dancers, with variations in square, circle and other formations. A caller, or stick-bearing *bastonero*, would often dictate figures at dances, and *contradanzas* were enjoyed by novices, as well as by more dedicated dancers. From the nineteenth century, Greater Caribbean *contradanzas* were given qualifying adjectives, such as the Puerto Rican *contradanza del país* and the Cuban *contradanza cubana*, *contradanza criolla* (Creole *contradanza*) and subsequent *danza* (dance) and *danza criolla*. Most *contradanzas* are in 2/4, although occasionally in 6/8 and 3/4, with diatonic melodies and harmonies. Their form is AABB, with each section consisting of two clearly demarcated eight-measure phrases. In dance contexts, the whole structure could be repeated for as long as desired, and combined with improvisations (León 1984, 228), different *contradanzas* and other genres.

The heyday of Cuban *contradanzas* was the nineteenth century. The earliest-known examples are scores from the beginning of that century. Cuban *contradanza* voicings were characteristically in thirds and sixths, with melodies sometimes drawn from popular songs, opera hits or street vendors' cries (*pregones*). The *tango* (or *habanera*) rhythm (see Example 1) had occasionally occurred in European *contradanzas*, including Mozart's 'Contredanse en sol' (Gadles Mikowsky 1988). However, it was the persistent use of the *tango* rhythm, and other rhythms such as the *cinquillo* and *tresillo* (see Example 1), which became markers of Cuban *contradanzas*. These isorhythms tended to occur in the bass in B sections, as well as in non-notated improvisations and percussion parts. Much scholarship has suggested that these rhythms originated from the African subcontinent, brought to the Greater Caribbean with slavery (Urfé 1976), via Moorish Spain (Fernández 1989; Sachs 1937), or both (Carpentier 2001; Lapique Becali 1995). However, as Tagg (1989) points out, rhythms linked to 'black' music have been found in some European music *and* some African music, but not all. Origins are hard to locate and were certainly multiple.

Example 1: Isorhythms: a) *tango* (or *habanera*), b) *cinquillo* and c) *tresillo*

Contradanzas could be played by any melodic instrument, and instrumentation ranged from solo violin or piano, to military and civil bands. Nineteenth-century Cuban ensembles usually featured percussion, including drums, *güiros* (gourd scrapers) and shakers. The popular Cuban wind bands known as *orquestas típicas* often included clarinets, cornet, *bombardino* (euphonium/saxhorn), *figle* (ophicleide, a bass key-bugle), trombone, violins, contrabass, two *timbales* (small timpani) and a *güiro* (Urfé 1976, 11). Although instrumentation was sometimes indicated on piano reductions, further archival research is required to understand contemporary performance practices, especially given the reliance on notated sources in *contradanza* research.

Histories

Much scholarship on Cuban *contradanzas* traces an evolving trajectory from European origins, specifically seventeenth-century English country dances and French *contredanses*, thereby eliding precursors such as the French *branle*, and foregrounding documented

European musical and choreographic practices, over undocumented contributions from the African subcontinent and from local populations. Seventeenth-century English dances, both rural and urban, were performed in circular (round), lengthwise (longways) and square formations by people of all social classes (Quirey 1993). Some indication of contemporary music and dance is provided by Playford's dance manuals, produced from the 1650s (such as 1698). Guilcher (1969) details how French dancing master André Lorin traveled to England to notate dances which, by 1688, were being performed by Louis XIV and his circle at Versailles. Whether popularized by the English elites, the French court or more humble performers, *contradanzas* (*contredanses*) were soon popular throughout Europe. They were also disseminated with colonial enterprises to the Greater Caribbean, the Americas and beyond. At the same time, millions of slaves were being violently uprooted and shipped to and around the Greater Caribbean, carrying with them their knowledge of cultural practices.

Histories of Cuban music often relate how *contradanzas* traveled a singular route from France to Saint Domingue (Santo Domingo), part of the island of Hispaniola which Spain ceded to the French in 1697. The eminent Cuban writer and musicologist Alejo Carpentier suggests that 'the black musicians of Santo Domingo adopted it [the *contredanse*] with enthusiasm, imbuing it with a rhythmic vivacity overlooked by the original model. … The so-called *tango* rhythm was featured in the bass. The percussion accentuated the cunning of the black violinists' (2001, 146). Carpentier also notes choreographic similarities with *calendas*, *congas* and other Afro-Caribbean dances. With the 1791–1804 Saint Domingue slave revolts, which resulted in the foundation of the Republic of Haiti, many Saint Domingue elites emigrated to eastern Cuba, taking their slaves and continuing sugar cultivation there. By 1808 the population of eastern Cuba consisted of 9,057 Afro-Cuban slaves, 9,226 free Afro-Cubans and 8,146 Europeans and Creoles (Duharte 2003). Given this high number of Afro-Cubans, many scholars, following Carpentier (2001), have argued that it was in eastern Cuba that rhythms such as the *tango*, *cinquillo* and *tresillo* (see above) became persistent elements of local *contradanzas*, resulting in the Cuban *contradanza*. However, Lapique Becali (1995) and Martínez Rodríguez (n.d.) propose that *contradanzas* traveled from Spain to Cuba and Lapique Becali argues that African-derived elements were added *prior* to the additional contribution from the Saint Domingue *émigrés*. It is hard to pinpoint the roots and routes of these various elements, especially given the importance of Havana as a regional port, the ongoing exchanges within the region, and to and from European, African and other territories. These exchanges were cultural, commercial, religious, political and violent. They included *contradanzas*, rhythms such as the *tango* and *cinquillo* and other music and dances which were continually modified. Whatever the origins, the popularity of *contradanzas* in Cuba was to peak in the nineteenth century, after the Saint Domingue *émigrés* arrived. It was then that substantial numbers of *contradanzas* emerged locally.

By 1800 dance was already extremely popular in Cuba. In 1798, around 50 public dances were held daily in Havana, according to estimates by the chronicler Buenaventura Pascual Ferrer (Carpentier 2001, 174). 'The enthusiasm was "almost crazed,"' comments Carpentier, 'open to all, "young lads of idle occupation were accustomed to spending all night there"' (Carpentier 2001, 155). People young and old, rich and poor, free and enslaved, danced *contradanzas*, as well as other popular genres such as minuets, allemandes, quadrilles, rigadoons and Lancers (*lanceros*). These dances were performed in rural villages, slave *cabildos* (mutual aid, recreational and religious societies), urban elite and middle-class dance halls and clubs, dance academies, homes, patios, schools and notably the *casas de cuna* ('cradle' houses), where free Afro-Cuban men and women mixed with young male Creoles (Fernández 1989; León 1984, 218, 229). Descriptions may be found in Cirilio Villaverde's novel 'Cecilia Valdés' (1882); however, a more poignant analysis of how 'race,' racism, age and gender intersected in some of these contexts is provided by Reynaldo González (1992, 188–209).

The majority of professional musicians were free Afro-Cuban men during the nineteenth century. The career of musician was considered by most Creoles to be too unstable in financial terms (Carpentier 2001, 153–4). While a few Afro-Cuban musicians came from prosperous families who could support their studying at Cuban or Parisian music conservatoires, the majority acquired their skills playing in military and civil bands. Musicians often performed in several ensembles, including symphony orchestras, military bands and elite, middle- and lower-class dance hall bands. Together with young male Creoles, Afro-Cuban musicians were important cultural mediators, transmitting fashions, music, dances and performance practices between social groups.

The nineteenth century saw a rise in local music publishing, particularly in Havana. Juan Federico Edelmann y Cayre set up the most important music publishing firm, subsequently run by his sons.

Edelmann founded his shop in Havana in 1836, importing, publishing and distributing the works of foreign and local composers (Lapique Becali 1979, 17). Significant numbers of local piano compositions were also printed in broadsheets, newspapers and, to a lesser extent, music journals, as Lapique Becali (1979) extensively documents. The anonymous 'San Pascual Bailón,' published in Havana in 1803, is the earliest-known musical illustration of a Cuban *contradanza* ('San Pascual Bailón' is reproduced in Galán 1983, 111–12; Manuel 2009, 68; and Rodríguez Domínguez 1967, 29–30). It is a piano reduction, merely indicating horn parts, but bearing the *tango* isorhythm which distinguished the Cuban *contradanza* from its predecessors. While 'San Pascual Bailón' refers to the Spanish saint Pascal Baylon, other *contradanzas* were named after notable innovations and events, such as 'La nueva cañonera' (The New Gunboat) composed by Victor Moreno and the anonymous 'La crisis o la baja del azucar' (The Crisis or the Sugar Slump) (both reproduced in Lapique Becali 1979, 38); local and foreign personalities, such as 'La Tedezco' by Manuel Saumell, named after the Italian singer, Fortunata Tedesco (*sic*) (reproduced in González 1980, 47); and Afro-Cuban culture, such as 'Tu madre es conga' (Your Mother Is Congolese) (reproduced in Lapique Becali 1979, 41). Titles of *contradanzas* did not always relate to their musical content, but could sometimes act as performance indicators.

Contradanza choreographies changed with fashion. But the majority consisted of four- and eight-bar figures, both simple and more intricate. Figures popular in early nineteenth-century Cuba included the *paseo* (promenade, performed particularly in the A sections), *cadena* (chain), *sostenido* (sustained, or holding of partners), *ala* (wing), *alemanda* (allemande), *latigazo* (whipping), *lazo* (knot), *molino* (mill), *puente* (bridge) and *rodeo* (roundabout) (Fernández 1974; Pichardo 1953). There were, however, two local steps of particular note: the *escobilleo* (sweeping) and the *cedazo* (sieve or 'passing through,' performed in the B section). In his novel *Cecilia Valdés* (1882), Cirilio Villaverde depicts the *escobilleo* as a lateral hip movement resulting in the shuffling of the dancer's feet against the floor. Until then, *contradanza* figures had been danced collectively by couples in open position (with dancers often holding one hand). However, in the *cedazo* (sieve or 'passing through'), couples danced independently in closed embrace under the arched arms of their fellows or under flower-adorned branches (Rodríguez Domínguez 1967). Moralists denounced the intimate embrace of the *cedazos*, as they would also object to the newly fashionable waltz. Their critiques were mostly highly racialized and often politically motivated.

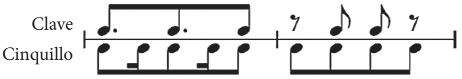
Between the 1800s and the 1830s the popularity of *contradanzas* dwindled in Europe. Meanwhile, several scholars (Castillo Faílde 1964; 1939; Sánchez de Fuentes 1928) contend that the Cuban *contradanza* was supplanted by the *danza* by the 1830s. However, the terms *contradanza* and *danza* were interchangeable in Cuba, at least initially, despite ongoing transformations to the music and dances. For many, *danza* was merely a diminutive of *contradanza*. Pichardo's definition of *danza* in his 1836 dictionary reads: 'The *contradanza*, as it was formerly called, is considered musically to be of a particular and well-known style' (1953, 258; author's translation). Terminology was further complicated by *danza* meaning 'dance,' that is a specific dance, activity or event. However, from mid-century, the term *danza* would be used more frequently than *contradanza*. And, regardless of nomenclature, there were notable musical changes including a decrease in tempo and greater variations in the B sections (creating B1, B2 and so on) (1988, 75). The first example often given of a *danza* is the anonymous 'El sungambelo,' composed circa 1813, where the *cinquillo* features prominently (see Rodríguez Domínguez 1967, 41, for a piano reproduction). Choreographically, the closed-embrace *cedazo* was extended, and the dance was increasingly performed by individual couples, rather than by couples in a group (Balbuena 2003, 27–9).

Contradanzas/danzas were composed by men, women, Afro-Cubans and Creoles. Notable composers, several of whom also led bands, included Ramón Menéndez, Nicolás Muñoz y Zayas, Ulpiano Estrada (1777–1847), Tomás Alarcón (d. 1795), Tomás Buelta y Flores (1798–1851), Claudio Brindis de Salas (1800–72), who founded the Orquesta La Concha de Oro and also gave dance classes, Vicente Díaz Comas, Agustín Cascantes, Juan de Dios Alfonso (1825–77), who led the Orquesta Típica Flor de Cuba, José 'Lino' Fernández de Coca (b. 1830), Nicolas Ruíz Espadero (1832–90), Tomás Ruiz (1834–89), Raimundo Valenzuela (1848–1905), who took over Juan de Dios Alfonso's band after he died, renaming it Orquesta Valenzuela, Miguel Faílde Pérez (1852–1921), director of the Orquesta Faílde, who famously premiered his *danzón* 'Los alturas de Simpson' in 1879 (piano version created in 1920 for Jorge Anckermann, reproduced in Castillo Faílde 1964, 191–2; see also Floyd Jr. 1999, 15) and Cecilia Arízti (1856–1930) (Carpentier 2001; Manuel 2009; Orovio 2004). However, Cuba's best-known *contradanza/danza* composers were Manuel Saumell Robredo (1817–70) and Ignacio Cervantes

Kawanagh (1847–1905), the former known for *contradanzas*, and the latter for *danzas* (see Fernández 1989; Gadles Mikowsky 1988; González 1980). Both Saumell's and Cervantes's *contradanzas/danzas* were initially published by Edelmann, and their works are still performed by Cuban pianists at the beginning of the twenty-first century, often as a form of musical nationalism. The *contradanza cubana* had, for some musicians at least, been a marker of Cuban nationalism. And while the Cuban *contradanza* could not easily be placed on either side of Cuba's independence struggles, some important musicians were patently pro-independence, including Buelta y Flores, Cervantes and Fernández de Coca (Manuel 2009, 102; Sublette 2004, 139).

Beyond Cuba, notable composers who penned *contradanzas* for piano included New Orleans-born Louis Moreau Gottschalk (1829–69) and the Mexicans Ernesto Elorduy (1854–1913) and Felipe Villanueva (1862–93) (see Campos 1930; Carredano 1992; Starr 1995). In the second half of the nineteenth century, Cuban *contradanzas* were also performed by *bufos* (comic theater groups) in Cuba, Mexico and elsewhere.

The popularity of the Cuban *contradanza/danza* began to be eclipsed by the *danzón* in the 1880s, although the distinction between the two was again not initially clear. *Danzón* would become demarcated by its rondo form, extensive appearance of the *cinquillo* rhythm within an overarching *son clave* pattern (see Example 2), and closed-embrace dancing (Malcomson 2010, 2011).



Example 2: *Cinquillo* rhythm and related overarching *son clave* pattern

Other successors of *contradanzas* included sung *contradanzas* known as *habaneras* (or *contradanza habanera*, meaning 'from Havana'), and the Puerto Rican *danza*, which emerged in the mid-nineteenth century and differs from its Cuban namesake (see Díaz Díaz and Manuel 2009). Cuban composers such as Ernesto Lecuona (1895–1963), Jorge Anckermann (1877–1941), María Cervantes (1885–1981) and Alejandro García Caturla (1906–40) continued to write *contradanzas/danzas* into the twentieth century, particularly as nationalist piano pieces. Several reconstructive recordings of *contradanzas* and *danzas* have been made in the twentieth century, for example by the Rotterdam Conservatory Orquesta Típica (1996). These recordings have inevitably focused on notated *contradanzas* and have tended to rely on descriptive writings in attempting to recreate improvisations and percussion parts. A few ensembles, in Cuba and beyond, have included *contradanzas* in revised form in their repertoire, such as recordings by Irakere and Chucho Valdés (1974, 1976), and the album '*Danzón All Stars. Mi gran pasión*' (1999) by Orquesta Todos Estrellas. In the early twenty-first century, *contradanzas* continue to be played in piano performances and danced in eastern Cuban *tumba francesa* performances (Alén Rodríguez 1991). Other parts of the Americas where *contradanzas* are still occasionally performed include Haiti (see Largey 2009), Mexico, Peru, the United States of America, where there is a revival contradance movement (see Beard et al. 1999), and the Southern Cone where the *pericón* is performed as a 'folkloric' music-dance form in Argentina, Chile and particularly Uruguay.

Coros de Clave

Coros de clave, literally 'clave choirs,' were ambulatory choral groups that would circulate in the streets of the western Cuban cities of Havana and Matanzas in the late nineteenth and early twentieth centuries, particularly during the Christmas holidays. Although this tradition has not been extant at least since the 1960s, its repertoire and vocal style are thought to be an important influence on *guaguancó*, the most popular style of the Afro-Cuban music and dance genre rumba. In addition to *coros de clave*, there were also groups called *coros de guaguancó*, which differed in certain ways, although the two are often discussed as the same tradition. Scholars utilize a variety of names to refer to the tradition, and it is likely that there were different appellations used in Havana and Matanzas. For example, in discussions of the tradition in Matanzas, scholars have used the terms *coros de rumba* (Grasso González 1989, 9; Évora 1997, 187) and *bandos* (Martínez Rodríguez 1977, 128; Esquenazi Pérez 2001, 210). Although mentioned by numerous scholars, there are no in-depth studies on this tradition.

History

Coros de clave were an Afro-Cuban imitation of Catalan choral societies brought to Havana in the later nineteenth century, and were named after a Catalan composer, José Anselmo Clavé, who established a choral society made up of uneducated, working-class people in Barcelona in 1845 (Sublette 2004, 262–3). (The *coros* were not, therefore, named after the percussion instrument consisting of two wooden sticks beaten against each other to provide a timeline rhythm, although *claves* were used in performance.) Several scholars discuss the emergence of *coros de clave* in terms of the specific situation of blacks in late nineteenth-century Cuba – that is, the gradual abolition of slavery in the 1880s and the large-scale migration of former slaves from rural plantations to urban centers. In addition, the tradition is often linked to *cabildos* – colonial-era mutual aid societies formed by African slaves and their ancestors along ethnic lines – with some scholars asserting that *coros de clave* functioned as a substitute in the wake of the dismantling of *cabildos* after full emancipation in 1886 (Grasso González 1989, 9; Sublette 2004, 263).

Although *coros de clave* and *guaguancó* are generally linked to Havana and Matanzas, the *tonada trinitaria* from the central Cuban city of Trinidad is sometimes discussed as part of this tradition (see León 1984, 163). Martha Esquenazi Pérez states that the *coros de clave* tradition migrated to the city of Sancti Spíritus (near Trinidad) around 1894, and that societies were founded there in the early twentieth century (2001, 210). She also discusses the *tonada trinitaria* within the *coros de clave* tradition, specifically noting that the different choral groups were, like the *coros*, defined by neighborhood of origin and engaged in competition during the Christmas holidays (ibid., 211).

There does not seem to be a consensus within the scholarship about how long this tradition lasted.

The dates given for its disappearance range from the early twentieth century (Alén Rodríguez 1998, 863; Évora 1997, 189), to the 1920s (Sublette 2004, 263), to the 1950s (Esquenazi Pérez 2001, 218). Nonetheless, both Évora (1997, 187) and Argeliers León (1984, 161) suggest that the famed Matanzas group Bando Azul was still extant in the early 1960s, and Grasso González asserts that it was still active into the 1980s (1989, 9).

Musical Description

Coros de clave were constituted by as many as 150 choral singers, and generally included a director, usually the most experienced member of the group, and a *clarina*, a female lead singer who possessed a particularly powerful voice, and who engaged in call and response with the chorus, usually singing in two- or three-part harmony (Moore 1997, 92). In addition, the *decimista* was the primary composer of the group, the *tonista* kept the group in tune and functioned as a conductor, and the *censor* was 'responsible for the quality of the song texts and the beauty of the melodies' (Alén Rodríguez 1998, 836). The *décima*, or Spanish ten-line poetic form, was the most common lyrical structure, although sometimes texts consisted of more simple rhyme schemes. Descriptions of the instrumental ensemble used to accompany *coros de clave* vary somewhat within the literature, but the most commonly mentioned instruments are guitar(s), *claves* and *viola*, a string-less banjo that was struck in a percussive manner. In addition, accompaniment could include a small harp, *botija* (earthenware jug that is blown and serves a bass function) or other instruments. It is likely that there was substantial regional variation in the instrumentation of central Cuban manifestations of the tradition, especially in *tonada trinitaria* (Esquenazi Pérez, 212).

Although *coros de clave* and *coros de guaguancó* are often discussed as the same tradition, some scholars note differences between the two, with most asserting that the latter evolved from the former (see Esquenazi Pérez 2001, 215; Sublette 2004, 263). Argeliers León differentiates them further, by noting that they developed independently of each other and that the *coros de clave* repertoire was more often appropriated for use in the *teatro bufo*, or comic theater, tradition (León 1984, 163). Robin Moore characterizes the *coros de guaguancó* tradition as more Africanized, more percussive and as having a higher proportion of male singers (1997, 92). In addition, unlike the *coros de clave*, *coros de guaguancó* incorporated membranophones, and were generally sung in 2/4 as compared with the typical 6/8 meter of the former (ibid.). In fact, some scholars assert that *coros de guaguancó* utilized *cajones*, or wooden boxes of various sizes that functioned as drums (Esquenazi Pérez 2001, 217; Sublette 2004, 263), which also constituted the instrumental ensemble of early rumba, before the incorporation of *conga* drums in the 1930s. Esquenazi Pérez implies that there may also have been a greater spirit of rivalry within the *coros de guaguancó* tradition, and presents fragments from a few songs that constitute *puyas*, or lyrical battles of wit between groups. A few of the most famous *coros de guaguancó* in Havana were El Paso Franco, Azules Amalianos (formed as early as 1862) and Los Roncos, the last of which became the most famous in part because its main composer was legendary *son* musician Ignacio Pineiro. Some of the famous *coros de rumba* in Matanzas were the Bando Azul, the Bando Rojo, El Marino and Los Congos de Angonga. The Bando Azul, which maintained a famous rivalry with the Bando Rojo, emerged in 1910 from an *Arará cabildo* (Grasso González 1989, 11), which was dedicated to preserving the religion and traditions of slaves and descendants from the ancient kingdom of Dahomey, present-day Benin. This history thus constitutes evidence of the close links between the choral societies and the Afro-Cuban *cabildo* tradition.

Although *coros de clave* and *guaguancó* are no longer extant traditions, and unfortunately do not seem to have been recorded in their original manifestations, their influence lives on in secular traditions still practiced in the early twenty-first century. For example, the mobile performance format of *coros de clave* is echoed in the Cuban carnival *comparsas*, which are also ambulatory ensembles that parade through the streets and engage in lyrical competition and friendly rivalry. In fact, León (1984, 161–2) notes that the *coros* often organized *comparsas* during Carnival, composing special songs for the occasion, and Cristóbal Díaz Ayala (2003, 109) asserts that the *coros de guaguancó* were the basis for the renewal of *comparsas* after they were banned for a period in the 1910s. The most important legacy of this tradition is in the arena of *rumba* song, and prominent *rumba* groups – such as the Havana-based Clave y Guaguancó (whose name is a homage to the defunct practice) and the Matanzas-based Afrocuba de Matanzas – still perform songs from the *coros de clave* repertoire.

REBECCA BODENHEIMER

Corrido

The *corrido* is a Mexican narrative song or folk ballad accompanied by one or more guitars and, in the later twentieth century, accordion-driven *norteño* groups or *bandas* (brass bands from Mexico's northern Pacific coast). The *corrido* is a folksong type not primarily associated with dance, though people may dance to *corridos* when performed by dance bands in polka or waltz rhythm. The genre has evolved as a mestizo cultural form associated with the rise of a national consciousness, especially during the early decades of the twentieth century, and in the context of border conflicts with the United States. As the *corrido* has been transmitted predominantly by live performance for much of its history, its limited appearance in the form of leaflets (songsheets) and its later appearance in the form of commercial sound recordings represent an important source for the documentation of Mexico's unofficial history. *Corridos* in these forms comment not only on political events, national affairs and natural disasters, but also on subjects such as crimes, family feuds, horse races, romantic entanglements, immigration and, since the 1990s, drug trafficking. As a folk genre, the *corrido*'s characters, events and themes represent the values and histories of local communities.

Historically, the *corrido* is a Mexican folk ballad that, like the Spanish broadside ballad, stems from the Spanish *romancero*, a ballad tradition that flourished in Renaissance Spain. Soldiers, adventurers, merchants and settlers carried the tradition to the New World, where it took root among the mestizo populations with varying degrees of popular acceptance. The Spanish *romance* was a balladry of such importance in expansionist Iberia that it swept the whole of Latin America: not only are Spanish *romances* still known across Latin America, but also several ballad traditions stemming from the romance have developed throughout the continent bearing striking similarities to one another. In Argentina and Chile, compositions known as *romances*, *cantares*, *corridos* and *tonadas* have been collected since the latter part of the nineteenth century. In its poetic forms and narrative subjects the early Mexican *corrido* is true to its roots in Iberian narrative poetry, although there are some non-narrative examples, such as simple love songs or political commentaries, that are also referred to as *corridos*. Throughout the nineteenth century, a variety of terms such as *romance*, *historia*, *narración*, *ejemplo*, *tragedia*, *mañanitas*, *recuerdos*, *versos* and *coplas* were used synonymously with, or in addition, to the term *corrido*. The distinctions between these different designations were made based on the subjects of the compositions, not on their musical features. The term 'corrido' itself is probably a shortening of the term *romance corrido*, a through-sung ballad (Mendoza 1954). Its transformation into a distinct Mexican form occurred during Mexico's struggle for independence in the early 1800s; however, the formative period in the rise of the *corrido* remains a matter of speculation – mainly because both the Spanish ballad and the Mexican *corrido* were essentially oral traditions which only occasionally manifested themselves in print.

Contradicting other *corrido* scholars who believe that the *corrido* emerged and evolved within Mexican territory, the Texan folklorist Américo Paredes (1958) posited the Texas-Mexican border as the birthplace of the ballad tradition itself. Indeed, in the 1850s a number of *corridos* did begin to surface in south Texas. These early ballads depicted the cultural conflict between the encroaching Anglos who took possession of the Mexican territory in 1848 after the Mexican-American War and the Mexican farmers who had been living there since the early 1700s. The lyrics of these early *corridos* addressed the deeds of Texas-Mexican folk heroes. One of the best examples of the border *corrido* is 'Corrido de Gregorio Cortéz' which narrates the bloody encounter between the Mexican farmer Cortéz and an Anglo sheriff (Paredes 1958). Cortéz's heroic actions became an important element in the emerging group consciousness of Texas-Mexicans. This type of border-conflict *corrido* appeared up to about 1930, but the tradition of celebrating heroes continued in new *corridos*, for example, those of the 1960s about John F. Kennedy or those of the 1970s about Mexican-American union leader César Chávez and the Chicano movement (Dickey 1978).

Description

Because the *corrido*'s central function is to relate a story or event of local or national interest, renowned *corrido* scholars of the 1940s and 1950s, such as Simmons, Castañeda, Mendoza and Paredes, have focused mainly on the genre's evolution as a distinctively Mexican genre and its importance as a social and literary document. Once consolidated, the typical *corrido* features a number of formal ballad conventions: (1) a formal opening that contains the initial call of the balladeer to the public; (2) the stating of the place, time and name of the protagonist of the ballad; (3) the arguments of the protagonist; (4) the message; (5) the farewell of the protagonist; and (6) the farewell of the balladeer. Although each of these elements is not necessarily employed in any one given *corrido*, the presence of at least three of them, combined with certain features of metrical and strophic organization, is taken by scholars as an indicator of its authenticity as a folk ballad.

The *corrido* is a song with a declamatory melody in either 2/4 or 3/4 time (polka or waltz rhythm). *Corridos* are fairly simple musical constructions. Like many other folk music genres in different cultures around the world, their harmony is based on the tonic, dominant and subdominant chords. The major key is preferred. The melodic phrases are repeated for each stanza; occasionally, the *corrido* has a refrain, which may be in a different rhythm. The melodies frequently have a range of less than an octave. The short range allows the *corrido* to be sung loudly at the top of the singer's voice which is an essential part of the corrido style. Whereas in earlier times the *corridista* (balladeer) used to accompany himself simply on guitar (women did not perform in public and no women *corridistas* have been documented so far), modern singers are accompanied by *norteño* groups or full-size *bandas*. The *corrido* usually follows the literary structure of the *copla*, consisting of octosyllabic quatrains (or less frequently stanzas of six eight-syllable lines), its rhyme scheme varying between ABAB, ABBA and ABCB. Indeed, in its rhyming, metrical and strophic structure the *corrido* is quite flexible and many compositions break away from the established patterns. This flexibility contributed in no small part to the genre's popularity and survival.

In oral tradition, folk tunes exist in an array of versions or variants. Yet, folk tunes such as the *corridos* are essentially combinations of prefabricated elementary forms such as scheme, motif, theme and formula. The creation of new tunes is largely based on permutations of more or less ready-made elements. Moreover, *corridos* are largely based on literary devices: the opening statement of date and place; the introductory reference to the singing of the *corrido*; a reference to the singer, the audience or the song; dramatic speech events; journeys as a common theme; the use of particular words, exclamations, proverbial expressions, metaphors and allegories; the figure of the bird messenger; the farewell, and so forth. The use of these stock devices signals the '*corrido* world' in which the particular story unfolds.

Although the *corrido* text is extremely detailed and abounds in dates and names, its purpose is not to convey news, as often believed, but rather to interpret, celebrate and ultimately dignify events already thoroughly familiar to the *corrido* audience or community (McDowell 1981). In many ways the *corridos* were the history book of the illiterate, providing an intriguing folk counterpoint to Mexico's 'official' history. In contrast to the emotional and *bel canto* style of *ranchera* (Mexican country music) singers, the *corridista* uses a deadpan language and performance style. Even the most melodramatic incidents are described in this matter-of-fact style. Although the language employed in *corridos* is mostly simple and direct, the meanings of the texts are difficult for outsiders to understand. Not only do they feature the everyday language of the local *rancheros* (country people) or, in the more recent *corridos*, the drug traffickers, they are also full of *double entendres* and allusions to local events, places and individuals.

Corrido narratives are usually in third-person discourse (so-called *narcocorridos*, which emerged in the late twentieth century and are related to the world of drug trafficking, are an exception). Because Mexican ballads are commonly written by male authors, they display mostly masculine-oriented themes and a strongly patriarchal ideology. Like the epic *romancero* of sixteenth-century Spain which depicted bold and reckless young men, the Mexican *corrido* extols the heroic deeds of male protagonists. Women usually play secondary roles in the narratives (Herrera-Sobek 1990). Ballads and stories of heroes were part of the Mexican folklore long before the heyday of *corrido* production between 1910 and 1930, but it was the Revolution (1910–20) that generated the image of the *valiente*, the brave man, characterized by courage, presence of mind, generosity, stoicism, heroism and bravery.

Entering Popular Culture

The *corrido* was so deeply embedded in rural society that, after the Revolution, the Ministry of Education used specially composed *corridos* for their so-called cultural 'missions' to teach the rural population about a range of subjects, from hygiene to moral guidance. Some *corrido* scholars limit the production of the 'true' *corrido* to the period from 1880 to 1930. According to the Mexican musicologist Vicente Mendoza (1954), after that period the *corrido* lost its authentic folk character, its freshness and 'spontaneity that emanated from the pen of mediocre writers,' and it became 'cultured, artificial, and often false.' Thus, he concluded that 'everything points to the decadence and the near death of this genuine folk genre' (Mendoza 1954, xvi; author's translation). Similarly, Simmons (1957) feared that better communication technology, greater literacy of the masses and the influence of the radio and recording industry would condemn the *corrido* to oblivion. Contemporary *corrido* scholars disagree with this view, as many newly composed *corridos* still fit the classic heroic *corrido* style of the Revolution era, using the traditional *corrido* language, the typical 'speech event' dialogues (designed to make the *corrido* more lively and authentic, as if the *corridista* were an eyewitness), a stylized vocabulary arranged according to preset formulas, and frequent references to local men and places (Nicolopulos 1997). Moreover, throughout northern Mexico and along the Pacific coast the *corrido* remains a vital component of rural culture with an intimate connection to people's daily lives. Here, like in earlier times, the primary medium for disseminating *corridos* is live performance (McDowell 2000).

Allegations of the demise of the *corrido* in fact have much to do with the changing process of transmission that began after the Revolution and that turned an orally transmitted folk genre into a product of popular culture. When the emerging recording industry began to take an interest in the *corrido* in the late 1920s, the long-story ballads had to fit on the 78-rpm disc (*corridos* often started on side A and continued on side B). The production of recorded *corridos* reduced the narratives to the three-minute format of popular songs. However, with the spread of industrialization and urbanization, the broadcasting of recorded *corridos* and their appearance in jukeboxes became and has remained a major factor in keeping this musical tradition alive. In the early twenty-first century in northern Mexico and along the Mexican-American border and the American Southwest, the long-story ballad tradition continues, although, as some *corrido* scholars argue, not as much as a 'living tradition' but as a preservation of the old repertoire (*Heroes and Horses*, 2002).

In the early 1900s the Victor, Columbia and Edison labels recorded some 40 *corridos* on wax cylinders in Mexico City. With the onset of the Revolution in 1910, however, recording activities in Mexico came to a halt and were not resumed until 1926. The Peerless label, Mexico's first company to build recording and pressing facilities, released mostly popular Mexican music that appealed to the emerging middle class – an audience interested in *rancheras* interpreted by *mariachi* ensembles and *boleros* rather than by *corridos*. Strachwitz, in his notes to the album *Corridos y Tragedias de la Frontera* (1994), considers the decade from 1928 to 1937 the 'Golden Era of the Recorded Corrido.' Indeed, a large number of *corridos* sung by vocal duos accompanied by guitar were recorded in the US Southwest despite the financial hardship of both the recording industry and the potential consumer during the Great Depression. Because record producers lacked knowledge of the language and the repertory, they often hired Spanish-speaking intermediaries to recruit local singers. This, as well as the improvised character of the recording sessions, afforded singers some agency to decide what to record. Due to the limited shellac supplies during World War II, the major US labels abandoned the marketing of regional music. The general economic recovery and the increased buying power of the masses after the war led to a resurgence of the recorded *corrido* which now shifted into the hands of local entrepreneurs and small record companies such as Falcón, Ideal and Azteca Records. *Corridos* on records were again popular during the 1950s–1970s: the death of President John F. Kennedy – much beloved by Mexican Americans – spawned a considerable number of *corridos* (Dickey 1978) as did the Chicano Civil Rights Movement.

Corridos are populated by personages and types of figures that appeal to (or repel) the common people. They generally celebrate Robin Hood-like figures who emerge from the marginalized classes of society to perform inchoate class war: revolutionaries and all sorts of 'folk heroes' from the *tequilero* (liquor smuggler) to the *narco* (drug trafficker). Indeed, modern-day *corridos* about drug-smuggling take advantage of the traditional *corrido*, particularly the Lower Rio Grande Border contraband-type *corrido* of the 1920s–1930s, in which the smuggler was seen as an extension of the hero of intercultural conflict (Herrera-Sobek 1979). However, under the influence of a new subculture that made its fortunes with drug trafficking and was promoted by the popular music industry, the *corrido* of the late twentieth century underwent considerable change. Whereas the heroes of the Revolution fought on behalf of all lower-class Mexicans for a more dignified life, the protagonists of the more recent *corrido* production fight private and less ethical battles. *Corridos* related to drug trafficking or traffickers, so-called *narcocorridos*, have become very popular among a predominantly young, Spanish-speaking audience north of the US-Mexico border. Commercial narco-music (music related to drug trafficking – although some bands have been allegedly sponsored by *narcos*) is a fast-growing business, especially in the United States. Los Tigres del Norte ('The Tigers of the North'), a *norteño* group based in San Jose, California, launched their first big hit in the early 1970s, going on to become one of the top-selling groups in the Latino market and one of the most influential bi-national bands. Although the group succeeded in capturing the imagination of hundreds of thousands of Mexicans living in 'el otro México' ('the other Mexico') with their bittersweet immigration songs, they initiated their career in 1973 with 'Contrabando y traición' ('Contraband and Betrayal'), a *corrido* about drug smuggling. Using a clever marketing strategy of fabricated censorship, Los Tigres produced an entire album about drug trafficking in 1989, *Corridos prohibidos* ('Prohibited Corridos').

In the 1990s hundreds of *norteño* bands emerged on both sides of the border, taking up the *narco* theme. Among the most commercially successful bands was Los Tucanes de Tijuana ('The Tucans from Tijuana'). Although Los Tigres del Norte distanced themselves explicitly from the violence and drugs that mark most of the contemporary *norteño* lyrics, the majority of the songs on their Grammy-nominated 1997 album *Jefe de jefes* ('Boss of Bosses') exploited the theme again. With a few exceptions, early twenty-first-century *corrido* production is an apotheosis of the drug trafficker and his lifestyle. Although the way of life narrated in *narcocorridos* may be part of the everyday life of many inhabitants of various cities and regions in Mexico and across the border, these *corridos* can no longer be considered 'folk ballads' in the sense that the ballad is a medium in which 'the common folk' expresses its sentiments and points of view regarding its social reality. Commercially produced and mass-mediated *narcocorridos* call for a redefinition of this genre. Contemporary *corridos* not only express a commercial mystification of the drug trafficker, but are also prey to the hegemonic power of culture industry. The widespread popularity of the *corrido* in the early twenty-first century indicates that the music industry has achieved the generation of a music that speaks to an audience that is not confined by social, regional, national or gender boundaries. At the same time, there exist distinct *corrido* audiences. There are basically two types of *narcocorridos*: the commercial *corrido* and the noncommercial or *corrido* that has been privately commissioned, often to honor or commemorate a family member or friend (Simonett 2001). The second of these transcended its subcultural confines through the famed singer/composer Chalino Sanchéz (1960–92), a key figure in the musical landscape of Mexican Los Angeles in the early 1990s. Whereas the former type is recorded on compact discs and made available to a mass audience, the latter may be heard performed live in nightclubs frequented by drug traffickers. Some of these ballads may be obtained on cassettes sold in small record stores or at swap meets throughout Los Angeles' Mexican neighborhoods. Since the boom of commercial *narcocorridos* in the 1990s, commissioned *corridos*, too, have been discovered as a profitable commodity by major record companies such as Capitol Records (EMI Latin) and Balboa Records (Musart). Balboa Records purchased the rights to Chalino Sanchez's *corridos*, including ones commissioned by private individuals.

In recent years, the ensembles that have most commonly interpreted both *corridos* and *narcocorridos* have been *norteño* and *banda* groups. The *technobanda* craze that swept California in the 1990s helped the genre gain popularity and acceptance among listeners who do not sympathize in any way with the lifestyle and achievements of drug traffickers. The popularity of narco-music has provoked passionate discussions comparable to the gangsta rap debate in the United States. Based on mostly emotional and ideological judgments, *narcocorridos* are either condemned for their negative and emulative effects on the youth or applauded them for 'telling the truth,' but few have attempted to scrutinize the ambivalence at the heart of this new musical form. *Narcocorridos* are not simply people's chronicles that transgress, desecrate or question the official view. Like other popular music forms, they are a cultural commodity disseminated by the media. The same is true for commissioned *corridos*. Paired with the fictitious world of already existing *narcocorridos* and the pre-fabricated elements of the traditional *corrido* repertory, these ballads are as imaginary, or as genuine, as commercial *corridos* composed by professional songsmiths such as Teodoro Bello (who writes songs for the Tigres del Norte) or Mario Quintero Lara (a member of Los Tucanes de Tijuana).

Calls from special interest groups and politicians to control the dissemination of popular songs about drugs and violence in Mexico have led several states to remove narco-music from their airwaves. Such actions, however, had little effect on the popularity of this genre. Rather, an over-saturation of the market during the early years of the twenty-first century, together with the rise of a new popular style called *pasito duranguense* (the 'little Durango step,' which arose in Chicago and is called 'Chicago sound' in the Mexican state of Durango after which is it named), have led to a decline of the narco-music business.

From its inception in the 1940s to this day *corrido* scholarship has mainly focused on the song lyrics. With the emergence of the *narcocorrido*, more attention has been given to the social space of production and consumption, dissemination, moral values, violence, censorship and so on. A fascination with the latter subgenre has generated a number of doctoral dissertations and books that, depending on the authors' discipline, emphasize certain aspects of the narco-culture and its musical expression. The music itself, however, continues to be considered 'accompaniment' rather than constitutive of the genre's widespread appeal.

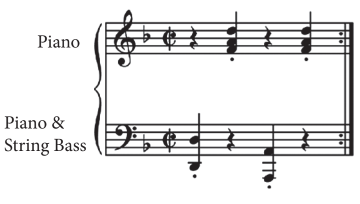
Cuarteto

Cuarteto is a type of popular dance music associated with the city of Córdoba, Argentina and the centrally located province of the same name. The genre, which is a social phenomenon patronized mostly by the lower-class population in the region, is used at mass dances held on weekends at a variety of venues – mostly sports clubs – and almost nightly during summer. *Cuarteto* groups often travel extensively in well-worn band buses to get from performance to performance throughout the country. Musically speaking, *cuarteto* is identified by its *tunga-tunga* accompaniment pattern, originally heard in the string bass and piano, but later performed with the electric bass guitar and electric piano (see below for details). Various umbrella styles of *cuarteto*, described below, have emerged over time by putting standardized textures and orchestrations above the *tunga-tunga*. All *cuarteto* music is sung, and each *cuarteto* group has at least one solo singer. The genre is considered to be one for dancing – rather than just listening – and dances are said to allow participants to forget their troubles and experience *alegría* (happiness). Although *cuarteto* is called the 'folk music' of Córdoba by some, many middle- and upper-class Argentines associate the genre with a group of people they do not like, look down upon *cuarteto* and find its corresponding musical structure and the *tunga-tunga* simplistic. As a result of this prejudice, little was written about *cuarteto* – even in newspapers – until the late 1980s, and much information about the genre's history and musical evolution has been lost.

Cuarteto music was created in 1943 by Augusto Marzano, a part-time musician who performed with a large ensemble throughout the countryside of Córdoba for Spanish and Italian immigrants at weekend dances. To make traveling easier, he formed the Cuarteto Leo, a 'quartet' consisting of violin, accordion, string bass and piano; a singer who also acted as an announcer was not counted. Marzano, who was a widower, did not want his daughter, Leonor, to stay home at night when he went off to perform. As a result, he asked her to become the Cuarteto Leo's pianist. Leonor is mythically remembered by *cuarteto* fans as being the inventor of the *tunga-tunga* and the only woman to have been a full-time instrumentalist in an early *cuarteto* group. At the beginning of the twenty-first century, it is still extremely rare to see a woman performing even as a solo singer or back-up vocalist in a *cuarteto* band; instead, women usually attend dances to dance with their friends or to meet and socialize with band members and other men.

A typical example of the original *tunga-tunga* accompaniment pattern, which is said to be related to the *pasodoble* and *tarantela*, is shown in Example 1.



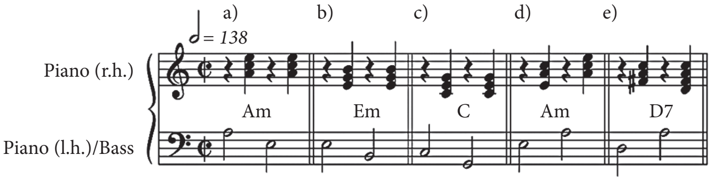
Example 1: Hypothetical example of the original *tunga-tunga* accompaniment pattern. Used with permission of SADAIC

The early *tunga-tunga* usually consisted of downward alternation between the tonic and dominant of the chord being used in the string bass and left hand of the piano (played in octaves) on the first- and third quarter notes of each measure; these notes corresponded to the '*tun*' syllable of *tunga-tunga*, which is an onomatopoeic term that imitates the sound of the rhythm. 'Tun' syllables were played louder than 'ga' ones, which consisted of offbeat triads (corresponding to the chord being used in that measure) played on the second and fourth quarter notes of each bar in the right hand of the piano. The chord outlined by the string bass and the piano was changed harmonically, when necessary, to fit with the melody, but chord changes were made only at the beginnings of measures. The *tunga-tunga* was emphasized and played quite staccato in this early style. Stanzas and refrains were sung about Córdoba, one's neighborhood friends, falling in love, objects (such as a broom) found in one's surroundings, people (such as a taxi driver) encountered in one's daily life, and topics not considered to be controversial. Despite the carefree lyrics and double meanings found in early *cuarteto* songs, most were (and still are) written in minor keys. Early *cuarteto* music often had long instrumental introductions, was played quite fast and stopped abruptly at the ends of the singer's phrases. Connecting, scalar passages in the bass part of the *tunga-tunga* were used at the ends of phrases (Florine 2001, 36–42; Waisman 1993).

When urbanization and industrialization occurred in Argentina during the 1950s with the growth in power of President Juan Domingo Perón, internal migration brought *cuarteto* to the city of Córdoba, an industrial center. *Cuarteto* first made it to the fringes of the city (1955–68), but it penetrated the city center in 1969 (Hepp 1988, 63–4). The genre surged in popularity from 1973 to 1976 after the return of Perón to the country from exile, spreading to nearby provinces and television (Hepp 1988, 64); *cuarteto* has always flourished during times of populist governments. By this time, *cuarteto* groups had grown in size to about a dozen members and had absorbed outside musical influences including *cumbia* and calypso (since the 1950s), rock (since the 1960s) and updated Argentine folk music with jazz elements. As a result, electric and electronic instruments such as keyboards began to be used in the genre. Chébere, created in 1974, was the most innovative of the new bands. It invented the *moderno* (jazz/rock-influenced) style with drum set and electric guitar and later the *tropical* (Latin/salsa-influenced) style with Latin percussion and brass. Chébere had two singers, one for each style, who took alternate sets when performing at dances; this model went on to be imitated by other *cuarteto* groups.

During the military regime of 1976–83, *cuarteto* was banned because the military apparently feared and despised the genre (Hepp 1988; Mero 1988, 53–69). Dances were held secretly, and some groups changed their instrumentation to find work and get by (Hepp 1988, 81–2). The accordion, for example, which many considered as synonymous with *cuarteto*, was often eliminated to give the appearance that a different genre (not *cuarteto*) was being performed. With the arrival of democracy in 1983, *cuarteto* once again flourished. It was in 1984 that Juan Carlos Jiménez Rufino (a.k.a. Carlos 'La Mona' [the Female Monkey] Jiménez) formed his group. He was to become the most famous *cuarteto* singer for the next two decades. At the beginning of the twenty-first century, Jiménez was also the main performer of the *cuarteto-cuarteto* ('very' or 'true' *cuarteto*) style, which is linked to the early *cuarteto* style. In the *cuarteto-cuarteto* style – unlike the other contemporary umbrella styles – the *tunga-tunga* is emphasized and the accordion is still used. The violin has been dropped by all *cuarteto* bands.

Along with the development of the umbrella styles described above, the *tunga-tunga* changed over time and came to be played with electric piano and bass guitar. In Example 2, five hypothetical ways of playing the contemporary *tunga-tunga* are presented; each of these independent one-measure units would be repeated until another chord would better fit the melody harmonically.



Example 2: Five of many possible ways to play the *tunga-tunga*. The right hand of the piano plays the top line (the offbeats); the left hand of the piano and the bass play the bottom line. The *tunga-tunga* is seldom written out; the chords to be played in each measure are usually indicated with chord symbols, as is shown above, instead. Hypothetical examples by Jane L. Florine 1996

Sections 2a and 2b show how the *tunga-tunga* might be played in A-minor and E-minor and the most typical movement of the bass line, and section 2c gives an example of the *tunga-tunga* in a major key. Section 2d demonstrates that the bass line could also move upward, and Section 2e illustrates how a seventh chord might be played. It is the pianist who picks the voicing and fingering of the offbeat chords and determines how to play the bass line. The goal is to choose fingerings/spacings that involve as little movement of the fingers as possible from one measure to the next or when one-measure units are repeated. Once the pianist has decided how to play his part, he does not change it; improvisation is not a characteristic of *cuarteto* (Florine 2001, 44–5).

Piano and bass players do not usually have the *tunga-tunga* completely written out for them on their parts; instead, they read chord symbols to which they add the standard *tunga-tunga* (see the chord symbols in Example 2). It is often hard to hear the *tunga-tunga* being played by the electric piano in contemporary *cuarteto* music because the bass guitar line covers it up. Some pianists no longer play their left-hand notes in octaves, either, which also makes their lines less audible. It is possible that the *tunga-tunga* bass line might be altered rhythmically, sometimes for just a few measures (to highlight words in the lyrics, to provide contrast, to help the performer move from one chord to the next more easily, etc.), sometimes for an entire song. Groups that find it confining might play it softly or in an 'inaudible' register to hide it, or they might draw attention away from it by using overlapping rhythmic layers and percussion. A running, arpeggiated bass line or an anticipated bass pattern taken from *salsa* might be substituted for it in certain cases (Florine 2001, 45).

The history of *cuarteto* changed abruptly in 1988, when Carlos Jiménez sang at Argentina's Cosquín National Folklore Festival. Due to the unruly behavior of the thousands of his fans who traveled to hear him (*cuarteto* had been allowed at the Festival only once before, when the Cuarteto Leo had performed there in 1987), Jiménez's performance was stopped and canceled during his third song (Hepp 1988, 2–29, 74; Mero 1988, 14–15, 137–46). The national newspaper coverage generated from this incident brought fame to both Jiménez and *cuarteto* music, which had been only a regional genre up to that time. *Cuarteto* thus became known nationwide, and *cuarteto* groups started to perform in Buenos Aires at dance clubs called *bailantas*. By the end of the 1990s, however, many bands had decided to cease performing in Buenos Aires. They did not like having to perform brief 'shows' in several different *bailantas* per evening. They preferred the dances in Córdoba, which typically last from approximately midnight to 4 a.m., offer four sets, and have breaks during which dancers consume alcoholic beverages and socialize with band members (and vice versa). In Córdoba, *cuarteto* is danced counterclockwise either in couples, a circle or in a huge wheel formation in the middle of the dance floor using a special step coordinated with the *tunga-tunga*. Dances there also have a family feel in which bands' announcers greet audience members, who normally follow the same group night after night.

Although bands earn much revenue from dances, by the 1990s it had become customary for them to record two compact discs per year with new selections and innovations to keep both band members and fans interested and to earn more money. The majority of groups recorded with multinational labels in Buenos Aires at that time, but in the mid-1990s they began to record in Córdoba instead. It also became commonplace to do mixing abroad. As the genre grew more commercialized, arrangements gradually became more fluid and professional, and lyrics started to refer mostly to erotic love. Hints of other genres came to be commonplace, especially in introductions, and the underlying *tunga-tunga* began to be fairly camouflaged. Fusions of *cuarteto* with *merengue* and *cumbia* became popular with the incorporation of some Dominicans to the band of Ángel 'Negro' Videla in the early 1990s, and singers such as Edgar 'Gary' Fuentes occasionally sang *melódico* (international ballad) style songs. In 1994 Jiménez fused African-derived musical genres such as *conga* and rap with *cuarteto* in his compact disc *Raza negra* (Black Race), but he returned to his former style with *El marginal* (The Marginal Man) in 1995. Since the 1990s, bands often have several singers and use mainly the *tropical* style.

Cuarteto has gradually gained in acceptance among the middle and upper classes in Argentina. La Barra, a group formed in 1994 when it broke off from Tru-la-lá, began performing in reputable upscale clubs in Córdoba and eventually (in 2004) made it to the San Martín Theater, the temple of Western art music in that same city. The singer 'Rodrigo' Alejandro Bueno achieved great popularity – especially in Buenos Aires – in 1999 (Cragnolini 2001, 84–5); although he was killed in a car crash a year later, he continues to be idolized by fans. Jiménez has since performed in the United States, national music awards such as the *Premio Gardel* [Gardel Prize] have added categories for *cuarteto*, and recordings have been produced independently by *cuarteto* groups for economic reasons. Jiménez even collaborated creatively with a supermarket chain in 2004 to distribute his compact disc called *Selección privada 2* (Private Selection 2), a period during which some major labels were leaving the country in the wake of the 2001 financial collapse. A nationally televised, multiday *cuarteto* festival was held in Cosquín in 2003, 2004 and 2005, *cuarteto* has become popular on Argentine radio and television, and the genre has continued to be big business as it has spread and gained in status.

JANE L. FLORINE

Cueca (Introduction)

The *cueca* is a musical, poetic and choreographic form found in the southern Andean areas of South America. It is most prominent in Chile: widespread throughout that country, it is considered a crucial element of local culture and identity and has had the status of national dance since the nineteenth century. It is also well rooted along the western border area of Argentina and in Bolivia; in both of these countries it is considered representative of national folklore. The variant in Argentina's Cuyo region (which includes the provinces of Mendoza, San Juan and San Luis), where it is practiced by broad sectors of the population, is known as *cueca cuyana*. Another variant extends from northwestern Argentina – the provinces of Jujuy, Salta, part of Catamarca and Santiago del Estero – through a large area of Bolivia in the departments of Cochabamba, Potosí, Chuquisaca, Santa Cruz de la Sierra and La Paz. This variant is known as *cueca norteña* on the Argentinian side and *cueca boliviana* in Bolivia. In Bolivia, the *cueca* is recognized as the national dance and as such is treasured and practiced by people of all sociocultural backgrounds. In Peru, another variant, known after the War of the Pacific (1879–84) as *marinera* and related to the *zamacueca*, is considered the national dance; see the *marinera* and *zamacueca* entries for discussions of these genres. *Cueca* was also popular in Ecuador in the first decades of the twentieth century, as a few recordings of *cuecas* by Ecuadorian singers show, but was never a prominent genre there. The local variants of *cueca* present differences in nomenclature, musical structure, choreography and function due to differing constructions of nationhood, histories and sociocultural representations in the various regions.

NANCY M. SÁNCHEZ AND OCTAVIO SÁNCHEZ

Cueca Boliviana and Cueca Norteña (Argentina)

In both Bolivia and Argentina, the *cueca* is considered representative of national folklore. It is rooted along the border area of northwestern Argentina (the provinces of Jujuy, Salta and part of Catamarca) extending to Santiago del Estero, and through a large area of Bolivia in the departments of Cochabamba, Potosí, Chuquisaca, Santa Cruz de la Sierra and Sierra de La Paz. This subgenre of *cueca* is called *cueca boliviana* in Bolivia and *cueca norteña* in northern Argentina.

In both countries, *cuecas*, *bailecitos, takiraris* and *carnavalitos* are accepted by various sectors of the population as traditional genres on the one hand, but also as fundamental elements of a popular music repertoire that is modern, mediated and subject to continual processes of hybridization.

Status and Importance of the *Cueca*

In Bolivia, the *cueca* is recognized as the national dance and as such is treasured and practiced by people of all sociocultural backgrounds. It is present at festive occasions as well as political, military or religious ones. Presidents may dance *cuecas* at official receptions, and *cuecas* may even be danced in churches accompanied by the harmonium (Paredes Candia 1966, 40).

Jenny Cárdenas Villanueva, from La Paz, Bolivia, investigated the role played by *cuecas históricas* ('historic *cuecas*') during the Chaco War between Bolivia and Paraguay (1932–5), explaining that after that painful experience, mestizo (mixed European and Amerindian) music, including the *cueca*, spread and eventually became accepted by the elite. Willy Claure (2005) analyzed the resignification of the *cueca* in the city of Cochabamba, and in particular, the centrality of the dance in the marriage celebration, as part of the formation of kin bonds between the bride, the groom and attendants, and as an act of public gratitude toward the family and friends who are present and who helped make the wedding possible.

Origin, Modes of Circulation and Genre Transformations

Historical studies of the *cueca boliviana* and *norteña* present several different hypotheses regarding its origins and evolution. According to Antonio Paredes Candia (1966), the *cueca* stems from the mixture of *kolla* (indigenous) and Creole (Spanish-American) cultures, related to Spanish dances such as the *jota aragonesa* but different from the Peruvian *marinera* and the *cueca chilena*. José Díaz Gainza (1977) agrees, but also sees a relationship between the *cueca boliviana* and the pre-Hispanic *samakueka*, whose musical characteristics he views as similar to those of the *wayñu*. A traditional *cueca* from Humahuaca (in Jujuy), 'La cocinerita' [The Little Cook], suggests Inca ancestry in that it is pentatonic, although as such it is an exceptional case. Díaz Gainza asserts that the *cueca* appeared in the mid-nineteenth century as a decided means of expression for subaltern peoples during the South American independence wars. Originally the *cueca* was the music of the *chicherías* (canteens where people gather to drink, sing and dance communally), practiced by soldiers, artisans and farmers. Eventually it entered the salons of the elite classes, where it was first stylized, then, later, popularized. Carlos Vega (1944) also asserts that before the *cueca* was folklorized, it formed part of the salon repertoire of the provincial learned classes. For him, the *cueca norteña* came via Bolivia and Chile, giving way to differentiation through homonym forms. Finally, the explanation most commonly accepted among musicians and dancers is that the *cueca* is an Afro-American hybrid deriving from the Afro-Peruvian *zamacueca* (Claure 2005).

Different explanations also circulate regarding the transitions, modifications and borrowings that affected the genre as it passed from one country and/or social context to another. Although differences in structure, musical characteristics, choreography and general character are recognized between the *cuecas* of Chile, Peru, Bolivia, northern Argentina and Cuyo, some authors have taken nationalist and Eurocentric positions, failing to recognize the influence of the Chilean *cueca* and the African-American aspects of the genre's origins – elements which, in accordance with the configuration of the colonial population and commercial and military routes, were essential to the development and evolution of the genre. Such contradictions regarding claims of the origins of the genre have their source in narratives built around the imagined nation, in a homogenizing vision typical of traditionalist Creole movements, and most of all, as a result of the defeat of the Bolivian-Peruvian Confederation by Chile in the War of the Pacific in 1879. This event brought about changes in the genre's nomenclature to simply *cueca* in Bolivia, *marinera* in Peru and *zamacueca*, *zamba-cueca* or *cueca norteña* in Argentina.

Major Exponents

Among the genre's main composers and interpreters is Simeón Roncal, known as 'the father of the *cueca*.' He composed dozens of *cuecas* for piano, including both dance accompaniments and virtuosic concert works stylizing the genre, that were published in the early twentieth century in Argentina and in Europe. Other composers of historic and popular *cuecas* are José Lavadenz, Miguel Ángel Valda, Octavio Campero Echazú, Luis Mendizábal Santa Cruz and Ovidio Céspedes Porfirio Díaz Machicao. The genre has also been incorporated into the academic field by Willy Claure, who composed and published numerous concert *cuecas* for symphony orchestra and as *études* for guitar.

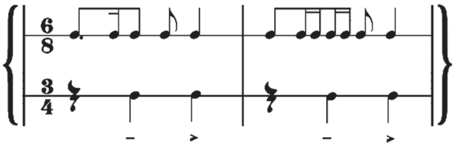
Many Argentine and Bolivian composers and interpreters helped spread the genre internationally, including Los Fronterizos, Hugo Díaz, Mercedes Sosa, Trío Cumbo-Vitale-González, Uña Ramos, Fortunato Ramos, Jaime Torres, Jaime Dávalos, Chaqueño Palavecino, William Centellas, Gladys Moreno, Alfredo Coca, Kjarkas and Tupay. Some have taken an avant-garde approach by composing instrumental pieces that do not follow traditional structures, such as Eduardo Lagos ('La Bacha' [The *Bacha*] and 'Mi amigo Waldo' [My Friend Waldo]), Lito Nebbia ('Cueca para Waldo' [*Cueca* for Waldo]) and Gustavo 'Cuchi' Leguizamón ('La arenosa' [The Sandy Land'] and 'La cucarra' [The *Cucarra*]).

Musical, Lyrical and Choreographic Features

The formal structure of the *cueca norteña*, which is the same as that of the *zamba,* has two parts, each with an introduction, two verses and a chorus (introduction-A-A-B). Within each verse, which is in octosyllabic meter, the last two lines – that is, the consequent of each verse – are repeated. In its folklorized version, the genre has two melodic themes, A and B, whereas older versions tended to only have one (an example of this older form is 'Una Boliviana' [A Bolivian *Cueca*] collected and recorded by Andrés Chazarreta). In the *cueca norteña* the minor mode predominates, with mixed scales and a bimodal minor scale.

For *cuecas bolivianas*, the predominant structure is an introduction followed by four strophes in AABA form. Each theme is 12 measures long due to the repetition of the last two lines. Differences in structure and number of verses or sections may be observed not only between the *cueca norteña* and the *cueca boliviana*, but also among subgenres of the *cueca boliviana* associated with various cities such as Potosí, Cochabamba, La Paz, Chuquisaca and Tarija. The main commonality of all *cuecas*, as in most colonial Creole genres, is a horizontal and vertical dual rhythm produced by combining 6/8 and 3/4 meters with accents on the second and third beats.

The *cueca* has a stereotypical introduction that is 8 or 10 measures long and that employs the chord progression VII-III-V-i. Its basic rhythmic motif, from which variants stem, is as follows (Example 1):



Example 1: Basic rhythmic motif of the *cueca* introduction

In the chorus a particular rhythmic motif is commonly found (see Example 2 below).

Carlos Vega affirmed in 1944 that the characteristic instrumental ensemble of northeast Argentina and Bolivia was the Creole orchestra, composed of guitar, *charango*, *quena* or violin and *bombo*. In the center-north region of Argentina, *bandoneón* and accordion might also be included. In the first decades of the twentieth century *bandurrias*, mandolins and harps appeared. As a sign of modernization, since the 1980s the *cueca* has included new sonorities such as keyboards, synthesizers, electric guitar and bass, drums, Peruvian *cajón* (box) and harmonica. In 'Cueca del Negro' ('*Cueca* of the *Negro*'), William Centellas used tambourine and wood block, a reference to the *jota*.

Song texts are generally picaresque and festive in nature. During the second exposition of the main theme, known as the *jaleo*, audience members clap along to the foot-stamping of the dancers and call out popular sayings (*aros*) and toasts between the verses. Thematically, the *cueca* symbolizes the courting ritual and conquest. However, regional differences can be discerned in the gestures and implied purpose of the dance. It may be perceived as a shy kind of seduction, more of a pursuit or almost a siege in which the man conquers the woman. For example, the tempo of the *cueca* from Tarija is faster and the dance more energetic than that from Chuquisaca, which is meant to evoke a more circumspect kind of wooing through slower, more cadenced steps.

In both the provinces of northeastern Argentina and in Bolivia, the *cueca*, in its traditional and 'urbanized' versions, demonstrates a strong presence in both family gatherings and in institutions dedicated to the formation of professional performers and teachers of folkloric music and dance. This musical and choreographic genre is an obligatory part of the repertoire of the university folklore curriculum, which supports the likelihood that the *cueca*'s presence will continue with the passage of time. In the early twenty-first century, young folklorists compose *cuecas* with contemporary sonorities and themes, respecting or, in some cases, transgressing the original formal structure. Likewise, the *cueca* is danced either with or without the typical costume, but the dancers always wave handkerchiefs, in the *peñas* (locales for listening and dancing to folkloric music) and in folkloric festivals, such as the one that has taken place annually without interruption for over 50 years in Cosquín (in the city of Córdoba).

CRISTINA FUERTES GOTH)

Cueca Chilena

Widespread throughout Chile, the *cueca* is traditionally performed by an ensemble including singers, stringed instruments and percussion. The music accompanies a non-embraced couple dance depicting, through swirled handkerchiefs and bodily movements, an amorous pursuit. The text is composed of an octosyllabic quatrain, a *seguidilla* (Spanish poetic form) and two rhymed verses (*pareado*); this structure is modified in its sung form. In the early twenty-first century several changes have added complexity to the *cueca*'s musical performance and dancing practices.

The history and development of the Chilean *cueca* is intimately connected with urban and rural musical life, the music industry and Chile's particular sociopolitical context in that change and continuity in all these areas have been reflected strongly by symbolism and discourse in *cueca*. To understand fully the introduction, dissemination and development of *cueca* during the twentieth century, it is also necessary to examine its immediate predecessor the *zamacueca,* which represents an early stage of the manifestation of social and musical issues contained in the Chilean *cueca*.

History and Development

Although the *zamacueca*'s precise ethnohistoric origins are not well understood, its rapid dissemination through Andean South America is known to have been due to three elements: the previous existence of traditional Creole dances, the circulation of armies and the increasing genre regionalization after the end of the independence process (ca. 1825).

Subsequent development of the *zamacueca*, and by extension the *cueca*, in Chile took place in three stages. In the first (1823/24–56), the *zamacueca* spread from Lima, Peru to major Chilean towns such as Santiago, Valparaíso, Coquimbo and Copiapó, propelled by the growth of theater activity, greater availability of venues for social activity such as the *chingana* or handmade tavern, and the state's recognition of the dance's symbolic value in its nation-building project (Spencer 2007). Between 1825 and 1830, the *zamacueca* spread from Santiago to a nearby Argentinian town, Mendoza (Vega 1953, 28–9), where a variant of the Chilean *cueca*, the *cueca cuyana*, took shape. Forty years later a Chilean version of *zamacueca* from Lima, known as the '*chilena*,' spread to Argentina's northern areas where it became the *cueca norteña* (Vega 1953, 73). In Chile, meanwhile, the *cueca* became accepted in both aristocratic and popular circles and continued its expansion thanks to a mulatto trio known as Las Petorquinas (Zapiola 1945, 82; see also Grez 1879, 105; Pereira 1974, 255; Garrido 1979, 180–4; Vicuña Mackenna 1882, 284; Spencer 2009a).

In a second, decisive stage of development, around the time of the publication of the first known Chilean *zamacueca* score (1856–79) the genre became entrenched as a characteristic element of written, oral and visual forms of Chilean national culture. The 1870s saw the development of a local repertoire invoking national history and traditions, prompted by the outbreak of the War of the Pacific which pitted Chile against the allied forces of Bolivia and Peru (1879–84). This war contributed to an important adjustment in nomenclature, in which the Peruvian *zamacueca* began to be referred to as the *marinera* (Vega 1953, 89–92; Garrido 1979, 62) and the Chilean dance came to be known later, through a process of aphaeresis, as *cueca*.

These name changes coincided with the start of the genre's third stage of development (1879–ca. 1910), during which new forms of collective organization associated with an emerging middle class resulted in the adaptation of old dances, such as the *zamacueca*, to new instrumental forms and salons. This stage also saw the publication of albums containing *liras populares* (a literary verse form) and nondanceable strophic *zamacuecas*. In this way, over the first three decades of the twentieth century the two genres coexisted: while the *zamacueca* gradually ceased to be a salon genre and became a source of material for printed scores, wax cylinders, phonograph recordings, piano rolls and soundtracks for silent films, the Chilean *cueca* moved toward becoming a popular genre directly influenced by social and political changes in cultural life and in the music industry.

The *cueca* was first recorded in Chile in 1906, and by 1931 more than 40 *cuecas* had been released on 78 rpm discs by several local and international record labels (Astica 1997). Between the 1920s and the 1940s a star system arose corresponding with the release of the first local recordings on the mass market. These artists, projecting a strong Creole identity, included feminine duos (*cantoras campesinas* or 'female peasant singers'), male duos and *grupos de huasos* ('cowboy groups'). Major artists of this period include Blanca Tejeda de Ruiz, Derlinda Araya, Esther Martínez, Las Huasas Andinas, Los Huasos de Chincolco (1922–1930s), Los Cuatro Huasos (1927–56), Los Quincheros (1937–), Dúo Rey Silva (1935–91), Los Hermanos Campos (1935–2009) and Los Provincianos (1938–58) among others.

Thus, through a process lasting over two centuries, the *cueca* was connected as much with oral tradition as with an emerging mass culture. Around the 1930s the dance split into two types: an urban-style *cueca* known later as *chilenera* or *cueca brava* ('rough *cueca*'), performed in a shouting style by male groups (sometimes in *ruedas* or circles), and a peasant-style *cueca*, performed by female duets or trios, which later became mass-mediated, hybridized and mass-produced. During the twentieth century, the *cueca* further diversified through the development of regional and subregional variants in Chile, notably the *cueca porteña*, the *cueca nortina* and the *cueca chilota*, associated respectively with the port city of Valparaíso, the northern regions and the Chiloé archipelago.

Between 1940 and 1973, the year that Augusto Pinochet's military dictatorship began (1973–90), Chilean musical culture underwent a change that affected the status of the *cueca*:

(a) A movement arose that was dedicated to the revitalization and documentation of popular folkloric culture. This movement was fomented by the Universidad de Chile (University of Chile) and its related institutions and through the sponsorship of the Chilean State. A direct outgrowth of this movement was the construction of a discourse that framed folkloric music as representative of the 'national' (c.f. Torres 2005, 9–11; Donoso 2006).

(b) A kind of folk associationism crystallized with the aim of encouraging the social practice of dance – particularly *cueca* – enabled by festivals, national championships, folk meetings and Clubes de Huasos ('cowboy clubs'). This phenomenon culminated in the foundation of the National Cueca Federation (1972) and was continued by Pinochet's cultural policies supporting Clubes de Cueca (Cueca Clubs) and Clubes de Huasos, among others (see Donoso 2006).

(c) At the same time a particular movement arose, known as *proyección folclórica*, whose objective was to collect, perform and record traditional (amateur) performances of Chilean genres, such as *cueca*. These genres were also approached in an innovative manner through two more movements, known as *neofolclor* (or neofolklore) and *nueva canción chilena*. Both of these movements formulated new versions of the *cueca*'s main musical and textual themes and characters, although they focused primarily on other folk Chilean and Latin American genres, respectively. *Nueva canción chilena* emphasized lyrics that expressed social commitment, and a few *cuecas* took on political overtones in the work of individual artists such as Isabel Parra, Ángel Parra and Víctor Jara and occasionally in the compositions of known groups such as Aparcoa, Quilapayún and Inti-illimani.

(d) Between 1965 and 1972 Violeta Parra's brother Roberto Parra (1921–95) immortalized a personal style of *cueca*, the *cueca chora,* opening the range of topics to include experiences from the everyday underworld culture found in brothels and marginal bohemia. Connected with this new type of narrative between 1967 and 1973 the urban *cueca* group Los Chileneros recorded three albums that were to become the main inspiration for a revival of *cueca brava* or *chilenera* in the 1990s, especially the first one, *La Cueca Centrina* (1967). Considered the most important urban *cueca* group, Los Chileneros gave voice to a marginalized social practice of singing that originated in the old downtown neighborhoods (*canto a la rueda* or 'right circling singing'), and they promoted an alternative *cueca* not immersed in mass culture (see Torres 2003).

In a later phase of the dance's development, Chile's military regime officially decreed that *cueca* was Chile's national dance (Decree 23, 6 November 1979), once again highlighting the political potential of the genre. Yet at the same time it was subverted and enriched at both the literary and musical levels through processes of fusion by rock and urban groups (Los Jaivas, Joe Vasconcellos, Huara, Congreso, Mario Rojas) and renewed through a wide range of localist discourses (Los Chinganeros, Los Afuerinos, Los Pulentos de la Cueca, Los Paleteados del Puerto, Altamar). In the 1990s, after the return to democracy, a gradual process of revitalization of traditional and urban culture and a resurrection of the 'popular' took root, prompting a spectacular revival of *cueca*. The work of emblematic 'authentic' artists from previous decades was revived and new bands were formed such as Los Trukeros (1997), Las Torcazas (1998), Los Santiaguinos (1998), Los Tricolores (2000), Las Capitalinas (2001), La Gallera (2006) and Las Niñas (2007), among many others. Since the year 2000 documentaries and other audiovisual works have been produced, recordings reissued, paintings and photographs disseminated, new dance venues for *cueca* opened and even an award for *cueca*-related research established. The emergence of all-women *cueca* groups also changed the masculine-centered singing culture and imprinted new performance trends anchored on new harmonies, fusions (rock, pop and ballad) and costumes (Spencer 2011).

Musical Elements and Scholarship

The Chilean *cueca* is in strophic form, with four strophes of 14 lines each. Each strophe contains an octosyllabic quatrain, an eight-line *seguidilla* (rhymed in paired verses) and a *dístico* or *pareado* (closing pair of rhymed verses of seven and five syllables each). When sung, this structure translates into 48–52 measures of music, known as the '*pie*' (or unit), where the quatrain and *seguidilla* are embellished by expressive refrains and repetitions (*muletillas*), which help fit the text within the music and also test the performers' skills (Garrido 1976 [1943], 124; Loyola 1999, 1082; Loyola 1997; Acevedo 1953, 41). However, within this complex form important variations do occur, such as *seguidilla cuecas* or '*cuecas largas*' (extended *cueca*) (c.f. Vega 1947, 45; Figueroa 2006, 12; Barahona 1913, 53–87).

The subject matter of *cueca* lyrics also has evolved over time. While the *zamacueca* was primarily concerned with love and the native land (Pereira 1941, 265), over the twentieth century the *cueca* embraced new subjects such as occupation, religion, conviviality, popular celebrations, flora and fauna, social criticism and commentary, history and even the *cueca* itself.

The dance begins with an instrumental introduction that invites dancers to take the floor. They dance around an imaginary circle, simulating an amorous pursuit. Couples combine waltz steps (*valseado*), skipping or dragging steps (*escobillado*) and tap steps (*zapateado*). Dancers generally dance three consecutive *pies*, moving back and forth, together then apart, in a *media luna* (semicircle or 'half-moon') pattern while punctuating the dance by shaking their handkerchiefs. Spectators encourage the dancers by clapping and sometimes by shouting popular refrains. An active audience is essential to *cueca* dancing in order to create a festive environment.

As is the case in many other genres from the southern Pacific zone, the *cueca* rhythm alternates and superimposes binary and ternary accents in 6/8 and 3/4 meters (*sesquiáltera*). Phrasing structure is based on two alternating motifs or cells (*a* and *b*), presented in eight-measure sections with a repetition of *b*, thus producing a repeated melodic structure of double consequent (*abb*). As a result, the Chilean *cueca* has four sections divided according to the verses in *abb aba* (octosyllabic quatrain), *abb* (first *seguidilla*), *ab* (second *seguidilla*) and (*ab*)*a* (*pareado*) (Claro 1979, 57–8; Claro 1982, 84; see also Loyola 1999, 1082; and González and Rolle 2005, 397–8). Phrase construction and rhythmic combinations are more widely varied in oral tradition than in recorded *cuecas*.

Although during the first decade of the twenty-first century the genre has experienced a process of revitalization due to new urban *cueca* groups, melodically the *cueca* features many repeated notes, consecutive scale degrees, and a linear melodic range between the sixth and tenth intervals with skips. The harmony is generally based on the fundamental degrees, occasionally employing the double dominant (often at the conclusion of a piece) and relative minor keys as passing chords. In spite of the fact that *cuecas* are normally in major keys, in the North it is also common to find them in minor keys and their relatives (see Loyola and Cádiz 2010).

During the nineteenth century the instruments most commonly used were Creole harp, guitar (sometimes played with *scordatura* tunings), piano (in the salon), one or two singers and percussion including *cacharaína* (scraped idiophone), *pandero* (large tambourine) and *tañidos* (tapping on the body of the guitar). In the twentieth century other instruments used to perform *cueca* included the Paraguayan harp, *bombo* (Chilean bass drum, used in the northern and Chiloé areas), panpipes, snare drums and brass bands (typically in the northern plateau). Accordion (in Chiloé) and piano are also used. Historically there were instrumental solo versions in the Arica, Parinacota, Antofagasta and Magallanes regions where *cueca* is performed as a social rite in celebration of life (see Loyola and Cádiz 2010).

Since the 1980s other instruments have sporadically been employed, including percussion (*cajón peruano* or Peruvian box drum), congas, spoons, coffee saucers (used as clashing cymbals), *guiro* (rasp) and other idiophones, chordophones (violin, *charango*); aerophones (*quena*, transverse flute, saxophone and clarinet); and rock fusion instruments (electric guitar and bass and drum kit).

Of the almost 100 books and articles about the Chilean *cueca*, only a few have contributed significantly to the study of the genre's history, music, dance and lyrics. While Allende (1930), Claro (1982, 1986, 1993) and Claro et al. (1994) have studied the influence of the Arabic-Andalusian language and singing style, Vicuña (1882), Acevedo (1953), Garrido (1976 [1943], 1979) and Pereira (1941) have published general and well-documented histories of the genre. The work of Vega (1936, 1953) and Loyola (1997, 2010) has also documented the history and circulation of the *cueca* during the nineteenth century in Argentina, Peru and Bolivia. Torres (2003), Spencer (2007, 2011a, 2011b) and González and Rolle (2005) have written from the disciplinary frameworks of ethnomusicology and social history, including ideas of gender, authenticity and nationality as springs that feed the conceptualization of Chilean identity.

In general terms, analyses of the *cueca*'s music, text and choreography can be classified into two complementary approaches: *sociohistorical* and *folkloristic-musicological*. The former, which tends to result in texts of a historiographic, literary, journalistic and critical nature, has stressed the spreading and reception of the dance in public social contexts, emphasizing its 'authentic' (i.e., oral) or erudite (i.e., print, bourgeois) properties and its presence within mass-mediated folklore and the mass-music industry of the twentieth century. The latter has emphasized the music and dance performance of the *cueca*, focusing on choreography, poetic variations and musical features such as harmony, melody, form, phrasing and meter.

Cueca Cuyana

Cueca cuyana is one of the popular music genres practiced by broad sectors of the population of the Cuyo region of Argentina. This area includes the provinces of Mendoza, San Juan and San Luis and is located approximately 1,000 kilometers from Buenos Aires. The *cueca* is both a song and a dance; its music, lyrics and choreography are tightly interwoven. It is part of a musical complex – which also includes the *tonada cuyana*, and, to a lesser extent, the *gato* and the *vals* – that can broadly be characterized as tradition-based popular music of Cuyo.

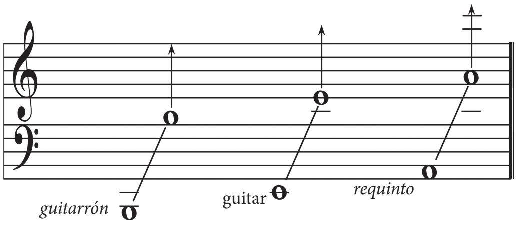
Various researchers have studied the *cueca*, focusing their work on the folkloric context and on the development of the genre in the nineteenth century. Links have been established between the *cueca* and the *zamacueca*, a very important genre in South America beginning in the 1820s (Aretz 1952; Draghi Lucero 1938; Rodríguez 1938; Vega 1944, 1953, 1956).

Until the beginning of the twentieth century these musics formed the basis of Cuyo's musical folklore and were very popular, but at the regional level only. Beginning in the 1930s, while *cuecas* and *tonadas* continued to be practiced in traditional ways and environments, they were also highly affected by the cultural industries. This period marked the start of a contemporary rebirth of the popular music of Cuyo (Sánchez 2004, 2006). New ways of constructing meaning were established, symbolic referents to modernity were created that continue to be in force in the early twenty-first century, and areas of circulation and influence of these musics were expanded. This entry presents a brief development of the history of these musics and their relationship to the culture industry during the twentieth century.

Sonic Identity of the Tradition-Based Popular Music of Cuyo

Cuecas and *tonadas* are songs whose overall timbre is created by voice and guitar. In the tradition-based popular music of Cuyo, the preferred formats are, in order, the singing duo with instrumental accompaniment, the vocal-instrumental group and the solo singer with instrumental accompaniment.

The accompanying stringed instruments range from a single guitar to more complex ensembles in which each part is given a specific role, either providing a rhythmic and harmonic base or working with a melodic function. The basic or typical instrumental ensemble consists of a *guitarrón* (a guitar-like instrument tuned a fourth down from the guitar) whose function is to provide rhythmic and harmonic accompaniment through strumming and bass notes, and two guitars, whose function is melodic, generally played in parallel lines of thirds and sixths in rhythmic unison. The guitars take a leading role during the instrumental sections, but also frequently play an active part during the song itself by providing counterpoint to the main melody. Occasionally a third guitar doubles the song's main melody one octave below. Other instrumental ensembles call for a *requinto* (a chordophone tuned a fourth above the guitar, often in double courses separated by an octave). An ensemble that includes *guitarrón*, guitar and *requinto* can work to great effect and opens up significant new possibilities in terms of timbre and register (see Example 1).



Example 1: The ranges of the *guitarrón*, guitar and *requinto* showing the fundamental notes of the sixth and first strings of each instrument and an upper range a tenth higher for each

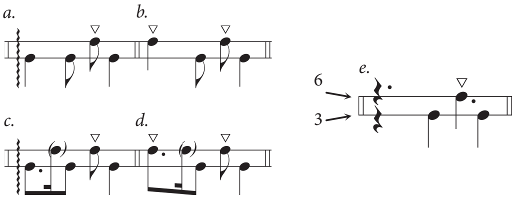
Adapting to the norms of the cultural industries, some artists have also begun to use electric bass, which extends the total range of the instrumental ensemble downward by a fifth, although this has not yet become common practice. The piano is also used less frequently, although its use has deep historical roots, especially in the work of Alberto Rodríguez and Carlos Montbrun Ocampo.

The most common vocal texture is the duo singing in parallel lines of thirds or sixths in rhythmic unison. The traditional singing style of Cuyo shows a preference for high registers and piercing timbres. The vocal production features a bright, nasal sound and the use of subtle *portamento* and sudden change in the dynamics. This combination has resulted in the singing style associated with Cuyo acquiring connotations of *canto llorado* ('sung crying') and has even been referred to pejoratively as *canto de borrachos* ('singing of drunkards') and *canto de viejos* ('singing of old people'). Singers who want to disassociate themselves from the 'traditional' style cultivate a darker, more full-bodied sound that is less nasal and features more precise attacks.

Singers usually use a portato style, but with frequent interpolations of staccato in order to reinforce the rhythmic qualities of the music and evoke the naughty, playful or festive moods associated with the dance. This is especially true of the *cueca cuyana*. The *tonada cuyana*, on the other hand, aims to convey more serious and transcendental sentiments and thus tends to use a legato and less rhythmic style of phrasing.

Typical Musical Structures of the *Cueca Cuyana*

The basic meter of *cueca cuyana* is 6/8, which alternates with 3/4. The harmonic and rhythmic accompaniment of this genre (Example 2) is produced through strumming of the *guitarrón* (or a guitar if one is being used in this capacity). The strings of each instrument can be conceptually divided into two frequency ranges, the lower and higher, corresponding to different parts of the strumming action. An analysis of the strumming (Example 2.e) shows that strings in the lower register are used to emphasize the 3/4 meter by sounding the last two quarter notes, while the higher strings correspond to the 6/8 meter by sounding on the second dotted quarter note and also, often, on the first (Example 2.b and 2.d). Chord changes tend to be approached by a rising glissando on all the strings (Examples 2.a and 2.c).



Example 2: Strumming technique on the *guitarrón* or guitar in *cueca cuyana*. Lower line: lower strings. Upper line: higher strings. Small triangle: snap. Parentheses: quieter sound

The musical form of the *cueca cuyana* is highly standardized and corresponds closely with a fixed choreography. It has two major sections containing the same music but different lyrics. Dancing takes place only during the sung parts (Figure 1).

Instrumental introduction, without dance (8–16 measures)	Song/dance (36–48 measures)	Instrumental interlude, without dance (8–16 measures)	Song/dance (36–48 measures)
Section I		Section II	

Figure 1: Major sections of the *cueca cuyana*

The structure shown in Figure 1, known as the '40-measure *cueca*,' is widely recognized as the standard contemporary form of *cueca cuyana* (though it is only one of many in use). It can be observed in works composed over a long period of time, for example 'Corazones partidos' (Broken Hearts) (Saúl Salinas), released in 1914; 'Cochero 'e plaza' (Park Coachman) (Hilario Cuadros), recorded in 1950; and 'De vendimia en vendimia' (From [Grape] Harvest to [Grape] Harvest) (Jorge Viñas), composed at the end of the twentieth century. '40 measures' refers to the song/dance portion of each major section of the *cueca* (Figure 1), which has a standard organization of 16 + 12 + 12 measures. The second most common structure has 36 measures (12 + 12 + 12). Figure 2 illustrates how the song/dance portion is broken down in the well-known 40-measure *cueca* 'Póngale por las hileras' (Work Those Vine Rows) (Félix Palorma).

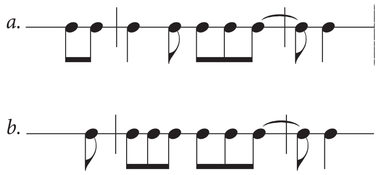
D	*Full circle*		*Arrestos*		*Half circle*	*Arrestos*		*Half circle*	*Arrestos*	*Half circle*
M	*a* (4m)	*a* (4m)	*b* (4m)	*b* (4m)	*a* (4m)	*b* (4m)	*b* (4m)	*c* (4m)	*b* (4m)	*b'* (4m)
	A (16m)				*A'* (12m)			*B* (12m)		
L	*Verse 1*				*Verse 2*			*Refrain*		

Figure 2: Song/dance portion of the 40-measure *cueca* 'Póngale por las hileras' (Félix Palorma). Lyrics (L), Music (M), Choreography (D), measures (m)

Choreographically, the *cueca* is a couple dance (Vega 1953). The dancers, a woman and a man, do not touch each other or embrace when dancing and, if there are other couples dancing, there is no interaction between them; the dance thus has a spacious, yet intimate, character. The woman and the man begin at opposing points in the dance space. The dance then consists of the couple moving symmetrically in both a circular and a semicircular manner, simulating a seductive chase at a distance, using generally slow movements and a walking step. In between the circular and semicircular displacements, the dancers perform other figures known as *arrestos* (also *paseos*, *contorneos* or *festejos*), which are freer and livelier, but within a more restricted physical area. Through the *arrestos*, flirting becomes more intimate and the seductive qualities of the dance are made more obvious through the use of gesture, facial expression and physical proximity. Handkerchiefs are also waved as tools of seduction. The four final measures correspond to the symbolic achievement of the amorous encounter, or, in the emic terms typically employed by dances in Cuyo, 'the conquest of the woman obtained by the man.'

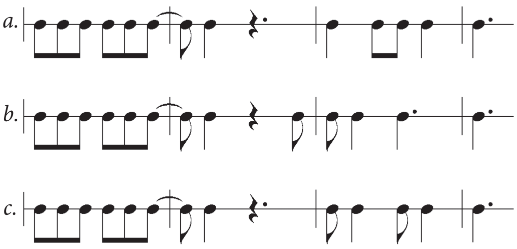
The most common harmonic progression, which we will call the 'standard progression,' is || I | V | V | I ||, always in a major key. This progression determines that in general the musical idea is completed within those four measures (as in *a*, *b* and *c* in Figure 2), and that in most cases can be subdivided into two phrases of two measures each, the first antecedent (suspense) and the second consequent (conclusion). Many other harmonic combinations are also used, such as the incorporation of secondary dominants and diminished passing chords. A frequent practice is the use of $V_{(V)}$ on the last quarter note of the first measure of the standard progression: || I $V_{(V)}$| V | V | I ||. The tonic is usually played with an added sixth and the dominants frequently employ the minor seventh.

The most commonly used literary structure within the phrases is the octosyllabic line (four or six of them); the corresponding melodies commonly adopt the following rhythmic structures (Example 3):



Example 3: Rhythmic structures of melodies in octosyllabic verse

The combination of heptasyllabic and pentasyllabic verse is also very common, with other combinations used less often (Example 4).



Example 4: Rhythmic structures of melodies featuring heptasyllabic verse (the antecedent) and combined with pentasyllabic verse (the consequent)

It is very common for the first measure of a phrase to be connected to the second by means of syncopation; artists and public cultivators of the genre see this as one of its identifying features. Figure 3 below shows the placement of syncopation in one of the best-known 40-measure *cuecas cuyanas* since 1950.

The genre's sonic identity has developed, in part, by virtue of comparison with *cuecas* from other parts of South America. Although artists and public cultivators of the *cueca cuyana* recognize the Chilean *cueca* as its main precursor, through the course of the last century important differences in formal structure, timbral profile, choreography and general character have developed. For example, although the structures presented in Example 2 are the most common, there are also others that create a denser rhythm through the use of sixteenth notes; yet the more the strumming is subdivided, the more the *cueca* seems Chilean

Figure 3: Placement of syncopation in 'Póngale por las hileras.' (Palorma)

and therefore less Cuyano. Tempo is also a significant factor: although it is festive in character, the *cueca cuyana* typically runs at 65 dotted quarter notes per minute, much slower than the Chilean *cueca* which often surpasses 80 dotted quarter notes per minute. In addition, the dance of the *cueca cuyana* features a walked and dragged step, in comparison with the Chilean step which is characterized by small hops. Finally, from a traditionalist perspective, the use of percussion instruments in a *cueca cuyana* ensemble would be frowned upon, whereas tambourine, *tormento* (a wooden idiophone) and even drum kit are used in *cueca chilena*, and *bombo legüero* (Andean bass drum) is employed in *cueca norteña*.

Common lyrical themes in the *cuecas* include the local landscape or environment, love, deceit and occupational or regional issues, especially wine-growing and wine-drinking as a source of inspiration. Audience members frequently interrupt the performance by shouting '*aro, aro!*' and then toast or share wine with the musicians. A festive environment is created through the use of particular themes and performance practices, as well as through the participation of audience members who may dance, sing along with the choruses and clap the rhythm in certain sections. As in other South American dances, the clapping pattern accentuates the 6/8 feel (Example 5); from a symbolic point of view, the handclaps reinforce the sense of common purpose between the musicians and the audience.

Example 5: The clapping pattern in the *cueca cuyana*

Another theme often present in the *cueca cuyana* is that of the War of Independence (1810–24), particularly the role of José de San Martin and of the people of Cuyo in establishing the Army of the Andes to fight for independence. Although songs dealing with this subject are referring to events in the relatively distant past, they were composed after 1930 and form part of the era of mediated folklore. The state has frequently used these songs to manipulate processes of national and regional identity construction, thus associating nationalist ideals with the more traditionalist musicians (Sánchez 2005a). Most representative of this type of *cueca cuyana* is 'Los sesenta granaderos' (Cuadros/Pérez Cardozo).

Conclusion

Cuyoan music suffered a gradual decline in visibility on a national level starting in the mid-1950s, which led to a reduced circulation of this music during the final decades of the twentieth century. In the 1980s there was a return to local circuits in the provinces of Cuyo, where the practices of the culture industry were re-dimensioned and re-signified on a smaller scale. Despite these changes, new interpreters of *cueca* continue to give this genre an important place in large festivals as well as small concerts. In the twenty-first century the emergence of small digital recording studios revitalized the production of the music by enabling the dissemination of new works. Today, in contrast to the more contemplative *tonada cuyana*, the festive *cueca cuyana* is considered the Cuyoan genre of most presence among tradition-based popular music in Argentina.

Cumbia

Cumbia is the best-known Colombian genre and has been referred to as the ‘musical synthesis of the Colombian nation’ (Zapata Olivella 1962). The term refers to styles of music and dance. *Cumbia* has a ‘folkloric’ or ‘traditional’ expression, believed to be of colonial origins and still played by ensembles that present themselves as playing folklore associated with Colombia’s Caribbean coastal region. Folkloric ensembles are based on drums, rattles and cane flutes, playing a 4/4 rhythm, often without vocals, although octosyllabic quatrains may be sung in call-response fashion. The accompanying dance involves pairs of men and women who, while engaged in what is identified as a courtship dance, do not touch each other but circle around a central core of musicians, like a wheel around a hub. At night, the women often hold up bunches of burning candles. Purists might dissent, but folkloric *cumbia* can also be played by small ensembles based on the accordions which entered Colombia from the late nineteenth century (Bermúdez 1996, 116; Zapata Olivella 1962, 196).

Cumbia also has a commercial, 'modern,' 'popular music' mode of expression, which has been played by different ensembles from big jazz bands of the 1940s and 1950s (ensembles similar in makeup to popular big-band orchestras all over the Americas) to smaller combos of the 1970s onward, which include electric piano and bass, brass and/or wind, drum kit and other percussion. This form of *cumbia* usually has a vocal accompaniment and is typically danced by couples who hold each other. From the 1960s 'commercial' *cumbia* became popular in many countries of Latin America outside Colombia and was also played by local groups who adapted the style. The line between folkloric and commercial *cumbia* is flexible, of course, as folklore is a commercial product and commercial bands may present themselves as tapping into more or less 'authentic' roots.

History

Cumbia is usually presented in the literature as a style of antique origins, rooted in the Caribbean coastal region of the colonial vice-royalty of New Granada (more or less today's Colombia, but which, in the north, included parts of present-day Panama) and emerging principally out of encounters between African slaves and indigenous people, with overlays of Spanish influence (Abadía Morales 1983; Davidson 1970; Escalante 1964; Ocampo López 1988; Perdomo Escobar 1963; Zapata Olivella 1962). The word *cumbia*, and the related term, *cumbiamba*, which refers to a social festivity of dancing *cumbia*, are said to be connected to the term *cumbé* (sometimes *kumb*), identified as African (usually from Guinea). Solid historical evidence is rarely supplied to substantiate this derivation, although it is impossible to deny the African input into Colombia's Caribbean coastal culture, given the importance of slavery to the local colonial economy and the function of the local city of Cartagena as a key slaving port.

Instead, secondary sources mostly refer to each other and other twentieth-century sources. However, reference is made by Escalante (1964, 149) to the memoirs of Joaquín Posada Gutiérrez who wrote in about 1865, describing the period of his youth in the 1830s (Posada Gutiérrez 1920, 334–49): he described the Festival de la Candelaria in Cartagena and the dances of black slaves and indigenous people, as well as whites and mixed-race people (see also Simon 1994, 186). Yet Posada Gutiérrez does not mention *cumbia* as such, referring instead to *currulao*, *gaita* and *mapalé*. González Henríquez (1987, 474–5) cites a 1912 history of Cartagena by Urueta and Gutiérrez de Piñeres which described *fandangos* in the city in the late nineteenth century, but does not mention *cumbia*. The nineteenth-century travelers, described by Peñas (1988) in his account of the *bogas* (boatmen) who worked the vital Cartagena-Bogotá river transport, did not mention it either, again referring to *currulao*. Cordovez Moure (1957 [1893], 484), another traveler of the era, did the same. Fals Borda (1979, 48A) interviewed a 90-year-old ex-*boga* who referred to *bunde*, *berroche* and *mapalé*. The local black poet Candelario Obeso (1849–84) does not mention the term in his work (Obeso 1977 [1877]).

It seems that the term *cumbia* may be of relatively recent origin, even if the music and dance styles do date back to at least the late eighteenth century: colonial reports from the 1770s describe circle dances, with pairs of men and women holding candles, wheeling around a group of drummers, as do Posada Gutiérrez and other travelers of the nineteenth century (Wade 1993, 275–6). The instrumentation is also used to substantiate old origins: the *conga* drums have clear parallels in Africa, while the cane flutes used may be either indigenous or African. The long, vertical cane flute called the *gaita* or *pito cabecècera* (wax-headed pipe, so named after the wax used to seal a feather-quill air tube to the cane pipe) is of local indigenous origin, used by such indigenous groups as the Kogi, the Ika, the Cuna and the Motilones, from Panama to the Venezuelan border; the transverse cane flute called the *caña de millo* (millet cane pipe) or *pito atravesado* is identified by some as of African origin (List 1980, 572–3; 1983, 568). Some identify the old Spanish *fandango* as an important influence (Ballonoff 1971; Zapata Olivella 1962).

Cumbia formed part of the repertoire of urban and rural people of working-class status in the Caribbean coastal region at the turn of the nineteenth century, alongside a variety of other genres such as *fandango*, *bunde*, *currulao*, *mapalé* and *gaita* (Bermúdez 1996). It would have been danced in street settings, in village spaces, at festivals and carnival celebrations. In the early decades of the twentieth century, as urban centers grew and radio broadcasting and the record industry began to disseminate in Colombia, local musicians started to record national styles (Wade 2000). Jazz bands, such as the Orquesta A Número Uno and Orquesta Sosa, emerged and included *cumbias* in their international repertoire – although *porro* was a more popular style. These bands played in the new radio stations in Cartagena and Barranquilla and in elite social clubs, despite some initial resistance from conservatives. Key local figures in these bands included Antonio María Peñaloza, José Barros, Francisco 'Pacho' Galán and Lucho Bermúdez. In 1929 recordings made by Angel Camacho y Cano for Brunswick included a *cumbia*; in the early 1940s Discos Fuentes set up in Cartagena and recorded local artists playing mostly *porro*, but also some *cumbia*. *Cumbias* were also played by smaller ensembles, such as the Trío Nacional, whose two guitarists specialized in Cuban music. As played by jazz bands and trios, *cumbia* retained a simplified rhythmic marker (set by a *conga* or bass drum and a scraper), but became assimilated into a generalized umbrella genre of *música costeña* (music from the Caribbean coastal region) or *música tropical*.

In the 1940s and 1950s jazz-band *cumbia* became popular in the cities of the Colombian interior (Bogotá, Medellín, Cali), despite some early denigration of it (and *porro*) in the press as too vulgar and 'black.' The orchestra of Lucho Bermúdez was central to this popularity and he also toured and recorded in Buenos Aires, Cuba, Central America, Mexico and the United States, kick-starting the international popularity of *cumbia* and related genres. In Venezuela, Billo's Caracas Boys orchestra specialized in Colombian *música costeña*. In the 1950s the Colombian record industry, including the key Discos Fuentes firm, shifted its center of gravity to the industrial city of Medellín and became more dynamic. New rhythms were invented, such as Pacho Galán's *merecumbé* (a mixture of *merengue* and *cumbia*), which enjoyed commercial success (e.g., 'Ay cosita linda,' [Oh Beautiful Little Thing] 1955).

In the 1960s the big jazz bands began to lose some of their dominance, while smaller *conjuntos* became more successful. *Cumbia* began to displace *porro* as the central genre. In 1962 'La pollera colorá' (The Red Skirt) was recorded by Pedro Salcedo y su Conjunto, now a classic of the genre: the percussion section retains rhythmic similarity to the folkloric *cumbia* style, while the clarinet recalls the *caña de millo*'s strident tones (List 1980, 572; Wade 2000, 159). In the 1960s Los Corraleros de Majagual, essentially a Discos Fuentes house band, combined accordion (in the hands of the talented Alfredo Gutiérrez) with a brass section and electric bass to produce a distinctive sound; they included some – although few – *cumbias* in their repertoire. They became best known for a style they labeled *paseaíto*, which referred to the subgenre of *vallenato* called *paseo*: the *paseaíto* was similar to the *paseo*, but with a brass section accompanying the accordion and a faster beat (Wade 2000, 163; see also Nieves Oviedo 2008). Accordions had long been used to play *cumbias* and this became a more significant trend with the smaller *conjuntos*, although brass sections still dominated.

In the late 1960s and into the 1970s and 1980s *cumbia* was promoted by the Colombian record companies through a series of slick bands of young men, such as Los Hispanos, Los Graduados, Los Black Stars and La Sonora Dinamita, which were mainly made up of musicians from the interior of the country, rather than the Caribbean coastal region. However, some singers (Rodolfo Aicardi of Los Hispanos, Gabriel Romero of Los Black Stars, Lucho Argaín [aka Lucho Pérez Cedrón] of La Sonora Dinamita) were of coastal origin. This shift accompanied a musical change toward a more electric and mechanical sound, with simple duple beat and the use of electric keyboards and guitars becoming prominent. This shift was perceived by many (especially in the coastal region itself) as a move away from 'authenticity' toward cheap, artificial commercialism that appealed to the new middle classes. Various names were coined to denigrate this music – *chucu-chucu* (in imitation of the beat), *raspa* (scrape, referring to the mechanical beat of the scraper) and *sonido paisa* (*paisa* sound; *paisa* means from Antioquia province and its capital Medellín, the heart of the recording industry). This musical shift can be appreciated by comparing the two compilation recordings, *Cumbia, cumbia* (1989) and *Cumbia, cumbia 2* (1993): the latter has recordings that are mainly of the 1960s and the former mainly of the 1970s and 1980s. Two songs, well known beyond Latin America, that represent the later style are 'La piragua' (The Canoe), written by José Barros, but covered famously by Gabriel Romero in about 1970; and 'La colegiala' (The School Girl) by Rodolfo (Aicardi) y Su Típica RA7, which was a big hit in France in 1980. *Cumbia* in this form also began to incorporate elements of salsa (in the electric piano line) and *merengue* (in the simple fast duple beat). Manuel (1985, 256) notes that 'It is not uncommon today in the latter portion of a cumbia for the bass player to forsake the archetypal cumbia pattern [half-note, quarter-note, quarter-note] for an anticipated bass rhythm.'

In the 1990s *cumbia* continued in basically the same style, but with some new, younger groups on the scene, promoted by the record companies as exponents of tropical pop and covering old *cumbias* in a 'modern' style. Notable among these was Joe Arroyo, best known as a salsa singer, but who also did hybridized versions of *cumbia* (e.g., 'A mi Dios todo le debo' [I Owe Everything to My God], 1999). The salsa band Grupo Niche also included a *cumbia* ('La canoa rancháa' [The Old Canoe]) on their album, *Etnia* (1996). Carlos Vives, who is renowned for bringing worldwide fame to Colombian *vallenato* accordion music, also claims *cumbia* as one of his influences, and on some of his albums he includes tracks classified as *cumbias* (e.g., 'Cumbia americana,' 1997). *Cumbia* recordings continued to be released in the early 2000s, but mostly as covers or re-releases of older material.

A notable feature of *cumbia* is its internationalization (Fernández L'Hoeste 2007). Artists such as Lucho Bermúdez had popularized Colombian tropical music, including *cumbia*, internationally from the 1950s. Already by the 1960s Mexican orchestras were playing *cumbias*, while in Argentina Eduardo Armani played Colombian tropical music. In the 1970s Mexican bands followed the same trend as in Colombia, as smaller, electric ensembles produced a rhythmically simple form of *cumbia* as part of a repertoire of *música tropical* (Stigberg 1985). *Cumbia* has had a major impact in the north-east of Mexico and crossed over, via Mexican migrations, into the south-east of the United States; fusions with northern Mexican styles and with hip-hop and rock have taken place (Blanco Arboleda N.d.; Olvera 2000; Peña 1985, 107). Colombian *cumbia* also influenced the popular music scene in Andean countries. In 1960s Peru, urban middle-class youth listened to *cumbia* – and continue to do so (see www.cumbiaperuana.com) – but by the 1970s *cumbia* was fusing with highland *huayno* music to produce *cumbia andina*, better known as *chicha*, a style of music associated with Andean migrants to the cities (Bullen 1993; Turino 1993). *Chicha* is still an immensely popular style in Peru (see www.chichaweb.com) and elsewhere in the Andes and Southern cone (see, for example, a website dedicated to *cumbia chilena* at www.cumbiamania.ya.st). In the late 1990s it spawned a derivative, *tecnocumbia*, which in the hands of artists such as Rossy War, has a glossier image and uses more electronic sounds (see www.peru.com/rossywar/). In Argentina, *cumbia* was popular in the 1980s, especially among working-class urbanites, who listened to Andean *cumbia* bands, and in the 1990s *cumbia villera* emerged as an expression of the harshness of life in the *villas miserias* (the peripheral low-income neighborhoods of Buenos Aires), with rap-like lyrics making reference to drugs and crime (Cragnolini 2006; Gori 2005; Vila and Semán 2006). Yerba Brava's *100% villero* (2001) was a *cumbia villera* album popular in the early 2000s.

Styles of *cumbia*

Given the way *cumbia* has changed over time, there is no single description of how it is played and danced. Folkloric *cumbia* is typically played by a *conjunto* based either on the *caña de millo*, with two *guachos* (tube rattles), a *tambor mayor* (*conga*-style, conical drum), a smaller drum, some 30 centimeters high, called a *llamador* (caller) and a large, round, double-membraned bass drum or *bombo*; or on two *gaita* vertical duct flutes – one *hembra* (female) with five orifices and the other *macho* (male) with two – together with a maraca, *tambor mayor* and *llamador*. An accordion-based *conjunto* may also be found, with a *guacharaca* (scraper) and a small bongo-style drum (Bermúdez 1985; List 1980). The female dancers wear long, flowing, white dresses and hold lit candles, while the men wear white trousers and shirts and carry red handkerchiefs; both go barefoot. Without touching, the man courts the woman and she keeps him at bay: hip movements are central and have elicited disapproving commentary in the past (Simon 1994). When lyrics are sung – by one group member, perhaps with an answering refrain from others – they refer to rural and local themes. Amateur and professional folkloric troupes perform this kind of *cumbia* in a variety of settings, from carnival processions, through village festivals to urban concerts. Well-known professional groups include Totó la Momposina y Sus Tambores (e.g., *La candela viva* [The Burning Candle], 1993) and Los Gaiteros de San Jacinto (e.g., *Fuego de sangre pura* [Fire of Pure Blood], 2006).

Cumbia has also been played by the typical jazz bands mentioned above, with brass section, often with a clarinet, plus double bass, piano, drum set, *conga* and/or bongo-style drums, maracas and other percussion. The 1962 version of 'La pollera colorá' (The Red Skirt) involved a *conga* drum, a bass drum of some kind (*bombo* or drum-set tom-tom), maraca, scraper, piano, saxophones and clarinet. The percussion starts the song and is joined by the clarinet sounding the melody over the saxes' two-chord riff; the piano marks a simple duple rhythm with single chords. The bass adds a half note, quarter note, quarter note accompaniment and a lead male vocal, with a high, nasal tone. The lyrics, typically of *cumbia*, talk of dancing, women and partying. Later styles of *cumbia* have electric bass and piano, with the percussion often less prominent, although some types of *tecnocumbia* have strong percussive beats.

Generally, *cumbias* are played in 4/4 time with heavy emphasis on the first beat and some accentuation on the third and fourth beats, which gives a rolling rhythm that many observers say is reminiscent of riding a horse. Manuel (1988, 50–1) says that a basic rhythmic ostinato (crochet, two quavers, crochet and two quavers), usually played on a shaker or scraper, clearly identifies the style, while the bass 'generally moves in the pattern of a half-note followed by two quarter-notes; the piano completes the classic cumbia format with a chord on the second beat of each bar.'

Cumbia Colombiana?

Cumbia is a music that has lent itself to multiple adaptations and reinterpretations, from the 'traditional' versions of Totó La Momposina, oriented to the world music market, through the Caribbean fusions of Francisco Zumaqué and his Super Macumbia band (e.g., *Voces caribes* [Caribbean Voices], 1994), to the jazz-band renditions of the 1940s and all the permutations described above. It has been subject to multiple interpretations and significations: frequently seen as plebeian and vulgar – whether in the elite social clubs of early 1940s Bogotá or in hybrid form as the *chicha* music or *cumbia villera* associated with poor urban dwellers in Lima or Buenos Aires – it has also been hailed as a symbol of Colombian national identity. Interpreted as the product of centuries of intercultural exchanges between indigenous, black and Spanish peoples, its character has been neatly dissected into three racialized roots – African drums, indigenous flutes and Spanish lyrics and clothing (and perhaps dance style) – which come together in a dance of sexual encounter, making it a perfect symbol for the tri-ethnic sexual and cultural process of *mestizaje* (mixture) that is seen as underlying the emergence of the Colombian, and many other Latin American, nations (Appelbaum, Macpherson and Rosemblatt 2003). Like many popular music styles, there are endless debates about its aesthetic qualities and perceived authenticity: some denounce 'modern' versions of it as plastic and artificial, as *chucu-chucu*; others evidently revel in its constant renewal, as its long-lasting popularity has indicated. Also like many popular music styles, new versions emerge out of the lower social strata and become commercialized; what was once seen as plebeian and tasteless is then hailed as rootsy and authentic, compared to subsequent, more commercial adaptations.

Cumbia has never achieved quite the level of international success of other Latin genres, such as salsa or *merengue*, and it is not clear why. It may be related to the relative lack of influence of Colombia and Colombian migrants on the United States (compared to, say, Puerto Rico, Cuba and the Dominican Republic); it may be related to the fact that plenty of Colombians prefer salsa and *merengue* – not to mention rock and ballads – to *cumbia*. What is clear is that the developments in *cumbia* of the late 1990s and early 2000s seem to be located outside Colombia – in Buenos Aires, on the Texas-Mexico border, in Lima and so on. Especially notable is that recent fusions of *cumbia* in Peru, Mexico and Argentina have been associated with the urban working class and even marginalized people, even if there have been processes of 'gentrification' of fusion styles within these countries (Blanco Arboleda N.d.; Olvera 2000). There is a process of South-South cultural exchange here, associated with working-class identities, a process which has detached itself from the country of origin of *cumbia*. Within Colombia, *cumbia* by the early twenty-first century seems to be about recycling and re-releasing old material, partly in a nostalgic attempt by cultural activists of the Caribbean coastal region to assert a strong regional identity vis-à-vis the central regions of the highlands (Wade 2000: ch. 8). Despite the popularity among some young people of participating in folkloric dance troupes, most urban youngsters are looking elsewhere – whether hip-hop, rock, *champeta* or reggaeton – for sources of entertainment and inspiration.

Dancehall

Dancehall (known as ragga in some places in the Caribbean and in Britain) is a style of music that emerged in the urban ghettos of Kingston, Jamaica, during the late 1970s. Dancehall is distinctively different from its predecessor, reggae, mainly in its lyrical content and tempo. The genre is characterized by a thumping beat and a singer, singjay (a vocalist who blends singing and toasting in a manner that resembles jazz scatting) or DJ who expresses everyday issues that arise in the inner city. Singjaying, which was first pioneered by DJ Big Youth in the song 'Hit the Road Jack,' allowed for the emergence of a new group of artists who had been unable to break into the music business during reggae's peak. The ability of the populace to relate to the socioeconomic currency and political potency of the lyrical content, as well as to the hard-hitting beats over which the dancehall vocalists performed, led to the emerging genre's rapid eclipse of reggae as the style of preference among the island's youth population.

As opposed to reggae, which relied on lyrics about love and protest, and which employed arrangements with horns, guitars, percussion and harmonies, the new dancehall music had none of these embellishments. Interestingly, dancehall's boom in local popularity occurred simultaneously with the rising acceptance of Jamaican reggae on the international stage. While reggae expressed resistance, liberation and Rastafari religious beliefs, dancehall lyrics were mundane and parochial, describing the everyday lives of ordinary people living in poverty and oppression. Early dancehall beats were created by recycling backing tracks derived from previously recorded songs to create what was referred to in the Kingston music scene as 'riddims.' Riddims are identified by name and a given riddim may be used as the backing track in numerous songs, resulting in an entire compilation album of recordings that utilize the same backing track or accompaniment. In dancehall the tempo and pace of the 'riddim' was significantly faster than that of reggae, reflecting the renewed energy of the music scene. Sound system selectors developed a style of using the faders on their mixers to match the rhythmic patterns of the sound system vocalist, which was known as mixing. This made the music tempo increase. Coupled with elements of dub, this practice was soon emulated by producers, engineers and musicians in the recording studios of Kingston to create the distinctive sound of analogue dancehall. 'Under Mi Sensi' by Barrington Levy and 'Under Pressure' by Super Cat are examples of this style.

Dancehall's popularity emerged from a particular set of circumstances, most important of which was the ability of its previously voiceless and relatively unseen audiences, primarily young, black, low-income Jamaicans, to identify readily with the commentary of the early DJs who shared similar socioeconomic characteristics. The performers thus held credence, which allowed them to maintain an emotional relationship and appeal with their core audience. Dancehall was also able to sustain the interest of the masses through the lyrical content of the DJs that appears to have made it easier for art to imitate life, as well as for life to imitate art, as evidenced by the major themes of the dancehall and the subculture that emerged within it.

Perhaps the most potent factor that gave rise to the popularity of dancehall was the fact that the genre did not rely on traditional means of reaching its audience. Dancehall heroes typically emerged from within the 'dancehall' space. Over time, dancehall was no longer simply a space, but an indigenous Jamaican genre and a lifestyle that included the space/venue, fashion, language and behavior.

Dancehall: The Venue

Dancehall derived its name from the space in which its fan base could easily access the emerging genre. In fact, prior to the 1980s the term 'dancehall' (or dance hall) simply described the venues for music and dance that have been integral to Jamaican popular music since the 1950s. There were two distinct types of dance halls. In the 1950s–1970s dance halls were formal buildings, where big bands such as the Granville Williams Orchestra and the Sonny Bradshaw Orchestra performed live to middle-class audiences who danced on well-prepared dance floors made of polished oak. Among the more popular dance hall venues located in Kingston were The Glass Bucket, Bournemont and Silver Slipper.

In contrast, the poorer classes danced at a number of lodge halls with music echoing from the huge boxes of the mobile turntable/speaker assemblies known as sound systems. Popular sound systems included Sir Coxsone's Downbeat, , , Thompson Hi Fi, Tom the Great Sebastian, Duke Reid and V. Rocket. Among the more famously affordable early dance hall venues used by these pioneers in Kingston were The Success Club, Foresters Hall and Chocomo Lawn.

By the 1970s however, many more informal outdoor halls were introduced. These venues were mainly open-air with basic facilities such as a bar counter and a makeshift kitchen area for curried goat and goat soup known as 'manish water,' the staple food and hot beverage of these dances. Controversially, dancehall's popularity emerged from the autonomy and independence provided by the dance hall venues. The population of urban youth was drawn to the sound in a space not dependent on the traditional mass media. Thus, dancehall artists were not dependent on conventional means of exposure. Their popularity emerged from the nightly parties, hosted in dance hall venues easily accessed by the lower classes in search of affordable entertainment. Dancehall thus did not require the popularity of a studio-produced single or album to gain public acclaim. This phenomenon resulted in a rapid democratization of the Jamaican music industry and eroded the status of reggae as the most popular indigenous genre during that period. In these spaces the toasters/DJs were able to appropriately pique and sustain the interest of younger, less conservative Jamaican masses, by echoing the content of their daily lives and experiences against the backdrop of constantly changing 'riddims.'

The broadcast rules governing conservative mainstream media challenged the ability of these emerging dancehall artists to be heard. The dominant themes of dancehall tended to reflect a subcultural lifestyle that many would have preferred to dismiss. Yet these dominant themes reflected the interest of the common Jamaican citizen.

Dancehall Genre: Origins and Musical Developments

Despite its undeniable presence and force, dancehall as a genre is problematic to define, partly due to its many stylistic changes since the 1980s. In order to simplify this effort, it is instructive to differentiate between the discrete analogue and digital periods of the genre. The early analogue period (1979–85) was decisively marked by the reuse of old reggae and rock steady backing tracks. Among the most famous riddims used during this period were the 'Real Rock,' 'Full Up,' 'Heavenless,' 'Answer' and 'Far East.' Original riddims were also created during this period and studio bands such as High Times, the Revolutionaries and Roots Radics were responsible for this output, working with producers including Henry 'Junjo' Lawes, George Phang, Jah Thomas and Jo-Jo Hookim.

The early analogue period eventually gave way to a digital period in the mid-1980s. One of the most notable songs of that period was 'Under Mi Sleng Teng' by Wayne Smith, produced by legendary producer and sound system man Lloyd 'King Jammys' James. While generally regarded as the start of the digital period, the recordings were not actually digital (digital recording began in the Kingston music scene in 1988 with the operation of studios such as New Name Music). However, the use of digital sequencers and drum machines gave the music a hard, robotic signature which differentiated it from the warm sound of live instruments. Introduced in 1983, the first popular drum machine of dancehall was the Oberheim DX, which featured 18 sounds and allowed for 6-sound polyphony and had a 4-digit, 7-segment display. This was used by musicians/producers Steelie and Cleavie on the famous riddims of digital dancehall for producers including King Jammy and Redman. The machine created 'riddims' such as 'Punany,' 'Chinatown,' 'Soap' and 'Duck' (see YouTube listings).

The shift to drum machines and synthesizers was characterized by a minimalist approach to musical accompaniment and production. The measure moved from emphasis on the second and fourth beat of rocksteady and on the third beat of the measure of reggae to an emphasis on the first and the third beats, with the kick drum and bass guitar on the first beat and the snare on the third. Examples include 'Punany' (Admiral Bailey) and 'Anytime' (Bounty Killer). Chord progressions were also limited to a basic one- or two-chord beat, and it was the beat or riddim, not the lyrics, that became the central component of the recordings. Many Jamaicans refer to the 'riddim' of dancehall as evoking an almost involuntary response, and they state that they respond to the sounds without paying much attention to the lyrics.

At first, the new music flourished in dance halls all over Jamaica. These venues were different from the old dance halls of the 1950s, 1960s and 1970s. The new halls were mainly open lots in the inner city where 500–2,000 people could gather and enjoy listening to their favorite singers, singjays and DJs. Some of the emerging stars included Barrington Levy, Half Pint, Michael Palmer, Tenor Saw, Little John, Yellow Man, Peter Metro, Josie Wales, General Trees, Super Cat, Frankie Paul, Burro Banton, Rankin Joe and Brigadier Jerry. Some reggae stars became dancehall kings too, including Sugar Minott (one of the founding fathers of dancehall), Johnny Osbourne and Tony Tuff. In fact, Sugar Minott recorded two seminal dancehall tunes: 'Dancehall We Deh' (We Are at the Party), which paid homage to the new dancehall venues with the lyrics 'Dancehall we deh, an we a play reggae,' as well as the quintessential dancehall anthem 'Inna Dancehall Style,' an ode to the new style emerging among inner city youth.

'Inna Dancehall Style' had all the elements of the new genre, and a great hook, but the verses were lines from old songs and nursery rhymes. These verses were not repeated in some sections of the song. Minott continued to realize his mission of promoting the new music with another song for producer George Phang called 'Riddim,' which states, 'you play de riddim riddim riddim and then yu choose the dancehall king.'

Influential Sound Systems

The evolution of the dancehall phenomenon began with the explosion of several new sound systems in the early 1980s. Without the dancehall and sound systems the genre would not survive, as it gave exposure and prominence to a host of performers who were not provided with radio exposure. Among the most popular were Youth Man Promotion, Stur Gav, Lee's Unlimited Kilimanjaro, Jah love Music, Black Scorpio, Metro Media, Stereo One, Volcano and King Jammys.

In the 1980s Youth Man Promotion was one of the biggest sound systems to spread early dancehall music throughout the island, spearheaded by veteran reggae crooner, Sugar Minott. Minott may also be credited with having developed and recorded the first dancehall crew of artists that toured with the sound system. This trend over time was to become a characteristic trait of dancehall sound systems. Among the Youth Man Promotion Crew were dancehall icons Junior Reid, Michael Palmer, Tenor Saw, Yami Bolo and Steve Harper, Minott's set developed a large fan base in the inner city and had the reputation of giving young 'wannabees' a chance to 'buss,' which was the new term for becoming popular. Minott later reflected that the name of his sound system reflected his personal ambition to give ghetto youth a chance to be as successful in music as he was (Minott 2000).

Yet another remarkable sound system owner who also wore the hat of producer was Henry 'Junjo' Lawes. His Volcano sound system was one of the biggest of the 1980s. Junjo employed major DJs including Barrington Levy, Coco T., John Holt, Tony Tuff, Frankie Paul, Michigan and Smiley, Eek a Mouse and Yellowman. They, too, performed on his sound system at nightly dances at venues in the inner city and the countryside.

King Jammy Super Power was a dominant force in the dancehalls in the 1980s. Starting out as Prince Jammy, this behemoth's crew included dancehall favorites such as Tonto Irie, Chaka Demus, Admiral Bailey, Tulloch T., Pampido, Colin Roach and Wayne Smith. The popular Kilimanjaro sound system utilized Super Cat, Burro Banton and Nicodemus; while Stur Gav sound system employed Charley Chaplin, Josie Wales and Inspector Willy. Peter Metro, Tonto Metro, Danny Dread and Jimmy Metro led the Metro Media sound system, while Stereo One sound system employed the likes of Lieutenant Stitchie, and Lee's Unlimited sound system relied on Yellowman. These sound systems and DJs charted a path for early dancehall. Indeed, their tireless efforts arguably resulted in dancehall's status as a major social force and popular contemporary genre.

Dancehall: Jamaican Politics

The advent of dancehall music in the 1980s occurred amidst political changes sweeping the world, including the decline of Communism and the rise of free market ideology. Throughout the decade of the 1970s supporters of the island's two main political parties engaged in violent ideological clashes resulting in the loss of nearly 1,000 lives in the period preceding the 1980 election. The Jamaican Labour Party (JLP), led by Edward Seaga, was ushered into power advocating free market capitalism, fully supported by the United States.

As the new political directorate brought hope to the country's middle class, Jamaican music, in contrast, echoed the challenges faced by the socially and economically disenfranchised poorer classes. The pervasive violence also significantly influenced the changing sound of Jamaican music. The black consciousness and nationalistic themes of 1970s reggae were no longer relevant, and they were stoutly denounced at the political level. Ironically, reflecting the mood of the country's more economically disengaged social classes, who were far less optimistic about their future prospects under the regime change, the music shifted to express their general feelings of discontent and despair. Thus, the 'black conscious' message of iconic reggae artists was rapidly replaced by a far more aggressive style of lyrical delivery that reflected the overarching dissatisfaction of the lower classes.

As is common among disaffected groups across the globe, song themes grew pervasively more materialistic as artists sought to highlight all that was thought to represent a better life. Despite their experience of relative poverty, the spirit of materialism seemingly grew with the corresponding increasing availability of consumer goods from the United States for those who could afford it. The message of the DJs also changed to correspond to the demographic shifts and taste preferences in the society. Ace DJs who remained topical were headline acts at popular dances. Their fresh style of chanting seemingly struck a chord with the populace through lyrics that touched on all the dominant aspects of life in inner-city Jamaica.

Dancehall: Themes

DJs have addressed issues relating to poverty and economic opportunity, police brutality, gang violence, abortion, definitions of sexuality, sexual prowess, infidelity, promiscuity and sex appeal. They also commonly advocate for the legalization of marijuana. Sexuality is one of the most central and repeated themes represented in dancehall, along with an emphasis on hetero-normative sexuality. Many dancehall artists have advocated for the rejection of homosexuality and its practices. Lyrics that promote homophobia, misogyny and the glorification of guns and gangsters have earned the genre much criticism both in Jamaica (e.g., by journalist Ian Boyne) and internationally (by organizations such as Gay and Lesbian Alliance Against Defamation or GLAAD), evidenced in the controversy and protests by international gay rights organizations surrounding Buju Banton's 1992 hit, 'Boom Bye Bye,' a song with lyrics promoting violence against homosexuals. Many major dancehall stars, including Shabba Ranks, Beenie Man, Buju Banton and Sizzla, have experienced career setbacks due to opposition mainly from gay rights groups, who have advocated banning performances by these acts in cities around the world. The music has been branded by participants and critics alike with labels such as 'slackness' ('Punanay' by Admiral Bailey), 'gun tunes' ('Bloodstain' by Ward 21) and 'murder music' ('Log On [Chi Chi Man]' by Elephant Man). However, some academics, including Carolyn Cooper and Donna Hope, have argued that the themes and ideas expressed within dancehall are specific to the region and its culture and are to be viewed within the context created. This line of argument defends the genre against its critics, both nationally and internationally.

Patriarchy can also be considered synonymous with the genre, as topics such as sexuality and other themes have, for the most part, been expressed from a male's perspective. Often, the woman is portrayed as the giver, while the male is identified as the taker and the dominant figure. However, DJs such as Lady Saw and Patra along with countless others have helped to redefine this relationship, establishing the woman in a role of power and presenting some form of gender balance. The genre itself can be characterized by its dynamism. By the early 1990s, the emergence of performers such as Garnet Silk and Tony Rebel introduced a blend of roots stylings. This allowed for a shift in dancehall's sound along with the emergence of more philosophical themes, although X-rated content still retains its popularity.

Despite the difficulty of gaining middle-class acceptance in its embryonic years, dancehall rapidly became the charge of the youth movement and quietly garnered popularity through live performances over riddim tracks in the dance hall spaces. The popularity of the new sound, with its socially conscious commentators chanting emotionally charged lyrics about sexuality, power, X-rated topics, braggadocio, opulence, gangster and gun glorification, resonated so profoundly with the Jamaican masses that by the beginning of the 1990s dancehall had firmly established itself as the most popular indigenous Jamaican genre, at least on the island.

Dancehall Styles and Culture

The acceptance of the genre by major show promoters and the media led to the evolution and acceptance of an entire subculture defined not only by the music but also by fashion, food and lifestyle. The newly developing dancehall lifestyle, in contrast to reggae's roots style, was flashy and outrageous, symbolized by big bikes, fancy cars, lots of jewelery and ostentatious living, usually associated with the very rich. This style evolved from the high fashion sense that had been part of popular music culture since the days of ska and rock steady. The style was heightened by the return of Jamaicans from England and the United States, sporting big gold chains and fancy designer clothes. This trend was manifested through dancehall figures including Henry Lawes, who drove BMW and Mercedes Benz sedans and Honda Ninja motorbikes. With the development of the Jamaican transatlantic drug trade, there was also a parallel rise in the lifestyle of the dancehall.

The style and language of dancehall was developed by DJs who adopted slang and words they heard in their communities. In so doing they popularized many of these words and phrases in songs. 'Boops' (sugar daddy), 'matie' (mistress), 'bowcat' (oral sex), 'mud up' (messed up), 'mampie' (obese), 'dash wey belly' (abortion) and 'bush to de bone' (elegant) are just some of the slang expressions popularized by dancehall.

Dancehall in the International Arena

Like reggae, dancehall has emerged as a global commodity with a rising fan base in Europe, Japan and Africa, spawning several new genres outside Jamaica including reggaeton in Latin America, dubstep and grime in Britain and kwaito in South Africa. A major issue in defining and representing Jamaican music is that many aspects have not yet been formalized and institutionalized. In many cases, nomenclatures have developed that are endemic to Jamaica. Hence what is described in international music circles may be defined differently in Jamaica. In some cases multiple and contradictory perspectives and definitions coexist, varying according to the individual's background in the music and constituency. This lack of consensus among the various sectors related to Jamaican music, national and international, can result in confusion.

Conclusion: Dancehall's Success Story

At its peak, through collaboration with international major record companies in the 1990s, dancehall acts such as Shabba Ranks, Cobra and Patra (utilizing a fusion aesthetic that combines traditional local forms and international soundscapes) rose to international prominence and sold millions of records. Later, pop-influenced acts such as Shaggy and Sean Paul achieved multiplatinum success. Shaggy sold 10 million copies worldwide of his album *Hotshot*. Since the beginning of the twenty-first century the Kingston music scene has transformed the dancehall sound and aesthetic. A new sound that fuses many styles, including dancehall, reggae, ska, hip-hop, pop and R&B (one beat) is on the rise to takes its place among the many genres of popular music emerging from Kingston.

DENNIS HOWARD

Dande

The *dande* (dan-day) is a New Year's greeting in the Caribbean island of Aruba with musical accompaniment performed by groups of traveling musicians who are also called '*dandes*.' A form unique to Aruba, with roots stretching back into the nineteenth century, it has connections with the music of Christmas and New Year celebrations elsewhere in the Caribbean region. After a period of decline, *dande* was revived in the last decades of the twentieth century and became an important sign of Aruban national identity.

Description

During New Year festivities in Aruba, after midnight many families receive a visit by a *dande* group. Traditionally, the *dandes* visit a specific household because they wish to do so, and to show respect for those live there. The leader, who is responsible for deciding where and at what time to begin the 'revel' (*paranda* in Papiamento, *parranda* in Spanish), approaches family and friends in advance to find out if they would like to receive the *dande* (a visit would be inappropriate in a home that is in mourning, e.g.). Families may also approach the *dandes* to request a visit. The leader then obtains the names of the family members expected to be present in the home at midnight. Before New Year's Eve, a *dande* singer (usually a male) will seek information on family events that have taken place over the preceding year. This knowledge will be included in the greetings the leader composes to each individual and is evidence that the musicians are part of a specific community and familiar with a family's everyday lives.

On New Year's Eve during the Catholic midnight mass, *dande* groups arrive at church to serenade the congregation and to thank God for the New Year. Around the island, as fireworks are exploding, *dande* groups begin their 'sweep,' or 'dandering' (Orman 1996), visiting as many as 20 houses throughout the night. Formerly, extended families lived in the same neighborhood and *dandes* would visit homes on foot; but today the *dandes* travel in trucks since people now often live at considerable distances from one another. For example, the *dande* group Tipico Arubano visits family members all over the island, including those from Noord or Tanki Leendert to Pos Chikito (a distance of approximately 24 kilometers).

Dressed in their best clothes, the *dandes* begin to play as they enter the yard of the first house. The violin is the first instrument to be played 'to make the *dande* cry.' As the other instruments join in, the musicians position themselves on the threshold. The singer stands with his hand on the doorframe. He begins to sing with his hat in his other hand, wishing a happy and prosperous New Year to everyone present. When invited to enter the house, the singer steps over the threshold first (Maduro 1980).

The first verse of the *dande* brings greetings to all the family and – another important element – thanks God for bringing them a New Year. Successive verses are sung to the head of the household (man or woman), and on down to the youngest child. For each individual, the singer will sing a personal verse *ex tempore;* this demonstrates his social integration with the family by revealing information that only someone closely connected could know. The family's guests are also serenaded. The *dande* removes his hat before singing; this is done out of respect for the family and to elaborate his verses kinetically – in a sense, he is 'dancing the hat.' Each time he sings to an individual, that person shows their appreciation by dropping something into the hat – formally some food, but in recent times more often a few florins to help defray costs. Through song, the singer takes the family on a journey back through the year, celebrating the joyful events, exorcizing the difficult times and expressing hope for the year to come.

The lyrics all begin with the line 'O dande' (the precise meaning of the phrase remains unknown), and each line ends with the chorus of 'ai nobe' which is a contraction of 'aña nobo' or New Year. The recipients join in with the chorus in a call-and-response pattern. Repeated phrases include 'O dande felicidad di aña nobo' (Happy New Year) and 'O dande masha danki pas carino' (thank you for your affection).

When the *dande* is completed, the groups are invited to partake of some refreshments and toast in the New Year. Celebratory foods include *sopi cabrito* (goat soup), *suls* (pork in vinegar*), stoba di carni* (meat stew) and *bollo* (cake); refusing what is offered is considered impolite. After a toast, the group usually plays two or three family dance requests – a mazurka, a *danza* or a waltz, for example. The duration of the *dande* visit varies but is typically under an hour long. Family and friends will often follow the *dandes* to the next house. By the time 'dandering' is over, a very large crowd is often in tow.

Dande is a remarkably affirmative tradition. A fortunate and 'blessed' family might receive up to six *dande* groups at hourly intervals throughout the night. Visiting continues for a week until 6 January (Three Kings). The groups often end their week of celebration with a visit to an orphanage, hospital or old people's home.

Historical Roots and Cultural Connections

The construction and elaboration of symbols of identity form a practice found in many societies (Hobsbawm 1983). Although *dande* is considered by Arubans to be 'pure Aruban folklore' dating back to the 'time of the Indians' (Booi n.d.), oral evidence suggests the tradition dates back to the early nineteenth century. Dande singer Tony Werleman claims that both his father and grandfather played *dande;* his grandfather (1806–95) recalled seeing the *dandes* as early as 1820 (Werleman 1996). Simeon Ras (born 1905) told Harry Croes in 1980 that his father (born 1870) and grandfather (born 1840) both sang *dande*. Other claims by *dande* families also trace the genre within their families back to the early 1800s.

The origins of the *dande* are unknown, but it is probably a fusion of Spanish, mestizo and African music and customs. The most likely source of the music is coastal Venezuela, from where it was introduced (in an earlier form) during the early 1800s. Venezuelans have customarily worked on Aruba and have married into Aruban families. There is still significant trade, commerce and intermarriage between the two populations. When the music took seed on Aruba, it became differentiated from its roots. Through contact with native Aruban culture, the lyrics and performative structure of the original song were recrafted and resemanticized to such an extent by local musicians that the *dande* became, and remains, truly 'Aruban.'

During pre-Columbian times as well as during the Spanish period (1500–1636), very close contact with the mainland existed and cultural relationships were strong. After the arrival of the Dutch this did not change; the sea currents made the journey to Curacao difficult for sailing ships. Until 1754 no whites lived in Aruba except the Dutch Commander and his *ruiters* (horsemen or riders). Then, the Dutch West India Company gave permission for the first white Europeans with their slaves to settle (Hartog 1988). The African music traditions fused with the local and can still be heard in the drum. The Indian trait in the

Arubans was constantly revitalized by Indians coming to work in Aruba from the mainland. However, with constant trading between the two territories, native Arubans also married mestizos and Spanish so that the Indian-oriented population acquired a Spanish strain. Until 1849 mainly Spanish and Venezuelan priests worked in Aruba which strongly influenced the development of customs and religious life for over a hundred years. (The Dutch never had a large presence on the island and had limited cultural interaction with Arubans.) Right into the first decade of the twenty-first century a significant number of marriages have taken place between Arubans and Venezuelans, resulting in the absorption of Venezuelan customs, language, food, festivals, music (*gaitera* and *aguinaldos*) and dance, and architecture into the native Aruban culture.

Lack of employment at the end of the nineteenth century caused Arubans to seek employment as seasonal workers on the coffee and cocoa plantations in Venezuela. They also found work in Cuba and in Jamaica, and exchanges with Colombia and the Dominican Republic also became increasingly common. This period of frequent short-term migrations continued until the end of the 1920s. The music of these other places certainly impacted on the music-loving Arubans, but many Aruban families claim to have known *dande* in their families for as long as 200 years, and thus, since *dande* was already established by the time when travel to, and exchanges with, these more distant territories occurred, Spanish-mestizo ties with native Arubans remain its most likely source.

The Meaning of *Dande*

The meaning of the *dande* is twofold. First, it is an overarching folkloric symbol of native culture and, as such, plays a central role in the affirmation of Aruban identity. Second, the *dande* reflects the preferred qualities of the Aruban character. When performed appropriately, an idealized native ethos is expressed through a set of aesthetic codes that recreate proper social behavior and remind recipients of their kinship obligations and of the importance of good manners and mutual respect. By singing *ex tempore* to each family member in turn, a *dande* singer has the opportunity to display the depth and quality of his personal connection to the family, and to celebrate the eloquence of the much-loved Papiamento language through its mastery in performance. The lyrics chronicle the joys and sorrows of the past year and express hope and best wishes for the New Year. The art of the *dande* is to balance these contrary expressions of happiness and sadness through song, and through the musical qualities of *alegria* and *melancolico* – gaiety and melancholy. It is a gift of happiness 'with a taste of sorrow.'

The *dande* melody is simple, repetitive, even monotonous, especially in the chorus, 'ai nobe.' It is not the music, however, but the spirit in which the verses are sung that is important, enriched by the imagination and vocabulary of the singer. Many of the expressions are somewhat antiquated and even obsolete, but are poignant to the older generation. To the well-attuned ear, no two singers express their *dandes* in the same way, no violin 'wails' with the same feeling, and no *tambor* rolls with the same beat – yet the *dande* is always the same. For the older generation of native Arubans, the more *dandes* they receive, the better the coming year will be. But all feel glad to have had the opportunity to receive the *dande* and to 'comply with the rules of hospitality' (Maduro 1980).

Accorded little value or respect for many years, by the early 1980s the *dande* had once again grown in popularity. In 1972 Harry Croes and Maikey Croes of the group Grupo di Betico discussed the possibility of bringing the flagging *dande* back into favor through a *dande* festival. In July 1973 Croes issued a press release announcing that a *dande* competition would be held in the Connie Francis Club in Santa Cruz on 27 December. Fourteen groups entered the competition and the audience attendance exceeded expectations. The then prime minister Betico Croes promoted *dande* as a potent symbol of native identity. With many existing and newly arriving immigrants, there was a need to identify symbols of native culture to differentiate the island's ethnic groups. Over the years the annual festival grew in stature and popularity. In the early twenty-first century the *dande* is the most semantically laden of all music for the native Arubans, in the same way as the calypso is for Trinidad and reggae is for Jamaica, in that it displays the native ethos through exemplary performance.

Instrumentation

The minimum number of members in a *dande* group is five, although larger groups of six to eight are more common. The essential components are (ranked in importance) a violin, a singer, a *tambor*, a *cuatro* (a four-stringed guitar of Venezuelan origin) and a steel *wiri* (also called *wicharo* or *guïro*). The *tambor* is a small wooden drum, sometimes made from a wine cask, covered on both sides with goat or sheepskin. One side is played with the palm of the hand, while the other is beaten with a cloth covered stick, or *palito*. The *wicharo* is a percussion instrument of Latin-American origin (Brazil, Cuba and Mexico) made of a serrated gourd (CHICO 2008). In Aruba the *wiri* was originally made from a gourd or cow horn, but the steel *wiri* became more popular around the turn of the twentieth century. It is played with a single metal rod, a *wicharon*, and maintains the rhythm of the *dande*. The violin provides the melody, while the *tambor* provides the beat. The *cuatro* strengthens the rhythm and provides the harmonic three-chord structure of the music; the *wiri* sets the rhythm, while the other percussive instruments provide a fuller sound.

Dande groups can, however, be much larger and include other nonelectric instruments such as the accordion, a six-stringed Spanish guitar (*guitar seis*), a short-necked, Cuban-style, six-stringed guitar, a mandolin, a base guitar, a *raspa* (made from a serrated metal tube resembling a round cheese grater) or a *calbas raspa* made from a serrated calabash gourd. The *raspas* are played with a metal comb or *pena*. Commonly employed is the large *bass-en-boite,* a percussive instrument that developed from the *mbira* (African thumb piano). It is a unique tuned percussion instrument. Sound is produced by plucking strips of metal, wood or cane fixed across a round opening of a large wooden resonator box upon which the player also sits. The ukulele, maracas and *claves* have also been used in the larger *dande* groups.

The *dande* has a stable musical structure comprising a single melody and a single chorus – only the verses vary for each recipient. Performance protocols are properly observed by the more traditional dandes. The elements which are prescribed and subject to critical judgment are the content of the message (‘*contenido di texto/mensaje*’); the sympathetic interpretation of the message (‘*interpretacion di e contenido di texto*’); the timing, synchronicity and rhythmic flow of the singers (‘*compas di cantante/acopla*’); the pronunciation of the words ‘*articulacion*’); the melody and harmony of the singers and musicians (‘*melodia y armonia di e grupo musical*’); and the correct feel of the music which is a half-closed *tumba* rhythm (‘*medio tumba cera*’). The music is performed allegretto (Orman 1996)). Below is the basic song without the unique extempore verses:

Call	*Response*	*Call*	*Response*
O dande nos a yaga na bo porta –	Ai nobe!	Oh dande we arrived at your home –	New Year!
O dande riba e dia di aña nobo –	Ai Nobe!	Oh dande on New Year’s Day –	New Year!
O dande nos a bin pa deseabo –	Ai nobe!	Oh dande we come to wish you –	New Year!
O dande felicidad di aña nobo –	Ai nobe!	Oh dande happiness for the New Year –	New Year!
O dande prosperidad di aña nobo –	Ai nobe!	Oh dande prosperity for the New Year –	New Year!
O dande nos a trece alegria –	Ai nobe!	Oh dande we bring joy –	New Year!
O dande riba e dia di aña nobo –	Ai nobe!	Oh dande on New Year’s Day –	New Year!
O dande nos no a bin pa nada di mundo –	Ai nobe!	Oh dande we came for nothing else in the world	New Year!
O dande nos a bin pa saludabo –	Ai nobe!	Oh dande we came to greet you –	New Year!
O dande nos ta bai sigui nos caminda –	Ai nobe!	Oh dande we’ll continue on our journey –	New Year!
O dande nos ta bai cu nos paranda –	Ai nobe!	Oh dande we leave with our revels –	New Year!
O dande a yega e ora pa nos bai –	Ai nobe!	Oh dande time has come for us to leave –	New Year!
O dande masha danki pa molester –	Ai nobe!	Oh dande thank you for letting us bother you –	New Year!
O dande adios adios nos ta bai –	Ai nobe!	Oh dande goodbye, goodbye, we are leaving –	New Year!

Dande: Tumba folklorica No 34 (sheet music) Musica Folklorica; Arreglo di (arranged by) Wever, Rufo. 12 March 1973. This original song was also recorded on a 78rpm record.

The groups most associated with dande are Sixto 'Mo Tito' Croes (violin) y su Conhunto Folklorico Arubano (who made the earliest known recording of the *dande*, and fragments of performances are recorded on a VHS tape). Other well-known groups or individuals past and present are Yendi Koolman (singer), Tony Werleman (singer/instrument) y su Grupo Allegre Noord, Facundo Panneflek (singer/instrument) y su Grupo Poco Loco, Carl Ras (instrument) of Grupo Amistad, Maiky Croes (singer) and Betico Croes (instrument) of Grupo di Betico, Vicente Tromp (singer/instrument) y su Grupo, Alma Folklorico, Tipico Perla, Tipico Arubano, Tipico del Campo and Tico Oduber (singer/instrument) y su Grupo Estreyanan.

Language and *Dande*

The native language of Aruba is Papiamento (derived from the Portuguese 'papear,' to jabber), which emerged in the sixteenth century to enable African slaves to communicate with their owners. The word 'dande' is of unknown provenance, but some conjectures can be made. 'Dande' may be a contraction of the old Papiamento word 'dandara' – now 'parandia' or 'parandea' – which means to go on a spree or revel. A reveler is known as a 'parandero.' However, the *dande* is also characterized as a 'gift.' Papiamento words relating to gift are 'donador' (donor or bestower of gifts), 'duna' (to give) and 'dunado' (giver) (Ratzlaff 1992; Mansur 1991). Possible related words in Spanish which have a semantic and phonetic relationship with the word 'dande' include 'donde' (where), 'dante' (he who gives, giving), 'andante' (walking) and 'tende' (listen, to hear).

The Aesthetics of *Dande*

Although the musicians in the *dande* groups have always been predominantly male, throughout the twentieth century women joined in increasing numbers (to the dismay of some of the older men). The *dandes* pass on their art to their children, who are encouraged to accompany the adults on the *parandas* from a young age 'to put it into their blood.' Consideration is given to the *dandes*' attire. Dress must be *decente* (decent) to show respect. Thus, slacks, shirts and closed leather shoes are the norm. The singers wear formal suits with neckties, and they *always* wear a hat with a brim. In fact, the hat is an integral part of the *dande* performance. It is either a felt or cloth fedora, or a straw panama with a colored band. Baseball hats are frowned upon, as are jeans, sneakers and t-shirts.

Within the prescribed limits of performance, there is still some variation in style. Until the mid-twentieth century Aruba comprised a series of distinct regions, each associated with a few extended families, and by extension, a few *dande* groups. Over time the *dande* developed at least three distinct regional styles, such as *dande yora* (the crying dande) from the district of Savaneta.

There are some prescriptions as to performative interpretation. The singer and musicians should show that they are 'living the music' (that their performance is heartfelt and earnest). Each recipient must receive a personal message with appropriate words (selected according to the expressive aesthetics of Papiamento) and no message should be repeated. Clear articulation is important as is timing, rhythm, tone and emotional qualities of the voice. The body should incline toward the recipient with respect, deference and humility, extending the head, arms and hat. In a 1996 *dande* festival, a young singer put on a stylish, rather showy performance that was well received by women in the audience. But judged by the exemplary *dande* traditions, it was thought by most of those present to lack the qualities of generosity, humility and esteem for the recipient. (Needless to say, he did not win the contest!)

An emotional and sympathetic rendering of a verse is greatly appreciated, and many of the older folk are apt to weep with joy, for 'when your friend is singing to you, you get emotionally involved, it touches you.' It is a communal music with a strong symbolic and empathetic relationship between performer and audience – the latter's response being part of the performance.

Similar Traditions in Latin America and the Caribbean

Although the *dande* is performed during the New Year, it is similar in some respects to the European custom of Christmas caroling and to the songs known generically as *aguinaldos,* religious folksongs of Spanish origin introduced into the New World in the sixteenth century. The *aguinaldo* is performed at Christmas in Aruba, whereas the *dande* is played only for the New Year; however, they share many religious references.

In Venezuela, there is a second type of *aguinaldo* which is more of a serenade and folksong. These songs are often performed as part of a *parranda* and are known as '*parrandas*' or '*parranda-aguinaldos*.' They are performed at Christmas but also at other times of the year. Pollak-Eltz (1983) notes that during the Christmas season, groups of masked or unmasked figures roam the streets and move from bar to bar, accompanied by musicians or just singing.

Wherever Venezuelans migrated, the tradition was apt to be introduced and modified by the local environment. In Trinidad and Puerto Rico, for example, the songs are performed through the Christmas season by troupes of amateurs who travel from house to house partying, singing and playing stringed instruments (Manuel 1995). Several authors have noted that *aguinaldo*-derived music is widespread throughout the circum-Caribbean region and parts of Latin America in different guises – for example, *quesh* in Tobago and *parang* in Trinidad. These performances are all associated with the Christmas season, where roving bands of amateur musicians called *parrandas* stroll from house to house (Manuel 1995). In Tobago, a harmonic chorus of singers performs the songs, sometimes in French. In Trinidad, the carols are sometimes sung in Spanish (Pearse 1979). In Trinibago, the music is locally acknowledged to be folkloric music of Hispanic-American origins. Wherever the music is played, it has matured into a local popular form. For Trinidad and Tobago, one theory states that the music originated during the Christianization of the Amerindians by French Clergy Indians in Spanish Missions. However, this does not explain the frequent references to Venezuela. The second theory is that *parang* music was introduced by Venezuelans imported to work in the cocoa estates; this has some merit (www.tntisland.com/parang.html).

Puerto Ricans are known for their unforgettable *parrandas*, the Puerto Rican version of Christmas caroling where a small group of friends gather together to surprise another friend. Most *parranderos* play some sort of instrument, *guitarras*, *tamboriles*, *guiro* maracas or *palitos*, and all sing. Songs tend to be more secular than religious but the traditional *aguinaldos* retain the holiday spirit. On St Vincent, groups of musicians and singers go from yard to yard at Christmas playing seasonal hymns and carols. However, unlike the bawdy *parrandas* of Venezuela, they neither demand admittance to the home nor beg the family for money (Abrahams 1983).

Aguinaldos are musically rich, have alluring melodies and catchy rhythms, and the musicians execute flashy improvisations (Manuel 1995). The music contrasts strikingly with the Aruban *dande*, which has a single monotonous melody and a slow, rolling beat similar to that of the *tambu.* But both may be seen as echoing Roger Abrahams's account of the way festivals can offer highly stylized renderings of some of the 'central expressive practices and moral concerns' of a cultural community (Abrahams 1983, 98). His discussion of the symbolic meaning of the Christmas performances for Vincentians corresponds well to the meaning of the *dande* for the native Arubans. On St Vincent, the Christmas season is a time to 'reaffirm one's place in the community ... a time for good behavior and high decorum,' a time to 'emphasize order, respect, and a sense of community' (Abrahams 1983, 100–2). On Aruba, *dande* ensembles are effectively extended family groups that are ritually linked through these performances. Because modern life has seen the decline in the kin-centeredness of *barrios*, this traveling ritual brings the dispersed kin group into a coherent social whole as the *dandes* travel between family domiciles around the island. However, it is within the discourse surrounding it that the *dande* as idiom-as-symbol takes on its rhetorical power.

VICTORIA RAZAK WITH IVAN JANSEN AND HARRY CROES

Danza

Danza is generally understood as a nineteenth-century urban Caribbean derivative of contradances introduced from Europe around the late eighteenth century. In various ways, local composers integrated imported contradance forms with elements of music of African heritage, thus creating distinctive forms of *danza*.

The family of European contradances included quadrilles, rigaudons and lancers, as well as Spanish *contradanzas* that were rooted on the 'longways' style of the English country dance. This latter type, reported in Spain around 1711, is the one usually considered to be the most common (albeit not exclusive) tableau for the emergence of *danza* in the Caribbean. The early longways consisted of two duple-metered eight-bar sections of melodies played to accompany a similar recurring dance format of men and women in two lines, initially facing each other and later evolving in figures prescribed by a dance caller, or *bastonero*. Urban dance orchestras in the Caribbean consisted primarily of low-class military band members or musicians of African ancestry, who slowly but surely converted *contradanzas* into a Creole genre known as *contradanza del país*. As local, white, upper-class patrons entered the dance arena to the 'stately and dignified' melodies of the opening part, they were exposed to, or 'ambushed' by, voluptuous Afro-Caribbean rhythms in the latter section. The earliest-known published example of local *contradanzas* is 'San Pascual Bailón' (Cuba, 1803), containing elements such as the so-called *habanera* (as a rhythmic pattern) in march-like melodies common in military repertoires. Frequently, composers drew for their melodic styles on Italian arias performed in opera productions sponsored mainly by local merchants and the buoyant sugarcane industry. Under the influence of European Romanticism, *contradanza del país* emerged in the 1840s as background for dancers to reject the authoritarian caller and the longways system in favor of the independent couple, a modality observed in the slow, moderate and fast dances of urban societies in the early twenty-first century. Events such as the Paris Revolt of 1848 inspired local writers to adopt Creole *contradanza* as an emblem of an antimonarchic Caribbean, free from the chains imposed by Spain and Roman Catholicism. Perhaps not coincidentally, these *danzas* seldom featured the Andalusian cadences associated with Peninsular Spanish music.

Variants of contradance existed with similar or different names in many countries, including Cuba, Puerto Rico, the Lesser Antilles, Venezuela, Colombia, the Dominican Republic, Haiti, Mexico, Curazao, Brazil, Argentina and Uruguay. Whenever these distinctive versions were performed in Europe, Peninsular Spaniards referred to them indistinctly as *danza antillana* (Antillean Danza), or *danza americana* (American Danza). The popularity and significance of the Antillean *danza* is documented in 'La Borinquena,' a suave and romantic *danza* that became Puerto Rico's national anthem.

Danza in Cuba and Puerto Rico: Contrasting Histories

Nineteenth-century Cuban and Puerto Rican composers proposed to develop forms of Antillean *danza* as means of demonstrating a distinctive musical idiom for the region. But the Puerto Rican and Cuban versions were dissimilar to each other due to a number of factors, including demography and migration. In Cuba, the *contradanza* featured a two-part structure with the repeating *habanera* rhythm as its most distinctive feature. Later, this so-called *contradanza habanera* was renamed *danza,* and subsequently known as the *danza cubana* that evolved shortly thereafter into the Cuban *danzón* by the 1870s.

While Cuban composers considerably infused the *danzón* with elaborate African rhythms and drew on repetitive or circular formulas, composers in Puerto

Rico enlarged the *danza* form in melodic sections, and took from any of the various rhythmic and metric systems at hand. The *danza* of Puerto Rico became as popular and influential as the widely acclaimed *danzón* of Cuba, but did so with its own distinctive form, melodic style and texture, as reflected throughout the region well into the 1920s and beyond.

Puerto Rican *danza* was originally known as *merengue*, in which the two-part form consistently inscribed a 2/4 time signature, although it often dictated the performance of triplets more suitable to 6/8 or 3/4. This metro-rhythmic ambivalence points to the contribution by a significant Venezuelan migration fleeing the Bolivarian revolution by the thousands, especially in 1821. On their arrival in Puerto Rico, they introduced two-part *contradanzas* in *sesquialtera* patterns, that is, a binary feel in 6/8 alternating with a ternary meter (like 3/4). The unprecedented arrival of a Spanish regimental band from Cuba around 1839 may have inspired local composers to include *habanera* rhythmic patterns more frequently into this local *contradanza* form. In 1848 the local press in San Juan made explicit mention of *merengue* as the national music of the country. This prototype of *danza* came to be a local synthesis of Venezuelan and Cuban contributions.

Another difference between the Cuban and the Puerto Rican versions lay in their structure. In their beginnings, both Cuban and Puerto Rican *danzas* almost invariably comprised only two parts. In Cuba, the parts were called *prima* and *segunda* and were repeated *ad infinitum* in the dance context, perhaps with ornaments or improvised variations, while in Puerto Rico *danzas* a first part, called *paseo,* was followed by a section called *merengue.* But in contrast to the Cuban *segunda*, *merengue* evolved into a multipart form generally consisting of three 16-bar melodic sections, often concluding with the theme of the introduction or one of its parts. The expansion helps explains why the entire genre was also known as 'merengue.' In 1849 Governor Juan de la Pezuela issued a decree banning *merengue* in Puerto Rico. Dance organizers, musicians and the public responded by disguising the expression under the name 'upa' and later as 'danza.' By the mid-1850s Spanish military bands were including *danzas* in regular nightly outdoor concerts known as *retretas*, occasions at which bandleaders could show their instrumental expertise through *obligato* arrangements of popular arias and cavatinas. The presence of the mid-low register of a brass instrument known as *bombardino* (alternately translated in English as 'baritone euphonium.' 'baritone horn' or 'saxhorn') enticed the development of a local *obligato* style (known popularly as *contracanto de bombardino*) throughout the entire *merengue* section. A likely contribution by Frenchman Charles Allard during his tenure as major of local Spanish regimental bands, this subordinate line became one of the most distinctive elements of Puerto Rican *danzas*. It was often transcribed for the piano as a left-hand countermelody in the petit salon *danzas* that became popular among local elite dilettante ladies. 'Un viaje a Bayamón' (A Trip to Bayamón, 1867), by Manuel G. Tavárez (1843–82), reveals the use of low-register melodies much like the third-section solos for the *bombardino*.

For the regimental ensembles, *danza* composers embraced specific snare-drum rolls in the *paseo* section, thus invoking the 1870 adoption of similar patterns for the 'Marcha Real,' the Spanish national anthem.

San Juan and Ponce: Two Schools of *Danza* in Puerto Rico

After Tavárez moved to Ponce around 1870, two schools of *danza* were discernible in Puerto Rico, based on differences that had developed in formal, rhythmic and stylistic areas of the music. In San Juan, *danza* kept its ties with the old Spanish *contradanza* while maintaining the prominence of the accompanying *habanera* rhythms by inserting boisterous and lighter themes in short and equidistant phrases. This is reflected in suggestive titles, such as 'Zabaleta, rabo de puerco' (Zabaleta, Pork Tail) and 'Ay, yo quiero comer mondongo' (Hey, May I Eat Some Mondongo?).

At the time Ponce, Puerto Rico's second city, was considered a hub of sugar-plantations owned mostly by non-Spanish Europeans, whereas the Spanish controlled the commercial sectors. It was in this sociocultural realm that Tavárez, educated in Paris, established the basis of a more elaborate and cosmopolitan style. Much as Louis Moreau Gottschalk during his 1857–58 visit to that city (e.g., in his *Souvenir de Puerto Rico*), Tavárez instilled his *danzas* with elements of contemporary European Romanticism, together with rhythms he heard from black slaves in nearby plantations. His *danzas* consisted of enlarged melodic phrases, with triplet and quintuplet figures evenly inscribed, as, for example, in scores such as that for his *danza* 'Margarita' (1870). Local performers transformed these left-hand obligato figures into alternating African-related uneven patterns of 3-3-2 and 2-1-2-1-2, resulting in the voluptuous languidness characteristic of the slow *danza romántica* for piano. Another of Tavarez's contributions was the occasional use of distant tonalities, as in his *danza* 'Un recuerdito' (A Little Souvenir, ca. 1877).

Danza is often considered to have reached its highest musical level with Juan Morel Campos (1857–96), a pupil of Tavarez and the most prolific composer in the region. Most of his estimated 300 *danzas* were written for dance ensembles combining military-band and string-ensemble formats. Eventually, orchestras in Puerto Rico drew on his ensemble to standardize a format consisting of flutes, clarinets, violins, *bombardino,* trumpets, bass, *guiro* and *timbale*. A *bombardino* player (or *bombardinista*) himself, Morel Campos established the tradition of double-horn *contracanto* (in thirds and sixths) along with *bombardinista* Domingo Cruz ('Cocolía'), whose improvised 'talks' on this instrument (recorded by Columbia in 1910) are known to have predated, by some considerable time, the era of jazz improvisation. Campos had a hugely varied career, including the roles of orchestra conductor in South America and the Caribbean, and arranger for traveling Cuban minstrel, Italian opera and Spanish *zarzuela* companies. Together with his reputed capabilities on various musical instruments, he demonstrated prodigious ability in improvising *ad hoc* arrangements in remote cities where ensembles lacked the instruments prescribed in scores. Trained by Tavárez and Antonio Egipciaco (who was educated in Spain), at the zenith of his career (from 1882 until his death) Campos applied the knowledge he gained in making his local adaptations of the latest opera scores by Giuseppe Verdi to his own compositions. Thus, he gave more freedom to the standard *paseo-merengue* structure of the *danza*, and endowed the genre with melodic and harmonic sophistication while maintaining the austere, provincial, sober and defiant character of his native city of Ponce. Traces of Italian *cantabile* are clear in *danzas* composed in the 1880s, such as 'Alma sublime' (Sublime Soul), 'Tormento' (Torment) and 'Influencia del arte' (Influence of Art). His *danza* 'Felices días' (Merry Days, ca. 1892) was popular in his time and continues to be widely played. While these works also show marked contrasts in tonal harmony, and others such as 'Sí te toco' (Yes I Touch You, ca. 1885) use augmented triads, *danzas* such as 'Noche deliciosa' (Delicious Night) play with distant tonalities. In the hands of pianists such as Julio Arteaga, Gonzalo Nuñez, Anita Otero and Elisa Tavárez, piano reductions of *danzas* by Morel Campos became widely acclaimed in nineteenth-century concert halls around the world, along with similar salon piano compositions by Chopin, Schumann, Liszt and others. These *danzas* were recorded in the 1940s by Jesús María Sanromá on RCA Red Seal, a label at the time exclusively reserved for 'classical' music.

Danza in the Twentieth Century

After the United States acquired Puerto Rico as a territory in 1898, the prospect of 'Americanization' was set in motion with the purpose of assimilating the island's culture and society to national standards. But for a correspondent of the *New York Times*, writing in 1904, Puerto Rican music was 'an amiable trait of character that needs no Americanization,' and the *danza*, 'a music of a distinctly high order.'

Despite the increasing presence of the Cuban *danzón* in Puerto Rico, the early years of the twentieth century saw *danza* preserve its standing as the most popular genre in and beyond artistic circles.

In Ponce, the legacy of Morel Campos was continued by Juan Ríos Ovalle, Jaime Pericás and Arturo Pasarell, while in San Juan it inspired compositions by Braulio Dueño Colón and Julián Andino. In between these two schools was Angel Mislán, whose *danza* 'Tú y yo' (You and I) (1882) is considered to predate the modern *bolero*. José Ignacio Quintón (1881–1925) maintained – and indeed closed – *danza*'s creative cycle by enlivening it with *jíbaro* (peasant) music, or by using concert-related contemporary formulas, especially for the *paseo* section.

Local *danza* recordings made in 1910 by bands such as the Cocolía orchestra and, in 1917, by the San Juan Municipal Band (dir. by Manuel Tizol), received national attention due in part to the clarinet and baritone horn improvisations that until then had rarely been heard on cylinders. By the eve of the United States' involvement in World War I, most members of Tizol's orchestra and other San Juan-based groups had become part of James Reese Europe's 369th Regiment 'Hellfighters,' the pioneering African-American band that provoked an unprecedented craze among Europeans during the war.

In the 1920s Rafael Hernández's Trío Borinquen helped create a new 'romantic' genre distinct from the Cuban *bolero*, although structurally closer to the *danza* than previously assessed by scholars and amateur writers. This new kind of song is known as the modern *bolero latinoamericano*. Composer Pedro Flores often referred to the modern *bolero* as 'danza moderna,' due to its resemblance to the romantic *danza*.

By the mid-1930s the introduction of the *bolero* in the main social venues led to the marked decline of *danza* as a live symbol of collective aspirations, but in the 1970s – a period of renaissance in the local mass media – *danza* regained its luster as a popular and patriotic song. The most representative example is Antonio Cabán Vale's 'Verde luz' (Green Light), a song recorded in 1975 that became popular in political rallies as well as in intimate celebrations.

Danza as *Merengue* in the Dominican Republic

In the Dominican Republic, newspapers, chronicles and other documents report early *contradanza* derivatives such as the *tumba dominicana* overlapping with the 'intrusive' *merengue* that was introduced by itinerant musicians and military bands from Puerto Rico around 1854, 8 years after it was reported in San Juan. 'Danza' and 'merengue' had always been terms used to denote music introduced by military bands from Puerto Rico. Between 1869 and 1892 several Puerto Rican musicians abandoned their regiments and remained in the Dominican Republic to found nearly all of the regimental and municipal bands and help make a larger contingent of Dominican composers, who continued to promote the *danza* in urban dance halls. Peasant musicians who joined the military bands were trained on instruments like the *bombardino* and several military drums. They introduced *danza*-related styles such as the introductory drum roll, as well as the *contracanto de bombardino*, to their local *conjuntos*. These styles were later adopted in rural *perico ripiao* ensembles, consisting of accordion, gourd-scraper, *tambora* (a two-sided membranophone evolved from military drums) and saxophone. For example, *bombardino* solos, or *cantos de bombardino* in the third section, may be seen in saxophone *jaleo* sections of the Dominican *merengue* and the Haitian *méringue*. Versions of double-saxophone counterpoint reminiscent of Morel Campos's style for *bombardino* can be heard in late-1950s and 1960 recordings of Haitian *méringues* by orchestras such as the one directed by Nemours Jean-Baptiste, father of *konpa dirèk*. Upper-class Dominicans, who favored the urban *danza* that had been in vogue since the 1870s, rejected the musical contributions of local peasants, but during the US occupation of the Dominican Republic (1916–24), an identity crisis in the Dominican Republic compelled writers and composers to embrace a nationalist stance which closed their world to external influences, to the extent of denying any linkages between *merengue* and *danza*. Eventually, a form designed as *jaleo* – synthesizing styles of Dominican folklore – was appended to the *danza* in much the same way as the rural *son* became attached to the urban *danzón* in Cuba around 1910. In this way, *danza* came to be presented to the world, by official decree, as 'the Dominican Danza.' After 1940 composers in Santo Domingo systematically displaced the original multipart *merengue* section by expanding the *jaleo* to the point that *merengue*, as it is known today, is a quite distinct and unique reaffirmation reminiscent of the long-postponed autochthonous legacy of Dominican music.

Danzante

The *danzante* is an indigenous musical genre danced to during Corpus Christi festivities throughout the highland region of Ecuador. The term *danzante* also denotes both the dance and the dancers who thank the *Pachamama*, or Mother Earth, for the blessings and harvest she has bestowed. The celebration of Corpus Christi takes place on the Thursday after the seventh Sunday after Easter, and syncretizes elements of Roman Catholicism with native Andean and pre-Incaic rituals, such as processions, games and sharing of the harvest. Salient aspects of this festivity are the *danzantes* (costumed dancers), the pipe-and-tabor musical accompaniment and the erection of *castillos* (fruit-bearing poles).

Due to their colorful and fancy costumes, the best-known *danzantes* in Ecuador are from Pujilí, a small town in the province of Cotopaxi. Their white outfits are complemented by a handkerchief tied around the neck and small bells attached to the feet. They carry a richly ornamented headdress and breastplate with colorful ribbons, religious images, feathers, coins, bells and pieces of mirror attached to them. They usually dance in a circle to the accompaniment of a *pingullo* (a three-hole cane flute) and a *tamboril* (a small drum), which are played by the same person. For several decades, *bandas de pueblo* (small brass bands) have also marched behind the *danzantes* to augment the musical accompaniment. *Danzantes* usually dance in a circle with short steps and slow movements.

Musically, the *danzante* is characterized by a pentatonic-based melody and a rhythmic pattern formed by long and short notes (a quarter and an eighth note). Indigenous and urban renditions of the *danzant*e greatly differ from each other. The former is always instrumental music. The melody consists of short phrases that are repeated with slight variations. The latter includes Spanish lyrics, a binary musical form and guitar accompaniment.

Despite its significance as an 'authentic' vernacular music from Ecuador, there are not many urban *danzantes* in the national music anthology. The most popular *danzante* within Ecuador, and the only one widely known outside Ecuador, is 'Vasija de barro' (Clay Pot), written in 1950 by a group of Ecuadorian intellectuals in a bohemian gathering at painter Oswaldo Guayasamín's house. Three poets and one painter wrote the stanzas, which were set to music by Dúo Benítez-Valencia, among the most popular performers of Ecuadorian national music. The lyrics talk about death and the desire to be buried in a clay pot in order to return to the earth, the place where one's ancestors belong. This song has been recorded by different types of vocal and instrumental ensembles, including the National Symphony Orchestra.

Academic composers such as Luis Humberto Salgado, Segundo Luis Moreno and Gerardo Guevara stylized the *danzante* and inserted it into their cyclic nationalist compositions for piano, choir and orchestra.

Danzón

Danzón is a traditional Cuban genre of music and dance; since the end of the nineteenth century it has also been considered a traditional salon dance. It is recognized as Cuba's national dance, although no official documents appear to exist to verify a date when this recognition took place. As early as the 1920s, according to Alejo Carpentier (1979 [1946]), the idea existed that *danzón* would one day become Cuba's national dance; and indeed, 'for forty years there was no event that was not glossed or celebrated through a *danzón*' (189).

Danzón is dance hall music, predominantly instrumental but with some variants that are sung. It arose in the mid-nineteenth century in the northwestern cities of Matanzas and Havana; its various styles were consolidated in the first decades of the twentieth century. In the nineteenth century *danzón* was performed in Cuba by *orquestas típicas*, the principal dance music ensemble of the day, consisting of two violins, two clarinets, cornet, trombone, ophicleide (bugle), contrabass, timpani (*timbales*) and *güiro* (scraper). This format remained unchanged until approximately the first decade of the twentieth century. The *orquesta típica* was replaced by the *charanga francesa*, which emerged at the end of the nineteenth century, and in which the clarinets and brass instruments were replaced by the five-key wooden flute, which predominated, together with the violin; the timpani was replaced by the *paila cubana* (also known as the *timbal cubano*) (see '*Danzón in Cuba*' below). Vocals were also added. Some *charangas* included a Cuban harp (Giro 2007, 9), and sometimes also a cello or a viola.

Danzón is performed all over the island of Cuba, as well as in some Mexican cities such as Mexico City, Mérida and Veracruz, where the tradition is also strong. The differences between Cuban and Mexican *danzón* can be seen in the way it is danced, the basic rhythmic patterns underlying the music, and the types of ensembles that perform it. In Mexico *danzón* is performed by *danzoneras*, who appeared around 1910 (see '*Danzón in Mexico*' below).

The Genesis of *Danzón*

The origins of *danzón* have been the subject of much debate. Cuban Miguel Faílde is often considered to have created the *danzón* with his classic composition 'Las alturas de Simpson' (1879), but it is more accurate to see the idea of Faílde's paternity as inventor of *danzón* as responding to a kind of myth, a manner of simplifying the historical record of the emergence of the genre, which has been constructed without historical or analytical foundations. According to Castillo Faílde (1964a), Faílde was responsible for establishing the style, rhythm and dancing norms in the structure of *danzón*. As a result, the invention of the genre was attributed to this composer and led to his creation being considered as a model for the genre. Argeliers León (1984, 281) considers that Faílde succeeded in giving the genre a specific expression – the result of the constant transfiguration in the folk arena in which the composer was a participant.

As Zoila Lapique has pointed out (2007), there are ample references to *danzones* in the nineteenth-century press prior to 1879. These *danzones*, predating the formal, choreographic and melodic-rhythmic model that was recognized in 'Las alturas de Simpson,' represent the beginnings of *danzón* as it is known today. One of the earliest authors to mention *danzones* is Alejo Carpentier (1979 [1946]), who also comments that the relevance of Faílde and 'Las alturas de Simpson' is a response to the fact that, at the time, the sectors of society that frequented the Liceo de Matanzas had socially accepted the previously known *danza*. Both Argeliers León (1974) and Leonardo Acosta (2004) reject the idea of genres having a single inventor, asserting that this is in fact part of musical restructuring processes.

Over time, scholars have come to see the process in which *danzón* emerged as a wider one involving a continuity or consequence of the 'Cubanization' or 'criollización' (Creolization) of the *contradanza*. This Creolization has to do with the performance of these musical genres by blacks and mulattos and the role they had in the development of popular salon music. The emergence and development of *danzón* have been seen (e.g., by Alen Rodriguez [1998]) as one history within a wider 'danzón complex,' involving a process that began with the *contradanse* in Europe, the *contradanza* and *danza* in Cuba, and reached its final variants in the twentieth century with *mambo* and *chachachá*. Leonardo Acosta, however, refutes the idea of generic complexes in the historical narrative of Cuban music. In his view *danzón* along with *son* and *rumba*, is one of three historical pillars of popular dance music in Cuba, from which (and in their combinations) many variants emerge – subgenres, hybrids, styles, and even intergeneric currents and modalities such as *mambo*, *danzonete*, *danzón de nuevo ritmo* and so on. Acosta asserts that *danzón* is the result of a gradual process of 'criollización' or 'Cubanization' of a European musical form (country dance-*contredanse*-*contradanza*) and accepts the presence of *contradanza-danza-danz*ón in the process, but not that of the *mambo* (Acosta 2004, 42–3).

In Argeliers León's view (1984), the emergence of the genre is a consequence of a process of transformation of a style from the *contradanza* to the *danzón*, in which the convergence of 'topical factors' that are characteristic of Cuban musical folklore gets emphasized. As the process unfolds, some of these factors disappear while others become assimilated or are combined. Among these topical factors that mark the genre's development, León mentions the appearance of rhythmic combinations – from rhythms in the *tango* or the *habanera* – and their use in *contradanzas* and other dances, which creates a space for the Cuban *cinquillo* (282–3) (see below). León also considers *danzón* to mark the close of a historical cycle of stylistic definition in the musical history of Cuba, which started with *contradanza* and other courtly dances (ibid., 281).

Robin Moore (1997, 52), meanwhile, highlights how the history of *danzón* is important to the interpretation of the most common attitudes of the Afro-Cuban musical forms of the twentieth century. There exists a vast academic output by Cuban historians who include *danzón* within Afro-Cubanist polemics of nationalist positions from the mid-nineteenth century (see, for example, Fernández Robaina (2009), Félix Julio Alfonso (2008), Iglesias Utset (2010), Basail Rodríguez (2004), among others).

Historical Development

Danzón *in Cuba*

While Faílde's contributions to the emergence of *danzón* as a distinctive genre were clearly significant, the development of the dance, music and repertoire of the *danzón* had already been in the making since the 1850s, and the social issues in which it was involved had also been in place for some time.

The documentary evidence for the existence of the term *danzón* in the mid-nineteenth century suggests that the name appeared well before the style, rhythm and dance norms that were to be defined and popularized by Miguel Faílde. But there was more to it than simply the name. Newspaper reports indicate that by the early 1850s *danzón* was developing among the poor blacks in the northern city of Matanzas, and that it also spread to Havana around this time (Castillo Faílde 1964). By 1870 *danzón* had already been adopted by members of the black middle class in their social clubs, and had been transformed into a respectable salon dance (Moore 1997, 49). Between 1870 and 1880 controversy grew around the music, spreading throughout the island. Some newspapers attacked *danzón,* calling it 'an immoral dance that was infiltrating the educated segments of society' (Castillo Faílde 1964, 125). One of the factors behind this attitude was the dance which, as it involved embracing, was seen as immoral, erotic and lascivious.

This is the context in which *danzón* was officially introduced to *criollo* high society, in the form of Miguel Faílde's 'Las alturas de Simpson,' on 1 January 1879. The event took place at the Liceo Artístico y Literario de la Ciudad de Matanzas, where it was danced to by the *sacarocracia local criolla* (the Cuban aristocracy, founded on sugar commerce, which saw itself as being in opposition to Spanish society) (Moliner 2007, 148). Conservative newspapers criticized this event, while the nationalists and progressivists defended it. Faílde himself was a mestizo musician whose orchestra was acclaimed by white society at a time when, as local newspapers made clear, stances with regard to 'negritud' ('blackness') were radicalized. For most of the nineteenth century, black people had not been seen as belonging to Cuban culture but rather as posing a cultural threat. Nonetheless, the dance was one of the most important forms for socializing and the majority of orchestras were made up of blacks and mulattos.

In the 1880s and 1890s the controversy around *danzón* deepened as the debate took on political and racial overtones. The genre was labeled Africanist due to its timbral and rhythmic elements associated with the *abaku'á* and the *bembé* drums. Middle and upper classes, as well as Spanish descendants, the Autonomist Party and the conservative press described it in these terms (i.e., Africanist). Others, however, considered it as a 'symbol of the first Cuban attempts to define itself in cultural terms that excluded Afro-Cuban expressions' (Moore 1997, 49). Experts at the time such as Eduardo Sánchez de Fuentes denied the African influence on *danzón*, although Sánchez was alluding to discrete Africanisms (ibid., 59). According to various sources, those who were hostile to the genre labeled the use of musical instruments such as the *güiro* and *chekere* as savage Africanisms imported into the salon, while the blackness of the genre's creators and performers defined the steps as degenerated versions of the African *tango*. They also pointed to the choreography of the paired dance, even alluding to the similarity between *danzón* and prenuptial rites in their physical closeness and public movement. In addition, *danzón* was condemned because white social classes and poor blacks alike were performing what were widely seen as immoral dances. All of this served political agendas which questioned the values of the *criollo*, black and poor classes.

The main causes of the polemic surrounding *danzón* were the links with Afro-Cubans and Haitians (Moore 1997, 49). The controversy was generated in terms of *danzón* (as music, dance and social expression) representing a cultural change: a form of resistance against the foreign, which resulted in *danzón* being understood as a referent of national *criollo* identity. The many quarrels between conservatives and nationalists around *danzón* showed how the ideas of a Cuban nation were being constructed, and how the value judgments of nineteenth-century Cuban society changed, engaging in dialogue, as well as imbuing the genre with a nationalist sense.

By 1890 the dance – an embraced couple dance, unlike the *contradanza* – was prohibited in many cities and was labeled as improper in recreational societies of the middle class; the prohibition formed part of the campaign measures for the 'blanquaemiento' (whitening, or purification) of culture. But *danzón* was being danced in both public and private (and black and white) dance halls. It was also performed during all types of social events, especially those connected to the *criollo* society. In the 1880s *danzón* gained acceptance in the 'superior classes' by dint of its popularity, and between 1887 and 1890 a number of *danzones* were unveiled during Carnival seasons, which were the main dance seasons at the time. At around the same time, according to Marial Iglesias Utset (2010, 99), a type of stylized *danzón* emerged that 'has pauses, fan strikes on the part of women, and a modest embrace keeping prudent distance' and that exists in salons of 'good society.' The same author speaks of *danzón* as replacing the *zapateo* as the traditional dance at the end of the nineteenth century.

By 1898 the link was clear between *danzón* and the growing sense of nationalism and sense and opposition to the musical influence from the United States. From that point, the dance became labeled as the essence of Cubanness.

Notable early exponents of the modern form include composer, bandleader and trombonist Raimundo Valenzuela (1848–1905), who is said to have incorporated fragments of Spanish *zarzuelas* and Viennese operettas into *danzones*, and pianist and composer Antonio Torroella 'Papaíto' (1856–1934). These and other musicians directed very popular *orquestas típicas* of the time and sold out ballrooms with their music, contributing enormously to the development of the genre.

The relationship between the *danzón*'s choreographic and musical structures was essential to the genre's development from the time of its first appearance. Pre-Faílde *danzones*, also known as '*danzones coreográficos*' (choreographic *danzones*), are accepted (at least by Cuban specialists) as a variation of *danza criolla* (Creole dance), a term used to draw a distinction between the imported *danza* and the local, Creolized form. They had the binary form of the *danza criolla*, but the music was lengthened to accommodate the addition of new dance steps and combinations. For some time, even after 1879, the terms *danza* and *danzón* were used interchangeably within the binary form-based repertoires of composers and bands. A fundamental point is that the rhythmic basis of the music relied on the pairing of the *timbales* and the *güiro* or *calabazo*, instruments which brought elements of Afro-Cuban music to the dance hall, thus Creolizing the sound of urban music.

The search for new sonorities, together with the construction possibilities and the mobility of the instruments that existed in the island, resulted in major developmental processes affecting the format of instrumental ensembles performing *danzón*. In the move from *orquesta típica* to *charanga* the European timpani or *timbal*, which had arrived in Cuba with the Spanish military bands, became Creolized. The first changes concerned size (smaller), playing techniques (sticks instead of mallots) and sonorous capacity (moving toward a higher register to make the instrument more audible). Later, the *timbal* evolved into what came to be known as *pailas cubanas* or *timbales cubanos*, the names used to differentiate the instrument from the original. These instruments, which come in pairs (male and female) and are mounted on a tripod, consist of a pair of cylindrical casings covered by a membrane that is tightened by a ring. Membrane tension can be adjusted by keys but it lacks the capacity for fine tuning. The instruments are played with wooden sticks without a head. A smaller variant was known as *timbaleta* (Neira 2012). At times, in traditional Cuban ensembles the timpani and *pailas cubanas* and even other membranophone variants coexisted, according to the instrumentation options and to the musical experimentations of each orchestra, as can be seen in the visual records of orchestras since the nineteenth century.

Danzón *in Mexico*

Danzón experienced its golden age in Mexico in the 1940s and 1950s, but many questions surround its initial establishment and early development there. It may have arrived in Mexico by way of the city of Mérida around 1870; alternatively, it may have taken root, along with other Cuban genres such as *guaracha* and *danza*, in the 1870s through the influence of

Cuban comedy theater (*bufos)*, following long performance runs by Cuban theater troupes in regions such as Veracruz as well as appearances in theaters in Mexico City and Mérida. It would appear that *danzón* was already being heard by 1895, at gatherings held in the homes of Cuban families who settled in Mexico (many of them moving there during the Cuban wars of independence), at which *danzones* were played on the piano. Other repertories were introduced through musicians such as José Urfé, Luis Casas Romero and Jorge Anckermann. The latter composed numerous *danzones*, stylizing the genre by using them as overtures for Cuban theater performances.

Important *danzón* orchestras were Los Hermanos Concha and Los Chinos Ramírez. Cubans Tiburcio Hernández 'El Babuco' and Tomás Ponce Reyes founded their orchestra in Veracruz in 1905. It was Babuco who applied the term '*danzonera*' to the style. At first *danzoneros* were similar to the Cuban *orquesta tipica*, but with the inclusion of violas, cellos and flutes. By the 1920s the Orquesta Conchain was already a hybrid between *tipica* and *charanga*, featuring cornet, trombone, bugle (ophicleide), clarinets, strings (violins and basses, sometimes violas and cellos), piano and flute in addition to the percussion (that always included *timbales* – never *pailas* or *tumbadoras*, which began to be incorporated only recently and very sporadically – *güiro* and *claves*). In the 1950s the lineup changed substantially with the inclusion of saxophones in the manner of American big bands. The format of Acerina y Su Danzonera was two trumpets, trombone, two tenor and two baritone saxophones (sometimes clarinets), two violins, bass, piano, *timbales*, *güiro* and *claves*. In the modern era in Veracruz some *danzoneras* use a reduced and more economic lineup that locals call 'guerrilla,' featuring two trumpets, two saxes (tenor and baritone), electric bass, *güiro*, *claves* and solo *timbal* (Madrid and Moore, 2013).

Salón México, known as 'La Catedral del Danzón' (The Cathedral of the *Danzón*), opened its doors in 1920 and was in operation until 1962. Its opening helped to encourage a rapid growth of new dance halls, each with its own resident orchestra. Consejo 'Acerina' Valiente, a Cuban resident in Veracruz, moved to Mexico City and founded his orchestra Acerina y su Danzonera, which was active in the area for many years.

Danzones were also incorporated into the repertoire of some *marimba* ensembles. This practice was also widely adopted in the Guanacasteca region of Costa Rica, with some of the repertoire based on melodies heard on the radio and some composed locally.

Musical Characteristics of Cuban *Danzón*

Danzón evolved from several styles generated by modifications to the formal structure, timbral profile and musical dramaturgy. It is important to note that the lyrical character of danzón melodies is considered essential to the delineation of danzón as a genre and allows one piece to be distinguished from another. Despite many of these styles coexisting within the repertoires of specific composers or orchestras, the following time periods have come to be widely recognized, highlighting the periods during which these styles were consolidated:

- Classic *danzón* (1879–1910)
- Classic modern and sung *danzón* (1910–40)
- *Danzón de nuevo ritmo* (new-rhythm *danzón*) (1940–51)

Classic Danzón *(1879–1910)*

During this period, the classic *danzón* 'Las alturas de Simpson' by Miguel Faílde becomes a structural, rhythmic and timbral model. The piece, written in 2/4 time, adopted a rondo structure (ABAC). However, the number of sections included in a *danzón*'s rondo structure will vary with each individual work, expanding infinitely – for instance ABACADAE – or, like some *danzones*, preserving a binary structure. In some of these early *danzones*, (A) functions as a ritornello or refrain that is alternated with the other sections (B and C, also known as *danzones* or *trios*), acting as a break between sections. It is called *paseo* or *floreo* by the dancers. (In Mexico*, florear* means 'to turn,' usually during the *montuno* section later.) During this section women often fan themselves, using the language of the fan in their interactions with the men. The first (B) section – played by the clarinet in the *orquesta típica* or by the flute in the *charanga francesa* – is lively and virtuosic in character, and is generally 16 measures long. The second *danzón* (C), played by the violin (or by a brass trio in earlier versions) and usually of 32 measures, is slower and more melodic. The (C) section often contains references to *zarzuelas* and arias from operas and operettas. Trombonist and bandleader Raimundo Valenzuela was one of the first to introduce such references into *danzón*. These two sections (B and C) provided many opportunities for displays of technical virtuosity. Melodic and harmonic elements utilize the major-minor tonal system.

The distinctiveness of the rhythmic pattern, which marked it out as Cuban, was present before *danzón*, when the *cinquillo* arrived from the Eastern regions of the country, influencing all other musical genres. The *cinquillo*, a short rhythmic pattern or cell (see

Example 1), is considered by Carpentier (1970[1946], 189) to come from the French black population of Santiago de Cuba.

Example 1: *Cinquillo cubano*

Very frequently, the *cinquillo* cell is followed by four eighth notes, which may be expressed with or without pitch information (Example 2).

Example 2: Extended form of *cinquillo*

Other patterns are also used, such as the Cuban *clave de son* in Mexican repertoires (Example 3).

Example 3: *Clave de son*

Classic *danzón* was performed by the instrumental ensembles characteristic of the nineteenth century, the *orquesta típica* or *orquesta típica de vientos* (*orquesta típica* with wind instruments) and *charanga*.

Associated with the idea of a new anticolonial nation, the presence of the *cinquillo* preceded the *danzón*, and as it spread from the eastern part of the country to other areas it was interpreted and attacked from various perspectives. By the mid-nineteenth century it was influencing various genres. Its arrival resulted in changes in the manner of playing the *timbal* (timpani), including the introduction of the *baqueteo* rhythmic pattern (*baqueto* is a technique of playing the *timbal*, in which hand-playing is combined with stick-playing).

Classic Modern and Sung Danzón*, 1910–40*

In 1910 José Urfé broadened the structure of the *danzón* when he adopted the format ABACAD for his composition 'El bombín de Barreto.' He introduced a new D section, a third *danzón,* played by the brass section and known as the *montuno*, which consisted of a new rhythmic section with a faster tempo and employing elements related to, or characteristic of the *son*. Rhythmic and harmonic vamping underscores improvisational passages executed primarily on the flute or piano. This section tends to bring in elements from popular genres such as *son, canción*, jazz, *rumba*, *bolero*, American ragtime, street-vendor calls (*pregones*) and so forth.

Following the change in structure, the *charanga francesa* became established as the typical *danzón* ensemble, taking the place previously occupied by the *orquesta típica*. According to Cuban musicographer Ezequiel Rodríguez Dominguez (1967), the first ensemble dedicated to the interpretation of *danzones* to incorporate the piano was the ensemble of Papaíto Torroella, which also featured two violins, flute and bass. It also appears that Romeu, at some point during the first decade of the century, was a pianist for the ensemble of Leopoldo Cervantes, another important personality of *danzón* who did not leave any recordings. Rodríguez comments that the first to develop the format of the *charanga* is Tata Alfonso, and that the nickname 'francesa' 'is derived from the influence or reciprocal exchange that was established between the music from the south of the United States and Cuban music, because the music of that North American region is colored by the French influence' (Casanella Cué n.d.).

With the change to *charanga francesa*, the *concertante* style began to be notated. In addition to the *cinquillo* pattern and its variants, the percussion section, whether it consisted of a single instrument, or two or more played simultaneously, perform patterns that differentiate one musical section from another. These sections are known as *paseo* or *acompañamiento* (patterns played during the improvised portion of the introduction), *otras* (for the first *danzón*), *reparto* (performed on the *timbales* during *montuno* sections) and *baqueteo* or *fondo rítmico* (variants on the *cinquillo*), among others.

During this phase three forms of *danzón* coexisted: instrumental *danzón* with *montuno*, *danzonete* and sung *danzón* with *montuno*. Instrumental *danzón* lost its relevance with the rise of the sung form. Some scholars maintain that the sung *danzón* emerged from the *danzonete* during the 1930s (Torres 1995, 194) and represents a progression from the vocal-instrumental form (Loyola 1997, 60). Both sung *danzón* and *danzonete* contributed to the introduction of a singer to the *charanga* ensemble.

The inclusion of sung phrases or sections had their precedent in nineteenth-century *danzas*, *contradanzas* and even *danzones*. What is distinctive about the sung *danzón* variant is the integration of vocal parts from various Cuban music genres, primarily the *bolero*, into the *danzón*'s formal structure.

No single formal structure is imposed on sung *danzones*, only general principles. Among them are that the introductory instrumental A section is retained within the formal structure but is not repeated between the subsequent sections; the lead instrumentalists sometimes double the melody or add flourishes and countermelodies; and a bridge or instrumental segment is included between song sections, utilizing melodic material from the introduction or quoting other well-known melodies, especially *boleros*.

This new version of *danzón* was popular with almost all Cuban orchestras in the 1930s, notably the Gris orchestra, Fernando Collazo's orchestra and that of Cheo Belén Puig with Pablo Quevedo. Barbarito Diez became an emblematic figure, accompanied by Antonio María Romeu's orchestra and later by his own. Many *bolero* melodies were heard in sung *danzones,* thus introducing the *bolero* to the dance hall, and bringing forward a vast repertoire performed by great singers of the day.

Alongside the sung *danzón* and the instrumental *danzón* with *montuno*, the contributions of pianist Antonio María Romeu, 'El mago de las teclas' (The Keyboard Magician), stand out equally for their performative character. Some of his innovations include the use of new harmonic progressions, longer and more technically complex and virtuosic passages, and increased melodic lyricism. In 1926 'Linda cubana' appeared for the first time in the form of a piano solo. The level of virtuosity increased even further in other pieces such as Reverón's 'El violín mágico,' Israel López's 'Canta contrabajo' and José Urfé's 'Fefita.' Virtuosity is widely seen to have been a determining factor in the interpretation of *danzón* in this orchestra. Thus, the musicians privilege piano improvisations as well as violin and flute solos, while at the same time continuing to emphasize sections of exceptional polyrhythmic activity and always performing at the service of the dancer (in *montunos*, especially) (Casanella Cué 2011).

Unlike the *danzonete*, the lyrics of which are specially composed, sung *danzón* adopts popular texts interpreted by a solo singer over a rhythmic base of *cinquillo* or one of its variants, with the orchestral accompaniment kept subordinate to the singer. Sung *danzón* involves an instrumental section, a sung section and a refrain (*montuno*) which is also sung.

As well as the *charanga*, another type of twentieth-century ensemble whose repertoire was dominated by *danzones* was the *órgano oriental* (organs accompanied by *pailas* and *güiro*). The composer Carlos Borbolla created adaptations of *danzones* for this type of ensemble.

In the early twentieth century *danzones* were recorded by many Cuban orchestras, including those of Enrique Peña, Felipe B. Valdés, Pablo Valenzuela and Antonio María Romeu and others, and these were widely disseminated. Major labels included RCA Victor and Panart.

Danzón de Nuevo Ritmo *(New-Rhythm Danzón), 1940–51*

This style was given its name by flautist Antonio Arcaño, leader of Orquesta Arcaño and responsible for that orchestra's outstanding contributions to the revitalization of instrumental *danzón*. It began in the late 1930s with the *danzón* 'Mambo' by Orestes López, who is a well-known composer of *danzones*. In this *danzón*, López added a syncopated instrumental section at the end called 'mambo.' The closing was done by the *timbalero*, and the technique of the *abanico* (a rimshot and a sextuplet roll played on a *paila macho* to mark the beginning of the improvised section of the *danzón* [Neira 2012]) was used as one of the characteristic effects by the percussion (see Acosta 1985, 72–5). Over *sonero*-style syncopated motifs – small musical structures in which syncopation predominates – Arcaño developed three sections: A (for the flute), B (for the piano) and C (to be sung). The *danzón* unfolds as a virtuosic *tumbao*-inspired dialogue between the flute and the violins, emphasizing intricate rhythms and harmonies and building up in pitch to reach a climax for the dancers, allowing for more choreographic freedom through the use of new steps, gestures and movement vocabulary. Arcaño's improvisational style on the flute was taken up by other *charanga* orchestras (after 1940, the name '*charanga francesa*' was truncated to '*charanga*').

Orestes López paved the way for the rendering of the *tumbao* (a rhythm played on the bass) on the piano, and his brother, bass player Israel 'Cachao' López, also a member of the orchestra, contributed to the *descarga* (jamming) that characterized the new style. A large number of *danzones* were produced in the 'new rhythm, 'transforming the genre in the 1940s. An important element was Arcaño's introduction of the *tumbadora* (*conga* drum) into the *charanga* ensemble to reinforce the *charanga*'s percussive qualities, as was the sounding of the *baqueteo* rhythmic pattern on the *pailas* (Cuban *timbales*).

In 1940 Romeu expanded his *orquesta charanga* by incorporating instruments that were common in the *orquestas típicas* of the late 1800s: two clarinets, trumpet and trombone. He called this new formation 'orquesta gigante' (giant orchestra or big band). In this manner he combined the timbral characteristics of the two most important instrumental ensembles of *danzones* (Casanova 1995).

The invention of *chachachá* is often mentioned in connection with the development of *danzón*, becoming fused with it to form *danzón-chá*, which consists of an instrumental introduction, a *danzoneada*, and a second sung section, with rhythmic changes in the time of *chachachá*. Performed mostly by *charangas*, this variant highlights flute improvisation over a piano *tumbao* and instrumental *contracantos* played by the violins.

In the 1950s a chorus section of mostly male voices was added to the *charanga* ensemble and the repertoire began to change as material from other danceable genres was integrated. Popular *charanga* orchestras included La Aragón, La Sensación, La Sublime, La América, La Ideal, Las Melodías del 40 and the three orchestras led by the famous Cuban flautist José Fajardo. All these orchestras played *chachachás* and became popular precisely because of this repertoire. However, many of them started by performing *danzones*, a repertoire which they later maintained. With the rise of *son* and the groups that performed it in the 1950s, *danzón*, with its stylistic variants and *charanga* orchestras, no longer reigned supreme on the Cuban dance floor. Although *danzón* continued to be a significant force, a new danceable genre, *mambo*, replaced it as the most popular music of the day.

Classic Repertoire

Danzones considered classics include Miguel Faílde's 'Las alturas de Simpson' (1879), José Urfé's 'Fefita' and 'El bombín de Barreto' (1910), Antonio María Romeu's 'La flauta mágica' (1919, an arrangement of Mozart's *Die Zauberflöte*) and 'Linda cubana' (1926), Abelardino Valdés's 'Almendra' (1937), Electo 'Chepín' Rosell's 'Bodas de Oro' and Orestes López's 'Mambo' (1938), among many others. 'Nereidas' (1932), by Amador 'Dimas' Pérez, is considered the classic of Mexican *danzón par excellence*.

As Carpentier (1979 [1946]) observed – a point that is corroborated by the *danzón* repertoire – *danzón* made use of many available musical elements, such as fashionable *boleros*, US ragtime, *pregones callejeros* (street cries), Rossini arias, Spanish *cuples* and Chinese melodies. In addition, he (Carpentier) comments on the classical 'packaging' of many classic *danzones* from the point of view of harmony, of melodic characteristic and formal structure.

Dance Styles

Cuban *danzón* is an embraced couple dance in which the man leads, featuring small steps, torsos kept erect, arms always in held place, and locked gaze, always face-to-face. The steps are defined by the movements of the feet and knees and the knees are always kept bent. In general the embrace is maintained throughout the dance. In Mexico City, the open *danzón* features frequent turns. There is moderate movement of the hips. The basic steps include the introduction or *paseo* (the couple moves, holding each other with one arm while the woman fans herself), turns on the basic step (moving forward and back), *cajón* or *caja* (both man and woman dancing in a square, with both feet, usually facing one another), *vuelta tornillo* (the man plants his left foot and spins in place; the woman spins also, using more open steps). The latter practice is common in Mexico and among some dancers in the east of Cuba.

In Cuba a number of variant dance styles have evolved, including a more traditional form in the east of the island that emphasizes offbeats, while a stress on the on-beats is characteristic of the west. Sung *danzón* is danced differently. There is a pause during the introduction, then no further stop until the end of the dance. During the moment where the woman passes her fan from one hand to the other, she keeps it in her right hand until she moves behind her partner's shoulder, when she switches to her left.

In Mexico there are several dance styles and there are many different ways of executing the steps in relation to the venue where the dance is taking place. Basic steps include the *cuadro* (box/square) and the *columpio* (swing). In general the Mexican styles can be divided into two broad, well-differentiated categories: open and closed.

Musical Infrastructure

In contemporary Cuba, there are two organized events dedicated to *danzón*: Cubadanzón in Matanzas and the Festival Internacional Danzón Habana in Havana. Cubadanzón launched in 1989 and was instigated by José Loyola, composer and at the time vice president of UNEAC (Unión de Escritores y Artistas de Cuba [Union of Writers and Artists of Cuba]), and Ildelfonso Acosta, a well-known guitarist from Matanzas. Danzón Havana was started in 2004, sponsored by UNEAC and presided over by José Loyola. Both events feature dance competitions, a competition between the best *danzón* orchestras in the country, social dance events, dance classes and discussion panels.

In the early twenty-first century Cuba's national *danzón* scene features more than 150 clubs with a total membership of approximately 50,000, of which around 90 percent are more than 50 years old. These clubs are part of a national movement led by a board of directors chaired by Caridad Rodríguez Cervantes, a 66-year-old dancer from Camagüey. Each club has its own president and runs its own local activities. The oldest of these clubs is Amigos del Danzón Miguel Faílde, a group in the province of Matanzas. The newest is La Isla de la Juventud.

Radio programs such as *Felicidades* and *Tiempo de Danzón* focus on the dissemination of the genre past and present, recreating experiences and providing historical data about composers, performers and repertoires. Cuban radio show director Aurelio Rodriguez ('Yeyo') co-authored a book on *danzón* in Mexico with Simón Jara, a Mexican dance hall promoter, and anthropologist Antonio Zedillo (Jara Gámez et al. 1994).

Current Orchestras

The *orquesta típica* is obsolete in the early twenty-first century, although three such orchestras still exist (one each in Havana, Camagüey and Santiago de Cuba), aiming to preserve the acoustic environment of the first *danzones*. Notable *danzón* orchestras of today include Acierto Juvenil in Matanzas; Charanga de Oro, Panorama and Orquesta Loyola in Cienfuegos; and Orquesta Siglo XX, Aché Juvenil, Piquete Típico Cubano, Orquesta de Efraín Loyola, Estrellas Cubanas, América, Siglo XX, Sublime, Barbarito Diez, Charanga de Oro, Orquesta Aragón and Orquesta All Stars.

Fragments of classic *danzones* have been used in symphonic music; for example, the *danzón* 'Triunfadores' (Champions) by Antonio María Romeu was borrowed by Darius Milhaud for the overture of his *Saudades do Brasil,* while Aaron Copland included a section called 'Danzón' in *Salón México* and Leonard Bernstein's ballet *Fancy Free* features a section of the *danzón* 'Almendra' (Almond) by Abelardito Valdés (Giro 2007, 10).

Many Cuban art music composers have been inspired by *danzón* and have brought it into the jazz and concert music repertoires, be it for solo instruments or chamber or symphony orchestras. Among the most important is Cuban composer Alejandro García Caturla, who wrote nearly ten *danzones* as well as arrangements for jazz bands between 1922 and 1925. Among his *danzones* we find 'El piano de Colín' (Colín's Piano), 'Las calles de Campoamor' (The Streets of Campoamor), 'El cangrejito' (The Little Crab), 'El olvido de la canción' (The Song's Oblivion), 'Tu alma y la mía' (Your Soul and Mine), 'Ay, mama, yo te vi bailando' (Ay Momma I Saw You Dancing), 'El saxofón de Cuco' (Cuco's Saxophone), 'Laredo se va' (Laredo Is Leaving), 'Tócala con limón' (Play It with Lemon) and 'Cine Méndez' (Méndez Cinema) (Giro 2007, 256–8). Other composers include Emiliano Salvador, Gonzalito Rubalcaba, Chucho Valdés, Andrés Alén, Leo Brouwer, Argeliers León, José Ardévol, Jorge López Marín and Harold Gramatges.

In 2012 the genre is performed by different types of ensembles, including ones using electronic instruments. The reinvention of *danzón* following its fusion with other genres such as jazz, and a marked interest (in Cuba) in rescuing it as part of the Cuban concert repertoire are predominating factors currently. Young musicians such as jazz musicians Roberto Fonseca, Dayramir González, Orlando Valle 'Maraca,' Alejandro Falcón, singer-songwriter David Torrens, and Cuban rap and alternative music exponents such as Francis del Río are reinventing the genre on the basis of diverse constructions of identity.

Danzonete

Danzonete is a sung form of the *danzón* which arose when the instrumental form of *danzón* was in decline in Cuba, as a result of the rise of *son*. Credit for the first *danzonete* is usually given to Aniceto Díaz, a musician from Matanzas, in the north of the island, whose composition 'Rompiendo la rutina' (Breaking the Routine) was premiered in 1929 at the Sociedad Casino Español de Matanzas. Among the limited repertoire of danzonetes, other *danzonetes* by the same composer are known, including 'El trigémino' (The Trigeminus) and 'Son igual que el cocodrilo' (They're Just Like the Crocodile).

The lifespan of *danzonete* was short – barely a decade – but during that time this variant came to be known throughout Cuba, as a result of the enormous popularity of radio performers such as Pablo Quevedo, 'el divo de la voz de cristal' (the crystal-voiced divo) and Paulina Álvarez, known as 'la emperatriz del danzonete' (the Empress of the *Danzonete*). Quevedo, who sang with Cheo Belén Puig's orchestra, made no recordings, dying in 1936. Álvarez sang with Neno González's orchestra and later started her own. Other notable orchestras included that of Antonio María Romeu, a *charanga* orchestra, featuring Barbarito Diez as lead singer, that excelled at performing *danzonetes*, as did Fernando Collazo's orchestra, La Maravilla del Siglo.

In its formal organization 'Rompiendo la rutina' is structured much like a *danzón*, with an A section alternating with sections known as *tríos* or *danzones*. It retains the introduction (A), the violin-dominated B section, then the return to A with some improvisations. During the second *danzón* section a long instrumental section is added, with vocals sung in the time of a *bolero-son*. It ends with a more lively *sonero*-style *montuno* section, which includes improvised texts and a brief coda. The lyrics were designed specifically for the sung section, unlike in the *danzón cantado,* in which a complete song written for another genre is incorporated into the formal structure of *danzon*. Attention is focused on the singer's voice, thus ensuring the adoption of this form by *charanga* ensembles.

Décima

The *décima*, a poetic form developed in Spain in the 1500s and brought to Latin America during the Conquest, consists of stanzas of ten octosyllabic lines. In the Hispanic Americas, *décima* is also known as *espinela* in recognition of Spanish poet and musician Vicente Espinel (1550–1624), who set out in his book *Diversas rimas* (originally published in 1544) the strophic structure of the rhyme, abbaaccddc, which went on to become a form of literary and musical expression of great importance in numerous folkloric festivals in the continent. Although the *décima* faded in Spain, it thrived in Latin American literature and popular song forms in countries including Peru, Venezuela, Colombia, Ecuador, Argentina, Chile, Panama, Uruguay, Mexico, Puerto Rico, Cuba and Brazil. Despite its obvious literary syntactic associations with the Spanish language, *décima* performance in Latin America also incorporates African-derived musical aesthetics (such as call-and-response vocals) that shape the general character of the *espinela* in Latin-American countries and situates and places it within the context of religious and festive celebrations of a popular, syncretic and mestizo nature.

History

Décima harks back to the era of the medieval European troubadours, and indeed, even earlier. Since medieval times, troubadours, regarded as princes of the sung word and interpreters of the histories of peoples and places, developed the art of narration through melodies, turning them into song-based common knowledge. Their works were taken up by minstrels who spread the messages of troubadour-style poetry. Minstrels performed the compositions of the troubadours, and they also created their own narrative messages. Together, they were the creators and diffusers of the popular poetic arts.

In the eighth century Arab poets introduced to Al-Andalus (today's Andalucía) the art of setting to music the monorhyme verses known as *zéjeles* that lie at the origin of popular verse in Muslim Spain and that led to the *zejelesca glosa,* a Castilian poetic form. These *zejelesca glosas* are at the root of the *décima de pie forzado* (forced foot *décima*) of Hispanic poetry. In this form, each ten-line strophe concludes with the same line of text.

The development of the *zejelesca glosa* led to the emergence of the Castilian *glosa* or *trovo*, a poetic form that became popular by the seventeenth century and whose structure consisted of one *copla* (four octosyllabic lines) and four *décimas*, whose final lines correspond consecutively to each of the verses of the initial *copla*. This 44-line *décima* structure is known in Hispanic America as *glosa*, *palabreo* or *trovo.*

Thanks to the influence of literature during the Spanish Golden Age (sixteenth and seventeenth centuries), the poetic sphere flourished within Hispanic America, tied to the work of academic poets. This gave rise to the first works set in *décima* form.

Some of the classics of Mexican poetry constitute exquisite examples of the use of the *décima* form and in that country the *décima* moved into the world of popular song. It spread throughout Latin America and came to be accepted in Puerto Rico as a suitable vehicle for popular improvisation. Puerto Rican researcher Ivette Jiménez de Báez points to the use of the *décima* poetic structure in Peru and Mexico by the sixteenth century, and Cuban musicologist María Teresa Linares affirms that it was present in Cuba by the early seventeenth century.

The golden age of the *décima* in Hispanic America took place in the eighteenth and nineteenth centuries, during which time it was even more popular than in its country of origin, Spain, where it was limited to the regions of Andalucía, Murcia and Canary Islands. In the New World it became a compositional form of the masses and was present from California to Patagonia.

Cuban researcher and critic Virgilio López Lemus attributes the introduction of the *décima* form in the Americas to a theatrical oral tradition, transferred to the *Autos Sacramentales* (a popular religious theater form of Hispanic origin presented in open spaces in some areas of Venezuela) via staged representations of rural life. *Décima* was thus used by popular composers as a mnemonic tool to help facilitate, in the manner of an exercise, the memorization of various subjects, *a lo humano* and *a lo divino* (categorized as secular and sacred in theme), for song and recitation.

Nonetheless, the development of sung *décima* in the Americas rose to such heights that appreciation became a matter of great prestige for all *décimistas*. Demanding of themselves the requirement not to repeat memorized texts, singers preferred to compose original texts and employ improvisation which, when executed skillfully in situations of dispute or during literary challenges, had the effect of boosting the performer's esteem in the eyes of opponents.

Following a period during which the *décima* became generally accepted by academic poets such as Nicaragua's Rubén Darío, Argentina's Leopoldo Lugones and Mexico's Alfonso Reyes and Amado Nervo, among others, in the early twentieth century the *décima* as high art went into partial decline throughout Latin America as it gave way to improvised manifestations by popular poets. At this time, a popular regionalist poetics was developing, fed by *criollismo*, *costumbrismo* and other literary trends. In this literary context, the *décima* was transformed by cultured poets into an expressive resource and the form took on new thematic and linguistic dimensions. These new literary trends, along with growing censorship in some Latin American countries, critical acclaim, irony and local humor, became decisive elements in the reassertion of popular poetry. *Décima* became an expressive medium widely used by poets by virtue of the compositional challenges posed by its complex literary structure.

Décima's Manifestations in the Americas

The *décima* is practiced widely throughout the Americas and, while there are many similarities in its uses, in each country the *décima* also incorporates distinctive local characteristics and names. In Mexico's Sierra Gorda region, the *décima* type known as *valona* is performed as part of *contraversias* and *topadas* (popular festivals). In the Veracruz region, *fandangos* and *sones con fuga* are recited in *décima* form. In Panama, *décima* is employed in the *cantos de mejorana* song genre. The *puntos* and *torrentes* (tunes and accompaniments typical of *mejorana* songs), set to *décima* form, function as a vehicle for the banter and jeering taking place between the singers. In Colombia, *décima* forms the basis of verbal confrontations or duels between singers of the *guabina* genre and as a vehicle for improvisation between oral poets; it is used similarly within the plains-style *porro* and *cumbia lenta* (slow *cumbia*). In Argentina and Uruguay, *décima* is an element of the *payadas* (improvised musical dialogues) performed in *cifra* or *milonga* songs. In Chile, *décima* stand-offs are known as *verso* or 'poetic singing' as well as *tonada*. In the Afro-Ecuadorian region of Esmeraldas on the Pacific coast, *décima* (spoken or chanted) is practiced as a recited dispute between *mulato* singers and is typically accompanied by the African-descended *marimba*. In Cuba, *décima* is associated with the *punto*, a song type with many regional variants throughout the island, including *punto fijo*, *punto libre*, *punto spirituano*, *seguidilla de décima* and others. In Puerto Rico, *décima*-based singing can be found in the *seis* in its various forms, including *seis de comerío*, *seis de mapeyé* and *seis fajardeño*.

These forms, which arose during the process of *mestizaje* based on poetic structures inherited from Spain, give shape to literary and musical forms of expression that are now considered important cultural legacies from the peoples of the Americas to the rest of the world.

Décima in Venezuela and Peru

A more detailed description of the *décima* in two particular countries illustrates how, while the *décima* is widespread as a shared poetic form throughout Latin America, it also acquires a distinctive character in each country based on local traditions, literary culture and social relations. While a closer look at the *décima* in any of the countries named above would yield rich comparative data (and other entries in this volume explore the *décima*'s use in the *payada* of Argentina and Uruguay, the *punto* of Cuba and other genres), the following discussion will focus briefly on Venezuela and Peru.

The popular improvised *décima* has existed in Venezuela since the sixteenth century, but it gained popularity in the eighteenth and nineteenth centuries, extending throughout almost the entire country. The Venezuelan *décima* is especially prevalent in peasant regions during popular festivals in celebrations *a lo humano* and *a lo divino*. Singers utilized, and continue to utilize, nicknames to introduce their sung participation.

In Venezuela, *décima*-based singing occurs in religious songs throughout most of the country during agrarian and devotional celebrations in honor of the Cruz de Mayo [May Cross], the Virgin Mary, the saints and Jesus. In eastern Venezuela, this religious *décima* appears in *fulía*, *punto* and *galerón* songs, forms whose roots lie in older Spanish singing practices. The *décima* in the minor mode that is performed in Zulia state and dedicated entirely to human (e.g., secular) themes is identical in structure to the *gaita oriental* of Zulia and Falcón states (not to be confused with other popular variants of *gaita*). In the central part of Venezuela, *décima* is subsumed within a religious song structure incorporating the *salve*, the *fulía* and the recited *décima*, combining a Spanish literary form with an African musical aesthetic in a way typical of the syncretism that characterizes mixed peoples. A secular form is also present in the central region in the *golpe* and the *joropo*, and especially in their musical variants, the *yaguazo* and the *pajarillo.*

In western Venezuela, *décima* is used in devotional activities directed at the most popular deities and is part of a religious musical structure made up of the *tono*, the *pasacalle* and the *décima*. In the Venezuelan plains and Colombia's eastern plains, *décima* is accompanied by the *tonos de velorio* (religious ritual songs). Finally, the *espinela*, a religious devotional form featuring six-syllable verses, constitutes a curious variant of *décima*. It occurs in the Venezuelan Andes, especially within the state of Trujillo.

As in other parts of Latin America, in Peru from the sixteenth to eighteenth centuries, the *décima* thrived primarily among European-identified sectors, but in the mid-nineteenth century it was abandoned in literary, 'cultured' circles (Santa Cruz 1982, 39, 69; Tompkins 1981, 160–1). The *décima* survived as a popular form in lower and working-class neighborhoods (Santa Cruz 1982, 82), especially among black Peruvians (Santa Cruz 1970, 14; Tompkins 1981, 161).

Until the early twentieth century Peruvian *décimas* were performed in contests at homes or taverns. The contest began with exchanged greetings (*saludos*), followed by biographical *décimas (décimas de presentación*) and then by 44-line *décimas* (improvised or memorized) performed by each poet in alternation (Santa Cruz 1982, 77–96). Themes were both sacred (*a lo divino*) and secular (*a lo humano*). *Decimistas* chronicled important historical events including the Spanish Conquest, the rebellion of Túpac Amaru, independence and the War of the Pacific (Durand 1979; Santa Cruz 1982).

Before about 1925 *décimas* typically were recited in declamatory style, accompanied by a slow precomposed solo guitar melody in the major mode and ¾ meter called *socabón* (Tompkins 1981, 162). The guitar player added melodic interludes during pauses between each couplet (while the poet composed the next rhyme) (Santa Cruz 1975, 24, 1982, 76–7), serving as timekeeper for the contest. After 1925 décimas were recited *a cappella* (Santa Cruz 1975, 24; Tompkins 1981, 164). In 1958 Nicomedes Santa Cruz and guitarist Vicente Vásquez created a new accompaniment for the *décima* by adapting a slower version of the melody of an obsolete genre called *agua'e nieve* (Santa Cruz 1975, 24).

Because popular *décimas* were an oral tradition, many *décimas* and the names of their authors were lost by the mid-twentieth century (see Donaire Vizarreta 1941; Durand 1979; Santa Cruz 1982). By the 1940s, according to Nicomedes Santa Cruz, the *décima* was nearly extinct in Peru (1982, 17–18). Santa Cruz repopularized the *décima* in the 1950s to 1970s and became Peru's most internationally renowned *decimista*, addressing contemporary national and international issues, especially racial injustice. Santa Cruz had apprenticed with Don Porfirio Vásquez (1902–71), who, in turn, had learned from Hijinio Matías Quintana (1881–1944) in rural Aucallama (Feldman 2006; Santa Cruz 1982). Quintana belonged to a group of competing *decimistas* called 'The Twelve Pairs of France,' whose colorful competitions and exploits are chronicled in Nicomedes Santa Cruz's *La décima en el Perú* (1982, 82–3, 100–7). Santa Cruz performed his *décimas* on television, radio and stage in the 1950s, and he later published them in books (Santa Cruz [1959] n.d.; 1962; 1964; 1966; 1971a; 1971b) and recordings (1994, 2000). His book *La décima en el Perú* (1982) provides a historical overview and over 300 pages of collected *décimas* dating from the colonial period to the contemporary era.

At the turn of the twenty-first century the *décima* survives in Peru, though it is not typically performed in large public venues. In some private *peñas*, *decimistas* still recite their compositions. In 2005 Octavio Santa Cruz, host of one such *peña*, launched a project called 'Today's *Decimistas*,' geared toward creating a network of living Peruvian *decimistas*.

Conclusion

Throughout the Hispanic Americas, the *décima espinela* surely embodies popular song *par excellence*. As can be seen in the variety of examples given above, it can be said that the *décima* put down roots in the Americas and then branched out, becoming one of the most-employed poetic and musical forms by a large proportion of cultured poets from both the high art (compositional) and popular (improvisational) spheres.

Diablada

Diablada is a Bolivian form of music and dance that carries great symbolic significance in Andean thought and among the mestizo population. The most important avenue for the dissemination of *diabladas* is the Carnival of Oruro in the western region of the country.

The *diablada* evokes and recovers the memory of *Autos Sacramentales* (a form of dramatic sacred literature) that were practiced in Spain during the Middle Ages. This is likely the result of colonization. However, the dynamic of hybridization in this and other musical forms in Bolivia incorporates elements from Andean worldview systems. For instance, *diabladas* feature the character of the 'tío,' a creature related to the devil in Western thought that in local cultures is believed to come from the underworld (Manqha Pacha) and is not necessarily representative of evil. This character commands respect and has become a guardian for mine workers. *Diabladas* portray and develop this relationship between the 'tío' and the miners. The performance also features a confrontation between good and evil. This section, which is the dramatic climax of the dance, concludes with a type of coda called *wayñu*. In this manner the form of the *diablada* exists between two musical worlds: Western and Andean.

The *diablada* is structured in three sections of eight measures each. The symmetric relationship between sections is rarely varied. The first two sections are in duple meter, while the third and final section is set in 6/8.

Diabladas are performed by brass ensembles to accompany dancers. In sung versions, the ensemble features singers, guitars, *charangos*, traditional aerophones and membranophones such as the double-headed *bombo* (bass drum).

Dobrado

Dobrado is a term popularly used in Brazil to refer to musical compositions within the *marcha* genre, performed predominantly by instrumental ensembles known as *bandas*, *bandas de música* (music bands) or *bandas de coreto* (gazebo or bandstand bands) and composed of brass, woodwind and percussion instruments. The term *dobrado* is derived from the name of a historical subcategory of *marcha* known as *marcha-dobrada* or *marcha-dobrado*, distinct from other types of *marcha* such as *marcha-lenta/grave* (slow march), *marcha de procissão* (processional march), *marcha-de-rancho* or *marcha rancho* (a Carnival march of the old *ranchos*; see entry for *marcha*) and many others.

The *marcha-dobrado*, or simply *dobrado*, is associated with the *passo dobrado* (double march), a marching technique designed to speed up the progress of a group parading in the street by getting the band (be it military or civilian) to march more quickly. The *marchas-dobrado* are linked historically to military events, as are the bands themselves, which continue to play a role in the activities of these institutions. It is worth noting that the term exists in other languages, such as *pasodoble* (Spanish) and *pas redoublé* (French).

The various historical distinctions are no longer made, and the term *dobrado*, at least from a popular point of view, has become simply a generic term for marches performed by the bands mentioned above, irrespective of the speed at which the band is moving or of other musical characteristics. It is a very popular genre in Brazil despite the music being performed and composed in general by musicians with specialized training. Its popularity is in a separate class from that enjoyed by the styles of mass music – mainly vocal music – associated with the media, recorded on CDs, heard on radio and television and at concerts centered on singers. *Dobrados* are more commonly heard in the cities in Brazil's interior in the form of live performances by the *bandas* in public plazas, festivals, commemorations and street parades. The genre's importance is associated with the very existence of the *bandas*, which in Brazil have been historically responsible for the training of many generations of musicians, as well as being a factor in the shaping of popular musical sensibilities.

Structurally, a *dobrado* is typically divided into three sections or parts and is in duple or quadruple time or, occasionally, in compound time. Historical variations notwithstanding, the *bandas*' instrumentation includes flute, piccolo, clarinet, saxophone, trombone, trumpet, euphonium, saxhorns (E♭ tenor horn or alto horn), sousaphone, etc., as well as percussion, mainly bass drum, snare drum and crash cymbals; in some cases in more recent times, a drum kit has been added for performances not involving marching. There are dozens of *dobrados* that, despite not having been recorded or aired on radio and television, are well known throughout the country and firmly established within *banda* repertoire. Although these instrumental groups now number few around the country as compared with past times, it is nonetheless impossible to understand the music of Brazil without taking them into consideration, with their varied repertoire of popular music, *dobrados* and even arrangements of passages from works by art music composers. In northeast Brazil, especially in the cities of Recife and Olinda in the state of Pernambuco, the *bandas* continue to enjoy a high profile during the Carnival period, as they animate the parades of the *frevo* (a musical genre within the *marcha* complex) clubs, attended by thousands of participants who parade with the clubs and dance in the streets.

Dub

Jamaican dub is a subgenre of reggae involving the remixing of recordings. First developed in the 1950s by Jamaican DJs in Kingston dance halls run by companies nicknamed 'sound systems' (Barrow and Dalton 2004, 11–18; Davis 1982; Stolzoff 2000), it was further advanced in the late 1960s and 1970s by Jamaican record producers, engineers and musicians.

Dub remixes involved many techniques that were pioneered by Jamaican DJs – notably Lee 'Scratch' Perry, King Tubby and Augustus Pablo – beginning with a mix that reduced or entirely eliminated the vocals to leave the backing tracks with a few slight alterations. Sometimes, however, the melody was replaced by an instrumental rendition and/or by additional percussion overdubs or instrumental solos (see representative recordings in Discographical References by King Tubby 2003; Augustus Pablo 1994, 1987, 2002, 2008; and Lee Perry 1997, 1998). Studio effects (such as reverb, echo and equalization) were added to individual tracks, which were faded in and out without regard for their role or function within the original mix, creating new soundscapes that took on a life of their own.

In the early 1950s DJ Count Machuki (Winston Cooper) started 'toasting' (a style of rhythmic, intoned speech that was one of the antecedents of contemporary African-American rap) at sound system dances. Other DJs, including Sir Lord Comic (Percival Wauchope), King Sporty (Noel G. Williams) and King Stitt (Winston Spark), imitated Machuki, and soon every sound system featured a toasting DJ. Unfortunately, however, none of these early toasting performances were recorded. In the 1960s Jamaican recording engineers created unique mixes of recordings for sound systems, pressed on acetate discs called 'dub plates,' or 'dubs.' In the early 1970s toasting became known as 'rub-a-dub' or 'dub' (Veal 2007, 62).

Reggae musicians also used the term 'dub' to label a particular way of performing. As Bob Marley described it, 'Dub means right and tight, the perfect groove. When [the] Wailers say "dub this one," dis mean "we gonna play it right and tight"' (in Hebdige 1987, 82). Musicians also used the term 'dubwise' to label parts of a live performance in which dub remixing techniques were replicated, or when bass and drums played alone (Veal 2007, 62). In the mid-1970s a group of Jamaican poets (including Oku Onuora [Orlando Wong], followed by Michael 'Mikey' Smith, Mutabaruka [Allan Hope] and Linton Kwesi Johnson) read poems over nyabinghi (Rastafarian music), reggae or jazzy instrumentals – which they called 'dub poetry' (Morris 1982, 189–91; Katz 2003, 294–7).

Aside from the use of 'dub' to refer to a Jamaican musical style, in the 1950s and 1960s 'dub' was used in recording studios worldwide as an abbreviation of 'overdub' – the process or product of recording additional sounds synchronized to, and combined with, prior recordings, and also to refer to the process of creating a copy of a recording, or a copy of a copied recording. In the early twenty-first century the term 'dub' usually refers to *any* remixed recordings – not just Jamaican ones – and/or to the process of creating a dub recording.

Origins of Dub and Toasting

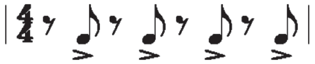
In the early 1950s sound systems became popular at rural and urban Jamaican dances by playing US R&B, pop hits, swing, Latin music and mento recordings, but their DJs did more than simply spin records. They blended live performance with prerecorded music – altering the mix through the use of electronics, adding their own voices while the records were playing and altering the length and arrangement of song structures by manually resequencing the records (Johnson and Pines 1982, 66; White 1984, 49).

By using the treble, mid-range and bass tone controls of their amplifiers (along with some custom-made sound-processing equipment), DJs boosted the bass frequencies of records significantly, then created tension by pulling the bass frequencies out and 'plunging' them back in (Bradley 2000, 36–7; Ehrlich 1982, 106; Gayle 1982, 112; O'Gorman 1972, 51; Stolzoff 2000, 44). They also used reverb and tape-delay devices to echo and repeat the treble range, creating polyrhythms and explosion-like effects (Davis 1982, 33–4).

DJ on-mic vocalizing included echoing vocal and instrumental phrases, and adding refrains, responses, countermelodies and percussive noises (usually emphasizing offbeats) – all saturated in reverb and delay. Audience members sang and clapped along, and some even toasted on the microphone.

DJs altered song structures by extending, resequencing or editing songs by lifting the record player needle to repeat, reorder or skip sections. To fill the gap while they moved the needle, they toasted or encouraged audiences to sing, chant or clap (Bradley 2000, 10–1; de Koningh et al. 2003, 17; Pinnock 2002, 103; Stolzoff 2000, 54–5).

The roots of toasting have been traced to traditional West African griot storytelling – which is characterized by the rhythmic delivery of tribal histories and social commentary (Chang and Chen 1998, 73). DJ toasts included Jamaican proverbs, nursery rhymes, ring songs, word games, Anansi stories and work songs (Jones 1988, 29; Stolzoff 2000, 54–6). Their rhythmic delivery was influenced by West African, African-American and Jamaican musics. The Jamaican influence was manifest in DJs' tendency to enter between beats (corresponding with the strong 'afterbeat' accents – a term preferred by Jamaican musicologists to refer to 'offbeats,' which are found in all Jamaican folk, religious and popular musics; see Example 1), and to set their phrases and rhymes to rapid rhythms, usually subdividing the beat into four parts that could theoretically be notated in sixteenth notes, although DJ toasts were never notated. Davis notes that many DJs repeated a phrase twice before rhyming it, a practice that might be derived from the 'a-a-b' phrase structure of African-American blues choruses (Davis 1982, 33).



Example 1: Afterbeat accents

Because of the frequent conflation of the term 'offbeats' with 'upbeats' and 'backbeats,' Jamaican musicologist Garth White and American musicologist and reggae bassist Luke Ehrlich suggest using the term 'afterbeat' for the consistently accented, louder and heavier sounds that appear between beats in Jamaican music. Jamaican afterbeats can be accented in a variety of ways, from single notes to full chords, and most often by percussive instruments or sounds, and they sustain the harmony of the previous beat rather than anticipating the harmony of the following beat. (See 'Reggae' entry for a more detailed discussion of the term 'afterbeat.')

Acetates (Instrumentals) and First Toasting Records

In the 1950s and 1960s most Jamaicans heard contemporary popular music primarily at sound system dances – not on radio, at home or on stage, since JBC (Jamaican Broadcasting Corporation) radio gave limited airplay to popular music – and because records and live musicians were generally unaffordable for the lower-class majority. Recording studios made special remixes of recordings for sound system DJs to use that were not sold to the public (Stolzoff 2000, 129). Using two-track tape recordings – with instruments and voices on separate channels – studio engineers reduced the volume of vocals, removed them completely, or overdubbed organ, saxophone or guitar playing the melody (usually with improvisations) (Davis and Simon 1982, 105). These unique remixes were pressed on acetate discs, which only lasted around 20 plays, so few survived. By 1965, due to public demand, some remixes began to appear as B-sides of singles, but many remixes were never released commercially at this time. By 1967 most B-sides were sound system-style instrumental remixes of the A-side (Bradley 2000, 312–13), although there were also many remixes that were created exclusively for DJs, and therefore only heard at a sound system dance.

When listening to and evaluating Jamaican dub remixes (many of which have been released commercially in the late twentieth- and early twenty-first centuries on CD for the first time) from a present-day perspective, or in contexts outside of Jamaican dance halls, it must be remembered that dub producers' decisions and priorities were primarily to create recordings for presentation by a DJ on a huge sound system in a dance hall, with live DJ interjections and audience interaction. Present-day listening to these remixes omits the DJs' toasting, manipulation of recording frequencies, moving the needle to resequence songs, and audience interaction with the DJ and each other. In addition, dancing with other people while singing and clapping along to new material created and improvised on the spot by the DJ added to the experience. DJ-audience interactions were central in shaping DJs' toasting and manipulation of records, and the impact of hearing these recordings on typical consumer playback systems (either at the time of release in the 1960s and 1970s or in the late twentieth and early twenty-first centuries, once these previously noncommercially released recordings became available on CD) pales in comparison to the physical sensations of hearing them on massive sound system PA speakers and amplifiers which were much louder and had much better frequency response – especially in the bass register. These remixes thus not only sounded different in the dance hall, but also generated different corporeal, social and emotional activities and responses. Thus, even those original remixes from the 1970s that have survived or have been presented in contemporary CD box sets only present a part of how they were experienced by Jamaican audiences in a dance hall at the time of their release. As to the context and experience of dub recordings in nondance hall settings (e.g., by Jamaican audiences who purchased singles or albums at the original time of their commercial release), there has been no study of these practices, although it would be reasonable to assume that they would likely have been played at house parties and for personal enjoyment. Since there is unfortunately no historical film of these dance hall performances, the complete musical picture and analysis of most dub recordings has essentially been lost forever.

The first recording of a sound system DJ toasting was Sir Lord Comic's 'Ska-ing West' (1966). Two other 1966 singles featured a DJ toasting: Baba Brooks's 'One-Eyed Giant,' and Soul Brothers' 'Lawless Street.' However, all were instrumentals with episodic toasting influenced by contemporary US radio DJ patter rather than the toasting style typically used by Jamaican DJs in the dance halls (Chang and Chen 1998, 68–71). In 1969 King Stitt released five singles (similar to these earlier recordings) that were big dance hall hits ('Fire Corner,' 'Herbsman Shuffle,' 'Lee Van Cleef' 'Vigorton Two' and 'The Ugly One'), but none of these records received any airplay because JBC radio did not play toasting records at this time (Barrow and Dalton 2004, 120–1; Bradley 2000, 300; Gayle 1982, 114). Like earlier acetates, present-day listening to these recordings alone omits the elements added in the dance halls: the type of improvised toasting involving audience interaction and technical manipulations of the recording itself.

'Versions'

In addition to Jamaican innovations, these first acetate remixes were also influenced by record releases by US R&B artist James Brown and by new recording technology. Brown wrote long singles that continued on the B-side – usually called '(Song Title) – Part Two,' which were similar to Jamaican remixes (Bradley 2000, 313; Clarke 1980, 130; Ehrlich 1982, 106). Brown's B-sides featured instrumental solos, vocal improvisation and often just bass and drums for extended periods – a blend of prearranged musical ideas with improvised ensemble interaction, although the use of effects such as reverb and delay was much more subtle than on Jamaican remixes. Another notable difference was that Brown's producers and engineers sought to replicate what might happen in a live performance. On Jamaican B-Sides (and acetates), on the other hand, many engineers and producers may have been inspired by, and even emulated, Brown's improvised interaction, but they usually created distinct variations of the original recordings – without any input from the original artists – and most significantly, with no intention of replicating live performances. Jamaican producers sometimes added new instruments, and they remixed everything using equalizers, reverberation and delay equipment to change the tone and volume of instruments and voices, and to create unusual electronic effects. Their goal was to produce unique, one-off remixes for individual sound system DJs to use and manipulate further in dance halls with electronics, toasting and audience interaction.

A major technical innovation that enabled the types of technical manipulations that characterized dub was the introduction of four-track recording in Jamaica in the mid-1960s, which permitted greater separation of parts and remixing possibilities. Rudolph 'Ruddy' Redwood was one of the first Jamaican engineers to use this new technology to drastically alter original instrument levels, balances and combinations of instruments, which came to be called 'versions' (Katz 2003, 165). Other Jamaican engineers and producers – Lynford Anderson, Clement Dodd, Clancy Eccles, Joe Gibbs, Bunny 'Striker' Lee, Duke Reid, Errol Thompson, King Tubby (Osborne Ruddock) and Lee Perry – imitated Redwood and introduced other innovations (e.g., filters, extreme equalization, phasing, percussion overdubs and added sound effects of animals, machines, etc.). King Tubby's remixes were considered the most creative in this style (Thompson 2002, 101; Veal 2007, 108). He featured interlocking drum and bass patterns (which came to be called 'riddims' – although 'riddim' was also eventually used to refer to the entire backing track), and unconventionally equalized instruments and background vocals in altered balances and combinations – all drenched in reverb and delay. Since each sound system had its own unique version of the same songs, audiences found the unpredictability exciting. The best remixes created the effect of a rhythm track that was constantly mutating, which became even more dynamic when heard on the huge sound system speakers (Barrow and Dalton 2004, 220). The work of many of the aforementioned producers can be heard on the CD compilation *The Rough Guide To Dub* (2005).

Rub-a-dub Toasting and Dub Plate Specials

Some DJs' toasting and technical manipulations were so creative that the results often sounded like new songs. In 1970 DJ U-Roy (Ewart Beckford) created three unique dance hall-style toasts over King Tubby's remixed versions of the Paragons' rocksteady hits 'Rule the Nation,' 'Wake the Town' and 'Wear You to the Ball.' These versions were so popular – the top three spots on Jamaican charts – that even JBC radio played them (Gayle 1982, 114). U-Roy spoke in free and rhythmic Jamaican Creole – vernacular Jamaican English – in a highly spontaneous manner that became known as 'rub-a-dub,' filled with joyous vocal interjections and asides and silly, fun rhymes (Bradley 2000, 296). Tubby's remixes became known as 'dub plate specials' or 'dubs' (Veal 2007, 54).

Soon, other rub-a-dub DJs had similar hits: Dennis 'Alcapone' (Smith)'s 'Mosquito One,' 'Guns Don't Argue' and 'Teach Your Children' (1971–72); Scotty (David Scott)'s 'Draw Your Brakes,' 'Sesame Street' and 'Skank in Bed' (1971); Big Youth (Manley Buchanan)'s 'S. 90 Skank' (produced by Keith Hudson) and 'Screaming Target' (produced by Augustus 'Gussie' Clarke) (1972); Dillinger (Lester Bullocks)'s many hits starting in 1976, compiled on *CB200* and *The Prime of Dillinger*; 'Papa' Michigan and 'General' Smiley (Anthony Fairclough and Erroll Bennett)'s 'Nice up the Dance' and 'Rub A Dub Style' (1979); Eek-A-Mouse (Ripton Hilton)'s many hits starting in 1980, compiled on *The Very Best of Eek-A-Mouse*, *Vols 1 and 2*; and Yellowman (Winston Foster)'s 'Mad Over Me' (1982). Soon female DJs emerged, such as Sister Nancy (Ophlin Russell) with her 1982 hit 'Transport Connection.' (For analyses of these DJs' styles, see Barrow and Dalton (2004, 121–4, 187–9); Katz (2003, 167–8, 203, 207); Salewicz and Boot (2001, 97); Veal (2007, 55–61, 108–34, 140–60).)

By the mid-1970s dubs were commercially released in three main formats: B-sides of singles, disco 45s/12-inch singles introduced in 1976 which offered extended length and greater dynamic range (Ehrlich 1982, 108), and albums featuring only dub versions. Many new producers and engineers specialized in this new style, such as Clive Chin, Keith Hudson, Herman Chin Loy, Derrick Harriott, Augustus Pablo, Errol Thompson, Linval Thompson, Jack Ruby and Scientist (Overton Brown).

These producers promoted toasting and dub for both economic and aesthetic reasons. Since singers and musicians were paid only for the initial release, remixed versions could be produced at little additional expense (Barrow and Dalton 2004, 215; Ehrlich 1982, 105; Veal 2007, 90–1). Throughout the 1970s dub releases and DJ toasting records were the most popular music in Jamaica – promoted mostly by dance hall play (Barrow and Dalton 2004, 230; Ehrlich 1982, 108; Veal 2007, 46), whereas foreign sales of Jamaican music were dominated by reggae artists such as Bob Marley and the Wailers, Jimmy Cliff, Toots and the Maytals and Burning Spear – who promoted themselves primarily through concert appearances, since foreign airplay of reggae was often limited. Other than a few one-off successes in the United Kingdom, most foreign markets (notably North American radio stations) were not receptive to dub, and there were few dub releases (other than the odd single B-side) outside of Jamaica. In the 1980s, however, Jamaican dub producer Mikey Dread (Mikey Campbell) achieved significant success in Britain producing not only dub recordings (e.g., *World War III* in 1980), but also recordings by the Clash (including the 1980 reggae-influenced 'Bankrobber,' their first entry into the British charts, and *Sandinista!*, voted best album of 1980 by *The Village Voice*) and UB40's 'Red Red Wine,' a rocksteady hit that topped both UK and American charts in 1983.

Between 1972 and 1975 the emergence of roots reggae inspired a slower, heavier drum-and-bass toasting-mixing style – called roots toasting or mixing – that was based on Rastafarian philosophies and nyabinghi music (Bradley 2000, 302). Roots toasting and mixes were designed to create the same type of simmering, meditative 'righteousness' and smoky intensity as nyabinghi music, and to 'strike dread' – literally and figuratively – in the heart of Babylon (Bradley 2000, 310). Rastafarians use the term 'Babylon' – the ancient Mesopotamian city described in the Old Testament as a symbol of evil and oppression to the exiled Israelites – to represent the bondage of any person held in slavery and oppression – especially black people – and/or to represent any institution or activities that only benefit the oppressors (i.e., the upper-classes) (Foehr 2000, 62, 64). Roots DJs commented upon ghetto sufferers' problems and presented 'history lessons' from a black perspective, praising influential Jamaica-born writer and orator Marcus Garvey (whose back to Africa ideology – espoused in the 1920s and 1930s – formed the bedrock of Rastafarianism) and Haile Selassie (the ruler of Ethiopia whom Rastafarians also considered to be God incarnate). These praises often resembled the chanting of psalms (Barrow and Dalton 2004, 187).

Noted roots toasting producers include Glen Brown, Clive Chin, Augustus 'Gussie' Clarke, Keith Hudson, Vivian Jackson (aka Yabby U/You), Lloyd 'King/Prince Jammy' James, King Tubby and Lee 'Scratch' Perry. In addition to the artists mentioned above, other successful roots toasters and recordings include Prince Jazzbo (Linval Carter) ('Step Forward Youth,' 1974); Prince Far-I (Michael James Williams) (*Psalms For I*, 1976, a collection of Old Testament Scripture chanted over reggae rhythm tracks, and *Under Heavy Manners*, 1977); Tappa/Tapper Zukie (David Sinclair) (*MPLA*, 1976); Trinity (Wade Brammer) (*Three Piece Suit*, 1977); Dr Alimantado (Winston Thompson) (*Best Dressed Chicken in Town*, 1978); and Mikey Dread (*Dread at the Controls*, 1979). (For analyses of these roots toasters' styles, see Barrow and Dalton (2004, 219–25, 230–40); Bradley (2000, 328, 359); Ehrlich (1982, 105–7); Katz (2000, 2003, 175–9, 187–9); Salewicz and Boot (2001, 90–7); Veal (2007, 47, 51–4, 108–34, 140–60).)

Dub Strategies, Characteristics and Techniques

Michael Veal (2007) has provided scholars with a penetrating analysis of dub strategies, characteristics and techniques, and the following discussion draws significantly on his approach and terminology. Many Jamaican producers and engineers were influenced by the late-1960s/early-1970s British and American psychedelic music and progressive rock which integrated experimental studio effects with musical content. King Tubby and Lee 'Scratch' Perry were impressed by the late-1960s/early-1970s recordings of Pink Floyd and the Jimi Hendrix Experience, especially their highly innovative use of reverb and sound effects (Masouri 2008, 267).

Jamaican dub remixers use many different creative strategies and techniques, involving three overlapping areas: (1) the creation of new musical patterns through editing, remixing and overdubs, (2) technological devices and effects and (3) new aesthetic principles that emerge from using technology (especially the recording console) as an instrument or a creative tool.

The dub aesthetic is based on ongoing variations and surprise, usually disrupting the flow and expectations of the original recording. There is an emphasis on incompletion and unpredictability that emerges from the deliberate fragmentation or interruption of the original rhythms, phrases, melody, harmonic resolution, cadences, etc. Many of these mixes subvert or delay traditional goal-directed musical gratification, and create feelings of chaos, confusion and imminent collapse. As a way of generating unpredictability, some producers – such as Lee Perry – improvise their mixes at the mixing console as if it were a musical instrument. Perry is seen mixing 'on the fly' in the 1977 film *Roots, Rock, Reggae*.

The most basic remixing technique involves the use of equalizers (a bank of narrowly focused tone controls) to create timbral and textural effects. Equalizers remove or accentuate specific frequencies, which can alter a sound's timbre, boost or mask its presence, or transform it into another sound. Boosting upper frequencies not only makes a sound brighter, but also increases its attack, which can alter a sound's character or function within the arrangement. A decrease in upper frequencies can blur a sound's attack and diminish its prominence. Similar changes to other frequencies can make sounds warmer, darker, louder, or create a radically different timbre from the original sounds. Equalization can also be used to create or exaggerate distortion and produce a deliberately low-fidelity sound quality. Sometimes defects in a sound or a recording (e.g., poor frequency response, hiss, wobble or other 'flaws') are enhanced to create unusual timbres and effects. Alteration of playback of tape speed is also used to manipulate the timbre and pitch of sounds. Slower speeds are most often used to create thicker timbres. Changes in equalization and tape speed combined with reverb and echo can also alter the impression of a sound's size or source.

In most dub remixes, isolated bass and drum parts/patterns (i.e., 'riddims') are the main musical focus, but they are often stripped of their harmonic implications. These parts/patterns are often fragmented, juxtaposed and treated with repeating echoes or delays that can produce patterns that are quite different from what the original player or programmer created. Silence or the absence of sound is often treated as a musical 'event,' rather than simply space between musical sounds.

When chords played by keyboards or guitar are highlighted in the mix, they often function merely as bits of abstract color and texture that ornament bass and drum parts, rather than as tools of harmonic movement and progressions. This technique can generate pitch combinations and tonal movement that differ significantly from the conventional goal- or tonic-oriented harmony that underlies traditional European folksongs and Christian hymns (Veal 2007, 58).

Dub mixes often prioritize an aesthetic of fragmented interlocking parts – the result of suddenly bringing sounds in and out in ways that differ significantly from the original musicians' intentions – producing new patterns and rhythms. The result of this fragmentation resembles a West African style of interlocking parts, which the producers separate and rearrange in different balances, by using reverberation and delays to create striking and disorientating effects (Veal 2007, 70). This fragmentation technique is even applied to vocals – which can be erased or broken up into syllables – transforming words into emotional sounds, often with little semantic meaning.

The most common studio effects are reverberation (or 'reverb') – that is, 'echo' – and delays or multiple repeats, in which the original sound is repeated from one to many times, either at the same intensity as the original or as a series of sounds that gradually fade out or the reverse – they fade in with *increasing* intensity. Reverberation creates a sense of space, from small, dry rooms to large, highly ambient cavernous spaces. Different reverb effects are often employed simultaneously within one recording, so that different parts sound like they are being played in difference spaces (e.g., a small room, theater, arena or cave). Sometimes the emphasis is primarily upon the effects, with the original sound either mixed much softer than the effect or omitted entirely, creating strange, swirling, ambient sounds that can be difficult to identify. Short sounds may be extended and sustained with reverb, creating trails and echoes of sounds that mingle together and provide continuity between one sound and the next (Veal 2007, 71). At times, microphone bleed (a sound other than the one intended to be picked up) is highlighted with reverb and/or delay to create distant-sounding ambient textures.

Delay/echo effects are often used to create timed repeats of rhythms, which can intensify the basic groove, disrupt it or create unusual or unpredictable rhythmic or harmonic patterns. Echo can sometimes sustain chords or repeat them – which can disrupt or alter their original harmonic function.

A nontraditional aesthetic orientation that emerges out of dub techniques is the inclusion, and sometimes a focus upon, sounds that are normally excluded from finished commercial recordings, for example, tuning up, mistakes, chatter, noises and tape rewinding. Such 'noises' are sometimes incorporated as musical elements in a dub mix. Some producers (e.g., King Tubby and Lee Perry) have been known to deliberately drop or hit equipment (notably spring reverb units) to produce loud, clanging sounds or feedback that would usually be considered as undesirable noise. Sometimes noise that is unrelated to the recording is also added to the mix, for example, sound effects such as wind, explosions, gunfire, breaking glass or animal sounds become musical/compositional elements, treated and fragmented using the same techniques as the original recorded sounds.

Other unusual mixing techniques include the simultaneous presentation of different vocal and instrumental takes and tape splicing to create unconventional shifts and transitions. Until the 1980s, when digital recording was introduced, all dub mixing was made on analog tape, which could be cut up and spliced as a way to resequence patterns and sections, and to create collages, sometimes combining different performances at different tempos.

Conclusion

Dub releases faded in popularity in Jamaica in the early 1980s, but in the early twenty-first century Jamaican dub has become a major influence upon many non-Jamaican musical styles, especially in dance music. In particular, the use of massive sound systems, the creation of special 'DJ-only' mixes, the foregrounding of bass and drums, and especially rapping over instrumental tracks have become the norm in the worldwide club dance scene (Barrow and Dalton 2004, x). Jamaican-style remixes have been used by African-American rap, hip-hop, ambient music, electronica, jungle, house, garage, trance, trip hop and alternative rock artists (Veal 2007, 233–60), and with the advent of inexpensive consumer-oriented computer mixing software, social media websites such as YouTube, Facebook and MySpace often present remixes by amateurs of virtually every style of music, sometimes involving a synchronous mix of two entirely different recordings ('mash-ups').

Embolada

Embolada is a popular musical genre of the Brazilian North-east, typical of the coastal zones but also found in the backlands (*sertão*). One of its defining features is its poetical structure, which takes the form of a stanza with lines of varying syllables (sometimes as many as ten) usually followed by a set refrain. Often improvised, the stanzas are typically humorous, sometimes nonsensical, and are performed at a high tempo by a duo of *emboladores* in a competitive manner. *Embolada* is also connected to a form of *coco* called *coco de embolada*; the two terms have sometimes been used synonymously. As an integral part of the poetry of the *cocos*, *embolada* is presented in two primary forms. The type that is danced is known as *coco dançado*, and the type that is sung by a pair of singers (the *emboladores*) is known as *coco de embolada* or simply *embolada* (Azevedo 2000). In the latter, the improvisation of lines is a major component. Travassos (2001, 91) emphasizes the speed of the recited text, which typically obscures the understanding of the content.

Researchers such as Renato de Almeida (1942), Oneyda Alvarenga (1982), Mário de Andrade (1989) and Câmara Cascudo (2000) have highlighted the characteristic rhythmic-melodic construction of the stanzas of *emboladas*, which they consider to be an integral part of the creative performance techniques of northeastern singers known as *repentistas* (improvisational musician-poets). *Embolada* can therefore be seen as a 'musical poetic process,' which links it to other cultural practices, such as *dança do coco* (a dance with responsive singing). Alvarenga (1982, 297) defines *embolada* as a *pure song* – alongside other such genres as *desafio, romance, moda* and *toada*, among others – by which she means that *embolada* integrates those song modalities 'of individual and free use, which represent the exercise of activities of an exclusively poetical musical nature' (ibid., 297; author's translation). According to Andrade (1989, 199–200), the word *embolada* comes from '*bola*' (ball) in Portuguese, a word that is very confusing in the terminology of the northeastern singer. Its most perceptive meaning is: a 'poetical-musical way of singing.' The verb '*embolar*' refers to 'the singing process' and 'manner [of singing unintelligible words]' which not only demand wit (sharp mind, intelligence) but oral dexterity (Andrade 1993, 72). Thus its performance demands great agility in the articulation of verses, which function much as a 'tongue twister' (hard-to-say sentences or phrases spoken rapidly and repeatedly, as in the contemporary duo Beija-Flor e Vem-Vem's 'O cachorro e a cadela' [The Dog and the Bitch]). Ayala has also pointed to the free transit of verses and melodies across more than one dance, music and song manifestation as evidence of a cultural approach that regards borders as permeable (Ayala 2000, 10). This fact had already been perceived by Gustavo Barroso (*O sertão e o mundo*, 1923, quoted in Almeida 1942, 168), who denounced the distorted appropriation of the *coco praieiro* (cocos from the beach) songs in the Carnival of Rio de Janeiro.

Embolada can be found as an oral production in live performance or printed in pamphlets. The stanzas, in syllabic metrics (in which lines are controlled by the number of syllables), are sung in a declamatory way at a high tempo. Fixed lines can be included, especially in the refrain, which is peculiar to each *embolada*. The verse structure is varied (lines of seven, eight, ten syllables) and has abundant rhymes, but there is a predominance of *redondilha* (a line of five or seven syllables). Themes are wide-ranging and refer to daily life or even to historical facts. In the former case, there is a wider choice of themes, and humor becomes a highlight. The *emboladores* are accompanied by the tambourine and an instrument called the *ganzá* (a cylindrical percussion instrument filled with seeds). Performers need to be very quick-witted in order to produce the lines of the song, which also often include nonsensical or hard-to-say phrases and vocal 'pranks' to entertain the listeners. The performance is characterized by a heated dispute between the protagonists, who alternate around the refrain, which both of them sing. In an alternative form, one *embolador* sings the verses alone, while his partner sings the refrain, as a 'response.'

The *embolada* style first began to appear in commercial recordings via the compositions of the musician-poet João Pernambuco (1883–1947), author of several *emboladas* and considered one of those responsible for the diffusion of the genre in the south-east of Brazil. Among other pieces, he composed 'Seu Coitinho pegue o boi' ([Mr Coitinho Catches the Ox] recorded by Patricio Teixeira for Odeon in 1926), and made arrangements of several traditional items, such as 'Meu noivado' (My Engagement), 'Perigando' (In Danger, 1930) and 'ABC' (all recorded by Jaracara [José Luis Rodrigues Calazans] in 1930). Before João Pernambuco, that is, until the 1920s, the process of unintelligible singing (*cantar embolado*) had been inserted into the first recorded versions of the old song/dance style known as *lundu* (e.g., 'Bolimbolacho,' recorded by Eduardo das Neves in 1908).

In the 1950s the singer Jackson do Pandeiro (the nickname of José Gomes Filho, 1919–82) played an important role in the media in both the north-east and south-east, making several northeastern musical genres better known (among which was the *coco*), and in the process revealing himself as a great tambourine virtuoso. His inventiveness always appeared to be open to a free communion with other genres that were in fashion in the major cities. By the turn of the twentieth century e*mbolada* was very much in fashion, presented by well-known protagonists in public squares and auditoriums as well as in the media. Striking examples are the duos Castanha & Caju and, Beija-Flor e Vem-Vem. Also noteworthy are the daring experiments by Chico Science and Nação Zumbi (1990s) into interactions between Brazilian musical traditions and different cultural tendencies, including the amalgamation of songs with an *embolada* cadence and rap.

Fandango

The *fandango* is a dance of Spanish (and possibly Moorish) origins, popular in Europe in the eighteenth century as a courtship dance and also a song style. In Spain, it was a couple dance in 3/4 or 6/8 time, in which the male and female teased and pursued each other. It was exported to the Americas in the 1700s. In colonial times it was subject to censure by the Church and Crown for its supposed lewdness: in the 1730s the bishop of Cartagena (in modern Colombia, on its Caribbean coast) banned *fandangos* for the 'inconveniences and sins' which originated in 'such dishonest diversions' (Wade 1993, 279) and in 1776 they were prohibited by the Viceroy of Río de la Plata (roughly, modern Argentina, Uruguay, Paraguay and Bolivia). It is not clear what form the dances took at this time, but in Cartagena, they may have been performed by a circle of dancers, whirling around a core of drummers and hand-clapping singers (Bensusan 1984). *Fandangos* were clearly popular among the lower classes, which in Cartagena, Buenos Aires and Montevideo would have been home to significant numbers of African and African-descended slaves and freed blacks.

For late nineteenth-century Cartagena, there are descriptions of *fandangos* as events, rather than as a style: they were 'nocturnal civic processions' with carnival-style floats, a music band, 'African drums' and women singing and clapping. *Fandango* associations, sponsored by the elite families, organized these processions (González Henríquez 1987; Wade 2000, 54). Although *fandango* might still have been seen as plebeian and even morally dubious, regional elites were at this time sponsoring popular musical forms as part of a populist form of political control and the building of regional and national identities. At this time, the history of *fandango* becomes inextricably linked to that of *porro*, a genre from the Caribbean coastal region of Colombia. *Fandango* became a key element in the repertoire of wind bands, which were playing European, but also local, styles of music, to accompany festivals (Fortich Díaz 1994; Wade 2000, 58). In the twentieth century, as the popular jazz-band format spread over the Americas, Colombian ensembles picked up *porros*, *fandangos* and *cumbias* and began to popularize them. *Fandango* became part of the repertoire of key bandleaders such as Lucho Bermúdez, Pacho Galán and, especially, Pedro Laza. Musically, a *porro* and a *fandango* were similar in the use of trumpets, saxes and clarinet interweaving short riffs, with a clarinet taking solo parts, on a steady 2/4 rhythm driven by a scraper, maracas and/or cow-bell playing a steady rhythmic cell (crochet, two quavers, crochet, two quavers), but the *fandango* was more rapid (around 250 bpm compared to *porro*'s 180).

The *fandango* was a lesser cousin of the *porro* in terms of popularity, possibly because its rapid rhythm was less comfortable for couple dancing, and like the *porro* was eclipsed from the 1960s by the *cumbia* which became internationally popular. However, as late as 1983, Jose Arroyo, better known as a *salsa* artist, covered Clímaco Sarmiento's *fandango* hit 'El conejo' (The Rabbit).

PETER WADE

Fandango (Brazil)

Fandango denotes two types of dance events in different areas of Brazil: a particular kind of ball typical of the coastal areas of the states of Paraná and São Paulo, and any popular ball in the state of Rio Grande do Sul.

The first practice is related to what is known as *caiçara* culture (Setti 1985). *Caiçara* is a Portuguese term used to denote the people of rural, coastal areas of Paraná and São Paulo states. In these areas, where fishing and plant foraging are the main economic activities, *fandangos* are important leisure-time events. The *fandango* is practiced as a sequence of dances, called *marcas* or *modas*. These are associated with particular regions and bear specific names, such as *anu* (cuckoo), *andorinha* (swallow), *marinheiro* (sailor) and *chamarrita* or *querumana* (names of musical genres) (Martins 2006). A sequence is classified either as a *bailado*, where any couple in attendance may dance, or a *batido*, in which only some couples may dance, often older couples or people linked with the organization of the dance. The couples dance specific choreographies, embraced, in a circular pattern. A prominent feature of the *batido* is that the men dance in wooden clogs, achieving a percussive effect as the clogs strike the wooden floor.

The *fandango caiçara* is accompanied by three instruments: the *viola fandangueira* (a five- or six-string acoustic guitar), the *rabeca* (a bowed lute with three or four strings) and the *adufe* or *adufo* (a circular, two-headed frame drum). An important musical element is the dialogue between the rhythmic patterns of the wood clogs rendered during the dance and the *rabeca* (Gramani 2003; Marchi, Sanger and Correa 2002).

In the state of Rio Grande do Sul, the term *fandango* has a broader meaning, in that it is a generic term denoting any popular ball. This is an older sense of the term, originating in the nineteenth century, when it denoted any popular ball for white people (as compared to *lundu*, which denoted any ball for black people). The typical music of Rio Grande do Sul, known as *música gauchesca* or *música gaúcha* ('gaucho' or cowboy music), predominates in *fandangos* of this region, at which many different local dances may be practiced, such as *xote, chamamé* and *bugio*. The musical accompaniment is played by an ensemble including acoustic guitars, frame drum and *gaita*, a kind of accordion (Lucas 2000).

The use of the term *fandango* to denote any popular ball is similar to the way it is commonly used in Hispanic America. However, Brazilian *fandangos* are different from those typical of Hispanic America. Some similarities exist in choreography, which may be attributed to common European origins, but the musical elements are different. For example, the Spanish *fandango* has a ternary beat, whereas the *fandango caiçara* is binary and the *gaúcho* includes both binary (e.g., *bugio*) and ternary (e.g., *chamamé*) dances.

In the 1990s an interest in *fandango caiçara* arose among the young musicians of the independent musical scene in the states of Paraná and São Paulo. *Fandango* elements (percussion with wooden clogs, for example) were mixed with an aesthetic of pop, rock or *MPB*, with the aim of stamping their works with a mark of authenticity, a reflection of the fact that *fandango* is widely seen as the traditional musical practice of rural people. This had continued to be important for many musicians interested in demonstrating 'Brazilianness' in an increasingly global music market.

ALLAN DE PAULA OLIVEIRA

Festejo

The *festejo* is a music and dance genre from coastal Peru, predominantly associated with populations of African descent. The name is derived from the Spanish verb *festejar*, which means 'to celebrate,' and for many Peruvians its lively tempo and vigorous choreography have come to symbolize the spirit of cultural resistance of the Afro-Peruvian community. The contemporary form of *festejo* began to take shape as part of the Afro-Peruvian music and dance revival that occurred between the 1950s and the 1970s. During this time period, Afro-Peruvian musicians and intellectuals sought to reconstruct the genre using a number of surviving song fragments that were no longer actively performed but that had been preserved orally within families of Afro-Peruvian musicians. Many of these fragments dated back to the early and middle parts of the nineteenth century when they were likely performed at a variety of festive events. The lyrics generally described celebratory occasions while at the same time commenting on the hardships of various types of agricultural work, thus suggesting a possible connection to one or more musical genres associated with slave and marginal Afro-Peruvian populations. Nevertheless, because much of the contextual information associated with these songs, such as types of accompanying rhythmic patterns or use of particular instrumentation, was unknown by the turn of the twentieth century, it is difficult to ascertain whether or not these various fragments originally were part of a single, clearly defined genre.

Between the 1950s and the 1970s Afro-Peruvian musicians consolidated these fragments into an increasingly clearly defined genre, adding to the repertoire new compositions that continued to reference themes associated with celebration, various types of agricultural work and slavery. Guitar and percussion patterns became standardized as a series of melodic, harmonic and rhythmic ostinatos. The percussion section was also expanded from *cajón* (box drum), *cajita* (a small box with a hinged lid, used as a percussion instrument) and *quijada de burro* (jawbone) to include a number of nontraditional instruments such as *conga* drums, bongos and cowbells. Dance movements that were described by Afro-Peruvian elders as being free and unrehearsed prior to the revival were transformed into group choreographies for male-female couples that featured alternating pelvic and upper torso movements along with the vigorous shaking of hips and shoulders as markers of the joy and exuberance associated with the genre. Much of this standardization was tied to the emergence of professional dance troupes such as Peru Negro, who specialized exclusively in Afro-Peruvian genres and made the *festejo* their signature dance. These groups popularized Afro-Peruvian music and genres with non-Afro-Peruvian audiences in Lima and the coastal region more generally through live performances, audio recordings and live radio and television appearances. This popularization was paralleled by the institutionalization of Afro-Peruvian music and dance as a regional form of folklore, which led many of the musicians from these professional groups to become teachers at a number of private and state-sponsored schools and dance academies.

Since the revival, the *festejo* has become characterized by a quick compound duple rhythmic feel marked by the *cajón* with accents on the fifth and tenth eighth notes of a twelve eighth-note cycle. The guitar ostinatos feature cross-rhythmic relationships with the bass line outlining a simple triple meter that moves through the first, third, fourth and fifth scale degree, while the upper strings perform arpeggios that outline a I-IV-V chord progression. Vocal melodic lines tend to exploit the same cross-relationship between simple triple and compound duple meters, often oscillating between them. Along with the *landó*, the *festejo* remains one of the main musical genres associated with the Afro-Peruvian community and a key symbol of Afro-Peruvian identity.

Since the early 1990s musicians have continued to transform the genre, while at the same time finding ways of maintaining connections to the earlier repertoire. Artists including Eva Ayllón, Andrés Soto, Félix Casaverde and Susana Baca have expanded the harmonic language of the *festejo* to include ninth and eleventh dominant chords, and at times to experiment with chord progressions in minor keys. Newer *festejos* have begun to move away from themes specifically dealing with rural life and the experience of slavery, but many still continue to be used more broadly as anthems of Afro-Peruvian cultural identity, as is the case with compositions by artists such as Roberto Arguedas and Juan Medrano Cotito. The *festejo* has also been the preferred genre for artists seeking to cross over into world beat fusion, rock, electronica and jazz such as Miki Gonzalez, Peru Jazz, Gabriel Alegría and his Afro-Peruvian Sextet and Novalima.

JAVIER F. LEÓN

Filin

Filin is a jazz-influenced style of Latin American *bolero* composition and performance which flourished in Cuba in the late 1940s and was influential on the new genre of *nueva trova*. *Filin* originated during jam sessions ('descargas') in private homes in mid-1940s Havana, Cuba's capital city. The participants at these formative sessions shared a passion for US jazz, particularly the music of Al Cooper, Chick Webb, Ella Fitzgerald, Cab Calloway, Sarah Vaughan and Nat King Cole. At these meetings, the musicians would both improvise and write new tunes to be performed in a jazz combo style (Acosta 2001). *Filin* moved out of private homes when the ensemble Conjunto Casino included some *filin* numbers in dance hall performances. Soon after, artists in Mexico and South America recorded *filin* songs, for example, Chilean Lucho Gatica's 'Contigo en la distancia' (With You in the Distance, 1953) and 'La gloria eres tú' (The Glory Is You, 1955). This new style of songwriting and performing came to be known by the English word 'feeling,' 'feelin' or 'filin,' because it was considered extremely expressive, full of a bohemian sentiment.

In terms of compositional style, *filin* proposed a new approach to *bolero* melody and harmony. *Filin* melodies include extensive use of chromaticism and wide melodic leaps, such as minor sevenths, and arpeggiated diminished and major seventh chords. *Filin* expanded the harmonic language of earlier *boleros* by adopting the harmonies and voicings of contemporary US jazz: tonic chords often incorporated major sevenths and ninths, and dominant chords may feature major and minor ninths, augmented elevenths and thirteenths (Giro 2001). The most important *filin* songwriters are César Portillo de la Luz (b. 1922) ('Contigo en la Distancia,' 1946, 'Tú, mi dlirio' [You, My Delirium, 1954]), José Antonio Méndez (1927–89) ('La gloria eres tú,' 1946), Frank Domínguez (b. 1927) ('Tú me acostumbraste' [You Made Me Accustomed], 1955) and Marta Valdés (b. 1934) ('Tú no sospechas' [You Don't Suspect], 1958).

Guitar-playing *filineros*, such as Méndez, Portillo de la Luz and Ñico Rojas, speak of having a self-conscious interest in harmonic innovation that was to expand traditional guitar accompaniments (Contreras 1989). None of them claims to have been influenced by each other, but rather to have been amazed to discover that others were experimenting with similar harmonies. Their use of the guitar laid down the foundation for the late 1960s political-song style known as *nueva trova*.

Lyrically, *filin* was also a departure from earlier forms of *bolero*. For the most part, *filin* composers wrote their own words, and they tried to make lyrics more realistic and colloquial. They preferred everyday words, rather than the modernistic poetry of early *boleros* and Lara's fondness for somewhat convoluted metaphors (Évora 2001). *Filin* composer José Antonio Méndez said that the genre 'wasn't about subtlety, but about saying something; if you said something, it already had *filin*' (Restrepo Duque 1992, 168). *Filin* songs often celebrate the joy that love brings, rather than unrequited love or the bitterness of parting.

Filin also featured a new attitude toward singing and instrumental performance. *Filin* singing is often described as 'saying' (*decir*) instead of 'singing' (*cantar*), a style that strongly contrasts both with the bel canto delivery that dominated *bolero* singing in the 1920s through the 1930s and with the nasal tone of Cuban *son* singers (Acosta 2001). Many *filineros* had a well-documented disinterest in conventional notions of perfection or even beauty in the voice and musical accompaniment (see the first-person accounts in Contreras 1989). Sentiment and expressiveness was the primary goal. Musicians were expected to play with rubato and sing differently each time they performed a piece (Giro 2001). As a performance style, *filin* could be used to sing and play any type of popular song, from traditional *boleros* to *guajiras*.

Filin songs were more successful when recorded by professional singers than in the composers' own versions. As a result, the founding members of the movement never became hugely popular. In the early years, the only *filin* performers who appeared on Cuban TV and toured internationally were the members of the vocal quartet Las D'Aida, formed by Elena Burke, Moraima Secada and the sisters Omara and Haydée Portuondo. Las D'Aida debuted in 1952, and was one of many Cuban vocal ensembles that followed the style of contemporary US quartets. Of the members of D'Aida, Omara Portuondo and Elena Burke went on to have successful solo careers in the island. Portuondo participated in Ry Cooder's Grammy-winning album *Buena Vista Social Club*, and Elena Burke (a.k.a. 'Señora Sentimiento') was for decades the most popular *filin* singer in Cuba.

The *filin* singer who achieved the greatest international success is Cuban Olga Guillot (1922–2010). Despite being recognized in the Spanish-speaking world as 'The Queen of *Bolero*,' Guillot is absent from most Cuban *bolero* histories because she defected in 1961, heading first to Venezuela, then Mexico and finally Miami, Florida. Guillot took the concept of *filin* performance in a new direction. She dramatized songs in theatrical fashion, which included sobbing, sighing and screaming in order to express the content of the song. Her style was deeply influential on singers from *bolero moderno* star Lucho Gatica to her clearest follower, singer La Lupe (1939–92).

Early ideologues of the 1959 Revolution, most notably Lázaro Peña, supported *filin* because it seemed to represent a return to the pre-Batista national roots of *vieja trova*. After the Revolution, however, government support for *filin* was short-lived. By the mid-1960s the lack of engagement with political issues in *filin* lyrics was being seen by the authorities as a shortcoming; even worse, *filin* reminded critics of jazz, an unmistakable symbol of US influence. The government's position regarding jazz eventually changed when officials learned that it was being produced in other socialist countries, such as Poland (Díaz Ayala 1993). In the mid-1960s a younger generation of musicians rejected *filin* as an 'evasive' form of popular music (Giro 2001). This, coupled with the lack of governmental support, led to *filin*'s decline in the late 1960s (Díaz Ayala 1993).

Folclore (in Argentina)

Folclore (also spelled Folklore) is the label attached in the media, in popular parlance, and since the late 1990s also in academic discourse, to musics based on the traditional practices of the rural *criollos* or *gauchos* (descendants of Spanish settlers, often with Indian and/or black blood input) of Argentina, but produced in urban centers by professionals and distributed mainly through the national media.

Issues of Definition

Although *folclore* designates a phenomenon largely common to countries in South America's Southern

Cone (Chile, Argentina, Uruguay, Paraguay and Southern Brazil), the various national cultural structures and communication networks have made it difficult to describe it as a whole in its full geographical spread. The unending arguments about a proper definition of the term, and about what it includes or excludes, have always had a strong ideological component – discussions are invariably supported by a nationalistic substratum, but come to widely diverging conclusions depending on the speaker's affiliation with the 'conservative' right or the 'progressive' left. The term's synonyms usually betray one of those two political outlooks: *nativismo* ('nativism'), *tradicionalismo* ('traditionalism') and *música autóctona* ('autochtonous music') belong to the first, more exclusionary approach, and *proyección folklórica* (a term introduced in 1969 by the scholar Augusto Raúl Cortázar to identify 'manifestations produced outside the geographic and cultural environment' of folklore, 'designed for a general, mostly urban, public and transmitted by institutionalized and mechanized media' [(1977, 77]) and *música de raíz folklórica* ('folkloric roots music') belong to the second. In both *proyección folklórica* and *música de raíz*, the accent is more on the popular roots of the music and less on its locality. The former set of terms tends to reject modernizing, urban and non-Argentinian influences and developments, whereas the latter two favor the view of a pan-Latin-American (or even Third-World) patrimony and often include 'urban folklore,' such as *cuarteto* and *tango*. The present article, however, will be confined to the heritage of the rural Argentinian tradition.

The rare academic discussions of *folclore* in the second half of the twentieth century used to emphasize the difference between the 'authentic' rural tradition, for which the term '*folclore*' was reserved, and its 'commercial' variants, but new conceptions of tradition, gaining strength since the 1980s, have made such a hard-and-fast distinction obsolete. *Folclore* in the twentieth and twenty-first centuries may be best understood as a 'field' in Bourdieu's sense (1979): a dynamic structure including (1) a repertory that is open but subject to certain rules for inclusion, exclusion and transformation, (2) a number of creators (composers, lyric-writers and performers), (3) a group of producers, (4) a consuming public and (5) a distribution network that coincides in part with the networks of the national and international music industry. It has its own internal power structure (with attendant struggles), its own dialect and its own set of practices, used to legitimize products, people and institutions. Of course, given the dual nature of the field (traditional and modern values), uncertainty and disagreements about its limits are inevitable.

Historical Outline

The term 'folclore' has been popularly applied to this field from its very inception in the 1930s and 1940s. Previously (since the late 1880s) it had designated anonymous, traditional customs and artistic objects, as well as the discipline that gathered and studied them. Throughout this earlier period, *criolla* (Creole), *tradicional* (traditional), *gauchesca* (of the *gauchos*), *nativa* (native) and *nacional* (national) were the preferred adjectives used in reference to urban presentations and adaptations of the rural heritage. During the eighteenth and nineteenth centuries, urban culture, under the influence of the ideologies of progress and Europeanization, had gradually become estranged from that of the hinterland. Paradoxically, it was the European ideology of cultural nationalism that belatedly sparked the interest of urban dwellers for the music of the rural *gauchos* (cowboys and, more generally, peasants). A first wave followed on the heels of the immensely popular *Martín Fierro* by José Hernández, a long poem that idealized the *gaucho*'s customs and wisdom (68,000 copies sold between 1873 and 1879, when the total population of Argentina was under 2 million, largely illiterate). Traveling circuses as well as stable theaters began to highlight the performances of singers in fancy *gaucho*-like attire, who rendered *zambas, milongas, estilos, rancheras* and other genres from the southern pampas to the accompaniment of one or more guitars. The inclusion of these songs and dances within pantomimes and spoken plays (*zarzuelas, sainetes, criollos*) induced many authors to write their own songs in imitation of the traditional ones. At this time, collectors and composers began publishing anthologies of 'national songs' (Ventura Lynch 1883; Antonio Podestá 1896), as well as sheet music editions of new songs cast in traditional molds. The dozen or so respectable publishing firms in Buenos Aires at the start of the twentieth century (e.g., F. Núñez, Casa Breyer) were complemented by a significant number of mere printing shops, of which Ortelli Hnos. is a good example. Songwriters had their works printed by these shops, retaining the copyright. The *gaucho* thus invented was rather one-dimensional and embodied the romantic-nationalist reaction against modernization and the huge wave of immigration that transformed Argentina's life between the 1870s and 1914. The challenge posed by these new forces was answered by the foundation of *centros criollos* (Creole centers) – clubs or associations where the urban lower bourgeoisie learned to sing and dance traditional music, thus absorbing *argentinidad* ('Argentinian-ness').

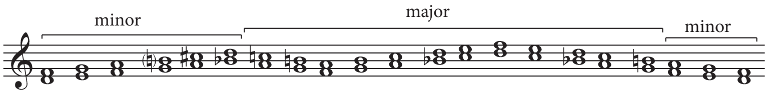
After a short-lived downturn of the nationalist mood during World War I, the shows and triumphant tours of Andrés Chazarreta's company of musicians and dancers from Santiago del Estero (beginning with his 1921 appearance in Buenos Aires) set the stage for the emergence of a *folclore* field. To a large extent, they also determined the musical traits of the folkloric genres as they would be cultivated and expanded later on: the *santiagueño* versions became standard, ignoring the vast diversity of previous local traditions. Only the *criollo* or *campero* (country) repertoire of the southern pampas, by this time assiduously adopted by composers, soloists and duos who cultivated the nascent *típico* (*tango*, *milonga* and waltz) repertoire, represented a different strain of *folclore* until the arrival in Buenos Aires, in the 1930s and 1940s, of groups from Cuyo and from Mesopotamia (westcentral and northeastern Argentina, respectively), although the latter performed almost exclusively to lower classes on the outskirts of the city. Beginning in the restricted circuit of *centros criollos*, these new groups gradually acquired a wider audience through recitals in theaters, radio performances and recordings, two media that by this time were reaching almost all the urban population. By the 1940s, within a media scene dominated by *tango*, *folclore* had acquired a national dimension and a mass of fans. Foremost among the host of artists who contributed to and enjoyed this success (Antonio Tormo, Margarita Palacios, Hilario Cuadros, Julio Argentino Jerez, Eduardo Falú and the Ábalos Brothers) was Atahualpa Yupanqui, whose songs quickly became classics. A long-time affiliate of the Communist Party, he included in his lyrics, in addition to the traditional celebration of local landscape and regional heritage, strong denunciations of poverty and inequality, which were to spark off an important line of development within *folclore*. His life as an errant laborer had afforded him a direct experience of traditional musics of different Argentinian regions; his pieces were widely recognized as 'authentic.'

By the late 1950s the stage was set for a *folclore* 'boom.' The younger generations seized upon the fare offered to them, through TV shows, recordings and massive festivals, by a host of new quartets (four singers in *gaucho* attire, accompanying themselves on three guitars and *bombo*) and soloists. Although the northern province of Salta was at the time the main site from which *folclore* artists were recruited, the recording studios in Buenos Aires and the festivals in Córdoba Province were the centers of irradiation; control over programming and budget in these was soon assumed in most cases by people linked to the recording industry and mass media (most notably, Julio Márbiz at the festival in the town of Cosquín). The old, traditional *centros criollos* were replaced by more informal *peñas folklóricas* (folklore bars or pubs), catering mostly to a youth whose musical tastes embraced both international pop and national *folclore* (*tango* was definitely 'not cool'). Festivals and TV shows instituted country-wide competition networks for new performers and songs, with a hierarchy of local, regional and national events. Among the most popular groups were Los Fronterizos, Los Chalchaleros, Los Cantores del Alba and Los de Salta (all of them from Salta), Los Tucu Tucu from Tucumán and Los Cantores de Quilla Huasi (from different provinces). Among soloists may be mentioned Eduardo Falú and Horacio Guarany (singers/guitarists) Ramona Galarza (singer), Ariel Ramírez (pianist) and Jaime Torres (*charango* player). In the early and mid-1960s, a new crop of solo singers joined them; Daniel Toro, Jorge Cafrune, César Isella and Mercedes Sosa were the most popular. The new groups at this time were more 'modern': dressed in jeans and sweaters, Los Huanca Hua, Grupo Vocal Argentino, Los Trovadores, Las Voces Blancas, Cuarteto Zupay and Dúo Salteño incorporated elements of international youth culture and more sophisticated arrangements. At this time a political split became apparent in the field. The left (including the *nuevo cancionero* led by the Mendoza poet Armando Tejada Gómez) took up Yupanqui's legacy of commitment to indigenist or populist causes, while the right wing, exemplified by the solo singer Roberto Rimoldi Fraga, defended the conservative's slogan 'fatherland, family and tradition.' The latter found favor with successive military regimes, while the former often suffered censure, blacklisting and persecution.

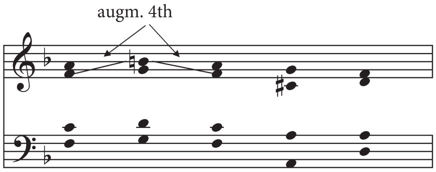
Folclore entered a stage of decline in the 1970s. This was due partly to the repressive military governments, which looked askance at the attitudes and ideologies of the rebellious younger generation who sustained *nuevo cancionero* and similar repertoires. But the main reasons for this decadence should be sought in internal factors and market conditions. Dedicated radio and TV programs went off the air, and very few new recordings were issued. Many composers and performers had to go abroad, both to make a living and to safeguard their lives. Only a few, like the *litoraleños* Teresa Parodi and Antonio Tarragó Ros, kept the *folclore* scene alive. Many youngsters shifted their allegiance to Argentinian rock and international pop music. The most important festivals were still held yearly, but their importance within the music business and their status as national symbols were strongly diminished. To counteract the loss of revenue, many of them started diversifying their musical fare; others simply folded. The 1990s witnessed a revival, which has continued to some extent into the twenty-first century. The younger generations (notably teenagers) took up *chacarera*, one of the western Argentinian genres, as a symbol of identity. They recovered the dance dimension of music that had been treated during the boom years mainly as songs, and improvised new choreographies or reproduced the traditional ones in discotheques, where they shared time with rock and other pop music. Audiences began to return to festivals in numbers and the national media again promoted and broadcast Cosquín, Jesús María and the like. Peteco Carabajal and Soledad Pastorutti have been key figures in the *chacarera* revival. 'Chaqueño' Palavecino has extended it both in terms of his wider gamut of genres and of his tremendous popularity among all age groups. Another facet of the revival is 'romantic folklore' (Los Nocheros, Los Guaranys, Jorge Rojas), which may be understood as *fusión* between *folclore* and *bolero*. The frankly erotic lyrics and genre mixtures performed by these groups (traditionalists have called them 'lingerie *folclore*') also appeal to a wide variety of audiences from middle- and low-income strata. (For a fuller account of the origins, regional variants and history of *folclore,* see Waisman and Restiffo 2005.)

Description

The only firm constants between rural tradition and modern *folclore* seem to reside in the rhythmic patterns associated with the different species that the genre encompasses. In order of decreasing importance, we may include other earmarks: formal structures, instrumentation, vocal styles, topics and vocabulary of the lyrics, choreography and the performers' costumes. From its protean rural origins, several species crystallized during the first half of the twentieth century. (In common Argentine parlance *folclore* as a whole is usually referred to as a 'genre,' and the different types of songs and dances within it are commonly called 'species' – rather than 'subgenres,' as is common elsewhere.) First and foremost is the *zamba*, the standard bearer of the genre, considered representative of a nationwide ambit. *Chacarera, cueca, litoraleña, chamamé*, *milonga*, *vidala* and *gato* are other species with wide but less universal appeal. *Carnavalito*, *huayno*, *baguala*, *chaya*, *bailecito* (northwest), *rasguido doble* (littoral – the River Plate area in the northeastern part of the country, bordering with Uruguay), *tonada*, *estilo* and *valsecito* are closely tied in the *folclórico* imaginary to particular regions, and have been favored mainly though not exclusively by local composers. Additionally, there are several dozen folk genres – sung and, especially, danced – that are still heard in their traditional melodies, mostly in folk-dancing academies and companies. These are mostly genres with only one exemplar: *La firmeza*, *El cuando*, *El escondido*, *El palito*, *El pericón*, *La media caña*, etc. Some species that were extremely popular in the nineteenth century, such as the *cielito*, have scarcely been tapped by modern *folclore*. The formal schemes of the different species are varied, but a common disposition comprises two or three sections, each one constituted by several stanzas followed by a refrain. Rhythmic patterns are also diverse, but many of them are based on hemiola-related devices, both simultaneous and successive. The common practice of singing in parallel thirds is congruent with the prevailing ending of melodic phrases on the third degree of the scale (5-4-3 for the top voice, 3-2-1 for the lower voice). A large proportion of the repertoire (excluding the northeastern species) relies on what Carlos Vega has called 'bi-modality,' assuming the double scales in parallel thirds to derive from standard European major and minor modes (Example 1). Although this phenomenon may be more simply understood as a particular variant of the first ecclesiastical mode (Dorian) current in early-modern Spain, Vega's terminology is widely employed. Twentieth-century arrangements intensively exploit the augmented-fourth relationships produced by alternation between the I and II degrees in the major segment of the scale (Example 2).



Example 1: 'Bi-modality' according to Carlos Vega (1998 [1944])



Example 2: One common harmonic scheme in 'bi-modality'

The one instrument that functions as a steady feature of *folclore* is the acoustic guitar (though fusions with rock usually substitute the electric instrument). Only for *huaynos*, *baguala* and other species of the extreme north-west is the *charango* (small plucked chordophone made from an armadillo shell) considered an adequate replacement for the guitar. Harp and *bandoneón* (a type of concertina), still common nationwide in the early decades of the twentieth century, have become unusual in *folclore*. A single violin is a traditional addition for *chacareras* that modern *folclore* has highlighted, and a double bass is often included in versions of themes from the *litoral*. Northwestern music makes use of the *quena* (notched vertical flute) and other aerophones of indigenous parentage, and the species from the *litoral* feature prominent use of *verdulera* (a type of concertina) or accordion. Pieces derived from dance music (though not often danced nowadays) incorporate percussion: the *bombo* (two-headed long cylindrical drum) is by far the most frequent, but the *caja* (flat snare drum) is often substituted for it in northwestern music. The piano, frequently used in the first half of the twentieth century, dropped out of most ensembles in the heyday of the *folclore* 'boom.' 'Modernizing' ensembles, often with college-educated players, include prominent use of an orchestral flute and/or a cello, as well as a wealth of Latin-American percussion instruments such as the Peruvian *cajón*; fusions with rock and jazz include drum sets, saxophones and all sorts of electronic and amplified instruments, such as keyboards and bass guitars.

In the first decades of the twentieth century the vocal duo accompanied by several guitars was a widespread type of ensemble, offering both *típico* and *folklórico* repertoire; most famous in the 1910s were the duos of Carlos Gardel and José Razzano and Francisco Brancatti and Léon Lara, followed in the 1920s by that of Agustin Magaldi and Pedro Noda. In the ensuing decades larger ensembles became common (Los Hermanos Ábalos, La Tropilla de Huachi Pampa), but the standard since the 'boom' years has been the vocal quartet with guitars and *bombo* accompaniment (Los Chalchaleros, Los Fronterizos, Los Cantores de Quilla Huasi). The more 'progressive' trends initially favored *a cappella* groups with frequent vocal imitations of instrumental sounds or scat-type singing (Los Huanca Hua, Grupo Vocal Argentino, Buenos Aires 8), but soon came to include all sorts of vocal and instrumental combinations. Concurrently, during the entire history of *folclore* there have been well-known soloists, many of them also poets and/or composers, who accompany themselves on the guitar (Atahualpa Yupanqui, Eduardo Falú, Horacio Guarany); others function only as singers (Antonio Tormo, Mercedes Sosa, Chaqueño Palavecino). In the 1990s groups and soloists such as the violinist-singer-composer Peteco Carabajal often incorporated some of the perks of pop shows: choruses, movement, lighting effects. The older type of vocal quartet, with a new sensual *romántico* touch, has been continued in the first decade of the twenty-first century by the wildly popular Los Nocheros.

Arrangements in the *folclore* idiom in the first part of the twentieth century were fairly standard: the tendency was for the melody in parallel thirds, with straightforward guitar strumming and percussion ostinatos as accompaniment and short instrumental introductions and interludes provided by a solo instrument to the same accompaniment. The quartets of the boom often duplicated the melody at the higher octave or sixth and introduced *solo-tutti* effects within a limited variety of vocal scoring. Soon afterward, arranger-composers such as 'Chango' Farías Gómez or 'Cuchi' Leguizamón became central figures. Vocal groups in the 1960s (Los Trovadores, Las Voces Blancas, Los Andariegos, Cuarteto Vocal Zupay) relied on the resources of choral academic composition and on more complex harmonies, sometimes in a barbershop quartet configuration. A delicate use of harsh dissonances, a thorough exploitation of the falsetto register and extremely slow tempos to highlight the resulting sonorities were the trademarks of the Dúo Salteño. Instrumental virtuoso display and jazz-like improvisation were slowly incorporated, featuring the guitar in the 1960s (Tres Para el Folclore), and other instruments in the 1980s (Lito Vitale on the keyboards, Dino Saluzzi in *bandoneón*). The *litoraleña* (northeastern) segment, however, has mostly retained the simple harmonies and arrangements of earlier times, in spite of the emergence of youthful new figures in the 1980s (Antonio Tarragó Ros, Teresa Parodi).

The lyrics of *folclore* are varied in topic and language. They include a large proportion of love poetry (which was the almost exclusive concern of the previous rural tradition), a nearly equal share of verses extolling the beauties of local landscape (often expressing the nostalgia of the migrant worker for his native soil) and quite a few poems celebrating the virtues of traditional rural trades: carpenters, quarry workers, woodsmen, cowboys, teachers, etc. References to actual people are fairly common, be they historical personalities (here the ideological slant – right or left – is usually conspicuous), local figures or simply the author's friends and companions in wine-drinking. The more traditional lyrics use the language and syntax invented by *gauchesca* literature (poems and dramas describing rural customs and imitating the speech habits of the *gaucho*) in the decades around 1900 on the basis of popular rural language; this may be spiced up by the introduction of local expressions, words in Quechua or occasional references to current slang. Since the 1940s, however, several poets, such as Manuel J. Castilla, Jaime Dávalos (from the neo-romantic and nationalist '*generación del '40*') or Armando Tejada Gómez (influenced by Chilean poet Pablo Neruda and the leftist avant-garde), adopted a more 'literary' manner, highly metaphorical, often relying on a more complex syntax and a sophisticated vocabulary. Strangely enough, this has not stopped their verses from attaining widespread popularity. 'Protest' or *testimonial* 'lyrics have always been a prominent strain within *folclore*, embracing all the popular causes of the left: the poor, the migrants, indigenous people and the defense of national patrimony against imperialism, of human against commercial values and of nature against its senseless exploitation. Mention must be made of the illuminating and witty parodies of *folclore* produced by Les Luthiers, the best-known Argentinian musico-comic ensemble: by over-emphasis and by recourse to the absurd, they unmask some of the ideological assumptions undergirding the idealization of *folclore* as 'the essence of the nation.'

Folclore is practiced in multiple ways. In small towns and rural areas, convivial gatherings often include '*guitarreadas*' (roughly, 'guitar parties'), where local traditions, local composition and media-circulated repertoire coexist. Urban fans get together to sing, either in private homes or in *peñas,* the dedicated pubs, where anyone may pick up a guitar provided by the house, and sing, and which may also offer shows by professionals, who perform as well in auditoriums and clubs. Many large, open-air, weeklong festivals are held every summer in different locations, featuring famous artists. Some of them (e.g., Cosquín) have national networks of sub-festivals where new talent is scouted. International record labels have paid varying attention to this music ever since the 1920s: during the 1960s and 1970s Philips was hegemonic; since the 1990s it has been partly replaced by smaller local labels. TV and radio programs played a major role in generating the 'boom' around 1960, but their coverage was greatly reduced later on; although there are some specialized FM and cableTV stations, at the beginning of the twenty-first century the mass media do not reflect the size of the *folclore* public. Sheet music was plentifully provided by many specialized publishers until the 1960s (Breyer, Lagos), later superseded by lyrics printed as *cancioneros* (songbooks) or in fan magazines (such as *Folklore*).

Folclore in the Early Twenty-first Century

Contacts between *folclore* and other fields of popular music have multiplied, including joint projects with rock and *tango* artists. One especially celebrated example of this was León Gieco's *De Ushuaia a La Quiaca*, a four-CD set (2005) in which the rock singer performed together with more than 100 professional and amateur *folclore* musicians from around the country. The blending of elements from *folclore* with *tango*, rock and jazz idioms and instruments is known in Argentina as *fusión*. The limited media exposure that *folclore* receives in the early twenty-first century hides its persistent cultivation by an important segment of the Argentinian population. Argentine *folclore* was very popular all over Latin America and Spain in the 1960s and 1970s, with enclaves as far as Japan; in 2011 there were still a number of *folclore* groups in several distant countries, and the more celebrated contemporary Argentinian performers frequently carry out international tours. Although oral traditions have long been the subject of serious study (Vega, Aretz-Thiele), little academic attention had been paid to urbanized *folclore* before the work of scholars such as Díaz (2009), Kaliman (2003) and Sánchez (2004).

Folguedo

The term *folguedo* has been used in Brazil since the 1940s to indicate the widespread practice of collective dancing around a traditional theme, organized in a succession of parts and combining music, dance and drama (Marcondes 2003). Câmara Cascudo (2001a) defines *folguedo* as a folkloric event with lyrics, music, choreography and dramatization. Some *folguedos*, such as *reisados*, have a religious connotation and are held on sacred festivals such as Christmas, while others are secular.

The practice of *folguedos* often takes place in rural areas or among rural migrants to the cities. Reflecting this, the study of *folguedos* as folklore that took place between the 1940s and the 1980s was related to theories of the urbanization and transformation of rural zones. For many years, *folguedos* were studied from the perspective of resistance or survival – a powerful trend among Brazilian folklorists, and one that was slow to reflect changes in practice (Vilhena 1992). Beginning in the 1980s, however, *folguedos* became a research theme for social scientists, guided by new perspectives and interested in observing their internal dynamics.

Mário de Andrade (1891–1945) was the first to engage in a serious study of *folguedos*, which he called *danças dramáticas* (dramatic dances) (Andrade 1982; Cavalcanti 2004). He described some of them in the book: *reisados*, *maracatús*, *caboclinhos*, *cheganças and bumba-meu-boi*. For Andrade, *folclore* was the basis of artistic production, providing elements that it was the artist's task to rework. Andrade's ideas, which have been compared by some authors (e.g., Travassos 1997) with those of Hungarian composer Béla Bartók on the same theme, gave the impulse to the study of *folclore* in Brazil and made the *folguedos* one of its central themes.

The early history of Brazilian *folguedos* is one of a mixing of elements from Portuguese, African and indigenous traditions between the sixteenth and eighteenth centuries. By the second half of the eighteenth century there are narratives, written by travelers, in which descriptions of *folguedos* appear (Câmara Cascudo 2001b).

Within the body of *folguedos*, several common features can be discerned (Marcondes 2003; Araujo 1964). There are *folguedos* which dramatize the relationships between the kingdoms of Europe and Africa in the sixteenth and seventeenth centuries, for example the *congada,* the *moçambique* and the *maracatu*. The *congada* occurs on dates when black Brazilians pay homage to Our Lady of Rosary (October) and Saint Benedict (the Moor) (April) – or on days in the Catholic calendar called *Ciclo de Reis* (Three Kings Cycle), between 25 December and 6 January. Two other *folguedos*, *catopês* (Minas Gerais and Espírito Santo states) and *taieira* (Bahia and Alagoas), are also performed in honor of Our Lady of Rosary.

The *maracatu*, which is very common in Pernambuco, is also traditionally performed in honor of Our Lady of Rosary, but it occurs in the Carnival period as well. Other *folguedos* dramatize the encounter and the battles between Christians and Moors, as, for example, *cheganças* (Crook 2005). The *Ciclo de Reis,* cited above, is central to the *reisados*, a group of *folguedos* performed in honor of the Three Magi, of which the *folia-de-Reis* is an example (Reily 2002). C*aboclinhos*, *dança-dos-tapuias* and *torém* are among the *folguedos* that dramatize the encounter between the Portuguese and the indigenous people in Brazil.

Some *folguedos* are dramatizations centering around mythologies related to animals, such as the ox. *Bumba-meu-boi*, for example, is for many authors the most complex and important Brazilian *folguedo*, because it occurs in many areas. The common thread is the character of the ox. Found most often in rural areas in the north and north-east, *Bumba-meu-boi* occurs with variations and other names (*Boi-bumbá*, *Boi-de-mamão*) in areas of the 'middle-south' or in northeastern coastal areas (*cavalo-marinho*).

The musical elements of these *folguedos* are very diverse. Some, such as those related to African traditions (as *maracatu* or *congada*), have a predominant percussive part, using such percussion instruments as *adufe* (a little frame drum), *ganzá* (a kind of rattle) or *alfaia* (a kind of bass drum). For those that are related to Portuguese and indigenous traditions, such as *cheganças* and the *folia-de-Reis, viola* (a kind of acoustic guitar), *rabeca* (a kind of fiddle) or *pife* (a kind of flute) are commonly used.

ALLAN DE PAULA OLIVEIRA

Forró

Throughout northeastern Brazil, *forró* is considered more than a popular music genre; it is an always-present ‘state of mind’ that changes along with the two seasons of the year in the region: the rainy and bountiful one and the drought period. During the droughts, poor northeasterners often leave behind their homeland in the *sertão* (‘hinterland’) in search of better living conditions. Long before *forró* emerged as a popular music genre and was transformed into a national phenomenon by Luiz Gonzaga (1912–89) and the Rio de Janeiro-based music industry, poor northeasterners from the *sertão* carried their love of *forró* deep within them on their migrations during cyclical drought periods. Thus, it is difficult to unravel the musical and social history of *forró*, a genre that was transformed into a popular music genre in the 1940s and 1950s but that seems to have existed since much earlier.

A traditional *forró* ensemble uses only three instruments: a button or piano accordion, a triangle and a *zabumba*, which is a kind of side drum without snares that is as large as a bass drum. The *zabumba* is always played with a drumstick on the upper side and a wooden (or metal) rod that strikes the lower rim and/or drumhead. In this traditional ensemble format, sometimes the accordion is replaced with a ‘*pife*’ (‘wooden fife’) and/or a ‘*rabeca*’ (‘fiddle, violin’). The traditional form of *forró*, always referred to in the north-east and elsewhere as *pé-de-serra* (literally, ‘the foot of the mountain’), differs vastly from the modern urban, stylized, electronic variety that emerged in the 1970s and became a craze in the 1980s, even though both types occupy their respective places in the Brazilian music scene (Murphy 2006).

From the mid-twentieth century on, the term *forró* has served as an umbrella within which many rhythms and genres are classified, such as *baião*, *coco*, *rojão*, *xaxado*, *xote*, *xamego* and so on, with each of these rhythms often regarded by *forró* fans as separate subgenres or rhythms, even if some of these fail to classify as music genres *per se*. Most *forró* composers tend to choose a rhythm that corresponds with a song’s tone and tempo: a song that is slow, sentimental, sad and/or nostalgic might be set as a *baião*, *xamego* or *xote*, while a faster and happier tune would be better suited with a *coco*, *xaxado* or *rojão* arrangement. A simple review of numerous composers’ choices in naming the genre of their songs suggests that this tendency has not changed much over the years, with the exception of genre variation imposed on songwriters by the music industry (e.g., when *forró* became fashionable with Luiz Gonzaga’s *baião* recordings, and accordion players were all the rage in Brazil’s largest urban areas from the mid- to late 1940s to the early 1960s).

In terms of its musical characteristics, *forró* is a secular style from the Brazilian North-east that may be arranged for vocals, instruments or both. *Forró* music employs a particular vivacious rhythmic swing in duple meter, in which the accordion plays a central role, supported by the rhythmic work of the triangle and the *zabumba* drum. *Forró* music accompanies the homonym dance that traditionally is performed by couples. The dancers keep one arm around their partner’s waist and the other extended, ready to grasp hands with the partner or swing up and down, according to changes in the music. The movements are relaxed, casual and sensual, contributing to a joyful ambience. In the ‘modern’ setting of electronic *forró*, bands incorporate a contracted chorus line of male and female dancers – the latter usually wearing scanty clothing – adding to the musical performance a sensual, theatrical nuance. The stage dancers move athletically and tease the audience below the stage into performing the same dance movements.

Etymology

The word *forró*, which originally referred to the place where popular balls were held, was used in northeastern Brazilian magazines and newspapers beginning in the 1830s (Marcondes 1998, 301; Cascudo 1999, 412–13). There is some discrepancy between scholarly and popular versions of the term's etymology. However, both etymologies share the conviction that the word *forró* initially referred to the place where parties were held among the poorer strata, rather than the music genre *per se*. Marcondes (1998, 301) traced the origins of *forró* to a reduction of the term *forrobodó*, meaning 'fuss, feud, confusion, fight, disorder, uproar,' apparently because there was occasional violence among fans whenever *forró* music was played and danced to in the north-east of Brazil and among northeastern migrants in the south. 'Forrobodó' was also the title of a successful 1911 vaudeville theater operetta with music by Francisca Edwirges 'Chiquinha' Gonzaga (unrelated to the celebrated singer, accordionist and composer Luiz Gonzaga). However, the operetta's title, setting (the outskirts of Rio de Janeiro), colloquial language and original urban music had nothing to do with northeastern *forró*.

According to folk etymology, the word *forró* is derived from the English expression 'for all.' Two stories tend to be cited to support this popular etymology. First, it is said that in the early 1900s 'for all' reminders were hung at British railroad construction yard headquarters in the Brazilian North-east to indicate that everyone, rich or poor, was welcome at parties held there, since there were no other parties to which the poor were invited. A second story refers to the time during World War II when the US military supposedly held 'for-all' parties at an air force base located just on the outskirts of Natal. As capital of the northeastern Brazilian state of Rio Grande do Norte, in the 2000s Natal was home to some of the best *forró* venues in the north-east. In 1997 the Brazilian motion picture *For All: O trampolim da vitória* (Springboard to Victory) reinscribed this second story by blending fiction with bits of actual history, such as the visit of US President Franklin Delano Roosevelt to the Natal air force base during World War II. As a result, younger movie-goers across the country began subscribing to the 'for-all' story, and so an urban legend gained widespread credence, though not without controversy.

Historical Origins

Forró's exact origins are difficult to verify because the word *forró* was not popularized throughout Brazil to describe an urban music genre until the time of Luiz Gonzaga's success in Rio de Janeiro, the historical birthplace of most urban Brazilian popular music and one of its most important distribution centers throughout the twentieth century. As a rural, folkloric music tradition, *forró* is likely to have emerged in the backlands of northeastern Brazil either by the late 1800s or even earlier, around the 1830s. The European accordion (*sanfona*, in Portuguese), including both the 8-bass button and 120-bass piano models, reached Brazil with European immigrants, mainly Italians and Germans, who settled in the southern region. Around the 1830s the button accordion received the name '*gaita*' in southern Brazil (Cascudo 1999), where it is still widely used in folklore. But in this folklore music from southern Brazil no ensemble is or was composed of a *gaita*, a triangle and a *zabumba* drum – at least not in the manner of the northeastern *forró* developed by Luiz Gonzaga in more modern times.

When Brazil, Uruguay and Argentina joined military forces to fight Paraguay in the War of the Triple Alliance (1864–70), returning northeastern Brazilian servicemen took both models of accordion back home, and the *forró* tradition began as a folkloric style, with the accordion as the main instrument (Cascudo 1999). Since contemporary *forró* is rhythmically similar to older rural southern music genres, such as *rancheira*, and more modern ones, such as *vaneirão*, it is not impossible that *forró* may have evolved from the music those northeastern servicemen brought home from the south.

Forró and the Recording Industry

The Brazilian music industry, based in Rio de Janeiro (and São Paulo), had, during its inception, a history of assimilating rural, folkloric music for consumption by urban audiences across the country, especially music from the north-east. Since Rio de Janeiro was the center of the Brazilian music industry, success in the Rio market was obligatory for any popular music style in order to achieve status as a 'national' popular music expression.

Forró is an example of a style that became 'national' in spite of being originally from the north-east. In the 1940s Luiz Gonzaga came to be fully identified as a northeastern artist and known as the 'king of *baião*' who sang and played *forró*, *baião* and other related styles. Soon afterward, Jackson do Pandeiro (1919–82) became popularly known as the 'king of *rojão*' and also the 'king of rhythm.' Well deserved or not, these nicknames, often used by radio DJs of the era, caught on almost instantly.

In the 1930s *forró* was not yet considered a music genre by the recording industry. Yet most of the songs recorded by artists including Luiz Gonzaga, Jackson do Pandeiro and others were consistent with the *forró* genre, even when they used other descriptives to indicate the genre of their songs on record labels. Exceptions are the recordings of waltzes, polkas, mazurcas, marches, *choros* and other styles that Gonzaga had to make to prove his talent as an accordionist at the beginning of his career in the early1940s, before he became famous and was allowed to craft his stage persona as a northeastern herdsman/cowboy, which remained with him until his final days.

The first time the word *forró* appeared on a record as part of a song title was on 2 July 1937 (Azevedo ['Nirez'] 1982). The song was 'Forró na Roça,' composed by Xerém and Manoel Queiroz, and recorded by the brother-and-sister duo Xerém & Tapuia. Although the word *forró* is included in the song title, the genre was labeled *choro sertanejo*. No other *choro sertanejo* songs can be found from this era, and the song sounds more like the early form of southern folkloric music brought back to the north-east by soldiers in the nineteenth century than it does like twentieth-century *forró*. Therefore, it is likely that this 1937 song evolved into *forró* some time later or that the record industry chose not to give *forró* the status of new genre in the 1930s for fear the recordings would not sell, either because the word *forró* had not yet been used previously to describe a music genre or because of its clear associations with the poorer strata.

Even though Luiz Gonzaga was not the first artist whose records were described on their labels as *forró*, he is commonly credited as the founder and/or forerunner of *forró* and of all northeastern music (Albuquerque Jr. 2001). Gonzaga started recording strictly northeastern music in the 1940s, and his importance for northeastern music is unquestionable. In 1949 he recorded 'Dezessete légua e meia' (Seventeen and a Half Leagues), a *baião* composed by Humberto Teixeira and Carlos Barroso, and 'Forró de Mané Vito,' a *forró* composed by Gonzaga himself and Zé Dantas. Surprisingly, the genre for the second track was not identified at all on the record, which was released in July 1950, perhaps because the genre was implied in the song title. In 1949 perhaps Gonzaga could not yet publicly identify *forró* as a music genre, or perhaps RCA-Victor would not allow him to name the genre of his own songs. This latter scenario seems unlikely, however, because, after introducing *baião*, Gonzaga rose to stardom in Brazil and, in theory, could do anything he wanted with his music.

Indeed, throughout his career, Gonzaga recorded only four songs with *forró* as part of the song title ('Forró do Mané Vito,' 'O Forró do Quelemente,' 'Forró no escuro' (Forro in the Dark) and 'Forró do Zé Tatu'). Just two of Gonzaga's songs were specifically identified as *forró* by record labels: the aforementioned 'Forró no escuro' and 'Sanfoneiro Zé Tatu.' 'O Forró do Quelemente' was composed by Luiz Gonzaga and Zé Dantas, and sung by Luiz's brother, Zé Gonzaga, while Luiz himself recorded 'Sanfoneiro Zé Tatu,' composed by Onildo Almeida, and 'Forró do Zé Tatu,' composed by Zé Ramos and Jorge de Castro (Azevedo ['Nirez'] 1982).

The first time the word *forró* was used on a record to designate a genre was in April 1956. The song that achieved this distinction was 'Forró no Alecrim,' composed by Venâncio and Corumba and recorded by Zito Borborema (Azevedo ['Nirez'] 1982). The difference between perceptions of Luiz Gonzaga's early recordings (those not labeled as *forró*) and Zito Borborema's recording of 'Forró no Alecrim' may be ascribed to signs of an increasing regional indifference on the part of the music industry in the 1940s toward northeastern music. This attitude was evidenced when radio program directors did not at first allow Gonzaga to dress like a northeastern herdsman/cowboy during his live radio performances, only to perceive immediately that it was an inseparable part of his act. This regionalist attitude diminished a great deal in the 1950s, but by the end of this decade it returned strongly with the birth of *bossa nova*. Coincidentally this is also the time when Gonzaga's fame began to recede in Rio de Janeiro. At the same time, as a result of his musical success in Rio de Janeiro, his fame flourished in the north-east at unprecedented levels because he was the first to succeed nationally as a northeastern artist playing northeastern music.

In the mid-1940s Gonzaga was the first artist ever to convince music industry bosses in Rio de Janeiro that his northeastern music was suitable for records and radio and, especially, that his northeastern dress style was fit to be seen and enjoyed by urban audiences during his live performances at Rio de Janeiro's radio station auditoriums. At this time, during World War II, the Brazilian music scene was flooded with US big band jazz and a great deal of Spanish-language music with Latin American and Caribbean rhythms (*bolero*, *chachachá* etc.). Nevertheless, *forró* music and Gonzaga himself (as *forró*'s most prominent exponent) thrived in the media at unprecedented levels for almost fifteen consecutive years, until the mid- to late 1950s. Northeastern music had captured Brazilian audiences because it carried an undeniable 'national ingredient,' which, although originally from the north-east, the whole country seemed to have identified with during World War II (Azevedo ['Nirez'] 1995). For a short time, *baião* almost seemed poised to replace *samba* as the internationally acclaimed icon of Brazilian popular music. Perceived as a 'new genre,' *baião* flourished in the urban music scene.

International Fame

Before the international advent of Brazil's *bossa nova* music in the early 1960s, *forró*, in its rhythmic format as *baião*, became the most successful and influential Brazilian music genre abroad, especially in Europe and the United States. In 1951 US jazz singer Peggy Lee recorded 'Wandering Swallow,' her rendition of a popular Brazilian *baião* ('Juazeiro') composed by Luiz Gonzaga and Humberto Teixeira and originally released in 1949. The original composers were not credited (and other composers were erroneously named) when the Peggy Lee record was released in the United States, and Humberto Teixeira filed a lawsuit in New York on behalf of both composers (Azevedo ['Nirez'] 1995). The song was recorded again in 2006 by Forró no Escuro, featuring Bebel Gilberto, the only daughter of *bossa nova* greats João Gilberto and Miúcha, on vocals. In 1953 a *baião* from the motion picture *O cangaceiro* (The Bandit), the early folk (anonymous) classic, 'Mulher Rendeira,' received high acclaim. The film itself was awarded an honorable mention at the Cannes Film Festival in France, and the song became an international hit recorded in several rhythms and arrangements in different countries. For example, US folk singer Joan Baez's 1964 album *Joan Baez/5* included the song 'O cangaceiro,' based on an instrumental arrangement of 'Mulher Rendeira' originally recorded in 1958 by Alfredo Ricardo do Nascimento ('Zé do Norte'), who had appeared in the film, and French maestro Henri Leca. In 1956 US maestro Percy Faith and His Orchestra recorded a 1950 instrumental song by Waldyr Azevedo, 'Delicado' (Delicate), originally a *baião*. Despite such international success, *forró* moved gradually into partial oblivion in the following decades in urban Brazil (where it was viewed in a derogatory fashion as 'music in bad taste from the north-east') as well as abroad, where it was eclipsed by the *bossa nova* boom in the United States during the early 1960s.

Forró in the 1960s and 1970s in Brazil

From the mid-1960s to the 2000s, *forró* took refuge back in the north-east where it had originated, as well as in poorer urban areas of large southern cities such as Rio de Janeiro and São Paulo. There, *forró* seemed to await the opportunity to show its strength again in the media. Northeastern people who migrated to major urban areas in the South in search of a better way of life helped keep *forró* alive. Northeastern capital cities also embraced *forró* more thoroughly beginning in the 1960s, due primarily to Luiz Gonzaga, who, as the first popular artist in the history of Brazilian popular music to sing and play in the name of the North-east, became a representative of his regional identity (Albuquerque Jr. 2009).

In the 1960s and 1970s João do Vale (1934–96) was the last representative of traditional *forró pé-de-serra* to emerge in what was now called *MPB*, an acronym for 'Brazilian Popular Music' created by journalists who covered the music scene in Rio de Janeiro in the 1960s. Do Vale was among those poor northeastern people who had migrated to Rio de Janeiro and who kept *forró* music alive, despite its lowered status during the *bossa nova* fad in the early 1960s. In 1964 and 1965, for instance, he was part of an MPB show called *Opinião* that presented three artists: João do Vale, himself, representing northeastern music; Nara Leão (1942–89), a singer and guitar player of *bossa nova* fame (later in 1964 replaced by Maria Bethania, Caetano Veloso's sister); and Zé Keti (1921–99), an 'old school' *samba* performer from Rio de Janeiro. The *Opinião* show incorporated a mix of the two music styles that form the backbone of urban Brazilian popular music: *samba* and *baião*, which is a type of *forró*. For both *MPB* fans and *MPB* artists, including those involved in the project and those who were not, the show constituted the very beginning of an ideological stance against the military dictatorship that lasted from 1964 until the mid-1980s, increasing its repression at the end of 1968.

Electronic *Forró* Music

During his tenure as a 'living legend' of *forró*, Luiz Gonzaga never allowed any electronic device to permeate his acoustic accordion, triangle and *zabumba* music. But many contemporary *forró* artists have abandoned Gonzaga's traditional views by using modern electronic instruments to play their music. The use of electric and electronic instruments to play *forró* music dates back to the mid-1970s, when such instruments were used for the first time and achieved national success in *double entendre* songs composed and sung by Genival Lacerda (1931–). Fans of the original *pé-de-serra* style were critical of this new form of *forró* – mainly because of its supposedly 'modern' electric sound, but also because of its promotion of a caricature of northeasterners, with *double entendre* lyrics in what was perceived as 'bad taste,' to which urban audiences often laughed their hearts out. Even during its brief success, this new trend for *forró* appeared to many to be manufactured by the music industry and the media to fill a gap in the music scene and to raise record sales.

Lacerda's first national hit, 'Severina Xique Xique,' released in 1975, proved that *forró* could occupy the forefront of the music business, despite regionalist and prejudicial perceptions of Lacerda's 'odd' appearance, strong northeastern accent and *double entendre* songs (Severiano and Mello 1998). Suddenly, Lacerda became a national *forró* clown of sorts, but his success did not last long, and in the late 1980s his career returned primarily to his native city of Campina Grande, in the state of Paraíba, where, in the early twenty-first century, he lived modestly, had his own radio show at a local AM/FM station, and occasionally still performed.

In the 1980s it became easier to produce independent records, and recording studios seemed to proliferate everywhere across the country, especially in the north-east, where several studios started to provide opportunities for a younger generation of *forró* artists. *Double entendre* lyrics in 'bad taste' were now sometimes replaced with lyrics about love and relationships, and a new array of modern electronic equipment and instruments were incorporated in recordings made in the new local recording studios. In the mid-1980s *forró* bands were formed in major capital cities such as Fortaleza, Natal, Aracaju, João Pessoa and Recife, along with other northeastern cities such as Campina Grande, in the backlands of the state of Paraíba, and Caruaru, in the neighboring state of Pernambuco, both known as '*Forró*'s World Capital.' Every year during the months of June and July, these two cities hold immense outdoor festivals known as '*festas juninas*' (June festivities in honor of Anthony, John and Peter, Saints of the Catholic Church), and compete to be viewed as the biggest *forró* venue in the world, although such festivities are also held elsewhere across the country on a more modest scale.

In what appears to be a decolonizing experience for the Brazilian music industry (which was historically located in the Southeast), recording technologies and music industry facilities were decentralized and made newly accessible in the north-east, and the new *forró* became electronic in its own right beginning in the 1980s. This change may be explained in part by the fact that new artists were more practical about 'national success,' which was then almost unattainable without local success. New *forró* bands in the early 1980s grew to include more than six musicians on average along with several male and female professional dancers under contract. A group aesthetic prevailed, contrasting the emphasis in Luiz Gonzaga's time on a leading individual artist. If they succeeded locally, *forró* bands would try to achieve national recognition; if not, they would break apart, and try again sometime later with some other band. But the most significant part of this process was the pivotal role played by the bands' owners and/or agents, always working behind the scenes, who controlled the bands' repertoires as well as their image rights, recording contracts and performances. These band owners also held the rights to the bands' names, and they replaced musicians, singers and dancers who tried to break free to pursue solo careers (Pires 2009a).

By the end of the millennium, the electronic wave seemed to have taken control of local scenes in major capital cities across the north-east, which at last enjoyed some freedom from the guidance and supervision of São Paulo and Rio de Janeiro. Since its inception, this stylized, electronic *forró* has drawn more of the music market in comparison with the *pé-de-serra* variety, largely due to the larger number of bands playing electronic *forró*. The epicenters of consumption in Brazil were distributed in higher concentration among the poorer classes for electronic *forró*, while the middle and upper classes dominated the audience for the more traditional style (Pires 2009b, c, d; Pinheiro and Paiva 2010). Much of electronic *forró* derived from the state of Ceará, where most of the band owners and agents lived and built their businesses. The giant among these entrepreneurs is Emanuel Gurgel, who owns a company by the name of Somzoom (www.somzoom.com.br) with its own recording studios (Pires 2009b, d; Pinheiro and Paiva 2010). In the 1990s Gurgel kept three or four bands under contract, began controlling a local FM radio station whose satellite signal soon covered the whole country, and even sold his bands' CDs at half their usual market price and published a monthly magazine (Pires 2009b, e, f; Pinheiro and Paiva 2010).

In the late 1990s the traditional *forró pé-de-serra* style also saw a greater urban development of sorts, both in the national and international arenas (Murphy 2006, 107–8). Mestre Ambrósio, a now-defunct band from the state of Pernambuco that was a leading representative of the Recife-based *manguebeat* movement (a genre that blends Brazilian local styles including *forró* '*pé-de-serra*' with global forms of electronic music), toured the United States, Europe and Japan. US accordionist Rob Curto's band, Forró in the Dark, was visible in New York club engagements (Murphy 2006, 108). Another band, Falamansa (www.falamansa.art.br), from São Paulo, was very popular with Rio de Janeiro and São Paulo college students, resulting in the designation *forró universitário* (literally, 'college *forró*'), which challenges electronic *forró* by claiming to be a more ‘traditional descendant’ of *pé-de-serra* despite its use of electric instruments. ‘College *forró*,’ briefly described by Murphy (2006, 107–8) as ‘an even more pop-sounding substyle,’ also includes other bands, such as Forroçacana from Rio de Janeiro. From the early 2000s on both Falamansa and Forroçacana have released hit songs and made national TV appearances.

Conclusion

For many reasons, *forró* is more than a popular music genre; it is an originally rural music style that survived after migration to an urban environment, most importantly, without losing most of its original northeastern characteristics and identity. Brazilian musical culture is world-renowned for its rhythmic diversity, and *forró* has been a part of its urban scene since the 1940s, when Luiz Gonzaga became famous in Rio de Janeiro, recording his *forró* music, playing his accordion and wearing special outfits that showed he was from the north-east. Although Gonzaga was not the first northeastern recording artist in Rio, it was the first time an artist was so thoroughly identified as a northeasterner.

As an artist, Gonzaga was aware that he was part of a community of millions of north-easterners who had fled their homeland in the *sertão* to seek better living conditions in major southeastern cities such as Rio de Janeiro and São Paulo. While the other poor north-easterners had migrated mainly to escape poverty and hunger, Gonzaga had other plans, which included becoming a famous musician – and he was persistent. Gonzaga began his career in Rio, but he never stopped reminiscing about his birthplace, and always made it clear to his fans where he had come from. The importance of Luiz Gonzaga to *forró* is thus measured by his dedication toward his beloved *sertão*, its people and their life stories, which became the main thematic focus of *forró* lyrics.

Although the *forró* genre was built around Luiz Gonzaga’s musical *oeuvre*, it was reshaped and restyled through great contributions by subsequent *forró* artists, all of whom shared a sense of gratitude toward Gonzaga for his groundbreaking steps within the music market in the 1940s and 1950s. Many forró composers and fans agree that, because of Gonzaga, everything musical in *forró* has been re-elaborated in such a way as to recall and/or revive his genius. Although much has been written about *forró* and the genre’s prominent exponents, more scholarship is necessary to uncover the liaisons between *forró* and the music industry that from the 1940s on sought to establish the genre in the media as one of the greatest northeastern music genres of all time. While there have been few academic studies of electronic *forró* exploring, for instance, how and why it became electronic amid the decentralized music industry in the north-east, it is noticeable that *forró* never lost its appeal for the lower classes. In fact, *forró* audiences increased and the genre proved that it had come to stay when it appropriated electronic equipment and instrumentation in its second coming to the urban scene of Brazilian music.

Frevo

Frevo is a dance music genre that emerged in association with street carnival in the early twentieth century in the cities of Recife and Olinda, in the northeastern State of Pernambuco, Brazil. The word is a variation of the Portuguese verb *ferver* (to boil), which was used to describe the movement of the crowd during Carnival parties that was thought to resemble the movement of a boiling liquid. 'Frevo' also refers to the dance performed to the music of the same name.

Types

There are three types of *frevo*: *frevo-de-rua* (street *frevo*), which is instrumental, *frevo-canção* (vocal *frevo*) and *frevo-de-bloco* (a street band with a group following it). The latter two types include vocals. In Pernambuco, the word *frevo* (plural: *frevos*) commonly describes *frevo-de-rua*, the oldest form of *frevo*. The explicit division among the three types most typically occurs in its original state of Pernambuco, where the association of the genre with the carnival period remains strong. Music compositions written and performed since the late 1950s by professional musicians outside of Pernambuco (or any Carnival context) tend to be called *frevo*, whether vocal or instrumental. During the 1970s Carnivals, a type of vocal *frevo*, known as *frevo-baiano* (*frevo* from the state of Bahia), became popular throughout Brazil.

History

The first written musical reference to the word *frevo* appeared on 12 February 1908. On that date, *Jornal Pequeno*, a journal from Recife, published the repertoire of the brass band Clube Empalhadores do Feitosa, including the march 'O frevo' among the compositions to be performed (Oliveira 1971,12). The word *frevo* did not indicate a music genre but rather the title of a carnival march.

Since the late twentieth century Recife and Olinda carnivals have included corporate clubs with names referencing their members' occupations. In addition to the aforementioned Clube Empalhadores, other significant clubs include the Clube das Pás de Carvão (founded in 1888), Clube Carnavalesco Vassourinhas do Recife (1889) and Clube dos Lenhadores de Olinda (1907). Such clubs, exclusively comprised of male members, danced in the Carnival parades to music by the brass bands who played successful genres of the time such as *dobrados*, marches, polkas and *tangos*. Little by little, as first the musicians and later the composers from Pernambuco gradually transformed the rhythmic character of the music they played in a dialogue with the dancing carnival crowd, *frevo* became defined as a distinct genre. The songs 'A Província,' written by Juvenal Brasil in 1905 for Clube Lenhadores, and 'Gonçalves Maia,' written by Zeferino Bandeira for Clube das Pás in the late twentieth century, were among the first to start developing the distinctive features of a new genre. However, the majority of *frevo* researchers and songwriters considers José Lourenço da Silva (1889–1952), also known as Maestro Zuzinha, conductor of Recife's Fourth Infantary Brigade's band, to be responsible for the consolidation of *frevo* as a music genre by defining meaningful distinctions between '*marcha-frevo*' (*frevo* march) and '*marcha-polca*' (polka march).

Later, songwriters including Levino Ferreira (1890–1970), Nélson Ferreira (1902–76) and Capiba (1904–97) codified the main characteristics of instrumental and vocal *frevos*. The subdivisions established in the genre (*frevo-de-rua*, *frevo-canção* and *frevo-de-bloco)* appear to have been recognized since in the 1930s. *Frevo-de-rua* is the original *frevo*, as described in the previous paragraphs: purely instrumental, performed by brass bands and danced by the street crowd during Carnival. *Frevo-canção* is derived from *frevo-de-rua* but includes a vocal part performed by a solo singer. *Frevo-de-bloco* displays a different instrumentation, slower pace and the use of a female chorus to perform the main melodic part. *Frevo-de-rua* and *frevo-de-bloco* are related to distinct types of Carnival groups: the former belongs to the clubs created since the late twentieth century by manual laborers and exclusively (later, predominantly) joined by male members, while the latter belongs to middle-class Blocos Carnavalescos Mistos (co-ed carnival street groupings) created since the 1920s, and joined by both male and female members. *Frevo-canção* is not intrinsically related to Carnival groupings, although it is also performed during Carnival.

Frevo was first recorded by local musicians and singers in Rio de Janeiro in the late 1920s. 'Borboleta não é ave' (Butterfly Is Not a Bird) and 'Não puxa, Maroca (Shut up, Maroca),' by Nélson Ferreira (with Baiano and Grupo do Pimentel and Orquestra Victor Brasileira, respectively), are the earliest examples known. Until the early 1930s the term *frevo* was not explicitly used in recordings; instead, designations such as 'March from Pernambuco' and 'Northern March' are found. Later, musicians from Pernambuco were hired for *frevo* recordings in Rio de Janeiro. Rozenblit, the first record label in Pernambuco, was founded in 1954, and *frevo* stands out with a large number of recordings in its catalogue. During Carnival in 1957, 'Evocação,' a *frevo-de-bloco* composed by Nélson Ferreira and recorded by Ferreira and Batutas de São José at Rozenblit, became highly successful throughout the country. By then *frevo* was being produced in the Carnivals of several Brazilian cities outside of Recife and Olinda, including Rio de Janeiro and Salvador. In Salvador, a style of vocal Carnival *frevos* called *frevos-baianos* was popular during the 1970s. Among the songwriters and recorded singers of this type of *frevo*, two of the most important were Caetano Veloso ('Atrás do trio elétrico') (After the Trio Elétrico), 'Chuva suor e cerveja' (Rain, Sweat and Beer), 'Um frevo novo' (A New Frevo) (1977) and Moraes Moreira ('Pombo correio') (Homing Pigeon) (1976). *Frevo-baiano* was responsible for the nationwide popularity of the *trio-elétrico*, an instrumental ensemble who were to perform a fundamental role 15 years later in the broadening of *axé-music*, another Brazilian genre. During Carnival and other festive occasions, the *trios-elétricos* perform on top of trucks outfitted with sound amplification systems that travel slowly through the streets, guiding the dancing crowd.

Although *frevo* musicians have complained about a supposed decline of *frevo* and about its limitation to the Carnival period, in the last decades of the twentieth century each of its subgenres resurged. With regard to *frevo-de-bloco*, since the 1970s several new *blocos* have been founded, accompanied by the emergence of new compositions and by new recordings of old ones. In the area of *frevo-canção*, singer/songwriter Silvério Pessoa's works combine *frevo* with elements of pop-rock (namely Batidas urbanas/Projeto Micróbio do Frevo, 2005). Finally, Spokfrevo Orchestra has successfully integrated jazz elements into the genre of *frevo-de-rua*, playing concerts and festivals in periods not limited only to Carnival (*Passo de Anjo*, 2005).

Since the 1960s *frevo* has been considered the most representative musical genre of Pernambuco State. In 2007 the genre was registered by the Brazilian Ministry of Culture as Intangible Cultural Heritage.

Rhythm

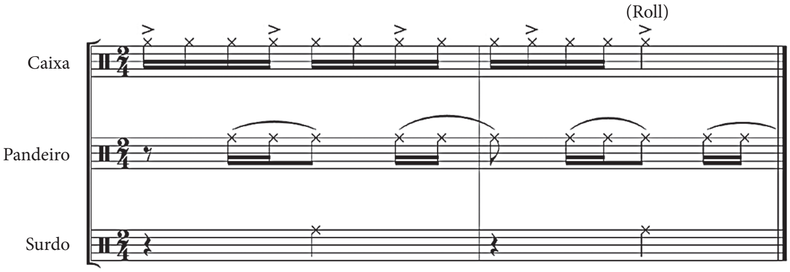
Rhythm is the main similarity among the three types of *frevo*. Indeed, it is possible to refer to a '*frevo* rhythm' common to all of these types and performed primarily by two instruments: bass drum (*surdo*) and snare drum. The bass drum rhythm emphasizes the offbeats: in a 2/4 measure, the first beat is a rest and the second a strike. The snare drum's rhythm is considerably more complex and extends across two 2/4 measures. Thus, the snare drum's rhythm could also be notated in 4/4. A third rhythm instrument very commonly used is called *pandeiro,* a type of frame drum similar to a tambourine. A common *frevo* rhythm for bass drum, snare drum and *pandeiro* is presented in Example 1 below.

The music in Example 1 can be performed in several different tempos: *frevo-de-bloco* is characterized by moderate tempos (100–110 MM), whereas *frevo-de-rua* and *frevo-canção* are played at fast tempos (140–150 MM).

Instrumentation

The classic *frevo-de-rua* instrumentation is called band or *frevo* orchestra. It consists of wind and percussion instruments. Brass instruments (trumpets, trombones and tuba) predominate, but wind instruments (saxophones, clarinets, Eb clarinets called *requintas* in Portuguese, flutes and piccolos) are also used. Additionally the ensemble includes percussion, comprised of the bass drum, the snare drum and the *pandeiro*. Since at least the 1970s smaller ensembles have been used, limiting wind instruments to saxophones, trumpets and trombones. In studio recordings and stage performances, electronic instruments such as keyboards, electric guitars and basses are added. There is no place for electronic instruments in street performances (for obvious reasons), with the exception of the previously mentioned *frevo-baiano*, typically performed during Carnival by *trios-elétricos*.

Frevo-canção instrumentation is basically the same as *frevo-de-rua*, with the addition of a solo singer. Of the three types of *frevo*, however, *frevo-canção* has the strongest association with professional staged performances and the recording industry; for this reason,



Example 1: A common *frevo* rhythm for bass drum, snare drum and *pandeiro*

the use of electronic instruments (and the absence of clarinets, *requintas* and tubas) is much more common in this *frevo* variety.

Frevo-de-bloco instrumentation is totally different from the other types. A *pau-e-corda* ensemble is centered around fingered or strummed strings for harmonic accompaniment (mainly guitars and *cavaquinhos*, which are small, 4-stringed, guitar-type instruments) and wind instruments (primarily flutes, clarinets and saxophones) for introductions, counterpoints and obligato passages. Most often, percussion is performed on the bass drum, snare drum and *pandeiro*, but shakers, wood or bamboo scratching instruments that produce a ratchet-like sound called *recos-recos*, and other instruments may be incorporated. Melodic instruments generally double the sung melody, and in this group it is possible to include instruments such as the mandolin and others that can be adapted to the parade occasion. The absence of polyphony (except for occasional passages sung in thirds) and the lack of musical organization into sections of similar instruments, along with less demand for instrumental virtuosity compared to *frevo-de-rua* or *frevo-canção*, facilitate an *ad hoc* free musical expression by the instrumental *pau-e-corda* ensemble.

Melody

Frevo initially developed as an instrumental genre. Its most typical melodic nature is expressed, therefore, in the instrumental subgenre *frevo-de-rua*. Some typical characteristics include scales with more than one octave, continuous sequences of sixteenth notes, as well as the broad use of chromaticism and frequent dialogues among instrumental sections, all at a fast tempo.

Sung *frevos* begin with an instrumental introduction in which the melody follows the general features of *frevo-de-rua*. *Frevo-de-bloco* sung passages, however, are completely different: their melodies are voiced purely vocally, accommodating tessitura as well as melodic and rhythmic articulations. These features, along with a slower tempo, enable ease of pronunciation and comprehension of lyrics.

Frevo-canção occupies a middle-ground between the other two types: its vivid melodies prominently feature syncopation, and it is played at a fast tempo, which makes it closer to the instrumental version, but there are still 'song melodies,' presenting melodic patterns adapted to the voice of a standard popular singer. Compared with *frevo-de-bloco* lyrics, its lyrics are very often cheerful and humorous.

Dance

As stated earlier, before it designated a music genre the word *frevo* was applied to the movement of the dancing crowd at Carnival parties. *Capoeiras* played an important role in the development of a dance from this crowd movement. In the early twentieth century, in Pernambuco, *capoeira* did not designate, as it does now, an Afro-Brazilian martial art registered as intangible cultural heritage of the country. Instead, it referred to a class of people who were considered by members of the Brazilian elite to be socially dangerous: street-fighting experts who generally used weapons such as truncheons and daggers. According to Valdemar de Oliveira, the brass bands and carnival clubs that paraded in Recife and Olinda were rivals and engaged in serious fights. For this reason, they frequently placed *capoeiras* at the front of their parades, both in order to open space within the crowd and to protect their members against rivals. The *capoeiras*' dance in front of their groups was athletic and threatening, and from such movements and from such movements and their close relationship to the rhythmic vividness of Carnival music, *frevo* dancing was born. Indeed, the *frevo* is a solo dance that requires a high degree of physical skill and presents, in some of its moves (known as *passos*, Portuguese for 'steps'), similarities with *capoeira* strikes.

During the twentieth century *frevo* dance became an established and continuously growing movement repertoire. Body movements emphasize the legs and feet; movements are quick and sometimes quite acrobatic. Beginning in the 1960s the dance was also taught in schools and presented by amateur and professional folk dance groups. Its typical costumes include comfortable and colorful clothes, women's attire that reveals the legs, tennis shoes and the use of an umbrella (an object that, according to some, would have been used as a weapon by the *capoeiras* in the beginning of the century).

Frevo is today a widely known and appreciated genre in Brazil. It remains strongly associated with Carnival and with Pernambuco's main cities, Recife and Olinda. Street groups such as *blocos* and *clubes* make thousands of people dance to *frevo* music each Carnival year after year, but it is quite rare to find a new *frevo* hit. In the last few years, Spokfrevo Orchestra has been successful in playing *frevo* beyond Carnival for attentive listeners in concert halls and at jazz festivals in Brazil and abroad. Musically speaking, Spokfrevo Orchestra's main innovation was introducing jazz-like improvisation choruses. Conservative critics denigrate the creation of a fourth subgenre, stage-*frevo*.' But Spokfrevo Orchestra, along with Silvério Pessoa and others, demonstrates that even though *frevo* is now an official 'intangible heritage' genre, it still leaves room for innovative approaches.

CARLOS SANDRONI (TRANSLATED BY MAIZA DE LAVENÈRE BASTOS)

Funk Carioca and Música Soul

In a poem published in 1919 entitled 'Muzica brazileira,' Olavo Bilac defined Brazilian music as 'flor amorosa de três raças tristes' (the loving flower of three sad races) – the Portuguese, the African and the indigenous Amerindian. *Samba* rose from outlawry in the 1930s to become an icon of Brazilian unity, offering the black and the poor symbolic compensation for material exploitation. Since the 1960s, however, some have found in African-American soul and funk an antidote to the ideology of subaltern integration. The core of *música soul* consists in a set of 1970s albums by Cassiano, Carlos Dafé, Hyldon and Tim Maia. *Funk carioca*, the first Brazilian genre of electronic dance music, was born in 1989. It circulates freely on the web and is sold by street vendors on pirate CDs and DVDs. MCs earn their living from live performances, whereas DJs can also count on studio production as a source of income.

Also known outside Brazil as *baile funk* (funk dance), the music Brazilians call *funk carioca* (funk from Rio de Janeiro city) derives not directly from African-American funk but from a variety of US hip-hop known as Miami bass. The name 'funk' has clung to the music because of its roots in the *bailes funk* of the 1980s, which were fed by US funk and rap. *Bailes funk* in turn relate to the *bailes black* (black dances) of the 1970s, which had themselves been fed by US soul and funk.

The huge popularity of both *bailes black* and *bailes funk* can be judged from some estimates of those attending. According to the journalist Lena Frias, who named and disclosed the scene in one of the main Brazilian newspapers in 1976, every weekend the 'Black Rio' dances used to attract from 500,000 to 1.5 million black or black-identified – that is, poor – young people of the Rio de Janeiro slums and periphery to dance to the sounds of James Brown and other soul brothers in big *bailes* promoted by *equipes de som* (sound crews), the local equivalent of the Jamaican sound systems of the 1960s and DJ Kool Herc's Bronx, NY, block parties of the 1970s. Some of them reached an attendance figure of as many as 15,000 (Frias 1976, 1). When, in the 1980s, electro and Miami bass replaced funk and soul as the soundscape of choice for the marginalized youth of Rio, the anthropologist Hermano Vianna estimated that 700 *bailes funk* were taking place every weekend in the greater Rio area, each attracting from 500 (a failure)–1,000 (the average), 2,000 (no less than 100 dances) to as many as 10,000 *funkeiros* (*funk carioca* funksters), making a total of at least 1 million young people every Saturday and Sunday (Vianna 1988, 13). In 1996 DJ Marlboro estimated that every week in the Rio de Janeiro state 800 *bailes* were each bringing together an average 2,000 *funkeiros*, amounting to at least 1.5 million young boys and girls each week (Matta and Salles 1996, 42). In 2008 the prestigious Fundação Getúlio Vargas (FGV) calculated, with a margin of error of five percentage points, that an ensemble of 67 *equipes de som* was doing an average of 878 *bailes* a month, of which 552 were in clubs of the greater Rio area, 185 in the *favelas* and 140 elsewhere in the Rio de Janeiro state, with an average of 1,810 tickets sold in each club, and 1,232 in each *baile de favela* (FGV Opinião 2008, 60).

Música Soul

The appropriation and resignification by Brazilian artists of African-American music from the United States is as old as the recording industry itself. George Washington Johnson's 'Laughing Song,' the biggest-selling record of the 1890s, appeared in the southern hemisphere as early as 1902. Recorded on disc under the title 'Gargalhada' (Laugh) by Eduardo das Neves with words by Vagalume in 1906, it remained in the Brazilian Odeon catalogue for approximately a quarter of a century. But whereas in his recording Johnson, despite being African-American, caricatures the behavior of a black man according to white stereotypes, Neves, also of African descent, mocks bootlicking, which he presents as a widespread trait of Brazilian society. In the process, a 'coon song' became a *lundu* (a Brazilian urban song), as 'Gargalhada' was consistently marketed until 1926. With Kerry Mills's 'At a Georgia Camp Meeting,' recorded in 1898, the reverse occurred. A cakewalk of worldwide renown, Mills's piece appeared in Brazil under various guises in the earlier decades of the twentieth century, one of which was the song 'O mulato de arrelia' (The Quarrelsome Mulatto), recorded in 1907. But whereas a cakewalk entails an African-American choreographic parody of white upper-class behavior, 'O mulato de arrelia' involves an ethnically unspecified male singer impersonating the bravado of a rustic Afro-Brazilian in the Europeanized capital of the nation. In the process, a cakewalk was turned into the Brazilian counterpart of a 'coon song.'

Resignification follows from a fundamental property of phonography: a sound produced at one time at one place resounds here, now, and acquires thereby inherently new meanings. In the late 1960s the Prague Spring, the Paris riots and the Civil Rights movement shook Europe and the United States. In Brazil, the military shut down the Congress and gave the *de facto* president legislative and judiciary powers.

In 1961 the LP *Os anjos cantam* (The Angels Sing), by Nilo Amaro e Seus Cantores de Ébano (Nilo Amaro and his Ebony Singers), announced the soul craze of the early 1970s in Brazil with eclectic repertoire, doo-wop arrangements and Platters-like vocal styles. The forceful appearance of unheard-of 64-year-old Clementina de Jesus surrounded by the elite of *samba* in the musical *Rosa de Ouro* (Golden Rose) in 1965 could have provided the blueprint for radical Afro-Brazilian vocality. Instead, Brazilians turned to soul and funk as signs of freedom.

On 24 June 1967, on the first anniversary of black megastar Wilson Simonal's TV show, recorded live for a double LP, 3,000 white people sang along as he performed his 'Tributo a Martin Luther King' (with lyrics by Ronaldo Bôscoli), with its exhortation: 'cada negro que for, mais um negro virá para lutar, com sangue ou não, com uma canção também se luta, irmão, ouve minha voz, luta por nós!' (each black that's gone, one more black shall come to fight with blood or without, we also fight with songs, brother, listen to my voice, fight for us!). Recorded in the previous February, the single of the song had been waiting in the drawers of the censorship service; now, in June, it was finally released. Three years later, soul and funk were exploding on national television with the rapid rise of black performers Toni Tornado and Trio Ternura in 'BR-3,' by white composers Antônio Adolfo and Tibério Gaspar, and of black singer Erlon Chaves and Banda Veneno (Poison Band) in 'Eu também quero mocotó' (I Want Knuckle of Veal Myself Too) by black composer Jorge Ben. Despite these popular successes, the sight of undomesticated Afro-Brazilian showmanship triggered a multimedia war: two years later, Tornado was driven away from the country, Simonal brought to court and slandered; deeply wounded, Chaves died of a heart attack in 1974. In 1971 white star Marcos Valle and white superstar Elis Regina released 'Black is Beautiful,' by the Valle brothers, demonstrating the acceptability of female or male blackness as a luxury item provided for whites by whites. Any unsettling feelings that the image of a white woman singing her surrender to a black male body on prime time TV might arouse were conveniently deflated by her characterization as a clown. The year 1975 saw the release of Tim Maia's ascetic first *Racional* album, the crowning achievement of Brazilian soul. *Maria fumaça*, by Banda Black Rio, blended *samba* and funk in a collection of instrumental tracks in 1977, and *Tim Maia disco club*, by Tim Maia, restored Brazilian disco to the blackness of the original US movement in 1978. The contemporary cultural press viewed such novelties as threats from the foreign music industry. For their part, Brazilian DJs of the 1970s and 1980s, whether black or white, saw disco music as the unfunky white thing that killed the *bailes*.

In the decade from the latter half of the 1960s numerous Brazilian artists, some of them – for example, Roberto Carlos and Elis Regina – hugely successful, flirted with African-American soul or funk. Their relation to the *bailes black* was nil. In the same period, a number of Brazilian artists, one of them (Tim Maia) also hugely successful, devoted themselves mostly or exclusively to the same music. Whatever their relationship to the *bailes black* – and except for Gerson King Combo it was almost certainly insignificant – it is clear that the *bailes* could make good without them.

From *Bailes Black* to *Bailes Funk*

The question of the relationship between the *bailes black* of the 1970s and the *bailes funk* of the 1980s is not a settled one. In her remarkable study of the Renascença Clube, where, from 1972 to 1975, Asfilófio de Oliveira Filho, a.k.a. Dom (Sir) Filó, hosted Noite do Shaft (Shaft's Night), one of the most influential of the 1970s *bailes*, Sonia Giacomini resorts to interviews with former participants to highlight ruptures rather than continuities between the two scenes (see Giacomini 2006, 189–256). Journalists and scholars agree that in the second half of the 1970s the *bailes* were dealt mortal blows by a combination of factors: negative attention triggered by Frias's article (see above); the hostility of the *samba* world; and the arrival of disco in 1978. Vianna nevertheless records the existence of *bailes funk* in which DJs played 'an older kind of funk' – very likely, funk *tout court* – in the mid-1980s. He also provides details concerning the shifts first from African-American soul and funk to disco, then to a slower kind of rhythm and blues locally known as *charme*, and finally to African-American hip-hop, a process he deems completed in 1985 (Vianna 1988, 11, 30–1). On this basis, it seems appropriate to emphasize connections that link the places where *bailes black* and *bailes funk* took place, the social status of their dancers, the places they came from, the relationship of their clothing and dancing patterns to those of the so-called Zona Sul, and, more than anything else, their common reliance on African-American vinyl. However, if it is indeed the case that in the grooves of such vinyl the kinship between African-American soul, funk and hip-hop is inscribed, it is also true that participants looking back on the *bailes black* of the 1970s have often voiced their contempt for early twenty-first-century *funkeiros*, as have Brazilian hip-hoppers. In Vianna's words, *funk carioca* is 'o excluído do excluído' (the excluded of the excluded) (2005, 20). Even so, Oséas Moura dos Santos, a.k.a. Mr Funky Santos, the DJ/MC behind some of the early *bailes black* of the 1970s, in the later defunct Astoria Futebol Clube in Catumbi, begrudgingly acknowledges the kinship between both scenes by admitting that 'if there is *pagode* today – see the way the guys look and talk –, if there is *funk* [*carioca*] today – no matter how mediocre it may be –, if there is rap today – but a beautiful rap, like that of Racionais MCs – it is all soul's fault' (Essinger 2005, 48; author's translation).

Not unlike Northern Soul, a scene that developed in northern towns in the United Kingdom in the mid–late 1960s, centered around the spinning of obscure up-tempo Motown-type US-made records, the Rio de Janeiro *bailes* relied, from 1970 to 1989, on the spinning of US-produced African-American musics in poor neighborhoods of Rio and its peripheral cities. Nonetheless, while the Northern Soul scene lost momentum when African-American music moved into Philly soul and funk in the early 1970s and there were no more obscure records of the right kind to unearth, the Brazilian *bailes* showed a willingness to assimilate a variety of black musics – from Wilson Pickett to Stevie B – and thus feed on US imports for two decades, before generating their own sound.

Execrated and extolled by the media, for whom the slum dweller is either a bandit or a very creative person, and figuring side by side with *música sertaneja* (Brazilian country music), *pagode romântico* (1990s romantic pop *samba*) and *axé* (up-tempo Afro-pop from Bahia) among the most cited genres in lists of musical abominations, *funk carioca*, in which the slum dweller can be at the same time violent and very creative, constitutes the first Brazilian genre of electronic dance music, Brazil's equivalent of house music. Like Chicago house, *funk carioca* results from the creative appropriation of cheap technology by people with no formal musical training to produce music for segregated segments of the population: for young black gays of Chicago in the mid-1980s read young inhabitants of economically deprived urban areas of Rio de Janeiro and other Brazilian cities from the late 1980s onward.

A constant item on the agenda of the Legislative Assembly of the Rio de Janeiro State, which, with precarious syntax and concord, once declared 'forbidden the execution of pieces of music and procedures of crime apology in places where social or sportive events of any nature take place' (Clause 6 of Law 3410 of 29 May 2000; author's translation), *bailes funk* share with UK rave the privilege of being fed by a music governed by specific legislation: Law 3410/2000 (abrogated), Law 4264/2004, Law 5265/2008 (abrogated), Law 5543/2009 and Law 5544/2009. They must be understood in the context not only of the appropriation of African-American musics from the United States by marginalized sectors of the Brazilian urban population but also of the acts of physical and cultural violence perpetrated against these populations by individuals, civil society, the media and the state, of which the compulsory crimination of the poor is only one instance (see Araújo et al. 2006). The history of *funk carioca* consummates the brutal disruption of the mystique of joyous interaction between masters and slaves, the slum and the beachfront, the living room and the kitchen, the *modinha* and the *lundu*. The nationhood that *funk carioca* portrays is almost irretrievably partitioned. Yet, in the historiography of *funk carioca*, the integrationist paradigm holds sway.

For most authors, the *Baile da Pesada* (heavy party), which white middle-class radio-DJ Newton Duarte, a.k.a. Big Boy, and mestizo club-DJ Ademir Lemos put on in the upmarket Canecão beerhouse in the early 1970s, plays the role of founding myth. If Vianna and Marlboro are right, *funk carioca* appeared when a white upper-middle-class anthropologist – Vianna himself – presented a white lower-middle-class DJ from the Rio periphery, Luís Fernando Mattos da Matta, a.k.a. DJ Marlboro, with a drum machine. The first commercial release of *funk carioca* – the LP *D.J. Marlboro apresenta funk Brasil* (DJ Marlboro Presents Brazil funk), produced and co-authored by Marlboro in 1989 – followed thence, an interpretation endorsed by Marlboro himself on the LP sleeve. Even *proibidão* (literally, big forbidden thing), a subgenre dealing with the feats and fights of the criminal factions, is presented by Essinger (2005, 91) as originating from the first album of clean-shaven media-friendly Marlboro.

In addition to *proibidão*, also known as *funk proibido* (forbidden funk), *rap de contexto* (context rap) or *funk de facção* (faction funk), the roster of musical subgenres includes *funk sensual* (sensual funk) or *putaria* (harlotry); *funk consciente* (conscious funk); *funk melody* (sweet funk); *funk de raiz* (rootsy funk); *gospel funk* (evangelic funk); and *montagem* (montage), exploring the rhythmic repetition of vocal fragments, as in early house. The boundaries between crime, sex, awareness, romance, rootedness, the Gospel and dehumanized speech were and are often difficult to ascertain. The dances may be divided into many types: *bailes de comunidade* (community dances) take place inside the *favela, bailes de asfalto* (asphalt dances) happen outside it, whereas *bailes de rua* (street dances) may happen outside or inside it; *bailes do bicho* (murder dances), *bailes de briga* (fight dances), *bailes de corredor* (corridor dances), *lado A e lado B* (A-side, B-side) and *15 minutos de alegria* (15 minutes of joy), each extinct by the twenty-first century, all featured violence with a recreational character. In any of these events, the music comes from a DJ who plays *funk carioca* tracks from vinyl, CDs, a drum machine or a portable computer; from one or more MCs who rap/sing – often accompanied by a group of dancers (the combination of MC and dancers forming a *bonde*) – to the sound of a DJ who plays tracks on vinyl, or a combination of beats and breaks triggered from a drum pad; or from an often invisible DJ who releases an elaborate prerecorded track on top of which the MC raps/sings live. Whatever the format, a massive wall of loudspeakers is *de rigueur*. *Equipes de som* are owned by *donos de equipe* (sound crew owners), who hire DJs, sound technicians and dancers in addition to producing CDs and DVDs, owning phonographic copyrights, hosting radio and TV shows and maintaining DJs and MCs under more or less exclusive contracts. According to a leading MC, the major *equipes* are 'os cânceres do funk' (the cancers of funk). However, FGV has shown that, in 2008, MCs received by far the largest share of profits, 61 percent of them having never been under contract with an *equipe de som*.

The loop that underscores rapping has evolved so far in cycles of approximately 10 years. DJ Battery Brain's '808 Volt Mix' (1988) prevailed in the first decade (1989–98), although Willesden Dodgers' '122 BPM' (1982), Hassan's 'Pump Up the Party' (1987), Ice-T's 'What Ya Wanna Do' (1989) and other electro, Miami bass and freestyle tracks were also used. In 1998 DJ Luciano Oliveira created the Tamborzão on a Roland R-8 Human Rhythm Composer, combining the musical patterns of Miami bass with the rhythms and sounds of *maculelê*, *capoeira* and *candomblé*. Tamborzão reigned over *funk carioca* until 2010, when it was replaced by the anonymous Human Beatbox loop, emulating the spontaneity of rapping to the rhythm of handclaps and vocal noises, as seen in Denise Garcia's 2005 documentary.

Conclusion

The end of the millennium saw a rebirth of interest in *música soul* (a phrase that, in Brazilian parlance, may also encompass African-American funk, so as to distinguish it from the less prestigious *carioca* brand), to some extent due to the emergence in the media of issues related to racism and affirmative action policies. Since that point, new artists have appeared, old ones have returned and the careers of others who never stopped performing have received a new lease of life. Revival *bailes black*, where 1970s DJs perform their repertoires of yore, attract young crowds. In addition, house, drum 'n' bass and hip-hop DJ-producers have been remixing selections of 1970s soulful and funky Brazilian music. As to the world of *funk carioca*, it is alive and always changing. According to FGV, in 2008 the earnings of the 164 MCs, 90 DJs, 67 *equipes* and 248 peddlers whose income depended on the *bailes* added up to well over R$17 million in the city of Rio alone (FGV Opinião 2008, 79). A diachronic study of the music, however, is yet to be undertaken.

CARLOS PALOMBINI

Fusión (in Venezuela)

Fusión and *música de fusión* are umbrella terms used in Venezuela to denote new compositions by popular music artists and groups who use elements from folk music without producing a recognizable traditional folk piece, and in which formal, instrumental, linguistic, stylistic and conceptual propositions are different, personal and experimental in nature. *Fusión* is separate from the nationalist intentions of academic composers, although it involves similar musical procedures, being active within the field of popular music.

Fusión artists may be found within a wide spectrum of musical ideas, from simple use of a folk rhythm to digital experimentation with folk instruments. In the early twenty-first century, it may still be too early in its development to be able to group tendencies together, but a recurrent influence, similar to that in neofolklore, has been the integration of highly skilled performers of symphonic instruments with the folk and pop music worlds. The main characteristics of *fusión* are

- It involves professional music productions (live and recorded) of new compositions with elements of traditional folk music
- No specific folk piece is recognizable.
- It contains different formal, instrumental, linguistic, stylistic and conceptual propositions from traditional folk music

- It is personal and experimental in nature
- It is specific to popular music, although may come into contact with the academic music world

As in neofolklore, the use of folk instruments with different music assures an imprint of traditional folk culture, as well as the use of folk music styles with non-folk instruments. Antonio Lauro, guitarist-composer, who led one of the first important popular music groups in 1935, the Cantores del Trópico, created many guitar compositions with Venezuelan folk rhythms, such as the series of *Valses venezolanos*, the *Merengue para guitarra*, *Seis por derecho*, *Pasaje aragüeño,* among many others. With his guitar compositions, Lauro has become part of the basic program of all classical guitar schools in the world, and at the same time his music has remained very popular, despite the fact that the guitar has never been a prominent instrument in Venezuelan folk music, with the exception of a declining role in *joropo central* music.

The *cuatro,* as the national instrument, appears in almost all of the country's folk music, but its role has been always reserved to one of an accompanying instrument. In the 1950s Freddy Reyna turned it into a solo virtuoso instrument, transcribing folk repertoire into tablature, publishing a method in 1957 followed by a series of recordings, and a new, improved method for the *cuatro* in 1996, 5 years before his death. Reyna's work was expanded by Hernán Gamboa in the 1970s and by Cheo Hurtado of Ensamble Gurrufío, from the 1980s onward. Young *cuatro* performers have since taken the instrument to new frontiers, including jazz, where the folk reference is considerably lessened, as in the case of the *cuatro* group C4 Trío.

Fusión means in Spanish joining or mingling, and in the developing of new popular music it applies preferentially to the mixing of different rhythms to produce a new one. This is what Aldemaro Romero achieved and became famous for, first with his orchestral arrangements of Venezuelan folk and pop music in his album *Dinner in Caracas* in 1955, and later by mixing *bossa nova* with Venezuelan rhythms within a band concept to create a new style, *onda nueva* (New Wave) in 1971. Another successful example of *fusión* music in Venezuela is the world hit 'Moliendo Café' by Hugo Blanco in 1959, the most covered song in Latin America. Using the *cuatro*, the Venezuelan *joropo llanero* harp, the maracas, *güiro*, the first electric bass in the country and the *son clave* in 3–2, he created a song with an intro in the Andalusian cadence and a rhythm with a Caribbean flavor which he named *ritmo orquídea*. In this the ternary meter of the folk repertoire with which the harp and the *cuatro* were identified is adapted to sound in a four-beat, binary-subdivided rhythm.

An important popular music group named Guaco was formed in 1960 and grew in the west part of Venezuela, in the city of Maracaibo. Using the traditional rhythm of the *gaita zuliana* as its base, in its different forms which are traditionally performed at Christmas time, Guaco succeeded in detaching the *gaita* from its folk-calendar tradition and creating a personal 'Guaco sound.'

Further developments of *fusión* music introduced simultaneously all kinds of variations, including instrumental switching, rhythmic mixing, to changes in the social function and contexts. From 1967 the large production of original *canciones de protesta* (protest songs) by Alí Primera included the use of Venezuelan folk rhythms and instruments, enhancing the cultural and social relationship of his music. Within the rock influence of the early 1970s, Vytas Brenner, of German origin, produced an important track, 'Frailejón,' in his record *Ofrenda*. Here he mixed the harp of the *joropo llanero* with a rock band and Latin percussion. This tendency was immediately followed by the jazz pianist Gerry Weil, from Austria, mixing Venezuelan rhythms in his influential, experimental group La Banda Municipal in 1973–74, leaving only an old concert recording, *En vivo,* edited in 2008. Gerry Weil has continued to produce original *fusión* music in different instrumental combinations until today, a permanent resident of the country and jazz teacher of generations.

The Orquesta de Instrumentos Latinoamericanos ('Odila') established as a *grupo de proyección* in 1982, included in its concert program a Latin American folk repertoire as well as commissioned experimental compositions for a 30-member orchestra of folk and indigenous instruments. Compositions such as *Etnocidio* by Emilio Mendoza, its director until 1987, were part of this alternative repertoire, which was bringing together indigenous, folk, pop and academic influences.

It is common for solo singers in Venezuela to experiment with folk music in one way or another. María Rivas, a successful jazz singer appearing as soloist in 1987, experimented with Afro-Venezuelan rhythms and *joropo* folk music. Carlos Baute learned to play and dance folk music in the *Talleres de Música Popular* (Workshops of Popular Music) of the Bigott Foundation in Caracas, before adventuring himself in his *Orígenes* albums of 1994 and 1997. Within Latin-ska and reggae, groups such as King Changó included an amplified *cuatro* in the track in their music, such as 'Confesión' in 1997, made possible by the new technology of the luthier Luis Ruiz in Caracas with his ‘Gordation’ *cuatro* series similar to the electro-acoustic Ovations guitars.

The ingredients of the Venezuelan *fusión* development are completed by the addition of an influence from the academic symphonic world. This is present also in neofolklore music, as a by-product of the youth symphonic movement. Academic instrumental virtuosity with extended compositional procedures has reached the production of popular music that is at the same time folk in essence. The neofolklore groups which started in the 1980s eventually progressed to experiment with *música de fusión*, such as the compositions for El Cuarteto and for the Ensamble Gurrufío involving symphonic orchestras. Gurrufío conducted in 2001 a project known as the ‘Camerata Criolla,’ in the same direction as the Odila two decades before, but for a hybrid-chamber ensemble. They commissioned and performed works by composers such as Paul Desenne with his *El Reto*, crossing the border between academic and pop music with this initiative.

Numerous groups and soloists have evolved in the last 20 years, and Venezuelan popular music is very active in its production of *música de fusión.* Some artists who have had a sustained level of production for over 10 years, mostly with hybrid ensembles, are Arcano, Onkora, Saúl Vera y su Ensamble, Caracas Sincrónica and the guitarist Aquiles Báez. They give different names to define their music, such as Saúl Vera with his ‘*Música instrumental venezolana de nueva tendencia*’ (Venezuelan Instrumental Music of New Tendency), in which he incorporates the *bandola llanera*, a folk relative of the mandolin, into his jazz ensemble. Vera is also active as academic composer, completing his *Concierto para bandola y orquesta* (Concerto for Bandola and Orchestra) in 2000 and writing a method for the instrument. Andrés Eloy Medina, oboist of Arcano, defines it as ‘*Música nenezolana contemporánea*’ (Venezuelan Contemporary Music) (Mendoza 2000), in which the boundaries in terminology and music-making between contemporary academic music and progressive popular music are diffused. Other names which have been coined in the media are ‘*música contemporánea de raiz venezolana*’ (contemporary music of Venezuelan roots) and ‘*música folklorica urbana*’ (urban folk music). The joining of borders between these music worlds is one of the most important results of the *fusión* category, as well as the creation and advancement of the new Venezuelan popular music.

Some newcomers should be mentioned because of their surprisingly high level of music production, despite having only recently appeared: C4 Trío, the new *cuatro* music of Venezuela, Huáscar Barradas, a flutist proclaiming and taking advantage of the validity of neofolklore in its general meaning, Ensamble Catako, Akurima, Pabellón sin Baranda, Kapicúa, Germaín Coronado with Toberías and Ozono Jazz, among many others, with propositions that blend influences from folk music, jazz, rock and new academic music. The latter group has developed an adaptation of the *joropo*-playing technique ‘*jalao*’ of the *bandola llanera* to the nylon-string guitar, as in the track ‘Espirales.’

An initiative called ‘VenezuelaDemo,’ led by Alejandro Calzadilla, Luis Laya, Raúl Abdueza and Germán Acero, has achieved in producing from 2005 until 2008, 24 compact discs which include one track of each artist or group of popular music recorded in Venezuela since the year 2000. This valuable collection, covering over 400 artists of all genres, was financed by the government. Its international distribution has just began, which may mean an opening to the world of the new Venezuelan popular music.

Gagá

Dominican or Haitian-Dominican *Gagá* is a Lenten season religious society, appearing first in the 1920s, whose rituals and carnivalesque processions make extensive use of an exuberant style of music and dance, also known as *Gagá*. Its members are now mostly fourth- and fifth-generation Haitian-Dominicans who are bilingual and of mixed ancestry, although more recent Haitian migrants and numerous Dominicans with no Haitian ancestry also participate in *Gagá*. Since the 1990s its music has also been of influence in Dominican Carnival and modern popular music including Afro-Dominican fusion (Luís Díaz, Xiomara Fortuna, Roldan Mármol, José Duluc and others) and, to a minor extent, urban *merengue* (Amarfis y La Banda de Atakke, Diómedes y El Grupo Mío, Omega y Su Mambo Violento). *Gagá* songs are mostly in Haitian Créole (there is also some repertoire in Spanish) and singers are joined by an ensemble of *petró* drums, one-tone bamboo trumpets played in hocket, metallic horns, whistles and idiophones. *Gagá* leaders carrying titles such as president, coronel and minister of war wave flags, blow whistles and crack a whip to disperse dangerous spirits. In elaborate dress, including multicolored skirts, headdresses and sequined vests, male and female dancers twirl sacred batons and perform acrobatic routines in tribute to *Gagá* patrons and protective spirits, while others solicit offerings of money and alcohol. While known more widely for their public processions just before Easter and in Carnival, the more private rituals and underlying religious foundation of *gagá* groups contribute to much of the music's character and meaning.

Gagá songs may have two or more sections and alternate several lines of verse with refrain. Sacred and secular themes intermingle in lyrics rich in figurative meaning, including frequent sexual metaphor. A set of songs may be sung over the same hocketed pattern of the *bambúes* (bamboo tubes), while other song groups are set to different patterns. One of the *bambúe* pitches usually functions as the tonal center of *Gagá* songs, but tuning is without harmonic intent and often dissonance between some *bambúe* and song pitches adds tension to the ensemble sound. A one-headed long drum of the Central African type is played vertically by hand, while a smaller double-headed *catalié* is played horizontally with one or two sticks. The *bambúes* are four in number, range in size from two feet to over three and are not only blown but also struck by a stick in *tresillo* rhythm. Other aerophones are conch shells and thin metallic tubes with elliptical appendages (*tatua*), and idiophones including the lead singer's metal maraca (*cha-chá* or *zambá*), and a triangle or two pieces of iron. Unlike Haitian *Rara,* in *Gagá* a number of *pitos* (whistles) tend to be blown simultaneously in coordination with the rhythms of other instruments.

The religious and musical roots of *Gagá* are intertwined with its Haitian parallel *Rara*, although since *Gagá* appeared, along with massive early twentieth-century migration of Haitian workers to Dominican sugarcane plantations, both traditions have developed independently and are musically quite distinct. Haitian *Rara*, from which *Gagá* was originally inspired, may have developed from the French colonial period when slaves dominated a secondary carnival during Lent in which they visited the houses of important patriarchs performing and wearing costumes mocking French royalty, and soliciting food and money. The ritual calendar of the syncretic Vodú religion and leadership by members of *Petwo-Kongo* secret societies were also foundational to the rituals, instruments, songs and aggressive or spiritually 'hot' character of *Rara* performance. However, while Haitian *Rara* continued to develop and exploit its connections with Carnival, mass participation and cultural politics, Dominican *Gagá* remained closely tied to its religious society, and the alienated subculture of rural Haitian-Dominican cane workers. In response to inhumane conditions approximating slavery on the *bateys*, lack of citizenship and access to education and health care, together with feelings of sociocultural alienation, the members of *Gagá* have emphasized the militaristic *petró* cult and protective guardians of the ancestor spirits (*guedes*) within the African-derived religious practices of these labor communities. Also, while contemporary Haitian *Rara* groups have incorporated instrumentation and arrangements from urban popular music, *Gagá* music generally maintains an ensemble of traditional percussion fabricated from woods, bamboos, animal skins and scrap metal by members of the cult society.

Since the start of the twenty-first century, with more urban migration and greater integration of Haitian-Dominicans into Dominican society, there have been some new developments with *Gagá*. Several *Gagá* groups have been included in Santo Domingo's Carnival processions before a massive Dominican and international audience, and some are now adding snare and bass drum, trombones and additional rhythms popularized in Dominican Carnival. Likewise, *Gagá* has inspired Carnival themes written by Marcos Caminero and Luís Díaz among others. In 2008 an electronic version of *Gagá* created by members of Gagá Andres (just east of Santo Domingo) and dubbed 'Mambo-Gagá' was rapidly pirated across the Dominican Republic and appropriated by Dominican rap and reggaeton producers in highly popular dancehall remixes. Traditional *Gagá* ensembles have also participated directly in the development of Afro-Dominican fusion, including songs recorded on *Música raíz Vol. 1* (1997) and *Sí Gagá* (2008), in collaboration with several artists including Luís Días, Roldán Marmol, Xiomarra Fortuna, José Duluc, Rafelito Mirabal, Titico Carrión (Concepto Lotus) and Magic Mejía (Marassá).

DANIEL C. PIPER

Gaita (Colombia)

In Colombia, the word *gaita* refers to three things: a traditional wind instrument found along the country's northern coast; the instrumental ensemble to which it belongs; and a type of fast *cumbia*, a common dance genre from the mid-twentieth century that is commonly performed by an orchestra.

As an instrument, the *gaita* belongs to the aerophone family and is divided into two main types: *gaita larga* (long *gaita*) and *gaita corta* (short *gaita*). The long *gaita*, measuring approximately 80 centimeters in length (approximately 32 inches), is further divided into *gaita hembra* (female *gaita*) and *gaita macho* (male *gaita*). In performance, both *gaitas* are played simultaneously and complement each other. The female *gaita* has five finger holes and carries the melody, while the male *gaita*, with only one or two finger holes, highlights some of the pitches played by the female *gaita* and keeps a constant rhythm. The body of the instrument, or *palo*, is made from wild cactus-like plants called *bledo*, *cardón* and *pitahaya*. The mouthpiece is made of beeswax and vegetable carbon, to which a duck or turkey quill is inserted as a blowhole. The sound is produced by blowing through the opening and breaking against the edge of the tube which has been filed down.

A traditional *gaita* ensemble features a *gaita hembra*, a *gaita macho*, a *maraca* (played simultaneously by the *gaita macho* player) and three *tambores* (drums): one *alegre* (an open conical drum of a variable height between 60 and 75 centimeters that repeats, improvises and accompanies the female *gaita* in dialogue); one *llamador* (a shorter open conical drum between 30 and 60 centimeters in height that is limited to the counter-beat); and one *tambora* (a low-pitch, double-headed drum played with sticks).

Gaita larga ensembles interpret three basic *gaita* genres (*gaita corta* ensembles do not perform the *gaita* genre): *gaita*, *porro* and *merengue*. Some recognize a fourth genre called *puya*, which is a variation similar to the *merengue*. One should not confuse *porro*, *merengue* and *puya de gaitas* with other genres bearing the same name. Both the *gaita* and *porro* are genres with a moderate tempo (metronome markings between 75 and 100) in duple meter. They differ in their basic patterns from the *tambor alegre* and in their instrumentation the *gaita* is always instrumental while the *porro* involves some singing. The introduction of singing in the music of *gaitas* (specifically the *porro*) is a recent development no more than a hundred years old and is a result of intercultural borrowing and exchange. The singing lines in *porros* are infused with characteristics similar to those of other regional genres and of popular music in general, such as the presence of a clear tonal center and the use of melodies that outline arpeggios, creating chord progressions typical of functional harmony. Furthermore, *porros* often have a responsorial character similar to that of the *bullerengue* and the *tambora*, which are musical forms found in the northern coastal regions of Colombia. The *gaita* genre, on the other hand, shows original melodic material; its melodies, though clearly built from the superimposition of arpeggiated thirds, in many cases do not allow for the easy identification of elements of functional harmony such as the use of a tonic. The third genre, *merengue*, is also in duple meter like the *gaita* and the *porro*, but is characterized by a faster tempo (metronome markings between 110 and 145) and it can be instrumental or accompanied by singing.

The melodies of the *gaita* genre are marked by the possibilities afforded by the instrument its relative tuning that produces scales similar to A dorian (i.e., A minor with a raised sixth), and the instrument's tessitura of an octave and a half that typically extends from A4 to E5, with the occasional use of E4 and D4.

While the *gaita* instrument is of pre-Hispanic indigenous origin and has been used by ethnic groups located in Central America and the northern tip of Colombia, its exact origin is unknown. The most important development in the *música de gaitas* occurred in the region of Serranía de San Jacinto (also known as Montes de María), between the departments of Sucre and the north of Bolívar, in municipalities such as Ovejas, San Jacinto, Carmen de Bolívar and San Juan Nepomuceno in Colombia.

Although traditionally the music of *gaitas* has been the exclusive domain of men, the presence of women is of vital importance as this music is meant to be danced to in pairs. In recent years, women have started performing this music in addition to their role as dance partners.

The main avenue for the dissemination of *gaita* music has been the work of the renowned ensemble Gaiteros de San Jacinto. Formed in the mid-1950s, the group has recorded extensively and has been the recipient of several awards, among them the Latin Grammy in 2007 for best folk album in the folklore category. In addition, a *gaita hembra* was used in various recordings by Colombian pop artist Carlos Vives, introducing the instrument (not the genre) to a wider audience. Despite the revitalization of Colombian folk music in recent decades, the genres interpreted with *gaitas machos* and *gaitas hembras* continue to exist only in the margins.

FEDERICO OCHOA ESCOBAR
(TRANSLATED BY PAMELA NARBONA JEREZ)

Gaita (Venezuela)

In Venezuela, *gaita* is a term used most commonly for a genre of Christmas-season party songs that address history and geography, regional pride, religious devotion and political protest. The word itself is related to the terms for various wind instruments in Spain, North Africa and the Middle East, and is used for several distinct genres of music in Venezuela and Colombia, regardless of instrumentation. To distinguish this particular form of *gaita* from other lesser-known forms that use the same name, experts refer to it as '*gaita de furro*,' a reference to the '*furro*,' the characteristic bass friction drum. In the 1960s this regional folk music from the city of Maracaibo and its state of Zulia in northwestern Venezuela gained nationwide popularity through radio and television broadcasts and performances in the capital, Caracas. By the 1970s and 1980s *gaita* was overtaking other Christmas-season musics throughout the country, and through increased commercialization in the early twenty-first century, it has become one of the main genres of Venezuelan popular music.

Gaita is forceful music. Perhaps its most distinctive feature is its particular 6/8 rhythm, traditionally performed by an ensemble including *furro* and *tambora* (a large barrel drum played with sticks) accenting the offbeat second, third and fifth eighth notes of each measure with booming low tones. The *charrasca*, a loud scraper made of metal pipe with grooves cut in it and played like a *güiro* with a metal nail or rod, provides a constant eighth-note pulse with accents on the strong beats of the first and fourth eighth notes, though with many rhythmic variations. A similar rhythm is provided by the four-string *cuatro*, a small guitar, which offers considerable tonal harmonic complexity in both minor and major keys. Since the late 1960s some groups have added more instruments to this traditional ensemble such as electric bass, keyboard, congas, *timbales* and other percussion, salsa-like horn sections, electric guitar and trap drumkit.

Equally forceful is *gaita* singing. Normally, a soloist sings the verses, and a chorus of four to seven sings the refrains. Most singers are male baritones, and many groups include a female vocalist or two. Singing is dramatic and expressive, and in live performances audiences are encouraged to sing along on the refrains.

Gaita is seasonal music. Groups spend the first half of the year composing, rehearsing and recording new songs that are released in September and October in preparation for the holiday season. In Maracaibo, the season peaks around 18 November, the feast day of the patron saint, La Chinita (an image of the Virgin

Mary). Since the mid-1960s the weeklong Féria de la Chinita (Chinita's Fair) has featured performances by *gaita* groups and marked the beginning of the long holiday season. The climax of the Féria is the traditional *amanecer gaitero*, which literally means partying with *gaita* music, and lasts from the night of 17 November to dawn on the following day.

History

It is impossible to say when *gaita* first came into its own as a genre. By the first half of the twentieth century, people sang *gaitas* at parties in the patios and streets of Maracaibo, and the term *gaita* was used not only for the music but also for the party where the music was played. In this era *gaitas* were often improvised. Based on stock poetic structures, someone would invent a refrain for the *gaita del día* (gaita of the day), and people at the party would gather in a circle to improvise verses. Vocal improvisers of particular skill are known as *repentistas* (although by the early 2000s this improvised tradition had all but vanished), and they would take center stage at *gaita* parties. Partygoers would signal their urge to improvise a verse by waving a handkerchief (nearly everyone carries a handkerchief to mop their brows due to the intense year-round heat). Often, one singer would challenge another at the party to respond in a verse, and if the challenged could not respond effectively, that person would be expected to go and purchase the next bottle of liquor to keep the party going. This oral, communal, improvised origin is cited by *gaiteros* as the reason for *gaita*'s reliance on relatively fixed rhyme schemes and four-line verse structures, and also why topics such as partying and local culture are more common than love songs – the drunken singing circle being a poor place to confess one's heart. During this prerecorded phase, the predominant instruments were *furro*, *cuatro*, *charrasca* and maracas, with the stick-played *tambora* coming into the ensemble perhaps as late as the 1950s.

Around 1960 *gaita* began its transformation from a popular folk form to a mediated popular music. The first recordings of *gaita* were made around 1958 and 1959, with limited commercial impact. In the early 1960s businesses began sponsoring folk music competitions, and *gaita* groups organized and named themselves in order to compete. A *gaita* from this era that is still widely performed is Moises Martínez's 'Gaita Zuliana,' now popularly known as 'La campeona' (the Champion) because it won so many festival competitions. When Martínez's group made their first television appearance, in 1962, the host, Oscar García, dubbed them 'Saladillo' after the old neighborhood in downtown Maracaibo that claimed to be the birthplace of *gaita*. Within the next few years many other groups organized themselves, took on names and uniforms and began recording albums of new *gaitas* for each season. Groups such as Cardenales del Éxito, Rincón Morales, Guaco, Barrio Obrero and Gran Coquivacoa have continued to be popular, although with ever-changing personnel. By the mid-1960s *gaita* groups were regularly traveling to Caracas, the Venezuelan capital, to perform in concerts and on television and radio. As the performance venues grew, so did the size and volume of the percussion instruments. Other instruments such as electric bass and keyboard were added, often offending *gaita* traditionalists.

The 1960s saw the advent of the first 'stars' of *gaita*, most notably the singer/composer Ricardo Aguirre, dubbed 'El Monumental.' With *furrero* Douglas Soto, Aguirre founded the group Cardenales del Éxito in 1963. After scoring numerous hits with Cardenales, conflicts led Aguirre to join Saladillo, with whom, in 1968, he recorded 'La Grey Zuliana' (The Zulian Flock), which was to become known as the 'hymn of the *gaiteros*' and serve as a model for protest *gaitas*. In 'La Grey,' in the form of a prayer to La Chinita, Aguirre pleads for the government to improve the living conditions of Zulians. The implication here, as in many protest *gaitas*, is that Zulia state, the source of much of Venezuela's petroleum, contributes much of the wealth of the country but receives little in return, due to centralization of the oil industry. Aguirre was killed in a car accident on 8 November 1968 at the peak of his popularity, leading to his immortalization in *gaita* history. The date is now celebrated in Maracaibo as the Day of Gaiteros. Aguirre's powerful, yet restrained baritone voice has served as a model for generations of *gaiteros*.

By the early 1970s *gaita* had become a small music industry of its own, with dozens of active professional groups. Perhaps the most popular *gaita* of all time, 'Sin rencor' (Without Resentment) by Neguito Borjas and Gran Coquivacoa, was first recorded at this time; unlike most *gaitas*, it is a song about a lost love. While some groups, notably Barrio Obrero, maintained a traditional instrumentation and sound, others, most prominently Guaco, have created a unique fusion sound by incorporating influences from Latin America and beyond. This has created a variety of music that can be identified as *gaita*, and a lively discourse about what is or is not *gaita*. While some lament the loss of the original familial folk performance setting, most Zulians are proud of the ever-growing popularity of their regional music. In the early 2000s government support for *gaita* increased with the creation of entities such as FUNDAGRAEZ, *la Fundación para la Academia de la Gaita 'Ricardo Aguirre' del Estado Zulia* (the Foundation for the 'Ricardo Aguirre' Academy of Gaita of Zulia State). By 2008 hundreds of *gaita* groups were active throughout Venezuela.

ROBERT T. CARROLL

Galopa

Like the Paraguayan *polca*, to which it is closely connected in terms of both origin and development, the *galopa* is a dance which uses a lively rhythm in compound duple meter with *sesquialtera* or *hemiola* rhythmic elements.

The name *galopa* derives from the European salon dance the gallop, introduced in South America, first in Montevideo, Uruguay, around 1849 (Ayestarán 1953). Boettner (1997, 198) indicates that before the Paraguayan people adopted the term *polca* in the second half of the nineteenth century, the term *galopa* was used in reference to this already existing dance in 6/8. The distinction between the *polca* and the *galopa* remains hazy, although some explanations have been offered in an attempt to differentiate between the two. *Galopas* seem to have a closer association to folk and traditional dancing with the accompaniment of a *banda típica* or *banda koyguá* (folk band), an ensemble comprising two trumpets, two saxophones or clarinets, two trombones, a tuba, a snare drum and a bass drum with two crash cymbals on top. While the *polca* is composed as one continuous musical section, the *galopa* is a *polca* divided into two rhythmically distinctive sections. The second section presents significant variations in the accentuation of the rhythmic patterns played by the percussionists. Mauricio Cardozo Ocampo (2005, 70–1) believes that the *galopa* and the *polca kyre'ỹ* are intrinsically similar in spirit. Inspired by the vivacious musical tradition of the *galopa* dance, Cardozo Ocampo's original composition 'Galopera' (The *Galopa* Dancer) has become one of the most internationally recognized songs from Paraguay. 'Galopera' encapsulates the melodic, harmonic and rhythmic features found in the traditional instrumental and vocal music repertoire of Paraguay. Since other Paraguayan folk music ensembles do not typically use percussion instruments, the *galopa,* when accompanied by a band, appears to be the only genre within the Paraguayan folk tradition that exhibits a systematic use of percussion. *Galopas* or *fiestas de la galopa* constitute popular gatherings and usually take place outdoors in connection with a Catholic festivity or a social occasion. In order to fulfill a *promesa* (religious vow), *galoperas* (female *galopa* dancers), dressed in traditional attire, perform improvised dance steps in a circle while balancing *cántaros* (clay pitchers) or glass bottles on their heads. Watkins (2008, 380) explains that 'the symbolism of water [carried in the *cántaros*] and fruit [which may also be carried in baskets by the *galoperas*] and sensuous motions of the dancers, … seem to identify this dance as a type of disguised fertility ritual.' In the early twenty-first century an annual *concurso de galopas* (*galopa* [dancing] contest) takes place in early September in Yvysunú, Guarambaré (a town in the Departamento Central), as part of the Catholic feast of the Nativity of the Virgin Mary (celebrated in Paraguay on 7 September) and as part of the musical activities centered on the Festival del Takuare'ẽ [Music] Festival of the Sugarcane) in Guarambaré. Curiously, when a Paraguayan *polca* is played by a *banda típica* with the rhythmic characteristics of the two sections of the *galopa* dance, the performance style of the piece is described as a '*polca-galopa*.'

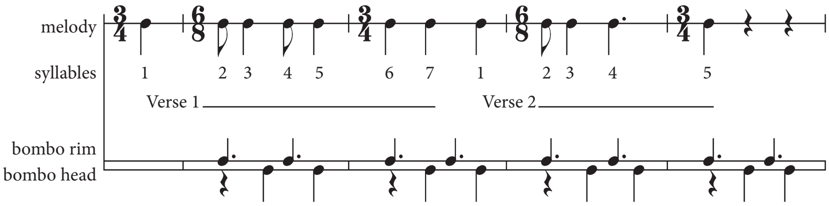
ALFREDO COLMAN

Gato

The *gato* was the most popular folk dance in Argentina during a large portion of the nineteenth century, when it was called '*Gato mis-mis*' or '*Perdiz*.' In the late 1700s it was also danced in neighboring areas and throughout the Spanish American Viceroyalties, as far away as Peru and Mexico. In the early twentieth century, when folk song collecting resulted in the crystallization of genres and conventions, it was considered a major genre in Argentina, but not so in other countries which are also heirs of the Spanish colonial tradition. In modern Argentinian urban, media-disseminated *folclore*, however, it has occupied a modest and gradually receding position.

The accompaniment pattern for *gato* is the same as that for *chacarera*; the mode is traditionally major. The choreography, for independent couples, includes finger snapping, heel-and-toe tapping and simple evolutions; it is picaresque but decorous and graceful. The lyrics are usually cheerful, sometimes humorous; typical subjects are the dance itself, courtship and happy evocations of past local scenes. The lyrics consist traditionally of four quatrains of *seguidillas* (alternating hepta- and pentasyllabic lines, rhyming ABCB), two each for the *primera* and the *segunda* (the two musical and choreographic sections). Following an instrumental introduction, the first two lines are sung and repeated; next, lines 3 and 4 are also repeated. After an interlude, the next stanza is sung, with a further interlude between lines 2 and 3 (Introduction – ABABCDCD – interlude – AB[AB] – interlude – CD). Both versification and musical scheme are freely modified in *gatos* of the second half of the twentieth century: the regular octosyllabic line that predominates in *folclore* is sometimes introduced. The basic rhythmic scheme for each pair of lines, transmitted by tradition (Example 1 below) is also often ignored, as are the details of the overall musical form; consequently, modern *gatos* are seldom danced.

In spite of all these adaptations, some trademarks of the genre remain: irregular or short line-lengths and instrumental interludes within the stanza.



Example 1: Traditional *gato* melodic/rhythmic scheme

Like other genres within *folclore*, *gatos* have been composed, arranged and performed in many guises. One of the most talked-about, 'El huajchito,' by Enrique 'Tata' Farías Gómez, adheres closely to the traditional rhythm, melody and versification, but became famous in the early 1960s through the *a cappella* performance of the ensemble Los Huanca Hua (2008), with voices imitating the effects of the usual accompanying instruments (guitar, *bombo* drum, harp and violin). Another celebrated *gato*, 'Gato de la fiesta,' by Zulema Alcayaga and Waldo Belloso (recorded, for example, in 2005 by Los Tucu Tucu), is written mostly in lines of nine and ten syllables in alternation, with a refrain that incorporates various other meters. 'Gatito 'e las penas,' by Raúl Carnota, (1983), replaces the repetition of the first pair of lines with an instrumental interlude, and substitutes sung stanzas (with lines of 8-8-7-8 syllables) for the traditional instrumental interludes. The rhythmic patterns of its melodies (similar to the *chacarera trunca*) and its 'bimodal' harmonic setting (to use Carlos Vega's term – see Vega 1988 [1944]) are imaginative transformations and intermixing of traditional elements from different genres.

LEONARDO WAISMAN

Goombay

Goombay is the term originally used in the Bahamas to designate the musical style that, by the late 1960s, came to be called rake-n-scrape. But even before rake-n-scrape emerged as a new way of describing traditional goombay music, the label took on another, much more specific and localized meaning within the entertainment industry in the capital Nassau. Beginning in the years following World War II, goombay came to be used in order to distinguish the musical style of local popular musicians and nightclub entertainers from the sounds of pan-regional musical styles. That this was a strategically important shift in meaning becomes especially clear when considered against the backdrop of rapidly increasing tourist presence in Nassau and the parallel rise in the popularity of calypso and Cuban dance band musics throughout the Caribbean, and especially in the United States (whence most tourists visiting the Bahamas hail). In the decade following World War II, then, musicians in Nassau found themselves in need of a product, one that would represent a pan-Caribbean feel without losing its Bahamian specificity. Goombay was the perfect solution to this dilemma, both in terms of its etymology and with regard to the stylistic and rhythmic possibilities it afforded to entertainers.

Goombay thus came to reference Bahamian popular music, not only in name but also symbolically (through exoticizing 'native' folk heritage) and sonically (in and through allusions to musical style). This representation was made possible in large part through an active discourse linking traditional goombay music with the popular music being performed in Nassau and through the simultaneous silencing of that traditional practice within the modern spaces of Nassau's nightclubs. The goat skin drum – often called the goombay drum by Nassauvian entertainers, further signifying the genre's appropriation into the nightclub scene – came to stand in for authentic Bahamian culture in an environment where the claim itself was more important than the practices that were being invoked. Many artists, for example, did not use the goat skin drum *per se*, choosing instead the more efficient (and more cosmopolitan) *conga* drums. The bands that played goombay music, moreover, made an increasingly clear distinction between the inspiration they drew from traditional practice (history/memory/folklore) and the music that they now played (modern/immediate/metropolitan).

Rake-n-scrape's characteristic rhythms thus made rather subtle appearances in the goombay music performed in Nassau's nightclubs, usually through transfer to other instruments. The saw rhythm, for instance, was often played on maracas, and the rhythms usually played on the goat skin drum were often (but certainly not always) translated in some fashion to the *conga*. In both cases, however, the translation was partial and incomplete. Artists such as Blind Blake, George Symonette, Eloise Lewis, Charlie Adamson, Freddie Munnings, Sr., King Eric, Count Bernadino and Peanuts Taylor, to name but a few, were active on the scene and each made significant contributions to the nightlife of Nassau during the 1950s and into the early 1960s. It is significant, moreover, that the repertories of these goombay artists included songs in a wide range of styles, ranging from calypso to *merengue*, from *chachachá* to locally composed material. Goombay music, then, was a way of providing a catch-all label for a highly diverse repertory that needed a specifically Bahamian anchor in order to appeal to tourist audiences.

An important aspect of this moment in Bahamian popular music concerns the fact that two distinct but interrelated nightclub scenes had developed in Nassau during the 1940s and 1950s. On the one hand was a group of venues known as the Bay Street clubs. This scene included all of the major hotels of the day, most of which operated several rooms where live music could be heard, and all of which welcomed only white clientele. Representative examples include the Jungle Club at the Montagu Beach Hotel, the Playhouse at the British Colonial, the Rum Keg Room at the Nassau Beach Hotel and the Jubilee Terrace at the Emerald Beach Hotel.

Another group of nightclubs, known collectively as the over-the-hill scene, comprised the center of entertainment by and for Bahamians. This scene was a part of the so-called chitlin' circuit and, as a result, Bahamians had the opportunity to see many of the major African-American and Caribbean entertainers of the day. Performers such as Nat King Cole, The Mighty Sparrow, Sam Cooke, Perez Prado, Harry Belafonte, Duke Ellington, Brook Benton, Count Basie and Byron Lee thus all found their way to Nassau during the 1950s and 1960s. The most famous of these clubs included the Silver Slipper and the Cat and Fiddle Club, but many others, including the Zanzibar, Blue Note, Lemon Tree, Conch Shell and Drumbeat Club, thrived during the middle decades of the twentieth century. Importantly, both tourists and local Afro-Bahamian clients were welcome at these clubs and it is significant that the exoticized floorshow routines so popular in the Bay Street clubs also played well in the over-the-hill clubs.

By the mid-1960s a younger generation of musicians, including performers such as Carl Brice, Smokey 007 and Richie Delamore, and bands such as Rupert and the Rolling Coins, The Blue Notes and Kenny and the Beach Boys, were playing in an increasingly competitive market in which the over-the-hill clubs found themselves placed at a distinct disadvantage vis-à-vis the larger, better-funded and air-conditioned hotels of Bay Street. The sounds of goombay music also began to shift away from the need for exploring a specifically Bahamian identity (even if it was predominantly discursive) and to move toward skillful covers of songs that were doing well on the US *Billboard* charts. This was a calculated move, designed to illustrate to tourists a local interest in, and connection with transnational media flows and musical trends, but it effected a gradual uncoupling of the symbolic relationship between the Nassau nightclub musicians and their (goombay) music.

By the early 1970s the over-the-hill scene was faltering and the 'golden age' of goombay was coming to a close. As independence arrived (1973), musicians were increasingly turning toward exploring the possibilities of using junkanoo rhythms in their popular music, and artists such as Dr Offfff, The Beginning of the End and T-Connections experimented with funk, soul and disco without feeling the need to label themselves as goombay musicians. The goombay music of the Bahamas, then, is as much about the musical negotiations that were important within the tourist-driven economy of Nassau, as it is about naming an era of nightclub entertainment that lasted from the mid-1940s through the early 1970s. The first 20 years of this era were devoted to symbolic and discursive explorations of goombay rhythms and native heritage in order to present the Bahamas as a unique Caribbean destination with a distinct musical product. The last 15 years of this era, by contrast, were essentially bound up in shifting the goombay paradigm away from links with heritage and toward unabashedly cosmopolitan, transnational musical ideas. They were also tied up in facing the collapse of the over-the-hill scene amidst a concomitant and rapid expansion of the tourist market. The goombay years, as this era is called in the Bahamas, thus provide a particularly interesting example of the shifting needs and expectations that emerge in the course of negotiating musical style within a tourist economy.

TIMOTHY ROMMEN

Guajira

There are two main forms of *guajira.* The first, in both 6/8 and 3/4 meter (in alternation), is related to the *punto cubano*, a form of *música campesina* (country music) that was adapted and performed in the theater in both Spain and Cuba in the early decades of the twentieth century; the second form, in 4/4 time, was known initially as *guajira de salón* and later as *guajira-son*. The latter *son*-influenced *guajira* form became well known in Cuba through radio shows in the 1930s, 1940s and 1950s, popularized by artists such as Guillermo Portabales, Celina González and Joseíto Fernández.

The meaning of the word *guajira* can lead to some confusion when it comes to labeling *música campesina* or 'country music' styles. The term is used to refer to the *guajiro* or Cuban peasant farmer or to the countrywoman (*guajira)*, as well as to many forms of music referring to the countryside and rural living. Not all songs with 'guajira' in the lyrics, for example, are musically related to the *guajira-son* style. However, the idealization of rural life and the portrayal of Cuban national identity through the image of the Hispanic farmer are prevalent in most *guajira* forms, from the composed pieces in Cuban musical theater works (in *zarzuela* and *teatro bufo*) of the early twentieth century to the *guajira* songs of the *son* and *charanga* dance bands from the 1930s and 1940s onward.

The Guajira Family

Peter Manuel has documented both the Spanish vernacular roots of the *punto cubano* and the later *flamenco guajira* style which developed in Spain as a result of theater troupes performing in both the peninsular and Cuba (see Manuel 2004 for more detail on this 'ida y vuelta' ('departure and return') cultural exchange between Spain and the New World). The *punto cubano*, with its lineup of vocal, guitar, *bandurría* (type of mandolin), *laúd* (type of lute) and hand percussion, could be said to be the wellspring of the *guajira* theater genre. This form of *música campesina* uses 6/8 and 3/4 meter, a particular style of guitar technique called *punto,* instrumental interludes between verses, and *décima* (ten line declarative sung poetry using eight syllables per line); these lines are either improvised ('libre') or fixed ('fijo').

The Theatrical Guajira

The composed *guajiras* of the Cuban *zarzuelas* and *teatro bufo* performances in the early twentieth century were similar in structure to these *punto cubano* country forms in that they employed the alternation of 3/4 and 6/8 meter, *décima* form, and lyrics which promoted idealized Hispanic images of rural Cuba. Composers such as Jorge Ankermann (1877–1941), inspired by *música campesina*, wrote *guajiras* based on the *punto cubano,* and Ankermann himself is sometimes credited with being the creator of the *guajira* style (Orovio 1981). According to *zarzuela* composer Sánchez de Fuentes (1874–1944), a *guajira* comprised a section in a minor key followed by one in a major key, finishing on the dominant, with verses arranged in *décimas* with alternating 6/8 and 3/4 meter (Orovio 1981). Used in the theater to represent stereotypes of the archetypal Cuban peasant, these theatrical *guajiras*, by composers such as Ankermann, Sánchez de Fuentes and Gonzalo Roig among others, portrayed Cuban identity as essentially Hispanic. Robin Moore (1997, 131) notes that the *guajirismo* nationalism of the 1920s and 1930s enabled white middle-class Cubans to embrace a Cuban rather than Spanish identity without having to confront or acknowledge the Afro-Cuban presence and influence on the island. The idealization of rural life thus entailed promoting a vision of Cuba populated by hardworking 'white' peasant farmers, as opposed to the *Afrocubanismo* movement of the same period which had begun to valorize (and idealize) working-class Afro-Cuban culture as a form of national identity.

The *Guajira de Salón* and the *Guajira-Son*

In the 1930s, with the influence of the Cuban *son* from the *trova* tradition, the *guajira de salón* emerged, and while it was not strictly a musical evolution from the theatrical form, this style nevertheless continued to portray similar themes of nostalgia for rural ways of life, albeit with more focus on the hard realities of working on the small farms and plantations. Credited with being the inventor of the *guajira de salón*, the guitarist, singer and composer Guillermo Portabales is said to have been the first to interpret the theater *guajiras* in the *trova* style in the 1930s. Between 1937 and 1939 he recorded several of these *guajiras de salón* for RCA Victor such as 'Al vaiven de mi carreta' (To the Swaying of my Cart) by his mentor Ñico Saquito in 1939 and he is remembered most for his composition 'El carretero' (The Cart Driver) which has been performed and recorded by numerous artists including the Buena Vista Social Club in 1996.

Afro-Cuban elements became increasingly part of the *guajira* style, although some alternation between the early *guajiras* of the theater and the more Afro-Cuban-influenced *guajira* did occur. For example, in the *guajira-son* composition by Rosendo Ruiz (1885–1983) *Junto a un cañaveral* ('By the Sugar Plantation' – see Cañizares 1992 for the score), both elements of the stage *guajira* and the *son* are combined. In general, however, the later *montuno*-based (repeated *ostinati*) style has been the more enduring form of *guajira*.

The *guajira-son* developed from the smaller, *trova*-based *guajira de salón* form and is now generally considered to be the most representative of the idiom. The ubiquitous 'Guajira Guantanamera' by Fernández has probably played a bigger role in defining the *guajira* style than has any other song. Fernández (a singer from Havana and not a *guajiro*) ran his own radio shows from the late 1920s up until the late 1950s (Sublette 2004, 488–90), as did many other singers of the time, such as Miguel Alfonso Pozo, known as 'Clavelitos' (Marrero 2008, 54). The 'Guantanamera' melody served as a template on which Fernández could improvise lyrics in response to listeners' requests or to the news of the day. Initially a love song for a countrywoman from Guantánamo, it has had many other lyrics attached to it, including a poem by José Martí, recorded by Pete Seeger in the 1960s as an anti-Vietnam war song. Thus 'Guajira Guantanamera' has been repeated in many forms, appearing on the 1992 compilation album *Joseito Fernandez … y su Guantanamera* under various titles such as 'Cuento mi vida' and 'Mi biografia' with different lyrics for the verses. In the *punto cubano*, archetypal melodies also served as templates for *décima* improvisations about the news of the day, and therefore one can see this as a wider Cuban tradition in which lyrics are used to provide commentary on daily life.

Musical Elements of the *Guajira-Son*

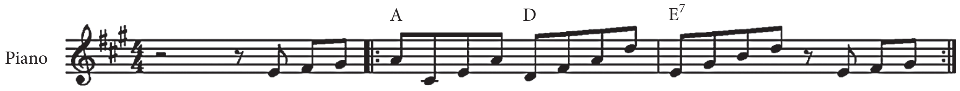
'Guajira Guantanamera' uses a lineup of guitars and *laúd*, piano, bongos, maracas, cowbell (on beat 1 only), main vocal and *coro* voices and a standard chorus-verse structure preceded by a floral 'ad lib' introduction. This could be seen as a template for the style, in that the use of anacrusis and arpeggiated *montuno* are the main signifiers of the *guajira*. The Guantanamera *montuno* is a four-bar I–IV–V progression (with I–ii–V variants) in the key of A major, as in Example 1 below.

The *guajira-son* style typically contains anacrusis and arpeggiated *montunos* using specific types of chord progression, such as the I–IV–V Guantanamera *montuno* above, but also the following 'Spanish-sounding' progressions in the minor, such as the i–iv–V (Example 2) and the i–VII–VI–V^7 progression (Example 3).

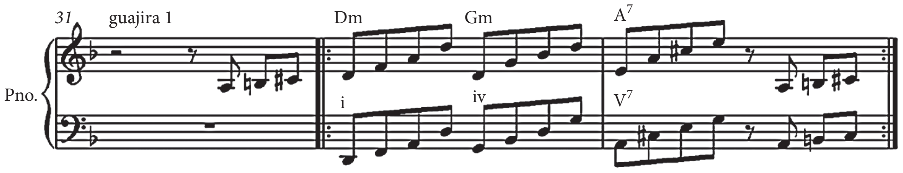
All *guajira* progressions finish on the dominant, setting up the expectation for the cycle to recommence in a never-ending ostinato accompaniment to the lyrics and solos. Originating in the *trova*, rhythmic patterns for the *guajira*, such as those played on the *timbales* and maracas, are closely related to those of the *bolero.* As a consequence of this *bolero* connection, one can often hear straight eighth notes alternated with *bolero* patterns (Example 4).

Boleros, however, are typically reserved for love songs, whereas *guajiras* are used for stories about life in the country or news of the day and have a strong narrative quality to them, inherited from the *punto cubano*.

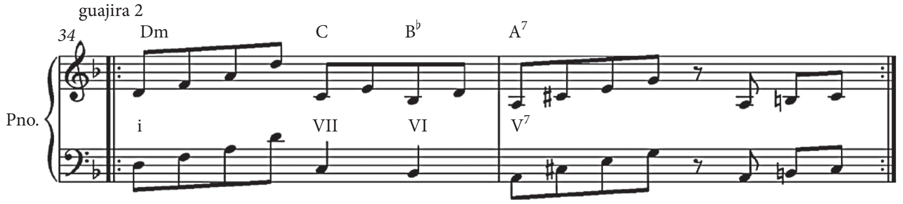
Stylistic elements from the *guajira* are not only found in guitar-based *música campesina* but are also adapted to larger dance band formations. Benny Moré



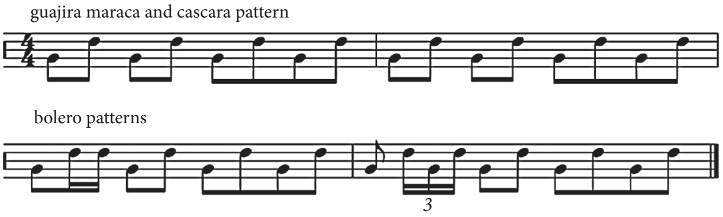
Example 1: *Guajira Guantanamera Montuno*



Example 2: *Guajira Montuno* (transcribed by Sue Miller during flute lessons with Richard Egües, Havana 2001)



Example 3: *Guajira Montuno* 2 (as demonstrated by Egües, Havana 2001)



Example 4: Rhythmic patterns used in *guajira-son*

employed elements from the style in his Banda Gigante in the late 1950s, with numbers such as 'Soy campesino' (I'm a Country Boy) and 'No hay tierra como la mia' (There's No Country Like Mine). Orquesta Broadway, led by Cuban flautist Eddy Zervigón, has even adapted the opening of Beethoven's *Symphony no. 5* to the *guajira* style with their 'Quinta guajira' (Fifth Guajira). The slower tempo *guajira* is characterized in the violin and flute-led *charanga* lineup by arpeggiated figures on the piano and violins (*pizzicatos*), as illustrated by Ray Barreto's 'Te traigo guajira' (I Bring You Guajira). A good example of a big band *guajira* is 'Amor verdadero' (True Love), a *guajira-son* by José 'Cheo' Marquetti recorded by the Afro-Cuban All Stars.

Some Conclusions

The first theater *guajiras* are linked to the *guajira-sones* of the mid-twentieth-century dance bands mainly through their lyrical content, portraying Cuban identity through the image of the hardworking Hispanic farmer 'guajiro' or the beautiful country girl 'guajira.' Musically, however, they are distinct, with the theater *guajiras* based on Spanish vernacular forms such as the *punto cubano* with its alternating 6/8 and 3/4 rhythms and *décima* poetry, and the second with its more Afro-Cuban influence of 4/4 meter and cyclical *montunos* and *coros*. The foregrounding of the guitars (including the *bandurría*, *laúd* and *tres*) unites both forms, but the *guajira-son* style has been the more enduring. Since the late 1930s the *guajira-son* has been taken up by a variety of dance bands, from the traditional *son* band variety to the *conjuntos*, *charangas*, Cuban jazz bands and later salsa formations in Cuba and abroad. The international level of fame for 'Guantanamera' has elevated the *guajira-son* form (now known simply as *guajira*) to worldwide recognition, due to three decades of its radio broadcasting in Cuba, followed by popularization by world artists as disparate as Pete Seeger, Robert Wyatt, Celia Cruz and Wyclef Jean.

Guaracha

Guaracha is a Cuban musical genre that combines song and dance. Due to the tendency of *guarachas* to present a combination of features of other song types, genres and styles, especially the *son*, *guarachas* tend to be associated interchangeably with these other styles. The definition of *guaracha* is complex in that it has changed over time. In addition, many models or prototypes of *guarachas* that are associated with different historical periods do not necessarily share the common features necessary for categorization. A first prototype is the *guaracha* that developed within the Cuban nineteenth-century *bufo* theater. This theater *guaracha* is the type that migrated into other Latin American countries such as Chile. Important composers wrote *guarachas* that transcended the theater repertoire and became autonomous, securing their relevance in the second stage or prototype in the 1920s, when theatrical and singable *guaracha* became intertwined with the Cuban *son*. This marked the genre's departure from the theatrical stage and the emergence of the *guaracha-son* subgenre.

Origins and Historiography

The origins of *guaracha* have not been systematically collected and they appear dispersed in the existing bibliography. However, a large part of this bibliography acknowledges its Spanish ancestry and describes it as both song and dance. Some sources suggest *guaracha* was present in Cuba in the sixteenth century in the streets, public parks and circuses, or in brothels and port bars in Havana later in the eighteenth century. Other sources date its origins in the eighteenth century in the form of Spanish *zapateo andaluz* (from Andalucía). The *Diccionario provincial casi-razonado de vozes y frases cubanas* (Pichardo 1976) places the *guaracha* at the beginning of the nineteenth century – a date widely accepted – and defines the genre as a 'dance of the riffraff that is almost outdated.'

Some scholars discuss the origin of the genre exclusively within the context of Cuban *teatro bufo* of the nineteenth century. According to Robin Moore, the term 'guaracha' was used in theater to describe a vocal duet in a moderate tempo between a *mulata* and a black man that emphasized immodest humor and sexual innuendo (Moore 1997, 92). Generally speaking, the festive connotations of *guaracha* are transposed to daily life into terms such as 'guaracha' (rowdy party), 'guarachero' (partygoer) or 'guarachar' (to party), just as the term 'sandunga,' found in theatrical *guaracha* librettos and scores as a performance marking and in the typical 'mulata sandunguera' character, is used in social contexts to mean 'spice' and 'salaciousness.'

Stages and Development

Guaracha was initially performed in the sixteenth century in urban street parades such as *serenatas*, *comparsas* and *recorridos*. *Guarachas* also appeared in dance halls, where sung fragments were superimposed over *contradanza* melodies. In fact, a number of *contradanzas* were written from old *guarachas*: a notable example is 'El sungambelo' (1813, anonymous), which served as the theme for the first part of the *contradanza* of the same name. During the wars for independence in the nineteenth century, newspapers referred to the existence of 'camp' *guarachas*. The genre also existed as part of the *trovador* repertoire across the country, but most importantly, *guarachas* were incorporated within Cuban *teatro bufo*, a vernacular nineteenth-century form of comic musical theater that relied heavily on the use of blackface and depicted 'typical' characters that represented racial groups and social classes.

In the context of the theater, *guaracha* replaced *jácaras* or picaresque songs that were interpolated in *tonadillas*, *sainetes* and *entremeses* of the sixteenth- and seventeenth-century Spanish Siglo de Oro theater represented in Cuba. *Guaracha*'s rise in fortune begins in the second half of the nineteenth century, a process driven by Francisco Covarrubias and Enrique Guerrero. In this type of *guaracha*, many elements that were present in other manifestations of the genre became amalgamated and first crystallized: its popular character, the jocular and ironic language, as well as its links to song. Thus, the *guaracha* of the *teatro bufo* era concentrates the principal music-text features of the time and fulfills, in the words of Moore, 'a crucial role during almost a century in a place of social and ideological mediation' (Moore 1997, 101). The performance of *guaracha* was carried out by popular characters such as the *negrito* (black male), the *mulata* (*mulata* female) and the *gallego* (Galician) who criticized 'everything in daily life that may be used for joking, derision, and denouncing' (Linares 2000, 98) and made references to social and political events, customs, characters, dances and modes of dress in the manner of a chronicle. Texts from this stage served to channel elements of a nascent national identity, idiosyncratic features and sociopolitical and cultural concerns, while the music nurtured the sound amalgam that marked its birth – mainly that of the more popular context, although it also fostered expressions closer to those of lyrical song.

With the popularity of *son* during the first decades of the twentieth century, a second important event in the history of *guaracha* was the emergence of a canon established by the *guaracha-son* form, which combines the *guaracha* with the classic structure of the *son* genre (introduction, body and *montuno* section). This second prototype was established within the *trovador* tradition, whose defining feature was a *sonero* singing style with a quicker tempo and with texts that were already known. This 'familiar air' allows for other pieces to be considered as part of the genre, tied to the prototype by one of their features. *Guaracha-son* was adopted by septets and other ensembles, which encouraged both a widespread danceable version of the *guaracha* and new forms of manifesting itself within the vernacular theater.

Music-Text Characterization

Until the nineteenth century some *guarachas* could be very close to other song types due to the lyricism of the performance style, but they differed in the lyrical approach from these other songs, which were typically comical, ironic or satirical, as is the case in 'La reglana' by Eliseo Grenet. The strong presence of basic multivalent and reciprocal accented rhythmic patterns called *cinquillo*, *tresillo*, *anfíbraco/tanguillo* and *habaneroso* (Orozco 2001a, 29), juxtaposed and superimposed over performance modes for the stage defined *guaracha* as a synthesis of styles that converged in Cuba during the era of vernacular theater, particularly the *son*, *danzon* and *bolero*. This generated hybrid works that represented a complete fusion of multiple genres such as the aforementioned 'La reglana' by Eliseo Grenet and 'El golpe bibijagua' by Julio Cuevas. Both songs are performed by Rita Montaner.

Theater *guaracha* was initially conceived in 6/8 with occasional use of short note values (i.e., sixteenths and 30 seconds) on the accented beats. Later, the use of duple meter became intensified and more regular, making 2/4 the standard. Emilio Grenet alludes to a singable type in 6/8 and describes a 'set of rhythmic combinations (6/8 or 3/4 with 2/4) arranged without regimentation' (*Música popular cubana*, 39). This set generates rhythmic contrasts with a more dynamic effect.

Starting in the second half of the twentieth century, the *guaracha-son* was consolidated. The generic type *guaracha-son* assumed a quicker tempo with more jocular and picaresque lyrics than the *son*, and the accompanying guitar moved closer to the *tanguillo* style used in the rhythmic strumming figures performed by trios and other combinations of chordophones.

With regard to song texts, the language is popular, on occasion coming very close to vulgarity. In more lyrical *guarachas* the message may be diluted or softened, while in other contexts the joking character predominates. The jocular, ironic or satirical nature of the lyrics is a defining characteristic of the genre, intensified by the use of literary devices such as the purposeful mispronunciation of words to represent lower social classes – pejoratively stereotyped in the *negrito bozal* (an unacculturated black African slave in Cuba) and the *catedrático* (a 'black professor' feigning education and social status) – play on words, allegory, personification and *double-entendre*. These resources were utilized in accordance with the patrons of the era's preferences for what they perceived as taboo and comic, which may limit the relevance of some *guarachas* to posterity. Historically, these features were also used to mask themes of politics and sex, and a large number of works were censored. A classic example of *guaracha-son* with fable-style lyrics is 'Cuidadito Compay Gallo' (Watch Out, Rooster Buddy) by Ñico Saquito (Antonio Fernández, Santiago de Cuba 1901–82).

Guaracha form does not follow a set pattern; *guarachas* feature *cuartetas* or other strophic species of four verses, *décimas* or free strophic forms, as well as variable use of rhymed and unrhymed verses. The presence of an *estribillo* is common, which coexists with the *copla* in a solo-chorus alternation.

Ensembles and Performers

Early *guarachas* were performed by small itinerant ensembles such as Tandas de Guaracheros and Grupos de Cantadores, as well as by *estudiantinas*. In colonial times and up until the twentieth century, *estudiantinas* were groups of youths that gave serenades and sang and played music on the streets, in neighborhoods and in the homes of friends in the cities. During the wars of independence, *guarachas* were performed by military bands. In the context of the theater, they were performed by guitars (duos or trios), the theater's orchestra, or by a piano. The most important performer of *guarachas* in this context was Rita Montaner.

Within the *trovador* tradition of the first half of the twentieth century, *guarachas* adopted a style accompanied mainly by guitar and, depending on duo or trio format, employing two voices, based on the work of Miguel Matamoros, Ñico Saquito and the duo Los Compadres. In later years, the *trovadores* Faustino Oramas 'El guayabero' and Pedro Luis Ferrer became the principal exponents of the genre.

As far as dancing, the genre is adopted by *son* septets, ensembles, *charangas*, jazz bands and *orquestas típicas*. Alejo Carpentier includes *guarachas* in the repertoire of some important dance orchestras around 1878, such as the Miguel Faílde orchestra from Matanzas and the Raimundo Valenzuela orchestra from Havana. These *guarachas* were performed alongside *rumbas*, *boleros*, *puntos de claves*, *guajiras* and *danzones* (Carpentier [1946] 2004, 160).

Important works include those by Bienvenido Julián Gutiérrez and Marcelino Guerra as well as performances by ensembles such as Casino and Roberto Faz y la Sonora Matancera, whose vocalist Celia Cruz was known internationally as the 'guarachera de Cuba.' Today, *guaracha* is interpreted by ensembles of varying instrumentation such as Raison and Juego de Manos, the latter led by David Álvarez.

The Dance

Historiography of *guaracha* refers to a dance in the nineteenth century that was similar to the *rumbita flamenca* taught in academies along with other Hispanic dances. In the context of the theater, *guarachas* were danced within the *sainetes* and during *intermedios* (e.g., short theatrical interludes performed between acts of a theatrical play), in a manner similar to the *rumba teatral*. After its intersection with *son*, *guaracha* absorbed some of the characteristics from this couples' dance including the figures in casino-style that are still maintained today.

(TRANSLATED BY PAMELA NARBONA JEREZ)

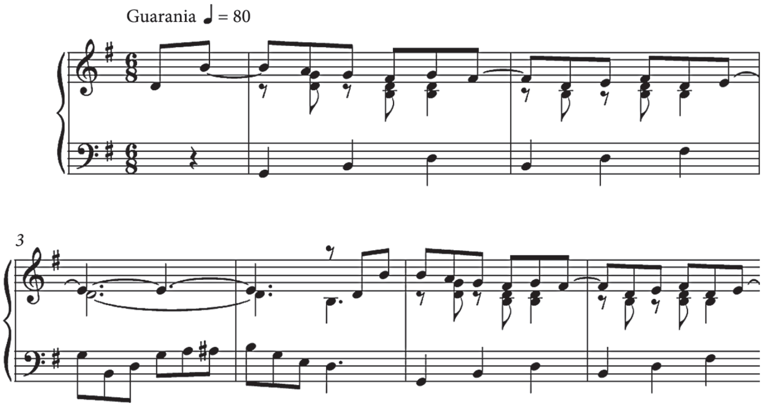
Guarania

The *guarania* is a vocal and instrumental urban musical genre created in 1925 by Paraguayan composer José Asunción Flores (1904–72). In that year, while receiving musical training with the Banda de Música de la Policía de la Capital (Asunción Police Academy Music Band), Flores experimented with an arrangement of 'Ma'erápa reikuaasé' (Why Do You Want to Know[?]), a popular Paraguayan *polca* attributed to composer Rogelio Recalde. Concerned about the correct notation of Paraguayan music, Flores thought that using a slower tempo for this arrangement would facilitate the accurate performance of its phrase accentuation and syncopation. The experimental tempo and its resulting aural effect inspired Flores to produce other compositions with a similar rhythmic pace and style. Thus in 1925 he composed the instrumental piece 'Jejuí' for violin, cello and piano, following this shortly afterward with 'Kerasy' (Somnolence) and 'Arribeño resay' (The Tears of the River Dweller), for wind, brass and percussion instruments. Piano versions of these pieces were published later in Buenos Aires, for purposes of copyright registration and wider dissemination.

The term *guarania* was later applied by Flores to the musical genre he had created. Some sources attribute the composer's adoption of the term to a line found in a poem by Guillermo Molinas Rolón (1892–1945) entitled 'Canto a la raza' (Song to the [Guaraní] Race), 1910. This poem had a great impact on Flores, who was influenced by the notion, current at the time, that the ideas and philosophy of the ancient Guaraní community and its role in the colonial miscegenation process were essential to Paraguayan identity, and believed that the term *guarania* captured the essence of the Paraguayan sentiment in music. Other musicians embraced the rhythmic innovation proposed by Flores, and soon thereafter other *guaranias* were composed and disseminated. With the collaboration of close friend and poet Manuel Ortíz Guerrero (1894–1933), Flores produced some of his most celebrated *guaranias*, among them 'Buenos Aires, Salud' (Hail, Buenos Aires), 1933, a salutation to the city where Flores received political asylum (1936–72) after his expulsion from Paraguay due to his association with the Communist Party, 'India' (Indian Girl) ca. 1930, a reflection on the attributes and qualities of an exotic Guaraní girl, 'Ne rendápe ajú' (I Come to You[r Side]), ca. 1930, a song of a traveler who dreams of returning to his beloved, 'Panambí-verá' (Shining Butterfly), ca. 1930, mixing themes of nature and romance, and 'Paraguaype' (Asunción), ca. 1932, describing the emotions felt while walking through the city. In the 1950s Flores experimented with the *guarania* and the symphonic form, premiering and recording in Buenos Aires and in Moscow his three *Guaranias sinfónicas*: *Pyharé Pyté* ([In the] Deep [of the] Night), 1930–54, for vocal soloist, double chorus and orchestra, *Ñanderuvusú* (Our Great Father), 1957, a ballet inspired by the Guaraní legend of Creation, and *María de la Paz*, 1961, a cantata dedicated to the city of Hiroshima and its inhabitants.

Two official government documents have recognized the *guarania* as a national genre within the body of Paraguayan music. The first, signed by President Higinio Morínigo on 24 July 1944, designated the composition 'India,' with lyrics by Manuel Ortíz Guerrero and music by José Asunción Flores, as *Guarania nacional*. The second document, signed by President Juan Carlos Wasmosy on 25 August 1994, established Flores's date of birth, 27 August, as the *Día Nacional de la Guarania* (National Day of the *Guarania*).

Although the *guarania* shares similar melodic and harmonic features with the Paraguayan *polca*, its slow rhythm in compound duple meter offers the possibility of creating longer musical phrases and variations in its melodic accentuation and syncopation. Specifically, the slow rhythmic nature of the *guarania* emphasizes the *sincopado paraguayo* (Paraguayan syncopation), which ties the last beat of the melodic line of a given measure with the first beat of the following (Boettner 1997, 205) (see Example 1).



Example 1: Guarania showing *sincopado paraguayo* (© Florentín Giménez. Used with permission)

Originally conceived as an instrumental genre, the *guarania* quickly became known as a song form. Both Cardozo Ocampo (2005, 72–3) and Giménez (1997, 126) believe that the performance style of the *guarania* is strongly connected to that of the *purahéi asy* (mournful song), a genre previously cultivated by nineteenth-century popular musicians, and that through the *guarania* the musical creativity and inspiration of Flores revitalized this old practice. The live broadcast of popular regional music from radio stations in Buenos Aires – the main center for the promotion of the arts during the early to mid-twentieth century – as well as the development of the recording industry, helped to disseminate the *guarania* in Argentina and Paraguay and later in other Latin American countries. Since the early 1960s and with the establishment of the recording industry in Paraguay, local labels such as Blue Caps Producciones Fonográficas, Discos Cerro Corá and The Song Producciones Fonográficas have regularly released old and newly composed *guaranias*, proving that a market for the genre continues to grow. In general terms, since the late 1950s, the singing style has become more mellow and breathy, with the addition of straight-tone and vibrato effect at the end of phrases. Nowadays, *guaranias* are usually performed with the accompaniment of the guitar and the Paraguayan diatonic harp (see Discography); however, ensembles of various instrumental combinations may accompany its interpretation. Most *guarania* texts emphasize romance and nostalgia themes with a high degree of emotion, usually related to melancholy and yearning. In addition to those by Flores, some of the most frequently performed and recorded vocal *guaranias* include 'Lejanía' (Distance), 1958 (1941), with lyrics and music by Herminio Giménez, 'Mi dicha lejana' (My Distant Joy), 1944 with lyrics and music by Emigdio Ayala Báez, 'Mis noches sin ti' (My Nights Without You), 1950, with lyrics by María Teresa Márquez and music by Demetrio Ortíz and 'Recuerdo de Ypacaraí' (Memory of Ypacaraí), 1953, with lyrics by Zulema de Mirkin and music by Demetrio Ortíz.

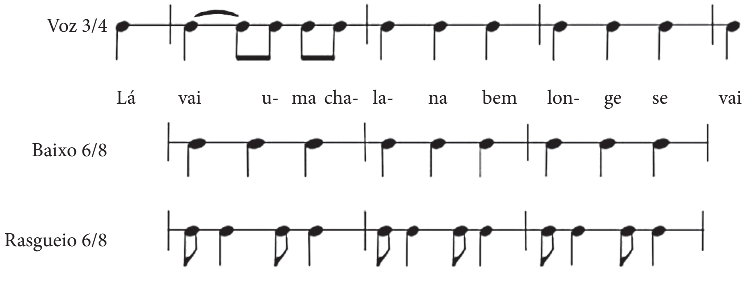
The *Guarania* in Brazil

During the 1940s, at a time when US country music and its symbols of modernity were being mixed with Brazilian *música caipira*, Brazilian musicians such as Raul Torres, Nhô Pai, Mário Zan and Capitão Furtado visited Paraguay and discovered in Paraguayan music an opportunity to renovate the country music of Brazil. Thereafter, the presence of Paraguayan *polcas* and *guaranias* with lyrics translated into Portuguese became common in *música caipira*. Also, the technique of *rasgueo* or *rasgueado* (strumming), known in Brazil as *rasqueado*, was incorporated by Brazilian guitar players. Later, the name *rasqueado* came to be used also to refer to all the songs with rhythmical 6/8 accompaniments that reminded Brazilian people of Paraguayan music.

Raul Torres visited Paraguay on several occasions and composed at least seven *guaranias* and eight *rasqueados* (Nepomuceno 1999, 123). Popular *guaranias* such as 'Recuerdos de Ypacaraí,' 'Lejania' and 'Índia' were translated into Portuguese and were recorded by the voices of Nhô Pai & Nhá Fia, Irmãs Castro and Cascatinha & Inhana.

Guaranias by Brazilian musicians do not show the same degree of complexity as do the Paraguayan *guaranias*. A very popular Brazilian *guarânia* composed by Arlindo Pinto (lyrics) and Mário Zan (music) is the 'Chalana,' in which the vocal line is in 3/4 time while the guitar accompaniment and bass line maintain 6/8 (Example 2).

Versions of Paraguayan *guaranias* in Portuguese, the incorporation of the *rasqueado* guitar accompaniment technique and the creation of *rasqueados* not only alert Brazilians to Paraguayan music but also draw attention to the southern Brazilian states of Mato Grosso and Mato Grosso do Sul with their fields, farms, little remote villages and their frontiers, where cultural interchange between Paraguay and Brazil has resulted in the formation of a unique identity.



Example 2: Extract from 'Chalana' showing vocal line in 3/4 and accompaniment in 6/8

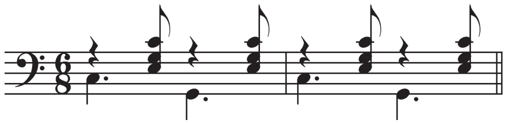
Guarimba

The *guarimba*, also known as *seis por ocho* (six by eight), is one of the most characteristic *marimba* dance musics practiced in urban areas of Guatemala by *Ladinos* (the mestizo, Spanish-speaking population of the country). *Guarimba* is a composite word formed from 'Guatemala' and '*marimba*,' and thus refers both to its place of origin and to the instrument which made it popular.

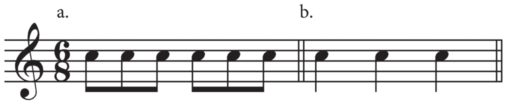
The first *guarimbas* were piano pieces written in the 1920s by Víctor Wotsbelí Aguilar (1897–1940) in Quetzaltenango, Guatemala's second city, located in the western highlands. Aguilar discovered the *guarimba*'s rhythmic formula while experimenting with playing a foxtrot in a 6/8 meter instead of its traditional 2/2. The foxtrot, a North American dance associated with the repertory of jazz bands, had been brought to Guatemala by successive waves of local chromatic *marimba* ensembles (a group of eight musicians who play two *marimbas* and a double bass), who toured the United States after 1915. Once in Guatemala, it acquired its own personality in the context of the local performance and repertoire.

At the beginning of the twentieth century, the *marimba* had emerged as the favorite instrument for *Ladino* dance music, thanks to the instrument's local evolution from its diatonic simple form to the double chromatic *marimba*. This allowed *guarimbas*, originally written for the piano, to be transcribed for the chromatic *marimba* ensemble, gaining popular acceptance in local ballrooms, where they competed with the common international saloon music forms (waltz, schottische, mazurka and polka).

The *guarimba* is characterized by a moderately quick 6/8 meter with alternate bass and offbeat harmonic accompaniment (Example 1). Recurring groups of three eighth notes and *hemiola* patterns are often used as rhythmic figures in the melodic part (Example 2). The use of added sixths chords, secondary dominants and direct modulations in ternary structures is also common.



Example 1: *Guarimba*'s accompaniment pattern



Example 2: *Guarimba*'s melodic rhythmic patterns

Among the most popular *guarimbas* are 'Los trece' (The Thirteen), 'Aromas de mi tierra' (Fragrance of My Land) and 'Tristesas quezaltecas' (Quetzaltequian Sadness) by Wotsbelí Aguilar; 'Juventud antigueña' (Antiguan Youth) by Manuel Samayoa (b. 1928), 'Turismo guatemalteco' (Guatemalan Tourism) by Higinio Ovalle (1905–81), 'Boca con boca' (Mouth with Mouth) by Rocael Hurtado (1900–73) and 'Callecita de los alamos' (Little Street of the Poplars) by Domingo Bethancourt (1906–80). Guitar transcriptions of some of these pieces were popular toward the end of the twentieth century.

IGOR DE GANDARIAS

Gwoka Modènn

Gwoka modènn, or modern *gwoka*, is a form of music which emerged in the French Caribbean island of Guadeloupe in 1969, when guitarist Gérard Lockel proposed a way to adapt the melodies, scales and rhythms of traditional *gwoka* in order to play them on stage using modern instruments such as guitar, trumpet, saxophone and drum set. While, strictly speaking, *gwoka modènn* only refers to music based on Lockel's concepts, at the beginning of the twenty-first century the term is often extended to describe many other forms of instrumental *gwoka*.

Gwoka traditionnel (Traditional *Gwoka*)

As early as the seventeenth century, European chroniclers observed African-derived, drum-based dances among the slave population of the French Antilles (Du Tertre 1654; Rochefort 1665). The term *gwoka* (also spelled *gro ka* or *gwo ka*), however, seems to have come into widespread use in the second half of the twentieth century to describe both a drum and a set of dances accompanied by that drum. The *gwoka* (or *ka*) is a single-headed, barrel-shaped drum, characterized by a system of tension using nautical rope and wooden keys. *Gwoka* is generally performed during outdoor celebrations on Friday or Saturday nights, mostly during the summer, called *swaré léwòz*. During a *léwòz*, *gwoka* generally involves three drummers, a *chantè* (lead singer), several *répondè* (singers forming a chorus) and a succession of dancers performing individually. Two *boula*, lower-pitched *gwoka* drums, play a constant rhythmic pattern in unison. A single higher-pitched drum called makè improvises above this rhythmic ostinato in response to the movement of dancers. The songs – always in French Creole – follow a call-and-response pattern, with the *répondè* repeating a set refrain while the *chantè* improvises new lines of text. Call and response often, but not always, alternate at regular intervals. Even though it is generally said that there are seven *boula* rhythms, most *gwoka* musicians commonly play eight different basic patterns: *woulé*, *kaladja*, *toumblak*, *graj*, *léwòz*, *menndé*, *pajanbel* and *granjanbel*. Beyond these traditional rhythms, some groups have introduced new patterns, such as the *takout* created by the group Takouta in the 1970s. Each *gwoka* song is set to a specific rhythm that defines its mood, character and dance steps.

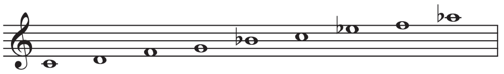
Following the abolition of slavery in 1848 in the French Antilles, the mulatto bourgeoisie denigrated African-derived dances because of their association with slavery. Seduced by jacobinical promises for radical egalitarianism, this rising middle class pushed for greater cultural and political assimilation with France through the nineteenth and early twentieth centuries. The push for assimilation culminated in the 1946 law of departmentalization which integrated Guadeloupe, Martinique, French Guiana and Reunion into the French political system. By the 1950s *gwoka* was systematically stigmatized as the music of 'vié nèg' (literally, 'old blacks'), a derogatory term akin to hoodlum or hobo (Gabali 2003, 8).

Gwoka Modènn

A growing economic crisis in the 1960s and the brutal repression against demonstrators in May 1967 fueled the growth of a separatist movement on the island. This movement joined together factory and agricultural workers, trade unions, Guadeloupean intellectuals and members of the General Association of Guadeloupean Students (AGEG). Influenced by Marxist and Maoist ideology, these nationalist militants argued that, more than *biguine* or *quadrille*, *gwoka* represented the only truly Guadeloupean form of music. They then set out to revitalize the tradition (AGEG 1970).

Gérard Lockel played a central role in this program. In the 1950s and 1960s Lockel had a successful career as a jazz guitarist in Paris. In 1969 he moved back to Guadeloupe where he offered the first concert in a new musical style that he dubbed '*gwoka modènn*' (Lockel 1989). A fervent nationalist, Lockel insisted that music should serve political ends. He used *gwoka modènn* to illustrate the specificity of Guadeloupean culture and to push for the island's independence. He presented his musical and political theories through a series of concert-debates, and several self-produced recordings and publications, including his monumental, 527-page *Traité de Gro Ka Modên* [Treatise of Gro Ka Modên] (1981), a method book gathering over 350 exercises.

Lockel based his system on an interpretation of *gwoka* as an 'atonal-modal' music. As such, he rejected any form of tonal tertian harmony in *gwoka modènn*. Furthermore, Lockel devised a new scale which he called 'gamme gwoka' [*gwoka* scale]. It consists of a regular succession of alternating whole steps and minor thirds which takes 24 pitches over five octaves to loop upon itself. Lockel recommends that improvisers limit themselves to the first nine pitches of the series (see Example 1) and mix together as many transpositions of the scale as they see fit.



Example 1: *Gwoka* scale

The structure of Lockel's compositions differs from that of traditional *gwoka* and is reminiscent of a practice that is common in jazz. Melodic instruments within the band introduce a theme in unison. This theme is then developed through a series of individual solos before being restated. The theme is also often used as an interlude between each solo.

Lockel's treatise offered the first published prescriptive notation of the rhythms played on the *boula* drums. The book describes seven rhythms, omitting the *pajanbel*. According to Lockel, *gwoka modènn* refers exclusively to instrumental music using the *gamme gwoka* and one of the seven rhythms listed in his treatise. However, several musicians have expanded this definition.

Antecedents and Influence

Lockel was not the first musician to add instruments to the drums found in *gwoka* music. Traditional *gwoka* singers Dolor and Robert Loyson joined forces with *biguine* musicians on some recordings as early as the 1960s. In the 1970s, as Lockel developed *gwoka modènn*, songwriter Guy Conquête (spelled 'Konket' in Creole) integrated dance band musicians within his *gwoka* ensemble, yet his music remained close to the tradition in its melodic and rhythmic vocabulary. Konket also kept the traditional responsorial structure of *gwoka* but complicated it by dividing his compositions into several sections that used different responses. For example, his song 'Lapli ka tombé' [It Is Raining] (Vélo & Guy Conquête 2008) starts with a long refrain (18 syllables). Halfway through the performance, the *répondè* introduces a short response (a single word of only two syllables), thus intensifying the performance by speeding up the exchange between *chantè* and *répondè*. Although the text of many of Konket's songs reflected the political and economic difficulties of the time, such as 'La Gwadloup malad' [Guadeloupe Is Sick] (Vélo & Guy Conquête 2008), Konket refused to align himself with any political party (Konket 2008).

While Gérard Lockel never managed to attract a broad popular following, he has nonetheless inspired numerous Guadeloupean musicians to express their national identity by playing *gwoka*, and in the early twenty-first century he remains the outstanding reference point for instrumental *gwoka* musicians. Trumpeter Edouard Ignol-Hélène – a.k.a. Kafé – led what was probably the most popular of the many instrumental *gwoka* groups that have emerged since the 1970s. Other groups of note include Gwakasonné, Katouré, Foubap, Kimbòl, Horizon, Simen'nkontra, Trio Laviso and Eritaj. These groups present a wide variety of musical styles and often use labels such as *gwoka évolutif* (progressive *gwoka*) to differentiate their music from Lockel's. For example, Horizon and Eritaj mix Lockel's *gwoka* scales and pentatonic scales within complex arrangements of mainly original compositions. On the other hand, Simen'nkontra specializes in instrumental improvisations over traditional *gwoka* songs.

In 1989 Lockel affirmed that even though jazz and *gwoka modènn* were both virtuosic musical expressions of the African diaspora in the Americas, they remained separate musics with separate bases (Lockel 1989). However, several musicians, both within and outside of Guadeloupe, have sought to mix the two traditions. Since 1998 US jazz saxophonist David Murray has been touring and recording with the Gwo-Ka Masters, a group that features percussionists and singers Klod Kiavué and François Ladrezeau as well as guitarist Christian Laviso. The group recorded the album Yonn-dé with Guy Konket in 2000. In 2002 Guadeloupean trumpeter Frank Nicholas released Jazz-Ka Philosophy accompanied by famed jazz/*biguine* pianist Alain-Jean Marie and expatriate saxophonist Jacques Schwarz-Bart. The latter released his own Soné Ka-La to great critical acclaim in 2006. As most *gwoka modènn* groups in Guadeloupe produce their own recordings and so do not benefit from widespread distribution outside of the island, Murray's and Scharz-Bart's albums have contributed to the slightly greater exposure *gwoka* has received in Europe and North America.

Conclusion

When Gérard Lockel introduced *gwoka modènn* in 1969, he saw the music as a weapon of cultural and political activism. He strove to restore *gwoka's* status within Guadeloupean culture and to ennoble the music by expanding its instrumentation and codifying its practice. Even though he never achieved the popular recognition that he wanted or indeed deserved, Lockel by and large succeeded. His concerts, recordings and publications have inspired numerous Guadeloupean musicians. Furthermore, the *ka* has now become a potent musical signifier of national identity in Guadeloupean popular music. This is probably best illustrated by the fact that the band Kassav originally chose the *gwoka* drum as a way to mark the Antillean specificity of *zouk* (Guilbault 1992, 22–3). At the beginning of the twenty-first century the influence of *gwoka* on Guadeloupean popular music continues to be felt through the work of artists such as Soft and Dominik Coco.

JÉRÔME CAMAL

Habanera

The *habanera* is a vocal and instrumental genre of urban origin that became part of the Cuban song movement in the second half of the nineteenth century. It is defined as a melodic line of lyrical romantic character, with an instrumental accompaniment that performs a stable rhythmic bass pattern (dotted quarter note, eighth note, two quarters (see Example 1).

Example 1: *Habanera* bass rhythmic pattern

The latter, known as *habanera* rhythm, *tango* or *tango congo*, which according to Cuban musicologist

Danilo Orozco (2000) originates from an African Bantu-Dahomeyan nucleus of rhythmic accentual relations, is the most important element of identification of the genre. It has a simple binary structure and a 2/4 meter; it is performed in tempo *lento* and generally uses texts made of octosyllabic lines with the purpose of maintaining its formal design.

The term *habanera* spread in the creative and interpretive context of the *contredanse*, a *criollo* form (i.e., created in Cuba but derived from European predecessors). At the beginning of the nineteenth century examples of the *habanera* were described with the name of *contradanzas habaneras* (Havana *contredanses*). For this reason, a number of sources agree that the *habanera* originates from a ball dance. Further evidence is provided by the fact that some '*dances* with a native influence, with a better rhythmic elaboration, … assimilated a text, and new songs that were simply called habaneras emerged' (León 1974, 187). Those songs took from the previous Cuban *contredanses* and dances the so-called *tango* rhythm and used it as a guiding pattern. Thus, this model was named *habanera* rhythm until it gained enough autonomy to designate a song style.

The first published *habanera* appeared in *La Prensa* newspaper in 1842. It was 'El amor en el baile' (Love in the Dance), which was signed by 'C.P.' and was identified by the publication as a 'new *habanera* song.' Cuban researcher Zoila Lapique writes: 'This song … may be considered a precursor to the *habanera* because it shows the characteristic cells … always present in the genre. It is the first found piece written for voice and piano that uses in its rhythmic accompaniment the *tango* pattern until then reserved for Cuban *contradanzas*, which were called … *danzas habaneras*' (Lapique 2011, 132).

The origin of the *habanera* is also linked to another Cuban vocal genre, the *guaracha*, since there are scores in which the formal structure of the melody is similar to the rhythmic and harmonic accompaniment. The main differences are found in the content of the text: the *habanera* is focused on love and poetry, while the *guaracha* is centered on humor and social critique.

The fact that the development of the *habanera* as a genre mainly occurred in areas near ports such as Havana meant that it entered the repertoire of sailors, who took it to other countries, contributing to its diffusion to the Americas along with Spain and other European countries. The ostinato featured in the traditional bass line was incorporated in the song repertoire of Spain, Mexico, Peru, Venezuela and Argentina. As Erdfehler notes, the influence of the *habanera* on Argentinian music can be seen in the fact that the first manifestations of *tango* appeared in the 1880s under the format of *habaneras* (2001, 49). In his book *The Latin Tinge* (1979), John Storm Roberts classifies the *habanera* as one of the first styles to influence the music of the United States. Precisely one of the elements that contributed to the genre's assimilation is its rhythmic pattern, which is contained within a single measure. This pattern had been previously introduced in the bass line of piano works, which were published as printed scores. The oldest example of these works is 'La pimiento' with a publication date of 1836 (1979, 5–6). Roberts asserts that toward the end of the 1870s the United States had clearly been exposed to the *habanera* rhythm through works such as 'La paloma' (The Dove) by Sebastián Iradier, a piece that is considered the first great Latin American success in the country (1979, 30–1).

Other information about the dissemination of *habanera* in the Americas indicates that it reached Chile around the year 1870, after touring Mexico, Venezuela, Colombia, Peru and Argentina. In this regard, Argentinian musicologist Carlos Vega wrote in *El origen de las danzas folklóricas* (The Origin of Folkloric Dances) that this dance was first reserved for the halls of the aristocracy and later became popular among the middle class (Vega 1956, 142). The Spanish influence introduced an element of reciprocity to the development of the genre. Here '… at the end of the nineteenth century the habanera grew independent from the dance as musical genre, it developed into a romantic and lyric version though it maintained the same pattern' (Guerrero 2005, 27).

The *habanera* became internationally known and well defined as a result of its use by Spanish composers of theater genres such as the *zarzuela*, who inserted the *habanera* into the *zarzuela*. Here, too, 'La paloma' by Sebastián Iradier (written about 1863, and one of the most famous *habaneras* around the world) constitutes a classic example.

Composers from other European countries who searched for innovations in their music by introducing Spanish elements, such as Bizet, Glinka, Lalo, Saint Säens and Ravel, used the rhythms and melodies from well-known *habaneras*. The influence of Spanish *zarzuela* composers also was seen in the works of Cuban composers who produced plays on national topics, music and characters, incorporating *habaneras* in late-nineteenth-century and early-twentieth-century works such as *La mulata María* (The Mulatta Maria) by Raimundo Valenzuela; *El submarino* (The Submarine) by Ignacio Cervantes; *Los Saltimbanquis* (The Acrobats) by Manuel Pérez de la Presa; *El hijo del*

Camagüey (The Son of the Camagüey) by José Marín Varona; and *La Plaza de la Catedral* (The Cathedral Plaza) by Ernesto Lecuona.

The Cuban lyric song attained greater standing at the end of the nineteenth century and beginning of the twentieth century. The best example is *Tú* (You) (1892) by Eduardo Sánchez de Fuentes, in which the *habanera* crossed the boundary between 'popular song' and 'concert song.' Other composers such as Antonio Peñez, José Marín Varona, Luis Casas Romero, Rogelio Dihigo, José Castro Chané, Ernesto Lecuona, Jorge Anckermann and Gonzalo Roig also composed and edited lyric *habaneras*.

The *habanera* was also used in the *trova* song 'Veinte años' (Twenty Years) by María Teresa Vera, 'Mariposita de primavera' (Little Spring Butterfly) by Miguel Matamoros and 'La rosa roja' (The Red Rose) by Oscar Hernández are examples that are well known in Cuba and around the globe.

After the first decades of the twentieth century the genre's status declined, though some plays with music featuring recognizable *habanera* rhythmic pattern have been produced. In this context, the *habanera* has been used by contemporary academics to express Cuban identity. New plays have been produced for the Habanera Festivals, held since 1986 in order to preserve musical and cultural Cuban patrimony since the *habanera* no longer plays a major part in the contemporary song movement.

AILER PÉREZ GÓMEZ (TRANSLATED BY ALEJANDRO GONZÁLEZ WITH PAMELA NARBONA JEREZ)

Hatajo de Negritos

During the Christmas season, in Peru's southern coastal department of Ica, groups of young Afro-Peruvian and mestizo boys and men called *hatajos de negritos* dance and (in some regions) sing *villancicos* in the streets and in front of nativity scenes in private homes to express adoration of the Virgin Mary and baby Jesus. Dances are infused with imagery of both the Magi kings and slavery (Tompkins 1981, 325–42).

In most areas, *negritos* carrying rope whips perform *zapateo* (tap dancing) steps in two parallel line formations, managed by a *caporal* (foreman). Sometimes, a *viejito* (old man) or *borrachito* (drunk) character amuses audience members and keeps them away from the dancers (Feldman 2006, 196; Santa Cruz 1969, 13; Tompkins 1981, 331). Costumes, which have varied regionally and over time, may include special footwear (rope slippers or black boots), pants and shirts in prescribed colors, sashes and caps covered with mirrors, coins and bells, and crowns (Santa Cruz 1969, 12). Musical accompaniment also varies regionally: a violin in El Carmen, a guitar in Pisco and a musical ensemble in Huánuco. In El Carmen, the dancers sing strophic songs, while in Huánuco, no lyrics are sung (Vásquez Rodríguez 1982, 65). In some areas, groups of young girls called *pallas* also dance, accompanied by a violin and/or guitar player.

Most scholarly documentation focuses on the town of El Carmen (Feldman 2006; Santa Cruz 1969; Tompkins 1981, 1998; Vásquez Rodríguez 1982), where the largest number of Afro-Peruvians take part in the *hatajo de negritos*. The musical repertoire performed during the Christmas festival of the Virgin of El Carmen consists of 24 strophic Christmas songs in duple meter sung chorally (E. Ballumbrosio 2000, 171; Tompkins 1981, 560–5; Vásquez Rodríguez 1982, 85–162), accompanied by one or more violinists whose instruments typically are decorated with streamers in the colors of the Peruvian flag (red and white). The violin is tuned in fifths but normally pitched one or more tones below European standard tuning (Vásquez Rodríguez 1982, 77). The melody is played on the violin's upper string, while the two middle strings articulate a repeated perfect fifth on open strings in rhythmic unison with the melody. The lowest string is rarely used. After the melody is played once, the *negritos* sing (marking the beat with handbells), usually in choral unison and sometimes in call-and-response form, to the same violin accompaniment. Melodies (in major and minor modes) are simple, with few interval skips of more than a third and a range of a fifth. Like the Andean *huayno*, phrases tend to be in couplets, with each melodic phrase repeated once. Lyrics are related to the Christmas story or pastoral themes. References to slavery appear in songs such as 'Zancudito' and 'Panalivio' (Baca 1997, 2000; González 1993; Lurita and Vallumbrosio 1998; Tompkins 1982, 336–7). Between verses, the *negritos* perform unison *zapateo* steps in rhythmic counterpoint with the violin.

Dances called *negritos* have been performed by black Peruvians in religious and State ceremonies since the seventeenth century (Tompkins 1981, 340). *Negritos* dances are performed by indigenous and mestizo peasants wearing black masks in festivals in Peru's highland communities, commemorating the historical presence of black slaves (Bigenho 1998; Cánepa Koch 1998a, 1998b; Salas Carreño 1998, 110). The relationship between these *negritos* dances requires further research (Feldman 2009; Salas Carreño 1998; Tompkins 1981; Vásquez Rodríguez 1982).

HEIDI CAROLYN FELDMAN

Hip-hop (Introduction)

The pairing of 'hip-hop' with 'Latin America and the Caribbean' may conjure a contemporary version of what cultural studies scholar Dick Hebdige (1987) called 'cut 'n' mix' (since 2004, for example, reggaeton, a hybrid of rap, reggae and a host of Panamanian, Puerto Rican and Jamaican folk music genres, has become increasingly popular), but in fact, hip-hop *roots* are essentially intertwined with its *routes* and Latin America and the Caribbean are central to that history.

Hip-hop is an organizing term for the four 'elements' of expressive culture corresponding to the human modes of being in the world: rhetoric (rap), sound scapes (disc jockey), visual cartographies (graffiti) and body movement (B-boys and B-girls). Mass commercialization during the 1980s in the United States helped cause a general conflation of the terms 'hip-hop' and 'rap.' In part due to this confusion, many 'conscious' artists have returned to 'culture' as a way to underscore the 'street' ethos of hip-hop and a complementary philosophy of cross-cultural understanding.

The search for the 'real' meaning of the 'street' in hip-hop is deeper in both time and space than the purported birthplace of the South Bronx, New York City, in the late 1970s. While early writers of hip-hop, such as David Toop (1984), sketched out the roots of hip-hop in West Africa (e.g., the tradition of *griot* storytellers), others such as Hebdige and later Raquel Rivera portrayed hip-hop roots/routes with broader notions of migration and diaspora, rather than asserted African retentions or 'survivals.'

There are two basic parts to this history: immigrant innovators and cultural precedents. It is undeniable that the transformation of the South Bronx after the infamous highway construction of the late 1950s and 1960s resulted in a tense, competitive and ultimately creative encounter between African Americans and Latinos. The members of the early street dance and graffiti crews represented this multicultural mix. Moreover, the early stars of the microphone and turntable were members of immigrant families hailing from Barbados (e.g., Grandmaster Flash) and Jamaica (Kool DJ Herc). What would become the most popular expression of the 'street' was not simply located in the realities of New York City. The style of bass-heavy, booming sound production and the catchy bravura of rap rhymes are versions of the 'ragging' and 'broad talking' of the island of St Vincent as well as the 'talk overs' and 'dubs' of 1960s Jamaican popular music producers. The hip-hop 'attitude' exuding supreme self-confidence and expertise in all things 'real' is a certain recasting of the 'rude boy' street ethos of 1960s Kingston, Jamaica and later West Indian immigrants in working-class districts of London.

This brief introduction to a set of entries on hip-hop on six different countries in the Caribbean and Latin America is a call to reconsider hip-hop history and locality. Hip-hop is not a US-born cultural template that floats around the globe for youth to reckon and 'localize.' Rather, hip-hop is what emerges from a complex and dynamic web of migrating sounds, images and attitudes mediated by creative youth, who are rooted in local streets but always part of something beyond the here and now. Latin America and the Caribbean have been rich resources for hip-hoppers elsewhere and increasingly have become recognized as a center of hip-hop production and innovative skill.

The following accounts of hip-hop in Bolivia, Brazil, Colombia, Cuba, Mexico and Puerto Rico are intended to offer a partial cross-section of the diverse – and sometimes similar – ways in which hip-hop has developed in different regions.

DEREK PARDUE

Hip-hop in Bolivia

Bolivian *altiplano* (highlands) rap music can be defined as the performance of a MC who rhymes either in Spanish or in indigenous languages Quechua or Aymara to the accompaniment of digital music tracks, most of which include Andean instruments such as *quena or zampoña*. For their shows, rappers usually wear *ponchos* (a single large sheet of fabric with an opening for the head and sometimes for the arms) and *lluchus* (Andean typical hat) besides the 'low rider' jeans, baseball caps and American jackets. Even though most rappers tend to describe themselves as part of the hip-hop scene, it could be said that out of the four traditional hip-hop elements, the most commonly found is rap, seconded by break-dance and graffiti. Due to the lack of economic resources, there are a few DJs who could be described as social or political hip-hoppers in Bolivia.

In order to understand the complexities of Bolivian hip-hop, it is necessary to take into account Bolivia's political history as well as local cultural projects that either extolled or denigrated mestizo, 'indigenous' or *cholo* symbolisms and images. It is also essential to understand Bolivian Andean Plateau rap in the frame of the reinforcement of Bolivian social movements that has occurred since 2000. It is notable that the development of this specific rap movement coincides with the time, in 2006, when Evo Morales, a leader of coca growers, was elected as the first indigenous president in the history of a country whose population is composed of a majority of indigenous people. Simultaneously and not inconsequently, El Alto town was chosen as a 'favorite' to receive the funds of international cooperation agencies, NGOs and national and municipal agencies. Those organizations said that they would either try to back the social changes promoted by the new Bolivian national government or, on the contrary, work to convert the local youth into 'positive leaders' and not confrontational ones. The Bolivian hip-hop movement is closely linked to internal democratic processes and to southern countries' foreign relations, and should be understood in that specific framework.

The Contemporary Scene

Bolivian rappers cover a huge diversity of subjects. In many of their songs they talk about Bolivian, Aymara, indigenous, *cholo* (countryside migrants living in the city), and Latin American identity; they honor people who died in past political or social demonstrations; they criticize the media and traditional politicians and they plead for social change; they also sing against what they define as American imperialism. Despite this, performing music that originated in the United States does not engender a sense of alienation, as the rappers identify with poor and marginalized African-American and Latino populations in American cities. As rap is not for them a music associated with rich American *gringos,* they do not find any contradiction in using rap to criticize the United States.

This type of music has also been used to support President Evo Morales (who was elected in 2006 as the first indigenous president in the country's history, despite its overwhelmingly indigenous population); to denounce the discrimination that poor, young, urban and indigenous people suffer; and to help youngsters be aware of different citizenship issues. Many local or international NGOs, political parties, embassies and cultural community centers have given financial and logistical support to Bolivian rappers so as to record their songs or present them in public as part of institutional campaigns. For this reason, some rappers have claimed that institutions sometimes use them.

The MC's name or nickname is often in the indigenous Aymara language. The musicians are not hired by big record companies. They usually record their own songs either in their own or in their friends' studios, at community radio stations or at professional studios if their song receives financial support from an NGO, political party or embassy. Their music is usually shared using MySpace or YouTube. Rappers tend to carry their recorded songs in MP3 players and they give them to their friends using that device. Some of them have informally recorded a CD with their music (homemade editions consisting of less than 50 copies).

Most of the rappers are male teenagers, though one of the leaders is a young woman. Nevertheless, many girls hang out with the rappers as their 'groupies.' The rappers define themselves as Bolivian and not as indigenous Aymara, even if most of them have indigenous origins, at least partially. According to Mollericona, in 2007 in El Alto city alone there were 100 hip-hop groups. Only a minority of them speak indigenous languages such as Aymara and Quechua.

Hip-hop in Bolivia is strongly related to Bolivian political and social demonstrations of the 2000s and has a strong presence in the country's highlands, especially in La Paz (the capital) and El Alto, a city located geographically just 'above' La Paz at 3,600 meters above the sea level. At the time of the last census (2001), the majority of the population in both towns considered themselves to be 'indigenous.' El Alto is also one of the poorest cities in South America and Bolivia one of the poorest countries in the region. El Alto was the scene of many protests that forced the resignation of the former neoliberal Bolivian presidents and that consequently led to the election of Morales. The majority of citizens of both cities are also in support of Morales's government.

The Origin of Bolivian Rap

Rap music's emergence in Bolivia can be dated to the 1990s, when, imitating the local TV show *Sábados Populares* (Popular Saturdays), young people got together and invented group choreographies using techno music, changing later to rap music. At much the same time some Bolivian rappers who lived abroad (United States, Europe or Brazil) started to bring rap in English and Spanish into the country.

In the rich neighborhoods of Bolivian cities, it was *gangsta rap* that was first to be in favor. However, from 2000, when demonstrations resulting from challenging social movements started gaining power and attention, a new trend of political and social rap was born, especially in the country's highlands. The movement of political rap was articulated originally in the community center and radio station in El Alto called Wayna Tambo and in the Tiwanaku Pub in La Paz city. The radio programs *La Nueva Flavah* in La Paz and *El Rincón Callejero* in El Alto broadcast news and music from the world of Andean social rap.

Understanding Political and Social Rap

In the Bolivian *altiplano* political and social rap music is being used as a tool in the quest for social justice. Many rappers understand rap as a tool for political struggle, while others tend to indicate that they want to build a youth citizenship that is nonpolitical, at least in the formal sense, while still others say that they are not interested in politics. Bolivian *altiplano* political rappers are inclined to reject institutionalized politics, and rap music has been used to protest against neoliberal presidents. However, despite their criticism, some rappers have engaged in negotiations with traditional political figures in order to participate in concerts, political rallies or rap workshops funded by national and municipal governments, political parties or some other organizations.

It would be a mistake to assume that rappers in these circumstances enjoy full freedom of expression. The lyrics of the songs that may show an evident 'political' awakening of the youngsters are many times under the command of, or at the invitation of, political parties, NGOs, City Halls or International Cooperation Agencies. The youngsters take advantage of the funds given by those institutions to record their CDs or to take part in shows. Most of the youngsters could not do so without those funds. The institutions could not boast of projecting or representing the 'real youth voices' without the funding of those events. That is why many rappers or specialists imply that some of them are being 'used' by institutions. Rap music would be 'in fashion' in the NGOnized world. Many embassies and NGOs are said to have found in hip-hop music a way to connect with youngsters, to listen to them, to understand them and to let them express themselves. But one ought not to see the processes as one-sided: if youngsters have a role in national and even international politics, it should also be acknowledged that national and international politics affect youth behavior by using rap music, for example, as one of the country's sources of 'soft power' (Nye 2004). Bolivian rappers do not tend to feel 'acculturated' for participating in the rap music scene. As noted earlier, for them, rap music does not come from the United States but from the Latino and African-American marginal neighborhoods in the United States that – just like them – have been discriminated against historically. It is important to highlight that there is not a single and simple westernizing globalization process: 'American music' means for these Bolivian youth not white elite Americans but marginalized and poor African-Americans, creators of rap music, with whom they identify themselves. It has also been interesting to verify that if youngsters identify themselves with the African-American or Chicano hyphenation cultures, La Paz's German Goethe Institut and French Alliance Française know how to understand or contribute to this perception by bringing French-Congolian and Turkish-German rappers to meet Bolivian rappers. These institutions are also said to be devoted to promoting rap in favor of ethnic issues and against discrimination.

With the local and international valorization of ethnic issues and rights due to the latest 15 years' change in the human rights international agenda and the local election of Morales in Bolivia in particular, there has been a change in the social status of indigenous people. This has led some rappers to warn that the motivation of some MCs with strong ethnical claims in their lyrics, with Andean tracks in their songs, or with an ethnic onstage look (wearing *ponchos*, for example), is to draw the attention of international or national agencies that fund public events. In the event, no more can be proved other than that some rap songs are indeed sung in Aymara; it is true, however, that these singers are often the most mediagenic, which suits the media's appetite for 'picturesque' news. Other interpretations of the situation draw attention to the lack of knowledge of indigenous languages on the part of the country's youth, and to the fear of being dubbed 'indio' whenever a young person admits they know or speak an indigenous language. Since the advent of President Morales, however, it is noticeable that more youngsters have started to learn these languages and that they are being more highly valued. Bolivian hip-hoppers have a tendency to characterize rap as a music that does not need a lot of resources ('it's a poor people's thing'), such as, for example, musical instruments, and for that reason see it as appropriate to the economic realities of one of Latin America's poorest countries. Using digital tracks and mixes is also a useful means to introduce actual situations in a theatrical way, for example parts of recorded politicians' speeches, sounds of shots, the cries of desperate people, the sale or consumption of drugs and examples of discrimination.

Five Predominant Trends in Bolivian Hip-hop

A categorization has been developed (Kunin 2009a, b, c) in order to describe five different trends within the Bolivian hip-hop movement. Like all categorizations, it is not watertight; groups may be classified under more than one heading, and some groups cross borders. But it is hoped that the scheme does help to explain the phenomenon.

The first category is rap for citizenship education. Thanks to the economic means that they have and the fact that they work with national and international agencies, La Paz rappers have recorded the vast majority of 'official' political rap CDs (that is to say, those recorded in an actual recording studio). Themes tend to be 'positive' and to criticize the rappers who 'just complain.' They say that their goal is to educate the youth, to help them create awareness of important citizenship issues and to destroy the stereotypes that associate youth with gangs, drugs and criminals. They only sing in Spanish and they generally define themselves as 'Bolivian' and not as 'Aymara' (even if most of them have indigenous origins, at least partially).

This group has coordinated activities with La Paz City Hall such as a Road Manners rap song; for the National Education Ministry, they recorded a rap about illiteracy; with a gender issues organization, they recorded a whole CD with songs about violence against women; with an NGO, they organized an event for antimilitarism in Colombia; with the US Embassy in La Paz (while the relationship between the Morales administration and the US embassy in La Paz was quite tense), they organized an event with an American rap group; with different sponsors, they organized an event called Hip-hop Connection between Chile and Bolivia (the nineteenth-century War of the Pacific between Chile and Bolivia created a deeply residing resentment against Chileans among the Bolivian population); with the National Government, they organized a contest, a national tour and a CD recording on the theme of Bolivian national union (while the wealthiest regions of the country were claiming more management autonomy); with the German Goethe Institut and the French Alliance Française in La Paz they organized an event with Turkish-German and North-African-French rap groups; with an NGO, they recorded a CD with the La Paz street shoe-shiners (most of whom are children); they also recorded a rap song about water as a natural resource.

Rappers in this category tend to have a high level of education (they are generally university-educated); they work and can use the internet and information technologies to distribute or produce their own music. They occasionally communicate with other rappers in Latin America.

The second trend is one associated with claims of Aymara identity. This trend is formed by some few groups who sing in Aymara or Quechua – hence their institutional support and media coverage. Despite that, they consider the media as 'manipulators.' That does not prevent the rappers granting media interviews. For their shows, they often wear *ponchos* and *lluchus* as well as the 'low rider' jeans, baseball caps and American jackets. Many of their songs speak about 'Bolivian,' 'Aymara,' *cholo* and 'Latin American' identity; they honor people who died in demonstrations; they criticize the media, the politicians and (American) imperialism; and they plead for social change. Their rhymes are generally sung with music tracks in which Andean instruments are played using electronic rhythms.

So as to record their music, these groups have been supported by cultural centers backed by international cooperation agencies. They have sung for El Alto's Juntas Vecinales (the Neighborhood Boards, especially in El Alto, had played an important role in anti-neoliberal protests of 2003 and 2005); and at the closure of Evo Morales's electoral campaign for presidency. The rappers have also taken part in an event for the nationalization of hydrocarbon resources in Bolivia (while the nationalization of hydrocarbons was one of the popular demands Morales accomplished). In addition, they have given rap workshops in jails and for miners' children (the Bolivian mining industry was one of the financial epicenters of the Spanish colonies more than 400 years ago due to its vast silver reserves, but today the former mining areas are inhabited by many families that are on the edge of survival as only a few mines keep on working). They have also recorded songs against acoustic pollution for La Paz City Hall.

Like the rappers in the first category, those in the second category tend to have a high level of education (they tend to be university-educated); they work and can use the internet and information technologies to distribute their own music. They have been invited to sing in hip-hop concerts and to participate in leadership training sessions in Cuba and Venezuela (while Morales is said to be an 'ally' of the Cuban and Venezuelan Presidents).

The third category is that of street and political rap groups with occasional institutional participation. For the most part they rely on homemade recordings. Generally younger than those previously described, they receive little media coverage. The themes of their songs are generally about 'life in the streets' (the 'street' being the legitimizing element of a 'good rapper'). Their songs include criticism of both the police and the politicians; they complain about discrimination and about poverty and they tell stories with the aim of teaching other youths about the dangers of alcohol and drug consumption.

Some rappers in this category have occasionally been invited to sing or compose for NGOs on subjects such as AIDS or Human Rights. Some have confessed that they sang in political conventions but they do not remember 'for whom or in which context.' They generally do not sing or speak indigenous languages, and sing over tracks with Andean instruments. Not all of them know how to use the internet. They have a lower level of education than the two previous groups and they are not generally in employment.

The fourth category is the rappers who take anti-system ideas and criticism of politicians, capitalism and imperialism to the extreme. They do not represent any political party or organization. Their works are only known through live presentations. They do not have the funding for the recording of official CDs. The element that differentiates them from other groups is that they do not want to negotiate their artistic or creative integrity in order to record an album and it is for this reason that an official product is not compiled. They do not desire to expose themselves publicly as rappers. Many hold university degrees or attend college and consider rap music as a method of relating to their peers, a means of expressing feelings and ideas through 'games cock' (live rap duel) or collective shows. They do not sing in Aymara but they use Andean tracks in their songs.

The fifth category consists of independent rappers who have their own studios and consequently enjoy the freedom to compose songs and to record them. They generally tend to become producers of other rappers, offering recording services or video-clip production at a very affordable price. They distribute their music through the internet and they occasionally sell it, even if they produce it with no profit motive in mind. Their songs are about political issues, discrimination and, to a lesser extent, about Aymara identity. They do not sing in Aymara but they use Andean tracks. They have, at least, a technical degree and are in employment.

Recognition

Bolivian hip-hop has received national and international coverage. Journalists expressed their surprise at finding such diverse and successful political rap music in the Bolivian highlands, inhabited mainly by countryside migrants, indigenous people and former miners. Others have pointed out that the political and social issues of this music actually come *from* the city's reality. It has also been highlighted that Bolivian youngsters use rap music to train and help young people who are at risk.

Academic works about Bolivian hip-hop have also been published. Cárdenas (2006, 14) states that hip-hoppers try to change and destroy the negative stereotype that is socially established by them and their origin. According to the same author, they make music related to the protest but they are not the spokesmen of political movements (ibid., 21). Cárdenas views the hip-hoppers' use of the indigenous Aymara language for their music as a sign of identity acceptance and pride. He also says that they use their music to resemantize the long memories of the indigenous struggle that has been happening since colonial times (ibid., 22).

Myspace Pages

A great many Bolivian rap groups have their own Myspace pages. The addresses may be found by adding the name of the group to http://www.myspace.com, e.g. http://www.myspace.com/insanomc.

JOHANA KUNIN

Hip-hop in Brazil

In Brazil, as for hip-hoppers around the world, the question of identity is a starting point for demonstrating 'reality' knowledge and aesthetic skills. Hip-hoppers show 'who they are' through the four 'elements' (rap orality, DJ sound mixing, graffiti art and street dance, sometimes glossed as B-boy/girl). Hip-hop in Brazil is a pathway toward getting an 'attitude' of empowerment built around experiences of marginality, youth and occasionally blackness. 'Black' is coded through dozens of Brazilian Portuguese words and hundreds of colloquial sayings, thereby creating an ambiguity unlike the United States (Skidmore 1993; Telles 2006; Pardue 2004). Brazilian hip-hoppers link the ideology of self-esteem to a notion of collective fulfillment, or what Afrika Bambaataa, the leader of the Universal Zulu Nation from the South Bronx and inspirational guide of many hip-hop organizations around the world, referred to as 'knowledge, culture and overstanding,' that is, the 'fifth element.'

In purely economic terms, Brazilian rappers, DJs, graffiti artists and street dancers pale in significance within the domestic and global markets of the music and culture industries when compared to the 'blue chip stock' of *samba*, MPB (*Música Popular Brasileira*), the country genres of *sertaneja* and *forró*, electronic pop and the Afro-Brazilian martial art and dance of *capoeira*. Nonetheless, hip-hop's influence can be found everywhere, from ubiquitous underpasses along the avenues of Brazil's cities to questions in college entrance exams, from popular initiatives by the Ministry of Culture to new hybrid genres, such as *samba-rap*. Until the twenty-first century hip-hop was limited to the megalopolis cities of São Paulo and Rio de Janeiro with significant communities also in Brasília, the nation's capital, along with the cities of Curitiba, Porto Alegre, Belo Horizonte and Campinas. By 2010 young people even in remote areas of Guarani-speaking indigenous communities (Espíndola 2010)) and northeastern dustbowl villages (Lélis 2011) were making hip-hop a popular idiom and a hopeful opportunity to encounter someone who actually cares who they are.

In this entry, hip-hop history in Brazil is presented less as an account of foundational figures and more as an assemblage of pertinent forces, strategies and practices. Using data from ethnographic fieldwork in São Paulo since 1995 (Pardue 2004, 2011a), it seeks to address the questions of the tradition or cultural practice from which hip-hop emerges, what, if any, are the elements of cohesion that allow a historical development, and how do practitioners establish and maintain such continuity? Historical cohesion is discussed in terms of working-class organizing and an 'opening-up' to globalized forms of blackness.

It is important to note that until the end of the 1990s there was a fierce rivalry or at least a tension between São Paulo and Rio as to what constituted 'rap.' Many groups from Rio recorded music with the word 'rap' in the title but with a beat akin to what was performed as 'funk' in Rio at the time. A reference from the United States rap scene would be 'Miami bass' sound of the 1990s. With the emergence of MV Bill and Marcelo D2, two artists with very contrasting styles, there has been a rapprochement of São Paulo and Rio.

Brazilian Hip-hop: A Brief Genealogy

In Brazil, hip-hop emerged in the mid-1980s as an extension of two areas of cultural activity: public performances of street dance and nightclub entertainment contests. The history of hip-hop's connection with state government agencies can be traced through the B-boy crews, while the trajectory of rap commercialization is historically tied to nightclub contests. B-boy crews drew attention because of their occupation of public spaces and their strong sense of group organization. For example, São Bento subway station in São Paulo became a place reference for activity starting in 1983. (For more on São Bento, see the documentary film *Nos tempos da São Bento* by Guilherme Botelho or DJ Guinho [2010].) In 1985 the popular commercial promenade streets of 24 de Maio in downtown São Paulo, including the malls (*galerias*) and Dom José de Barros Municipal Theater, would also become important stages for B-boy performance. Starting in 1987 B-boys at São Bento also began to talk about rap composition. This was the start of Thaíde e DJ Hum as well as early rappers such as MC Jack and breakers/rappers Balanço Negro.

Throughout the 1980s and 1990s thousands of teenagers – the overwhelming majority of whom were male, *periferia* residents of African descent with little formal education – organized themselves into groups called posses. 'Periferia' is the keyword that indicates not only a working-class, poorly serviced suburban area of the city but also a dynamic subjectivity of marginality (Pardue 2010). Such experiences would become the focus of narration among rappers and DJs and a theme of representation among graffiti artists and street dance crews. Through the experience of participating in posses, hip-hoppers learned, among other things, how to negotiate with state representatives so that they could organize events, hold collective meetings in public buildings and occasionally work in state-sponsored social work projects. The emergence of posses was not an unprecedented act of working-class agency articulating popular culture to state bureaucracy. Hip-hoppers drew on either prior experience or advice from older kin on how to procure resources from state departments of culture and social services (i.e., urbanization initiatives) and maintain neighborhood organizations.

For its part, the commercialization of rap was a result of the developing nightclub circuit. Nightclub contests depend on sound crews, and Chic Show was the first crew to explicitly incorporate a time slot for rap during the dance parties called the rap club (*clube do rap*). As part of a tradition of *baile* dating back to the late 1960s, Chic Show itself started in 1967 as a not-for-profit outfit. By the mid-1970s they, along with sound crews such as Black Mad, Zimbabwe and later Kaskatas (1981), dominated the dance party production scene. One will notice that 'black' is left untranslated above in the genre of *baile* or dance party. The significance of 'black' in contrast to conventional Portuguese words such as 'negro,' 'preto' or 'afro' refers to a contemporary cosmopolitan negritude linking Brazilian youth to not only sounds and images from the United States (James Brown, etc.) but also to the technologically savvy superpop symbols of Jamaica (more Kool DJ Herc than Bob Marley), Nigeria (e.g., Fela Kuti), South Africa (linking Miriam Makeba to Nelson Mandela). (The role of 'black' is discussed in more detail below.)

During the 1980s these production crews developed an infrastructure capable of not only coordinating events but also producing sound recordings. With the exception of the important compilation album *Hip hop cultura de rua* (Hip-hop Street Culture) (Eldorado 1987), all rap recordings from the early years (1986–90) were engineered by a handful of dance party sound crews. These include *Ousadia do rap* (Rap Audacity) (1987, Kaskatas), *O som das ruas* (The Sound of the Streets) (1988, Chic Show), *Hip Rap Hop* (1988, Região Abissal), *Situation Rap* (1988, FAT Records), *The Best Beat of Rap* (1989, Kaskatas), *The Culture of Rap* (1989, Kaskatas), *Consciência Black* (1989, Zimbabwe) and *Equipe Gallote* (1990, FAT Records). In retrospect, the most important compilation to emerge was *Consciência Black* simply because it introduced Racionais MCs, undoubtedly the most influential rap group ever in Brazil.

Becoming a Hip-hopper: 'Exchanging Information'

The history of hip-hop in Brazil is part of an overall story of 'information' access among marginalized youth in urban Brazil. According to hip-hoppers, 'to be informed' is a valuable asset that speaks to culture, business, history and ideology because the expressed goal is to 'exchange information' (*trocar uma ideia*). In short, hip-hoppers explicitly link information to who they are as a practice.

Of course, we all are like this to some degree, that is, we are what we know. Famed hip-hop pioneer Thaíde reminds us of this in his 1996 hit song 'Afro-brasileiro': 'Sabe quem eu sou? Então, me diga quem você é' (Do you know who I am? Then, tell me who you are). However, in the case of the millions of shantytown residents around urban Brazil, identity is seemingly always represented as a lack of, or tardiness in access to, modernity and citizenship. If not expressed in terms of paucity, *periferia* identity normally signifies a set of negative attributes. As targets of daily prejudice within a social system deeply saturated in practices of racism, sexism, classism and regional-based markers of status, *periferia* residents accumulate countless moments of dehumanizing experiences. As Brazilian sociologist Luiz Eduardo Soares (2000) has cogently argued, many young, poor, (sub)urban, 'black' kids and adults do not exist socially. There is a 'social invisibility' that shrouds Brazilian cities.

To combat such invisibility, hip-hoppers organize themselves in posses and invest time in developing *consciência*. They explicitly associate 'consciousness' with identity formation in terms of 'moments' of information access: a neighborhood party in 1976, discussions over a film from 1983, a comment about James Brown in 1975, an uncle's purchase of a pop culture magazine in 1990. In his memoirs, the legendary rapper Thaíde recalls the television program *Comando da Madrugada* (literally, Late Night Command). Thaíde describes what happened on one particular night in 1982:

> It was in the wee hours of the morning. I slept in a bunk bed, the top part; my mother slept in the bottom bunk. I lived in a shack with three families, lots of children and various dogs. They were playing 'The Big Throw Down' and Goulard de Andrade (the TV show presenter) said it like this: 'And we're here at the Chic Show dancehall – a typical sound system get up – and you'll never guess what these niggers [*crioulos*] are doing down here. Come with me, let's find out!' And, so, the camera went down and the sound got louder. It's when they showed Nelson Triunfo and these other guys dancing break. … I knew one thing for sure: I had to learn how to dance that way. I saw those guys spinning around, doing the robot. Total insanity. It was that, that's what I wanted. I think I can mark that as my first contact with hip-hop. (Alves 2004, 24–5; author's translation)

The contemporary currency of *consciência* within Brazilian hip-hop is in part due to hip-hop's roots in popular social movements organized in response to the military dictatorship (1964–85) in urban Brazil. Hip-hoppers' contact with consciousness discourses and social activists exposed them to a number of social issues concerning class but also race, ethnicity, feminism and ecology. The result is that there exists a latent expectation that hip-hoppers are conversant with pertinent debates, active leaders and prominent social institutions including the state. To a significant extent, this is true as hip-hoppers have worked with the MNU (United Black Movement), PT (Labor Party), PV (Green Party) and other official political parties; NGOs associated with the women's and black women's movements such as Fala Preta! and Geledés; and state departments of culture, education, labor and health.

Música Black

Brazilian hip-hop's ideologies of self-worth and 'attitude' involve becoming conscious of race and, more specifically, blackness. The dissemination of the struggles and victories of civil rights participants in the United States inspired *periferia* residents to make such connections between personal expression and group organization in the hope for social change. This was particularly true during the early to mid-1970s when the Black Power Movement in the United States, although in organizational demise, was at its highest point of national and international exposure. In 1978 the MNU (Unified Black Movement) was officially founded in response to an explicit, violent act of racial prejudice directed at a black taxi driver. During the late 1980s and early 1990s the MNU established significant partnerships with various posses throughout the São Paulo area.

Urban Brazil, and especially São Paulo and Rio de Janeiro, in the late 1970s and early 1980s became an empowering site of what Gilroy describes as 'a new metaphysics of blackness' (Gilroy 1993, 83). Artists such as Sandra Sá, Gilberto Gil, Tim Maia, Tony Tornado and Banda Black Rio internationalized Brazilian negritude by creating a hybridity of 'traditional' Africanity, contemporary Brazilian social commentary (some artists, of course, more than others) influenced by 'roots' reggae, and globalized black pop of James Brown and others. This 'new metaphysics of blackness' in urban Brazil was distinctively a youth movement, as these new sounds, images and narratives attracted a new generation of Brazilians looking for alternatives to 'roots' *samba*.

Christopher Dunn has termed the 'black' movement *blackitude brasileira* – an insightful neologism capturing the cultural capital of 'black,' the identity politics of negritude and the local specificity of Brazil (Dunn 2002, 82–4). The value of 'black' refers to the opening up of Brazilian media and the rise of the English language replacing the former dominance of French. Brazilian youth in Rio de Janeiro and later in São Paulo, Salvador and the new nation's capital Brasília also associated 'black' and negritude with a new politics of racial pride. Unlike the idea of black culture (*cultura negra*), 'black' represents a challenge to traditional Brazilian conceptualizations of race and most specifically the national ideology of Brazil as a 'racial democracy.' The concept of 'racial democracy' refers to the idea that the Brazilian nation was founded on a harmonious mixture of European reason, indigenous spirit and local knowledge, and African creativity as Dionysian fanfare. 'Black' and *música black* are challenges to this ongoing Brazilian convention, because for the first time, Brazilian urban youth have articulated race to identity not in a fashion of African retentions or nostalgia but in a pragmatic sense of affirmation. Brazilian soul star Jorge Ben in his song 'O negro é lindo' (Black Is Beautiful), and later rapper Rappin' Hood in his hip-hop anthem 'Sou negão' ('I'm Very Black'), indexed James Brown's famous phrase, 'We are black and proud (say it loud).'

Hip-hop Locality: Urbanization and 'Spatial Conquests'

The ideologies of empowerment within hip-hop that are historically based in working-class community organizing and the 'information exchange' of globalized 'blackness' contain a spatial dimension as well. First, Brazilian hip-hop emerged from particular urbanization policies in São Paulo as well as in other cities. Second, as local youth in more Brazilian cities and then later in smaller communities began to perform and produce rap music and the other hip-hop 'elements,' there were spatial effects. We saw that 'information exchange' is a key phrase of hip-hop historicity as well as a cohesive practice of becoming a hip-hopper, judging others and creating self-identity. Similarly, the key phrase '*conquistar espaço*' or 'to conquer/take over a space' is a stock phrase among hip-hoppers to evaluate the efficacy of an event, a rapper's prowess, the presence of a graffiti artist and so on. 'Spatial conquests' are not simply internal codes for who's hot or who's not but also, it can be argued, examples of how young, marginalized Brazilians participate in remapping their communities.

Before the first major wave of Brazilian industrialization (ca. 1900), São Paulo was a small town, a leftover missionary station from the mid-sixteenth century. Through a series of venture capitalist projects based on coffee and later textiles and metallurgy, what Brazilian historian Nicolau Sevcenko termed the 'colossal game of chance' (1993, 288), São Paulo became a spectacle of uneven investment and urbanization. Since the 1970s, a peripherization has occurred so that the percentage of São Paulo municipality to the overall metro population has gradually decreased over the past 50 years (Moreira, Leme, Naruto and Pasternak 2006; Gois 2004). Furthermore, socioeconomic statistics demonstrate that such expansion has been increasingly more uneven with sporadic elite enclaves (Caldeira 2000) surrounded by numerous impoverished working-class neighborhoods reflecting various methods of *autoconstrução*. 'Autoconstruction' is a common practice in the Brazilian *periferia* that involves architectural improvisation based on available resources.

The periphery is both a material place and a contested ideology. In Brazil, the *periferia* is a place of autoconstruction, state abandonment and strongly marked social prejudice. Brazilians consider the *periferia* a dangerous place, because it represents the outlaw backlands within the metropolitan spaces of modernity and progress. The *periferia* is, in effect, out of place. Yet, it is the 'point of address,' as articulated by Brazilian rap legends Racionais MCs (2002), unmistakably the discursive fodder for hip-hop culture.

What is contested about the periphery is its illegality. Hip-hop's intervention in this debate is represented in the 'marginal,' a reference to both epistemology and personhood as well as to spatiality. The crushing objectification in the real and imaginary figure of the 'marginal' in Brazilian hip-hop is the variable end result of a broken-down, chaotic system of city infrastructure. Simultaneously, the 'marginal' is the typical antihero of contemporary Brazil, the wayward migrant with a cursed gift of the gab and a similarly Calibanesque attitude of rage. The marginal is an alternative modern subject, a subaltern author of a translocal cosmology – a worldview based on the quotidian and conventionally abject. The marginal's management of precarious life chances has over time helped create the polemical place of the *periferia.* The spaces of buses, trains, corner bars, mud slide areas, abject public parks, abandoned school buildings, abandoned state residential projects, long lines waiting for social services and the *bocas* ('mouths' or entryways) of alleys and drug-trafficking spots mark the *periferia* as both an area of maverick socioeconomic life outside of state concern and a dependent beggar of basic social and health services.

In sum, while urbanization policies of the twentieth century created the *periferia* model of Brazilian social stratification, hip-hop has afforded the wherewithal for periphery residents to reurbanize their cities. On the one hand, such 'conquests' take the form of hip-hop cultural centers, incursion into public schools, community radio and the refashioning of public parks (Pardue 2007, 2011, 2012). Concomitantly, hip-hoppers remake Brazilian cities and communities in the stylist development of particular rap music and DJ sound accompaniment. The aesthetics of extreme locality are often represented in *periferia* life lyrics, images of daily violence and sparse beats punctuated by deep bass lines with the rapper's voice central in the mix. While the 'marginal' style has been a long-lasting paradigm, Brazilian hip-hoppers have created other styles that have emphasized other aspects of identity rather than place. These include evangelical, abstract, nostalgic, romantic and even party rap. Such subgenres offer what is termed as a 'positive' alternative to the hard-edged reality scenes of the marginal style.

Conclusion

Hip-hop as a movement of identity politics and artistic expression has depended on the occupation of space and the circulation of empowering ideologies of self and group, referred to below as 'information.' Local hip-hoppers in Brazil link the cosmopolitan aspects of 'blackness' and socioeconomic class with neighborhood traditions of community organizing and bureaucratic negotiation. They regenerate the concept and place of *periferia* and in so doing reposition themselves not as victims but as authoritative subjects on what 'reality' signifies to the majority of the people.

The desire to represent more forcefully the *periferia* and mark the self as a humble prophet motivates hip-hoppers to rework the musico-cultural elements of the past and reshape the public spaces of the present into recognizable hip-hop places. However, reality is crooked, and while hip-hoppers preach mantras of 'unity' and 'responsibility' in the understanding and representation of 'information' about 'reality,' differences emerge and reveal discrepancies and even contradictions within the hip-hop movement and what is intended by *periferia* and marginal. Part of this tension is productive as hip-hoppers have created a widening array of styles and subgenres. However, such differences in perspective and representation have also become polemical and have inspired the following 'reality' question: Are the voices of hip-hop ultimately reinforcing the persistent inequalities of Brazilian society, or does hip-hop culture mark a significant shift in Brazilian social relations?

DEREK PARDUE

Hip-hop in Colombia

Hip-hop arrived in Colombia in the 1980s not long after its emergence in the United States, and there are countless explanations as to how and where it first surfaced. In all likelihood, it simultaneously entered through various avenues by way of travelers, cross-cultural exchanges, commercial trade and especially US cinematic productions. Movies such as *Breakin'* (1984) and *Beat Street* (1984) played a key role in hip-hop's international dissemination. Despite the language barrier, Colombian youth were attracted to hip-hop's acrobatic dance moves and street gist. Furthermore, it was easily accessible, given that no instruments or formal training were required. At least during hip-hop's initial stages, beats and rhythms were produced by way of beatboxing. It was during the 1990s, however, that the United States. entertainment industry began to escalate the global distribution of hip-hop via expanding systems of mass communication, for example, through music television and programs such as *Yo! MTV Raps* – a one-time favorite of many Colombian performers. Since the late 1990s advancements in communication systems, coupled with developments in both information and digital technologies, have only intensified the spread of hip-hop while making it easier to access, copy and produce music.

Hip-hop's worldwide allure stems, in large part, from its ethnic-racial associations, its connections with lower-class urban milieus, and its tactical marketing as a cultural practice by and for subaltern youth groups living in inner-city contexts. Colombian hip-hop culture has emerged among youth of lower-class urban neighborhoods who use fashion, language, music and dance as a way to declare their cultural terrain. Much like their US counterparts, national hip-hop enthusiasts are easily identified by their baggy jeans, over-sized shirts, hairstyles, baseball hats, sports jerseys, bandanas, stocking caps and tennis shoes, almost always favoring US brands such as Baby Phat, Ecko, Adidas and so on. They also (re) produce forms of body language (greetings, hand signals) and employ terminology borrowed from today's global hip-hop culture. While most Colombian hip-hop devotees are non-black or mestizos (people of mixed Spanish and Amerindian ancestry), hip-hop is also very popular among Afro-Colombian youth who identify with rap as 'black music.' Lastly, Colombian hip-hop culture tends to be male-dominated, and participants generally range from adolescents to young adults.

Production and Distribution

It was in the 1990s that Colombian hip-hop artists began to produce CDs for local audiences. Due to the costs involved, however, making a CD is difficult. Rappers typically work odd jobs to finance the recording of their music in small studios, and some have looked toward local government agencies, churches or NGOs for financial collaborations. Once artists manage to record a CD, often under the direction of local music producers, they then hire a graphic designer to create an album cover. Eventually, the master CD and cover are submitted to a production company, and in a matter of weeks, rappers have thousands of CDs to distribute among fans and music vendors. During the last decade, artists have also become avid users of the internet and social networking sites as a way to promote and sell music. Furthermore, producing music videos has become more feasible, videos that rarely air on mainstream television, but that nonetheless reach wide audiences via the internet. Ultimately, the methods employed by Colombian hip-hop artists reveal how they generally operate outside the official circuits of the global music markets.

Musical Description

One of the first hip-hop groups to achieve a respectable degree of notoriety was Bogota's Gotas de Rap, a group comprised of both black and mestizo rappers that, unfortunately, was short-lived. While many artists have come and gone over the years, perhaps the country's most renowned and enduring hip-hop group has been La Etnnia, which was formed in the late 1980s among several mestizo rappers from Las Cruces, Bogota. La Etnnia has produced numerous CDs under their own independent label, 5–27 Records. Like most Colombian hip-hop, their tracks incorporate slow rhythms, heavy beats and, at times, dreary melodies suggestive of US gangsta rap. In fact, US 'old school' and gangsta rap have greatly impacted on Colombian hip-hop styles. La Etnnia's MySpace page, for instance, defines their rap as dark productions with slow tempos and classic or 'old school' arrangements, music not necessarily suited for dancing, but rather for bobbing one's head and raising an arm to its slower rhythms.

Lyrical content is generally understood as the most important component of Colombian rap. Emphasis is placed on what the rap is about and how well it is done, the latter understood as the ability to rhyme while rhythmically chanting lyrics to the music's beats. Colombian rap is overwhelmingly performed in Spanish, although at times mixed with English terminology taken from US hip-hop. Lyrics often reflect the rough language heard in the city streets of lower-class neighborhoods. National artists view hip-hop as a medium for social and political protest, and common themes include urban squalor, economic oppression, violence, the armed conflict, drug trafficking, etc. La Etnnia's music conveys dark worlds where frustration, resentment and hostility are the norm. In many ways, this group has come to embody what is understood as 'real' hip-hop, and the vast majority of Colombian rap follows in the same vein. However, since the late 1990s, there has been a significant rise in the number of black artists who rap about not only socioeconomic and political issues, but also racial ones. Through rap, groups such as Flaco Flow & Melanina, Choc Quib Town, Profetas and Carbono celebrate black culture while denouncing racial discrimination.

Despite the pressures to adhere to dominant trends within Colombian hip-hop, various artists have experimented with innovative styles and danceable rhythms as a way to differentiate their brand of rap or even appeal to broader audiences. Some performers, such as Zona Marginal and Tres Coronas, have produced tracks borrowing from salsa, while various Afro-Colombian artists such as Carbono and Flaco Flow & Melanina have also borrowed from music associated with the country's black communities. Perhaps more than any other group, Choc Quib Town has been committed to creating a unique style of hip-hop through the incorporation of Afro-Colombian musical material. They mix their rap with Afro-Colombian rhythms from the Pacific littoral known as *bunde*, *currulao*, *abazao*, *bambazú*, *levantapolvo* and *aguabajo*, in addition to other Latin American and Caribbean music genres. The ethnic and regional flavor of their music is bolstered through the inclusion of musicians who play instruments such as the *bombo* (a double-headed bass drum), *congas* (tall and narrow drums) and the *marimba* (a type of wooden xylophone of African origin).

Conclusions

The above-mentioned musical innovations have not been fully embraced by the national hip-hop community. Some view these efforts as a form of capitulation, thereby labeling these artists as 'sellouts.' Others, however, view this experimentation as a way to make hip-hop more (Afro-)Colombian while reducing dependence on US cultural products. These types of debates point to conflicts often created on the peripheries of global capitalism as a result of cultural globalization and the appropriation of US cultural goods. As Colombian hip-hop continues to grow, artists will inevitably have to manage these types of dilemmas between market forces and their own notions of artistic integrity. Rap al Parque, sponsored by Bogota's Institute for Culture and Tourism, has already become one of the country's most significant music events bringing together national and international hip-hop artists, while attracting over 100,000 participants each year. Mainstream music consumers have also started to take notice, as evinced by Colombian music award ceremonies that now recognize national hip-hop achievements. Finally, Choc Quib Town has even earned international recognition by winning a Latin Grammy (2010) for their track, 'De dónde vengo yo' (Where I Come From).

Regardless of any recent tensions or dilemmas, hip-hop has indeed provided Colombian youth with a more accessible channel of public discourse. Although it is dangerous to over-romanticize music's potential for engendering social change, hip-hop definitely has had a positive impact on the country's inner-city youth. Artists and their followers have used hip-hop to build self-esteem, construct positive social identities, awaken social consciousness and create a sense of belonging to local communities. In fact, hip-hop has motivated some young people to become involved in social and political movements. While most artists choose not take part in formal party politics, their music nonetheless provides unique perspectives on the challenges that their communities face while gauging, if not openly criticizing, Colombian hegemonic culture. Lastly, especially for Afro-Colombian performers, hip-hop has provided a medium for expressing ethnic-racial perspectives that all too often have been ignored. Black rappers are successfully using hip-hop as a medium for carrying racial concerns to broader audiences. In the end, all Colombian rappers have made significant contributions to the nation's popular music scene while working to create a brand of hip-hop that is informed by national events, infused with both local and global cultural material and socially committed to the artists' communities.

CHRISTOPHER DENNIS

Hip-hop in Cuba

Cubans make up the third largest Hispanic group in the United States next to Mexicans and Puerto Ricans, residing principally in the state of Florida (Albert et al. 2011). While Mexican rappers assimilated Spanish rap primarily from Chicano artists in Los Angeles, and Puerto Ricans adopted hip-hop from Nuyoricans on the east coast, Cuban rappers looked to Miami. But whereas conditions permitted access to American pop culture for Mexicans and Puerto Ricans, the United States' embargo against Cuba since Fidel Castro's 1959 revolution had placed limits on US citizens traveling to the island and restricted island residents' direct access to hip-hop. Codified into law in 1992, the legislation against US citizens doing business with Cuba was tightened further in 1996 by the Helms-Burton Act, and in 1999 US President Bill Clinton expanded the trade embargo by ending the practice of foreign subsidiaries of US companies trading with Cuba. During the administrations of President Bush (2001–09), further restrictions on travel to Cuba were imposed and the amount of remittances US Cubans could send to relatives was limited. Although travel restrictions were relaxed during the administrations of President Obama (2009–), opening people-to-people licenses for cultural, religious and educational travel as well as removing restrictions on remittance amounts, the result of this body of legislation has been to isolate young people on the island from contact with needed equipment (synthesizers, samplers, mixers and software) that could permit them to experiment with the electronic musical forms they have absorbed via pirate radio and foreigners.

Of the four elements that hip-hop celebrates as integral to its cultural art movement – rap music, break-dance, aerosol art and turntablism – only the elements that could be recreated without material resources had the potential to develop in Cuba. Despite an initial outburst of break-dance fever in the mid-1980s, rap music is the element that has most developed on the island. Because of Cuba's isolation from US art movements, economic difficulties on the island, and government institutionalization of the arts industries, it is imperative to distinguish between hip-hop created by Miami Cubans and that made by Cuban artists from the island. Rappers such as Pitbull and Don Dinero in Miami, although faithful to their ethnic and cultural roots, developed their musical careers under drastically different contexts from island rappers such as duos Anónimo Consejo and Doble Filo.

The Development of Hip-hop in Cuba in the 1990s

The fall of the Soviet Union, Cuba's primary trading partner since the inception of the revolution in 1959, created an economic contraction during the 1990s called the 'Special Period in Times of Peace.' Massive emigration, both legal and illegal, alongside electrical black-outs, transportation shortages and water rationing, led to conditions similar to those that gave birth to hip-hop during New York City's fiscal crises of the 1970s.

A few miles east of Havana is the Cuban equivalent of the South Bronx, a metropolitan Soviet-style housing project called Alamar. Built to provide homes for the many new urban migrants of the 1970s and solve the inner city housing crises (Fernandes 2006; Perez 1988; Robinson 1994). Alamar is made up of hundreds of six-story cement buildings in square rows containing thousands of overcrowded apartments. What makes Alamar unique is that it is a mere 90 miles from Miami. Its proximity to the Florida Keys allowed residents during the Special Period to intercept pirated radio stations from the United States that presented youth with music by LL Cool J and Public Enemy. The privileged access to pirate radio enjoyed by the housing district because of its geographical position, combined with its dense, primarily Afro-Cuban population, turned Alamar into the cradle of Cuban hip-hop.

In 1994 DJ Adalberto Jimenez founded *El Local de la Moña*. *La moña* refers to house parties considered the seeds of today's Cuban rap community. These house parties became so popular that the word *moña* became a common Cuban word for rap and *moñeros* for rappers or rap enthusiasts. The *moña* was not a location as such but rather a traveling rap party held in various locations between Havana and Alamar (Pacini Hernandez and Garofalo 2004). A year later, in 1995, the first Habana Hip Hop festival was held in Alamar, inaugurated by producer Rodolfo Renzoli as leader of the collective *Grupo Uno*. Early rap groups such as Amenaza, Reyes de la Calle, Primera Base and Junior Clan were among the first rap groups showcased at the festival.

For its first three years the festival was programed as a competition that introduced live rap presentations. Primera Base won the inaugural festival's competition with the song 'Malo' (Cruel). Doble Filo took first place in 1996 for their song 'Al doblar de la esquina' (At the Turn of a Corner). Amenaza (later known as Orishas) incorporated Afro-Cuban *bata* percussion into their performance, winning them first place in 1997 for their track 'Ochavón cruzado' (Mixed-Up Octoroon), a song about racism and being of mixed race. The same year, Instinto, Cuba's first all-female rap group, secured second place for their song 'No hay hombre que aguante' (No Man Can Resist). In 1998, the final year, the festival offered a competition, the first place prize went to Junior Clan for their song 'Los Dioses' (The Gods) (interview with Yrak Saenz 2009).

It was rare for these artists to make recordings. The formative years of the Havana rap scene were restricted to localized, performance-based musical releases rather than recorded albums or singles. In 1999 the Minister of Culture, Abel Prieto, officially declared rap an authentic expression of Cuban identity and appropriated the rap festival under the administration of the *Asociación Hermanos Saíz* (Saíz Brothers Association; the entertainment branch of the Young Communists Union). According to Cuban hip-hop scholar Geoffrey Baker (2011), the Habana Hip-Hop festival represents not just a series of concerts but a chance to bring together Latin American rappers in condemnation of US imperialism, symbolically uniting under a Cuban banner against US hegemony in the hemisphere. The AHS and ACR discourse kept the focus on rap to critique against the US government and its policies.

That same year, 1999, Cuban rap group Orishas (previously known as Amenaza, before emigrating) released *A lo cubano* in Europe, and the first compilation of Cuban rap *Hip Hop All Stars Vol. 1* was recorded in Havana intended for overseas distribution. It was also in 1999 that American songwriter, actor and activist Harry Belafonte, known for his long-standing interest in hip-hop as a force for social change, visited Cuba. During his trip, he held a meeting with Fidel Castro in which the revolutionary presence of hip-hop in Cuba was discussed. According to Baker (2005), Fidel was so impressed after meeting with Belafonte that he called hip-hop 'the vanguard of the revolution.'

Cuban Hip-hop in the New Millennium

The nationalization of rap was a complex process. The anti-American mainstream sentiment within Cuba forced authorities to negotiate the acceptance of broadcasting American musical forms such as jazz or rock 'n' roll (Brennan 2008). The nationalization of hip-hop required an anti-American approach in order to fit comfortably within Cuba's revolutionary cultural fabric. The change in both attitude toward hip-hop and the move toward developing an authentic Cuban derivative was in large part facilitated by Nehanda Abiodun and other African-American political exiles residing in Cuba. Abiodun worked with the Malcolm X Grassroots Movement and the 'Hands Off Assata' campaign from the United States to bring progressive hip-hop artists to Cuba (interview with Abiodun 2008). This exchange brought hip-hop artists such as Talib Kweli, Common, Mos Def and Dead Prez to perform at the Habana Hip-Hop festivals. The exchanges between Cuban rappers and these African-American artists stimulated the already Afro-centric lyrics and musical compositions of groups such as Anónimo Consejo, Obsesión, Hermanos de Causa and Explosión Suprema. Local rappers such as Anónimo Consejo, Obsesión and Doble Filo fused the Afro-centric American import with their own Afro-Cuban identity. *Afro-Cubanismo* offers a mixed racial identity for the Cuban nation. Miscegenation is still seen as a whitening process and race remains merely an underlying theme in contemporary social politics. Cuba's allegiance with the liberation struggles of Africa, particularly Angola and the Congo, have enforced African identity within and among the younger generation of the revolution. As opposed to the American 'one-drop' theory or rule of hypodescent, in Cuba there are varying degrees of race referred to as *negro*, *prieto*, *mestizo*, *mulato*, *trigueño* or *jabao*, depending on one's scale of blackness (Riviere 2006).

The early millennium generated rap songs that related to everyday social, racial and economic struggles. Anónimo Consejo rapped about the African diaspora, family dilemmas, emigration and interracial relationships. The female threesome Las Krudas spoke to issues of homosexuality and feminism. Hermanos de Causa addressed racial discrimination. Their most popular song, entitled 'Tengo' (1999), is derived from a 1964 poem by Nicholás Guillén that praised the revolution's eradication of racism. However, Hermanos de Causa turned the poem around to express how those achievements have eroded during their own generation. Duos Doble Filo and Obsesión's came together to form La Fabri K to ferment hip-hop throughout the island via conferences, symposiums, multimedia projects and youth outreach. The project led to a compilation album (2003) and later a documentary (Perez-Rey 2004).

In 2002 Clan 537 released their rap single 'Quien tiro la tiza?' (Who Threw the Chalk?). Unlike Hermanos de Causa's 'Tengo,' which carried a serious tone, Clan 537 made their song danceable and comedic. The song spread like wildfire, circulating on bootleg tapes throughout Havana. 'Quien tiro la tiza?' was about racism and inequality, two issues that were not directly addressed under the guise of the revolution. Clan 537 crossed an invisible line and struck at the core of the economic inequalities defined by race within a socialist revolution that aimed to eradicate such differences. Due in most part to its controversy rather than to its musicality, 'Quien tiro la tiza?' became a crossover commercial success, and at the same time a political tease with a catchy hook.

The popularity of 'Quien tiro la tiza?' encouraged youth to address social ailments and to push political limits. As lyrics became more nonconformist, police presence became more common at hip-hop events. When police repression escalated, rappers reacted in their lyrics. In the 2002 Alamar Habana Hip Hop festival, the then 18-year-old rapper/producer Papá Humbertico mounted the stage with a sign that read 'denuncia social' (social denunciation). He proceeded to speak above the crowd directly at the police letting them know he would not be silenced. Accounts from the Spanish newspaper *El País* (Vicente 2002) describe Humbertico illustrating his message first by requesting public pardon for convicted criminals, then by socially denouncing prostitution, followed by gesturing toward the police onsite and telling them 'I'm with this, but I am not with you.' Humbertico was allowed to perform his entire act and received little if any reaction from the authorities when he stepped off the stage that night, but the next day the Asociación Hermanos Saíz sanctioned him to take six months' leave (interview with Papá Humbertico 2008).

Humbertico's performance set in chain a series of concerns about rap on the part of the authorities. The international press took a new interest in Cuban rap as a cultural element that was rebelling against Castro's administration. Miami media and Washington politics oriented their attention toward rappers, and their performance places, as potential investment sites for counter-revolutionary and dissident cells. US Secretary of State Condoleezza Rice, in a 2006 Cuba Commission report, pointed out the rap community as a possible site for dissident youth to congregate, a site that should be monitored by Washington as potentially generating internal counter-revolutionary cells. A few months after Papá Humbertico's scandalous performance, the Cuban Agency for Rap (ACR), a state-run office under the umbrella of the Cuban Institute for Music (Instituto Cubano de la Música, ICM) and mandated by the Ministry of Culture, was designated to manage rap on the island. According to Baker (2009, 183–9), until 2002 the rap scene had been generally unified, described by all as 'underground rap.' But from that year, he notes that a divide emerged between the leading groups who belonged to the AHS, which tend to maintain this 'underground' aesthetic, and the ACR members, who in contrast have been attracted by commercial possibilities and share institutional catalogue space with reggaeton groups. The ACR offers a magazine publication titled *Movimiento* (Movement) and a music publishing and licensing catalogue.

The same year of 2002 brought a popularity shift from rap to reggaeton when the legendary founding rap group Primera Base split up and returned to the music scene as Cubanito 20.02. The group, who had previously been presenting lyrics about racial inequalities and referring to leaders such as Malcolm X and Nelson Mandela, was now telling audiences to dance away their worries. Baker (2009) proposes two ways to view this shift: either as a move away from idealism toward commercialism, or as a move away from

American musical forms toward one that is closer to Cuban musical traditions and thereby more easily assimilated by Cuban audiences. The transition from protest music to entertainment allowed the group to gain access to national media outlets and international tours yielding financial gain for their services. Based on the audience perception of 'success,' a trend prevailed in which groups changed their repertoire, mimicking the Puerto Rican version of reggaeton and calling it *cubatón*. The ACR membership includes both hip-hop and *cubatón* rappers. The latter have far surpassed the former with respect to mass popularity and access to mainstream broadcasting avenues.

Lead icons of the *cubatón* genre include Baby Lores and Insurrecto, who make up the group Clan 537. The same artists who had earlier proposed 'Quien tiro la tiza' suddenly chose to take advantage of the new popularity of reggaeton. *Cubatón* looked to Puerto Rican reggaeton to orient its production style and the visual aesthetics of its artists. The mainstream success of reggaeton rap in Puerto Rico became the alternative genre to mimic in Cuba. On the contrary, underground rap in Cuba was forced into greater isolation, which turned out to be beneficial for the originality of rap repertoire but made it difficult for outside audiences to understand. Many questioned why the underground rap music that was consciously responding to societies' ailments now received fewer benefits from the socialist state – in some cases even experiencing marginality or censorship – than a genre that was an obvious promoter of capitalist interests as *cubatón*.

The underground or the marginal is not marked solely by a rejection of the institutionalized; in Cuban hip-hop these are often interwoven. Eugene Robinson's research (2004) foregrounds two types of musical producers from Havana, Ariel 'DJ Asho' Fernández and Pablo Herrera. Ariel Fernandez represented the institutionalized hip-hop of the AHS, the cofounder and front man for the ACR's *Movimiento* magazine, and the host of the radio show *Esquina del Rap* (Rap Corner). On the opposing spectrum, Pablo Herrera was harnessing underground street hip-hop while personifying what Robinson refers to as the 'Cuban version of Dr. Dre.' Where Fernández was perceived as an institutional figure, Herrera encompassed marginalized street rap. The distinctions fueled diverging messages and sounds produced by different political positions of the Cuban hip-hop communities. However, rappers worked with both. Fernández and Herrera have since emigrated but the interwoven polarization remains consistent, exhibited in the works of rappers and producers alike. Some DJs/producers who have stood out in Cuban hip-hop include Raciel, Vaamas, Neury, Leydis, Profugo, El Aldeano, El Lapiz, Raimel, Boris, Edgaro '*el Productor en Jefe*' and Alexis D'boys.

In the outskirts of Havana, close to Alamar, the underground rap studio Real 70 was established in 2001 by Papá Humbertico in his bedroom, when he began circulating mixtapes and recording singles for rappers using a borrowed laptop (Ruiz 2008). Initially working with minimal equipment, Real 70 has given birth to the new school of Cuban rap, introducing artists such as Los Aldeanos, Randee Akosta and Mano Armada. Homemade studios equipped with basic computer equipment, speakers and microphones have become the primary spaces in which rap or reggaeton is produced and recorded. Artists either gain access to state-run recording studios in Havana such as the EGREM and the Electro-Acustica Studio where rates can range up to $60CUC/hour, or use underground studios such as Real 70 for rates ranging between $5 and $10CUC. In the underground studios, not only are rates more accessible, but artists also have the advantage of working with audio engineers whose styles are oriented toward hip-hop acoustics, an expertise that state-run studios do not offer. These home studios are considered illegal if they extend beyond the purpose of personal creativity into a 'business operation,' and notwithstanding, the studio should have paperwork to demonstrate where all the equipment originated and how it was acquired (Papá Humbertico 2008).

Musical and Technical Aspects

Owing to a lack of sophisticated equipment in Cuba, most musical compositions used American rap instrumentals; otherwise rappers relied on vocal beat boxing (a form of vocal percussion primarily involving the art of producing drum beats, rhythm and musical sounds using one's mouth, lips, tongue and voice) to produce original rhythms. Some early hip-hop producers looped cassette tapes using the first or last lyric-less eight bars of American rap beats to loop and rerecord a full musical track. Others forfeited these options altogether and used folkloric percussion drums for their musical backdrop. Early Cuban hip-hop songs tended to lack compositional originality. The ban on the import and sale of electronics throughout the 1990s (Cuba's Special Period) made it difficult, if not impossible, to produce electronic music. Legal permissions granted in 2006 have allowed personal computer ownership that initiated a new generation of self-taught computer technicians (Frank 2008). For rap this resulted in the rise of music producers. The lack of formal training in audio recording or musical production has yielded experimentation with high or low frequencies, mixing and audio editing. Tricia Rose (1999) proposes that many early rap music producers in the United States who lacked professional training created distorted sounds. This experimentation in Cuba forged innovative techniques and musical compositional styles ranging from extremely high snares to exceptionally low bass lines. The legal impermeability of copyright infringements between the United States and Cuba has also resulted in the overuse of musical samples, making these elements particular to Cuban hip-hop.

The equipment needed to produce hip-hop beats and vocal recordings, such as computers, microphones, samplers, mixers, hard drives and software is simply not available in Cuba. Producers tend to acquire such equipment through contact with foreigners. Boudreault-Fournier's (2008) research with rappers from Santiago de Cuba illustrates how artists maintain long-distance relationships with foreigners who frequently visit the island. These exchanges give island artists a glimpse of new trends in musical styles and foreigners bring with them the electronic equipment necessary for the further production of hip-hop music.

Gaining Popularity: Political Lyrics and Musical Fusions

With zero points of sale and isolation from American or European music labels, Cuban rappers seek alternative avenues to gain audiences abroad. Recent trends include rappers, such as Los Aldeanos, gaining popularity from their politically charged lyrics, and music producers, such as EdgarO, crossing genres and composing with Cuban pop icons. Both avenues have popularized Cuban rap with global audiences, allowing it to succeed financially from album sales and tours abroad.

The duo Los Aldeanos have become the prototype of protest rap in Cuba. Their commentary on social ailments and economic hardships extracts elements of Cuba's history and literature while attacking Castro's administration. Despite the various eras of 'manias' in Cuban rap, 'Aldeanomania' prevailed with a new set of tensions for authorities of the culture industries because their repertoire is critical of government bureaucracy, yet defensive of the Cuban Revolution itself. Los Aldeanos were featured on the front page of the *New York Times*' entertainment section (Lacey 2006) followed by a report in CNN International (Tutton 2009). The more international press coverage they received about their anti-Castro lyrics, the more pressure they received locally, pulling them from performances and closing down their concerts. Their draw was so massive between 2007 and 2009 in Havana that for two years small underground sites of their performances were packed beyond capacity. Despite their popularity, these performances are illegal because they have the ability to generate a petite bourgeoisie class of the establishment managers and event producers. Although some cases stand out in which performances have been shut down or artists arrested after the show, often the performance has been allowed to proceed, providing officials the opportunity to note who or what sector of society identifies with this type of music. As occurred in 2002 with Papá Humbertico's social denouncement, international press coverage about the island's protest rap has contributed to stricter government policies with regard to its genre artists.

According to Baker (2005, 377), rappers such as Los Aldeanos display a 'revolutionary fundamentalism' in their attacks on inequalities, special privileges, materialism and a decline in social solidarity. Baker suggests that elites are vulnerable precisely in the areas in which they make the rules. He illustrates that radical criticisms originate by taking the values of ruling leaders seriously, claiming that the elites do not. Other rappers of mention that present similar reactionary lyrics include Silvito 'El Libre' and S4Dron Patriota.

Musicality, complexity of rhythms, compositional fusions and the incorporation of Afro-Cuban folk instruments such as *bata* drums, maracas, *clave*, *congas*, *cajón* and *güiro* have also popularized rap groups. Ogguere orchestrate their musical backgrounds rather than using electronic beats or sampled loops. Musical producer EdgarO has experimented producing beats merging techno, *nueva trova* or *timba*. The aesthetics and styles of these rap groups and producers draw from Afro-Cuban roots as much as influences from jazz, reggae, funk, soul and rock 'n' roll. The elaborate musicality of contemporary hip-hop has contributed to the re-indigenization of the nation's youthful sound by incorporating the instrumentation from other popular genres. Doble Filo's recent album *Despierta* (2011) features *nueva trova* icon Carlos Varela, Cuban jazz pianist Dayramir González and salsa singer Pepito Goméz.

Conclusion

Isolation from American hip-hop does not signify seclusion from Latin American or European hip-hop movements. The emigration of Cubans abroad other than to the United States has also stimulated the musical genre as much as diffused it. Youth latch on to hip-hop throughout the globe, arguably to belong to a global majority when they are considered local minorities. Despite the lack of access to global markets, media or broadcasting, Cuban rappers have innovated a unique hip-hop movement that has transcended the island's imposed isolation and created fans worldwide.

Hip-hop in Mexico

Unlike other immigrant groups in the United States, such as Puerto Ricans, Mexicans did not participate in the foundational years of hip-hop in the late 1970s and early 1980s, and whereas other Spanish-speaking countries like Spain, Colombia or Argentina saw the birth of a domestic hip-hop scene in the early 1980s, in Mexico itself, this, too, was late in developing, and the influence of US hip-hoppers in the early years was slight. The Sugar Hill Gang, Boogie Down Productions, Public Enemy, Run-DMC, L. L. Cool J., Erik B & Rakim and many other prominent acts from the 1980s, who influenced the birth of a hip-hop scene in many Spanish-speaking countries, were never widely received in Mexico during that time. It was not until the early 2000s, when the influence of musicians such as the collective Native Tongues (A tribe Called Quest, de la Soul, etc.), was translated by the healthy Spanish hip-hip scene and triangulated via the internet, that international influence began to become significant.

Before the arrival of the internet, the first outside influences on Mexico were those of the Los Angeles hip-hop scene of the later 1980s and early 1990s, including the Mexican-American rappers Kid Frost, Psycho Realm and the Mexakinz, as well as other Latino artists such as Cypress Hill and Mellow Man Ace. The television show *Yo! MTV Raps* was broadcast in Mexico at this time also, but the language barrier and an element of cultural deference toward the United States prevented it making a full impact. Mexican hip-hop, like Mexican culture, its economy, education, social habits and many other aspects of Mexican life, has been deeply affected by the country's geographical proximity to the United States. The ambivalent attitude held by Mexico toward its northern neighbor has helped mold many aspects of contemporary Mexican identity as well as Mexican idiosyncrasy. Although the physical closeness to the country where hip-hop was born might have been expected to nurture a more solid, prolific hip-hop scene, in reality it worked the other way around. Language and the eternal deference that Mexicans hold toward any American product, whether in culture, politics or sports, served as a clear obstacle to hip-hop from the beginning (Paz 1950).

Local Developments

Mexican audiences first had contact with a form of rhyming style with Puerto Ricans Wilfred And La Ganga ('Mi abuela') [My Granny], Panamanian El General ('Te ves buena') [You Look Hot] or Ecuadorian Gerardo ('Rico suave') [Tasty Smooth], who first struck Mexican radio waves and local TV music outlets/channels with their suggestive choreographies and their singing style between 1989 and 1990. Language was not a problem in these cases, as it had been with rap made in Spanish from the United States.

Around the same time, during the early 1990s, the Mexican music industry produced very popular, localized products (among whom Caló was the most important), built upon the commercial success of international acts such as C + C Music Factory, Milli Vanilli, MC Hammer, Vanilla Ice, Snap and Technotronic. All of them released their most successful singles in 1990 and all were part of the major record labels of the time (EMI, Arista, Columbia, Capitol and so on, all of which had and still have a major presence in Mexico).

Caló were Mexico's own hip-house group. With catchy hooks and accompanying dance moves, *Lengua de hoy* (Language of Today) (Polygram 1990) was their first and most successful record. It sold millions of copies and toured all the major late-night, sketch, comedy and variety live shows of the time; most of the country's tape players of the time constantly had some of the songs from that album ('El Capitán' [The Captain], 'No puedo más' [I Can No More], etc.). Although the front man rapped and the record was sold as hip-hop, it had little to do with hip-hop's four basic elements. Caló were never serious about a message or had any solid connections with society; they never represented union or creative/artistic expression. They were far removed from the urban *periferia*, the area that Derek Pardue describes, in his entry on Hip-Hop in Brazil in this encyclopedia, as 'the keyword that indicates not only a working-class, poorly serviced suburban area of the city but also a dynamic subjectivity of marginality,' where hip-hop was nurtured in its essence. Caló represented chart popularity, which translated – as it always does – into industry profit.

Credit for being the first genuine Mexican hip-hoppers may go to Cuarto de Tren or Crimen Urbano, who appeared in the late 1980s. They never went beyond their own circuits and were not innovators, but in historical terms they occupy the pioneer position. Sociedad Café (previously known as Brown Society, a reflection of the identity inertia which affected all the early Mexican hip-hop artists following the Chicano hip-hop wave of the early 1990s) may also be included in that first generation of Mexican hip-hop.

Some other, localized moments in the 1990s are central to an understanding of Mexican hip-hop chronology. The now defunct hip-hop outfit from the 1990s, Control Machete, probably the most famous

Mexican hip-hop group to date, produced their two most successful records during that time. Hailing from Monterrey (Nuevo León state), next to the Mexican/US border, Control Machete's *Mucho barato …* (Very Cheap …) (Universal Latino, 1997) and *Artillería pesada, presenta* (Heavy Artillery, Presents) (Universal Latino, 1999) are important landmarks in Mexican hip-hop. Cypress Hill's first producer Jason Roberts worked on both and they sold millions of copies. They are the only two hip-hop records from the 1990s published through mainstream labels and mainstream promotion channels in Mexican hip-hop history. Because hip-hop never fully entered Mexican music markets, Control Machete's music was always linked to the northern rock scene in Mexico and they were always presented in rock bills. Apart from them and Cartel de Santa, all other hip-hop achievements in Mexico were independent of the commercial industry. Still today, in the early twenty-first century, the majority of Mexican hip-hop artists produce and pay for their own records; and all use public platforms and social media to promote them and sell them.

Several other important hip-hop crews, all independent and self-sufficient in their productions, were also founded in the 1990s. La Vieja Guardia crew, with DJ Aztek 732 and MC Luka, are still active in 2012, as are Los Caballeros del Plan G, from the northern state of Nuevo León. Serko Fu, one of the most skillful contemporary MCs, is an important part of Los Caballeros del Plan G. Last but not least, another crew from the 1990s, Life Style, no longer exists, but it saw the rise of two of the most successful Mexican hip-hop artists today: Akil Ammar and Bocafloja.

Mexico's Ministry of Culture is very far from declaring 'rap an authentic expression of Mexican identity,' as Abel Prieto did in Cuba back in 1999. But Cuba's Festival Internacional de Hip-Hop was crucial for the conception of today's Mexico City's scene. After being invited to Cuba in 2002, Akil Ammar and Bocafloja returned to plant the seeds of the circuit that today has grown into one with major concert venues as well as some press coverage. Along with Magisterio (Ximbo and Van-T), La Vieja Guardia, Nedman Guerrero, Big Metra and Sonido Liquido Crew, they are the first architects of the Mexico City's hip-hop scene.

As of 2012 there are still no radio stations, publications or venues dedicated solely to hip-hop. The basic infrastructure was built from scratch by hip-hop artists such as Ammar, who ventured into the hip-hop business by bringing other artists to play in Mexico. Around 2001 these entrepreneur rappers visualized the underground hip-hop players who could have a response in Mexico without having any airtime or press coverage. They took the risk of bringing the first internationally recognized hip-hop artists to Mexico: mostly Spanish MCs (El Chojin, Frank T, Falsalarma, Nach, etc.) or talented underground US artists such as Bahamadia and Afu-Ra.

Although Mexican hip-hop has not exploded into a recognizable commercial force as it has in Brazil or Spain, it is nevertheless true that around 2009 mainstream venues, radio programmers and some indie or rock magazines started opening up to some forms of local or foreign hip-hop. Unlike Spain, Germany, Japan, Cuba, France, Colombia or Brazil, where hip-hop arrived as a new form of urban muscle, allowing youngsters to have their own local style of hip-hop and their own infrastructure since the 1980s, Mexico's hip-hop scene is still fighting for a place in the national mainstream circuit.

While Colombia had major break-dance contests in the late 1980s, Mexico has yet to hold one. Besides private events, Method Man is the first member of the legendary Wu-Tang Clan to visit Mexico and it happened in October 2012. Public Enemy exploded in Brazil (Chang 2007) at that time also, but did not visit Mexico till 2011. Important hip-hop movies such as *Beat Street* (1984) and *Breakin'* (1984) never had a commercial or underground impact in Mexico. It was not until 2005 that the Red Bull Academy came to Mexico and organized the *Batalla de los Gallos* (battle of the roosters or freestyle cockfight). This set a very important precedent in Mexican hip-hop, as it showcased rap battles around the country for the first time, filtering the most agile rappers through the various battle stages and then sending them on to the international version of the contest, thereby uniting the most skilled freestyle rappers around Latin America and Spain. The international events held between 2005 and 2009, as well as the national battles, helped rappers to get to know each other and to network for future collaborations. *Batalla de los Gallos* gave initial exposure to some of today's major MCs: Eptos Uno, Eric El Niño, T-Killa, Hadrián, and helped establish brand new hip-hop groups such as Soul Compas (Mexico and Puerto Rico) possible.

Contemporary Hip-hop

As in many other parts of the world of hip-hop that lies outside the US mainstream circuit, the underground rappers in Mexico have adopted hip-hop culture as a way to express reality and survive. It has become a liberating exercise, a way to keep one's dignity, sanity and identity (McFarland 2002). In hip-hop culture all around the world, Mexico included, young, segregated sectors of the society are provided with a space and stage to express their perspectives, views and voices. As Tony Mitchell wrote in 2001, 'Hip-Hop and Rap cannot be viewed simply as an expression of African American culture; it has become a vehicle for global youth affiliations and a tool for re-working local identity all over the world.'

It is clear that hip-hop has had a consistent characteristic throughout its history: a relentless agenda always challenging the domestic status quo (Chang 2007), and Mexico is no exception.

Mexican hip-hop, like any other kind of cultural construction, is articulated within the local context: lack of opportunities, corruption, widespread impunity for all manner of activities, oppression, violence of all sorts, unemployment and other aspects of Mexico's present day are all covered throughout the national hip-hop scene.

Akil Ammar's 'Yo no voté por ti' (I Didn't Vote for You), released a few weeks after 2012's controversial presidential election, serves as a good example of how Mexican hip-hop takes a precise angle on the uncomfortable contemporary political reality. Using language as the main weapon, the song reveals a much more articulated form of lyrical communication. Akil Ammar, 'as a verbal architect, constructs his rhymes by consciously stretching the limitations of the standard language' (Spady et al, 2006).

> 'Yo no voté por ti'
> *Jamás olvido la represión a nombre de la paz,*
> *Tampoco aquel octubre, ni el asesino Díaz Ordaz,*
> *Yo sí recuerdo la Guerra sucia que sigue vigente,*
> *Desapareciendo a todo el que pensara diferente.*
>
> *Que llevan años con el narco como socio,*
> *Sé que ustedes mismo dispararon a Colosio,*
> *Zedillo con Acteal y la matanza,*
> *Tanto dinosaurios que te dieron enseñanza.*
> (Quoted with permission)
>
> *I didn't vote for you*
> *I'll never forget the repression in the name of peace,*
> *I'll never forget that October either, and Díaz Ordaz the murderer,*
> *I remember the dirty war still happening today,*
> *Disappearing everything and everyone who thinks differently,*
>
> *You've been partners with the drug lords for years,*
> *I know you were the ones who shot Candidate Colosio,*
> *President Zedillo with massacre at Acteal,*
> *And all the – political – dinosaurs who gave you all the teachings,*

It is only in very recent times that Mexican hip-hoppers have started to bend, explore and break the possibilities of Spanish to cover their own transcendent topics.

It is fair to say that, just as Eminem helped erase the racial barrier by demonstrating skills and strong content and by garnering 'major support from hip-hop underground fans who are always sniffing out the "inauthentic"' (Osumare 2007, 8), so also Emcee Residente from the Puerto Rican duo Calle 13 has helped erase the language barrier by demonstrating amazing rhyming skills in Spanish. Emcee Residente has unquestionably had a major impact on Mexican hip-hoppers. It is clear that right after the mainstream exposure of Residente's rhymes and ways of framing Spanish words and phrases, other Mexican hip-hoppers started bending, cutting and inverting words to satisfy their raps.

Tino el Pingüino, Mike Díaz a.k.a. Phontenak, Eptos Uno and C-Kan are just a few examples of Mexican rappers playing and discovering the flexibility of Spanish. All of them belong to the youngest hip-hop generation in Mexico.

Conclusion

Hip-hop as a movement of social identity and artistic manifestations through urban and city experiences has always based its musical and lyrical contents on the occupation of public space and the use of inspiring mind states of oneself and the group. Mexican hip-hoppers define over and over the idea of suburbs, ghetto and *periferia*. By doing so, they reposition themselves as authorities on what 'reality' means to the marginal side of the urban Mexican reality. It is important to recognize that because hip-hop has always been an 'un-educated' form of verbal, physical, written and technological expression, contradictions are abundant all over. And contradictions are often a symptom of naïveté. It could be said that the Mexican hip-hop scene is only in its infancy, characterized by the innocent moment of independently producing music and then selling it by one's own means – much as happened during hip-hop's birth in New York circa 1980.

What US rapper Chuck D calls the 'soft colonialism factor' in contemporary hip-hop, a 'certain sound and production formulae taken from mainstream American hip-hop intended solely to be reproduced throughout the biggest hip-hop markets around the world' (personal communication with author, 2009) has not struck the Mexican hip-hop scene. Its absence allows the scene to maintain a very healthy, young identity imbued with the local or traditional values in Mexican society.

Mexico's hip-hop scene is firmly alive in the solid, independent underground circuit, far from the abusive record deals, the major companies and the mainstream media. It lives in the periphery venues that saw a business opportunity by opening their doors to the hip-hop events. With the internet and all the free digital tools it offers, hip-hop truly evolved into a global network of communication and artistic expression. It is clear now that hip-hop has become one of the most penetrating, popular art movements of the last 30 years, and Mexico has not escaped its influence. As hip-hop becomes adopted as the common language between people who speak different native tongues, Mexican dancers, rappers, DJs and graffiti writers have entered the global dialogue. Whether hip-hop in Mexico will explode or remain as a timid, underground urban force remains to be seen.

Hip-hop in Puerto Rico

As the second largest Hispanic group in the United States, comprising 9 percent of the country's Hispanic population and residing primarily in New York and New Jersey (Albert et al. 2011), Puerto Ricans were essential contributors to the development of hip-hop in the late 1970s and early 1980s. The liberal migratory and capital transfer policies in place in the United States since 1898, combined with Puerto Rico's status as a US territory since 1952, intimately linked island residents to American art movements, youth genres, production resources and market interests (Dietz 1987). In the twenty-first century the Puerto Rican presence in hip-hop takes two forms, one forged by Puerto Ricans in New York (also referred to as Nuyoricans), and the other by rappers on the island itself. Mainland rappers such as Big Pun, Fat Joe and N.O.R.E. represent very different contexts and repertoire from their island counterparts such as Calle 13 or Tego Calderón, the most notable difference being the use of Spanish. Where island rap tends to be executed solely in Spanish, Puerto Rican rappers on the US mainland have a repertoire in which the primary language is English, but exhibit code switching, inserting random words in Spanish. This entry will focus on hip-hop by Puerto Rican island artists, whose repertoire has a greater circulation in Spanish-speaking countries than does that of US-based Puerto Rican artists – though the two forms of Puerto Rican hip-hop cannot be considered as entirely separate.

The close relationship between Puerto Rico and New York City allowed young people in both places to share images, media and sounds. The early rap music from Puerto Rico from the late 1980s and early 1990s shows how the urban US setting became an exotic attraction for island youth. While for its part Nuyorican cultural sensibility was characterized by emigrant longing for the island, in early rap texts and among the street youth of Puerto Rico it was the urban diasporic settings of the Bronx that became places of fascination and nostalgia (Flores 2000; Rivera 2002).

The Development of Hip-hop in Puerto Rico

In broad terms, pioneer Puerto Rican rappers looked to New York City hip-hop for lyrical flow while early island rap music producers turned to the surrounding Caribbean for compositional rhythm. A few select rappers stood out as pioneers, such as Vico C, who by 1987 had circulated cassette recordings from San Juan to the Bronx, or Ruben DJ, who was the first rapper to receive island-wide radio play, for his song titled 'La escuela' (The School, 1989), which encouraged children to stay in school. But the early era of rap in Puerto Rico belonged to the disc jockeys (DJs). Early turntable pioneers included DJ Adam, Playero DJ and DJ Negro, who began producing cassette tape recordings of Puerto Rican rap in the early 1990s while graffiti artists such as SKE and BLEN 167 provided album cover designs and concert backdrops. DJs had a role as performers, while they were also the pioneers of a new recording fashion in hip-hop called 'mix tapes.' Mix tapes were a DJ's promotional tools that replicated live concerts and that fans could replay at home (and continue to perform this function today, though as MP3 downloads). As such they became historical markers for the development of the musical movement on the island. Notable mix tapes by talented DJs showcased underground rappers to new audiences.

In 1992 DJ Playero introduced his influential and widely circulated debut album, *Playero 37,* followed soon afterward by *Playero 38.* Playero's mix tapes lacked a distinct compositional originality, using a variation of the Panamanian dem bow/*reggae español* beats (a genre from Panama mixing Spanish lyrics and Jamaican dancehall) that had become popular throughout Latin America with artists such as La Atrevida, Nando Boom and El General. The music was danceable and the rap lyrics spoke to issues of male braggadocio and criminality to which fans on both the island and the mainland could relate.

DJ Playero introduced many artists in the early 1990s, such as Mexicano 777, Don Chezina, Rey Pirin Blunt, OG Black, Wiso G, Rankin Stone and Winchesta Yankee, and duos such as Baby Rasta y Gringo, Master Joe and O. G. Black and Maicol y Manuel. These artists provided the sonic template that defined the early phases of rap in Puerto Rico. The musical compositions of underground DJs such as Playero, Negro, Joe and Blass were all relatively similar, consisting of looped beats, often fused with kick drums, snare rolls, cymbal splashes and even cartoon-like digital sound effects (Marshall 2009). The objective of early Puerto Rican rap was to demonstrate eloquent poetic lyrical flow in Spanish, particularly with regard to delivery speed. All Spanish rap on the island at the time was referred to as 'underground,' primarily because of its limited avenues of distribution and its reflection of illicit urban street lifestyles. The development of musical originality, instrumentation or rhythmic complexity, later defining factors in Puerto Rican rap, was not yet an aesthetic concern.

In the mid-1990s a series of musical productions by DJ Eric signaled a significant shift in the auditory experience of Puerto Rican rap. Among these was Wiso G's track 'Sin parar' (No Stopping) (1994) and the ballad rap song 'Mis ojos lloran por ti' (My Eyes Cry for You) by Big Boy (1996). Both tracks were the first of their kind to mix fast rap lyrics with a ballad-inspired, harmonized chorus. The vocal and compositional styles were neither US hip-hop nor Jamaican reggae but rather a new island fusion that merged two distinct vocal methods: harmonized singing overlaid with fast-paced rap. DJ Eric went on to produce other innovative rappers MC Ceja, Lito MC Cassidy and Polaco, whose repertoire reaffirmed a new fusion for their era. In 1994 DJ Darwin circulated his 'Mixtape #1' and DJ Adam released 'Mad Jam vol. I.' Both compilations exhibited a new authentically Puerto Rican rap style and an approach to rap's musical composition that no longer relied on mimicking New York attributes or dancehall beats to achieve popularity. These productions introduced significant new artists: Memo y Vale, Falo, Mexicano, Horny Man y Panty Man, Point Breakers, OGM, Oakley and Coo-Kee.

As commonly occurred in hip-hop, men brought women to the forefront of the hip-hop scene, in the process placing the women as singular feminine novelties within an otherwise all-male rap crew. DJ Negro introduced Ivy Queen and Vico C inaugurated Lisa M. Both female lyricists were influential in giving Puerto Rican rap a female perspective. Ivy Queen's lyrical content took advantage of her gendered viewpoint to speak out for women's rights, advocate against domestic abuse and instigate female solidarity (Ivy Queen 2005).

Despite the presence of rapper Ivy Queen in DJ Negro's rap crew 'The Noise,' the group's self-titled debut and sophomore albums *The Noise Uno: Underground Original* and *The Noise Dos* (1994) contained some explicitly misogynistic lyrics. The album showcased various artists whose lyrics pushed tolerance levels beyond public acceptance for the emerging rap genre. Songs such as 'La rubia' (The Blond) by Tito y Vale and 'Maldita puta' (Damn Whores) by Guanabanas Podrias brought widespread public attention. The repertoire glorified many of the everyday experiences about drug use, prostitution, sex and criminality prevalent within marginalized communities pertaining to the urban housing projects or *caserios*.

At the time, Puerto Rican rap was primarily produced by and for the *caserios.* These low-income housing projects placed throughout the San Juan metropolitan area near middle- and upper-class residential areas aimed to stimulate upward mobility. Rather than integrating their communities into wider Puerto Rican society, the *caserios* turned into isolated pockets where criminality and violence increased and where the people became exponentially isolated by unemployment or discrimination (Dinzey-Flores 2008). The popularity of the underground rap genre combined with its increasingly violent content led to government interventions at residencies. In 1995, under governor Rosello's administration, the Vice Control Division of the Puerto Rican police, assisted by the US National Guard, confiscated tapes and CDs from homes, record shops and cars, as well as recording equipment from underground home studios. The raids were publicly aimed at censoring rap music because it was considered suggestive of criminal behavior. The initiatives to isolate *caserios* and confiscate mix tapes grew from a public concern about social contagion. The Superior Courts of San Juan eventually dismissed the charges brought against the commercial establishments for the sale of underground rap music referred to as 'pornographic material,' but the seizures permanently marked the musical form (Marino 1995; Rivera 2009).

Underground rap became synonymous with moral corruption, and large-scale public mass media campaigns followed *caserio* raids. Senator Velda González of the Popular Democratic Party spearheaded a mainstream media campaign to reprimand the music as a social nuisance. However, censorship and other attacks had a reverse effect than the ones intended. Many rappers concur that Velda González's repression of the genre became a contributing factor to its commercial success. Both Eddie 'Dee' Avila and Luis Díaz have confirmed Gonzalez's role in commercializing the controversy of censored rap lyrics (interviews with author, 2004 and 2007) (For further discussion of the 'underground' rap movement, see Negrón-Muntaner and Rivera 2007).

Producer DJ Negro and 'The Noise' responded to the state censorship against profane lyrics with a new album for the controversial rap group titled '*The Noise 3: Clean Lyrics*' (1995). Intended for mainstream rotation and consumption, it was minimally successful for its concept, and disregarded for its lyrical or musical creativity. New bland lyrics to express the same stories from the urban neighborhoods diminished popular interest. Eddie 'Dee' Avila broke a two-year silence in 1997 by making nonobscene content risqué with his hit single 'Señor Oficial' (Mr Police Officer). The track was produced and composed by DJ Adam using a dem bow beat sample with additional melodic chimes. Eddie Dee's lyrical skill relied on his use of *double entendres* and other ambiguities, interchanging two types of vocabulary to refer to similar acts, substances and events, and merged slang with formal and informal Spanish linguistic forms. The song's message aimed at justifying underground rap itself as an acceptable musical form and warranted Eddie Dee being given the popular title of 'El terrorista de la lirica' (The Lyrical Terrorist), later a self-declared nickname as the title of his third album in 2000. The song's lack of swearing or obscene content allowed for island-wide spins on local radio stations. Eddie Dee's trajectory shifted rap's reputation from that of an underground and censored urban genre to a musical model of national pride. The recognition opened new opportunities for island-wide rap that led to radio rotation and international tours, bringing local underground rap into the global mainstream.

The post-censorship rap era led to new experimentations and internal divisions among rappers. Although most rap music was comparable with regard to lyrics and musical composition, its interpreters exhibited dissimilarities. Some artists demonstrated goals of attaining mainstream commercial success, while others aimed to forfeit stardom to fulfill the mantra of 'keeping it real' (a concept found in hip-hop worldwide, referring to the conscious moral obligation of rappers to lead lifestyles that reflect the content and implications of their lyrics and represent grassroots politics or offer social commentary in their music that can benefit the communities they represent). The divisions soon differentiated Spanish rap from the emerging reggaeton style, while being nonetheless confusing to the untrained ear – both styles utilized rap vocal delivery and musical compositions derived from sampled prerecorded beats.

Hip-hop and Reggaeton

A distinct compositional characteristic of contemporary reggaeton is its use of high hat and kick snare that was derived from the popular influence of Latin techno in the US music industry. In the mid-1990s Latin techno, infused with the Caribbean musical styles of *merengue* and dancehall, was becoming part of mainstream radio play in the United States with groups such as Lisa Lisa and Cult Jam (1985/1991), Proyecto Uno (1994) and DJ Baron Lopéz (1994). The most important influence, however, came from C + C Music Factory. This group's house music fused with Latin percussive rhythm patterns aimed at pan-Latin markets in the United States. Their album *Ultimate* (1995) offered a new style of techno music with break beats and sampled melodic salsa and *merengue* loops, adding an adapted high snare and kick drum drawn from US house music. Also featuring the Panamanian crossover superstar rapper El General, C + C Music Factory reoriented the direction of Latin music labels and market interests both in the United States and in Puerto Rico, winning many awards and showing contemporary young Latino urban rappers and producers the kind of success that could be achieved.

DJ Nelson, whose keen musical production style had gained island-wide popularity, seamlessly adapted this new experiment of making music for pan-Latin and non-Latin listeners. In 1997 Nelson released his innovative compilation album *The Flow*. The musical tracks contained a wide range of musical samples including dem bow, *merengue*, *reggae español*, rap in Spanish, US pop, calypso and house music. The composition introduced a particularly high snare effect with a kick drum reminiscent of C + C Music Factory's style interspersed with dancehall. The new sound was similar to house music but contoured for eight- to sixteen-bar rap lyrics. The first names for this trend were '*perreo*' (i.e., 'doggy style,' referring to the dog-like fornication movements of the dance style) and at times by some groups '*melaza*' ('molasses,' in reference to a slang term for marijuana or the 'sweetest things'); but in reference to DJ Nelson's *The Flow*, the new sound was given the permanent title of 'reggaeton.' The term was applied as (1) a popular reference to a 'ton of reggae' or a 'reggae-ton' and (2) a reference to the mixing and mastering style that joined one track after another without pauses called a 'reggae maratón' later shortened to reggaeton (Jargon 2006). DJ Nelson's album offered a template for a divergent sound from which a new musical derivative of rap was born.

At the end of the millennium in Puerto Rico, the fusions of rap and reggae began to get blurred, with artists appearing to be comfortable practicing both hip-hop rap and reggaeton rap. That situation changed with the release of *Boricua guerrero* (Boricua Warrior) in 1997. Published by musical entrepreneur Elias de Leon, the founder of White Lion Records and containing music composed by DJ Playero, Nico Canadá, DJ Goldy and Benny Blanco, the compilation album was a conceptual and compositional success. Presented as a dual cassette/CD set, the album was packaged in a glorified military command theme containing two duties: *Mision rap* and *Mision reggae*. This distinct division of rap and reggae allowed for the further development of hip-hop rap and reggaeton rap as separate genres and distinctly limited the crossover appeal of rap styles. *Mision rap* was particularly important because it included duet tracks with African-American and Nuyorican rappers alongside Puerto Ricans such as Nas with Yankee, Busta Rhymes and Jahvia, Q-Tip and Don Chezina, Fat Joe and Mexicano and Rey Pirin with Mad Lion.

Where reggaeton is seen as the playful, danceable, misogynistic, mainstream, consumer-driven musical sound, hip-hop instead prides itself on 'culture consciousness,' yet both share the element of rap lyrics. The first decade of the twenty-first century witnessed the crossover success of reggaeton in the US and European music industries with hits from Daddy Yankee, Wisin y Yandel and Don Omar, far surpassing the commercial popularity of hip-hop artists such as Tempo or Omar Garcia. Since Daddy Yankee's reggaeton hit single 'La Gasolina' (2003) topped the US charts, Universal Music Group has become the parent company to the majority of successful island rap labels, investing in whichever style of rap will sell the most units.

Puerto Rican Hip-hop versus Reggaeton

While reggaeton rap was beginning to take form and differentiate itself from hip-hop rap, artists of the later group formed collectives uniting the four elements in solidarity. Conciencia Poetica (Poetic Conscience) formed in 1997, made up of musical producer Yallzee and rappers Luis Diaz, Noah 'Omi' Santiago and Siete Nueve. A year later, a larger collective representative of the four elements of hip-hop Vanguardia Subterranean (Underground Vanguard) was founded. Vanguardia Subterranea included members from Conciencia Poetica, groups Ovr Doze (made up of Tek One y JMO), MAD Steelo (which included Severo Cantaclaro and DJ Locator) and EA Flow, as well as the SWAT graffiti crew, that consisted of Ogral One, Mero Uno and Exor. Break-dance troupe Time Machine Squad, which formed in 1989, began producing annual festivals in the late 1990s to maintain a hip-hop culture consciousness on the island, including youth workshops and dance competitions that kept the four elements of hip-hop – rap, breakdance, aerosol art and turntablism – in the public eye. Gunzmoke, No Mel Syndicate and 65 Infanteria were groups whose repertoires and activism reflected working-class Puerto Rican politics. Hip-hop took on more than a sound or a musical style, becoming a strategic lifestyle defined by its antithesis, reggaeton. Many artists clung to the four-element paradigm, finding refuge in each other (Romero 2009). Today, some of the more internationally well-known rappers to represent the genre of Puerto Rican hip-hop include Siete Nueve, the rap duo Intifada, Velcro and Ikol Santiago.

Rappers published albums appealing to one musical taste or the other, but not both. Tego Calderón's debut album *El Abayarde* (2003) featured musical compositions by producers Maestro, DJ Adam and Echo. The album attempted an unexpected fusion, not only between rap and reggaeton but also in its compositional construction, including the instrumentation of folkloric genres such as *bomba*, *plena* and the culturally popular island sound of salsa. The merging of diverse genres from the island into a rap album was innovative and opened the avenues for incorporating live instrumentation into the composition of rap songs rather than sampling and electronic looping. Calderón's contemporaries Chinonyno, Voltio and La Sista are also known for dominating both rap/reggaeton styles while elaborating traditional percussive instrumentation such as the use of *bomba* drums, *clave* and tambourines. Rappers Velcro and Siete Nueve working with producers such as Nuff Ced, JKO Dox, Maxine hi Fi and Godfader have been known to incorporate instrumentation into their recordings as well as producing full concerts with live bands instead of, or alongside, a DJ. The group *Calle 13,* featuring their front man rapper René Pérez nicknamed as 'Residente' and their musical producer Eduardo Cabra known as 'Visitante,' is perhaps the most recognized Puerto Rican hip-hop group known for blending live instrumentation with electronic backbeats. Their album *Entren los que quieran* (Enter Those Who Wish) (2010) features elements of *tango*, *bossa nova*, jazz, salsa, *cumbia* and *nueva trova*. Although the band is classified as a hip-hop group, it is also often catalogued as world beat.

The contemporary development of Puerto Rican rap demonstrates the desire to open and elaborate new musical directions, much as new lyrical paths were opened in the past. The new trend in island hip-hop looks to incorporate Puerto Rico's folkloric rhythms rather than turn to the US mainland for sonic influences. The Nuyorican contribution to hip-hop is further compounded when we consider the new island rap model as globally influential, particularly throughout Latin America. The frenzied popularity of reggaeton has diminished and hip-hop rap groups are gaining commercial success without having to forfeit their moral responsibilities or social obligations. In fact, Spanish-speaking Caribbean countries such as Cuba and the Dominican Republic have looked to Puerto Rican rap for a model to emulate, rather than the original US model.

Huayno

The *huayno* – or *huayño* in Bolivia – is one of the most popular musical genres in the Peruvian and Bolivian Andes. This musical form is often represented as a fusion of Inca and Spanish elements, although current *huaynos* are also influenced by twentieth-century media. In Peru, it is found from the department Cajamarca in the north to the southern highlands of Puno. In Bolivia, it is particularly present in the departments of Cochabamba, Chuquisaca, La Paz, Oruro and Potosí. Precisely because of its wide dissemination, the *huayno* exhibits great diversity in regard to both musical characteristics and cultural contexts. For this reason, it is only possible in the abstract to speak of the *huayno* as a unified musical genre with distinct characteristics shared in all places. It is safer to say that the term denotes a set of independent musical phenomena rather than one large musical form with local variants.

However, producers and consumers usually imagine the *huayno* as a homogeneous genre with a unified history. The genre is often presented in concerts and commented upon in conferences. Although its earliest historical documentation dates from less than 400 years ago, there is much talk about the ancestral and ancient nature of *huayno*. Equally ingrained is the idea that the *huayno* was a very important genre during the Inca Empire. The desire to provide the *huayno* with an antiquity and a glorious past is proof of its enormous symbolic importance as both a cultural expression and a factor in the construction of an Andean cultural identity.

History

Until the last decade of the nineteenth century indigenous music from the Andes did not attract much attention from music scholars in Bolivia and Peru. Therefore, writings about the history of the *huayno* began rather late, when the transformation processes of its different variants were already quite advanced. Historical documentation of the *huayno* is scarce. The earliest evidence can be found in dictionaries of old indigenous languages, written by Spanish priests during the colonial period. Both Ricardo and González Holguín mention the word '*huayñucuni*' in their respective Quechua dictionaries, Ricardo translating it as 'he or she asks someone to a dance hand in hand' ([1586] 1951, 51), and González Holguín as 'dance hand in hand' ([1610] 1989, 194). The word was used in the same way by Aymara groups on the banks of Lake Titicaca (Bertonio [1612] 1984, II, 157). Although these sources do not say anything about the musical form itself, one can conclude that this pre-Hispanic indigenous dance was the starting point of a musical exchange that generated the current forms of *huayno* when it assimilated elements of the musical practices of the Spanish Conquerors. *Huayno* fused with ecclesiastical and secular musical forms including *villancicos* and *coplas* of the Catholic Church and Spanish dances such as s*eguidillas, pasacalles* and *zarabandas*.

The presence of the *huayno* only in dictionaries and not in the chronicles of the Conquest is revealing.

While the chronicles repeatedly mention other genres as a musical part of public and religious ceremonies, the *huayno* is not even mentioned by Garcilaso de la Vega or Guaman Poma, who, as 'native chroniclers,' knew indigenous music better than the Spaniards did. Roel Pineda has for this reason concluded that, during the Inca era, the *huayno* was a minor musical form for private contexts, not a major genre played in public spaces. According to Roel Pineda, it was exactly this private character that saved the *huayno* from persecution by the Catholic Church and allowed it to adapt new musical elements from Spain (Roel Pineda 1990, 67).

Not only did the *huayno* itself change over time, but also the perception of the *huayno* by Peruvian and Bolivian intellectuals evolved. Whereas until ca. 1920 the *huayno* was, for the Peruvian urban elite, an 'abhorrent music' (Gibson 1920, 15) or the quintessential expression of a bucolic life (Alviña 1929, 320), since the mid-twentieth century the *huayno* has been a cultural icon of Andean identity in Peru, mostly due to the monumental work of anthropologist and writer José María Arguedas. Arguedas launched a campaign to establish an image of the *huayno* as a dignified cultural product with historical value:

> In the huayno has remained all the life, every moment of pain, of joy, of terrible struggle, and all these moments in which the people found the light and the access to the big world. ... The Indio and the Mestizo, as a hundred years ago, still found today in this music the whole expression of their spirit and all their emotions. (1977, 7, translation by the author)

Hence, Arguedas regarded the *huayno* as a metaphor for his ideal of the Peruvian nation, proposing it as an emblem of cultural hybridity that combined Andean and Spanish musical elements but was dominated by Andean values. In this sense, the *huayno* according to Arguedas ceased to be something 'primitive' or 'archaic' for Peruvian intellectuals and became a symbol of an 'ancestral' Andean culture (Mendívil 2004, 47).

As in Peru, until the late nineteenth century the Bolivian elite considered *huayño* music as primitive. Historical documents report, however, that the *huayño* was very popular among lower-class mestizos and *cholos* (Rossells 1995, 49). (In Peru and Bolivia *cholo* refers to indigenous people with Western influence and has been used in a pejorative sense. In recent years, though, Andean migrants in urban contexts including La Paz and Lima define themselves as *cholos*, giving the term positive connotations.) Thanks to Mauro Nuñez from Chuquisaca, the *huayño* gained cultural prestige in Bolivia during the late 1950s and early 1960s. Nuñez introduced classic guitar techniques for *charango* styles and made the *huayño* more socially acceptable for an urban audience (Céspedes 1984, 218). Also the group Los Jairas played an important role in this process. Los Jairas, composed of virtuoso musicians such as Ernesto Cavour, Edgar Jofré and the Swiss flautist Gilbert Favre, recorded traditional *huayños* with a style akin to the demands of a Western-oriented middle class and popularized them in *peñas folklóricas*, locations at which urban intellectuals and students consumed rural popular music (Céspedes 1984, 225; Leichtman 1989, 32). A final recognition of *huayño* as a cultural resource, however, first took place with the enormous success of the group Los Kjarkas in the 1980s. Los Kjarkas converted *huayño* into Bolivian national music (Céspedes 1993, 97).

Musical Characteristics of the *Huayno* Over Time

The *huayno* is a type of indigenous or mestizo song with a binary rhythm and strophic structure. Melodically, the *huayno* is characterized by the use of pentatonic scales of pre-Hispanic (Inca) origin. In the early twenty-first century, its common form consists of three or four stanzas in Quechua, Spanish or a mixture of both, an instrumental repetition of the stanza, an interlude, which in some regions is also called *codo* (elbow), and a kind of coda called *fuga* or *zapateo* in Bolivia, which has a different melody from the tune of the strophe and is played faster or with a sharper accentuation. Each stanza of the *huayno* is made up of short musical sections (AABB, AAAB, ABB or AABBCC, for example). According to Turino, these sections consist of two or more short phrases (Turino 2008, 64–5). Another characteristic is its rhythmic pattern, often represented in the literature as an eighth and two sixteenth notes. Vásquez and Vergara propose a notation of the pattern as a sixteenth note triplet with one note of the triplet extended to nearly an eighth note value (Vásquez and Vergara 1990, 149). Many authors have stressed the bimodal character of the *huayno*. Vasquez and Vergara note, for example, that *huaynos* 'start clearly in minor, go to its relative major and develop the melody in this mode to finish once again in minor' (Vásquez and Vergara 1990, 142).

These musical characteristics do not hail from a mythical time, as Arguedas imagined. Quite the contrary, *huayno* performers learned to adapt European influences that arrived with the Spaniards. They incorporated musical instruments including the violin and harp and other plucked chordophones such as the guitar and the *vihuela*; they inserted European harmonies and adapted the meter to the requirements of the Spanish language; and most significantly, they blended the *huayno* with local music traditions. But nothing had more impact on the transformation of the *huayno* than capitalist music production, which converted it into a commodity, creating a popular and commercial version in the twentieth century. José María Arguedas, after great effort, convinced recording companies to record the *huayno* for commercial purposes in the late 1950s. In a very short time the *huayno* accounted for 50 percent of annual record sales in Peru. At the same time the *huayno* began to be broadcast on the radio, which allowed local forms to suddenly acquire a nationwide impact (Lloréns Amico 1983, 121). This mediated form of *huayno* necessitated some concessions to the demands of the recording industry. Recording technology modified the *huayno*'s structure and reduced the length to three minutes in order to fit on a 78 (or later 45) rpm record. Such records were the most widespread commercial formats until the arrival of the cassette in the 1980s and later the CD during the 1990s, both of which abandoned the time constraints of the record and allowed for longer recordings, which resulted in a new song structure with 4 or 5 stanzas and an instrumental repetition of the *fuga*.

In the early twenty-first century the *huayno* forms an important segment of the Peruvian and Bolivian music industry. Since most major international record companies ignore it, numerous local entrepreneurs have founded independent labels to produce and sell *huayno* music (Turino 2008, 109–10). Clearly refuting the Adornian thesis of a negative interference of the media in traditional music (see Chalena Vásquez 1983), Tucker argues that these independent labels have had a strong influence on the formation of regional styles and contributed very actively to the production of the current diversity of the *huayno* (Tucker 2010, 153).

The Diversity of the Peruvian *Huayno*

Based on the map proposed by the Montoyas (1987, 22–3) for the Quechua song in Peru, one can outline a tentative atlas of seven *huayno* areas in Peru: (1) Cuzco with indigenous (Qorilazo) and mestizo traditions, (2) Puno with an Aymara influence, (3) Huamanga with a style known as *estilo ayacuchano* (style from Ayacucho) or *chanca*, (4) the central valley of Mantaro with a style known as *huanca*, (5) Callejón de Huaylas in Ancash, (6) the *Norte Chico* (Near North), covering the Lima highlands (Huacho, Chancay and Cajatambo) and finally (7) Cajamarca in northern Peru. Within these areas, ethnic and social differences can also determine differences between *huayno* types. For example, the Montoyas differentiate between indigenous and mestizo types:

> Both share a language and a common space but differ from each other in the instruments they play, the type or types of songs, the style of singing, the dancing mode and the thematic. These differences are very deep and are fully displayed throughout all regions. (Montoya 1987, 20, translation by the author)

The mestizo *huayno* from Cuzco can be defined as a rather slow pentatonic song, sometimes in the form of two-part melodic verses. It is also a dance genre, suitable for parties and private meetings (Roel Pineda 1990, 109–11). Professional musicians play it with instruments including the violin, accordion and *charango* – a stringed instrument of five double strings (usually tuned E'-A-E-C-G), widespread in southern Peru and Bolivia. The indigenous *huayno* in this area usually has a more intense rhythm and uses traditional indigenous instruments including the bamboo flute (*quena*) and the duct wooden flute (*pinkullo*), as well as harp, violin, mandolin, *charango* with metal strings and a frame drum called *tinya*. Los Bohemios, Los Campesinos and Julio Benavente are reliable representatives of the mestizo *huayno* from Cusco. The Conjunto Acomayo Condemayta is one of the few indigenous groups that has achieved national and international impact in Peru and Bolivia.

In the area of Puno, the indigenous *huayno* – also called *huayño* due to the region's geographical and cultural proximity to Bolivia – is played by panpipe emsembles called *tropas de sikuri* (Acevedo Raymundo 2003, 24; Turino 1993, 51) or by brass bands. Among mestizos, the most popular ensembles are called *pandillas*, consisting of mandolin, *charango*, accordion, guitar and a *guitarrón* (a huge acoustic bass guitar). A characteristic feature of the *huayno pandillero* is the use of a bass line with chromatic steps accompanying the pentatonic melody as a kind of counterpoint (González Ríos n.d., 18–19).

The mestizo *huayno* or *señorial* from Ayacucho is known for its stylistic finesse, a product of salon music culture. Raúl García Zárate on guitar and Jaime Guardia on *charango* have developed a solo style reminiscent of European concert music. In southern Ayacucho, it is notable that the Coracora style employs *bel canto* vocal style, which differs from the natural timbre of indigenous singers. Vásquez and Vergara have also stressed the importance of the guitar in the *huayno mestizo* from Huamanga, which sometimes uses different tunings (e.g., one called *baulin*: E-C-G-D-Bb-G). Using this tuning, the guitar plays both the bass line and the melody at the same time (Vásquez and Vergara 1990, 158–9). In contrast, the guitar is almost absent from the indigenous music of this area. The most characteristic instruments used in the area's indigenous music are harp, violin and *pinkullo* (Montoya 1987, 15). Another characteristic feature is the preference for high-pitched female voices.

The *huayno* from the Mantaro Valley in Junín is a product of the modernization of the area during the first half of the twentieth century and has gained great prestige all over the country due to its danceable character. Although in some remote communities one can still hear *huaynos* played with *pinkullos*, harp and violin, the most popular format in Mantaro Valley in general are large orchestras with saxophones, clarinets, harp and violin. Víctor Alberto Gil Malma (Picaflor de los Andes) and Leonor Chávez (Flor Pucarina) were legendary interpreters of this kind of *huayno,* which is also known as *estilo huanca* (Llórens 1983, 137; Romero 2001, 118).

The mestizo *huayno ancashino* is, according to Den Otter, a happy tune, based on Andean pentatonic scales, consisting of three stanzas and a *fuga* with verses from six to ten syllables and common themes of love, rural life and the landscape of the region (Den Otter 1985, 131). The indigenous *huayno* from this area is performed either with cylindrical drums (a pair of *cajas*) and a duct flute with two finger-holes called *roncadora*, or with harp and violin. Among mestizos one commonly finds ensembles with *quenas*, accordion and string instruments such as the guitar (sometimes with the tuning E-B-G#-D-B-E), the violin and the mandolin. Two icons of Andean music come from Ancash: Pastorita Huaracina and Jilguero del Huascarán, the latter remembered for his prolific production as a composer of *huaynos* with political content, but also for incorporating elements of modern genres such as the *guaracha*, *cumbia* and rock 'n' roll.

The style from the area called 'Norte chico' is usually described as a mix of pentatonic *huaynos* with harp accompaniment. This style is actually one of the most famous in the Peruvian music landscape. Singer Mina González and harpist Totito de Santa Cruz were successful performers for a long time; however, during the 1980s, this kind of *huayno* became a nationwide craze when young players including Zósimo Sacramento, Elmer de la Cruz and Hermanos Pacheco began to assimilate influences from the slow genre *balada*, which is widespread in Spain and Latin America, as well as from disco music. These artists also started using well-known rock music effects such as delay and reverb. This *huayno* style continues to enjoy great popularity due to the success of singers including Dina Paucar and Abencia Mesa (Romero 2007, 33), who also use electric bass guitar and electronic drum effects and incorporate elements from *chicha* music, a modern genre resulting from the mixture of *huayno* and Colombian *cumbia*.

Cajamarca also has a longstanding tradition of *huayno* music. In rural areas, it is common for two voices to sing in intervals of a fourth, and the use of instruments such as the *antara* – a single panpipe – and the *tinya* is widespread. Yet, *mestizo* interpreters such as the Indio Mayta and Los Reales de Cajamarca have acquired national prestige with humorous *huaynos* played with guitar, violin and flute accompaniment.

The *Huayño* in Bolivia

Although not as prevalent as the *huayno* in Peru, *huayño*, along with *cueca* and *saya*, is one of the most popular genres of Andean music in Bolivia. Its musical form has three or four stanzas and a *fuga* or *zapateo*. The *huayño* uses both pentatonic and diatonic scales and the same rhythmic patterns as its Peruvian homonym. The Bolivian *huayño* also manifests great diversity and includes both indigenous and mestizo traditions. Among the mestizo traditions, two different styles can be distinguished: the mestizo or *cholo* and the *folklórico*.

Raoul and Marguerite D'Harcourt refer to the indigenous *huayño* in Bolivia as a dance of lively and cheerful character with diatonic or pentatonic melodies (D'Harcourt 1959, 84). This kind of *huayño* is commonly performed by *sicuris*, or panpipe ensembles. Thorrez López has analyzed such *huayños* from La Paz and Oruro. While the pan flutes play the melody, the drums play the rhythmic pattern: an eighth and two sixteenth notes (Thorrez López 1977, 61). Other styles are also characteristic of the indigenous traditions in Potosi. Stobart describes '*wayñus*' played with *pinkillu* flutes as 'highly formulaic' (AABB), whereas guitar *wayñus* 'consist of a single melodic phrase repeated in its entirety (rather than several sections with internal repeats)' (Stobart 2006, 108). Luzmila Carpio has achieved international prestige with traditional *huayños* from Potosí, played with instruments such as *pinkillu*, *charango* or *kitarra* (an Indian guitar). Other representatives such as the Grupo Norte Potosi have also achieved fame with Indian *huayños* on guitars and *charangos* with steel strings.

The *huayño* is strongly rooted in the traditions of the *cholos*. In Bolivia, *huayño* brass bands are common among these groups. This is a musical practice that goes back to the early twentieth century, when military bands were established in Bolivia (Rossells 1996, 54). Jones noted that *huayños* almost exclusively form the repertoire of *cholo* ensembles in Cochabamba (Jones 2007, 42). *Cholo* performances of *huayño* in Cochabamba are usually a combination of vocals, *charango*, guitar and *bajo* (acoustic bass guitar). Characteristic of this style, which is known as *calampeado*, is a syncopated strumming accompanying the voice (Ibid., 36). Performers including Agustina Barahona, Alberto Aguilar, Miguelina Mendoza, Flora Vásquez and especially Alberto Arteaga are famous interpreters of this type of *huayño*. Alberto Arteaga's song 'El minero' is almost a second national anthem for Bolivians.

Huayños are also performed by *grupos folklóricos*. Céspedes characterizes the *folklórico* style as urban music, which blends 'some styles of indigenous music into a new, metamorphosed idiom, that reflects ... a process of cultural integration' (Céspedes 1984, 218). Inspired by the group Los Jairas, mestizo interpreters such as Jaime Junaro, Zulma Yugar and groups like Amaru, Savia Andina, Proyección, Kollawara and especially Los Kjarkas from Cochabamba have emphasized the use of traditional instruments including *quena*, charango, *bombo* and panpipes. Vocals in *huayños folklóricos* often have a polyphonic character, which is not common in other types of *huayños*, and show a direct influence of the Argentinian and Chilean *nueva canción* (Leichtman 1989, 47). Particularly interesting is the group Los Kjarkas that attained commercial success during the 1980s by modernizing the *huayño*'s harmonic structure and changing its melodies to include elements from the *balada* or *canción romántica*. Despite all these changes, Gonzalo Hermosa, the leader of Los Kjarkas, insists on the unchanged character of the *huayño*: 'Some things have remained pure. For example Huayño. Huayño has remained the purest of all' (quoted in Cespedes 1993, 64).

New forms of *huayños* have emerged in recent decades. Artists such as Betzabé Iturralde recorded *huayños* as dance music in the 1980s, usually with saxophones and keyboards. Julia Irigoyen records *huayños* in Cochabamba style, but with e-drums, electric bass, overdubs and other elements from *cumbia*. There is also a highly stylized version of *huayño* played in public concerts by groups including the orchestra Música de maestros led by Rolando Encinas, who aims at fusing Andean melodies with a harmony akin to European art music (Bigenho 2002, 97).

The Bolivian *huayño* has achieved an international impact. Peruvian groups including Hermanos Gaitán Castro demonstrate a clear influence from the Bolivian *grupos folklóricos* such as Los Kjarkas (Tucker 2010). Thanks to groups including Inti-illimani, Illapu, Los Incas and Los Calchakis, who have recorded *huaynos* from Bolivia and Peru, *huaynos* have become relatively popular in countries like Chile and Argentina – where they are known as *carnavalitos* – and even in Europe, but without forming music scenes such as those in Bolivia and Peru (Ríos 2008, 145–89).

The *Huayno* in the Twenty-first Century

The *huayno* in the early twenty-first century is a popular music genre in the sense that it is music produced for mass consumption. While other forms of *huayno* are still produced in traditional contexts, by far the most prevalent production is for commercial purposes. The *huayno* can be both a dance genre at private parties and a concert form for public or private listening pleasure. In the early twenty-first century, *huaynos* show strong influence from the *balada*, both in Bolivia and in Peru. Attempts to fuse the *huayno* with modern genres such as rock and techno music have been presented by groups including El Polen, Miki González and Uchpa in Peru and Wara and Atajo in Bolivia, although without great impact in either country. Because of their enormous presence in the mass media and in social life, the Peruvian *huayno* and the Bolivian *huayño* remain an important cultural resource and a strong element of cultural identity in the Andes.

JULIO MENDÍVIL

Huella

Huella is a traditional dance and song from Argentina, which according to the classification created by Carlos Vega (1952, 43) is positioned between dances of free-moving couples and those of a mischievous character. The first known documentation of the genre is that of Ventura Lynch (1883, 29–30); it offers a brief description of the dance and a transcription of a musical number for voice and guitar. However, to analyze the themes of the texts collected in his research, many of which concern various incidents in the civil wars between Unitarians and Federalists, Vega (1952, 273–4) determined that the *huella* was a genre that existed in the country during the second or third decade of the nineteenth century and that its popularity extended to most of the territory, in particular to the Pampa region.

The melody of the *huella* unfolds generally in the minor scale range and in 6/8 time. When sung, the texts are structured poetically with stanzas in the form of a *seguidilla,* that is in quatrains with alternating seven- and five-syllable lines. It can also appear as a six-syllable quatrain. One of the most traditional *coplas* makes reference to a moment in the choreography and says: 'A la huella, huella, dense las manos, como se dan la pluma, los escribanos' ['To the *huella*, *huella*, hold your hands, like the scriveners hold their quill'].

Around the end of the nineteenth century the *huella* started to decline in the rural setting, but in 1897 the actor and composer Antonio D. Podestá composed a *huella* for a circus show that gained notable success, enabling the genre to achieve a new popularity and circulation. It was also accepted in the urban guitar circles where arrangements of traditional rural musical genres were interpreted. Among them, the versions by Juan Alais (ca. 1888) and Julio Sagreras (ca. 1900) merit being singled out. For his part, the composer Eduardo García Lalanne introduced it as a number in his lyrical *sainete* (or farce) *Gabino el Mayoral*, premiered in Buenos Aires in 1897. From the first years of the twentieth century on, the *huella* served as inspiration to various creators of academic music belonging to the nationalist school. Among them were Alberto Williams, José André, Luis Gianneo, Felipe Boero, Luis Sammartino, Gilardo Gilardi, José Agustín García Estrada and Isidro Maistegui, who composed *huellas* for piano, for song and piano, for string trios and chamber and symphonic orchestras. But the work that spread the *huella* internationally was 'Huella,' *opus* 49 by Julián Aguirre, originally written for piano, which became well known through the orchestration created by the Swiss conductor Ernest Ansermet in 1925.

Even if *huella* is no longer practiced spontaneously as a dance, the genre has been a stimulus for diverse composers of traditional and popular urban music, among which the most distinguished are Atahualpa Yupanqui with 'Huella huellita' (1961), Hugo Giménez

Agüero with 'Huella a Laborde' (1999), Oscar Alem with 'Desde la misma huella' (2002), Hilda Herrera with 'La flor de sapo' (1997) and Ariel Ramírez with 'La peregrinación' (1965).

Jing Ping

Jing ping is the traditional music of Dominica. It is a generic term which describes the music played by accordion-led ensembles. The term is also used to describe the traditional four-piece accordion-led ensemble itself, as well as its distinctive timbre. The exact origin of the term 'jing ping' is not clear but it is commonly believed to be an onomatopoeic term derived from the core percussive sound produced by the *syak*, the *tanbal* and the *boum*. *Jing ping* music covers a wide repertoire and includes the quadrilles, mazurkas and other traditional dances of European origin. *Jing ping* bands are very much village-based and this is evident in their names. Giraudel Jing Ping Band, for example, derives its name from its place of origin, the village of Giraudel, while Gutter Jing Ping Band began in the Gutter area of the capital city, Roseau.

A typical *jing ping* band uses the accordion as the main melodic instrument, together with several percussion instruments. The *tanbal* is a large tambourine-type drum similar to the *tanbou dibas* of Martinique, made from goatskin stretched around a strip of wood bent into a circle. In some cases rattles are included, as in a typical tambourine, to give a rattling sound; the *syak* is a shaker similar to the *chacha* of Martinique or *güiro* in Latin America; the *boum* or *boumboum* is a length of bamboo hollowed at one end and a small hole inserted at the other which is blown to provide a bass sound. Twenty-first-century *jing ping* bands also use lengths of PVC pipe tubing.

Jing ping is not limited to a single rhythm, since it is an inclusive term which covers several styles of quadrilles, waltzes, polka and other popular Dominican music. Its core rhythm, however, is a steady 4/4 beat. Depending on the dance style such as *mazouk* or heel and toe polka, the rhythm is punctuated with stops and starts called *pitjé*. The timbre of the music is derived from the accordion which plays the melody. In some cases a violin, banjo and guitar are added for melodic phrases and harmonic rhythm. With its core percussive sound coming from the *tanbal*, *syak* and *boum*, the music as a whole is very rhythmic and percussive. Even the melodic instruments are played rhythmically. Rhythmic soloing by the accordion during passages of improvisation is known in French Creole as *fyolé*.

Jing ping is mainly an instrumental genre that functions as accompaniment to the various traditional dances. Vocals or singing is peripheral and frequently absent altogether. The notable exception to this is *séwinal*, a traditional serenade which involves a *jing ping* band and singers who go from house to house in the evenings leading up to Christmas.

The contemporary *jing ping* music repertoire consists of covers of traditional quadrille or *mazouk* standards as well as popular carnival songs and calypsos. In days gone by, *jing ping* was danced by adults at dances and other festive occasions. With the emergence of national competitions, however, *jing ping* began to be danced and performed by all age groups.

History and Development

Jing ping emerged in Dominica during the post-slavery period. It follows a similar trajectory as other folk music in the Caribbean; the adaptation of European music which accompanied the square dances such as the quadrilles, performed with Caribbean home-grown instruments. *Jing ping* is most closely related to the folk music of the French Caribbean, in particular, that of Martinique, Guadeloupe and Haiti. There is also rhythmic similarity with the string bands of the English Caribbean.

With the increasing availability of European melodic instruments such as the accordion and violin, guitars and banjo, *jing ping* bands surfaced throughout Dominica in the latter half of the nineteenth century and the early twentieth century, and *jing ping* music became the main dance hall music at festive occasions, religious festivals and so forth. *Jing ping* was mainly a rural-based music. During the first half of the twentieth century, there were few dance halls outside of the capital and *jing ping* dances were held at the largest dwelling house in the village. With the building of schools as education became increasingly universal, school buildings became the venue for such dances.

In the 1950s *jing ping* began to lose its dominant place in favor of modern electronic music and steelbands. Calypso music from Trinidad, *merengue* and other Latin American music became the popular dance hall music. Faced with this decline, the nationalist premier Edward Le Blanc initiated traditional dance and *jing ping* competitions, beginning in the mid-1960s, to coincide with national day festivities in October and November. These competitions and related festivals, which have continued into the twenty-first century, have been a major factor in the perpetuation of *jing ping* music. Another important development in the revitalization of *jing ping* music was the rise of the Creole movement in the 1980s, the introduction of Creole Day and Creole Week celebrations in late October.

Throughout these developments, *jing ping* music remained very much a seasonal affair, confined to festive occasions and in particular, national day celebrations in the October–November period. *Jing ping* had a popular resurgence on 'non-seasonal' occasions with the recording of the Giraudel Jing Ping Band in 1984, the first commercial recording of *jing ping* music. The recording proved to be a great success and as a result the band toured many villages in Dominica. Subsequently, the Division of Culture released compilations of *jing ping* music performed by bands participating in the national *jing ping* competitions. In 1990 another landmark development for *jing ping* music and the *séwinal* music tradition was the release of an album by the *jing ping* band, Bann Akayo of Atkinson, entitled *Mizik Séwinal*, comprising traditional Christmas *séwinal* songs. This was an instant hit and brought about a resurgence of the *séwinal* genre and tradition.

Jing Ping and Contemporary Dance Music

Jing ping has had a significant influence on contemporary dance music in Dominica. It fed into *cadence-lypso* of the 1970s, but especially into a new genre, *bouyon,* in the 1990s. Toward the end of the twentieth century, and especially in the early 2000s, the newer dance bands experimented with *jing ping* music, reproducing its core rhythms and timbre using the latest electronic instruments and sound technology. Two tendencies emerged out of this: one, the creation of *bouyon*, which combines elements of *jing* *ping* and *cadence-lypso*, and two, the emergence of an as yet unbranded form, which involves the reproduction and performance of *jing ping* music as faithfully as possible in terms of timbre and rhythm, using modern sound technology and electronic instruments. The latter has some similarities with the modernized Haitian *twoubadou,* which appeared at much the same time. These efforts appear on various recordings of bands such as Exile One, WCK and First Serenade. This 'new' genre has remained in a nascent stage during the first decade of the twenty-first century but has much potential, and branding remains an issue.

In conclusion, *jing ping* music continues to be very much a feature of contemporary life and music in twenty-first-century Dominica. Developments in tourism and new festivals such as the World Creole Music Festival have created new opportunities for *jing ping* music. Through *cadence-lypso* and *bouyon* it connects with the younger urban population. It is assuming an 'iconic' status in terms of Dominica's musical identity and remains an ever popular genre.
