Jongo

The *jongo*, also known as *caxambu*, is a Brazilian genre consisting of collective singing and dancing, performed to the accompaniment of at least two single-headed drums of different sizes and tonal ranges (the larger one is generally called *tambu* and the smaller *candongueiro*). Sometimes a friction drum called *puíta* is added to the percussion section.

The *jongo* is practiced by networks of relatives and neighbors, most of them descendants of the slave populations of southeastern Brazil. A soloist approaches the drummers and sings two or three improvised lines, uttered in a *parlando* style, followed by the drums which provide a metrical-rhythmical framework to the dancers. The song, called *ponto* ('point' in Portuguese), is then answered by the choir who repeat its last words or its last line. With the drumming and the collective singing, both the tonal and the rhythmic dimensions of the *ponto* become stable. The *ponto* can be sung for entertainment, but it can also be a riddle addressed to the dancers. It is expected that one of them answers by singing another *ponto* which shows his or her ability to interpret the hidden meanings of the first song. The practice has magical implications, since a non-deciphered riddle can harm the participants in general or the person to whom it was addressed.

The presence of the *jongo* in Rio de Janeiro among migrants who left the coffee plantations after the end of slavery (1888) was documented at the beginning of the twentieth century. The first *samba* schools were created at the same time, and some authors believe that the *jongo*'s sung improvisation is related to the improvised verses of the *partido alto*.

Despite some attempts to take the *jongo* to the professional musical scenes in Rio de Janeiro, it was never absorbed as a genre in its own right by the music industry. Clementina de Jesus (Valença, 1901 – Rio de Janeiro, 1987) recorded the *jongos* she had learned in her childhood. Darcy Monteiro (1932–2002), the son of an *umbanda* priestess who left the coffee county of Valença for the then Brazilian capital around 1900, was instrumental in introducing new urban audiences to the *jongo*. Working as a professional percussionist, Darcy Monteiro and members of his family founded the group 'Bassam.' While retaining the dance movements of the *jongo*, the metrical frame (which can be represented in a 6/8 meter), and the call-and-response vocal organization, 'Bassam' sought to create a musical form that would be appreciated by a general public. Instead of improvising verses, they selected a repertory of *pontos* with appealing tunes and rhythms. Darcy Monteiro also adopted a specific drumming ostinato whose shift between ternary and binary divisions of the beat became a signature for 'Bassam' and for its successor, the 'Jongo da Serrinha.' The *samba* singer

Beth Carvalho (b. 1946) recorded songs of Bassam's repertory in 1983.

In 2005 the *jongo* was designated as part of the Brazilian National Intangible Heritage.

ELIZABETH TRAVASSOS

Jonkonnu

Jonkonnu (also written as John Canoe, Jankanu, Junkanoo, John Kuner) is a music and dance form that includes drama, mime, masking and secrecy and that chronicles the African experience in the New World, and specifically Jamaica. The earliest known and longest surviving traditional dance-music form recorded and performed by the large slave population in Jamaica (Sloane 1707), it continues to be performed by their descendants up to the present. Jonkonnu has come to identify a specific character such as House John Canoe (*sic*), House Boat, Cowhead or Horsehead and to refer to the colorful band of characters and musicians that parade through the pages of Jamaican history. It evolved from a single character with a Cowhead headdress and a cowtail, followed by 'excited women' and children who danced through the streets, at the turn of the eighteenth century (Sloane 1730, 184). It grew into the elaborate groups and 'sets' (female groups organized by skin color or dressed alike in terms of the color or style of their costume) that were popular at the peak of plantation society (1780–1831) and, ultimately, into the cultural explosion of characters drawn from the teeming post-Emancipation society. Free Africans, Europeans, Indians, Chinese, North Americans and indigenous elements have contributed to the over 70 Jonkonnu characters, many of whom have survived and may still be seen in performance over the island.

During slavery, Jonkonnu was performed on Christmas Day, one of just two to three days that were given to the slaves as a holiday. Later, after emancipation (1838), it was performed during the entire Christmas and New Year Season, which extended into January. It could also be performed on important festival days such as Emancipation Day (1 August), and following independence from Britain in 1962, Jonkonnu and other traditional groups were encouraged to participate in the National Traditional Dance Festival. These groups may also perform for special events at the request of government and private agencies at any time of the year.

The word 'Jonkonnu,' or John Canoe as it was most popularly written up to the 1970s, has been recorded in several forms, and numerous attempts have been made to unravel its linguistic and historical/ethnic sources. Most theories which deal with the origins of the Jonkonnu parade have agreed that it springs from and was shaped primarily by an African source or sources. Some point to an etymology based on the celebration of the greatness of John Conny, a 1720 Axim (Ghana) leader, which purportedly gave rise to the name 'John Canoe' and the parade; others refer to 'Agyanka,' meaning 'orphan' in the Ghanaian Twi language; and still others, to the French phrase 'Gens Inconnus' meaning 'unknown folks.' The latter could have come to Jamaica no earlier than 1784, with the influx of the Haitians who introduced the French Set Girls to the Jonkonnu parade, while Jonkonnu had long been entrenched in plantation Jamaica.

Strong evidence exists, however, for the source and etymology of Jonkonnu lying with the Ewe words 'Dzono' (sorcerer) and 'Kunu' (deadly; pl. Kunus) – hence, 'deadly sorcerer.' Striking similarities with Jonkonnu may be found in the structure, characters, form and function of African prototypes such as the male *Egungun* and *Poro* secret societies and the related female *Sande* secret society. These traditions span a broad geographic area that cuts across a number of ethnic groups in the countries along the West African coast, from Senegal to Angola, and could have been brought to Jamaica as early as 1655 when Ewe speakers were brought there in large and consistent numbers, a trade that lasted until at least 1725 (Curtin 1969; Patterson 1969).

Early accounts of this *Dzono Kunu* figure in Jamaica (Sloane 1707; Long 1774; see also Wright 1937; Gardner 1873) make reference to a character with a Cowhead headdress and cow tail, which is consistent with figures found in a wide African cultural pool especially among Ewe speakers and the masquerade traditions of the Egungun and Poro already cited. The Egungun masquerade tradition of the Yoruba in Nigeria and Benin uses full-body masked figures who represent the reappearance of the ancestors and, by so doing, effect societal discipline and order. The Poro is an initiation school in specific areas of Guinea, Sierra Leone and Liberia, where a wide variety of masked characters that parallel many of their Jamaican Jonkonnu counterparts appear as representatives of the ancestors among the living. By the early to mid-eighteenth century in Jamaica, each ethnic group was led by its own 'Kunu' – male and female – followed by men, women and musicians. The end of the eighteenth century saw the greatest expansion of both individual characters and groups of masquerade characters or sets, the latter all wearing the same or similar face and full-body masks. This expansion was in line with the explosion of plantation society that followed the increased infusion of slaves, with the consequent growth in productivity and wealth that made Jamaica the 'gem of the Caribbean.' Several new masks and bands appeared such as the Set Girls with their own Queens, stand-alone characters such as the House Boat, House John Canoe – with their own musicians – and Koo Koo or Actor Boys who appeared individually or as a group of elaborately masked actors. These new characters began to dominate the parade, which was seen by then – and continues to be seen – as largely secular. The more African and religious associations with Jonkonnu that survived were confined to the 'southside' (Chambre 1858, 151–2) and hill regions of the island.

By 1858 a period of decline had evidently set in, and little or no evidence exists of 'public' performances from that date up to the turn of the twentieth century. Even when new accounts begin to appear, the re-emergence of Jonkonnu was marred by intermittent periods of decline occasioned by the evangelizing work of missionaries and the antagonism of civil authorities and self-appointed censors. As early as 1841 the physical confrontations on the street between different Jonkonnu bands and increasing claims of its being 'debased and vulgar' and 'frightening to children' culminated in the 'John Canoe Riots' and, in response, the outright banning of the Kingston parade by the then Mayor of Kingston. Following sporadic accounts after 1910, the regular appearance of the parade was boosted by the 1951 John Canoe [*sic*] Competition sponsored by the *Daily Gleaner* newspaper. This proved to be a major catalyst in resuscitating the parade and demonstrated that the tradition was alive and well all over the island in 'private' spaces.

Around the turn of the twenty-first century renewed efforts by researchers such as Kenneth Bilby began to point to the survival of the religious/spiritual function and duality of Jonkonnu, although it had largely been lost to the majority of practitioners in certain areas of Jamaica. Spiritual retentions have also been traced to the Bahamas, Belize (among the Garifuna, also known as Black Caribs) and along the Atlantic coast of Central America. Bilby also points to New Orleans, where an African-American masquerade, the so-called 'John Kuner' festival, may be found. John Kuner probably parallels, more closely than any other present-day masquerade tradition in the United States, the now extinct version of 'Jankunu' once practiced in North Carolina, Virginia and other southern states (Bilby 2010).

Dance and Music

In Jonkonnu, the close intertwining of dance and music is reflected in many of the terms that are used, such as 'jig' and 'marching tune.' Besides the 'fifer,' most Jonkonnu musical ensembles or bands consist of a bass drum which keeps a basic 2/4 and 4/4 rhythm while the rattling drum plays a more complicated rhythm. The grater keeps a basic four-beats-to-the-bar rhythm with a doubling on every other beat. Fifes and especially rattling drums and bass drums testify to a military influence. Departure from this general musical configuration for Jonkonnu can be found in the parish of Clarendon where the Buru drums (and rhythm) are included in the ensemble, while in St Elizabeth, where the Maroon influence can still be felt, the square-shaped gumbay drum is used. This particular drum is in evidence in the 1837 sketches of Jonkonnu parades by Isaac Mendes Belisario. In addition, wooden knockers, shakers, stamping bamboo, garden fork, bottle, calabash and even the wheel base of a car have been observed.

The individual masqueraders do not *perform* exclusive steps so much as *execute* a set mode or 'principles of movement,' dictated by their attempt to 'play a part' and by the type of costume worn. For example, *Whore Gal* is expected to be 'vulgar' and even wild in her actions, lifting up her skirt and often indulging in 'sexual play' with *Sailor Boy* or the *Devil* – a usually comical representation in dance movement. On the other hand, the *Queen* is expected to demonstrate taste, gentility and lady-like decorum in her dancing at all times. Her protector the *Champion* will intervene and 'fight for her honor' if her space is invaded inappropriately. *Pitchy Patchy* often spins wildly, energizing his costume of many-colored strips of cloth, while *Belly Woman* steps lightly while jerking her huge and pregnant 'belly' up and down, or while rotating the belly energetically. Belly Woman's antics usually solicit the anticipated peals of laughter. *Horsehead* kicks his 'hind legs' and snaps his jaws menacingly. General uniformity of dance style within Jonkonnu and 'appropriate selection' of steps per character are maintained. Shimmying (shaking), contraction-release and rapid footwork followed by a sudden break or stop of the 1837 House John Canoe were common. Also commonplace for the twentieth-century *Devil* are the high scissor kicks, rapid and repeated stepping on the balls of the feet followed by a sudden split on the ground.

Format of the Public Jonkonnu Performance

The public Jonkonnu parade follows a particular pattern of specific or prescribed 'figures' or dance-music sequences and involves repeated changes in location, either within the same town or from town to town, before settling – for a longer period – in a centrally located area. The precise format of the Jonkonnu public performance varies slightly, depending on whether it occurs as a more traditional procession on the street, with multiple locations, or as a staged presentation, involving one fixed location where the entry onto and exit from the stage marks the execution of each figure.

In both cases, there are four main 'Figures' to be found in all public Jonkonnu performances. Figure 1, the *Opening Procession,* is also referred to as the March, Marching Tune, Stop and Go, One Drop or Jig, each aptly describing the variations on the slow 4/4 music tempo and corresponding steps, according to whether they are performed by a dancer or a musician, and who is playing which instrument. Figure 2, *Open Cut Out,* also known as the While Out, Break Out or Jig, is a relatively unrestrained, up-tempo and highly energetic dance figure which highlights individual and couple-partnering dance virtuosity. Figure 3, *Intermittent or Rest,* also referred to as 'One Drop,' is used, as its name suggests, between multiple sessions of the Open Cut Out/Figure 2. Figure 4, *Closing Procession,* is distinguished by a special, very fast music referred to as Jig or Drille/Drilling, also typical of the Open Cut Out/Figure 2. Although the tempo of the music for this figure is fast and gives rise to the anticipated display of an individual character's virtuosity and couple dancing, performers may be observed 'cooling down' as a prelude to a final burst of characterization before leaving the stage or central area. There is also a fifth Figure – *Mime Play*, which is not typical of most parishes but is an integral and important aspect of Jonkonnu, also described as 'Masquerade,' in the parish of Westmoreland and its environs in the western region.

Conclusion

Jonkonnu has spawned and/or embraced several masking/dance/music traditions such as Buru, Bruckin Party, Set Girls, Queen Party, as well as sharing common steps and music with the more overtly British dance-music forms of quadrille and maypole. Although many of the over 70 different characters who have been documented are no longer seen, the earliest 'Cowhead' character endures and is to be found in many of the groups or 'bands' islandwide. The active and passive participants are aware of and exhibit behavior that conveys or responds to the 'frightening,' 'scary' elements of Cowhead, Horsehead and other lead Jonkonnu characters. The descriptions of strong, energetic dance, mimicry-mime-buffoonery, acrobatics, sexual play and the frightening antics of the characters speak not only to the traditional features of Jonkonnu but are readily found in contemporary dancehall spaces. Specific dance steps, styles, rhythms, dress (masking), attitudes, language, together with a variety of devices and codes of behavior, have been transposed from Jonkonnu into the popular dance arena. The application of the 'one drop' – an emphasis on the upbeat/after beat/off beat/pickup beat/'and' beat and a strongly sounded third beat – is carried over from Jonkonnu and other traditional forms into the Jamaican popular music arena. The 'Jonkannu (*sic*) riddim' is enshrined in the catalogue of dancehall rhythms, being covered in 2005 alone by at least 20 recording artists, such as Sean Paul ('Eye Deh A Knee'), Beenie Man ('Chaka Dance'), Bounty Killer ('Sen On Heng On'), Frisco Kid ('Wine Up Pon It'), Macka Diamond ('Da Size Deh'), Vybz Kartel ('I Neva') and Wayne Marshall ('Make Them Come').

CHERYL RYMAN

Joropo

Joropo is a folkloric and popular genre with many regional variants, widespread throughout Venezuela and the Colombian plains. It is performed at rural dance festivals where friends and relatives come together to enjoy *joropo* music and dance, food and socializing. The music, in a lively triple meter and usually sung, displays predominantly Hispanic features along with some African and aboriginal elements. It expanded its popularity in the second half of the twentieth century, when it began to be disseminated as an urban phenomenon. The popular form is derived from the *llanero* of the plains, employing harp, *cuatro* (a small four-string Renaissance guitar), rattles and bass. In Venezuela, the *joropo* is viewed as an expression of national identity.

History

The most widespread theory of the origins of *joropo* holds that its predecessor was the *fandango* (García de León 2002; Salazar 1991; Ramón y Rivera 1958), a genre derived from an African sacro-magical dance in the Caribbean that the Spaniards took to Andalusia. There, the *fandango* developed into regional variants beginning in the seventeenth century.

When the *fandango* returned to Latin America in the first half of the eighteenth century, it was well received by the public from Mexico to Chile. But for the church and the higher classes, until the nineteenth century, the *fandango* was synonymous with indecent dances and entertainment of the lower classes. In the mid-eighteenth century, such dances were generally stamped (*zapateo*), with fixed verses that were frequently in the poetic *décima* form (ten-verse stanzas), lyrics from folk tales and accompaniment by stringed instruments and varied forms of percussion (García de León 2002, 103).

The first document that mentions the term '*xoropo*' dates to 1749 (Ramón y Rivera 1958). The term *joropo* described a rural event until the second half of the twentieth century, when the *llanero* (plains) version began to include both rural *joropo* for feasts (in the style of the harpist Indio Figueredo) and the urban *joropo* for concert and stage performance (in the style of harpist/composer Juan Vicente Torrealba). During the dictatorship of Pérez Jiménez (1948–58), the *joropo* (*llanero*) in Venezuela was declared a symbol of the nation and nationalism because of the perceived strong and combative nature of the people represented in the dance (the inhabitants of the Venezuelan plains, typically cowboys and battle-hardened temporary soldiers who fought in Venezuela's Independence War), so that its diffusion gained great support. The urban *joropo* has since entered the radio waves, and it has been recorded commercially, presented in major music shows and used for political expression, commercial jingles and, since 1990 in music videos. The *joropo llanero* enjoyed such acceptance that its structures and lively expression are used as a symbol of Venezuelan identity by academic composers, staged folklore groups, dance companies and others.

Traditional *Joropo*

Like its predecessor the *fandango*, the *joropo*, established in all Creole-inhabited regions of Venezuela and in the plains of Colombia, developed many regional variants. The main variants of *joropo* are *oriental*, *guayanés*, *central*, *occidental*, Andean and *llanero*. All of these variants share a tendency toward rural idiosyncrasy, a combined local and regional presence, derivation from *fandango* and a strong sense of group-based identity. In addition, these *joropos* are performed in a dance and festival context with necessary complex communication between musicians, singer and dancers. Lyrics are about everyday life, whether history or fiction, and they are structured in *coplas* (four-verse stanzas) or *décimas* (ten-verse stanzas). The music is in triple meter, often with overlapping 3/4 and 6/8 measures and a tempo in which the quarter note equals 210 MM. The differences between various regional forms of *joropo* lie in formal, harmonic and melodic structures, in differently accentuated rhythmic schemes and especially in instrumentation.

Joropo in all its variants presents two basic forms: *golpe* and *pasaje*. The *golpe* is more prosaic and direct, with short melodic phrases, in general using the poetic *copla* form in 3/4 and/or 6/8 time. The *pasaje* has a more lyrical and contemplative character, a continuous melodic development, 3/4 meter and sometimes lyrics in *décima* form. The dance is performed by independent couples rotating to the right on the dance floor with the basic steps of *valseo* (waltzing) and *escobillao* (brushing). There is almost always stamping (*zapateo*), primarily performed by the men, in specific music sections. There are some regional differences in choreographic aspects related to different rhythmic accents.

While all *joropos*, with the exception of the central region, use the *cuatro* and all use rattles (*maracas*), the melodic instruments vary. Instruments may include mandolins (*oriental*, *guayanés* and Andean *joropo*); *bandola* types from the lute family (*oriental*, *central*, *guayanés* and *llanero*); different harps (*central* and *llanero*); accordion (*oriental* and *central*) and guitar (*central*). In a large area of the western part of Venezuela, the so-called *golpe larense* does not use a melodic instrument and is sung in polyphonic manner, while all the other *joropos* are sung by soloists.

The *joropo llanero* is the main source of inspiration for the urban popular variant. It is practiced in the vast territory of the plains between Venezuela and Colombia by ensembles of four or five people who perform on harp or *bandola*, *cuatro*, maracas and vocals. Since the 1960s these ensembles also include a bass. The harp is diatonic with 32 nylon strings and the *bandola* has four nylon strings. The rattles stand out with tremendous diversity of execution, especially in instrumental interludes. The *pasaje llanero* has a lyrical character and unique melodies. Each *golpe llanero* genre has a specific harmonic cycle and melodic and rhythmic characteristics. The texts are frequently based on *coplas*, and the singer performs challenging improvisations with a characteristic nasal intonation.

In addition to family dances on patios, in the plains the *joropo* is also found at bull fights and patron feasts. The choreography is always a couple dance using many different figures and often imitating everyday experiences from the *llano* region, such as horse-like behavior.

Outstanding personalities of the traditional or *sabanero recio* style in the twentieth century include harpists Indio Figueredo, Urbino Ruíz, José Romero, Eudes Alvarez, Omar Moreno, Pedro Castro, Armando Guerrero; singers Carrao de Palmarito, Eneas Perdomo, Francisco Montoya, Vidal Colmenares, Nelson Morales; rattle-players Braulio España 'El venao,' Pedro 'Mandarina' Díaz; and bandola-players Anselmo López, Misael Montoya and Camilo Herrera.

Popular Forms

There are three movements within the popular form of *joropo*: commercial and mainstream *joropo*, vocal arrangements and experimental instrumental arrangements.

Beginning in the 1950s the commercial and mainstream *joropo* developed after the Venezuelan mass media disseminated *música criolla* in a new concert form, initiated by harpist and composer Juan Vicente

Torrealba. His group Los Torrealberos, and singers including Magdalena Sánchez, Angel Custodio Loyola and Adilia Castillo, symbolized the style and identity of *música criolla* with traditional elements. Other artists, including Mario Suárez, Rafael Montaño and Chelique Sarabia, came from regions other than the plains, giving the *joropo* its urban and commercial character. This highly disseminated form is known in Venezuela as *música criolla*, *música venezolana* or *música de cuatro, arpa y maracas*.

Many musical changes led to this new musical personality. One such change was the inclusion of an electric bass that frequently simplifies the harp techniques. The nasal singing was replaced by a clear and voluminous voice. The often improvised melodies with relatively short phrases were replaced by new pseudo-romantic, large melodies, and the tempo is slower. There is a predominance of melancholic *pasajes*, and pieces are shorter, eliminating the richness of variants. It has also become normal to have female singers.

In the 1950s the nationalist dance expression arose, inspired by the *joropo llanero*, synchronizing and stylizing the figures to create an artistic product to bring to the masses. The dominant nationalist example is presented by the Yolanda Moreno Group 'Danzas Venezuela.' This style, sometimes lively and close to the *joropo*'s origins, has also been represented since the 1970s and 1980s by singers including Reynaldo Armas, Reyna Lucero, Cristina Maica or Cristóbal Jiménez, who have produced many records, including Reynaldo Armas's *Aquí está el cardenalito* (Here is the Siskin) and Reyna Lucero's *Aires de mi tierra*, as well as important concerts and videos. Since the 1970s and 1980s this trend has been growing, and there are many composers and musicians for *música criolla* throughout Venezuela. A special case is Simón Díaz, who, after 1965, popularized the *tonada*, a genre based on the songs *llaneros* perform while milking their cows. The *tonada*, which has its own category in juried competitions, is a slow, melancholic and intimate love song about nature, the region or a person.

A second variant of popular *joropo* form is characterized by virtuoso vocal arrangements of Venezuelan folk music and was initiated by Quinteto Contrapunto, a very popular vocal ensemble of the 1960s known for its polyphonic arrangements. In the 1970s Serenata Guayanesa was formed and added instruments to the vocals. The Venezuelan choir movement has created many popular arrangements of the different types of *joropo*.

Finally, a third style includes experimental instrumental arrangements for popular forms. A *recio* (brave) style developed on the harp, breaking with the traditional harmonic and formal schemes and finessing elements including timbre, technique and/or rhythm. This new virtuosic style can be observed in harpists such as José Archila and Carlos Orozco and in successful groups such as El Cuarteto, Gurrufío and Saúl Vera.

Since the 1960s the best musicians practicing these different *joropo* styles have met in various competitive festivals specialized in *llanero* music and dance. The most recognized festivals are realized in Villavicencio, Colombia (Torneo internacional del Joropo); Arauca, Colombia (Festival Internacional Santa Bárbara); Guanare, Venezuela (El Silbón); San Fernando, Venezuela (Voz de Alma Llanera); and in other Venezuelan locales (Florentino de Oro). In the competitions, groups are judged on the following mandatory and fixed elements: 31 dance-figures, specific music forms, virtuosity in harp execution, perfect text forms and clear pronunciation in the singing.

Conclusion

Joropo, a Venezuelan and Colombian genre, began as an activity that joined relatives and friends around music and couple dances, food and socialization. It then developed into popular music with both regional and national expressions, maintaining only some musical structures of the *llanero* variant in tasca (tavern) contexts, concerts, competitions and record production. Since the mid-1950s it has become widespread in both private and public spaces and of increasing social importance, especially in Venezuela, due to the growth of competitive festivals and the genre's commercial success.

KATRIN LENGWINAT

Jovem Guarda

Jovem Guarda (Young Guard) was a musical and cultural movement of great importance in Brazilian rock in the 1960s. The essential feature that defined the movement was the appropriation of rock 'n' roll and the integration of electric guitars, which shocked Brazilian popular musicians and intellectuals. *Jovem Guarda* was led by Roberto Carlos, Erasmo Carlos and Wanderléa Salim, but also integrated many other singers, vocal groups and bands. In the early twenty-first century, *Jovem Guarda*'s musical style was considered classic Brazilian rock 'n' roll, and it was an important reference for Brazilian musicians. Therefore, *Jovem Guarda* changed its status from a movement to a rock subgenre constitutive of Brazilian popular music.

Television broadcasts were crucial to the movement's dissemination. The movement was named after Roberto Carlos's famous *Jovem Guarda* (Young Guard) television program that broadcast live rock performances on Record television station. Launched in 1965 and featuring Erasmo Carlos and Wanderléa Salim, the program reached one of the largest Brazilian television audiences ever (Menezes Bastos 2005), spreading rock music across the country. Other television programs that nurtured the movement include Record's *O Pequeno Mundo de Ronnie Von* (Ronnie Von's Little World), hosted by male singer Ronnie Von, as well as *O Bom* (The Good) on Excelsior television station, hosted by male singer Eduardo Araújo.

The *Jovem Guarda* movement originated in the Tijuca neighborhood of Rio de Janeiro (RJ). It began with Turma do Matoso (Matoso's gang), a group of friends that gathered at Rua do Matoso (Matoso Street). The group included Roberto Carlos, Erasmo Carlos, Tim Maya – who later became an eminent soul and funk singer – and Jorge Ben – the originator of *samba rock*, a combination of rock with the musical genre most representative of Brazilian identity: *samba*. Turma do Matoso encouraged the emergence of various rock 'n' roll bands such as Os Sputniks (Roberto Carlos, Tim Maia, Arlênio Lívio, Edson Trindade and José Roberto 'China'), Os Terríveis (Roberto Carlos, Carlos Imperial, Paulo Silvino, Edson Moraes, Vitor Sérgio, João Maria and Amilcar) and The Snakes (Erasmo Carlos, Arlênio Lívio, Edson Trindade and 'China').

Before *Jovem Guarda*'s debut, Roberto Carlos was already a significant youth icon. He was often compared to Elvis Presley and considered the Brazilian 'King of Rock.' Among his early hits are 'Splish Splash' (1963) 'É proibido fumar' (1964 – Forbidden to Smoke) and 'Namoradinha de um amigo meu' (1966 – My Friend's Little Girlfriend). In 1968, Roberto Carlos became a movie star with *Roberto Carlos em ritmo de aventura* (Roberto Carlos in Adventurous Rhythm). He was also featured in *O diamante cor de rosa* (1969/1970 – The Pink Diamond) with Erasmo Carlos and Wanderléia, and in *Roberto Carlos a 300 km por hor*a (1971 – Roberto Carlos at 300 kilometers per hour).

Before beginning his singing career, Erasmo Carlos was Roberto Carlos's songwriting partner. He introduced the electronic organ Hammond B3 in Brazil, ultimately one of the standard sonorities of rock music, and he also contributed to the development of *samba* rock. The third key personality in *Jovem Guarda* was Wanderléa Salim, a young female singer whose style and clothes became a reference for her generation. Wanderléa's aggressive vocal performances, exemplified by the song 'Prova de fogo' (1967 – Fireproof), were an important element of the development of the style associated with Brazilian female singers (Rosa 2008).

Other major figures of *Jovem Guarda* include male singers Jerry Adriani, Sérgio Reis and Wanderley Cardoso and female singers Martinha, Silvinha and Vanusa. Vocal groups including The Golden Boys, Trio Esperança (Hope Trio), Leno & Lilian, Os Vips (The VIPS) and Deny & Dino also were important to the movement's configuration. The Golden Boys and Trio Esperança were the most significant vocal groups. These groups were characterized by smooth, harmonized vocal arrangements similar to the American doo wop group The Platters, and they sometimes also incorporated elements of Brazilian popular music genres such as *samba*.

Jovem Guarda supported old and new bands. The Rebels, The Jordans, The Youngsters and Os Incríveis (The Incredibles) were the most noted 'old' bands to join the movement. These bands contributed to a trend characterized by the appropriation of Californian surf rock, which relied on the prevalence of rock instrumental themes and the use of electric guitar with reverb effects. Among the 'new' *Jovem Guarda* bands were The Fevers, The Bells, The Pops and The Sunshines. The most prolific of these bands was Renato e Seus Blue Caps, named after Gene Vincent and his Blue Caps. Led by Renato Barros (lead vocals and electric guitar), this band was famous for the excellent level of its musicians, who also accompanied *Jovem Guarda*'s artists such as Roberto Carlos, Jerry Adriani, Wanderléa and Leno & Lilian. Renato Barros also wrote songs for Roberto Carlos and Leno & Lilian. Barros's compositions incorporated vocal and instrumental features associated with the Beatles. His guitar style, characterized by delay and reverb effects along with the fuzz effect, a type of distortion, is considered the main element shaping *Jovem Guarda*'s sonority (Rosa 2005).

The irreverent conduct of *Jovem Guarda* artists, characterized by a specific slang and dress style (long hair for men and tight pants or miniskirts and boots for women), spread the idea of youth rebellion. Nevertheless, *Jovem Guarda*'s members were not interested in political issues. In 1964 the Brazilian army took power. The military coup occurred during the Cold War, when the United States fiercely opposed the Soviet Union as well as perceived supporters of communism both within the United States and in Latin America. In Brazil, the military government established a policy of capitalism reform, modernization and anticommunism that relied on US funding. The country's economy became heavily dependent on international trade, foreign loans and the expansion of exports. In addition, the military imposed high levels of civil rights restrictions and cultural censorship (Menezes Bastos 2005). Several rebellious movements erupted and many eminent musicians went into exile. However, *Jovem Guarda*'s members did not react against the military repression. This lack of political position, in addition to the integration of US and British rock, was considered a form of alienation by intellectuals and popular musicians. These accusations reached their peak in 1967, when a group of musicians that identified with the *MPB* genre of Brazilian popular music marched against the so-called 'invasion' of electric guitars, viewed as a symbol of US imperialism.

Inspired by Beatlemania, the *Jovem Guarda* movement was also called 'iê-iê-iê,' a reference to the chorus of the Beatles' song 'She Loves You' (1963). Brazilian groups covered the Beatles' songs but created their own lyrics in Portuguese. For instance, 'Gente demais' (1966 – Too Many People), The Youngsters' cover of 'Ticket to Ride' (1965), is about a couple who cannot find a place to date in Rio de Janeiro because wherever they go the city is too crowded, while the Beatles' original lyrics were about a girl leaving a boy.

Most of *Jovem Guarda*'s lyrics were about love, rebellion, cars and urban melancholy. Frequently, these subjects were approached with humor, a distinctive feature of Brazilian art since the leaders of the Modernism movement (late 1910s and early 1920s) resorted to irony in order to criticize the establishment. The lyrics of 'Gente demais,' discussed above, are an example of this type of humor. Other examples include the lyrics of Roberto Carlos's 'O calhambeque' (1964 – The Old Car), in which the singer trades his

Cadillac for an old car that, ironically, attracts women, and Erasmo Carlos's 'Minha fama de mau' (1964 – My Bad Boy Reputation), in which the singer explains what he must not do if he wants to keep his bad reputation.

The Modernist notion of anthropophagy also influenced *Jovem Guarda*. Brazilian modernist poet Oswald de Andrade's (1890–1954) notion of anthropophagy challenged the Brazilian intellectual framework that established the norms of so-called 'genuine' Brazilian culture. In his 'Cannibalist Manifesto,' Andrade referenced the Brazilian Tupinambá Indians' practice of cannibalism in order to suggest that, a very Brazilian notion of cannibalism – paradoxically coming from a group almost completely decimated by Portuguese colonization – came to inform the metaphorical process of 'consuming the other' underlying the ongoing formation of Brazilian culture. Following Andrade's thesis, many Brazilian musicians in the 1960s viewed 'foreign' musical traits as part of Brazilian music, and the ability to transform the foreign into something that became Brazilian was conceived as the most striking feature of Brazilian culture. With regard to *Jovem Guarda* and other popular music, the cannibalism concept justified the incorporation of rock and electric guitars, sometimes blended with other Brazilian genres. Examples include the rise of samba rock as well as numerous songs that mix genres, such as Ronnie Von's 'Pra chatear' (1967 – To Annoy), which blends rock and *marchinha carnavalesca* (a carnival genre) and Os Incríveis' 'Cavalgada' (1965 – Ride), which blends instrumental surf music with *baião* (a northeastern Brazilian genre characterized by a syncopated 2/4 rhythm).

In the late 1960s and early 1970s some *Jovem Guarda* artists adopted elements of psychedelic rock, notably lyrics about spiritual trips, keyboards, electronic effects and sophisticated orchestral arrangements. Recordings demonstrating psychedelic rock elements include Ronni Von's *Ronnie Von* in 1968, Os Incríveis' *Neste mundo louco* (1967 – In This Crazy World) and Erasmo Carlos's *Carlos, Erasmo* (1971), recorded with Mutantes, a band that would lead the next generation of Brazilian rock.

Some *Jovem Guarda* artists achieved international fame. This was the case for Erasmo Carlos, whose albums were released in Mexico, Portugal, Argentina, Spain and the United States, and Os Incríveis, whose albums were released in Argentina and Spain. Roberto Carlos later abandoned *Jovem Guarda*'s aesthetic to become a ballad singer, achieving international fame and releasing records in the United States, Italy, Spain and France.

In the early twenty-first century many of *Jovem Guarda*'s artists were still active, including Roberto Carlos, Erasmo Carlos, Wanderléa Salim, Renato e seus Blue Caps and Netinho, the drummer from Os Incríveis, who joined Casa das Máquinas. In addition, *Jovem Guarda*'s repertoire was constantly recreated and rereleased by contemporary artists related to various Brazilian genres such as pop-rock, MPB and *sertanejo*.

Conclusion

Jovem Guarda began as a rock appropriation movement, an umbrella of bands with diverse musical characteristics. Nevertheless, these bands created a Brazilian version of rock 'n' roll, with their repertoire becoming standard songs for later rock musicians. *Jovem Guarda* also integrated some of the essential values of rock, such as the idea of youth rebellion. This rebellion was against the way of life and values of adults, but it was not about political engagement. *Jovem Guarda*'s hedonism, irony, irreverence and clothing style inspired many generations of Brazilian rock musicians. Thus, in recovering *Jovem Guarda*'s repertoire, contemporary artists not only express their musical affinities, but they also adopt its youth rebellion against conservative values.

TATYANA DE ALENCAR JACQUES

Junkanoo

Bahamian Junkanoo is a festival – including masquerade, dance, music and art – rooted in West African spirituality. It shares at least some connection with similar traditions in Jamaica (Jonkonnu), Belize (Jankunú), North Carolina (John Kuner), St Kitts and Nevis (Masquerade) and Bermuda (Gombey). Unlike the pre-Lenten Carnival celebrations adopted in places such as Trinidad, New Orleans, Cuba and Brazil, however, Junkanoo is a Yuletide festival, celebrated on Boxing Day (26 December) and on New Year's Day. Junkanoo serves as the primary artistic marker of Bahamian national identity, is sponsored by the state and is touted as a space within which all Bahamians can come together in equality – indeed, Junkanoo benefits from tremendous popular support.

Kenneth Bilby has noted that Junkanoo (Jonkonnu) was very likely a well-established practice in Jamaica as early as the late seventeenth century, pointing out that the first written accounts of the practice in the Caribbean date from the early eighteenth century (1707) (Bilby 2010). No written record of Junkanoo's presence in the Bahamas appears, however, until well into the nineteenth century. In fact, the first accounts of Afro-Bahamian Yuletide celebrations that clearly map on to Junkanoo practice elsewhere do not appear until the 1840s. As such, Junkanoo appears to have arrived in the Bahamas at a somewhat later time (although it is not possible to verify exactly when or how) (Craton 1995).

History

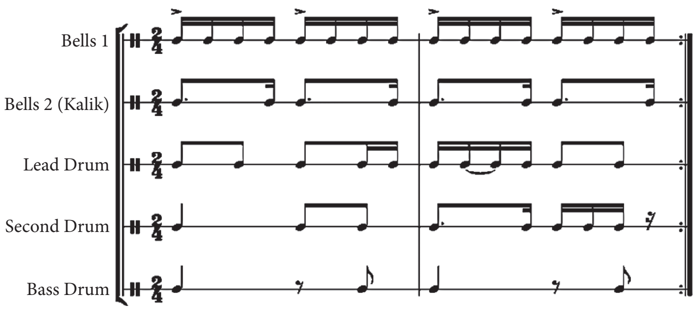
Initially, Junkanoo, like Carnival elsewhere in the Caribbean, was highly stigmatized by the establishment. The African roots of the music and masking, combined with the violence and disorder that occasionally accompanied the celebration, caused widespread concern among the middle and upper classes, especially in the wake of emancipation. Masked and costumed groups would 'rush' the streets during the celebration and compete with each other in an attempt to defeat other groups through music, dance and, on rare occasions, through violence. The government attempted to stop the celebration on several occasions and, when that failed, passed laws limiting it in various ways. One such effort was the enactment of the Street Nuisance Act of 1899, which proscribed nighttime activities. A paternalistic government then granted exceptions to this law each year (with some notable exceptions), so that Junkanoo could legally be celebrated. Thus, while Junkanoo continued to be celebrated, political pressure, in conjunction with middle and upper-class disapprobation, prevented it from gaining broad acceptance during the nineteenth century. Gradually, however, the celebration became less controversial, and by the middle of the twentieth-century Junkanoo was a reasonably well-accepted Bahamian cultural marker.

While smaller celebrations do take place throughout the Bahamas (and always have), the primary location of Junkanoo is Bay Street in Nassau. In the early 1950s enterprising merchants on Bay Street began to sponsor Junkanoo, first organizing modest prizes for best costumes, and later progressively institutionalizing it into a formal parade with rules for competition and prize money in multiple categories (best music, best choreography, best group, etc.). This institutionalization of the festival has contributed to significant growth in the size of Junkanoo groups. In the 1950s it was rare to witness groups larger than a few dozen 'rushers' on Bay Street. By contrast, starting in the 1980s some of the largest Junkanoo groups (such as the Valley Boys and the Saxons) have been known to bring as many as 1,000 performers to Bay Street.

By the time the Bahamas gained independence in 1973, the popularity of Junkanoo was such that it was recognized as a politically and nationally powerful symbol. While the festival is open to tourists, and many visit each year, it is understood as being for and about Bahamians (Bethel 1991). Post-independence efforts by the state focused on creating a unifying and universalizing approach to Junkanoo, an agenda illustrated well by the fact that the privately administered Masquerade Committee was absorbed into the Ministry of Tourism after independence. In addition, the nation's first prime minister, Lynden O. Pindling, participated in the festival each year, thereby illustrating official approbation and contributing to a sense of community pride.

The Sound of Junkanoo

Tinkle Hanna, a prominent musician and former member of the National Junkanoo Committee, claims that 'Junkanoo is above all else, a rhythm' (interview with the author, 20 February 1999). The rhythm he refers to is created through combining various layers of drums and percussion instruments. The drums are divided into three groups (first, second and bass) and are complemented by cowbells, foghorns, bicycle horns and whistles. The drums and cowbells, in particular, are assigned rhythmic 'roles' within which they have some limited freedom to improvise. The pattern played by the second bell players is known onomatopoetically as 'Kalik' and represents what, until recently, was the most



Example 1: Junkanoo rhythms

common bell pattern (see bell 2 in Example 1). Since the mid-1970s, the tempo of Junkanoo music has increased, prompting the bell players to raise the rhythmic intensity of their line as well (see bell 1 in Example 1).

The first and second drummers combine in any number of ways, although the first, or lead, drummers usually play a more complex line than that of the second drummers. The bass drummers carry the pulse of the music, and the most common rhythm is transcribed below. The foghorns, bicycle horns and whistles, for their part, are free to contribute syncopated, improvisatory rhythms at will. Since the 1970s horn arrangements, including sections of trumpets, trombones and, a little later, sousaphones, have been added to the sound of Junkanoo. This has afforded groups the chance to deploy musical medleys that tie directly into their costume theme for the year and has generated new possibilities for the musical direction of Junkanoo.

Junkanoo as Popular Music

Starting in the l970s, the rhythms and sonic markers of Junkanoo were increasingly translated into popular music. It was not uncommon, for example, to incorporate small-scale Junkanoo 'rushes' into concerts (Dr Offfff was particularly known for this), and dance bands found it easy to incorporate the cowbells, whistles and bass drums of festival Junkanoo into their compositions and recordings, thereby marking and marketing their music quite explicitly as Junkanoo (Rommen 2011). The Baha Men, for example, entitled their first major label release *Junkanoo!* (1992) and appeared on the cover dressed in Junkanoo costumes. They also saturated the album with the sounds of festival Junkanoo instruments. Junkanoo thus continues simultaneously to inspire and inform the festival arts on Boxing Day and New Year's Day and to provide musical materials and sonic markers for popular music in the Bahamas.

Kaluyo

Kaluyo (Khaluyo, Caluyo) is a vocal and instrumental genre and traditional dance that is cultivated in the south-east of Bolivia (Vallegrande, Santa Cruz) and in various southern areas such as Sucre and Potosí. Until the 1970s *kaluyo* was equivalent to the *pasacalle* (passacaglia) among artists cultivating popular music. As a musical genre, *kaluyo* is slow and rhythmic, often with octosyllabic lines that deal with unrequited love. The subject matter makes *kaluyo* a sad and melancholic genre but no less vibrant and poetic. As a dance, *kaluyo* is similar to the *huayño* in that both styles are danced in pairs, with couples holding hands and doing an energetic *zapateo* ('show-tapping') between each *copla* (a traditional poetic form of four eight-syllable lines).

In fact, *kaluyo* is a variation of the *huayño,* the most important of all Andean dances to this day. Noted folklorist M. Rigoberto Paredes wrote at the beginning of the twentieth century: 'The KHALUYU as a dance is different from the HUAYÑO despite the similarity of their music' (Paredes [1919] 1970, 139; emphasis in the original). According to Paredes, the *kaluyo* is a dance of mixed indigenous and Spanish origin:

> Indigenous influence on peninsular dances translated into new forms and figures of increased movement and more upbeat changes, such as the Spanish fandango, from which derived the KHALUYU and the popular MECAPAQUEÑA that entertained our ancestors during their family celebrations. (ibid.) (Emphasis in the original)

Nonetheless, other authors believe *kaluyo* is exclusively of indigenous origin. Paredes Candia published a chronicle from 1919 by Uruguayan diplomat Vicente M. Carrió in which he identifies the following Bolivian dances: 'the YARAVÍ is melancholic; the BAILECITO, in 6/8, is alive and is danced as a *cuadrilla* (i.e., in two pairs); and the CALUYO is entirely indigenous, in duple meter and with energetic movements' (Carrió in Paredes Candia 1991, 31; emphasis in the original). M. Rigoberto Paredes's assertion that *kaluyo* is derived from Spanish *fandango* is nevertheless inaccurate. In Latin America, the word 'fandango' was used to designate all types of celebrations and popular dances, which were considered suspicious due to the 'dishonest excesses' normally attributed to them (Guerrero Gutiérrez 1999, 926). In any case, within the Andean world there was a form of indigenous *fandango*, 'a musical genre that bears no relation to the Spanish fandango' (ibid., 927) Thus, the relationship between the *kaluyo* and fandango has more to do with the idea of a mestizo or indigenous dance of lower social classes than with its direct ancestry from Spanish music.

By the mid-twentieth century *kaluyo* was, in practice, a type of work by nationalist composers that expressed an idealized vision of pre-Hispanic cultures, as in H. Iporre Salinas's 'Chirihuayrita,' a *kaluyo* performed by Leandro López and his '*charango autóctono*' ('autochtonous charango') in Paris in 1951. A journalist present during this performance reported:

> It is unnecessary to add anything else with regard to the musical content of this 'kaluyo' that we just heard. Its notes resemble the greenish moss that emerges from the cracks of old walls, tired of eternally remaining on the edge of our dusty roads. … Like this, the sounds of indigenous music filter through the edges of our blissful hills, through the green scars of our theogonic mountains leaving behind a feeling of coldness that blows like something sharp, something that emerges with a shiver from the entrails of our snowdrifts. (*El Diario*, 9 November 1951, La Paz)

The romantic spirit of the *kaluyo autóctono* was embraced not only by Bolivian composers and performers, but by foreigners as well. In 1957 Argentine singer Atahualpa Yupanqui recorded the guitar work 'Kaluyo de Huáscar' ('Huáscar's *Kaluyo*') in which he uses a pentatonic melody to recreate an imaginary Inca world. In Argentina, the idealization of the *kaluyo* continues in the twenty-first century in songs such as 'Caluyo del desierto' ('Desert Caluyo') by Sandra Amaya (2000), where a telluric environment is reimagined through the use of contemporary musical resources.

A close relationship exists between *kaluyos* and *pasacalles*, although the latter emphasizes the musical function of *serenatas de pandillas* (group serenades), which are young street ensembles that perform songs with romantic themes similar to those of *kaluyos*.

In the Bolivian Southeast, the *kaluyo* survives in twenty-first-century popular culture. Indeed, the town of Vallegrande in the Andean department of Santa Cruz has built its identity around the *kaluyo*. Localities such as Villa Serrano and Redención Pampa, in Sucre, and the small town of Aiquile in the south of Cochabamba are characterized by the practice of *kaluyos*.

Instrumentation for the *kaluyo* varies: instruments such as the *charango vallegrandino* (Nina and Holtet 2001), accordion, guitar and *guitarrón vallegrandino* are common. The use of a saxophone or a muted trumpet to emphasize the vibrant sound of *kaluyos* is also frequent. Another common practice is the use of two *charangos* with metallic strings (one is strummed and the other is picked), as is the case with the ensemble Los Mojeños from Redención Pampa. Among the most outstanding exponents of *kaluyo* are Los 4 del Valle, Los Hermanos Burgos, Los Vallegrandinos, Conjunto 26 de Enero, Pukara de Vallegrande, Los Mojeños, El Charasqueado y Los Tunantes de Vallegrande, Félix Palenque y los Pescadeños, Los Esposos Castellón, Los Hermanos Arteaga, Trío Aiquile, Hilda Vargas (known as 'The Queen of Kaluyo'), Doly Príncipe, Nicomedes Flores, Dulia Panozo and Orlando Pozo. Of special mention is guitarist, singer and composer Hugo Barrancos, whose delicate arrangements for guitar have made *kaluyos* from Vallegrande known across the entire country. Similarly, artists such as Los Kjarkas, Dúo Tupay and Zulma Yugar have recorded traditional *kaluyos*. Well into the twenty-first century traditional *kaluyos* such as 'Saucecito palo verde' ('Green Branch Willow') and 'Las piedras de tu calle' ('The Cobblestones of Your Street') (all recorded by Los Mojeños), 'Al partir una granada' ('When Opening a Pomegranate') (Los 4 del Valle), 'Gato negro'

('Black Cat') (Nicomedes Flores), 'La carta' ('The Letter') (by Flores, recorded by Los Esposos Castellon), 'Cuatro estamos en tu puerta' ('We Are Four at Your Door') (Los Vallegrandinos) and 'A las orillas del río' ('By the River Bank') (Los Kjarkas) remain in the Bolivian collective memory.

MAURICIO SÁNCHEZ PATZY (TRANSLATED BY PAMELA NARBONA JEREZ)

Kaseko

Kaseko is one of the most well-known popular musical genres from Suriname. This dance music was created by the Creoles, descendants of former slaves living primarily along the Surinamese coast. In the early twenty-first century, however, it is performed and enjoyed by a much wider audience. *Kaseko* grew out of the combination of a wide variety of sources, ranging from local genres *bigi poku* ('bigi pokoe' in Dutch) and *kawina* to jazz and rock 'n' roll. The name *kaseko* probably comes from *casse-co*, an abbreviation of the French term *casser le corps* ('break the body'), which corresponded to an older style of dance from neighboring French Guyana. *Casse-co,* which was sometimes referred to as 'the devil's dance,' was known for its fast tempo and vigorous character.

One *kaseko* band may sound quite different from another, depending on which of the many musical influences they choose to foreground and on the instrumentation of the group. Nonetheless, there are several broadly shared characteristics by which the genre can be identified. Most songs feature call-and-response between a lead singer and a chorus of supporting vocalists (*koor*) singing in close harmony. Many bands have multiple lead singers who alternate taking the principal part. Lyrics are generally sung in either Sranan (Suriname's lingua franca) or a regional dialect. Songs in Dutch or English are less common. Singers and instrumentalists are almost exclusively male. Performance contexts and venues vary from large concerts in sports halls to funerals or ceremonies in villages deep in the rainforest, but *kaseko* music is most often performed on a stage. Although bands may perform as part of a larger event that may have a spiritual component, the genre itself is considered secular.

There are several subgenres of *kaseko*, and bands may customize their performances to suit both the context and the audience's demographic. Two of the most popular styles are *kamalama,* which is a relatively slow style, and the slightly faster *kabula,* which is influenced by ragga music from Jamaica. *Bigi sama kaseko* is played for older crowds, while younger audiences tend to prefer a more energetic subgenre called *kick poku*.

When *kaseko* bands first began to appear in the early- to mid-twentieth century, they had substantial wind sections consisting of trumpets, saxophones, trombones and occasionally a tuba. The twenty-first-century band may have a small wind section, a single wind instrumentalist or no winds at all. These timbres are often simulated on an electronic keyboard. In contemporary ensembles, an electric guitar and live winds act primarily as soloists, providing melodic material. In addition to enforcing a song's harmonic framework, the guitar often features lyrical, descending melodic lines, while the wind players are more likely to mimic the contours of the vocal lines. The bass guitar provides harmonic grounding as had the tuba in earlier bands. The keyboard has more of a rhythmic and harmonic function than a melodic one, emphasizing offbeats and occasionally providing a vamp.

Together with the keyboard, the percussion provides a multitextured and highly syncopated rhythmic feel. The percussion section can vary greatly from one group to the next; however, it is consistently dense, with a variety of different timbres. One of the most distinctive instruments in a *kaseko* group is the *skratjie* (also called *skrantjie*), a low-pitched drum with a hand cymbal attached to the top. The drum is held vertically by a stand and is played with a soft mallet in one hand, while the other hand holds the cymbal. The rhythmic interplay between the *skratjie* and the drum set or shaker provides a characteristic texture. Bands frequently utilize a succession of rhythmic feels or grooves, connected by drum breaks. Another popular compositional device is to begin a piece with a slow introduction in which the lead singer will introduce the topic of a song, for instance a scenario between the singer and his lover, over a series of suspended chords in the supporting vocals and keyboard, out of which the lead singer will give a few pickup beats before launching into a faster tempo in the body of the song.

Because *kaseko* is dance music, most songs have a lively tempo. Audiences tend to dance to the music either in couples or in informal same-sex clusters. The dance style features rotating the hips in movements that can be fluid or abrupt, so as to highlight or add to the syncopated texture of a song. Rhythmic breaks in the music provide dancers with an opportunity to showcase their rhythmic sensibilities.

Scholars have varying opinions about when *kaseko* emerged as a distinct form. Some indicate that it began around the turn of the twentieth century, an outgrowth of the musical climate of Suriname following the abolition of slavery in 1873, while others insist it emerged in the 1930s, the result of local styles merging with jazz and brass band music. Regardless of the exact date of origin, it is clear that the term and genre emerged as a distinct entity before World War II.

From its earliest appearance, *kaseko* has been influenced by a number of different musical genres. In its first form, *kaseko* music was played by small groups of street musicians. Its early years were characterized by a brassy sound that drew upon local Surinamese genres such as *bigi poku* and *kawina* and, starting in the 1920s, New Orleans-style jazz and brass band music. Starting around the 1950s and partially in reaction to the growing popularity of American rock 'n' roll, the instrumentation of *kaseko* bands gradually changed from one with a predominantly brassy texture to one relying more heavily on the guitar, bass guitar and keyboards. Several Caribbean and Latin American styles also contributed to the *kaseko* sound, including calypso and Afro-Cuban styles.

It was not until the 1970s, however, that *kaseko* began to acquire its modern style. At roughly the same time that Suriname gained its independence from the Dutch (1975), musicians began paying more attention to the musical innovations that could be found within their own country. In particular, they incorporated rhythms from Creole *winti* (spiritual) music and several Maroon musical styles, including *aleke*, *mato* and *seketi*. (*Mato* is a storytelling genre from the Ndyuka Maroons; *seketi* is a secular drum and dance tradition of the Saramaka Maroons.) Starting in the 1960–1970s Maroons – the descendants of escaped slaves – became increasingly involved with *kaseko*, both as performers and audience members. During this period, many Maroons left their ancestral settlements in the jungle for the more populous urban coast in search of work, increasing their exposure to *kaseko* and other Creole forms. From this point to the early 2000s there have been many popular and influential Maroon *kaseko* groups. Many of these groups sing in Okanisi or Saramakaans, two Maroon dialects.

The Creole singer Julius Theodore Uiterloo Hugo ('Lieve Hugo') was one of the first renowned *kaseko* performers. Hugo, who is often called the King of Kaseko, came to prominence with the group Orchestra Washboard in the 1960s–1970s. Calypso and Afro-Cuban influences are audible in many of his hits, including 'Blaka Rosoe' and 'Mi Sa Memre Na Dee.' During the 1980s the singer Iwan Esseboom achieved similar star status. Esseboom is especially known for his use of Maroon elements (Bilby 1999).

Beyond Suriname, there is a lively *kaseko* scene in the Netherlands, with several popular *kaseko* bands based there, including Ghabiang Boys, Live Mo Bradi Banti and Avion Boys. Neighboring French Guyana is home to a number of kaseko bands and artists, including the group Viety Guys and *kaseko* singer Prince Koloni, both from Saint Laurent du Maroni.

Contemporary *kaseko* bands continue to incorporate other musical genres. International styles, including reggae, *kadans* and *soukous*, have been especially influential, while more regional styles, including *aleke* and *kawina*, continue to provide additional creative inspiration. The long-standing mutual influence between *kawina* and *kaseko* has given rise to a successful fusion style called *kaskawi*.

CORINNA CAMPBELL

Kawina

Kawina is a percussion-based style of recreational music associated with the Creoles of Suriname. Creoles are one of two Afro-Surinamese populations, distinguished from the Maroons, or 'Bosnegers,' in that the former are descended from slaves that stayed on the colonial plantations, while the latter are descendants of escaped slaves.

Kawina emerged around the end of the nineteenth century during a period of close contact with the Arawak Amerindians, Maroons and foreign gold prospectors. Slavery had been abolished in Suriname only shortly before, in 1863. The style is believed to have originated along the Commewijne River in northeast Suriname. This area, in one of the country's most populous districts, was the site of a rail construction project and a great deal of mining for gold and other natural resources. Workers would come together in the evenings for recreation, and this meeting of cultures proved fertile ground for the development of new musical ideas.

Kawina shares many musical characteristics with other Afro-Surinamese genres, and indeed, several of these have been directly influenced by *kawina*. As in *kaseko* and Maroon *aleke* music, many *kawina* songs provide commentary on current events and social relationships. In all three styles, performers are almost exclusively male. Songs are performed in Sranan, Suriname's lingua franca, and they feature call and response between a lead singer and chorus. The vocal parts are largely diatonic, and the chorus often responds in close harmony. The distinguishing component of a *kawina* ensemble is its percussion section, which often exceeds five players.

A typical *kawina* band will include the *kwakwabangi, timbal*, handheld percussion instruments including bells and metal shakers, and the *hari kawina* and *koti kawina* drums. The *kwakwabangi* is a wooden bench played with two sticks. Its primary role in the ensemble is to keep a steady tempo. Another supporting rhythm is provided by the *timbal*, a standing drum related to the *conga*. The *hari* and *koti kawina* drums have two heads and are played on a musician's lap, typically with one hand and one stick. The *hari* drum is lower in pitch and fits into a relatively stable rhythmic texture, while the *koti* drum has a more interactive and improvisatorial role. Along with the smaller handheld percussion, the *kwakwabangi, timbal* and *hari* drum provide a relatively consistent rhythmic texture with a rich timbral palette, while the *koti kawina* drum adds variety and creates a more dynamic interplay with the individual supporting drum rhythms. Marcel Wetalk points out that the Arawak influence can be seen in the ways the *kawina* drums are constructed, particularly in the way the drum heads are attached to their frames.

While the above instruments comprise the core of a *kawina* ensemble, others may be added, for instance a low *skratji* drum typical of a *kaseko* ensemble, a *kwatro* (similar to a ukelele) or a side-blown flute. Early *kawina* groups occasionally included an accordion or clarinet; however, as time passed the percussion instruments were established as the most prominent instrumental roles.

Despite the fact that *kawina* originated over a century ago, bands continue to find ways of attracting contemporary audiences. In addition to composing songs that capture popular interests, musicians continually take inspiration from other musical styles. The drum parts may be consistent in terms of the ways they interrelate, but the overall musical texture allows for the incorporation of a wide range of influences, from the aforementioned national styles *kaseko* and *aleke* to international genres, including reggae, *soukous* and *zouk*. Musicians are constantly updating their style and changing the rhythmic feel.

There are two main subdivisions of the genre: *pisiri kawina* ('good time kawina') and *winti kawina* (sometimes called '*ingi kawina*'). While both styles are considered secular, the latter borrows songs, proverbs and rhythmic patterns from the Winti religion and its ceremonial music. *Pisiri kawina* is thought to be older and is generally performed at a slower tempo than is *winti kawina*. Both subdivisions are considered music for dancing. Although the dance styles that accompany *kawina* have broadened somewhat, the initial format of a circular group dance moving in a counterclockwise direction is still common.

During the 1980s and 1990s *kawina* enjoyed a surge in popularity. Young Creoles who could not afford expensive instruments and amplifiers found that they could make their own instruments and launch their own *kawina* bands at comparatively little cost. The somewhat fixed supporting percussion parts provided beginners and younger players with a relatively easy point of entry. These two factors made *kawina* particularly accessible. Its rising popularity extended beyond Creole communities as well. In particular, the style found many fans and performers among Suriname's Maroon population, many of which have incorporated elements from their own traditions into the music. *Kawina* has expanded geographically as well. As larger numbers of Surinamese began moving to the Netherlands in the 1970s and 1980s, *kawina* groups began to appear in Creole and Maroon communities abroad.

Popular *kawina* bands include the Spoity Boys and Ai Sa Si. A successful hybrid genre called *kaskawi* has emerged through the fusion of the rhythms and instruments characteristic of each style.

CORINNA CAMPBELL

Konpa

Konpa (in Haitian Creole, *compas*; in French, literally, 'beat') has been the predominant form of popular music in Haiti since 1955, when bandleader Nemours Jean-Baptiste coined the term *konpa-dirèk* to describe his novel style. A competing bandleader, Wébert Sicot, coined the term *kadans rampa* to describe his version of Nemours's innovation in 1957 in spite of the fact that Sicot's style was essentially the same as that of Nemours. Several groups in the 1960s developed a form of *konpa* played by smaller ensembles called *mini-djaz*. This article treats all three subgenres, *konpa-dirèk*, *kadans rampa* and *mini-djaz*, because of their shared stylistic qualities and social history.

Konpa-Dirèk and *Kadans Rampa*

While it was also influenced by Haitian popular music called *mereng (méringue* in French), *konpa* emerged from the direct influence of *merengue*, the national music of the Dominican Republic, a land that neighbors Haiti on the island of Hispaniola (a potentially controversial provenience due to the fact that many Haitians consider Dominican *merengue* to be an offshoot of Haitian *mereng*). Embraced by the Dominican dictator Rafael Trujillo from the 1930s to 1950s, *merengue* enjoyed considerable support from the Dominican state. In Haiti, radio broadcasts and tours of Dominican bands generated a taste for *merengue*; the Dominican dictator's personal dance band, Orquesta Presidente Trujillo, even performed in Haiti in 1955 (Averill 1997, 77). Trujillo held an iron grip on the Dominican economy, including the music industry, which stressed live radio performances rather than recording. The paucity of recording opportunities for musicians in the Dominican Republic in the 1950s limited their international exposure. This, however, was not a problem for *merenguero* Angel Viloria and his band Conjunto Típico Cibaeño, which was situated in New York City. Disseminated internationally, Viloria's recordings became the best-known manifestation of *merengue* outside of the Dominican Republic. It was, therefore, Angel Viloria who ensconced *merengue* in Haiti, as a local recording engineer recalled.

> In 1954, the Dominican group Típico Cibaeño led by Angel Viloria had a hit record in Haiti. That thing hit like a bomb. The Haitians loved the merengue because it had a lively beat for dancing. They were doing it in every nightclub, especially down by Carrefour. The Dominican girls [prostitutes] were there and would teach the Haitian guys how to dance. (Quoted in Averill 1989, 104.)

This music became so popular in Haiti that in 1955 it inspired saxophonist Nemours Jean-Baptiste to start a band specializing in a Haitianized version of *merengue* dubbed *konpa-dirèk* or 'direct beat' (Averill 1997, 77–9). Nemours's *konpa* was performed at a relatively slow tempo, adapting the signature rhythm played on the *tambora* drum in Dominican *merengue* to the *conga*, which was complemented by a pulse provided by drum set. *Konpa* utilized saxophone and accordion riffs similar to those of Dominican *merengue* augmented with trumpet accents, smooth vocals and improvised saxophone solos. While earlier forms of Haitian music such as *mereng* usually employed I-IV-V7 progressions, *konpa* favored V7-I progressions in imitation of Dominican *merengue* (Averill 1989, 222).

It is likely that much of *konpa*'s appeal issued from its sensuous dance style, which, especially compared to dancing to the complex *Vodou-jazz* rhythms of bands such as Jazz des Jeunes that preceded Nemours on the local dance scene, was easy to execute. Like its Dominican counterpart, *konpa* is danced in the ballroom dance embrace with a sensuous sway of the hips, and while it is easy to master the basic step, its execution by skilled dancers is nuanced and seductive. The step can be performed in various ways depending on the degree of sensuality desired and appropriate to the context: at bourgeois affairs, it can be executed in a stately manner, but it is often performed with dancers pressing their bodies together, *kole-kole* ('pasted') or *kole-mayouba* ('pasted with the hips swaying'), or even, in dimly lit venues, *ploge* ('plugged') (Averill 1989, 223).

The new music's flashy modernity lent itself to polemics, astutely chronicled by Gage Averill (1997). Openly competing with Nemours, the previously reigning dance band, Jazz des Jeunes performed songs such as 'Anciens Jeunes,' deriding *konpa* for its rhythmic simplicity in comparison with Jazz des Jeunes' Vodou rhythms, as well as for its origin in the Dominican Republic: 'You have only a single rhythm, / What a shame, neighbor beat' [Vous n'avez qu'un seul rhythm/ Quelle honte, compas voisin] (quoted and translated in Averill 1997, 82). Virtuosic saxophonist and showman Wébert Sicot played in Nemours's band in 1955 but left within a year, and in 1957 he started his own group. During the following decade, the two bandleaders engaged in a rivalry that took a central place in Haitian public discourse. Although he played the same style as Nemours, Sicot called his music *kadans ranpa*, a moniker that seemingly alludes to his spirit of musical competition: *kadans* means 'rhythm,' while *ranpa* means 'ramparts.' Sicot's song entitled 'Deux guidons,' for example, denigrates Nemours's style as containing only 'a single saxophone honk' (quoted in Averill 1997, 85).

For his part, Nemours pointed out that Sicot's challenges only proved that Nemours's innovations had been fruitful, alluding to a Haitian proverb stating that 'one only throws rocks at mango trees that are full' (Averill 1997, 84–5). In his song 'Rhythm commercial' he described himself as 'a mango tree / defying time, always yielding fruit'[yon pye mango / kontre tan donnen tout bon] (Averill 1997, 85).

Of course, the competition was beneficial for both groups, a fact that was not lost on either bandleader. *Konpa* and *kadans* were the first forms of Haitian popular music disassociated with the elites, actively promoted as 'show business' in the marketplace and recorded commercially, facts that both musicians exploited, as illustrated by the title of Nemours's song, 'Rhythme commercial,' quoted above. For their part, cultural nationalists criticized both bandleaders for promoting a crass new music of foreign provenience that threatened Haitian traditions. The eminent historian Jean Fouchard, for example, wrote that Jean-Baptiste and Sicot had denatured *méringue* by utilizing Dominican influences: 'Is this evolution? This is arguable when … the very structure of our méringue is gravely shaken, and its languorous grace … is replaced by jerky rhythms in a style foreign to our tradition' (Fouchard 1988, 120, quoted and translated in Averill 1997, 79).

Rising to the Haitian presidency in 1957, François 'Papa Doc' Duvalier was a country doctor and folklorist who had played a significant role in the rise of a Haitian brand of nationalistic pride called *noirisme* that celebrated rural, African-based traditions and black power. Challenging the Eurocentric orientation of the mixed-race elites, musicians active in *noirisme* composed *Vodou-jazz* songs in his honor. Duvalier soon consolidated power to create a brutal totalitarian regime. Likely influenced by Dominican dictator Rafael Trujillo, who astutely utilized *merengue* as a national symbol and means of propaganda for his own repressive government, Duvalier patronized *konpa* and *kadans* rather than *noiriste Vodou-jazz*. His embrace of a music clearly associated with the middle class was consistent with his support for the black bourgeoisie over the mulatto elites, but the escapist conformity of *konpa* arguably moved away from the tenets of *noirisme*; support for the arts eroded and music became more commercial and less politically progressive. Duvalier's support of *konpa* paralleled his focus on consolidation of power as he was declared 'President for Life' (Averill 1989, 221; 1997, 71–7).

Duvalier often hosted *koudyays*, festive street parties that doubled as political demonstrations offering free food, drink, music and transportation in order to promote the impression of political support for his regime. These events were often associated with Carnival. Members of Duvalier's feared *tonton makoutes*, his personal paramilitary corps, led both Nemours's and Sicot's bands on motorcycles at the 1959 Carnival. Both bands regularly played at private affairs for Duvalier and performed songs supporting the dictator. For example, during the 1964 carnival, whose theme was 'Papa Doc for life,' Nemours played a song that blended implicit support for Duvalier with his rivalry with Sicot, proclaiming 'konpa-dirèk for life!' For his part, Sicot's 1965 carnival song 'Men jet-la' ('Here Comes the Jet') alluded to Duvalier's construction of an international airport, while Nemours's Carnival song that year was 'Tout limen' (All Lit Up), in praise of Duvalier's electricity program (Averill 1997, 92). Gage Averill has shown that Duvalier 'co-opted the exuberance … of carnavalesque celebration' and popular music to support his regime against the mulatto elite (Averill 1997, 107).

Mini-djaz

During the early 1960s bourgeois Haitian youth were alive to North American styles such as jazz, rock 'n' roll, rhythm and blues, and Latin music. Emerging bands playing rock, which they called *yeye* after the Beatles' 'yeah, yeah' refrain, were dubbed *mini-djaz* due to the fact that they were smaller than the reigning big bands of Nemours and Sicot. The moniker was also likely influenced by the rising miniskirt fad. Despite the popularity of the cosmopolitan styles, Haitian partygoers still loved the *konpa* beat for dancing, and *mini-djaz* bands responded by infusing more and more *konpa* into their sounds; the emerging music came to be called *mini-djaz konpa*.

Founded in 1963 as the house band of the Ibo Lele Hotel, Ibo Combo made a mark as a leading *mini-djaz* band, with Shleu-Shleu, a teenage group that often performed at events geared toward school children, joining the scene in 1965. In fact, much *mini-djaz* was often associated with teens and their home neighborhoods in Petionville, the middle-class suburb of Port-au-Prince (Averill 1989, 225–8; 1997, 97–100).

While incorporating new elements, *mini-djaz* was stylistically very similar to *konpa*. *Mini-djaz* saxophonist Georges Loubert Chancy began performing with Shleu-Shleu and continued with Skah-Shah #1 in 1974. Carrying on the tradition of Nemours and Sicot, whose smooth saxophone riffs gave *konpa* and *kadans* a sensuous sound, he cultivated a style based on sigh-inducing velvet sax riffs and improvised solos, taking the veritable Haitian saxophone tradition initiated by his predecessors to new heights.

The escapism of *mini-djaz* was, of course, influenced by Duvalier's reign of terror, which made political commentary impossible. François 'Papa Doc' Duvalier died in 1971, only to be succeeded by his son, Jean-Claude 'Baby Doc' Duvalier. Baby Doc was a 'playboy dictator' who loved *mini-djaz konpa* and hosted parties featuring live music; the *mini-djaz* group Bossa Combo became a fixture at the presidential palace. The repressive political climate, combined with rampant poverty, motivated massive outmigration mainly to the United States and

Canada. By the end of the twentieth century almost a million Haitians were living abroad. The *mini-djaz* group Skah-Shah expressed the sentiments of those living away from their homeland in a song astutely alluding, in both text and music, to a classic *mereng*, 'Ayti cheri' (Dear Haiti): 'I miss my country, Dear Haiti … my heart is breaking in New York' (quoted in Averill 1997, 108).

The 1970s saw growing rivalry between *mini-djaz* groups, especially during the Carnival season, and in 1978 Bossa Combo launched an effort to encourage Haitian bands to work together. Significantly, the term *konpa* returned as a moniker encompassing the styles of Nemours, Sicot and *mini-djaz*. Bossa Combo's LP *Accolade* was dedicated to competing bands, and in 1980 another major group, Tabou Combo, released 'Hommage à Nemours Jean-Baptiste.' Such an expression of unity among Haitian bands was something new, and it clearly consolidated *konpa*, *kadans* and *mini-djaz* under a single banner. Contemporary *konpa* bands began experimenting stylistically, as Tabou Combo and other groups began incorporating larger horn sections influenced by French Antillean *zouk* as well as North American funk. A band called Zèklè went farther, incorporating elements of jazz-fusion.

During the period of political instability following the fall of Jean-Claude Duvalier in 1986, *konpa* briefly shed its traditional distance from social commentary when D.P. Express collaborated with the politically *angaje* ('engaged') singer Ti-Manno, recording songs calling for social justice. Also in the early 1980s several New York-based *konpa* bands experimented by incorporating elements of the traditional *Rara* music, thereby dovetailing with the burgeoning Haitian *racin* ('roots') music scene (Averill 1997, 118–29). Most bands, however, continued with time-tested musical formulas, stressing smooth and danceable riffs. Synthesizers came to dominate the music to the extent that by the twenty-first century *konpa* groups usually consisted of synthesizers, guitars, bass, drums and percussion.

Konpa demonstrated extraordinary staying power, retaining its position as the most popular form of Haitian music into the twenty-first century. A former konpa star, Michel 'Sweet Micky' Martelly – who, like most *konpa* musicians, was associated with Duvalierism – was elected president in 2011 (Sprague 2011). As Averill shows, 'it is one of the small ironies of Haitian music history that the coming to power of [Duvalier's] revolutionary *noiriste* regime helped eclipse. … *Vodou-jazz* in favor of apolitical *konpa*' (1997, 107). Perhaps the smooth, exuberant sensuality of *konpa*, ubiquitous in the urban soundscape as it blasts from the brightly painted public transportation vehicles called *taptaps,* provides respite from the economic and political problems that Haitians continually face.

Kullawada

Kullawada (also *cullahuada*, *cullawada*, *cullaguada*, *kullawa*, *cullahua*) is a Bolivian musical form and street dance evoking the wool spinners of the Andes, especially those of communities situated in the Lake Titicaca region, where it originated, and an urban musical genre of the city of La Paz. The dance is performed by both sexes as part of the *entradas folklóricas* (folkloric processions) in La Paz and Oruro in which large groups of dancers, paired up and arranged in rows, dance to music performed by brass bands (Gutiérrez 1999, 305). Traditional *kullawada* is a genre of music and dance performed in Aymara communities in commemoration of Andean textile culture. In those communities, *kullawada* was primarily performed by Andean wind ensembles. In the mid-1960s, with the movement of the Aymara population to the cities, it was taken up first by brass bands, and then, at the end of the decade, by the *conjuntos folklóricos*, small ensembles of young musicians playing guitar, *charango* (small Andean lute), *quena* (notched vertical flutes), *zampoña* (panpipes) and *bombo* (double-headed bass drum). In this respect, *kullawada* can be considered one of the characteristic subgenres of Bolivian neofolklore, as its popularity is associated with the preferences of young mestizo and urban Bolivians. In its original setting, *kullawada* is performed to accompany dancers during religious and auspicious festivals, but in the cities it lost this function and became an urban genre favored by youth.

Kullawada has a strongly rhythmic base tailored to the dance. The basic rhythmic pattern is in 2/4 (see Example 1), with four semiquavers on the first beat and, on the second, one quaver followed by two semiquavers. This seemingly simple structure is nuanced by an important characteristic: the brass band musicians do not execute the rhythm straight, but rather, in a show of musical expressiveness, they apply a rubato which creates a slowing effect and is responsible for the music's characteristic ritardando feel. As they accompany the dancers, the musicians (as is typical of such groups) alternate an A theme performed on the trumpets with a B theme performed on the bass instruments (tubas, trombones and helicons). Typically the latter slow down the tempo when they perform the B theme, with the tempo coming back up to its original level when the trumpets return with the A theme; at which point the dancers perform with renewed vigor and enthusiasm, infecting the audience in the bleachers with their energy as they pass by. Another characteristic feature of this genre is that drum rolls are used to reinforce the strong beats.

Example 1: The basic rhythmic cell of the *kullawada*

Kullawada dancers move from side to side, lifting the arms and using the hands to simulate the spinning of wool onto small distaffs that they carry and moving the waist, shoulders and head to the beat of the music. Members of *kullawada* troupes all wear the same brightly colored outfits. The signature piece of a *kullawada* costume is a heavily embroidered hat with a round brim with a fringe of small colored tubes hung all around its perimeter. In the early twentieth century there were also square-brimmed hats, but even then the characteristic fringe was present, obscuring the faces of the dancers and swaying with the movement of the head. The men also wear a brightly colored shirt, tie, jacket and trousers, lavishly decorated and covered in intricate designs; the trousers are bell-bottomed, often fitted with eye-catching triangular panels at the cuff. They usually also wear short, embroidered ponchos. The women wear white blouses, layered soft skirts and high-heeled shoes. They cover themselves with elegant short mantles cascading over the back and shoulders, held in place with silver brooches known as *topos*. The dance leader appears as the Walfuri, Waphuri or Waphur, a stock character wearing a plaster mask and carrying a very large, highly ornamented distaff. The mask features a long, aquiline nose, rosy cheeks and large eyes. The Walfuri's outfit is particularly showy, with exaggerated epaulettes and, often, special high-heeled shoes. These outfits are as much-exaggerated stylizations of youth fashion of the 1970s as they are about embroidery and Andean colors.

'Carding, spinning, plying and dyeing the wool'

Some folklorists trace the origins of the dance to pre-Inca times, associating it with the legend of

Cullahua, the wife of the deity Wiracocha, created to provide him with company. Cullahua was the goddess of spinners and medicine and the dance was performed in her honor. There is also mention in the literature of the dance having been performed by the Collana people, who were highly skilled spinners. Weaving is a fundamental part of Andean life, so it is not surprising that rituals should exist to honor it. The *kullawada* is closely related to the *llamerada* or *llamaya*, an Inca shepherd's dance mentioned by Espinoza Soriano (1997, 401, 402). To this day, the *llamerada* and the *kullawada* are very similar dances and are often confused. According to Lanza Ordóñez, the *llamerada* 'was performed … at the start of the *chacu* – the great Aymara roundup [of vicuñas] – and the kullawada at its conclusion, after the shearing, at the point where the wool is divided up for spinning and weaving into clothing' (1993, 44). Bolivian folklorist Antonio Paredes Candia notes that chronicler Fray Martín de Murúa had witnessed two Inca dances: the *llama-llama* and the *guacones* (1991, 18). According to Espinoza Soriano, the *huacones* dance was staged 'with special costumes and masks with long noses; it was performed as a means of social control' (1997, 402). The exaggerated noses can be linked with those of today's Walfuris. As Martínez Miura notes, 'In Andean cultures symbolism around the seed was crucial, expressed as a crude phallic icon' (2004, 199). In any case, the dance was practiced in the nineteenth century among Aymara communities in Bolivia.

After the War of the Pacific (1879–83), *kullawada* was recorded as part of the religious festival of La Tirana in Tarapacá, northern Chile, as one of the dances performed by Bolivian peasants working in the saltpeter mines there. In 1917 the following indigenous fraternities were listed, all bearing the title 'Cullave': 'Cullaves (de la Aguada) del señor de Sipiza' (González Miranda 2006), 'Cullaves (de Buen Retiro) de San Isidro' and 'Cullaves (de Galicia) de La Candelaria' (García Vásquez 2007, 4, 5). The dance re-emerged in Chile in 1993, starting with the founding of the Conjunto de Baile Cullaguas de San Lorenzo (Cullaguas Dance Group of San Lorenzo]) in Iquique. In the twenty-first century, however, these Chilean groups, along with groups participating in the Candelaria religious festival in Puno, southeast Peru, perform renditions of the modern *kullawada*, which was invented in La Paz at the end of the 1960s.

Modern *Kullawada*

Around 1970 the first modern *kullawada* dance groups were formed in working-class Aymara areas of La Paz. These groups participated in the major local religious festivals. They were made up of young people of Aymara origin who held the *kullawada* up as a symbol of their modernity, at a time when middle- and high-class youth were participating in the international culture of youth represented by the Beatles, psychedelia and hippies. In this way, in 1970 a *kullawada* group was formed in the nearby community of Viacha called 'Verdaderos Rebeldes Extraños de Pelo Largo' [The True Blue Strange, Long-Haired Rebels]. Over the Christmas season in 1971 *cullagua* or *kullawada* youth groups battled it out in dance festivals, giving themselves expressive appellations such as 'Los Lirios Chicos Malos de Sopocachi' (The Bad Boy Lillies from Sopocachi), 'Dramáticos Andinos de Pucarani' (Dramatic Andeans from Pucarani) and the unforgettable 'Los Satánicos de Sopocachi Sicodélicos Existencialistas' (The Psychedelic Existentialist Satanists from Sopocachi). All these dance groups were made up of Aymara members, young *cholitos* (people of indigenous and European blood) in competition for the best rendition of the 'modern' *kullawada* (Sánchez Patzy 2006, 255).

Costuming, choreography and attitudes of the dancers were also being refreshed at that time, thanks to numerous aesthetic innovations introduced by young dancers such as the Estrada brothers, founders of the Asociación de Baile Urus del Gran Poder. Thus, the ways in which Bolivian Aymara youth are able to reconcile the expression of community traditions with participation in trends in youth fashion are paradigmatically represented in modern *kullawada*. The *kullawadas* preferred by these young people are romantic songs that retain some of the rhythmic and melodic characteristics employed by the brass bands in folkloric processions.

With the rise of the new dance trend, many popular musicians began to compose songs in the rhythm of the *kullawada*, resulting in best-selling records and radio hits in the mid-1970s. As these modern *kullawadas* were in a style that was associated with the tastes of 'cholos' (a derogatory term for people of indigenous origin) and the lower classes, they did not find favor with young middle-class Bolivians. The lyrics found in these *kullawadas* are concerned with themes of love and bitterness following failed romance, painting into an urban social setting the love pursuits of young Aymaras and the unavoidable disappointments associated with these, as, for example, in 'Falsas Promesas' (False Promises) by Luis Carrión known as 'El Rey de las Kullawadas' (the king of the *kullawadas*). Notable songs include Carlos Palenque's 'Lágrimas' (Tears) and 'Ojitos negros' (Little Black Eyes); Octavio Cordero's 'Mascarita' (Little Mask); Ramiro Alcócer's

'Paceñita' (Woman of La Paz); 'Elizabeth,' 'Quién dime quién' (Who, Tell Me Who) and 'Te puedes ir' (You Can Go) by Luis Carrión; 'Jichapi,' recorded by Los Payas and combining a brass brand with 'folkloric' Bolivian instruments; and José Zapata's 'Acaso porque soy pobre' (Maybe It's Because I'm Poor]).

The impact of the successful exposure of *kullawada* on the radio in the 1970s was eventually felt in the adjacent northeast Argentine province of Jujuy due to a large influx of immigrants from Bolivia whose musical tastes remained anchored in this style. A good example of the impact of Bolivian *kullawadas* on popular taste in neighboring countries is 'Acaso porque soy pobre.' In the late 1990s it was covered by Argentine groups and singers such as Los Tekis, Los Diamantes Jujeños, Coroico and Fortunato Ríos. Perhaps out of ignorance, perhaps as a commercial ploy, these artists changed the rhythm to that of *carnavalito* (a genre from the Quebrada de Humahuaca), *takirari* (a genre from east Bolivia) and, in a recent release by young *cumbia* singer Sebastián Mendoza, *cumbia norteña*. In Bolivia in the 2000s, neofolkloric groups have reworked old *kullawadas* from the 1970s as catchy dance numbers, medleys recorded for primarily commercial reasons. These groups include Yara, El Grupo Femenino Bolivia and Aquí Bolivia, from Sucre. In 2006 Los Kjarkas included a *kullawada*, 'Loco por tí' [Crazy for You], on their album *35 Años*.

MAURICIO SÁNCHEZ PATZY (TRANSLATED BY MONA-LYNN COURTEAU)

Kumina

The term Kumina refers to an Afro-Jamaican ancestral-based religion, as well as the music and dance associated with it. Kumina drumming exerted a great influence on the emergence of Jamaican popular musical forms – ska, rocksteady, reggae – indirectly, through cross-fertilization with the masquerade and processional tradition of Buru, and more directly through its impact on Rastafari nyabinghi music. The much-referenced 'one drop' rhythm style, which signifies the unique characteristic of Jamaican popular music, where the snare drum stroke and bass drum emphasize the third beat rather than the expected first beat of every measure or bar in 4/4 or 4/8 time, may be readily identified in the Kumina *kbandu* drum rhythm which sustains the constant underlying rhythm of the music. It is to be found also in related traditional forms such as Buru and the masquerade dance/music/street parade tradition of Jonkonnu, which dates back to the early days of slavery. Whylie asserts that without the 'one drop' feature, the music of Africa and the African diaspora would be considered incomplete and ineffective (2011).

Kumina's adherents refer to themselves as part of a distinct African Bongo/Kongo nation or family comprising the living and the 'living dead' (the ancestors). They signify and pay homage to King Zaambi, or Zambi Mpungu, as the omnipotent creator from whom the Kumina people believe all power ultimately emanates. Kumina is derived culturally from a specific Central African Kongo antecedent, and in Jamaica is limited primarily to the east of the country, notably in the parish of St Thomas. Nevertheless, it incorporates a common Jamaican Afro-Creole religious form – Myal, which is considered to have been the central Creole manifestation of spiritual beliefs and religious practices in Jamaica, prior to the advent of a distinct Kumina form (see Ryman 1984, 87–9).

Myal, incorporating the core components of music, dance, use of herbs and spirit possession, came strongly to the fore after full emancipation in 1838 (colloquially termed 'full free') as part of the 'Great Revival Movement' of the 1860s. The '1860 order' of Revival, referred to as *Revival Zion,* was (and has continued to be) the more overtly Christian expression of the movement, while the '1861 order' or Pukkumina (little Kumina), also known as Pocomania, was (and is) more distinctly African in its orientation. The connection to Kumina is evident here, given the centrality of Myal and 'catching Myal' (spirit possession) in Kumina and Pukkumina ceremonies. As Ryman has pointed out (1984, 81), Kumina displays both Creole and specific ethnic Kongo features expressed in language, dance and music. The core Creole Afro-centric religious features are to be found under the dance-music-spirit possession and use-of-herbs umbrella of Myal.

The consensus among scholars is that Kumina and its modern-day adherents are specifically identified with Central Africans and their descendants who settled in their largest numbers between 1841 and 1869. Other exclusive Central African settlements of this period in Kongo Town in Trelawny, St Catherine (Sligoville), Portland and St Mary (Annotto Bay) all seem to have had direct and continuing infusions from St Thomas. Except for the May River group from St Mary, which exhibits significant differences from the St Thomas Kumina tradition, all groups readily acknowledge the 'headship' of the St Thomas Kumina groups.

Importantly, there is a close relationship between the two primary African 'nations' in Jamaica – the Akan Maroons and the Kongo Kumina people. The myth of the 'two sisters' – Grandy Nanny (Maroon) and Sekesu (Kumina) – speaks to the mutual respect and closeness of these two 'nations.' The two sisters are reputed to have founded the Maroon nation in the northeastern parish of Portland and the Bongo (Kumina) nation in the easternmost parish of St Thomas, respectively.

There are two forms of Kumina: 'bailo' and 'country.' 'Bailo' is the more recreational, secular and public form. It employs Creole songs and spirit possession is actively discouraged. Kumina practitioners have referred to the 'bailo' form of Kumina as 'Buru' (and 'Tambu') in part because of Buru's acknowledged Afro-centricity and its suggested Kongo antecedence. In addition, the 'music' aspect of Buru had become associated largely with secular and entertainment activities being played at private and public functions such as 'Coney Island' and village fairs, wakes and 'nine-nights' (a dance-music celebration for the deceased performed nine nights after the death of a person). 'Country,' the more serious or 'business' form of Kumina, is ancestral-focused and more spirit-oriented. Here, the songs and their words move markedly to the African-Bakongo extreme of the language continuum.

Kalunga, Kadunga and Kumeka are each used to describe different aspects of *Kumina*, while Kumeka also points to the possible etymology for the name. Kalunga speaks to the 'sea water' transmission and by inference to the African provenance and cosmology, of the original Kumina people. In the belief system associated with *Kumina*, highlighted by the word 'Kalunga,' water forms a natural barrier between the worlds of the living and the 'living dead' and is the home in which a deity of the same name resides. The original African antecedents of the Kumina family are therefore called 'salt water Bongo,' as distinct from the Creole descendants (i.e., those born in Jamaica of Bongo ancestry), who are termed 'creolin Bongo.' 'Kadunga' refers to the beating and the striking of the drum and signals the centrality of the drum for music and dance and its power to summon the ancestors in the Kumina ceremony. 'Kumeka,' another Kongo word glossed by Bilby (1983, 75), which translates as 'to fight, to hex someone,' is sometimes used as a synonym for the Kumina music and/or dance. Kumeka highlights the spirituality or 'science' function of the Kumina dance and music to bring about a prescribed goal – for healing, celebration or punishment. The evolution from 'Kumeka' to 'Kumina' is linguistically feasible and offers one possible origin for the 'Kumina' nomenclature. Leaders of Kumina groups who possess these 'science' attributes are known as '*Kumina* Specialists' and function as doctor-healers and dispensers of the 'Bongo Law' in judgment and justice, as well as diviners and counsellors. As such, they are accorded the greatest respect by the Kumina members whom they lead, as well as by the Kumina and non-Kumina members whom they serve. This type of leader may be male or female and potentially performs the functions of two or more functionaries in any given Kumina group – that is, spiritual leader, organizational leader, 'master of ceremonies' or ritual leader, lead drummer (if a man), lead singer (especially for women) and lead dancer. Such male leaders carry no specific designation beyond 'Leader' or 'Science Specialist,' but the equivalent female leader is referred to as a '*Kumina* Queen.' These types of leaders carry the primary 'ritual' responsibilities within the *Kumina* ceremony.

At another – lower – level of leadership, a male functionary who does not carry the 'science' prowess of the Kumina Specialist is referred to as the Captain, while his female counterpart is called a 'Mother-Queen' or 'Black and White Girl,' so designated by virtue of the black and white cord worn around the waist of the Specialist, and is distinguished by her primary role of assisting with the Specialist's ritual responsibilities. A Mother-Queen at this level is the second most important functionary next to the Kumina (Science) Specialist, based on her ability to control the proceedings by the type of songs that she raises, which usually dictates a change in the rhythm that is being played. The Playin Kyas Drummer sometimes plays the dual role of the Captain or Leader of the group or operates at the secondary level of importance in groups led by a Kumina Specialist.

In Kumina music, there is a close relationship between the drummers of the lead drum (the playin' cyas or kyas*),* the *kbandu* drum (basic rhythm) and the dancers. A 'third drum' rhythm is simulated by a 'katta stick' player who sits behind the open end of the drum and beats out a faster rhythm on the sides of the drum with two 'katta' sticks. Other accompanying instruments usually included in the Kumina music ensemble are a grater (and spoon) and shakkas. The drumming style is distinguished by the Kongolese feature of sitting on top of the drum, which is placed on the ground, and using the heel to modulate its pitch while playing the drum with the hands. Once the singer (usually the Queen/Black and White Girl) raises the appropriate song at any point in the day or days over which a Kumina ceremony may extend, the 'call and response' action of the musicians and dancers effect the desired outcome of the Kumina play (ceremony). The 'God-infused' ancestral spirits, sometimes referred to as the *nkuyu*, are invited and enticed to possess the dancer. It is through this medium of 'catching Myal' that the presence and satisfaction of the *nkuyus* may be expressed and achieved, respectively. This allows for specific requests for assistance to be made of the *nkuyus* by the living members of the Kumina family.

In the Kumina dance, the flat-footed inching and shuffling of the feet, facilitated by bent knees and either a slightly forward-bent or an upright-but-relaxed back, is accompanied by a side-to-side, forward thrusting or upward heaving of the hip. Whether the feet are placed one slightly in front of the other or side by side (the more usual stance), the weight is not evenly distributed. This facilitates the noticeable emphasis of a drop step on each strong one drop beat (i.e., the third beat of the *kbandu* drum), while the hips move continuously. Several specific stylistic variations of this basic form may be found in the Kumina dance repertoire across different groups and by different practitioners within any given group. Regardless of the variants, *Kumina* dance constitutes the thread that weaves together all the elements of the carefully manipulated sequence of events that comprise the Kumina ceremony.

Meaning is found in the symbols and 'keys' which the Kumina people refer to as *nkisi.* These keys comprise songs, rhythms, dance and sundry paraphernalia such as herbs, flowers, blood (the life force invoked through animal sacrifice), water, white rum, clear-colored and sweet drinks, fruits, breads, meat, starchy food, colors (in cloth and candles), fire and iron. The *nkisi* or keys unlock and enhance the spiritual forces that may be at man's disposal when desired, if there is knowledge about their use and how to unlock their power.

Other dances directly related to the *Kumina* dance complex include Kongo (largely secular and performed by younger participants), Tambu (a Trelawny-based version of Kumina with additional characteristics), Makumbe (an earlier variant of a

Kongo dance-music-ancestral form) and Warrick or Kittihali sometimes referred to as the 'Shakespeare' of the Kumina people – a stick-fighting dance form found among some Kumina groups in St Thomas and Trelawny.

Kumina's Influence on Modern Jamaican Popular Music

Kumina's entry into the popular music arena came primarily via Rastafari and its associated musical form nyabinghi, which evolved in the 1950s. Nyabinghi is the most recent Creole development straddling African ancestral, traditional and urban contemporary elements. Kumina's influence on Jamaican popular music was initially facilitated by its cross-fertilization with another strong Afro-centric traditional music form – Buru. By the 1930s and 1940s Buru had already occupied an important and quasi-popular space in the urban environment of West Kingston and as such, the incorporation of the Buru triple set of drums – thunder/bass, *fundeh* and repeater/*pita* – into the emerging Rastafari nyabinghi music was inevitable. In this crucible, Kumina drumming rhythms performed by the Kumina or Kumina-influenced Buru exponents flowed seamlessly into those of their Buru counterparts. Count Ossie played a pivotal role in this development.

Count Ossie hailed originally from St Thomas, the home of Kumina, and migrated to the capital city of Kingston, where he eventually embraced Rastafari. Here, he came under the mentorship of a Rastafari elder and master Buru drummer, Brother Job, and before him Watta King, who was also a Buru master drummer of Kongo descent and a drum maker. Watta King migrated from Clarendon to West Kingston and became the primary mentor of Brother Job and to a lesser extent, that of Count Ossie.

With both Buru and Kumina influences impacting on Count Ossie, he became not only a major Buru exponent but also in due course a key player in the development of Rastafari nyabinghi music. His later contribution to the evolution of Jamaican popular music in West Kingston was signaled by the groundbreaking background Rastafari drumming of the group Count Ossie and the Mystic Revelation of Rastafari for the ska recording, 'Oh Carolina' –recorded by the Folks (also spelled Folkes) Brothers in 1960 by Prince Buster and released in the United Kingdom in 1961 on the Blue Beat label. This classic not only resurfaced on Count Ossie and the Mystic Revelation of Rastafari's seminal three-record album *Grounation* in 1973 but was rearranged and re-recorded in 1993 by popular Jamaican and international DJ/Reggae recording artiste, Shaggy.

Evidence for Kumina's influence on the development of reggae dance and music is most clearly seen in the basic nyabinghi rhythm, which is attributed to the recognizable slowing down of the Kumina rhythm – that is, a 'decelerated Kumina rhythm' (Whylie 2011). The combination of the Buru set of drums and a slower basic Kumina drum rhythm has been described as being '... close to the Rastafarian fundeh ostinato, whose tempo is much slower than the former [Kumina]' (Nagashima 1984, 77). In the early twenty-first century Kumina's presence is still to be felt and heard in the 'Kumina Riddim,' which was one of the rhythms created by the outstanding producers, Sly Dunbar and Robbie Shakespeare, in 2002, and featured on recordings by nearly 20 dancehall recording artistes such as Sizzla ('Wild World'), Mr Vegas ('Wheel and Turn'), Tanya Stephens ('Champagne') and Chaka Demus & Pliers ('All Eyes On Me'). This speaks to the cross-fertilization of organic folk traditions which contributed to Jamaica's popular music forms and to the evolution of Rastafari nyabinghi music, which in turn had a major impact on the evolution of Jamaican popular music.

Lambada

Lambada is a Brazilian urban music genre which developed from a partner dance of the same name. It emerged in the Amazon region, particularly in Pará State, in the 1970s and is considered to be a hybrid combination of *carimbó*, a dance of African and indigenous origins practiced in Pará since the Brazilian colonial period, and some music and dance genres from the Caribbean (easily heard on radio transmissions in this part of Brazil), such as *salsa*, calypso, *merengue* and *zouk*.

According to Lopes (1995), the term *lambada* has two distinct etymologies, both African. One of them is the Yoruba word *lagbá*, which means a whip; and the other is the Quioco (Bantu) word *lamba*, which means a strike, a hit. In Portuguese, the dictionary definition for *lambada* is 'whipping with a flexible object' (Michaelis 2004). The term was first used in the early 1970s in Pará by radio broadcasters Paulo Ronaldo and Haroldo Caraciolo to describe an emerging 'hot' and upbeat dance style, featuring pronounced movement of the hips and frequent spins, turns and twirls. The spread of *lambada* to other northern and northeastern states enabled the incorporation of features of *forró*, primarily apparent in the *lambada* danced in Porto Seguro, a city in the south of Bahia state. The *lambada* is generally included within the *brega* category, a broad music genre that is used in Brazil to encompass all subgenres listened to by the masses.

The new music genre reached the record market in the middle of the 1970s. The first song entitled 'Lambada' is thought to have been part of the album *No embalo do carimbó e sirimbó vol. 5,* recorded in 1976 by singer/songwriter Aurino Quirino Gonçalves (also known as Pinduca). Pinduca is considered by media in Pará as one of the primary developers of the *lambada*, along with electric guitarist Mestre Joaquim Viera, who is also known for a distinctive music style called 'guitarrada.' Vieira's first album, entitled *Lambada das Quebradas*, was recorded in 1976, but only officially released two years later. The music of both Vieira and Pinduca followed urban music trends occurring around the world at the time, principally in their use of electric and electronic instruments such as the bass and keyboard in what is considered by scholars to be a modernization of the *carimbo* of Pará (Amaral 2003; Tinhorão 1991).

In the 1980s the *lambada* spread throughout the main northeastern and southeastern Brazilian capitals (Fortaleza, Recife and Salvador; Rio de Janeiro and São Paulo), accompanied by a proliferation of *lambaterias*, places where the dance was practiced (following the models of the *gafieiras* or *forró* clubs). During the 1980s artists such as Beto Barbosa (Pará singer Roberto Morhy Barbosa), Carlos Santos, Alípio Martins and Márcia Rodrigues were prominent. Supported by Pinduca, Beta Barbosa was the most renowned artist in the southeastern region. Introducing himself as Rei da Lambada (King of Lambada), a title created by the press, Beto Barbosa, has continued to perform live with a group. His greatest hits are the songs 'Adocica' and 'Preta,' each of which sold over four million copies during the 1980s.

The *lambada* garnered global notoriety in 1988 when French producer Jean Karakos and filmmaker Oliver Lorsac, while visiting Bahia, had the idea of introducing the dance to Europe. The duo created a *lambada* musical group with musicians, singers and dancers from different parts of the world, including Brazilians. The group, called Kaoma, became a worldwide musical phenomenon, especially with the success of their 1989 rendition of the Bolivian song 'Llorando se fué' (She Left in Tears), released under the title 'Lambada.' (The song was originally popularized by the Bolivian group Los Kjarkas, founded in the 1960s by the guitarist and songwriter Gonzalo Hermosa González. Los Kjarkas successfully sued Kaoma for using the song without their permission.) Despite the aim of spreading the *lambada* – music and dance – as practiced in Porto Seguro (Bahia), Kaoma in effect produced a mixture of elements from several Latin American genres, with a global approach. Capitalizing on the great success of 'Lambada,' North American producers included it in *The Forbidden Dance* (1990), a movie also notable for several ideological cliches about Brazil and the Amazon region.

The *lambada* is a partner dance characterized by very sensual choreography, particularly due to many of the spinning steps performed by the couples with their hips pressed closely together. The music combines traditional elements of the *carimbó* with Caribbean music such as salsa, *merengue* and calypso, while also incorporating electric and electronic instruments (electric guitar and bass; keyboards and synthesizers). According to Salles (1969), *carimbó* tempo is *andante*, with simple duple meter. Like Afro-Brazilian music genres, the *lambada* has a responsorial structure. The accompaniment consists of two tubular membranophone drums of different sizes and a varied instrumentation which includes strings, generally fiddles, guitars, *cavaquinhos* (a small string instrument from the European guitar family) and banjos, wind instruments (mainly flutes, clarinets, saxophones) and drums (primarily *pandeiros,* a type of frame drum similar to a tambourine, but which can be tuned to produce high and low notes), maracas, *matracas* (rattles) and *caxixis* (an African type of shaker). *Lambada* lyrics have short and repetitive verses and generally address daily life, love, legends and cultural traditions.

The popularity of the genre declined after the 1990s, but in the early 2000s it is still alive, found mostly in ballroom dance schools throughout Brazil and in music production emanating from the northeastern region. As an international genre, the term *lambada* has gradually been replaced by the term *zouk*, a similar dance from Martinique, and is also frequently referred to by hybrid terms including *lambadazouk*, *lambazouk*, *zouk brasileiro* (Brazilian *zouk*), in addition to variations such as *lambada carioca* (*lambada* from Rio de Janeiro).

MÔNICA LEME (TRANSLATED BY MAIZA DE LAVENÈRE BASTOS)

Landó

The Peruvian *landó*, nearly forgotten by the mid-twentieth century, was recreated during the Afro-Peruvian music revival of the 1960s and 1970s. Since then, it has been popularly considered the most 'African' of Afro-Peruvian music and dance styles, but its actual relationship to African heritage is the subject of debate. The *landó* has played a significant role in both establishing and reevaluating stylistic features that define Afro-Peruvian music (Feldman 2006, 162–4; León Quirós 2003, 229, 243–4).

Ethnomusicologist Javier León Quirós suggests that stylistic ambiguity, paradoxically, is a defining feature of the *landó* (2003, 229–47). To the extent that it is possible to generalize about the *landó*, it is typically in a minor mode with a triple feel in a moderately slow tempo. *Landós* may be felt in 6/4 or 12/8 (or in between), with shifting beat groupings. The mood is sensual, but lyrics are not usually romantic. Typically the form includes an instrumental introduction, instrumental interludes and two or three contrasting strophic sections, alternation between a vocal soloist and chorus, and some call-and-response singing. While the core instrumentation is guitar and *cajón*, other instruments vary and may include congas, *cencerro*, *bongó*, bell, handclaps, *quijada*, piano, bass guitar, strings and more (León Quirós 2003, 233–4; Tompkins 1981, 299–303). Standardized *cajón* patterns have changed substantively in a relatively short period of time (Feldman 2006, 113; León Quirós 2003, 234–8).

While there is no written documentation of the *landó* before the twentieth century, various dances with similar-sounding names have been suggested as possible progenitors, including *zamba-landó*, *ondú* and even the Brazilian *lundú* (Tompkins 1981, 288–96). Afro-Peruvian revival leader Nicomedes Santa Cruz affirmed that the *landó* was descended from an Angolan couple dance called *lundu* (characterized by a pelvic motion simulating sexual intercourse) that inspired the Brazilian *lundú* and over 50 other couple dances in Portugal, Spain and the Americas. Santa Cruz further stated that the *landó* evolved into the Peruvian *zamacueca*, *marinera* and *tondero* (1970, 18–20), seeking to reverse popular assumptions that these coastal dances were of exclusively European origin. While he offered little evidence, his theory is widely accepted in Peru (see Feldman 2006, 101–6; Tompkins 1981, 293–6).

Two *landó* songs are considered 'traditional' and were staged and recorded in the Afro-Peruvian revival: 'Samba malató' and 'Landó.' In the 1960s a few elderly black Peruvians remembered sung fragments of 'Samba malató.' Working with the Santa Cruzes, guitarist Vicente Vásquez composed an introduction and instrumental interlude based on the melody fragment, and percussion parts were added (V. Santa Cruz 1995; R. Vásquez Rodríguez 1982, 44). Nicomedes Santa Cruz contributed a new verse with pseudo-African lyrics (N. Santa Cruz 1970, 47) and 'Samba malató' became the first recorded *landó* (performed by Nicomedes Santa Cruz's theater group Cumanana in 1964). Since it is not widely known that Santa Cruz invented the new lyrics, their 'African' sound contributes to the *landó*'s 'very African' public identity. A choreography later popularized by Perú Negro for 'Samba malató' depicts black laundresses dancing as they do their chores (see Feldman 2006, 151–5).

In the 1970s the second traditional *landó*, simply titled 'Landó,' was still performed during the *yunza* celebration at Carnival time in El Guayabo. William Tompkins describes the choreography as a free and provocative couple dance performed in a circle of onlookers who shouted encouraging phrases. The rhythm was similar to that of the *resbalosa* (the final section of the *marinera*) (Tompkins 1981, 297–8, 303–4, 547–9). Members of the dance company Perú Negro visited El Guayabo and learned 'Landó,' and they subsequently staged a stylized musical arrangement that became standard. The resulting choreography downplays erotic elements (Tompkins 1981, 305) but celebrates female sensuality with a basic waltz-like pivot step (long–short–short) that causes skirts to swirl gracefully.

During the revival, Victoria Santa Cruz (Nicomedes's sister and a renowned choreographer, composer and director) recreated the *landó*'s choreography for her theater group, Teatro y Danzas Negras del Perú, using what she calls her 'ancestral memory' (Feldman 2006, 65–9, 73–4). It is not known whether Victoria Santa Cruz's choreography is related to dances later popularized by the group Perú Negro in conjunction with the *landó*.

Peruvian composer Chabuca Granda's compositions based on the *landó* were influential in defining the experimental spirit of new *landós* in the 1970s and 1980s, supported by Caitro Soto's *cajón* and the guitar of Félix Casaverde (and earlier Lucho González). Since the late 1980s *landós* have often been composed and arranged as ballads without choreography (see León Quirós 2003, 229–48). Peruvian singer Eva Ayllón has popularized a number of *landós* with ballad-like arrangements, and Peruvian singer Susana Baca has recorded *landós* in experimental ways, including the song 'María Landó' that launched her into the international world music arena (Feldman 2006, 236–8).

HEIDI CAROLYN FELDMAN

Lapo Kabwit

Lapo kabwit is the homegrown drum and percussion-based street dancing music of Carnival in the Caribbean island of Dominica. The term literally means 'goatskin,' a reference to the goatskins used in the making of these drums, and is used both to describe the form of music and as a shorthand term for describing a band that performs it.

The instruments used in a *lapo kabwit* ensemble are the *tiki* drum, which improvises and solos, the bass drum, which provides a steady bass throb on the beat, and a variety of percussion instruments such as the *syak* (traditional shaker/scraper), conch shells, horns and whistles. Dancers and other revelers strike a long whip called *fwet* at regular intervals. The *fwet*, which makes a cracking, gunshot (whiplash) sound when struck on the ground, adds to the ambience of the performance. The rhythm is very strident, as it is the music of 'jump up,' the street dancing of Carnival.

Closely linked to *lapo kabwit* is the *chanté mas* song (masquerade song), which provides *lapo kabwit* with its vocal element. These are typical responsorial songs featuring call-and-response between a lead singer, called *chante* (if male) or *chantwel* (if female), and the other revelers. *Chanté mas* has a social function, highlighting events or scandals and targeting persons who are deemed to have erred in their ways.

Lapo kabwit music is rooted in drumming traditions derived ultimately from Africa. It is also likely that the phenomenon of European military parades in the colonial era have had some influence. This influence of this tradition has also become apparent in more recent times in the increasing use of drums associated with military marching bands.

Up until the 1970s *lapo kabwit* was the dominant music of Carnival, particularly in rural communities. Since then it has lost this position to electronic bands, steelbands and, more recently, sound systems. Beginning in the 1990s the Carnival Development Committee, the body which oversees the organization of Carnival in the capital city Roseau and nationally, responded to this decline by making a concerted effort to enhance the presence of *lapo kabwit* on the streets. Jouvert, the early morning jump-up on Carnival Monday (Lendi Gwa), was particularly targeted. As an incentive, prizes were awarded to the first *lapo kabwit* band to appear on the streets and electronic bands were discouraged or banned altogether from the streets between 4 a.m. and 6 a.m. In the Roseau street carnival of 2010 several *lapo kabwit* bands were present. Awards were issued to the best band and the band of longest duration on the road.

Further developments have also taken place in the early twenty-first century. *Lapo kabwit* bands are becoming more formally organized and are adopting names. Some examples of this are Sakis, Sugar Fire, Yampiece Lapo Bwit and Newtown Lapo Kabwit. The bands employ many more drums and in particular there is the greater use of snare drums, toms and bass drums. In some cases, bands replace the synthetic skins used in these types of drums with goatskins to maintain that traditional, and some may add, authentic, *lapo kabwit* timbre. *Lapo kabwit* bands are also making more appearances outside of Carnival periods, at occasions such as political rallies, Creole music festivals and major sports events.

Efforts have also been made to reproduce *lapo kabwit* rhythm and timbre using modern electronic instruments, synthesizers and computers. The first major success story in this regard was the release by Exile One of the song 'L'Hivernage,' popularly referred to as 'Tchwe Yo' (Kill Them) after a punch line in the song. This song employed the *lapo kabwit* rhythm and timbre and became the unofficial road march (Carnival song) during the 1986 Carnival. Later, in the 1990s, other bands such as WCK and First Serenade and calypsonians such as The Hunter, released songs based on the *lapo kabwit* rhythm. More recently, an amateur recording was made with the Sakis Lapo Kabwit of Grand Bay. Despite these efforts, this new version of *lapo kabwit* music based on modern electronic instruments failed to take off, largely due to the fact that another genre, *bouyon*, which itself draws on *lapo kabwit*, continues to be the music of choice among the electronic bands and also functions as a street dancing music. Nevertheless, the evolution and development of *lapo kabwit* continues. While it may have lost its dominance at Carnival, there are signs in 2010 that developments are favoring a resurgence of the form.

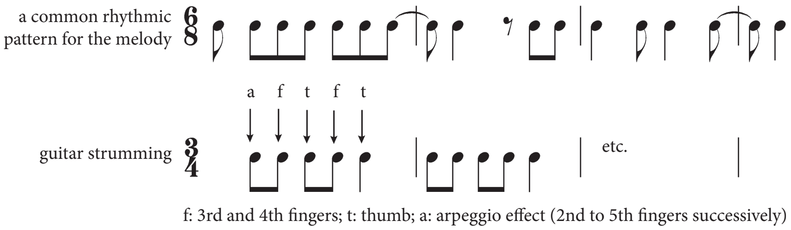
Latin Pop, *see* Latin Pop (Volume XII, International)

Litoraleña (Canción Litoraleña)

Litoraleña is a type of song within Argentinian folk-derived, media-disseminated urban music, collectively known as *folclore*. The adjective '*litoraleña*,' meaning 'from or associated with the riverfront provinces of northeast Argentina' (the so-called Argentine Mesopotamia, consisting of the provinces of Misiones, Corrientes and Entre Ríos), has designated at different times each and all of the types of music considered to have originated in these regions – *chamamé*, *polca correntina*, *rasguido doble*, *chamarrita*, etc.); the term '*música litoraleña*' still serves that purpose. But '*canción litoraleña*,' '*litoraleña*,' or even just '*canción*' refers usually to a slow song in measures of six eighth-notes, with the melody mostly marking 6/8 and the accompaniment 3/4. The standard syllable-bearing note is an eighth; anticipations of the first beat are characteristic. The guitar accompaniment (often the only instrument employed, although harp and accordion are frequent adjuncts) is a fairly even and gentle strumming in patterns of four eighth notes plus a quarter note (see Example 1). Unlike other species in *folclore*, there are practically no variants for this strumming.

The subject matter of the lyrics usually has a marked regional color, with a great many songs speaking about the two great rivers in the region, Paraná and Uruguay. The language, however, does not particularly favor local vocabulary; it is often in a literary, not popular, register. This may be connected with the modeling of the *litoraleña* upon the *guarania* or *guaraña*, a genre of Paraguayan origin (it was created in 1925 by José Asunción Flores), halfway between the folk and the academic worlds. In point of fact, within Argentine *folclore*, *litoraleñas* and *guarañas* are one and the same thing. The lines are often *de arte mayor* (11–14



a common rhythmic pattern for the melody
6/8
a f t f t
guitar strumming
3/4
etc.
f: 3rd and 4th fingers; t: thumb; a: arpeggio effect (2nd to 5th fingers successively)

Example 1: Rhythmic patterns for melody and accompaniment in *litoraleña* syllables), rather than the standard *folclore* octosyllables and *seguidillas.* On the other hand, it is often linked to the most popular dance of the region, the *chamamé*, with which it shares the accompaniment pattern, albeit in a slower tempo, and for this reason has been called a ballad-*chamamé.*

Lyrics and performance style of the *litoraleña* are set somewhat apart from other *folclore* types and are related to the so-called *romántica* Latin American song. For example, high female voices are employed, such as that of Ramona Galarza. Although folk enthusiasts in search of the 'authentic' have frequently branded the emergence of the *litoraleña* in the 1960s as 'commercial' and 'opportunistic,' many of these songs have become extremely popular, being recorded by many artists and often sung in informal gatherings. 'Canción del jangadero' (Song of the Raftsman) (Dávalos and Falú; recorded for example by Mercedes Sosa in 1959), 'Río manso' (Calm River) and 'Río rebelde' (Rebellious River) (both by Cholo Aguirre and recorded by him in 2007) and 'Canción de cuna costera' (Lullaby of the Coast) (Linares Cardozo; recorded for example by Los Fronterizos in 1970) are some of the more popular *litoraleña*s.

A related nondanced species of *música litoraleña* is the *galopa*, which is a dance of Paraguayan origin, but is incorporated by many *litoraleño* Argentinian performers. Similar in rhythms and lyrics, the *galopa* is more lively and brisk. It is built in two clear sections, often in contrasting modes and styles. A well-known example is 'Trasnochados espineles' (Night-weary Fishing Lines) by Cholo Aguirre.

LEONARDO WAISMAN

Loncomeo

Loncomeo is a vocal musical genre that emerged in the region of Argentine Patagonia, an area comprising the provinces of Neuquén, Río Negro, Chubut, Santa Cruz and Tierra del Fuego.

In its original manifestation, the term *loncomeo* (or *lonkomeo*) designates a male dance specific to the Mapuche ethnic group who inhabit various provinces of the southern or Patagonia region. It is performed by five dancers around the *rewe* or ceremonial center during the course of the *nguillatún* or *camaruco*, a collective annual supplication during which fertility and well-being are requested from the god Nguenechén. The *purrufe* or dancers wear feather head dresses and execute movements imitating a bird the ostrich and for this reason the dance is called *choikepurrún* (dance of the *choike* or ostrich). They also use a sash made of woven wool placed across the chest, to which metal bells called *kaskawillas* are attached that shake in rhythm with their movements. The accompaniment is made with a *kultrún*, a timbal or kettle-drum whose body is traditionally built by carving a piece of wood in the shape of a flat-based bowl. The opening is covered with sheep or goat skin stretched by means of straps. Its diameter is between 45 and 60 centimeters and it is played by men with two drumming sticks.

In the 1960s the composer Marcelo Berbel took the name of this dance to create a vocal genre which he sought to transform into the representative music of the Argentine Patagonia. In the same period, a similar enterprise was undertaken by the composer Carlos Di Fulvio. These *loncomeos* are not related musically to the Mapuche dance. Written generally in binary meter and a major key, they are sung by one or two voices with guitar accompaniment. Sometimes the percussion of the *kultrún* is added, or another percussion instrument that evokes the sound of the *kaskawillas*. The poetic texts refer to themes typical of the Patagonia region, narrating the customs of the Mapuche and employing Mapuche words that are sometimes also used as titles for the songs. Among the *loncomeos* of Berbel, several with lyrics by Milton Aguilar are 'Quimey Neuquén,' 'Romance de Mamá Rosario,' 'Rogativa de loncomeo,' 'Loncomeo del amor mapuche' and 'Amutuy Soledad.' These became known through the interpretations of his children Hugo and Marité Berbel. 'Dale tero, tero dale' (Go, Tero, Go [tero is the name of a bird of the area]) by Carlos Di Fulvio (2006) also deserves to be mentioned. Another composer of this genre is Roberto Navarro, with titles such as 'El país de las manzanas' (Apple Country 2002), who together with Claudio Chehébar makes up a duo who include in their interpretations instruments like the piano and various wind instruments. Also notable are the *loncomeos* of Pehén Naranjo 'Sopa de luna' (Moon Soup) and 'Viento' (Wind 2005). For his part, the musician Oscar Alem incorporated the *loncomeo* in his work 'Sinfonía de la llanura' (Symphony of the Plain 2002), created in collaboration with the Hamlet Lima Quintana.

HÉCTOR LUÍS GOYENA (TRANSLATED BY ZUZANA PICK)

Lundu

Lundu (also sometimes spelled '*lundum*,' '*landum*' and '*londu*') was the name used in Brazil from the mid-nineteenth century until about 1920 to designate a genre consisting of urban songs of a comical nature. The term had previously been used between the late eighteenth and mid-nineteenth centuries in Portugal and Portuguese America to denote certain dances practiced by blacks and *mestizos*. *Lundu* is also a type of folkloric music and dance currently practiced in Brazil, predominantly on Marajó Island (state of Pará). This entry addresses the first two stated uses of the term, especially the first one, to which the term '*lundu*' can be assumed to refer unless otherwise indicated.

The literature suggests a general acceptance of the term '*lundu*' as being a derivation of the word '*calundu*' (from the Kimbundu '*kilundu*'), known to have been in use in Brazil by the seventeenth century to describe certain religious rituals of Central African origin in which music and dance performed a major role. Over the course of the eighteenth century, the word '*calundu*' lost this specific meaning and came to be applied to any type of ceremony performed by enslaved Africans that included music and dance (Sweet 2006).

Lundu as a Dance

The first written record mentioning a specific dance called '*lundu*' that was not in any way associated with a slave ritual dates from 1780 (Alvarenga 1982). Written and iconographic evidence over subsequent decades indicates that the dance was performed outdoors, in private residences and in theaters. In these sources, descriptions of the *lundu* dance suggest that it featured a mixture of African traits (described by travelers and colonial chroniclers as lewd, indecent movements) and Iberian ones (it is compared to *fandangos*, *boleros* and *seguidillas*).

There are few clues about the music that would have accompanied the *lundu* dance, though some notation is extant from the early nineteenth century. Among the musical examples in the book by Spix and Martius, *Reise in Brasilien*, describing journeys made in Brazil between 1817 and 1820 and published in four volumes between 1823 and 1831, one is entitled 'Landum – Brazilian Dance.' The piece, transcribed only as a solo instrumental melody, is built on four-bar variations alternating between the tonic and the dominant, which musicologist Paulo Castagna viewed as influenced by the works of sixteenth-century Iberian *vihuela* players (2006; this same article also offers a full edited version of the piece).

Another source of interest is the manuscript 'Cifras de música para saltério' (Tablatures for the Dulcimer), transcribed by Antonio Vieira dos Santos in the early nineteenth century, which contains six instrumental *lundus* (a contemporary edition of these appears in Budasz 2002). The *lundu* as an instrumental piece was in practice until the mid-nineteenth century, as evidenced by the piece 'Grande lundu para pianoforte,' included by Mário de Andrade in his 1964 (1930) collection '*Modinhas imperiais*' (Imperial *Modinhas*). The last quarter of the century gave rise to the *polca-lundu*, an embraced couple dance which, based on descriptions from the time, was very different from earlier versions of the dance. Many *polca-lundus* for piano were printed in Rio de Janeiro between 1860 and 1890. They can be distinguished from polkas of European origin by the melody and/or the accompaniment presenting syncopated rhythmic figures characterized by the accentuation of the last semiquaver in the first beat of the 2/4 measure.

Lundu as a Song Genre

The first references to *lundu* as a song appeared in the *Jornal do Modinhas*, published in Lisbon from 1792 to 1796 by Frenchmen Milcent and Marchal (Albuquerque 1996). The songs 'Moda do lundu' and 'Dueto novo por modo de lundu,' written by Portuguese composer José de Mesquita, were published in this journal. However, in these songs the word '*lundu*' does not appear as a genre designation, nor do the music or lyrics reveal any specifics about how the word was used.

Although 'Modinhas do Brasil,' the manuscript of vocal music accompanied by guitar or harpsichord transcribed in Lisbon at the end of the eighteenth century, offers no direct reference to *lundu*, it nonetheless has a role to play in the story of sung *lundu* (Béhague 1968; Lima 2001; Sandroni 2008). This manuscript contains scores for Portuguese-language songs which reveal, for the first time and in a systematic way, characteristics that would be recognized to *lundu* as a song genre in Brazil over the course of the nineteenth century. These characteristics include both musical aspects, such as an abundance of melodic syncopation, and lyrical ones, such as references to Afro-Brazilians.

Little information exists about sung *lundu* in the first decades of the nineteenth century. The year 1826 saw the publication of the second volume of *Viola de Lereno*, containing works by Brazilian poet Domingos Caldas Barbosa, who made his career in Lisbon and died there in 1800. This volume included six poems entitled '*Lundu*.' We know that the *Viola de Lereno* poems were sung, but those for which we have the music do not include the ones in the book that were classified as *lundus* (Moraes 2003).

Sources of information regarding *lundu* increased significantly in Brazil from 1834 with the introduction of printed music. From then until the early twentieth century *lundu* would often feature among the published songs of Brazilian composers. The writers of these *lundus* tended to be the same people that composed *modinhas*, such as Cândido Inácio da Silva, Gabriel Fernandes da Trindade, Rafael Coelho Machado, Januário da Silva Arvellos and others. The *lundu* was considered on the one hand to be a kind of *modinha* (according to this word's commonly accepted meaning – a modern urban song – which was never completely lost), and on the other hand to be the jovial counterpart to the *modinha* (now interpreting the word in its restricted sense – a melancholy song whose lyrics refer to the sufferings related to love). From a musical point of view, the main differences between the two are the tendency for the tempo of the *lundu* to be faster, and above all, the occurrence of syncopation in the melody and accompaniment, which became more apparent approaching the twentieth century. Like the *modinhas* published in the same period, *lundus* published in the nineteenth century were always arranged for a solo singer with piano accompaniment.

In his classic article (1999 [1944]), author and musicologist Mário de Andrade presented a reading of *lundu* that drew a connection between its comical nature, its rhythmic characteristics and its Afro-Brazilian origin. He based his analysis on Cândido Inácio da Silva's *lundu* 'Lá no Largo da Sé' ('There in the Largo da Sé' [cathedral square], 1834). According to Andrade, Brazilian society would have strongly resisted the influence of any artistic practices of Africans and their descendants from early colonial times to the mid-nineteenth century. While Andrade acknowledges that such manifestations existed, were tolerated and sometimes even encouraged, he insisted that they did not mingle with the practices of the whites; both remained in separate watertight compartments. He contends that the *lundu* represented the first time that an Afro-Brazilian practice would have permeated white society: '*lundu* ... is the first Afro-Black musical form that spread to all classes and became nationalized.' The cost of this feat, however, would have been the obliteration of dramatic, controversial references to black enslavement through the systematic use of comedy. In this way, *lundu* typically depicts the seduction of a black woman (preferably a mulatta) by a white master, though always in a humorous tone, which elides the violence of the situation. Throughout the nineteenth century many *lundus* touched on a variety of issues that were unrelated to Afro-Brazilians, but they retained the humorous treatment of the subject as well the syncopated rhythms that Andrade – and, indeed, most of the literature – attributed to the African influence in Brazil.

The first song recorded on disc in Brazil was the *lundu* 'Isto é bom' (That's So Good) composed by Xisto Bahia and performed by the singer Manuel Pedro dos Santos, known as Baiano (1902). Over the following 15 years the *lundu* was one of the most highly recorded song genres in the country. The *lundus* recorded in the first two decades of the twentieth century are extremely varied, but the general rule is that they are strophic songs sung solo and accompanied on the guitar using a syncopated rhythmic pattern in 2/4. Continuing the practice established in the previous century, the lyrics were humorous, and popular themes included praises to the charms of the mulatta, references to typical foods of the people, often incorporating sexual innuendo ('A muqueca,' recorded by Baiano between 1907 and 1913, and 'O caruru' [both titles refer to food], recorded by Mário Pinheiro between 1904 and 1907), and the daily life of blacks during slavery and after abolition in 1888 ('Lundu gostoso' [Delicious Lundu] and 'Pai João' [Uncle John], recorded by the black composer and performer Eduardo das Neves between 1907 and 1912; and 'Preto forro alegre' ['Cheerful Freed Slave'], also recorded by Eduardo das Neves, between 1912 and 1913). An important characteristic of the *lundus* recorded at the beginning of the twentieth century was the frequent use of spoken interpolations, indicative of their various performance contexts: theaters, circuses, cafes. The main performers of *lundus* – Baiano, Eduardo das Neves and Mário Pinheiro – were the most established professional singers of the time. They also sang *modinhas*, *cançonetas* (light urban songs), *romances* and other genres in vogue at the time.

From 1920, with the progressive rise of *samba* as the main genre of Brazilian popular song, *lundu* gradually dropped out of use.

CARLOS SANDRONI (TRANSLATED BY DARA MURPHY)

Mambo

Mambo is a dance music genre that originated in Havana, Cuba, during the 1940s and developed simultaneously but largely independently in Havana and in the US cities of New York and Los Angeles (both places with large Latin-American populations), attaining international success in the 1950s. It is characterized by a mixture of elements from Cuban music genres such as *son*, *danzón*, *rumba*, *guaracha* and *guajira*, with orchestra tions and harmonies from jazz, especially swing. A key figure in the development of *mambo* was Cuban musician Dámaso Pérez Prado, who succeeded in elevating his own *mambo* style to that of 'real' *mambo*. Others involved included Julio Cueva, Orestes 'Macho' López, Israel 'Cachao' López, René Hernández, Bebo Valdés, Andres Echeverria (Niño Rivera) and Arsenio Rodríguez. By the time Pérez Prado's *mambo* rose to fame in the 1940s, New York and Los Angeles had already developed local *mambo* scenes featuring particular *mambo* styles. In New York, Cuban musicians Frank Grillo 'Machito,' Mario Bauzá, Anselmo Sacasas, José Curbelo, Pupi Campo and Puerto Ricans Tito Puente, Tito Rodríguez and Noro Morales were particularly prominent.

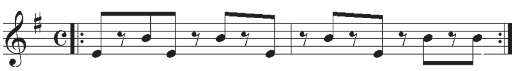
Origin and Use of the Term 'Mambo'

According to Pérez Prado, the word 'mambo' was not originally connected to music. It was used in Cuba to evaluate the social and economic situation: 'if the mambo was tough it meant that things were going bad' (Hernández 1986, 17). Other nonmusical meanings included 'something unique, relevant, unprecedented' (Santiesteban 1985, 303–4), and 'a priestess who officiates at the voodoo ceremony in Haiti' (Urfé [1948] 1993, 31). What is clear, however, is that the word was used in the context of Afro-Cuban music and that it was in common use by dance music orchestras by the 1930s.

In the environment of Afro-Cuban ritual music *mambo* designated certain practices of people who were descendants of the Bantu or Congo ethnic groups. *Palo mambo* was the name of an ancient style (Urfé [1948] 1993, 31). *Mambo* also denoted the '*puya* chants sung by the people in the festive-religious celebrations of palo monte' (Casanova 2000, 79). Fernando Ortiz notes that *mambo* was a liturgical chant of Congo priests or wizards known as *tata-nganga* or *nganguleros* (Ortiz [1950] 1998, 144). *Son* musician Arsenio Rodríguez has said that the expression 'mambo' was used in the music of the 'yucca drum,' when 'a singer says to another one: "abre cuto güirí mambo" which means: "open your ear and listen to what I'm going to tell you"' (Giró 1998, 211). In this sense, Ortiz says, the word *mambo* derives from the root *mambu*, the plural form of *diambu,* which refers to 'the spoken treatment through chants to invisible entities' (Ortiz [1950] 1998, 144–5).

In the world of dance music, *mambo* commonly refers to the 'measure of four or eight beats repeated in the chorus of brass instruments' (Joseito González, former director of the group Rumbavana, in Giró 1998, 211). According to Ortiz, it is a 'certain common musical device which results from the crossing of the rhythms of several instruments, it could be '"a conversation of rhythms" called a "palabre"' (Ortiz [1950] 1998, 151). ('Palabre' is an Afro-Cuban deformation meaning word.) The phrases 'o mambo' or 'a thousand times mambo' were used to designate a rhythmic-harmonic formula, which functioned as a base on top of which other instruments improvised (Casanova 2000, 79). In some big band scores, the note 'mambo' indicated the beginning of the section where that rhythmic-harmonic formula was repeated (Alén 2000, 670; Acosta 1983, 48).

Mambo was also the name of the last section of the *danzón de ritmo nuevo* (literally, 'new rhythm *danzón*'), created by the Orquesta Arcaño y sus Maravillas in the late 1930s. It was characterized by a syncopated rhythm or *guajeo* executed by the string instruments and taken from the motives performed in the early parts of *son* pieces by *tres* guitar players from the Eastern region of Cuba (Urfé 1979, 57). The *guajeo* was used as a base for the improvisations of flute, piano and percussion. One of the first *danzón* pieces that used this 'new rhythm' was one entitled 'Mambo' composed by Orestes López (ca. 1937 to 1939) (Example 1).



Example 1: *Guajeo* of the strings in the last part of the *danzón* piece entitled 'Mambo' by Orestes López

Mambo was also used to denote an aesthetic category expressing 'efficiency, demand, approval' among individuals who perform *rumba columbia*

(Urfé [1948] 1993, 31; Ortiz [1950] 1998, 151). In this context it seems to refer to the moment of climax in *rumba* performance.

History

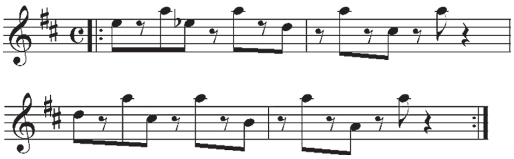
Reconstructing a precise linear history of the origins and evolution of *mambo* is problematic, as similar musical developments were taking place at the same time in Cuba and the United States. However, close examination of a number of significant individual events in both countries shows the intricacy of *mambo*'s history.

Havana

One of the most widely accepted hypotheses holds that a significant historical moment occurred at the moment when jazz bands and *conjuntos* (groups) in Havana adopted the *guajeo* of the last section (also known as 'mambo') of the *danzón de ritmo nuevo* of the Orquesta de Arcaño y sus Maravillas, described above. In the mid-1940s, orchestras with a jazz band format started to replace the old *charangas* (string orchestras with piano and percussion), because the former performed a wider variety of genres, such as *bolero*, *guarachas*, *danzón*, *rumba*, romantic songs and so on. The *guarachas* performed by these orchestras were in two parts: a first part consisted of a stanza, while the second part (*montuno*) included syncopated *guajeos* played by the saxophone section.

According to Enrique Jorrín, who is often credited with the creation of the *chachachá*, these *guajeos* could have been taken directly from *son tres* guitar players (Roy 2003, 101). However, in addition to the syncopated nature of the *guajeo* motive, the *danzón de ritmo nuevo* introduced a specific use of the rhythm in the climatic final section, in which the ecstatic dancers performed new and unusual steps, following the syncopated rhythm and the improvisations on the piano, the flute, the congas and the bell. (For further information, see the discussion between Odilio Urfé and Cuellar Vizcaino in the late 1940s [Cuellar Vizcaino (1948) 1993 and Urfé (1948) 1993]). Jazz bands executed the *guajeo* with the same objective: to give their *guarachas* an ecstatic element for dancers by lengthening the second section, inserting responsorial parts (soloist and chorus) with solos by piano, trumpets and/or percussion in an overall crescendo. *Son* musician Arsenio Rodríguez proclaimed himself the first composer to introduce a *guajeo*, which he called 'diablo,' into *son conjuntos* (groups). According to Rodríguez, his piece '¡So caballo!' was the 'first diablo or mambo ever recorded' (Giro 1998, 211). The first recording of this piece dates back to 14 September 1943 (Díaz Ayala 2002); however, in later recordings a style of *guajeo* and *tumbao* can be heard that is somewhat different from that of *mambo*, although the function is very similar to that of *mambo*'s *guajeo*.

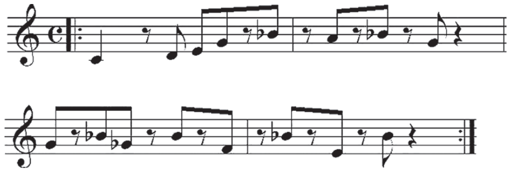
One of the first recordings of a mambo-style *guaracha* executed by a jazz band is 'Figurína del solar' composed by Chapotin and Pérez Canova, and recorded on 24 February 1944 by the Orquesta de Julio Cueva (Díaz Ayala 2002: card 630). The leading vocals were sung by Orlando Guerra 'Cascarita' and the piano was played by Rene Hernández, who was the orchestra's arranger at the time (Díaz Ayala 2002). After the first two stanzas of the introduction, a *montuno* with an obvious mambo-style *guajeo* begins, and it is a variant of the *guajeo* of *danzón* 'Mambo' with a chromatic melody (Example 2).



Example 2: *Guajeo* of 'Figurina del Solar'

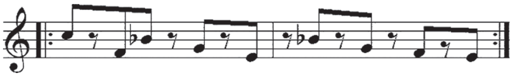
It is known that the composer, pianist and arranger Dámaso Pérez Prado (1917?–1980), who was to become the prominent figure in *mambo* in the 1950s, was the favorite musical arranger of Orlando Guerra, so it is highly possible that he made the arrangements. However, the style of the piano solo is very different from Pérez Prado's, whose playing was marked among other things by rhythmic exuberance, the introduction of strained silences, violent melodic gestures and many dissonances, suggesting that Hernández is the performer.

Shortly afterward, Guerra joined the orchestra Casino de la Playa, to which Pérez Prado also later moved. On 27 November 1945 in Havana they recorded with this orchestra the *guaracha* piece 'Coge pa' la cola' (Díaz Ayala 2002: card 436A). The second section reaches the climax by the repetition of a chromatic *guajeo* (Example 3).



Example 3: *Guajeo* of 'Coge pa' la cola'

The piece is also notable for the fact that the first section contains an anticipated *guajeo*, which creates the impression that the *montuno* is impatient to appear because it wants to hasten the climax (Example 4).



Example 4: Anticipated *guajeo* of 'Coge pa' la cola'

The piano solo in the second part is full of clusters, tense silences, virtuoso gestures and notes in the top register that are played as if the instrument was a drum and not a piano, all features of Pérez Prado's style. In the climax the singer weighs up the ecstasy that has been achieved and exclaims: 'look how good is the mambo.' There we have the essence of *mambo* executed as a section of *guarachas* by jazz bands.

Later in 1945 Bebo Valdés replaced Rene Hernández as the pianist with the Orquesta de Julio Cueva (remaining there until 1947) (Díaz Ayala 2002: card 2609). Hernández took his arrangements and piano style to New York, where he replaced Joe Loco as pianist for Machito's Afrocubans (Salazar 2002), and introduced *mambo* to the Machito orchestra (Acosta 1993, 31).

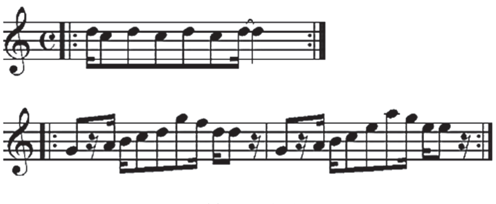
New York

During the first decades of the twentieth century, New York had received large waves of Latin American immigrants, especially from Puerto Rico, whose citizens had held US citizenship since 1917. The Latin immigrants, who gradually displaced other ethnic groups from the neighborhood of East Harlem until it became known as Spanish Harlem, were especially receptive to the music of Caribbean orchestras. Toward 1937 Frank Grillo, 'Machito,' met in New York with Mario Bauzá, with whom he created in 1940 the orchestra Machito and his Afrocubans, a band that was to be essential to the development of New York *mambo* and the creation of Afro-Cuban jazz (or Latin jazz). In 1939 Jose Curbelo arrived in New York and met Tito Puente, to whom he was to become both musical and entrepreneurial mentor. The following year, Miguelito Valdés and Anselmo Sacasas left the Orquesta Casino de la Playa in Cuba to move to New York. The former joined the orchestra of Xavier Cugat as a singer, while Sacasas waited for a short time before creating his own orchestra. (Arsenio Rodríguez, in the search for a cure for his blindness, would arrive in the late 1940s.)

The musicians and the leaders of Cuban bands who settled in New York did not break their ties with Cuba. Miguelito Valdés visited Havana frequently for personal and professional reasons, and Sacasas looked for singers there also (Pujol 1996, 2000). While there, they doubtless updated themselves on the latest musical developments. When the use of *mambo*-style sections proved a success in Cuba, they took the practice to New York (in some recordings made by Sacasas such as 'El tumbaito' (1946), *guajeos* and *tumbaos* of *danzon de ritmo nuevo* can be heard).

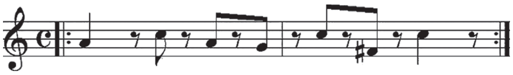
By 1946 – a crucial time in the crystallization of *mambo* as an independent genre – the practice of performing *mambo*-style *guajeos* had become widespread in Havana, and among the most outstanding arrangements were those of Pérez Prado. According to an interview published in the August 1946 issue of *Radio Magazine,* Pérez Prado had spent three months earlier in the year in New York making arrangements for Miguelito Valdés, Deni Arnaz and Xavier Cugat, and seeking to emulate the Cuban musicians who had settled in the United States since the late 1930s. The rules of the American Federation of Musicians, however, insisted that he remain in the country for six months before he could work, so he abandoned the attempt to settle in New York and returned to Cuba. In the same interview, Pérez Prado mentioned that he was preparing a new 'musical style' named *son mambo*. The first example was to be the song 'Pavolla,' which Pérez Prado expected to be recorded shortly (Betancourt 1986, 111–12). It is not known, however, whether that recording was ever made.

On 8 March 1946 in New York, while Pérez Prado was in the city, the orchestra of Anselmo Sacasas recorded 'Mambo,' a song classified on the record label as a *guaracha* and composed by Sacasas himself and C. Valencia (Díaz Ayala 2002). This was the first piece since the *danzón* composed by Orestes López in the late 1930s to be titled 'mambo.' The song speaks of Havana's fashionable new rhythm: the *mambo*. The *guajeos* in *mambo*-style are performed by the trumpets, occasionally overlapping with *guajeos* executed by the saxophones (Example 5).



Example 5: *Guajeos* of 'Mambo'

Occasionally, *guajeos* in the saxophones are combined with equally fast tremolo notes played by trumpets in the top register (an effect known as 'chiva' or 'shake'), very similar to the trumpet notes that were to characterize Pérez Prado's *mambos* in the 1950s. In October 1946, José Curbelo y su Orquesta played 'Botamos la pelota' (Let's Bounce the Ball), at New York's China Doll, a piece whose sections, *guajeos* and *tumbaos,* already sound like a distinctive New York *mambo* style (Example 6).



Example 6: Main *guajeo* of 'Botamos la pelota'

On 29 November, also in New York, Curbelo recorded the *guaracha* 'El Rey del Mambo' (The King of Mambo). In this piece, although the *guajeos* were considerably thinned down and were loosely related to the *guajeos* in *mambo*-style executed in Havana, there were many of the elements of New York *mambo*, such as faster tempo, harmonic modulations between some sections, and harmonic allusions to Tin Pan Alley and Broadway songs. In both pieces the leading vocals were sung by Tito Rodríguez and the *timbal* was played by Tito Puente. It is not known if there was any contact between Pérez Prado, Sacasas and Curbelo, and whether any mutual influences existed.

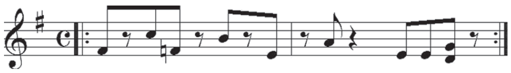
Cuban bandleaders filled their bands with Latin musicians (Cubans, Puerto Ricans and others), and occasionally recruited American musicians. From the outset, the *mambo* style was assimilated by non-Cuban musicians. Tito Puente (born in New York of Puerto Rican parents) played for Machito, Sacasas and Curbelo and with them shaped the New York style of *mambo*. Something similar happened with Tito Rodríguez, Noro Morales, Joe Loco and other Puerto Rican-born musicians.

Mambo also boosted the local New York music industry. It dominated Latin dance clubs such as China Doll, Madrid-Habana, La *Conga* and the legendary Palladium Ballroom, which was open from 1947 to 1966 and whose fame brought together Latino, black and white customers from different social classes, doing more for racial integration than 'any sociological theory' (Loza 2000, 10). Federico Pagani was one of the music's main promoters. Various artists recorded with the companies Coda and SMC (Spanish Music Company) owned by Gabriel Oller, while Machito recorded for the company Verne Records. With the success of *mambo* at its height, artists such as Tito Puente signed with international companies such as RCA Victor. Later, they were to be put aside in favor of Pérez Prado.

A *mambo* scene also developed in Los Angeles before the worldwide success of Pérez Prado. One of those who introduced it was Puerto Rican Ramón 'Moncho' Usera, an arranger for the Noble Sissle orchestra in New York. Usera distributed *mambo* arrangements among local orchestras during the second half of the 1940s (Delannoy 2001, 199–201).

Further Developments

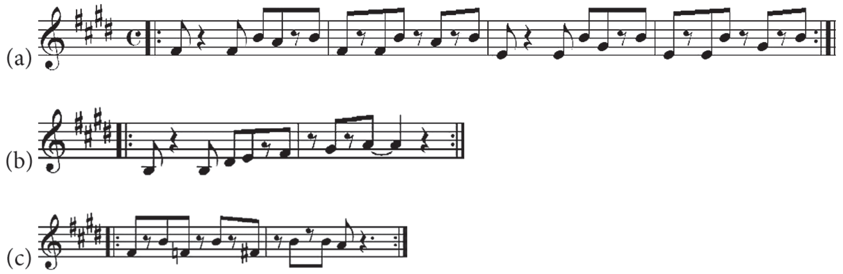
Meanwhile, in Havana on 29 October 1946, Bebo Valdés, with the orchestra of Julio Cueva and the voice of Cascarita, recorded his composition 'La rareza del siglo' (The Oddity of the Century), classified on the record label as a '*montuno beguine*,' in which he developed complex and dissonant *guajeos* (Example 7).



Example 7: Main *guajeo* of 'Rareza del Siglo'

On 20 November, also in Havana, Pérez Prado recorded the *guaracha* in mambo-style 'Son los bobitos' (They Are the Fools), and an instrumental piece for piano based on the style of orchestra *rumba* called 'Rumbambó' and 'Trompetiana.' The latter, since lost, is the first instrumental piece to be called a *mambo* (Díaz Ayala 2002: card 2033). With these recordings, Pérez Prado began a new process of experimentation that would be reflected in pieces such as 'Timba, timba,' 'Agony,' 'Rica' and 'Kuba-Mambo,' each of them complex and innovative.

Around October 1949 Pérez Prado moved to Mexico (Hernández 1986, 18). Before leaving Cuba, he reportedly recorded a demo with the *mambo* pieces 'Mambo caen' and 'So caballo,' but neither the registers nor the recordings of these pieces have been found. In Mexico, he assembled a new orchestra, modified the instrumental lineup and signed a contract with RCA Victor. In May 1949 he recorded the *mambo* pieces 'José' and 'Macome,' made the musical arrangements for the powerful Mexican movie industry of the time and even acted in some movies. Finally, when the record company adviced him to 'do more commercial stuff in the same style' (Pérez Prado in Hernández 1986, 18), he recorded 'Mambo No. 5' which would open the door to international success and set the prototype of *mambo* as a genre (Examples 8a, 8b and 8c).



Examples 8a, 8b and 8c: Main *guajeos* of 'Mambo 5'

This recording would be followed by many more, including some with Benny Moré. One particular hit, 'Cerezo rosa' (Cherry Pink), earned Pérez Prado a gold certificate from RCA Victor and remained in the *Billboard* charts for 26 weeks. The *mambo* 'Patricia' went on to sell more than 5 million copies and was used by director Federico Fellini in his film *La dolce vita*.

While the Mexican film industry was spreading *mambo* to the rest of Latin America, Pérez Prado was doing the same for the United States, alternating his residence between Mexico and the United States, where covers of his musical creations multiplied. The success of Sonny Burke's 'Mambo Jambo,' a cover of 'Qué rico el mambo' (Mambo is Great), was such that RCA moved Pérez Prado from their international division to the pop section (Pérez Firmat 2000, 101). At the same time, in Cuba, *mambo*-style dance was performed by bands such as the Conjunto Casino, Niágara, Sonora Matancera, the orchestras Hermanos Castro, Aragon, Benny Moré's Giant Band and Riverside, while the bands of Bebo Valdes, Pedro Jústiz 'Peruchín' Armando Romeu and Cachao played an instrumental *mambo* that was closer to jazz. In Mexico, along with Pérez Prado, other figures also rose to prominence, among them Mexican bandleader Luis Alcaraz and Cuban arrangers Arturo Nuñez and Juan Bruno Terraza. The latter wrote and arranged *mambos* in both Havana and New York styles.

Stylistic Characteristics

More than one attempt has been made to identify categories of *mambo*. Pérez Prado himself distinguished two types: *Mambo Kaen* which was slow and with elements of *son*, *danzón* and *guajira*, and *Mambo Batíri* which was faster and closer to *rumba*. Pérez Firmat (1994) proposed the following types of *mambos*: (1) pure *mambos*, (2) the inclusion of *mambo* sections in genres other than *mambo*, (3) *mambo* covers of songs, primarily *guarachas* and (4) *meta-mambo*: songs which celebrate *mambo* as a genre but are not in a *mambo* style.

In terms of structure, *mambo*-style *guarachas* from the 1940s (as previously described) have two clearly distinguished sections, the stanzas and the *montuno*. The latter is more animated and explosive than the first and features a repetitive chorus used responsorially. The syncopated rhythms called *guajeos* which appear in this part, generally played by the saxophones, are used by the piano, percussion and trumpets as the base for their improvisations, alternating between the choruses.

The *mambo* pieces composed by Pérez Prado from 1949 are different. They do not have the two well-distinguished sections and they move immediately to the syncopated *guajeos*. The climax is achieved by accumulation and repetition of notes in the high registers. The riff-like *guajeos* are repeated *staccatissimo,* rather than in a *cantabile* style, by the saxophones (occasionally trumpets). The trumpets search for the highest pitches, developing virtuoso effects – trills, tremolos (*chiva* or shake), flutter tonguing or *frulatti* (vertiginous rising gestures) and *glissandi*. The *chambola* or gradual accumulation of different brass instruments is common. The trombones (sometimes bass saxophones) develop pedals (low-pitched sounds sustained for a long period) and sudden, hard pitch attacks. The bass imitates the lines of the orchestral *rumba*. The harmony is generally simple with a succession of tonic and dominant chords. The frequent silences create a special tension.

According to Leonardo Acosta, Pérez Prado's orchestra uses only one trombone to make the changes of tempo and section and to make pedals, rhythmic accentuations and effects in the style of Duke Ellington's 'jungle jazz' of the 1920s and 1930s. Pérez Prado reduces the saxophone section to two altos, one tenor (instead of two) and a baritone, and uses them almost always in unison in the low register as a rhythmic-melodic base for the main melodies, which he gives to the trumpets. These are increased to five in number and are constantly used in unison in passages playing high and very high notes. Trumpets and saxophones join in polyrhythmic counterpoint together with percussion, bass (frequently in a 4-beat measure) and the piano. In the rhythm section, Pérez Prado introduced two congas instead of one, bongo, and *timbal* with cymbals, introducing more rhythmic versatility (Acosta 1983, 48–9; Acosta 2000, 166–9; Roy 2003, 100). Acosta concludes that, while jazz after the 1930s had tended to mix the sound of the different instruments more – something which is obvious in the music of Stan Kenton, Pete Rugolo and Hill Russo – Pérez Prado does the opposite, establishing different contrasting levels with two basic registers, one high from the trumpets and the other low from the saxophones, both in a constant counterpoint. The *mambo* sections also have a more melodic-rhythmic function than they have in jazz (Acosta 2000, 167–8).

Lyrics

Mambo is primarily an instrumental genre. Sung *mambos* are either *sons* or *guarachas* in a *mambo* style. As Pérez Firmat remarks, *mambo* lyrics show that the genre is 'laconic rather than lyrical, and repetitive rather than narrative' (2000, 96).

Style of Dance

The development of an original style of dance with its own series of steps and choreographies helped *mambo* to take shape as an independent genre. Roderico 'Rodney' Neyra, choreographer of the famous Cuban cabaret Tropicana, was in charge of the creation and spread of *mambo* dance through the participation of his dance group Las Mulatas de Fuego in Latin American films and New York shows in the early 1950s. *Mambo* is a couple dance in which couples alternate performing steps together and alone. Some of the first important steps were *mambeo*, *motoneta*, *tembleque*, *paseo*, *puntilla*, *palmada* and *jelengue* (Barral 1950). The frenetic *mambo* scandalized conservative Latin American societies. In Peru and Colombia the Church threatened to excommunicate those who practiced it. *Mambo* and rock 'n' roll were rival dances in ballrooms and parties toward the end of the 1950s and into the 1960s, drawing a clear line between two generations.

New York *Mambo* Style

New York *mambo* has a faster tempo and is harmonically more complex, with altered chords, harmonic progressions in the style of the songs of Tin Pan Alley, Broadway shows or Hollywood musical movies of 1930s and 1940s, with modulations between sections. *Guajeos* have the more pronounced swing of jazz. Elements of Pérez Prado's style, such as the *guajeos*, *chambolas* and the shake or *chiva*, are incorporated. Particularly characteristic are the *montunos* in the style of the famous piece 'Tanga' by Mario Bauzá, in which a *tumbao* (*ostinato*) on the bass and another one on the piano remain on the same chord on which the brass instruments improvise or execute riffs. Contemporary documentaries show young people dancing *mambo* in the style of swing and even singers such as Tito Rodríguez making steps similar to more recent break-dance.

Mambology

The study of *mambo* raises some very controversial topics. First, there is the debate about its creation. This began in the 1950s when Arsenio Rodríguez proclaimed himself as the real author of the 'diablito,' also called the 'syncopated guajeo,' featured in *mambo*. In the 1970s, Odilio Urfé (1979) and Maria Teresa Linares (1974) vindicated the role of the *danzón* 'Mambo' by Orestes López in the creation of the genre. In an interview in the 1980s, Pérez Prado called himself the sole creator of *mambo* and Bebo Valdes has since fueled the controversy by claiming that many Cuban musicians were already playing in a *mambo* style in the 1940s (Salazar 2005).

None of these authors denies either the originality or the value of Pérez Prado's music. What seems to irritate them is Pérez Prado's choice of a word full of meaning for them as the name for his music. Acosta has noted that the point of the debates is that it has mixed different concepts denoted by the same word (2004, 90). In fact, as has been noted and we have seen, the term 'mambo' can refer to very different things. However, the definition of *mambo* as a music genre is very complex. As Pérez Firmat has observed, 'when looking over literature about mambo [from the 1950s], it is clear to see that nobody knew exactly what it was or how it should be danced' (2000, 104).

This debate is also the result of the methodology used by Cuban scholars, who have worked with the models of a positivist approach to political history, seeking to establish linear and one-way stories marked by milestones with exact dates and 'great men' who change the course of history and whose facts are explained in terms of simple causality or by looking for intentionality.

Cuban scholars have devoted themselves arduously to proving and documenting the Cuban origin of *mambo*. Despite the fact that they have written about some of the Cuban musicians who worked in the United States (specially Machito and Bauzá), the study of New York *mambo* style has been neglected, as has the work of other important Cuban musicians such as Curbelo, Sacasas and Campo and their relationship with the style of Pérez Prado. US scholars, on the other hand, do not deny the Cuban origin of *mambo* but consider Pérez Prado's version to be a commercial and degraded one when compared to New York *mambo*, which they regard as more 'genuine' and 'artistically accomplished' (Roberts 1999, 127–8; Loza 2000, 51–2). Meanwhile, specialists within Cuba have tended to limit their view of music that is genuinely Cuban to that which developed inside the country, despite the fact that Tito Puente, at the request of Mario Bauzá, was officially recognized by the government of Fulgencio Batista in 1957 as one of the greatest performers of Cuban music in the last 50 years (Loza 2000, 18). As can be seen, mambology is not free of political dispute.

Behind all these arguments, we find more complex problems involving Cuban identity itself. Despite the fact that *mambo* was created before the Revolution of 1959, many debates about it have been enlivened by what Rafael Rojas (2006, 14) has called 'the dispute over national legacy, and over the symbolic heritage of Cuba,' between the Cubans who live on the island and the Cubans who live abroad, especially in the United States. According to Pérez Firmat, *mambo* is a 'model of hybrid ingenuity and intercultural freshness,' clearly Cuban-American in that it shares the identity signs of a generation of Cubans who were born in Cuba but grew up in the United States. Pérez Prado belongs to 'the Cuban tradition of movement, of "eviction".' He is 'another of those Cubans for whom the lack of their "own space" becomes a condition for their creativeness' (Pérez Firmat 2000, 87, 100, 113).

A number of excesses have marked this struggle. One of them is Cuban-American actor-director Andy Garcia's documentary *Cachao, como su ritmo no hay dos* (Cachao, His Rhythm Is Like No Other) (1993), where it is stated that Cachao is the creator of *mambo*. Cuban musicologists constantly deny this kind of information and put a huge effort into vindicating the Cuban origin of music commercially spread from the United States such as salsa. However, considering the intense Cuban diaspora of the recent years and its varied ways of cultural production, it is necessary to understand different styles of *mambo* developed both inside and outside Cuba and based on the musical fashions of Havana as one of the many forms of Cuban identity created simultaneously inside and outside the natural borders of the island (Rodríguez Rivera 2005, 56).

Filmography

Fictional and Musical Films

[Note: The dissemination and popularization of *mambo* via fictional and musical films was an important element in its history. Dramatic films produced in Mexico during the 1950s contained presentations of musicians and songs that would become reference points in Latin America and beyond. This list includes some of the most important of the films involved in spreading *mambo*.]

A La Habana me voy, dir. Luis Bayón Herrera. 1951. Cuba-Argentina. 104 mins. Musical film.
Al son del mambo, dir. Chano Urueta. 1950. Mexico. Musical film.
Amor perdido, dir. Miguel Morayta. 1951. Mexico. 101 mins. Musical film.
Baile mi rey, dir. Roberto Rodríguez. 1951. Mexico. Musical film.
Cha-Cha-Cha-Boom, dir. Fred F. Sears. 1956. USA. Musical Film.
Coqueta, dir. Fernando A. Rivero. 1949. Mexico. 87 mins. Musical film.
Del can-can al mambo, dir. Chano Urueta. 1951. Mexico. 107 mins. Musical film.
La dolce vita, dir. Federico Fellini. 1961. Italy-France. 174 mins. Drama.
La marca del zorrillo, dir. Gilberto Martínez Solares. 1950. Mexico. 105 mins. Musical film.
Locura musical, dir. Rafael Portillo. 1958. Mexico. 69 mins. Musical film.
The Mambo Kings, dir. 1992. Arne Glimcher. 1992. USA. 104 mins. Musical film.
Perdida, dir. Fernando A. Rivero. 1950. Mexico. 91 mins. Musical film.
Perez Prado and His Orchestra, Will Cowan. 1952. USA. 15 mins. Musical short.
¡Qué rico el mambo!, dir. Mario C. Lugones. 1952. Argentina. Musical film.
Rhythm of the Mambo, dir. Will Cowan. 1949. USA. 15 mins. Musical short.
Thrills of Music: Miguelito Valdes and Orchestra. 1949. USA. 10 mins. Musical Short.
Tivoli, dir. Alberto Isaac. 1975. Mexico. 127 mins. Musical film.
Una gallega baila mambo, dir. Emilio Gómez Muriel. 1952. Mexico. Musical film.
Una gallega en La Habana, dir. René Cardona. 1955. Mexico-Cuba. 108 mins. Musical film.

Documentaries

Benny Moré. Hoy como ayer, dir. Ileana Rodriguez. 2003. Cuba.
Cachao, como su ritmo no hay dos, dir. Andy García. 1993. USA. 109 mins.
Conozca Cuba, Mambo, dir. Jesús Dámaso González. 2007. Cuba. 24 mins.
From Mambo to Hip-Hop: A South Bronx Tale, dir. Henry Chalfant. 2006. USA. 55 mins.
Machito: A Latin Jazz Legacy, dir. Carlos Ortiz. 1987. USA. 58 mins.
Mambo, dir. Yves Billon and Juan Condé. 2003. France. 52 mins.
Mambo: Homenaje a Damaso Pérez Prado, dir. Rafael Baldwin. 1989. Mexico.
Nosotros, la música, dir. Rogelio Paris. 1964. Cuba. 66 mins.
The Palladium: Where Mambo Was King. A Latin Music Odyssey, dir. Kevin Kaufman. 2002. USA. 120 mins. TV Documentary.
Pérez Prado las número uno. 2005. USA. DVD compilation of archival footage from television and other sources.
Yo soy, del Son a la Salsa, dir. Rigoberto López. 1996. Cuba-USA. 100 mins.

RUBÉN LÓPEZ-CANO

Mangue

The term *mangue* generally is used to refer to a musical scene that emerged in Recife, Pernambuco (located in northeastern Brazil), in the early 1990s and became popular for fusing local folk music and culture with global musical styles. *Mangue* was not just a musical scene, but also a distinct cultural manifestation. Originally called *mangue bit*, whereby '*mangue*' referred to the vast mangrove swamps of Recife, and '*bit*' or '*beat*' highlighted the influence of technology and electronic music, it later became known as the '*mangue* movement.' The movement's architects were members of a small group of musicians and journalists who were responding to Recife's debilitated socioeconomic situation as well as to the city's lack of cultural venues and creative opportunities.

The state of Pernambuco has long remained at the margins of the nation's socioeconomic development and identity, suffering from droughts, widespread poverty and violence. Once the economic center of Brazil, the North-east's economy began to decline in the 1830s due to falling sugar prices. This weakened position allowed southern cities, such as Rio de Janeiro and São Paulo, to gain economic dominance and thus position themselves in the nation's consciousness as the more 'civilized' region. By the 1990s, Recife had the highest unemployment rate in the country and an institute of population studies in Washington DC considered it to be the fourth worst city to inhabit in the world, with over half of its residents living in slums and flooded swamp areas (cited in Galinsky 1998). Despite the region's economic problems, Pernambuco is known for its rich and varied folk music culture, which blends African, indigenous and Iberian influences. The *mangue* movement aimed at rejuvenating Pernambuco's diverse regional culture, while inspiring Pernambucans to become aware of contemporary international musical styles.

Predecessors of *Mangue*

The late 1960s *Tropicália* movement, headed by Caetano Veloso and Gilberto Gil, was an important precursor to the *mangue* movement. *Tropicália* emerged at a time when Brazil was embarking on the most repressive period of its twenty-year-long military dictatorship (1964–85). The *Tropicália* artists protested against the country's political predicament and nationalist stance by ironically juxtaposing traditional Brazilian music and art with global artistic trends and musical styles (see Dunn 2001). The idea of anthropophagism, or cultural cannibalism, spurred on by Oswaldo de Andrade's 1928 'Manifesto Antropófago' (Cannibalist Manifesto), 'urged artists to essay all themes and to incorporate an international repertoire of styles, assimilating them in the local vernacular in a practice of cultural devourment [sic]' (Harvey 2001, 107). The Cannibalist Manifesto was a major source of inspiration for the Tropicalists and *mangue*.

The Tropicalists rejuvenated the careers of formerly popular northeastern musicians, such as Luiz Gonzaga and Jackson do Pandeiro, by using elements of northeastern Brazilian music as part of their musical palette. The yearlong *Tropicália* movement widened the range of musical styles accepted within Brazilian commercial popular music and inspired the *mangue* artists, as well as other Brazilian artists, to begin negotiating their regional, national and international cultural influences into new musical genres.

Several national factors contributed to the emergence of *mangue*. In the 1980s the military government began to ease its censorship laws. Imported records became more available and foreign influences inspired underground punk, rap and funk movements, as well as a growing mainstream rock scene, which turned the nation's attention even further away from the North-east and toward the rock scene's locales in southern Brazil (Teles 2001). By 1991 and 1992, however, Recife benefited from this growing rock scene through the arrival of MTV and Rádio Rock, one of Brazil's biggest rock radio stations.

The Emergence of the *Mangue* Movement

Although many people played a part in the emergence of *mangue*, the main provocateurs were Chico Science (of Chico Science & Nação Zumbi), Fred 04 (of Mundo Livre S/A) and the journalist Renato Lins. Chico Science & Nação Zumbi's (CSNZ) project 'symbolically involved planting a satellite antenna in the mud of the region [Recife is built on swamps] and picking up signals from the rest of the world' (Galinksy 1998, 28). The band quickly became popular for fusing rock, rap, soul, funk, ragamuffin dancehall, electronic dance music and punk with folk styles specific to the North-east such as *maracatu nação*, *maracatu rural*, *embolada*, *côco* and *ciranda*.

Mundo Livre S/A was formed by Fred 04 (Fred Rodrigues Montenegro) in 1984. The idea behind the group was to create a kind of Brazilian new wave music, blending *samba* inspired by Jorge Ben (a popular Brazilian musician who mixes *samba*, funk and soul) with Sex Pistols-inspired punk and electronic music. The band never played for more than 50 people until 1987, shortly before Fred 04 and Chico Science met and decided to combine efforts to create a new musical scene.

In 1991 *mangue* began to be referred to as a 'movement' when CSNZ distributed a manifesto, written by Fred 04 and Renato Lins, to the Brazilian press. Both Fred 04 and Renato Lins had been trained as journalists and they admired the complex discourse of Malcom McLaren, the producer of the British punk band The Sex Pistols. The *mangue* manifesto, entitled *Caranguejos Com Cérebro* (Crabs with Brains) (04 and

Lins 1995), outlines the movement's goals and motivations. It is divided into three parts: *Mangue* – The Concept, *Manguetown* – The City and *Mangue* – The Scene.

The first section of the manifesto stresses the importance of Recife's mangroves as a basic link to the ocean's food chain and points out that, although they are usually associated with 'filth and rottenness,' they are 'among the most productive ecosystems in the world' (04 and Lins 1995). The second section explains that the estuaries of six rivers surrounding Recife, due to the expansion of the city, are on the brink of extinction, stressing that bad planning and economic and cultural stagnation have led to misery, urban chaos and overall poverty. The final section describes *mangue* and its performers (primarily CSNZ, Mundo Livere S/A and Lamento Negro). This final section of the manifesto serves as a call to action for the young people of Recife, urging that the city needs to be reinvigorated and that '*mangue* boys' and '*mangue* girls' need to 'inject a little energy in the mud and stimulate what still remains of the fertility in the veins of Recife' (04 and Lins 1995).

Musical Structure and Style

The music associated with the *mangue* movement is varied and is not as defined by musical characteristics or style as it is by common beliefs, friendships and a shared ideology based on diversity. *Mangue* groups draw on a vast array of musical styles – some lean more toward international rock, while others draw more from local or national genres. However, they share the postmodern juxtaposition of technology and global culture with regional folklore – a juxtaposition often accomplished by using folk instruments in conjunction with modern instruments (e.g., samplers, electric instruments and traditional percussion) and mixing contemporary trends with regional traditions and styles through visual presentation. For example, Chico Science often wore Ray Ban sunglasses and a *chapeu de palha* (a straw hat typical of fishermen in the region), while his dance style borrowed from the movements and dress of the *caboclo de lança* (a character in the *maracatu* rural folk performance) and hip-hop.

Mangue's deconstruction of the barriers between traditional and global musical currents in Recife was evident in their blending of regional rhythms and singing styles. CSNZ mixed *maracatu* (a northeastern Brazilian carnival musical style) drumming and *embolada* (a traditional Northeastern Brazilian musical-poetic form) with funk rhythms, rapping and elements of thrash metal. Mundo Livre S/A blends samba with tropical beats, electronic samples and scratching.

Conclusion

In February 1997 Chico Science's career came to a sudden end in a fatal car crash. Even though *mangue* bands received almost no government support in the early 1990s, after Chico's death the State praised him in highly prominent newspapers for representing the essence of Pernambuco (Sharp 2001). In the summer of 1997 Central Park Summer Stage in New York organized a Brazilian Music Festival dedicated to Chico Science. The festival lasted 5 days and featured several groups from Recife's scene: Cascabulho, which plays *forró* and other regional styles; Mestre Ambrósio, which fuses folk and pop music; and the folkloric Banda de Pífanos Dois Irmãos do Caruaru. In addition, in 2000 Recife's municipal government sponsored a program called Acorda Povo that contracted bands such as Nação Zumbi (without Chico) and Faces do Suburbio to visit poor neighborhoods and speak to high-school students about breaking out of poverty (Sharp 2001).

CSNZ's work, along with the work of other *mangue* groups such as Mundo Livre S/A, Cascabulho, Faces do Subúrbio, Devotos, Querosene Jacaré, Eddie and Mestre Ambrósio, 'allowed the interested observer to rethink what is old and new, what is traditional and modern, what is local and global, and what is regional and foreign' (Galinsky 1998, 90). *Mangue* inspired the use of 'alternative' global genres, a general willingness to experiment, and a minimizing of the rigid separation between 'modern' and 'traditional' that had previously dominated the Pernambucan musical scene. In addition, *mangue* groups helped increase the exposure of Pernambucan folk artists such as Mestre Salustiano, Dona Selma do Côco and Zé Neguinho do Côco.

Mangue was not only one of the most popular trends to emerge from Brazilian popular music since *Tropicália*, but it was also a movement that created a surge in northeastern pride. Prior to *mangue* it was rare to see northeastern musicians reach international, or even national, success. *Mangue* inspired many other '*mangue*-style' groups, such as Cordel de Fogo Encantado, Comadre Florzinha and Chão e Chinelo. Other Pernambucan groups, such as Maciel Salú e o Terno do Terreiro, Renata Rosa, Tonino Arcoverde, Siba e a Fuloresta de Samba, Tiné, Caçapa, Juliano Holanda, Hugo Linns, Alessandra Leão, Orquestra Contemporânea de Olinda and many others, have shared *mangue*'s fearlessness in embracing musical diversity, but have now turned even more to local styles as the primary basis for their music.

Mapalé

The *mapalé* is a dance and musical genre characteristic of the Caribbean coastal region of Colombia. As a cultural practice, *mapalé* is said to have originated as early as the 1600s among slaves from the western coast of Africa – Congo and Guinea, in particular – who danced and played the music while anglers fished for mapalé, a specific kind of fish from which the music took its name, and cleaned and sorted their catch. Fast and frenetic movements characterize the dance, which represents an erotic courtship between male and female dancing partners, who raise their feet intermittently, sway their hips back and forth and side to side and agitate their arms at high speed. Traditionally, the women take the men out to dance and lead through the performance, which may involve rapid gyrations and nimble maneuvers, as well as an occasional circle dance of couples. Individual movements are supposed to represent those of a fish out of water. Throughout the dance, sounds of drums, clapping of hands and entrancing voices – to the tune of '*¡El mapalé! ¡El mapalé!*' – accompany the couples.

The music mixes the sound of native *gaitas* (flutes) with African rhythms. In fact, the early practice of *mapalé* suggests the union of Colombian indigenous people and Afro-Colombians, sharing a similar milieu – in terms of setting and performance ensemble – with *cumbia*, the most popular Colombian music genre. According to Colombian historian Joaquín Posada Gutiérrez, this merging might have taken place as early as 1865 (1929, cited in List 1991). The main musical feature of *mapalé* is the constant juxtaposition of ternary and binary meters, usually in minor keys and with some modal elements. The typical *mapalé* ensemble involves a *gaita hembra* (a female flute, with five fingerholes), which carries the melody; a *gaita macho* (a male flute, with a single hole), which provides the harmony; and, as percussion instruments, maracas, *tambor mayor* (a big, leading drum) and *llamador* (a smaller drum, which keeps the beat). As in *cumbia*, a single musician plays the *gaita macho* and maracas at the same time. While the flutes correspond to the Amerindian heritage, the maracas and drums embody an African legacy.

During the 1930s and 1940s *mapalés* were recorded as part of the ballroom *rumba* craze. In the 1950s, during the golden age of Colombian tropical music *orquestas*, elaborately arranged versions were recorded and performed by masters of the scene, such as 'Robertico,' a *mapalé* composed by renowned bandleader Francisco 'Pacho' Galán and sung by Olguita Fuentes in a 1951 recording of the Emisora Atlántico Jazz band for Discos Tropical. From the 1970s on, with the growing popularity of more stylized versions of tropical music and other Caribbean genres, the *mapalé* became mostly the staple of highly trained dancers and *ballets folklóricos*. In the early twenty-first century, it is highly associated with tourist settings such as Cartagena de Indias or the port of Barranquilla during the time of Carnival.

As a musical genre, *mapalé* has become the source of considerable academic interest. Nonetheless, as a result of its clear association with a lengthy African tradition, as a cultural product it has been objectified and relegated to the status of musical curiosity, and is seldom practiced at a massive societal level.

HÉCTOR FERNÁNDEZ L'HOESTE

Maracatu

A *maracatu* is an Afro-Brazilian performance group and popular organization rooted in the north-east of Brazil, mainly in the neighboring cities of Recife and Olinda in the state of Pernambuco. For these groups, music and dance are very important, but a proper definition of the term should take into account religious and festive aspects as well (the latter related mainly to Carnival). A *maracatu* performance – which has been characterized as a dramatic dance – is organized as an emulation of a royal court, complete with a king, a queen, princes, princesses and other personages typical of a seventeenth- or eighteenth-century European court, all in sumptuous costume, as well as dancers and a group of musicians (the latter in simple dress and bare feet). A typical performance therefore takes the form of a procession, not in private or on a stage, although stage renditions – involving people who are not necessarily from traditional *maracatu* organizations – have been quite common since the 1990s. The term '*maracatu*' also refers to a Brazilian popular music song genre from the 1930s to the 1960s which was inspired by the music of the *maracatus*.

There is a second kind of popular grouping, also called *maracatu*, but whose music, dance, instruments, thematic material and overall organization are totally different: the *maracatu rural*, or *maracatu de baque solto*, associated with sugarcane workers and very popular in the Zona da Mata Norte region (in Recife's northern and western hinterlands). The role of this type of *maracatu* in popular music has been far less important. Practitioners and aficionados of both types will talk simply of 'maracatu.' In this entry, the term *maracatu*, used without qualifiers, denotes the first type. When it is necessary to distinguish between the two, the first type is referred to as *maracatu nacao* or *maracatu de baque virado*.

Maracatus have been associated with the Africans brought to Brazil during the period of slavery (1530–1888), and their descendants, since the first documented reference to them in 1851 (MacCord 2005, 262). Their origin is generally attributed to the coronation ceremonies of slave kings known to have taken place in Brazil since the seventeenth century. The term *maracatu*, whose etymology is unknown, appears not to have been used, at first, by the groups themselves. Instead, it was widely used with a pejorative connotation meaning a noisy group of low-class black people. This use of the term was documented through the second half of the nineteenth century.

Maracatu's instrumental ensemble, the *baque* (as in *baque solto* and *baque virado*), includes *bombos* or *alfaias* (two-headed cylindrical drums), *caixa* (a shallow snare drum, also known as *tarol*), *gonguê* (a large metal bell with a handle and separate beater) and *mineiro* (a closed cylindrical shaker filled with beads, generally known in Brazil as *ganzá*). Some innovative *maracatus* add other instruments such as *abê* (a shaker made of a calabash with a net of beads on the outside) and *timbal* (or *atabaque*: a single-headed conical drum).

The songs of *maracatus* are called *toadas*. The traditional structure of the *toada*, which continues to be widely practiced, is responsorial, with one or two verses sung by a soloist with an equivalent answer by a chorus. Traditionally, the chorus is performed by the *maracatu*'s female dancers, stock characters known as *baianas*, though the responses may also be given by a larger section of the performers or by a group of stronger singers only. The melodies are built upon two rhythmic cycles (which can be written down as two 4/4 bars) sung by the soloist, and then repeated or completed by the chorus in phrases of the same length; tonic-dominant harmonies are often implicit in the melodic organization, and the ambitus rarely goes beyond one octave. Some recent *toadas* have emphasized greater development of the soloist's part. Lyrics are generally self-referring, frequently alluding to the coronation of the kings and queens and the glories of one's *maracatu* group.

In the 1930s, songs referred to as '*maracatus*' began to be composed explicitly for recording and radio. These songs, which only achieved minor success, were vaguely inspired by the *toadas* and rhythms of *maracatu*, but composed and performed by professionals not involved in *maracatu* groups. In the 1960s, *maracatu* as a popular music genre went out of fashion, although some national hits from this period did refer to *maracatu* as a sign of living tradition in their titles or lyrics, such as 'Mas que nada'(No Way!) (Jorge Ben) and 'Maracatu atômico' (Atomic Maracatu) (Gilberto Gil).

In 1992 the group Nação Pernambuco's first CD, *Batuque da Nação*, was released. The CD, recorded and released in Recife, was the first time *maracatu* music in the traditional style, with call-and-response songs and percussion orchestra, had ever been recorded. Also in the early 1990s *maracatu* was incorporated into recordings associated with the *mangue* artistic movement, this time by bringing sonic elements of *maracatu nação* and *maracatu rural*, such as the use of the *alfaia*, into an overall rock-band setting and approach. Visual and verbal elements used by Chico Science and Nação Zumbi (CSNZ), the leading *mangue* band, include references to *maracatu*. Clothing worn by Chico Science in his performances refer to the *caboclo-de-lança*, the main stock character in *maracatu rural*. Some CSNZ lyrics mention widely known *maracatu* performers; the use of the word '*nação*' ('nation') in the group's name is a direct reference to *maracatu nação* groups.

Nação Pernambuco was formed in 1989 by middle-class musicians and dancers who had developed an interest in traditional culture and perceived *maracatu* as a means of participating directly. Many other *maracatu* groups with strong middle-class participation were set up after that date. This development took place following a general climate of redemocratization in Brazil in the late 1980s, as a consequence of which there was a generalized renewal of interest in local traditions. The burgeoning of new *maracatu* groups in the late 1990s was also probably influenced by the previous success of the *blocos afro* groups (black carnival groups) in the neighboring northeastern state of Bahia. In addition, the success of CSNZ sparked an interest among many of Recife and Olinda's young people in participating in *maracatu*. Partly due to these developments, longstanding *maracatus* began releasing their own CDs, including traditional and new *toadas*. Since the late 1990s, groups taking traditional *maracatu* music as a model have been established in other parts of Brazil, as well as in other countries, especially in Europe and North America.

CARLOS SANDRONI (TRANSLATED BY MONA-LYNN COURTEAU)

Marcha (Marchinha)

In discussing *marcha* (march) as a musical genre in Brazil, a range of contexts must be covered, from expressions of religious rituals from Afro-Brazilian culture, such as *Congados*, to the huge national festival, Carnival. The time period spanned by this genre is also very extensive; for example, the Carnival *marcha*, the main form of the genre when it comes to popular music, dates from the late nineteenth century and stems from marches performed by military bands, very prevalent in the eighteenth and nineteenth centuries. The Carnival *marcha*, which is mainly known by the diminutive form *marchinha*, is the principal focus of this entry; however, its other contexts must be noted at the outset, while bearing in mind that if there is any one characteristic that unifies them all, it is the use of duple meter.

The Reign of Our Lady of the Rosary or *Congado* was developed from within the Brazilian slave system as part of African rituals, values and knowledge. The musical code of the festivities thus derives from 'transcreative [processes] of cultural interaction, from the elements and concepts of Bantu musical cultures, remade in Brazilian soil through contact with Europeans, with other black cultures and also with the local indigenous ones, in a state of constant evolution throughout its historical path' (Lucas 2002, 18).

In her work, carried out in Minas Gerais, Lucas (2002) presented the *marcha grave* (deep march), *marcha lenta* (slow march), *dobrado* (double), *marcha dobrada* (double march), *marcha repicada* (ringing march) and *dobrado compassado* (measured double). According to the author, the *marcha lenta* and the *marcha grave do Congo* have almost identical basic rhythmic structures, and are only distinguished by the greater likelihood of the latter to include *repiques* (Brazilian tom-toms). The other *marchas* vary in the foundational patterns sounded by the snare drums. Differences also exist in the ritual contexts and spaces in which one or the other is performed.

Marcha is also one of the rhythms from the hymns of Santo Daime, a religion involving the consumption of psychoactive brews of the *ayahuasca* plant. There are very popular *marchas juninas* (June marches) in Brazil, which enliven the festivals of St John, St Anthony and St Peter with their themes of declarations of love, bonfires, balloons and typical festival foods.

However, the type of *marcha* that is best known as a musical genre in Brazil is that associated with Carnival. Carnival groups or associations also have their origin in religious parades. The *ranchos*, modest Carnival clubs or associations made up of humble people that made their first appearances in the Carnival of 1873, existed before that time and performed in parades celebrating *Dia de Reis* (Epiphany), 6 January, linked to the Christmas cycle. By virtue of having their own lyrics and music, they eventually created a new musical genre, cadenced and with great melodic richness: the *marcha-rancho.*

Many publications state that the first *marcha* was 'Ó abre alas' (Oh Open Wings) by conductor Chiquinha Gonzaga, created for the Carnival group *Rosa de Ouro* (Golden Rose) in 1899 and inspired by the rhythmic cadence of *ranchos* and *cordões* (both terms meaning Carnival groups). Since then, the *marchas*, or *marchinhas*, became popular with the public. In duple meter, with the accent on the strong (first) beat, they were initially slower so that the dancers could move to the rhythm, and have accelerated over time.

The Brazilian Carnival *marchas* derive from popular Portuguese *marchas*, which were very successful in Brazil until 1920. The songs 'Vassourinha' (Little Broom) (1912) and 'A baratinha' (The Little Cockroach) (1917) were particularly famous. The Carnival *marchas* share with these Portuguese *marchas* the duple meter of the military marches (though at a faster tempo), simple, vibrant melodies and spicy lyrics full of double meanings.

It is worth noting the role that military bands played in the history of popular music in Brazil, which partly explains the great impact of the genre. Although not well researched, bands from military corps were formed as of the nineteenth century. Musicians enjoyed prestige within their military organizations, which helped to attract them and contributed to the strengthening and perfecting of the activity. According to Tinhorão (2005), the bands of the National Guard – a paramilitary organization under the responsibility of the major landowners, created by act of law on 18 August 1831 – were the first to include in their repertoire, in addition to *marchas* and *dobrados*, classical and popular music, in competition with black Brazilian bands, who were the only ones who existed until then. With the rise in status of the military bands, 'hundreds of musicians of popular origin' had the opportunity to make a living from music, creating instrumental groups and musical genres that had a significant influence upon popular Brazilian music, including the *frevo* and the Carnival *marcha*. Carnival processions during the second half of the nineteenth century were also marked by the appearance of political criticism, which would characterize these new *marchas* as urban chronicles.

In Rio de Janeiro, Eduardo Souto, Freire Júnior and Sinhô became known as composers of Carnival songs, with Carmen Miranda, Almirante, Mário Reis, Dalva de Oliveira, Silvio Caldas, Jorge Veiga and Black-Out as performers, throughout the mid-twentieth century. They also performed the compositions of João de Barro, Braguinha and Alberto Ribeiro, Noel Rosa, Ary Barroso and Lamartine Babo. The last great *marchinha* composer was João Roberto Kelly. The *marcha*'s form is verse-chorus with an instrumental introduction.

The Carnival *marcha* or *marchinha* was part of the Brazilian Carnival from the 1920s to the 1960s, when it began to be replaced by the *samba enredo*. As the role of the *marcha* in Carnival was declining, the sophistication of the *marchas-rancho* began to attract the attention of *bossa nova* composers, culminating in compositions such as 'Manhã de Carnaval' (Morning of Carnival) by Antônio Maria and Luis Bonfá, 1959;

'Marcha da quarta-feira de cinzas' (Ash Wednesday *Marcha*) by Carlos Lira and Vinícius de Morais, 1963; 'Noite dos mascarados' (Night of the Masked) by Chico Buarque de Holanda, 1967; and 'Máscara negra' (Black Mask) by Hildebrando de Matos, 1967.

Since the turn of the twentieth century there has been a revival of the Carnival *marcha* genre in several cities, with festivals organized especially for the genre in the manner of *marcha-rancho* and *marchinha.* Rio de Janeiro has seen the founding of Carnival associations using the old *ranchos* as a template, along with the compositions of new *marchas* to enliven the parade.

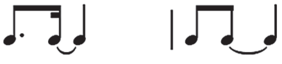
Marcha Camión

Marcha camión is one of the rhythmic patterns characteristic of the *murgas*, popular musical-theatrical ensembles in Montevideo, Uruguay, in their open-air performances during the long Carnival season (see Example 1).



Example 1: Basic pattern of the contemporary *marcha camion*

The term '*marcha camión*,' which literally translates as 'truck march,' is of recent origin. It is a reference to the vehicles (traditionally trucks, though these have given way to buses) used by *murga* groups to travel to and from the *tablado* (outdoor performance stage) for their performances. Rendered by the percussion instruments (*bombo* [bass drum], *redoblante* [snare drum] and *platillos* [clash cymbals]), the rhythm is distinctive and easily recognized.

After a long period in which the *murga* was seen as suitable for Carnival contexts but not for extra-Carnival ones, the *marcha camión* rhythmic pattern began to appear in popular songs. This happened in the late 1960s, and the novelty was introduced, paradoxically, by non-Montevidean musicians (Los Olimareños, followed by El Sabalero). As part of the new popular song movement of the late 1970s in Uruguay (the generation of 1977, involved in the resistance against the powerful dictatorship of the time), young songwriters adapted the *marcha camión* rhythm of the *murga*'s percussion trio to the guitar (the first recorded example being 'Cometa de la farola' [La Farola's Kite – a reference to a Uruguayan football club] by Jaime Roos [1977]). In this way, a model was gradually established for a renewed form of *marcha camión*: a creative modification of the rhythmic pattern for use by the guitar and other instruments, and a new pattern of popular song that could interact with *candombe* (Afro-Uruguayan drumming and singing, which was also being transferred to popular song at the time) and with rock. Other elements of the *murga*, such as the particular nasal tone of the voices, were incorporated into extra-Carnival popular song contexts only at the end of 1985, 8 years later. The *murga* choir had been introduced earlier, but without that particular characteristic.

The *marcha camión* seems to have a connection with the Afro-Montevidean culture. The link is so strong that often the audience confuses the concepts of *murga* and *candombe*, and the confusion is so pervasive that some songs are designated indiscriminately with both names. Sometimes composers or performers take advantage of this confusion, such as in the song 'A mi gente' (To My People) by José Carbajal, that has been sung in both *murga* and *candombe*. In spite of this, it cannot be said that the *murga* originated in *candombe*. The reasons are many. One is that the corporeality of the *murga* percussion is very different from that of the *llamada* (call) of the barrel-shaped drums of the Afro-Uruguayan tradition (which are of three sizes and interact polyphonically), the basis for the *candombe*. Another is that the *marcha camión* is not the *murga* as a whole. A third reason is that the *murga* rhythm is fundamentally a particular inflexion that permeates very diverse musical meters, a thing that does not happen with the *candombe*. Fourth, from different testimonies it can be deduced that *murga* ensembles originated in the lower classes but had racist or para-racist undertones. Black people – who have for decades been the almost unique protagonists of the *candombe*, not always of their own volition – were not accepted as members of the *murgas* until comparatively recent times. It seems that these recent times yielded a *murga* more influenced by the *candombe*, different from the *murga* of earlier times.

Since the early 1980s the *marcha camión* has become a very popular rhythmic pattern known simply as 'ritmo de *murga*' or simply *murga* and, from the 1990s onward it began to be adopted also by Argentinian musicians.

CORIÚN AHARONIÁN

Marinera

The *marinera* is a music and dance genre from coastal Peru, considered to be the national dance of that country. The genre traces its history back to the *zamacueca*, an immensely popular couple dance featuring European, African and Amerindian musical influences that originated in Peru and flourished in the form of regional variants in many parts of South America during the nineteenth century. By the 1860s, a Chilean variant known as the *chilena* or *cueca* was the most prevalent type of *zamacueca* in Peru. After the War of the Pacific (1879–83) and the Chilean occupation of the city of Lima, the name of the dance was changed to *marinera* in honor of the Peruvian navy and it was declared the national dance of Peru.

The first composition formally labeled as a *marinera* was 'La Concheperla,' with lyrics by literary figure Abelardo Gamarra 'El Tunante' (1850–1924) and music by his associate José Alvarado. The first notated rendition and piano arrangement of 'La Concheperla' was created shortly thereafter by 13-year-old Rosa Mercedes Ayarza de Morales (1881–1969), who went on to become a noted scholar of Peruvian coastal genres. In the decades that followed, nationalist sentiment helped disseminate the *marinera* throughout the country and a number of regional styles began to take shape. At the beginning of the twenty-first century, the *marinera* is found in a variety of different performing contexts ranging from family or neighborhood-based festive occasions such as birthday parties and weddings, to nightclub performances and recordings by professional musicians, to more institutionalized folkloric dance settings usually associated with dance instruction at schools, universities, social clubs and dance academies.

The *marinera* is usually organized into three main sections, all of which should be in the same mode, either major or minor. In some regional variants, the three sections are followed by one or two additional livelier sections in the same mode, known as the *resbalosa* and the *fuga*. Harmonic accompaniments tend to follow I-IV-V patterns in the major mode and i-III-V patterns in the minor mode. Guitarists vary these patterns through the use of alternate voicings and chord substitutions. From a rhythmic standpoint, the *marinera* exploits cross-rhythmic relationships between 3/4 and 6/8, often by varying the way in which particular patterns are accented. It is also common for melodic phrases to be syncopated, with ties across the bar line helping to blur the distinction between these meters.

The dance is one of courtship performed by a solitary male-female couple. While each regional variant has specific movements that differentiate it from the others, all variants are generally based on a series of 'passes' in which the dancers, twirling handkerchiefs in their right hands, approach each other from opposite ends of the dance floor, flirt with each other as they execute a turn in the center of the dance floor and then separate once again.

Of all the regional variants of the *marinera*, the most complex is the improvisational singing style known as the *canto de jarana* from the region of Lima. In this variant, two or more singers compete against each other by selecting from and elaborating on a large repertoire of song texts and melodies that are committed to memory, or from time to time, by creating their own lyrics in the moment of performance. In this version, the *marinera* proper is divided into three sections: the *primera, segunda* and *tercera de jarana*. Each section is based on a four-line stanza that is expanded through different types of repetition, ornamentation and improvisation. The singer or singers that introduce the *primera de jarana* establish the melody that will be used for the entire *marinera* as well as the various rhyme schemes, number of syllables per line and manner of elaborating the base text (these patterns differ in each section of the *marinera*). The challenging singer (or group of singers in parallel thirds) must then abide by these rules in addition to selecting or improvising text with subject matter that directly addresses what was sung in the previous section. There are also specially codified lines of verse that performers can use when an opponent breaks one of the rules. In such an event, a new *marinera* commences and the process continues until one singer or group of singers has won three out of five *marineras*. At that point, the *marinera* is followed by a livelier *resbalosa* section in which performers continue to compete with less strict rules. The final section is a series of *fugas* in which the challengers sing anywhere from one to four verses which must then be repeated verbatim by the opponents in a display of their memory skills.

The *marinera limeña* or *canto de jarana* is accompanied by one guitar that plays a series of ornamented melodic lines known as *bordones*, a second guitar that provides harmonic and rhythmic accompaniments, as well as hand-clapping and a wooden idiophone in the shape of a box called a *cajón*. Each section of the *marinera*, as well as the r*esbalosa* and *fuga* sections, is preceded by a guitar introduction or call that alerts singers and dancers to their places and is then followed by the entrance of the *cajón* which in turn is followed by the lead singer or singers and the dancers. As with the text, there are specific melodic passages and ornaments associated with each section of the *marinera* and with the mode in which it is being performed. Guitarists are also expected to avoid repeating any *bordones* that have already been used during a particular performance. The action on the dance floor has rules of its own that parallel the rules of the various sections of the *marinera* and determine the types of passes that are performed by the dancers.

While the *canto de jarana* continues to be performed in Lima, it is not as popular in the early twenty-first century as it probably was at the turn of the twentieth century, despite efforts by a small but vibrant community of singers, dancers, musicians and poets to foster its continued cultivation. Since the rise of the recording industry, there has been an increase in pre-composed *marineras* which, although at times they emulate some of the rules of the *canto de jarana*, tend to be shorter and sung by a single performer. In these cases, either the *resbalosa* or *fuga* section is omitted or at least shortened. Outside of Lima, pre-composed *marineras* are the norm and since approximately the middle of the twentieth century there have been two other main regional styles. The *norteño* or northern style is associated with the northern departments of La Libertad, Lambayeque and Piura. Musically, this style is strongly influenced by the *tondero*, another genre from the region, and it places more emphasis on various types of rhythmic strumming rather than on the elaboration of *bordones* that characterizes the Lima style. The *marinera norteña* also features a number of melodic and harmonic characteristics that are more associated with mestizo genres from neighboring highland areas. The third style is known as the *marinera serrana* or Andean *marinera*, and it varies greatly from one area to the next in mountainous regions of Peru. The *marinera* appears to have been exported to this region probably at the turn of the twentieth century in the wake of its nationalization and as a means of fostering national unity, but it has limited success in competing with popular mestizo genres from the highlands, such as the *huayno*. These variants are also pre-composed and tend to replace the *resbalosa* and *fuga* sections with a lively *fuga* in duple meter based on local mestizo genres such as the *huayno* or *carnaval*. Accompanying instrumentation varies greatly and is most often consistent with that used for other popular genres in each particular area. From time to time, variants of the *marinera* from the Amazonian region of the country have been recorded or are seen in performance. However, the lack of published research on the music of this region makes it difficult to ascertain whether these variants are or were widely practiced rather than being momentary fads inspired by nationalist fervor and the genre's popularities in other regions of the country.

In the early twenty-first century, the *marinera* in its many regional variants continues to be performed in various parts of Peru. While it is considered the national dance of Peru, specific variants are also keys to fostering particular types of local identity. This is particularly the case for those who continue to practice the *canto de jarana* in Lima, some of whom view pre-composed variants as dilutions or distortions of the tradition. During the latter half of the twentieth century, the institutionalization of the *marinera* also led to the emergence of a competitive dance circuit in which highly stylized and difficult to execute versions of the Lima and northern variants, along with the *tondero* (considered a close relative of the *marinera*), are performed to the accompaniment of large brass bands or military bands. Young people often undergo years of training at folklore schools and dance academies in order to participate in regional and national competitions that often include cash prizes and college scholarships. Within this context, the choreography and manner of dress of the dancers has become highly codified to highlight regional differences. The Lima style, for example, in an effort to highlight its urban character, uses smaller movements and performers wear clothing that is somewhat evocative of working-class urban attire from the turn of the twentieth century. In contrast, the *tondero* and *marinera norteña* styles make reference to rural themes, with the former referencing a more rustic, peasant character while the latter is based on the style of dress of the *hacendado* or wealthy land owner. Instrumental renditions of the *marinera*, most often performed by brass bands, are also commonly heard at patron saint celebrations, bullfights, Paso horse competitions and other large festive occasions in various regions of coastal and highland Peru.

Despite the *marinera*'s primary association with popular musical practices from the coast, the genre continues to be regarded by most individuals as an important symbol of Peruvian national identity. This recognition stems from the success Peruvians from different socioeconomic and cultural backgrounds have had, and will most likely continue to have, in adapting the genre to articulate specific regional identities and aesthetic predilections within the context of a broader sense of national belonging.

Maxixe

Maxixe is a Brazilian popular music genre which originated in the late nineteenth century, in close relation to the partner dance of the same name. The dance emerged in recreation clubs commonly called '*gafieiras*,' which proliferated in Rio de Janeiro and were frequented by people from the lower social classes, mainly freed slaves and manual laborers. From there both music and dance were spread to other areas of Brazilian society. Often involved in controversy because of the sexual suggestiveness of the dance, *maxixe* had declined in popularity by the 1930s following the rise of *samba*.

The term *maxixe*, designating a sensual dance, began to appear in printed media – newspapers, printed music, advertisements for balls – around the 1880s (the oldest source is a comic play by Francisco Vasques, entitled *Aí, Caradura!*, performed in the Teatro Santana in April 1883, and published by the *Gazeta da Tarde* newspaper on 25 January 1884 [Ferreira 1979, 244; Jota Efegê 1974, 20]), which may indicate that the dance was part of Rio de Janeiro traditions at the end of the previous decade, coinciding with the emergence of the first *choro* bands. A particular characteristic of *choro* musicians was their incorporation of African music elements, such as rhythmic syncopation patterns, into music genres based on European dances that were in vogue in Imperial Rio de Janeiro (for instance, mazurka, waltz, schottische and, primarily, polkas). This allowed the creation of new steps and choreography, which featured sensual swung steps and saunters between partners. *Maxixe* is a good example of this musical evolution.

There is much speculation about the origin of the term *maxixe*, but only a few sources are able to defend their hypotheses. Historians and musicologists Mário de Andrade (1975) and Jota Efegê (1974) question the hypothesis raised by Heitor Villa-Lobos, who claimed that the term emerged because of a dancer whose nickname was Maxixe. The dancer was a member of the Estudantes de Heidelberg carnival association and danced *lundu* in a new way. According to Villa-Lobos, the new style became popular and the other dancers started to dance 'just like Maxixe.' Jota Efegê refutes this hypothesis, primarily due to its lack of documented evidence, but also because in his research he found several other people with the same nickname. Jota Efegê maintains that until the 1870s the term *maxixe* was used to designate anything of inferior quality (1974, 37). The association of the term with the fruit of *maxixeiro*, or *cucumis anguria*, a vegetable of African origin introduced into Brazil by African slaves, appears to be the most reasonable hypothesis. The fruit, *maxixe*, deteriorates quickly. It is interesting to note (Pallas 1995) that in Kimbundu (a Bantu language), the term *muxixi* means 'rubbing down' and 'fire-starter,' which may be related to the licentious dance in which participants fervently rub their legs together (Lopes 1995).

Maxixe, as a dance or as a music genre, started to gain followers within the middle classes as a result of the *Teatro Musicado*, also known as the *Teatro de Revista* (musical theater or revue), a spectacle which was highly popular in Rio de Janeiro from the final decades of the nineteenth century through the first 20 years of the twentieth century. These revues, inspired by French operettas, featured a review of the main events of the previous year, in a comic style. French performers living in Rio de Janeiro adapted the French *vaudeville* for Brazilian audiences, treating aspects of the city's everyday social life.

Several conductors and composers working in Rio de Janeiro actively participated in the Teatro de Revista, writing music for revues. These frequently gave prominence to *maxixe*, as was the case with the revue *Zizinha Maxixe*, for which the composer Chiquinha Gonzaga (1847–1935) contributed music in 1897. The revue's great hit was the *maxixe* called 'Gaúcho,' later known as 'O Corta Jaca' and recorded by Grupo Chiquinha Gonzaga around 1910. 'O Corta Jaca' was renamed a 'tango brasileiro' (Brazilian tango) in order to designate the new genre. (The so-called 'tango brasileiro' is a term that is frequently confused with the term *maxixe*. The 'O Corta Jaca' theme was given a new style, along with other popular Brazilian themes, and was later used by the French composer Darius Milhaud, in the ballet play called '*Le Boeuf sur le Toit*,' opus 58, 1919.)

Maxixe's new and original dance style, with its sexually suggestive steps, was widely disseminated through caricatures and paintings, in poster advertisements for the revues, and in the most important newspapers of the day. Gradually, the practice obtained more and more attention from theater entrepreneurs, who organized balls where the choreography became increasingly obscene (Ulloa 1998, 170).

At the beginning of the twentieth century, the success achieved by *maxixe* dance became a controversial subject in Rio de Janeiro, resulting in censorship by the Brazilian political authorities (the then president, Marshal Hermes da Fonseca, prohibited the military bands from performing *maxixes*) and even in the genre's prohibition by the Vatican. These events yielded several critical *maxixes*, for example the famous 'Maxixe aristocrático,' composed in 1904 by the conductor José Nunes for the revue *Cá e Lá*:

'Pois o próprio Santo Padre/ sabendo do gozo que tem/ virá de Roma ao Brasil/ dançar maxixe também/ Mexe, mexe e remexe/ De prazer vamos dançar!/ Ai, sim, dançar!' (Because even the Holy Father/knowing about its pleasure/Is coming from Rome to Brazil/To dance the *maxixe*/Swing, swing, swing/Let's dance with pleasure!/Oh yes! Dance!') (Tinhorão 1986, 76; translation added). 'Maxixe Aristocratico' was recorded by singer Pepe Delgado in 1904.

In a similar way to the *maxixe* 'Gaúcho' by Chiquinha Gonzaga, mentioned above, a number of works were edited and given the classification of *tango brasileiro*, for instance, the work by Ernesto Nazareth (1863–1934), one of the primary developers of the *maxixe* genre. In fact, the majority of Brazilian musicologists and historians agree that Nazareth composed *maxixes*, since *tango* and *maxixe* are frequently confused, due to their utilization of similar elements. Nazareth's renaming of his compositions as 'tangos brasileiros' reveals his concern that his work should not be associated with the dance *maxixe*. Considered indecent, rejected by the upper classes and disallowed by the church, but danced intensely in *gafieiras*, the *maxixe* was strongly associated with places frequented by members of lower social classes. Many historians draw a distinction between the work of Ernesto Nazareth and the *maxixe*, suggesting that his *tangos* are all composed in classic rondo form, with five sections, and that their tempos are slower than those of *maxixe*. However, even though the most popular *maxixes* do not have a well-defined form, the utilization of the rondo form – a characteristic also of *choro* composers – is not enough to characterize a distinct genre.

Musical Characteristics

As a musical genre, *maxixe* may be described as a music of moderately quick (*allegro*) tempo, in duple meter (similar to polka), and with syncopation common to Afro-Brazilian genres such as *lundu*, and to elements from *habanera*. One of its peculiarities is the use of bass in the accompaniment, which closely resembles what happens in *habanera*. It also features introductions comprised of dotted eighth notes and sixteenth notes, executed respectively in the tonic and dominant of the scale, followed by eighth notes, or by the rhythmic pattern of *lundu*: sixteenth note, eighth note, sixteenth note. This combination of elements is exhibited in many different genres and subgenres of music of the time that, while often confusing historians, roughly resemble each other: *polka-lundu*, *polka-chula*, *tango brasileiro*, *tanguinho* and *maxixe*. Broadly, this abundance of terms was created and maintained by the emerging musical press, which became more expressive in the second half of the nineteenth century. By the 1880s there were some ten music publishing houses in Rio de Janeiro, including Isidoro Bevilacqua & Cia, Narcizo & Arthur Napoleão, Viúva Canongia, Buschmann & Guimarães and Carlos Wehrs, firms that were later to publish sheet music of record hits (Leme 2006), and the role of printed music editors in the consolidation of terms of the new music genres was very important. It is also worth noting that the first *samba* to be recorded, 'Pelo telefone,' which was sung by Bahiano and released by Casa Edison on the Odeon label in 1917, may be considered a *maxixe* on account of its musical features, showing how common the *maxixe* instrumental style was among orchestral musicians of the day. Such musicians worked primarily in Teatro Musicado and were incorporated in the nascent record industry.

Despite its name, 'La Mattchiche' (by C. Clerc, P. Briollet and L. Lelièvre), a popular march released on record in France and the United States in 1906, did not have any musical similarity with Brazilian *maxixe*. The spread of information among theater companies from South America and Europe was intense, however, suggesting that the common name is appropriate, despite significant differences in musical and choreographical features.

Unquestionably, Duque, the dancer, was responsible for the spread of *maxixe*, the dance, in Europe. With his partners, Maria Lina, Gaby and Arlette Dorgère, he achieved great success in Paris by developing a more sophisticated performance of the dance, avoiding the over-exploited sexual appeal of the *gafieiras*, making the dance appropriate for the middle classes.

Conclusion

With the emergence of the first *samba* schools and the consolidation of the so-called 'samba do Estácio' (Sandroni 2001) in the 1930s, *maxixe* lost its popularity. In the early twentieth century, several dance steps from *maxixe* still remain in the *samba de gafieira*, which is practiced in nightclubs and traditional *gafieiras* in the historic center of Rio de Janeiro, mostly in the bohemian neighborhood, Lapa and throughout Brazil.

MÔNICA LEME (TRANSLATED
BY MAIZA DE LAVENÈRE BASTOS)

Mazouk

Creole *mazouk* (or *masouc*), also called *lakonmèt* in St-Lucia, and *mazouka* in Martinique and Guadeloupe, is a dance music of the Lesser Antilles that emerged in the nineteenth century. It derives in part from the mazurka, a dance that was fashionable in Parisian salons of the 1830s. Like the European mazurka, the Creole *mazouk* is in 3/4 with an accent on the second beat of each bar. However, the dance music that developed in the former French Caribbean colonies bears little resemblance to its European counterpart. In the early twenty-first century, variants of the genre exist in Dominica, Guadeloupe, Martinique, St Lucia, which are four neighboring islands sometimes referred to as the French quadrivium. *Mazouk* is additionally found in French Guyane where a new variant called *piké djouk* appeared in the 1970s. It is performed primarily during the 'bal des Touloulous' (Touloulous' ball), a unique Carnival event. Like the *mazouk*, *piké djouk* is in 3/4 but the accent is placed on the first beat to correspond better to the distinctive dance step performed in Carnival *bal touloulous*. A dance called mazurka also exists in

Puerto Rico. Many people of the French quadrivium, nonetheless, consider the *mazouk* as an emblem of their local specificity.

During the slavery era, the colored elite of the French Caribbean colonies usually performed the most fashionable European dances at their own functions. Slavery had already ended when the European colonists brought the mazurka to their Caribbean plantations in the mid-nineteenth century. However, following the same pattern, the black people appropriated the new dance just as they did before. Mazurka soon became infused with African elements and evolved into the Creole *mazouk*. The genre was first mentioned in print in the early 1870s, and did not seem to undergo drastic changes for about a century.

During the second half of the nineteenth century, the *mazouk* served a variety of functions throughout the Lesser Antilles. Like its European counterpart, *mazouk* became included in the quadrille suite, but was also danced as a separate number. In the French Caribbean, *mazouks* were performed during late evening serenades and early morning *aubades* (predawn songs, traditionally performed in the French Caribbean as a surprise on special occasions, such as a birthday). On these occasions, the musicians left the trombone, horn and clarinet ensemble to the popular ballrooms and Carnival street parades, and instead chose a violin, a mandolin and a guitar or a banjo to accompany the *mazouks* that they sang to their belles. Up to 1902 in Saint-Pierre, Martinique, satirical *mazouks* were shouted by thousands of Carnival revelers in the streets. It functioned as the neighborhood gazette to uncover both political scandals and private affairs. After the destruction of Saint-Pierre in 1902 the *mazouk* entered a period of decline that lasted until the 1920s in Martinique. However, the genre continued to be practiced in the other Caribbean countries of the Lesser Antilles.

The popularity of *mazouk* rose again in Martinique in the period from the late 1920s up to the early 1940s as a renewed interest for the dance was sparked throughout the region by composer and clarinetist Fructueux Alexandre, 'Stellio.' He was a member of the Parisian jazz milieu of the 1920s and his music, though based on the tradition of Saint-Pierre, was open to jazz influence. Stellio was the first French Antillean bandleader to give the clarinet a prominent role in a band comprised of a guitar, a violin, a *chacha* (a shaker made from a metallic tube closed at both ends, filled with grains or small nails), a drumset and a piano. His music was a complete success at the 1931 Exposition Coloniale in Paris. However, the *mazouk* never reached a level of popularity outside the Caribbean area that could compare with the *biguine*.

Meanwhile, in fashionable dance bands of Martinique, the saxophone was making its first attempts at challenging the domination of the clarinet. Anderson Bagoe was the first to exclude the clarinet in his Orchestre de la Jeunesse, a band comprised of a piano, two saxophones, two trumpets, a cello and drumset.

In the 1950s and 1960s, however, the clarinet, trombone and violin were still interlacing their melodic lines in a tight counterpoint in the urban *mazouks* played throughout the French Caribbean and Guyane, especially at Carnival time. These instruments were accompanied by a guitar, drumset, shaker and cello in Hurard Coppett's band. The violin and accordion accompanied by a banjo remained the favorite instrumentation for the St Lucia *lakonmèt* and all rural *mazouks* in Martinique and Dominica.

When *zouk* emerged in the French quadrivium in the early 1980s, the *mazouk*, which had been slowly declining since the early 1960s, seemed to disappear completely for a while. Yet, at the end of the 1990s the *mazouk* came back in the dance repertoire of middle-aged people, thanks to cultural activism in Martinique and French Guyane. In these late twentieth-century commercial *mazouks* the overlapping melodico-rhythmic fragments that traditionally formed the accompaniment of the *mazouk* were replaced by simple harmonies.

Musical Characteristics

The Creole *mazouk* incorporates a number of features that allow a wide majority of Antilleans to identify with the music. Most sung *mazouks* have four-line verses. Traditional *mazouks* of Martinique have a tripartite structure in ABA. The central B section is called '*la nuit*' (the night). It contrasts with the section A, called *pitché*. The Dominican *mazouk*, on the other hand, can sometimes end with a section in 2/4 of varying length.

In traditional *mazouks* or *lakonmèt pitchés*, melodic phrases are generally four bars long. The accompaniment is provided by two or three melodic instruments each playing their own countermelody. For example, in the *lakonmèt* songs of St Lucia a banjo often punctuates the phrases of the violin with short melodic fragments that are enunciated on this rhythmic sequence (Example 1).

Example 1: *Lakonmèt* banjo, St Lucia

This type of melodic-rhythmic punctuation is played with a guitar or a trombone in other *mazouks*. The rhythmic characterization of the *mazouk*, however, is the following *ostinato* (Example 2):

Example 2: Basic *mazouk* ostinato, Martinique and Guadeloupe

It is always heard throughout the *mazouk*, played with percussion instruments such as the *tibwa* (a pair of sticks played on the side of the drum or against a bamboo branch), *chacha* or *shak-shak* and/or the drumset.

During the central *la nuit* portion of the Martinican *mazouk*, the *tibwa*/*shak-shak* sequences are varied. Meanwhile, the bass enunciates its melodic lines on this rhythmic sequence (Example 3):

Example 3: Rhythmic figure for bass, *la nuit* section

Up to the 1970s, *la nuit* was the moment of choice in which to make a brief quotation of an old French song from the *romance* repertoire.

In the early twenty-first century, although the *mazouk* and its variants seem relegated to Carnival time and cultural events throughout the French quadrivium, this dance music occupies a special place in the heart of its people. Perhaps because it was the first Creole genre to emerge after slavery ended in these countries, *mazouk* is cherished both as a reminder of the historical past and as a symbol of the vitality of the Creole people who created it.

DOMINIQUE O. CYRILLE WITH JULIAN GERSTIN

Mento

Mento (variant, minto), a Jamaican folk music and dance style, originated in the nineteenth century and was the dominant Jamaican popular music style by the early twentieth century. Most mento songs consist of local melodies modeled on European tunes of the nineteenth and early twentieth centuries (Witmer 1995, 31), with regular offbeat accents (labeled 'afterbeats' by Jamaican musicologists; explained below) in both the melody and accompaniment. Mento lyrics consist of Jamaican Creole words that often present local news, gossip and social commentary (Jekyll 1966 [1907], 216). Reckford (1982, 72) believes that the topical nature of mento's lyrics is the main reason for its popularity. Instruments associated with mento include European and African-American string instruments (guitar, violin and banjo), wind instruments (saxophone, clarinet and trumpet), neoAfrican instruments (hand percussion and rhumba box) and indigenous homemade instruments (bamboo saxophone, kitchen utensils and brake drums). The overall performance style synthesizes European and neo-African musical and body movement elements. In the 1950s and 1960s mento characteristics were combined with American rhythm and blues (along with other Jamaican elements) resulting in the emergence of ska, rocksteady and reggae.

Since the 1960s, mento has continued in several forms. The traditional style has been maintained (although to a lesser degree) as village recreational music and has been recognized as genuine Jamaican folkloric culture (appearing in cultural festivals, competitions, showcases and government celebrations). Parallel to this is mento's existence as a music directed at tourists – often in a more commercialized, pan-Caribbean style; in this form, mento is often labeled 'calypso' by both musicians and tourists. The traditional style has seen a resurgence in the late twentieth century because of CD and internet sales, linked to groups such as the Jolly Boys, who promote both traditional and modernized mento repertoire both locally and via international touring (see Jolly Boys discography entries). Since the early 1970s, Jamaican artists have frequently borrowed and adapted mento elements (musical, lyrical and body movement patterns) in newer songs and styles.

Origins and Etymology

Mento first emerged as a variation of French *quadrille* music and dance brought to Jamaica by British slave masters in 1830 (Neely 2008, 64, 110). *Quadrille* was divided into sections called figures. In Jamaica, one of the figures acquired neo-African sonic and movement characteristics that became known as 'mento' by the late 1800s (the actual *quadrille* figure that was changed is in dispute; Bilby [1995, 153] and Neely [2008, 81] believe it to be the second figure, whereas Noblett [2001, 2] claims that it is the fifth one). Jamaican entertainer-folklorist Ranny Williams believes that Jamaicans added indigenous music and movement elements to the European *quadrille* to assert their own identity (Williams in Reckford 1982, 79). In the early 1900s many Jamaicans worked in Cuba, Latin America and the United States. When they returned, those who were musicians incorporated foreign musical elements into mento, including arpeggiated bass patterns from Cuba, Latin America and Trinidadian calypso, and jazz instruments and styles from the United States (Reckford 1982, 73; White 1982a, 59–65; O'Gorman 1972, 50).

A variety of theories exist regarding the origin of the term 'mento.' Some authors believe that the term is a corruption of *kromanti*, a nineteenth-century designation for Jamaican folk music (Thompson 2002, 181). Other theories affirm that *mento* is derived from the Spanish verb *mentar* (Jamaica was a Spanish colony between 1509 and 1659) that means 'to call out' or 'to name' (Baxter 1970, 176). Another perspective maintains that it was rhythmically influenced either by a Spanish folk dance practiced in Jamaica in the nineteenth and early twentieth centuries (alternately known as *mento, bamboola* or *chica* and featuring frequent afterbeat accents) (Courtenay, cited in Murray 1971, 71–2) or by Jonkonnu (a Jamaican celebratory hybrid practice that combines neo-African music and dance with parading, miming, fife and drums, influenced by West African harvest festivals and British Mumming traditions practiced during the Christmas season) (Ryman 1984a, 1984b; White 1984, 63–4; Wynter 1970). Spanish *mento* dancing's slow body movements are similar to those of the neo-African Jamaican dance shay-shay, in which the hips are shaken rapidly and the feet beat time very quickly (Beckwith 1969 [1929], 214), and in the 1940s 'shay-shay' and 'mento' were used interchangeably to refer to Spanish *mento* (Dunham 1946, 26). Neely (2008, 58) notes that in the 1940s the music of shay-shay and Jamaican mento appear to have been very similar.

Popularization and Internationalization

Until the late 1940s, mento was widespread across Jamaica – performed at community gatherings, village dances, fairs, amusement parks, concerts, theatrical reviews and in nightclubs (Lewin 1998, 50–1; White 1982b, 32). Since there was no radio station in Jamaica until 1939, and no recording studios until the early 1950s, mento was primarily experienced in live performances, although lyrics were sometimes printed and sold on broadside-style, single-sided sheets. In the 1930s and 1940s a duo of itinerant musicians named Slim (Beckford) and Sam (Blackwood) performed mento 'blues' songs, probably influenced by contemporary American blues records (Witmer 1987, 5–8) and their own original compositions that blended mento and blues (Chang and Chen 1998, 15–16). They never recorded, however, only selling broadsides of their songs (Witmer 1989, 13).

The first recordings of mento were made between 1924 and 1930, when Trinidadian artists Sam Manning and Lionel Belasco recorded a dozen jazz versions of mento songs for US labels in New York City that were promoted as 'calypsos' – a Trinidadian folksong style similar to mento (Garnice 2010c). Calypso and mento are often considered similar in their lyrical, melodic and harmonic approaches, but there are many differences (White 1982a, 64; 1982b, 32). Mento's accented fourth beat and banjo/guitar rhythmic accompaniments result in rhythms that are less flowing than those in calypso. Mento tempos are usually slower, and there is a greater emphasis on sinuous and horizontal pelvic dance movements. Lyrical content and approach also differ. Although both styles address topical events and engage in social commentary (often satirically), calypso lyrics tend to be more political and overtly critical of colonial relations, whereas mento lyrics usually employ a greater degree of humor to make similar criticisms. Mento's rhythms are strongly influenced by the Cuban *rumba* style, while calypso rhythms are closer to those of Venezuelan *paseo* and Brazilian *samba* (see Floyd [1999, 21–5] for additional information about calypso history).

Between the late 1930s and the early 1950s Trinidadian calypso rose in popularity in Jamaica due to a number of factors (Neely 2008, 151–64). In 1937 RCA Victor and Decca Records had international successes with a large number of Trinidadian calypso recordings. In August 1938 *Time* magazine featured an article on calypso that was reprinted in the *Jamaica Standard* newspaper. As a result, Trinidadian musicians (such as Sir Lancelot [Lancelot Victor Edward Pinard], Lord Kitchener [Aldwin Roberts], Lord Creator [Kenrick Patrick], the Caresser [Rufus Callender] and Lord Beginner [Egbert Moore]) began performing regularly in Jamaica. This resulted in many Jamaican mento musicians (such as Slim and Sam, Lord Flea [Norman Thomas], Count Lasher [Terence Parkins] and Lord Fly [Bertie Lyons]) adding Trinidadian calypsos to their repertoire and employing the calypso label to promote themselves (primarily) to tourists. The use of Jamaica as an American military post during World War II further contributed to the country's popularity as a tourist destination and increased the popularity of Trinidadian calypso and Jamaican mento (although mento was usually promoted to foreigners as calypso).

In the early 1950s Jamaican entrepreneurs Ivan Chin, Stanley Chin, Ken Khouri, Stanley Motta and Dada Tuari issued recordings of local mento artists in Jamaica, mostly 78 rpm singles along with a few albums that were primarily compilations of singles. These records were often marketed as 'calypso,' especially those produced for tourists, to piggyback on the calypso craze which grew to international proportions after Harry Belafonte's highly successful *Calypso* album – discussed below.

The 1950s is generally regarded as the peak of mento's creativity and popularity, and its 'Golden Age' (Garnice 2010e). Most singles from this era were either traditional mento songs or newly composed songs in the traditional style. Examples of the traditional songs (many of which continue to be sung in rural communities in the early twenty-first century) include Lord Power's 'Penny Reel,' Count Lasher's (Terence Perkins) 'Slide Mongoose,' Lord Messan (aka 'Messam') and His Calypsonians' 'Linstead Market' and Monty Reynolds and the Silver Seas Orchestra's 'Long Time Gal A Never See You.' Examples of newly composed songs in a similar style include Laurel Aitken's 'Aitken's Boogie,' Lord Composer's 'Matilda,' Lord Flea's (Norman Thomas) 'Naughty Little Flea' (the previous two recorded and internationally popularized by Harry Belafonte in the late 1950s), Lord Tanamo's (Robert Gordon) 'Shame and Scandal' (recorded in ska style by Peter Tosh & the Wailers in the 1960s) and Harold Richardson and the Ticklers' 'Healing in the Balmyard' (renamed 'Balm Yard' in the 1970s by Stanley [Beckford] and the Turbines as a hit fusion of reggae and mento). Three albums of mento songs were particularly popular and influential: Edric Connor's *Songs From Jamaica* (1952), Louise Bennett's *Jamaican Folk Songs* (1954) and *Children's Jamaican Songs and Games* (1957).

Harry Belafonte was the first recording artist to popularize mento internationally (although his early releases were always labeled 'calypso' rather than 'mento'). Born of a Jamaican mother in New York City, Belafonte lived in Jamaica between the ages of 8 and 15 and then returned to New York, where he became a folksinger in the early 1950s. He performed many songs from Edric Connor's *Songs From Jamaica* (1952) and Louise Bennett's *Jamaican Folk Songs* (1954) as well as other mento songs (such as 'Matilda' and 'Jamaica Farewell') often adding new lyrics to traditional mento melodies. In 1956 he released *Calypso* on RCA records, a collection of mento and Caribbean folksongs that became the first album in any genre to sell a million copies. *Calypso* featured five songs from Connor's and Bennett's albums: 'Come Back Liza' (adapted from 'Wata Come to Me Eye'), 'Day-O' (adapted from 'Day De Light'), 'Hold 'Em Joe,' 'Hosana' (*sic*) and 'Judy Drownded' (*sic*), along with three other mento songs ('Brown Skin Girl,' 'Man Smart, Woman Smarter' and 'Jamaica Farewell' – an adaptation of 'The Iron Bar,' in turn an adaptation of a traditional mento song).

On his records Belafonte adopted a softened Jamaican Creole pronunciation, a pop crooning timbre and orchestral pan-Caribbean arrangements. His live performances, however, employed a melodic and rhythmic singing style closer to conventional Jamaican mento performance practice, featuring a freer vocal sound, less orchestrated arrangements and a great deal of improvisation, dancing and audience participation.

Following Belafonte's success, rural mento artist Lord Flea – a popular Jamaican artist since 1949 – was signed to Capitol records and performed with his band the Calypsonians in Miami, Las Vegas, New York City and on American TV. He also starred in two 1957 Hollywood films (*Calypso Joe* and *Bop Girl Goes Calypso*). In 1959 he died tragically of Hodgkin's disease (Neely 2008, 148–62; Garnice 2010b). In the 1960s Belafonte recorded Flea's two hits 'Naughty Little Flea' and 'Shake Shake Senora,' the latter of which was retitled 'Jump In the Line.'

Although initial mento airplay and record sales were strong in Jamaica, they faced serious competition from US R&B recordings released in the late 1940s and early 1950s. As the popularity of rock 'n' roll increased in the late 1950s, however, R&B recordings diminished in availability in Jamaica. As a result, Jamaican musicians recorded R&B-style original songs to fill the void at the behest of Clement 'Coxone' Dodd and Arthur 'Duke' Reid, two entrepreneurs who had developed huge disk jockey businesses (which were known as 'sound systems') by playing a combination of mento and US R&B records. In the late 1950s some of these musicians combined US R&B with mento and other indigenous styles and created ska, which became the most popular Jamaican music in the early 1960s.

During the ska craze of the 1960s, some artists recorded mento songs in a ska style, which was marketed as 'skalipso.' Most of these records were produced by Dodd and Reid. Like the mento singles released in the 1950s, these recordings were either traditional mento songs or newly composed songs in the traditional mento style. Examples of skalipso arrangements of traditional mento songs include Frank Anderson and Tommy McCook's 'Wheel And Turn' (196x), Baba Brooks's 'River Bank' (1963), Desmond Dekker's 'Day-O' (196x), the Gaylads' 'Brown Skin Gal' (196x), Carlos Malcolm and the Afro-Jamaican Rhythms 'Rucumbine' (1963) and Eric 'Monty' Morris's 'Penny Reel' (1964). Newly composed skalipso songs were fewer in number. Particularly successful were Lee 'Scratch' Perry's 'Sugar Bag' (1965) and Prince Buster's 'Girl Why Won't You Answer to Your Name' (1967). There were also skalipso-themed albums: Count Owen's (Owen Emanuel) *Come Let's Go Ska-Lipso* (196x), Euton 'Lord' Gayle's *Let's Dance The Ska* (1964) and the Hiltonaires' *Ska Motion in Ska-Lip-So* (1965).

Traditional mento records have continued to be produced into the twenty-first century, although airplay and sales have diminished significantly since the early 1960s. The mento style has remained popular with tourists and in rural areas (Neely 2008, 118–89). Most mento releases since the 1950s have been albums (for example, the Goldenaires' *Calypso Beach Party* [196x], the Hiltonaires' *Big Bamboo* [1966] and The Happy Smilers' *Plantation Inn* [196x]). Popular mento singles include Count Owen's 'Come With Me' (196x), Count Zebra's 'Bed Bug' (196x) and King Barou's 'Calypso Cha Cha Cha' (1972).

Although young people in the 1950s and 1960s increasingly viewed mento as old-fashioned and irrelevant (Witmer 1995, 31), in the late 1960s mento guitar and banjo strumming patterns (see Example 1 below) began to appear in rocksteady and reggae guitar styles (for example, in Derrick Morgan's 1966 rocksteady hit 'Tougher Than Tough' and Lee 'Scratch' Perry's 1968 early reggae hit 'People Funny Boy'). These strumming patterns proved to be a significant contributing factor in the emergence of the reggae style in 1968.

In the 1970s, mento experienced a resurgence. Some artists synthesized mento and reggae (with the resulting blend called 'reggae-mento,' 'mento-reggae' or 'country reggae'), and a number of rural mento artists also released new recordings of either traditional mento songs or new songs in the same style. Producers Sonia Pottinger and Alvin 'GG' Ranglin were a driving force for the country reggae style, of which the most influential proponent was Stanley Beckford who released recordings both as a solo artist and under the moniker of Stanley and the Turbines – also spelled 'Turbynes' (Neely 2008, xv), with records such as 'Wanted Man' (1973), 'Soldering' (1975), 'Brown Gal' (1977), 'Leave Mi Kisiloo' (1977) and 'Dreaming of a New Jamaica (A Land of Peace and Love)' (1980). Examples of reggae-mento based upon traditional mento songs include Cedric 'Im' Brooks and the Divine Light's 'Sly Mongoose' (1975), George Knooks and Barry Brown's 'Emmanuel Road' (1980) and Dandy Livingstone's 'Come Back Liza' (1973). Newly composed songs in a reggae-mento style include Eric Donaldson's 'Cherry, Oh Baby' (1971), which won the Jamaican Festival Song Competition in 1971 and was covered by the Rolling Stones in 1976, Larry Marshall's 'Throw Me Corn' (1984) and Peter Tosh's 'Maga Dog' (1971), which Tosh first recorded with the Wailers in a ska style in 1964.

Since the 1980s traditional rural mento artists such as the Jolly Boys, the Blue Glaze Mento Band and the Lititz Mento Band have become successful internationally, especially in the United States, Germany and Japan (Garnice 2010d). Since 2001 there have been many CD reissues of 1950s mento as well as new recordings that have also garnered strong international sales, especially on the internet (Neely 2008, 6–15).

Although the traditional mento style still exists in the early twenty-first century, a number of artists have continued to experiment with the synthesis of mento with other styles. Some reggae artists have adapted mento songs as the basis for new ones (for example, Samuel Cargill's 'Sambo Gal' [1994] is based on Lord Fly's [Rupert Linly Lyon]'s 'Big Big Sambo Gal,' the Congos' 'The River Beng Come Dow' [2006] quotes from 'River Ben Come Down' and 'Hold 'Im Joe,' Clint Eastwood [Robert Brammer]'s 'Some A Holler' [1999] is a reworking of 'Chi Chi Bud' combined with 'Charlie's Cow' and Prince Jazzbo [Linval Roy Carter]'s 'Penny Reel' [1990]). Others have written new mento-influenced songs, (for example, Big Youth [Manley Buchanan]'s 'Survival Plan' [1996] quotes 'Chi Chi Bud,' Barrington Levy's 'She's Mine' [1988] reworks 'Mango Walk' with new lyrics and Sister Nancy [Ophilin Russell]'s 'Ball A Roll' [1982] borrows freely from 'Day-O'). In early 2011, the Jolly Boys released the CD *Great Expectations* – an eclectic collection of cover versions of rock and popular songs from the 1960s to the 1990s synthesized with mento elements – which was promoted by live appearances on BBC TV.

This spirit of experimentation is also present in the work of some Jamaican dancehall artists, who have adapted mento songs or created new ones based on traditional mento (for example, Cutty Ranks's [Philip Thomas'] 'Ganja Pipe' [1996], which borrows from 'Mandeville Road,' Tenor Saw's [Clive Bright's] 'Ring The Alarm' [1985], which employs a few lyrics from 'Hold 'Im Joe' and Tony Tuff's [Winston Morris'] 'Find My Girl' [2005], which borrows heavily from Lord Flea's 'Naughty Little Flea' and Yellowman's [Winston Foster's] 'Hill and Gully Rider' [1984]) (for other dancehall mento adaptations, see Garnice 2010a).

Musical Characteristics

Mento melodies, harmonies, rhythms and structures are similar to those of other Jamaican folk and recreational musics (Murray 1971, 70–106). Melodies are generally in major keys and harmonized by the same three primary chords that characterize Anglo-Celtic folk music and Christian hymnody (I, IV and V). Other chords and modulations are rare; parallel vocal harmonies are common (Lewin 1998, 50). Songs in major keys are frequently altered by lowering third- and seventh-scale steps (White 1982a, 60), and melodies frequently begin and end between beats. Phrase lengths are also similar to those found in European models, usually four bars in length, in four-phrase verses, with the addition of recurring answering refrains. Mento music is usually composed and performed without notation.

Traditional mento instrumentation is flexible, and derived from many sources. European instruments include pennywhistle, fife, violin/fiddle, accordion, tambourine and guitar. There is homemade percussion: hollow branch of trumpet tree, PVC tubing, kitchen utensils, riding stirrup irons, sticks, brake drums and wheel rims. Neo-African instruments include hand drums, flutes, shakers, scrapers, animal jawbones, bamboo saxophone, rhumba box and banjo. The rhumba box (named using the Jamaican spelling of Cuban 'rumba') is a Jamaican variation of the Cuban *marimbula*, adapted and enlarged from the African *mbira*, a widely used sub-Saharan instrument. It is a large wooden box (upon which the player sits) with metal spring tines bolted over a circular hole cut into the side. These are plucked, sounding similar to a pizzicato string bass. In the late 1800s flute, saxophone, clarinet, trumpet, trombone and Cuban percussion (*claves*, *conga* drums, *bongos*, *timbales* and *maracas*) were introduced.

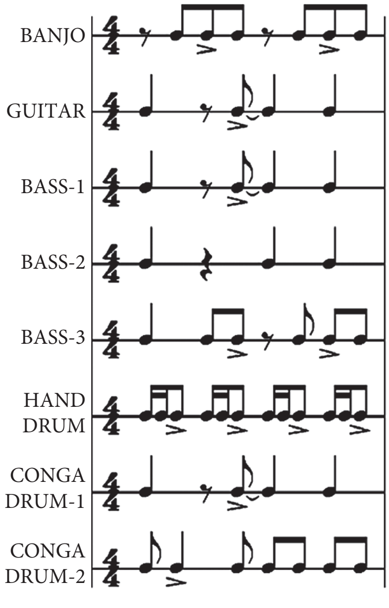
During the early twentieth century acoustic bass, keyboards (piano and organ) and drum kit (i.e., trap set) were sometimes employed, which led to the emergence of two mento styles. The rural style – known as 'country music' – was performed at informal family gatherings, or by village bands at community events, and featured the traditional instrumentation described in the previous paragraph. In the 1920s the influence of American jazz produced a polished, urban dance-band style of mento. By the 1940s this style was played primarily by 'society orchestras' – modeled after American big bands – that performed in nightclubs and hotels, mostly for tourists and upper-class audiences (Witmer 1987, 10–12). Homemade instruments were replaced with saxophones, clarinets and basses, and the banjo was often replaced with the electric guitar. When played in a more overtly jazzy style, piano and clarinet were frequently featured, along with a Latin rhythmic feel and diminution of rural percussion and overall rough edges. By the 1970s the dance band mento style was dying out, while the original rural style continued (Garnice 2010e).

In terms of performance elements, melodies often feature individualized phrasing and employ open, throaty timbres, melisma, slurs and slides (Reckford 1982, 73; White 1982a, 60). Pitch, lyrics and song structure are often improvised and adapted to suit the needs of the occasion. Verses are usually two repeated statements with responses, refrains and bobbins (short, percussive vocal refrains) (Jekyll 1966 [1907], 5, 158), but in live performances, songs are often open-ended, lasting up to 20 minutes (Lewin 1998, 51). Tempos run the gamut from slow to very fast (Murray 1971, 70–2; Baxter 1970, 174).

Mento rhythmic practices involve a constellation of rhythmic and instrumental roles that are described differently by various practitioners and experts. Both styles of mento employ a set of basic rhythmic patterns that are usually a composite of interlocking parts provided by a bass instrument and guitar/banjo strumming patterns (Neely 2008, 33, 38). The banjo strum (often called a bubble rhythm) (Neely 2008, 287–8) – see Example 1 – interweaves in and out of the bass pattern, which is usually played by the rhumba box (Neely 2008, 39).

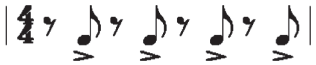
Rhumba boxes often play a 3 + 3 + 2 pattern (noted by Jamaican percussionist Marjorie Whylie, cited in Neely 2008, 36; Murray 1971, 141) or repetitive, rhythmic bass patterns, like those in other neo-African Jamaican musics (Ehrlich 1982, 53; O'Gorman 1987a, 86; Witmer 1981, 112). When supplied by a pitched instrument (or voice), however, bass parts are often muffled, muted and/or highly percussive, resulting in indeterminate pitches without a distinct melody line (Ehrlich 1982, 53).

Mento rhythmic patterns are interchangeable within a mento ensemble. Example 1 displays typical mento accompaniment patterns. In Neely's research into mento history and performance practices, he notes that the majority of mento musicians interviewed are aware of patterns similar or identical to the ones in Example 1. Older musicians usually know all of them. These patterns constitute a common pool of ideas that are utilized in various combinations and often are adapted in response to dancers' movements (especially in terms of accents and emphasis) (Neely 2008, 39–40).



Example 1: Typical mento accompaniment patterns

Mento rhythms emphasize offbeats, or 'afterbeats,' which is the term Jamaican musicologist Garth White and American musicologist and reggae bassist Luke Ehrlich use to describe the loud, heavy accents between the beats in Jamaican folk, religious and popular music; see Example 2 (White 1982c, 38; Ehrlich 1982, 55). Jamaican afterbeats continue the harmony of the preceding beat.



Example 2: Afterbeat accents

(See the 'Reggae' entry for a detailed explanation of why 'afterbeat' is preferred over other terms.) Mento afterbeats are usually played by banjo and guitar, and are also accented by percussion instruments. They also characterize the mento dancing style (described below).

When mento music is transcribed (for example, by scholars), although mento melodies are often notated as employing onbeat rhythms, accompaniment patterns usually generate melodic afterbeat accents or change melodic onbeat rhythms to syncopated ones. Indigenous performers, dancers and onlookers also feel a strong accent on the fourth beat, which Lewin attributes to the use of mento as work songs (Lewin 1998, 50). She notes that this accent is so conditioned among Jamaicans that older persons (i.e., over 50) often maintain this accentuation whenever they hear mento rhythms.

Mento Dance/Movement

Mento dancing consists of sideways, backward and turning steps combined with circular hip movements (Baxter 1970, 175). Specialists in Jamaican and West African movement and dance such as Bennett (in Johnson and Pines 1982), Carty (1988) and Ryman (1983) state that mento dancing is rooted in traditional West African dances, which also feature hip-sway and pelvic roll, especially in courtship/fertility dances. These African movement styles also show strong influences from the stateliness of the European quadrille (Wynter 1970, 47). Mento dance employs West African Kongo and yanga steps (Ryman 1983, Appendix, 57). In the Kongo step, the ball of the right foot pushes up, followed by a low, quick, flat-footed hop ahead by the left foot (Carty 1988, 36). In the yanga step, knees are bent with a forward torso (Bennett in Johnson and Pines 1982, 47). By the end of the nineteenth century, mento acquired head, shoulder and arm movements from Kumina dancing (Reckford 1982, 73), a form of dance associated with Central African-derived music-dance rituals practiced in Jamaica since the mid-1800s. While most older Jamaicans are able to execute appropriate corresponding movements when mento rhythms are played, the dance movements can present problems of execution, fluency and accuracy for people unfamiliar with this style (Lewin 1998, 53).

ROBERT WITMER AND LEN McCARTHY

Merecumbé

The origin of *merecumbé* is closely linked to the myth of the creation of 'Ay cosita linda' (Oh Beautiful Thing), a 1955 tune by Colombian composer Francisco 'Pacho' Galán. There are many versions for the origin of the song: in one, Galán recalls a beautiful woman at the Paseo Bolívar, the main square of the city of Barranquilla; in another, it describes Patricia Ropaín, the daughter of a colleague who used to house Galán during his recording sessions in Medellín. In yet another account, the song describes a bathroom encounter between Galán and his wife. Regardless of the version, the song marks the official birth of *merecumbé*, a rhythm that propelled Galán into international stardom, establishing him firmly as one of the two most renowned figures of the Colombian tropical music *orquesta* boom, together with fellow bandleader Lucho Bermúdez. Galán recorded the song for the first time in 1955 at the Sonolux Studios in Medellín, but was not pleased with the initial result, which, according to him, sounded too much like *porro*, another well-known genre of the 1950s. In early 1956 he was able to record it again at Discos Tropical in Barranquilla, with a different arrangement, managing to reproduce the desired sound. The song gained such popularity that icons such as Nat King Cole (1959) and the Sonora Matancera (1957, with Carlos Argentino as vocalist) also recorded it, and Galan himself recorded it numerous times. In the early twenty-first century it has been recorded by *tropipop* acts such as Luis Carlos (2008) and by reggaeton duo Wisin & Yandel (2007, under the title 'Ahora es').

In terms of structure, the *merecumbé* usually exhibits short, catchy lyrics, which allow development of the melody by the saxophones, with percussion instruments setting the stage for an eventual response from the trumpets section, much like in *mambo*. According to Galán, the *merecumbé* is the product of his study of the Colombian variety of *merengue*, (a local version, peculiar to the Caribbean coastal region of Magdalena), the *cumbia* and the *porro*. The *merecumbé*, however, results mainly from the mix of the first two types of music. While the drums keep the beat of *cumbia*, the rest of the percussion instruments have the rhythm of the local *merengue*. In the *merecumbé*, *conga* drums are the equivalent of the cumbia's *tambor alegre*, improvising on a beat. In turn, the kettle does not always follow the rhythm of *merecumbé*. For two or three beats, it plays the *merengue-cumbia* rhythm, which is then followed for the next three to four beats by the rhythm of *cumbia*. This cycle is repeated several times through the entire length of the song, lasting up to three minutes. The cymbals are arranged as in the *porro*, emphasizing the sound of saxophones and handbells, which must be played in unison. Unlike the Dominican *merengue*, the Colombian variety uses ternary meters. The *merecumbé* embodies Galán's efforts to create rhythms that, while embracing musical elements of national culture as foundation, engage with foreign melodies.

Popular *merecumbés* include 'El brazalete' ('The Bracelet,' recorded as 'La butifarra de Pacho' by the Billo's Caracas Boys in 1974), 'Río y mar' ('River and Sea'), 'Ay que rico amor' ('Oh That Rich Love'), 'Carasucia,' 'El bombón,' 'Merecumbé en Bogotá,' 'Mujer celosa' ('Jealous Woman'), 'No me des con ese palo,' ('Don't Give Me That Stick') and 'Tico Noguera' (a homage to Galán's lawyer).

Merengue

The Spanish term *merengue* and its Haitian Creole cognate *mereng* or *méringue* refer to stylistically distinct dance musics performed in the Dominican Republic, Haiti, Venezuela and Colombia. Together, these styles can be considered a pan-Caribbean *merengue* complex. Of the various *merengues*, the Dominican form has dominated, emerging as a national symbol of the Dominican Republic in the mid-twentieth century and diffusing as a commodified form throughout Latin America in the late twentieth century.

Early History

Dating back to the 1840s, the earliest references to *merengue* are found in Puerto Rico, where it was considered a variant of the *danza*, which had developed as an Afro-Caribbean version of the European *contredanse*. *Merengue* attracted attention because it was danced by independent couples (instead of groups) and because of its African influences. While it made a hit at first, the new genre was soon rejected, probably because its dance style was considered lewd. The earliest historical reference to Dominican *merengue* dates to 1854 (Rodriguez Demorizi 1971, 111–12). As in Puerto Rico, Dominican *merengue* was originally a ballroom dance associated with the *danza*, which, in spite of being a hit at first, was soon rejected by high society for its suggestive choreography and African tinges. The rural Dominican majority, however, adopted *merengue* and infused it with even more African influences. *Merengue* variants with various instrumentations developed in several areas of the Dominican Republic, and variants of the music local to various regions of the country developed in the Dominican Republic; together, these can be considered a *Dominican merengue complex*. The variant local to the geographically contiguous Dominican regions of the Northern border and Cibao regions, called *merengue típico cibaeño* (Cibao-style folk *merengue*) or *merengue liniero* (border-region *merengue*), gained prominence during the mid-nineteenth century. While this variant originally featured string instruments such as the guitar and *cuatro*, these were supplanted by the button accordions, which became available, as a result of trade with Germany, by the 1870s. This was complemented by the *tambora* (a double-headed drum) and the *güira* (a metal scraper); by the early twentieth century, this trio was sometimes supplemented by an alto saxophone.

Accordionists led groups, composed and sang; Santiago natives Francisco 'Ñico' Lora and Antonio 'Toño' Abreu were the best-known accordionist/bandleaders of the period and the architects of the *merengue* style that later gained national and transnational prominence. Songs commented on everyday life and world events, employing a witty, light-hearted tone and, sometimes, ribald double meanings. Sometimes improvised on the spot, they could speak to the immediate context. Songs often addressed issues of the day, such as 'La libertad de Cuba,' composed in 1899, 'El aeroplano,' composed in 1903 and 'La guerra mundial' ('The World War') in 1914. Ñico Lora is credited with creating over 500 songs; some of Lora and Abreu's pieces have remained popular.

The musical style of *merengue cibaeño* combined European-influenced melodies and harmonies with interlocking, syncopated Afro-Caribbean duple rhythms. Two types of *merengue típico cibaeño*, both of which continue to be performed, became popular in the early twentieth century: *sectional merengue* and the *pambiche*. *Sectional merengue* consists of three parts denominated *paseo*, *merengue* and *jaleo*, each of which utilizes different *tambora* rhythms. The *paseo* is a short, march-like, instrumental introduction that is not danced. This is followed by the *merengue* section, which features a European-influenced melody sung and played on the accordion two to four times. The *jaleo* repeats accordion ostinatos over tonic and dominant harmonies and a *tambora* rhythm featuring a roll. The *merengue/jaleo* pairing is similar to the *canto/montuno* structure prevalent in Cuban music. The single-sectioned *pambiche* consists solely of tonic/dominant ostinatos driven by a highly syncopated *tambora* pattern. *Merengue típico cibaeño* utilizes the ballroom dance position and sideways step in one direction. Contexts for *merengue típico cibaeño* were recreational dances, cock fights and brothels.

Merengue During the US Occupation and the Era of Rafael Trujillo

On 5 May 1916, US President Wilson ordered an invasion of the Dominican Republic, and the United States established a military government that ruled the country until 1924. Rural Dominicans waged guerrilla warfare against the occupying forces, and the urban upper classes mounted an international program of protest on the diplomatic front. A virulent cultural nationalism, which encouraged the embracing of all things Dominican, accompanied this campaign. Many Dominicans, however, were simultaneously attracted to the North American popular culture that the Marines brought with them. These mixed feelings played themselves out in *merengue*'s subsequent stylistic and social history. While it is possible that it existed already before the US occupation, the *pambiche* is often said to have originated during this period. According to a popular anecdote, the Marines sometimes went to local fiestas but could not dance *merengue* correctly, combining fox-trot steps with *merengue* steps. Imitating the Yankees, Dominicans in the town of Puerto Plata created what they called *merengue estilo yanqui*, or 'Yankee-style *merengue*.' Accompanied by a novel, syncopated *tambora* rhythm, the dance was associated with a song about a fabric called 'Palm-Beach' (as in the Florida city). The new form was called '*pambiche*,' a Dominicanization of the city's name. Just as '*pambiche*' Dominicanizes a US placename, the story of its origin comments ironically on occupation-era power-relations: while Dominicans did not stand a chance of defeating the United States in armed combat, the local population reigned supreme on the dance floor, even creating a new genre out of the Marines' tangled attempts at dancing *merengue*.

When the occupation began, most upper-class Dominicans rejected both rural Afro-Caribbean genres and modernistic North American imports in favor of European-influenced forms such as the waltz, polka and *danza*. The patriotic mood that arose in the face of the US presence, however, encouraged composers to take interest in local rural music; Cibao natives Juan Francisco García and Julio Alberto Hernández composed concert pieces based on *merengue*. Influenced by this trend, Cibao bandleader Juan Espínola made a mark by performing refined *danza*-tinged *merengue* arrangements for ballroom dancing. By the 1920s and 1930s, salon dance bands were being influenced by North American popular music introduced by the occupying Marines. The jazz vogue, however, did not meet a wholly favorable reaction in the face of the anti-Yankee sentiment that reigned during and after the occupation. In 1933 the Cibao bandleader Luis Alberti diffused these sentiments by fusing *merengue* with big-band jazz. This new jazz-tinged *merengue* style soon found a permanent, though small, place in the Cibao dance band repertories.

Rafael Trujillo became dictator of the Dominican Republic in 1930. Understanding that music can serve as a potent symbol of the nation-state, he summoned Luis Alberti's band from the Cibao to the capital city of Santo Domingo in 1936 to play his jazz-tinged *merengue* arrangements at high-society balls. Renamed Orquesta Presidente Trujillo, Alberti's group became Trujillo's personal band. *Merengue* became a staple of radio broadcasts, and all of the country's dance bands were required to perform newly composed *merengues* praising the dictator. Trujillo espoused an extremely Eurocentric notion of national identity and, following his lead, scholars argued that *merengue* is of Spanish origin. Trujillo's embrace of *merengue* issued from the music's syncretic nature: in spite of its distinctly Afro-Caribbean aesthetic, *merengue*'s European elements set it apart from overtly African-influenced Dominican ritual drumming, making it compatible with the dictator's Eurocentric and anti-Haitian brand of Dominican nationalism. He also implemented an isolationist foreign policy which limited transnational intercourse; while he did not proscribe foreign musics, he consistently fostered native forms. When Brazilian hits became popular, for example, urban dance bands recorded *merengue* versions of them. Arrangements combining *merengue* with other Dominican genres such as the *salve* were also made. At the same time, accordion-based *merengue típico cibaeño* was promoted as a symbol of rural authenticity.

Under Trujillo, *merengue* was often performed on live radio broadcasts, but it was rarely recorded in the Dominican Republic. Ex-patriot Dominican bandleader Angel Viloria, however, recorded many *merengue* LPs in New York City in the 1950s, gaining fame not only among Latinos in the United States, but also in Haiti and Cuba. Ironically, in spite of the anti-Haitian character of Trujillo's nationalism, which played such an important role in the development of the genre, Dominican *merengue* gained popularity in Haiti during this period, even exerting a major influence on the preeminent Haitian popular music, *konpa* (which was also influenced by Haitian *méringue*).

Merengue in the Modern Period

Despite *merengue*'s close association with Trujillo, the music remained popular after the dictator's fall; an anti-Trujillo *merengue* entitled 'La muerte del chivo' ('The Death of the Goat') was a big hit immediately following his assassination in 1961. Bandleader Johnny Ventura incorporated *salsa* elements and rock 'n' roll performance style into his *merengue*, which abandoned big-band instrumentation in favor of a smaller *conjunto* ('combo') format. Significantly, during the 1965 Dominican Civil War, Ventura sang to troops who resisted North American forces, who had invaded the Republic in support of neo-Trujilloist elements.

The country opened to outside influences as never before in the post-Trujillo era, and under the influence of bandleaders such as Wilfrido Vargas and Juan Luis Guerra, *merengue* incorporated outside elements ranging from romantic *baladas* to Colombian and Haitian *konpa* (which, as already noted, was influenced by both Haitian *méringue* and Dominican *merengue*), to hip-hop. Massive outmigration to the United States, Puerto Rico and elsewhere marked the decades that followed; by 1990 an estimated 900,000 Dominicans (12 percent of the country's population) were living in New York City alone. *Merengue* gained a high profile in the growing Dominican diaspora in the late twentieth century, where it fomented social cohesion. Gaining access to the transnational music industry, *merengue* diffused throughout Latin America and beyond, even challenging *salsa*'s position as the preeminent Latin Caribbean dance music. Dominican *merengue* became so popular in Puerto Rico that many musicians and fans there came to consider it their own. This embrace is all the more significant when one considers the fact that *merengue* was first documented in Puerto Rico.

This transnational popularity bolstered *merengue*'s cachet within the Dominican Republic. Musicians incorporated elements of other musics into their national genre: Wilfrido Vargas and Juan Luis Guerra fused *merengue* with sundry transnational styles ranging from African-American music to Latin-American romantic *baladas*, Colombian *cumbia* and Haitian *konpa*. Even the basic percussion underpinning to the music, so intimately connected to dance movement, changed from the Cibao-style *típico* rhythm discussed earlier to a two-beat pattern called the *maco* (or toad) evocative of black North American dance rhythms such as disco.

Traditionalists, including Papa Molina, who led the preeminent Dominican *merengue* band of the 1950s, argued that the new forms of *merengue* were 'corruptions' of the genre and should not be called by the name. Others saw the new developments as a natural evolution. Interestingly, bandleaders such as Anival Bravo and Cheché Abreu attempted to baptize their innovations in *merengue* (which led the way toward the *maco* rhythm mentioned above), calling their music *chucuchá* and *mangué,* respectively. Audiences, however, continued to call the music *merengue*. The neologisms failed to stick, in part, because music industry promoters continued to sell the music as *merengue*, a 'name brand' whose market value outweighed the commercial benefits offered by the new terms. The industry strategy developed in dialogue with the predilections of *merengue* fans in the Dominican Republic, the Dominican diaspora and throughout Latin America, who continued to call the music *merengue*, a musical category that had clearly accrued a great deal of cultural capital.

Despite the phenomenal popularity of *merengue*, a new Dominican music called *bachata* became increasingly popular beginning in the 1970s. As a genre, *bachata* is distinguished by its guitar-based instrumentation and texts whose street language ironically comments on working-class life, often employing bawdy double meanings. Several musical types, including *merengue*, are performed within the rubric of *bachata*.

Accordion-based *merengu*e remained vital in the late twentieth century. While rural groups and those playing for tourists stuck with the traditional instrumentation, groups in the Cibao developed a new form of *merengue típico cibaeño* that added *conga* drums and electric bass to the traditional lineup of accordion, saxophone, *tambora*, *güira* and saxophone. These groups became more and more popular during the *merengue* boom, and eventually came to perform alongside top *merengue* bands in luxurious nightclubs throughout the Dominican Republic and among Dominicans in New York City. In the 1990s the New York-based Dominican bandleader Fulanito gained fame with his dramatic juxtaposition of *merengue* accordion riffs, evoking idealized rural authenticity, with quintessentially urban hip-hop.

In spite of growing urbanization and modernization, at the turn of the twenty-first century many Dominicans continued to live in the countryside. While *merengue* and *bachata* dominated in rural as well as in urban recreational contexts, a rich repertory of uncommodified genres such as *salve* and *palos*, which are associated with African-influenced religious rituals, were flourishing in the Dominican countryside. Perhaps the most striking aspect of Dominican music culture as a whole is the degree to which urban, mass-mediated, transnational recreational musics such as *merengue* coexist with local, rural, orally transmitted ritual musics such as *palos*.

The explicit African influences on *palos* stand in stark contrast to Eurocentric concepts of Dominican identity which had prevailed since the founding of the Republic in 1844, bolstered later by the dictator Trujillo. In the post-Trujillo era, however, a coterie of urban intellectuals and musicians began to challenge this Eurocentrism. Spearheading this movement was the activist *nueva canción* group Convite, who argued that pop *merengue* represented alienated mass culture, and composer/bandleaders such as Luis Días and José Duluc, who researched rural forms to use as fodder for a new roots music, even if the major movers in the music industry ignored them. In contraposition to the Eurocentrism that had surrounded *merengue* since it rose to national prominence under the racist ideologies of Trujillo, the prominent folklorist Fradique Lizardo proposed that Afro-Dominican *palos* drumming be adopted as a national symbol. While Dominican celebration of African roots never reached the prominence of Negritude movements elsewhere in the Caribbean, it is significant that several high-profile *merengue* musicians invoked Afro-Dominican culture in their music in the 1990s. Bandleader Kinito Méndez, for example, made mega-hits by blending *palos* drumming with *merengue*, as with his version of a traditional song dedicated to the Afro-Dominican *luá*, or spirit, Ogun Balendyo, 'Suero de amor.'

PAUL AUSTERLITZ

Merengue Venezolano

The *merengue venezolano* is a twentieth-century dance music from Venezuela, with a characteristic attractive rhythm. It is a completely different genre from the *merengue* of the Dominican Republic in the way of its tempo, rhythm, instruments, culture and historical development. *Merengue venezolano* is also known by two other names: *merengue caraqueño*, relating its origin to the capital city Caracas, and *merengue rucaneao*, in which a reference to *Rúcano,* a mix for a popular jelly dessert, is used as a simile for the sensual pelvic movements of its dance. The *merengue* came into fashion in Venezuela during the period from the 1920s until the 1940s, the final years of a rural, backward country dominated by the dictator Juan Vicente Gómez, who died in 1935. The country's economics had changed gradually from an agricultural-based industry to those of a modern nation, becoming in this time the world's second largest oil exporter. At first, the music of *merengue* was closely associated with the *mabiles*, popular drinking and dancing places in Caracas, and with the capital's Carnival celebrations in street parades and plazas. Later in the 1940s it was absorbed into the dance halls of the higher classes through the adoption by the famous dance orchestra of Luis Alfonso Larrain, founded in 1939, and also became part of the repertoire of popular smaller groups such as the Cantores del Trópico, led by the guitarist-singer-composer Antonio Lauro (who composed 'Merengue para guitarra') and of composers such as Eduardo Serrano. Traditional hybrid ensembles of then and now who dedicate their programs to arrangements of Venezuelan folk music – ensembles such as *estudiantinas*, *orquestas típicas* and *bandas marciales* – always include *merengues* in their repertoire. These music groups consist of Venezuelan folk instruments (*cuatro*, guitar, mandolin, mandolas, maracas, percussion), mixed with symphonic instruments (strings, woodwinds, brass, saxophones) in different configurations. Twenty-first-century *estudiantinas* are mostly situated in the educational circuits, whereas the *orquestas típicas* and *bandas marciales* are usually subsidized by the local governments.

Historical Outline

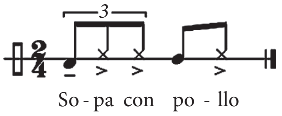
The origins of *merengue venezolano* are disputed. According to Ramón y Rivera, it is a music-type descended from the *danza cubana*, known up until the 1920s as *tango-merengue* (Ramón y Rivera 1976, 95), but it was named thereafter either *guasa* or *merengue* (Ramón y Rivera 1969, 190). This author traces the first appearances of the *danza merengue* to the scores of compositions included in the *Seminario El Zancudo*, such as 'La Boriqueña' by Salvador Llamozas (1854–1940), in 1880 (1976, 85) and to compositions by other art music composers such as José A. Montero (1839–81) (see also Soto 1998), and the famous band music composer Pedro Elías Gutiérrez (1870–1954) (see also Peñín 1998). Salazar, on the other hand, argues that the *merengue* originated from the Andalusian *tanguillo*, but could also have derived from the *fulía negra*, an Afro-Venezuelan folk type of the central coast, and that the *tango merengue* originated from Haiti, spreading throughout the Caribbean (Salazar 1991, 41). Soto mentions a possible derivation from the Basque *zorcico* proposed by Vicente Emilio Sojo (Soto 1998, 220). It was also performed by *grupos cañoneros* ('cannon' music groups), due to the fact that the musicians would call the listeners' attention by firing a bamboo cylinder (*trabuco*) filled with an explosive mixture dubbed *carburo* every time a performance of *merengue* started in the entrances (*zaguanes*) of private houses. Its traditional instrumentation consisted of guitar, *cuatro* (Venezuelan strummed four-string chordophone), *rallo* (gourd rasp), maracas, and a mandolin, flute, violin or clarinet as melodic instruments, with voices (Soto 1998, 221).

After the success of *merengue* in the arrangements of Larrain's orchestra in the 1940s, among many other *orquestas de baile*, the presence of this music and dance style diminished considerably in a changing, modernizing country, as a result of the growing distribution of foreign recorded music, which was widely accessible on radio as well as in concerts by touring foreign artists. During the 1950s, however, one or two *merengues* continued to be included in the repertoire of dance orchestras such as Billo's Caracas Boys, who played for higher social class events, and especially for the famous Carnival celebrations in Caracas during the regime of the dictator Marcos Pérez Jiménez (1952–58). *Merengue* has regularly been included in the repertoire of musicians with neofolklore tendencies – in small vocal ensembles such as the Quinteto Contrapunto, from the mid-1960s, and Serenata Guayanesa, originating in the next decade – as well as in choir arrangements from the beginning of the

1970s onward. The same applies to the new hybrid-instrumental *ensambles* which sprang up in the 1980s, such as El Cuarteto, Grupo Raíces de Venezuela and Ensamble Gurrufío, among many others, and to solo singers such as Simón Díaz, Cecilia Todd and Lilia Vera. It also became one of the rhythms adopted by the art music composers involved in the Nationalist School led by the composer Vicente Emilio Sojo in the mid-twentieth century, such as Inocente Carreño. This trend has persisted well into the twenty-first century, where art music composers equally versed in popular music, such as Orlando Cardozo in his *Merenguísticas*, have taken the *merengue* rhythm as being a symbol of the new Venezuelan culture, although it is part of the past as a dance music genre. New small *ensambles*, as well as jazz artists devoted to *fusión* music, have experimented in the search for the type of music style that could identify Venezuela, and advocate for the *merengue* as one of the best candidates among all Venezuelan rhythms to represent the new national pop music-to-be. In both cases – its usage in art music nationalism as well as in *fusión* music, where performance takes place without collective dance – the *merengue venezolano* faces a change from its former function, since it had been a music ideally suited for dancing in couples. At the same time, the *merengue* is also being continually promoted through different channels with the intention of regaining acceptance in the pop media, which, as a key to success, would imply its serving again as music for dancing. Just how this dynamic creative situation will develop is unpredictable today, but may depend on the creative level attained by whoever employs this attractive rhythm.

Musical Characteristics

Despite the many turnarounds in its history, the *merengue* has a birthright that qualifies it as the typical Venezuelan rhythm: traditionally, the first lesson given to anyone learning to play the *cuatro*, the national folk instrument, includes the *merengue* rhythm, strummed on the right hand by spelling the words '*sopa-con-pollo*' (chicken soup), in order to seize the rhythm (see Example 1). Once this technique has been mastered, the *cuatro* student learns to play the first song, the traditional *merengue* called 'Compadre Pancho.'

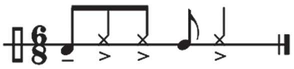


Example 1: *Merengue* in 2/4 meter (with the words used in *cuatro* lessons)

Merengue venezolano survives in a version intended to be close to the original, through the performances by *grupos de proyección* (revivalist folk groups) such as 'Los Antaños del Stadium' since 1950, 'Cañón Contigo,' founded in the early 1980s and 'Rucaneo del Mabil,' in 1995. The latter's stated purpose is 'to rescue this forgotten music typical of a city, Caracas, which has no longer any music to define it' and at the same time to 'provide a dance-music alternative to compete with foreign music' (Gil 2005, author's translation). They include other traditional salon dance music in their repertoire as well as *merengue*, such as *pasodobles*, *joropos*, *vals*, foxtrots and *aguinaldos*. These groups incorporate wind instruments such as the saxophone, trumpet and trombone, the *cuatro*, *rallo*, a snare drum with cymbal and the electric or double bass, and usually dress in formal pairs of trousers with suspenders and a flat-top, round, straw hat. Their performances are seen more as a museum-type of concert, nostalgic of the lost and forgotten cultural homogeneity of Caracas.

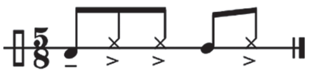
Although the *merengue* is no longer part of the regular dance repertoire in the early twenty-first century, the charm of the rhythm continues to attract present-day composers who are actively producing songs in this idiom, such as Luis Laguna, Pablo Camacaro of the Grupo Raíces de Venezuela, and jazz artists such as Aldemaro Romero, Gerry Weil and the newly emerged pianist Prisca Dávila, among many others.

The rhythm of *merengue* is traditionally written as a two-beat phrase (± 108 – 140 bpm), but a controversy exists as to how to transcribe it into music notation. Scholars and composers have proposed different versions of it, without arriving at any agreement (Ramón y Rivera 1976, 89; Salazar 1991, 42; Soto 1998, 221). As the *merengue* has become part of the life of written art music and of arrangements of jazz music in its recent history, three notational options have been used but none of them works efficiently to make a performance from notation sound like a *merengue venezolano*, without previous audio knowledge. It can be written in a 2/4 meter with triplets and two binary eighths notes (see Example 1 above), or in a 6/8 meter as in the majority of Venezuelan folk music (see Example 2).



Example 2: *Merengue* in 6/8 meter

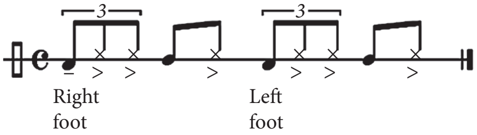
But among art music and jazz composers, the trend has been to choose a 5/8 meter (see Example 3):



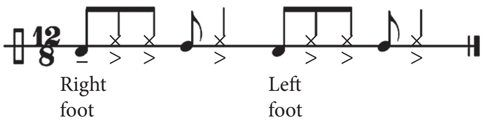
Example 3: *Merengue* in 5/8 meter

The problem with the first option is that the fifth note (the second eighth note on the second beat) sounds too slow. In the 6/8 version, the rhythm sounds too similar to an existing large body of Afro-Venezuelan music. With the version in 5/8 meter, the music would not be danceable because the two beats (dotted quarter note + quarter note) would be of different lengths of time. This version has become the preferred one for new composers since it is an unusual, irregular meter to experiment with, creating difficult syncopations. Since it is not meant to be danced to in any case, it is usually performed faster and measured in one single beat subdivided into five eighth notes. So there are two different rhythms existing for the *merengue venezolano* in the true musical sense, each differentiated by its regular or irregular beat structure. These two rhythms have become functional in two different fields of music activity: folk/pop/dance music using 6/8 or 2/4 and art music/*fusión*/jazz using 5/8.

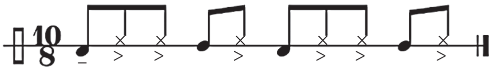
However, in the true *merengue* dance sense, the rhythm should be understood as a four-beat meter, since the dancer makes a major step with the right foot on the first beat and a major corresponding step with the left foot on the third beat. So it is either a four-beat rhythm (see Examples 4 and 5), or the undanceable 10 (5 + 5)/8 meter (see Example 6), a fact that has not been previously considered in any literature.



Example 4: *Merengue* in a four-beat, binary-subdivided meter



Example 5: *Merengue* in a four-beat, ternary-subdivided meter



Example 6: *Merengue* in a four uneven-beat, 10 (five + five)/8 meter

The difficulty caused by the last accented note of the phrase (the fifth note), in order to achieve the *merengue* 'feel' in its performance (see Examples 1, 2 and 3), can be solved by playing it with a nuance back or forth depending on whether it is written as a binary eighth note (Example 4) or as a quarter note within a 12/8 meter (Example 5). This is what does indeed happen in the performance of the *merengue venezolano*, a delightful, catchy dance rhythm.

EMILIO MENDOZA

Méringue (Mereng)

Méringue (French), or *mereng* in Haitian Kreyòl, is an iconic Haitian music genre that developed from the legacy of social dance in the Caribbean in the nineteenth century. Its long history and popularity among diverse social strata has led to varied iterations of the genre over time, although it is best known to Western audiences in its parlor music form, *méringue lent*. After emerging in the mid-nineteenth century and coming to fruition in the early twentieth century, *méringue* reached the pinnacle of its popularity during the American occupation of Haiti (1915–34), earning unofficial designation as the island's national music; it remains a treasured emblem of national culture today (Fouchard [1973] 1988b). Because of its multifaceted past, the term *méringue* can denote a wide range of folk music styles, most commonly those that include the popular *quintolet* or *cinquillo* rhythm.

The *méringue* evolved from the European-derived *contredanse* tradition, which then blended with the *calenda* and *chica*, syncretic dances of African origin. Although *contredanse* originated as a form of rural dancing (country dancing) in England in the seventeenth century, the *contredanse français* was an important activity in the French court by the early eighteenth century; the dance quickly became popular among lower classes as well. The French brought the *contredanse français* to Haiti, where they held social dances. Slaves frequently provided the musical accompaniment for these social dances and thus became familiar with *contredanse,* adopting it for their own social gatherings.

The *carabiné* (French: *carabinier*), a couple's dance that blends aspects of *contredanse* and *calenda*, is the believed direct precursor of the *méringue*. This dance emerged shortly after the 1804 revolution, during the Presidency of Jean-Jacques Dessalines. It became the most popular social dance among the elite in Haiti until the *méringue*'s debut around 1847. Rural communities continued to practice the *carabiné* until the mid-twentieth century, especially at dances and at *fèt champèt* (country dance), where *contredanse* was typically performed.

Méringue Varieties and Social Class

By the early twentieth century, the *méringue* was ubiquitous in the social life of both Haitian elites and the lower class. However, the style and practice of these '*méringues*' greatly varied between the classes. Typically, *méringues* can be grouped into two subsections: *méringue lent* (slow *méringues*), the slow-tempo and lyrical salon songs of the elite, and *mereng koudyay* (French: *méringue coup d'jaill*), the fast rural music practiced by the lower class.

The *méringue lent*, the best-known variety of *méringue* outside of Haiti, is sometimes called *méringue salon* (parlor *méringue)* because of the genre's popularity as lyrical parlor songs written for piano and performed at Sunday afternoon salon concerts of the elite. In addition to these parlor songs, Haitian art music composers in the late nineteenth century, including Occilius and Occide Jeanty as well as Michel Mauléart, embraced *méringue* in their music, which they composed for dances as well as salon concerts. The bourgeoisie consumed *méringue*-inspired concert music as a way to celebrate their Haitian cultural roots through a contemporary medium. One example of such a *méringue* is 'Choucoune,' composed by Michel Mauléart Monton (1855–98) and published in 1884 by Ferdinand Frangeul. The text for 'Chocoune' was taken from a poem by Oswald Dunand (1840–1906), and was originally called 'Frè P'titt Pierr' (Little Brother Pierre), after the narrator of the song, a young slave who is in love with a woman named Chocoune. The lyrics evoke rural life so as to allow elite listeners to connect to local culture.

The *méringue* also remained an important staple at elite social dances, typically closing the dance as the final selection of the night. Gage Averill presents a *mérigue lent* that exemplifies this point, as well as the *méringue*'s importance in Haitian culture (Averill 1997, 35):

Mereng ouvri bal	The *méringue* opens the ball
Mereng fenmen bal	The *méringue* closes the ball
San mereng panpwen kanaval	Without the *méringue*, there is no Carnival

It is fitting that the song mentions *méringue* and Carnival, because another variety of *meringue*, favored by the lower class, was commonly used in Carnival song practices. Preceded by the *mereng kanaval* (Carnival *méringue*), the *mereng koudyay* (French: *méringue coup d'jaill*) is meant to denote the music-fueled, 'gushing, surging events' that took place at political rallies post-independence (Largey 2009, 213). Although the *mereng koudyay* and *mereng kanaval* have different names, they are nearly identical in style. The fast-tempo songs of *mereng koudyay* were originally used in the early days of the Haitian military to celebrate victories, and this celebratory nature conveyed well into Carnival song practice.

There are some exceptions to the typical delineation of *méringue* by class. The best-known examples of this are in the work of composer and pianist Ludovic Lamothe (1882–1953). Lamothe bridged the different class-based styles of *méringue*, composing both the *méringue lent* 'La dangereuse' and the *méringue de carnival* 'Nibo,' the latter of which won best song in the 1934 Carnival competition. However, the upper class mostly consumed *méringues* of lower status through select pieces that were published and stylized.

Significance as a National Symbol

By the end of the American occupation of Haiti *méringue* had become a cultural staple across class lines and was revered as the country's (unofficial) national music. However, there have been debates as to whether the *méringue* can be called a distinctly Haitian genre, particularly due to its similarities to other Caribbean national musics. Most obviously, the shared use of the *quintolet* or *cinquillo* rhythm in the Haitian *méringue*, the Martinican *beguine*, Dominican *merengue* and Cuban *danzón* has caused scholars to question how closely these genres are related and how unique each is to its respective island (Largey 2009, 209).

The most heated of these debates has involved the Dominican Republic, Haiti's neighbor on the island of Hispaniola. The two nations have a long and tumultuous history, and it comes as no surprise that they disagree with each other on the origins of the *méringue* and the *merengue*. Many Haitian music scholars trace the connection of the genres to the Haitian occupation of the Dominican Republic from 1822 to 1844 (Fouchard [1973] 1988b; Saint-Cyr 1981–82; Dumervé 1968). They posit that during this time Haitian soldiers introduced their neighbors to early forms of *méringue* and that the *merengue* is the direct offspring of the *méringue*. Not surprisingly, Dominicans vehemently disagree and denounce the idea of any Haitian influence on the *merengue*. One Haitian musician, however, has taken another stance. Haitian pianist and composer Ludovic Lamothe, one of the best-known composers and performers of *méringues* during and after the American occupation, wrote an essay in 1935, 'Can We Have a National Music?' in which he acknowledged *méringue*'s dubious origins. In the essay, he conceded that the dance is related to the *habanera* and is of Spanish origin. However, Lamothe maintains that the *méringue* is now a distinctly Haitian art, regardless of its antecedents.

Thus, the *méringue* remains an important heirloom of Haitian culture and national identity. Although the dance has lost its large-scale commercial popularity, it is commonly performed today in folkloric settings as a homage to Haiti's rich and variegated history. In spite of its differing styles and class stratification, it is clear that the *méringue* has served an important purpose for Haitians of all classes for over 100 years.

LAURA DONNELLY

Milonga

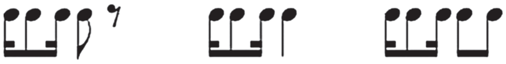
'*Milonga*' is one of those words, often encountered in the cultural field, whose meaning is taken for granted but difficult to define precisely. The origin of the term has been postulated as being Afro-Brazilian (Rossi 1926, 116) or directly African (Vega 1965, 309). The word comprises a group of musical genres that extended at different points in time across a good portion of the territory of Argentina, the entire territory of Uruguay and the extreme south of Brazil (a part of the state of Rio Grande do Sul state). As is often the case, the origin of a word is not necessarily related to the origin of the object the word indicates. Since the second half of the nineteenth century the term has consistently carried several different, changing meanings. It was the name of a musical genre with at least four subgenres, one of them quicker, danceable and mostly instrumental, and the other three slower and mostly sung. It was the name of a lively and angular dance that originated, according to Rossi (ibid., 113–28) on the eastern bank of the Río de la Plata. The danceable *milonga* was not especially suitable for lyrics, even if it often gave shelter to low texts, sometimes mischievous or obscene. The other, slower subgenres allowed the development of singable *milongas*. As in other parts of the continent, in earlier times in Uruguay and Argentina the word 'milonga' meant 'muddle' or 'mess,' or even, in certain places, enchantment or sorcery; it also designated a celebration that included dance. Later on, by the end of the nineteenth century, any dance venue could be designated by the term. In the last decades of the nineteenth century there was a large influx of young European workers into the Río de la Plata area, resulting in an overpopulation of single males and a thriving network of brothels. As a consequence, the term *milonga* began to acquire less positive meanings, and as well as referring to the places where people danced the *milonga* (and other dances), it began also to be used to mean a licentious woman. More recently, the term has been used to denote an event where people dance *tango* and *tango*-related dances.

Ayestarán (1967) placed the origin of both *milonga*-music and *milonga*-dance at around 1850, recognizing that it had reached its peak by 1870, though he knew, as did Vega, that its origin could have been earlier than the appearance of the term in documents. Vega presupposed the existence of a genre from which the *milonga* derives. The nineteenth-century *milonga* seems to have disappeared by 1900, though it has been revived repeatedly and perhaps never really died out. In any case, at the start of the twenty-first century the *milonga* was still in good health.

In Uruguay the *milonga* has been, at various periods, the central genre cultivated by popular musicians (and accepted by the audience). By observing the genre as it existed in Uruguay through the second half of the twentieth century, we can establish some of its characteristics. (For information on *milonga* in Argentina and Brazil, see Milonga [Argentina] and Milonga [Brazil])

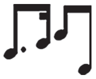
The Danceable *Milonga*

Performed principally by the guitar, followed at some distance by the accordion, a danceable *milonga* preceded the *tango* historically but gave way to it at the beginning of the twentieth century, only to reappear three decades later within the context of *tango*, like an updated echo of past practices. Recovered above all as the gesture (in both musical and physical terms) of the old dance, the music of this danceable *milonga* is perpetuated in the *tango*-orchestra repertoire as *tango-milonga* (or *milonga tanguera*). A particularity of this *milonga* is the rhythmic cell, called '*pie de milonga*' in the Río de la Plata, of sixteenth note-eighth note-sixteenth note that falls on the beat in quaver or crotchet or two quavers (see Example 1).



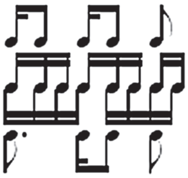
Example 1: *Pie de milonga* rhythmic cell

This melodic gesture, which is probably the central core of the danceable *milonga*, also appears in musical expressions in other parts of the Americas. Another important characteristic is the accompaniment, which can be understood as a quick version of the *habanera* bass (or the rhythm of Cuban *tango*, as *habanera* was known in Cuba in the first half of the nineteenth century), probably, but not necessarily, derived from it (Example 2).



Example 2: Scheme of the accompaniment of the danceable *milonga*, similar to the *habanera* bass

Both schemes conform to an implied underlying structure in which the binary metric unit can be subdivided in two different ways: on the one hand, into two equal halves of four sixteenth notes, and on the other, into three unequal thirds of three, three and two sixteenth notes, respectively (see Example 3).



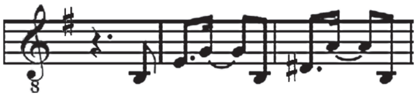
Example 3: Superimposition of the rhythmic structures underlying the danceable *milonga*

These characteristics may be omnipresent in a danceable *milonga*, or present only sometimes, or merely suggested.

The implied frame allows the consumers to perceive as danceable *milonga* pieces of music that are not explicit in terms of these types of structures and that defy any attempts at academic analyses with melodies or accompaniments which, when put on paper, may appear rigid.

The Singable *Milonga*

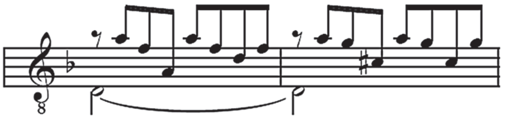
In the second half of the twentieth century, the singable *milonga* was developing a number of variants, usually slower. These can be broadly grouped into three main types. One is the *milonga oriental* or *orientala* (eastern *milonga*), cultivated in what is today Uruguay. Rugged, with aggressive and sharp accentuation, it was defined by Carlos Molina (the principal personality among the *payadores* of the second half of the twentieth century), as 'more vigorous, more virile, more appropriate for singing epic things' (quoted in liner notes for the album by Molina and Sosa, *El arte del payador*; author's translation) (see Example 4).



Example 4: Basic accompaniment of *milonga oriental*

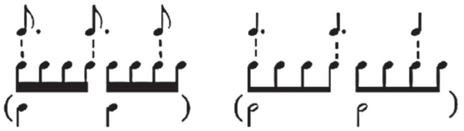
The dotted eighth notes and sixteenth notes (with tie) in this accompaniment can often be of an eighth note and two sixteenth notes, the second of which is clearly more accentuated than the first (and is tied to the next eighth note as well).

The second broad type is that of the *milonga pampeana* (western *milonga*). Lyrical and tender (in contemporary terms), it is described by Molina as 'a little softer, very nostalgic' (ibid.), so more able to express feeling. Here the lower notes subtly trace the three-three-two pattern (see Example 5).



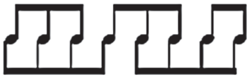
Example 5: Basic scheme of the beginning of the Introduction to Atahualpa Yupanqui's 'Hay leña que arde sin humo.' (Some Wood Burns Without Smoking)

In the singable *milonga*, the superimposition of the two different subdivisions noted earlier in the danceable *milonga* (Example 3) is again present. In the singable type, the basic rhythm again is three-three-two, that is two dotted quarter notes followed by a quarter note, simultaneous with two half notes subdivided into eighth notes (see Example 6).



Example 6: Rhythmic simultaneity in the singable *milonga*

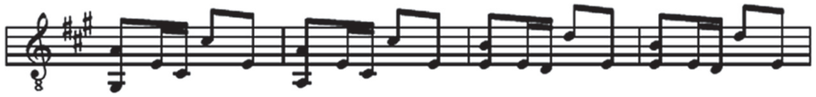
This is an example of a metric scheme which is widespread in the Americas (especially on the Atlantic coast, as established by Vega), in which the binary is superimposed over the ternary, both subdivisions having a corporeal feel. As noted earlier, this metric structure subdivides two beats into four, which are superimposed – note against note – over three pulses of unequal duration: two three-note and one two-note subdivisions (see Example 7).



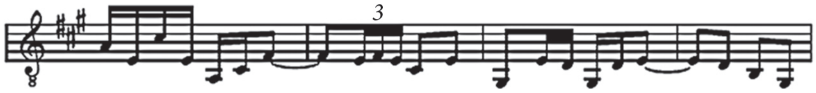
Example 7: Basic polymetry of the three-three-two scheme

It is important to note once again that this three-three-two pattern is implicitly perceived though not necessarily explicit. As a consequence, this metric family retains its rhythmic feel even when the melody line or the accompaniment feature equal note values (i.e., a series of eighth or thirty-second notes in a two-guitar accompaniment).

It is likely that *milonga* contains an important component of remote African origin, whether in its gestational crossbreeding or in its interactions with other genres, but that origin cannot be affirmed. Vega (2007, 66–7) thinks that the *milonga*'s origin is in the



Example 8: *Milonga achamarrada* accompaniment pattern



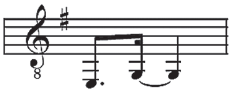
Example 9: Cutting gestures in a *milonga achamarrada*

lundú, a genre, both sung and danced, that originated in Brazil in the eighteenth century. That would mean the process of hybridization with African traits would be a second-generation process: effectively, a hybridization of what was already a hybrid.

A third type of singable *milonga* may also be identified: that of the *milonga* of northern Uruguay, which bears many similarities with the *chamarrita* (or *chamarra* or *chimarrita* or *shimarrita* or *cimarrita*) and is potentially danceable. In fact, the *chamarrita* has been defined as a variant of the *milonga*. The accompaniment to this '*milonga achamarrada*' ('chamarrized' *milonga*) is a kind of hammering pattern, as in Example 8 above. This pattern can be interspersed within the introduction and interludes with certain cutting gestures, which perhaps reflect the influence of dance; see Example 9 above for a common variation.

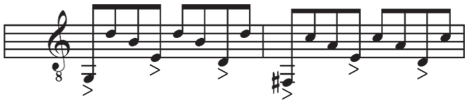
These three branches of singable *milonga* have persisted into the twenty-first century, cultivated not only in Uruguay but in parts of Argentina and in some adjacent areas of southern Brazil. They have also been of fundamental and continued importance in the work of popular musicians since the 1960s. Through the influence of radio and the frequent visits of Argentinian musicians (mainly Atahualpa Yupanqui, Antonio Tormo and Abel Fleury), the second, western branch of the singable *milonga* appears to have influenced the first, eastern one by the mid-twentieth century.

Among the enormous diversity of variations in use, within eastern *milonga* we find variants such as the scheme of a dotted eighth note and sixteenth note tied to a quarter note (close to the scheme of *milonga oriental*, already defined) (Example 10):

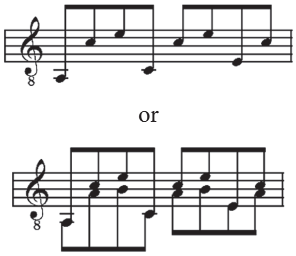


Example 10: Eastern *milonga*'s accompaniment variant

A further variant is a scheme of eight eighth notes (if written in 2/2) in which the interplay between pitches (i.e., their highness and lowness) determines how the three-three-two is perceived (more distant from *milonga oriental*), and in which the direction of the articulation can be descending or ascending (Examples 11 and 12):



Example 11: Descending movement (fragment of 'Nací para andar caminos' [I Was Born to Travel the Roads] by Anselmo Grau)

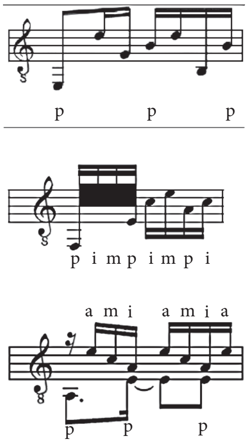


Example 12: Ascending movement (fragment of '¿No lo conoce a Juan?' [You Don't Know Juan?] by Rubén Lena, recorded by Los Olimareños)

This scheme can be present in very different tempi.

Another aspect to be noted is that in the singable *milonga* a higher or lower tempo is not linked to eventual danceability. Moreover, there is no inherent range of tempi.

The character of the *milonga* can also be seen in the way the guitar is played: as Rubén Olivera has stressed (personal communication with author), the right hand has a decisive role in the way the strings provide the implicit (and not necessarily explicit) perception of three-three-two. The play of accents in the above examples (*marcato* in Example 11, *non marcato* in Example 12) is provided by the thumb, the use of which is very important in the popular guitar style of the Río de la Plata cultural tradition (see Example 13). The use of the thumb generates an entire palette of timbres, sound qualities and gestures of attack. But the thumb can go beyond the usual strings (4, 5 and 6), to the 3 and even the 2.



Example 13: Examples of three-three-two feel being brought out in the bass notes of the guitar accompaniment pattern in singable *milonga* (p = thumb, i = forefinger, m = middle finger, a = ring finger)

The meter of *milonga* lyrics is generally octosyllabic, structured in groups of four, six, eight or ten lines. The singing is, as almost always in this region, syllabic. With its static character, the *milonga* is well suited to the development of long sequences of lines, appropriate for narrating epic stories or current happenings in daily life. That is why, since the nineteenth century and over several decades, the warp and woof of *milonga* has permitted confrontations between two singers (*milongueros*), though in a different praxis and in a less demanding manner than the duels of the *payada* (alternate improvisation of lyrics by two singer-guitarists). From the end of the nineteenth century the *payadores* themselves adopted the *milonga* as an important support for their duels.

It is in that *payador* tradition that we find, surviving strongly, a way of intoning the melody that does not fit with the molds of the tonal system; the *cifra* tradition demonstrates a similar phenomenon. In traditional *milonga* singing ('canto por milonga'), the boundary between song and spoken intonation can be very fluid, and the articulation of the lyrics achieves a high level of intelligibility. In the long series of stanzas, the sung text often alternates with recited sequences.

Historically, the *milonga* has often been conceived as a repertoire of formulaic patterns at the levels of melody, accompaniment and embellishment. This historic trajectory is also common to other local genres, such as the *cifra*, and, possibly to a greater degree, the *vidalita*. The culture of formulas became less prominent during the twentieth century, due perhaps to the influence of recordings and radio, though it reappears here or there; however, the approach is linked with the ongoing tradition of the 'walking' formulas, which was attacked by the twentieth-century cultural industry and by the capitalist concept of authorial rights. The *milongas* frequently use walking solutions (which have no owner and are free for use among those who cultivate the genre), in the singing line as well as in the accompaniments, or in the introductions and preludes (see Example 14 below).

And finally, there is an almost hidden, secret current within the *milonga* family: that of the *milongón*, a genre that can be perhaps defined as a sluggish and thick *milonga*. This genre has a more explicit relationship with Afro-Montevidean traditions.

Milonga (Argentina)

In Argentina, *milonga* is a traditional vocal genre of *criollo* origin, normally performed by a solo voice with a guitar accompaniment. The genre is present mainly in the provinces of Buenos Aires, La Pampa and Entre Ríos, and in the south of the provinces of Mendoza and San Luís. However, the influence of *milonga* extends from the Patagonia region to urban sectors thanks to the work of nationalist composers. The term may have originated in Africa (see main entry on Milonga) but the origins of *milonga* as a song genre appear to go back to the mid-nineteenth century. Ventura Lynch documented this type of song in 1883 (1925 [1883], 37–40), transcribing a few examples that he collected in rural areas. He defined these songs as 'zandungueras,' namely for their graceful and animated character. He also distinguished between the rural *milongas*, which were sung, and those that were danced in the suburbs of the city of Buenos Aires. At the start of the twentieth century, the *milonga* was revived and disseminated by the traditionalist movement in Buenos Aires, becoming the song par excellence of the River Plate *payadores* who, until then, had used the *cifra* (a traditional melody with accompaniment based on improvised verses).

The *milonga* normally starts with a guitar prelude usually plucking the strings, reproducing the rhythmic formula characteristic of the genre: dotted eighth-sixteenth-eighth-eighth, over tonic and dominant chords. This serves as a base for the accompaniment once the voice is introduced. It contains the musical features proper to the songbook that Carlos Vega (1944, 230–45) denominated as 'colonial binary': major or minor key, sometimes bimodal (i.e., with the superimposition of F major and the melodic minor). It is in duple meter with occasional polyrhythms between the accompaniment, which is in triple meter, and the vocal line, which is usually in duple meter. *Milongas* are syllabic, with each sung verse separated by an interlude that repeats the theme of the prelude. Often the melody line starts on a pickup, and it also tends to start on a higher register with a gradual descent to lower registers as the song progresses.

The texts, based on octosyllabic lines, are organized in verses of four, six and eight lines and, above all, in *décimas*. The range of subject matter explored in these poems is wide, including patriotic, narrative, comic or burlesque, romantic and historical themes. In addition, the *milonga* is used to improvise on a theme proposed by the audience, and also for counterpoint *payadas,* literary-musical duels between two singers on a poetic theme either previously agreed upon between them, suggested by the audience, or that emerges freely in the course of the duel. In a *payada*, one of the singers is defeated when he is unable to respond correctly to the other contender.

In the province of La Pampa, the *milonga* has been registered as performed by two voices and two guitars, the singers alternating after two verses or each stanza. This *milonga* has also been given different names and functions according to the strumming techniques used to perform it: *corralera*, *campera*, *surera* or *para payar*. It can also be interpreted by a solo guitar in a purely instrumental mode.

Many of the art music composers affiliated to the nationalist movement of the first half of the twentieth century were inspired by the *milonga* to create works for piano, voice and piano, choir or orchestra. Notable among them are 'Aires de la pampa,' ten *milongas* for piano, opus 63 (1913) and opus 64 (1916) and 'Las milongas de la orquesta,' opus 107 (1935) by Alberto Williams; 'Ritmos argentinos' for piano (1933) by Cayetano Troiani; 'Milonga' for mixed choir by Juan Bautista Massa; and 'Frescas sombras de sauces' (Cool Shades of the Elm Tree) for voice and piano by Carlos López Buchardo.

Creators and interpreters of popular music have also made the *milonga* one of their preferred genres for their compositions. Among the most relevant are Atahualpa Yupanqui with works such as 'El payador perseguido' (The Hunted Payador), a tale in the form of a *milonga*; 'Milonga del solitario' (The Loner's *Milonga*) and 'Milonga del peón de campo' (*Milonga* of the Country Peon); Eduardo Falú's 'Variaciones de milonga,' 'Contrapunteando' and 'Preludiando'; Carlos Di Fulvio's 'Milonga ¿cómo le va?' ('How Are You?' *Milonga*), 'De nadie y de todos' (Nobody's and Everybody's) and 'Abuelo gaucho' (Gaucho Grandfather); Hugo Giménez Agüero's 'Sangre de peón' (Peon's Blood), 'Por el sur de Piedra Buena' (South of Piedra Buena), 'Glaciar,' 'Solo soy un peón' (I Am Just a Peon) and 'Metáfora' (Metaphor), Hilda Herrera's 'Al calor de mi tierra' (In the Heat of My Land); Atilio Reynoso's 'Cuando llama la querencia' (When Home Beckons) and 'La matera de San Francisco' (The Mate Shack of San Francisco).

HÉCTOR LUIS GOYENA (TRANSLATED
BY ZUZANA PICK WITH PAMELA NARBONA JEREZ)

Milonga (Brazil)

Milonga appeared in Brazil around the end of nineteenth century in the extreme south of the country, in the region where Brazil borders on Argentina and Uruguay. It was widely disseminated as a genre of popular music, mainly in the state of Rio Grande do Sul, in the context of the *música nativista* festivals that appeared around the end of the 1970s. In the 1980s, when these festivals were of considerable importance (Lucas 1990, 227; Santi 2004, 94–5), *milonga* was considered their most emblematic musical genre (Lucas 2003, 70).

In Brazil, the Río de la Plata region of Argentina and Uruguay is widely accepted among musicians and researchers as being *milonga*'s point of origin. Ferraro characterizes it as 'one of the most important genres of musical communication' (2006, 59; author's translation) within *platina* (from Argentina and Uruguay) and *gaúcha* (in this case, from the Brazilian state of Rio Grande do Sul) cultures. It should also be noted that in two well-known dictionaries of popular music and Brazilian folklore (Andrade 1999; Câmara Cascudo 2011), the term *milonga* is associated with African origins, and with meanings such as 'a reunion to solve some problems,' 'a kind of gossip, intrigue, plot' (Andrade 1999, 336) and also 'words,' 'words in general, foolish or insolent words' (Câmara Cascudo 2001, 383; author's translations). (See also main entry on Milonga.)

As in *rio platense payada* (music of the *payadores* of the Rio de la Plata) *milonga* in Brazil has a strong connection with the spoken word, for example in that form of performance which provides instrumental accompaniment (traditionally played on the guitar) for verbal improvisation. *Milonga* can also be sung or be played as an instrumental.

In the modern era, at least in Brazil, *milonga* is characterized by a great deal of variety, in terms of style of composition and mode of performance, mood, arrangements and instrumentation. At the 'traditional' end of the spectrum, *milongas* in different moods are common in the repertoire of groups and musicians associated with the aesthetics of *música gauchesca/nativista*, such as Os Monarcas, Os Serranos, Gaúcho da Fronteira, among many others. At the other end, and confirming *milonga*'s plasticity and its ability to transcend boundaries whether national or aesthetic, it is also present, for instance, in the title track of the first album of one of the most important Brazilian rock bands from the 1980s, Engenheiros do Hawaii, from Porto Alegre, the capital city of Rio Grande do Sul (*Longe demais das capitais*, 1986). *Milonga* also continues to be included in the repertoire of musicians who originated in Rio Grande do Sul and who perform in broader popular musical contexts at both national and international levels, composing and recording new *milongas* as well as drawing inspiration from the genre as a whole. Two good examples are the composer, singer and instrumentalist Vitor Ramil and, from another style, the virtuoso guitarist Yamandu Costa. Meanwhile, in the work of musicians such as the instrumentalist Renato Borghetti, *milonga,* together with other genres from the south of Brazil, approaches the borders of jazz, with complex arrangements and harmonies, and the inclusion of elements such as an improvised solo.

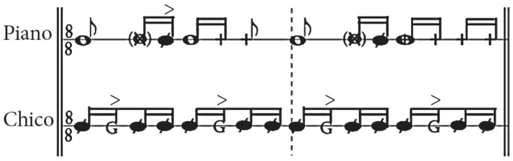
LUÍS FERNANDO HERING COELHO

Milongón

The *milongón* forms part of the *candombe* repertoire of the Afro-Uruguayan Carnival associations, who perform it mostly in popular theaters during the Carnival period in Uruguay (and not, therefore, when marching in parades). *Milongón* is also played, sung and danced in the domestic sphere, in families of African descent, as part of a party – for example, to make a joke or to engage in an imitation of the elders, animating them to dance. Like the *candombes* presented by those associations ('comparsas') in popular theaters, *milongón* is played by a trio, quartet or quintet of the best drummers. Many *milongón* pieces are songs for a singer and a chorus. In this type of *milongón*, besides the drum group, there will be an arrangement for electric bass, guitar, keyboard and perhaps brass (Ferreira 1997; Aharonián 2007).

The drum group interacts with two of the *candombe*'s main dance figures, the ancestral couple of the group – the 'Gramillero' and the 'Mama-Vieja.' Many *comparsas* experts consider that the *milongón* refers to an early noble dance, representing that of the King and Queen of an ancient nation – an African society in the colonial and early republican period in Uruguay – on the occasion of a ritual. This representation may be expressed in gesture by the way in which the dancers' movements designate noble rank, following the subtle improvisation of the medium drum and the fills and some breaks by the large drum. According to historical sources, some of the main Nations established in the southern districts of Montevideo in the 1870s and 1880s were the Congo, Benguela, Mina-Mahi, Mina-Nago, Calabari and Mozambique (Ayestarán 1953; Goldman 1997).

Milongón has the same musical structure and organizational principles as *candombe* drumming, but is played at a much slower pace. A fast *milongón* would be a slow *candombe*. *Milongón* may be represented as a sixteenth notes pulse in 4/4 time or, better, in 8/8 (see Example 1).



Example 1: *Milongón* in 8/8

This is because the big drum *piano* (bass) often uses a special technique, similar to ‘manotazo’ in Afro-Cuban music, of successive strokes by the palm (⊙) and fingers (⊗) of the left hand in the center of the patch, accentuating an eighth note flow. Meanwhile, the right hand with stick (●, open stroke; +, muted stroke) emphasizes a three/two/three metric organization in the first half of the measure, and a three/one/four organization in the second half (⊕ is a simultaneous palm and stick stroke). At the same time, the small drum *chico* (treble) plays a pattern named *chico repicado* (G is *galleta*, a strong left-hand open slap stroke; ●, open stroke with stick).

Medium drum *repique* improvisation and responses (to other *repique* drums or to the vocal part) may include the superimposition of triplets (Example 2) as well as quick sextuplets (Example 3), and a variety of colors (G is a *galleta* slap stroke; X is a left-hand closed slap stroke; ● stands for open stick stroke; T is *timbaleteado* – a rim-shot stick stroke).

A *milongón*, played with drums only, is related to another of the main dance figures of *candombe*, which the master of ceremonies – the ‘Escobero’ – performs during the slowest part of the dance with his light broomstick twirling round his body. Beginning with a medium-time *candombe*, a drum trio or quartet abruptly slows the *candombe* pace down to that of a *milongón*, creating a sense of suspense when the dancer lets his stick to fall to the floor. Soon, the dancer smartly recovers the stick using just his feet, and the drums very rapidly accelerate to a fast *candombe* time, releasing the tension and signaling the success of the dancer.

Most of the composers of *milongón* are the same as those who compose the *comparsas*’ *candombe*s; one or more *milongón* are composed and choreographed by each *comparsa* every Carnival (for example, Esther Fernández and Comparsa Marabunta. ‘Milongón’ [2000], Eduardo Da Luz, ‘Milongón de Reyes’ [1999] and Heber Píriz, ‘Milongón de la Mama Vieja’ [2003]). In comparative terms, the production of *milongón* appears rarely in other manifestations of Uruguayan popular music. Some *milongón* may be related to the *milonga* of Uruguayan ‘canto popular’ (popular song), influenced perhaps by the contribution of Miguel Angel Herrera, an Afro-Uruguayan *comparsa* drummer, composer and singer. Herrera was one of the guitarists who played with Alfredo Zitarrosa, one of Uruguay’s most important *milonga* artists in the 1970s (for example, on the 1984 recording ‘Romance para un negro milonguero’). Argentinian *tango* ‘Orquestas Típicas,’ such as the one led by Francisco Canaro between 1938 and 1956, composed and played a few special *milongas* that were called *milongón* (for example, Canaro’s ‘Milongon,’ 2003). In the 1960s, *milongón* could also be found in some of the ‘Candombe Beat’ productions in Uruguay as a mixture of *milonga* and slow *candombe* (for example, ‘Y es así’ by Jaime Roos [1994]).

LUIS FERREIRA

Miskitu Popular Music

Miskitu people have historically been residents of the Atlantic coastal region of Central America known as the 'Mosquitia,' now the eastern coast of Nicaragua and Honduras. This region was informally colonized by England and later by the United States before being integrated, to some extent, in Spanish-speaking nation-states. Miskitu people have a cosmopolitan history of intimate relations with escaped African slaves, European buccaneers, English colonists, Moravian missionaries, West Indian migrants and North American investors. These relations have shaped and sometimes radically transformed Miskitu musical practices. Nevertheless, Miskitu people's aesthetic flexibility and cultural syncretism have facilitated the maintenance of a distinct indigenous identity over 500 years of intercultural contact.

Sacred and Secular

At least since the 1950s the most common genre division in Miskitu music has been between sacred and secular – *dawan lawana* (God's song) and *tasba lawana* (earthly song). Miskitu people consider certain music in both categories to be popular in the sense of widespread contexts of performance, participation and circulation. In Nicaragua, Miskitu musicians are especially known for their popular recordings of Christian songs, accompanied by acoustic guitars, or increasingly by bands of electric guitar, bass, keyboard and drum set. Electric bands are also common in Honduras, but there Miskitu musicians have recorded more secular songs, including updated versions of traditional songs and new dance numbers.

These contemporary popular songs are descendants of a genre that researchers identified in the 1970s as *tiun*, from the English 'tune' (Scruggs 1998a). Velásquez and Agerkop (1979) described this as a genre associated with youth participation, song texts about love and travel, and guitar accompaniment. Contemporary Miskitu songs may also draw on older forms of men's songs about travel, labor and love (Agerkop 1977; Conzemius 1932). When American companies dominated the region, these songs narrated experiences of work in the mines and logging companies. Now they are more often associated with lobster divers and other maritime laborers in the region's formal and informal economies (Herlihy 2004).

In the early twenty-first century, Miskitu popular songs are most commonly referred to simply as *Miskitu lawana* (Miskitu songs), and they are heard across a range of contexts. Christian popular songs are performed in churches, religious gatherings and homes; secular songs are performed in homes, bars, small community gatherings and larger political events. Cassette and CD recordings are broadcast on radio and sometimes television, and played in shops, restaurants and dance halls along the Atlantic Coast. Miskitu popular songs fill public and private spaces with regional sonorities, which, in the case of Nicaragua, form an aural counterpart to political autonomy (Antonio 2006). The circulation of Miskitu recordings also facilitates cultural and aesthetic ties between Miskitu people in Honduras, Nicaragua and other places such as south Texas and Florida, where Miskitu communities have formed in the United States (Peter Espinoza 2005).

Style and Lyrics

Contemporary Miskitu popular songs often display the constricted, high-pitched vocal style that is characteristic of Miskitu traditional song, with syllabic texts in Miskitu, Spanish or more rarely Creole English. Vocal harmonies are commonly in thirds, while the harmonic accompaniment is usually limited to I, IV and V chords. Songs performed in rural communities have conventionally been accompanied by acoustic guitar with percussion. Recent urban songs may also use an electric band, a synthesizer or occasionally more elaborate studio mixing. Contemporary Miskitu recordings often adapt stylistic elements from Honduran and Belizean Garifuna *punta*, Trinidadian *soca* and calypso and Jamaican and South African reggae. The classic themes of love, nature and travel are still narrated in strophic song forms, but the influence of Caribbean dance music has also spurred songs with repeated textual fragments in a driving rhythmic groove. Other popular song lyrics attempt to raise consciousness about the conservation of natural resources and protest against exploitation by logging and fishing companies.

Performers and Textual Change

Older styles of Miskitu popular music are sometimes associated with singers in the Wangki River region, along the border of Honduras and Nicaragua. Prominent Wangki singers who maintained indigenous styles until their death include Paladino Taylor, Lester Arthurs, Bonifacio Solano and Kingsman Lino. The Honduran Modesto Morales was one of the first Miskitu singers to make recordings, including the song 'Sirpiki Mairin' (My Little Woman), which has maintained widespread popularity over several decades. In the 1980s this song gained national and international renown when it was performed and recorded using electric instruments by the Nicaraguan Creole bands Grupo Gamma and Dimensión Costeña (Scruggs 1999).

In the early 2000s, some of the best-known Miskitu bands on the Atlantic Coast of Nicaragua included Grupo Amigo (Group of Friends) and Los Peregrinos (The Pilgrims), both of which have played primarily Christian songs in Miskitu with electric instrumental accompaniment. Around 2004 a new wave of Miskitu secular music moved from Honduras to Nicaragua, often with the syncopated rhythms of a synthesizer accompanying singers such as Joaquina (Joaquina Acuna), Beningno Bordas, Doroteo Feldeman and Romel Reyes (cf. Antonio 2006). In Nicaragua, Doroteo Feldeman came to be called Papa Nulan, based on his popular dance tune by that name; in Honduras, he is sometimes known as Yakal Siksa.

Joaquina may be unique as a woman recording secular popular songs, but Miskitu Christian songs have been recorded by Nicaraguan women such as Emmy Rosa and Katia. Together they represent the slowly increasing presence of women's voices in Miskitu popular music. The incorporation of women's perspectives in popular song can be heard in Joaquina's version of the classic Miskitu song 'Maritkam wihki lilam ba wal' (Your Wife and Your Lover). In the past, this song was typically performed by a man, as recorded on the album *Saumuk Raya* in the 1980s. It asks the question of whether one's wife or lover is preferable, and ultimately answers that the lover is preferable because she is more obliging, attentive and always ready to serve her mate. In contrast, according to the male singer, the wife is full of complaints, criticisms and bad moods. Joaquina recorded a new version of the song asking the same question, but responding that the wife is preferable because she remains with her husband under all circumstances, in poverty and wealth, illness and health, while the lover is only with him for money and leaves as soon as it is gone. Joaquina reinterprets not only the song, but also the discourse of gender relations, creating a dialogue between gendered voices and songs that has been noted in other cultural contexts (Fox 2004, 258–9).

Revitalizing Indigenous Roots

While Miskitu popular music is connected to international styles, it also serves as a tool of indigenous cultural revitalization. Miskitu popular music is part of a deeper history of autochthonous music performed in shamanic rituals, community celebrations, song games and dances. Shamanic (*sukia*) rituals were suppressed by German Moravian missionaries beginning in the mid-nineteenth century, but song games (*pulanka*) were more often encouraged. For many Miskitu people, song games such as 'Usus Mairin' (Lady Buzzard) and 'Urale' evoke idyllic memories of song, play and dance on moonlit nights around Christmas time during their youth. In spite of missionary suppression, several musical forms related to indigenous spirituality have survived in memory and sometimes in practice, including curing songs (*iumuh*), laments (*inanka*) and rituals for the spirit of the deceased (*kwal taya* and *sihkru*) (Cox 1998, 2003). Beginning in 2004, the *sihkru tara* ritual has been reconstructed as an annual binational event that unites Miskitu people from Nicaragua and Honduras through cultural and aesthetic practices (Matamoros 2008). It has featured mostly Honduran musicians playing contemporary, secular popular music with electric bands. Some songs performed in this context aim to raise social consciousness about the loss of natural resources, while others aim to enliven the audience and stimulate dance.

In the early twenty-first century, as in the past, Miskitu popular music is a fundamental part of spirituality, labor, love, joy and sorrow. The history of missionaries and Christianization had ambivalent effects: they sparked dramatic changes in the music of Miskitu communities, but they also established institutions that became tools of indigenous mobilization in the latter part of the twentieth century (Hale 1994; Hawley 1997). In sacred and secular popular music, Miskitu people incorporate cosmopolitan styles while vocalizing Miskitu texts and ideas. From Miskitu Christian songs to performances of the *sihkru tara*, unique forms of musical syncretism connect Miskitu people to modern circuits of exchange, while grounding their aesthetics in indigenous histories.

Modinha

Modinha is a Luso-Brazilian genre of sentimental song. Its first documented references date from the end of the eighteenth century in Lisbon, the capital of Portugal, where it developed through the early years of the nineteenth century in the context of the colonial exchange between Portugal and Brazil, which included the presence and influence of Afro-Brazilians. It flourished mainly in Brazil during the imperial period (1822–89).

Origins and Early History

'*Modinha*' is the diminutive form of the Portuguese word *moda*, from the French word *mode*, meaning 'fashion.' Beginning in the eighteenth century, the term was used as a general designation for all urban, relatively simple and newly composed songs. Initially, '*modinha*' did not imply anything beyond a recently written short song (an overall meaning it has never in fact lost). Thus, in 1792, when F. D. Milcent and P. A. Marchal began publishing a *modinha* magazine (*Jornal de Modinhas*) in Lisbon, their central purpose was to publish simple songs that had a sentimental tone and had recently been written for amateur musicians who could sing and provide simple accompaniment on keyboards or guitars (Albuquerque 1996). The word also designated the music of servants and other members of lower social classes, who would learn the songs by ear and sing them unaccompanied or with a simple guitar accompaniment.

Already in the late eighteenth century there is evidence of a distinction being made between Portuguese and Brazilian *modinhas*. The first written reference to the word '*modinha*' appears to be in 1779 in Lisbon. It occurs in the plural (*modinhas*) and is associated with the qualifier 'Brazilian.' The late eighteenth century offers a variety of documentary evidence for the success of Brazilian *modinhas* in Lisbon, as well as for their simultaneous occurrence alongside Portuguese *modinhas*.

The identification of a Brazilian type is often said to be connected to the poet Domingos Caldas Barbosa (1738–1800). Son of an African mother and a Portuguese father, Barbosa was raised in Rio de Janeiro, where he may have learned to play a Portuguese type of guitar, called the '*viola de arame*' (wire guitar) (Tinhorão 2004). In the early 1760s he traveled to Portugal and in 1775 started to be known as a poet, achieving significant success (Moraes 2003; Tinhorão 2004). The nationalist inclination in Brazilian music historiography has given credence to the idea of a link between the origins of *modinha* and the poems of Caldas Barbosa – see, for example, works by Mozart Araújo (1963) and José Ramos Tinhorão (2004), who state that the genre was taken by Barbosa from Brazil to Portugal. There are, however, at least two problems with such a statement. First, there is no documentation of a genre with this name in Brazil until the beginning of the nineteenth century. Second, Caldas Barbosa himself hardly ever referred to his poems as *modinhas*, instead using the word 'cantigas,' particularly the poems gathered in his most famous book, *Viola de Lereno* (Lereno's Guitar, or Lereno's Songbook), which was first published in two volumes in 1798 and 1826.

In musical terms, *modinhas* in the late eighteenth century were very diverse. However, these *modinhas* were typically composed for two voices singing in parallel thirds or sixths, with a reasonable use of melisma, at a moderate tempo. The only known musical sources from that century through which it is possible to establish a clear musical distinction between Portuguese and Brazilian *modinhas* are manuscripts from 1595 and 1596 in the Biblioteca da Ajuda in Lisbon. The manuscripts are entitled, respectively, *Modinhas* and *Modinhas do Brazil* [*sic*], and there is no identification of their author (Béhague 1968; Lima 2000). The main musical difference between the manuscripts of 1595 and 1596 is the pronounced use of syncopation in the melodies and, less frequently, in the accompaniments of manuscript 1596, *Modinhas do Brazil*. Titles and verbal instructions added to the music by the composer or copyist link a Brazilian and Afro-Brazilian character to this syncopation. This link has been stressed by musicological commentary in the twentieth century. It is important to emphasize, however, that these rhythmic features are unique to manuscript 1596 in the context of eighteenth-century Portuguese (including Brazilian) musical documents known to date.

Although it is known that these so-called '*modinhas* from Brazil' were sung in Portugal in the late eighteenth century, there is no indication that they were sung at that time in Brazil. The first known *modinhas* written and sung in Brazil are those of Joaquim Manoel, an Afro-Brazilian composer who lived in Rio de Janeiro during the early nineteenth century and who is known for composing and playing the small guitar known as the *cavaquinho*. Twenty of his *modinhas* were transcribed and harmonized by the renowned Austrian composer Sigismund Neukomm, who lived in Rio de Janeiro between 1816 and 1821 and worked in the court of King John VI of Portugal (Joaquim Manoel 1998). In addition, it is important to mention the two *modinhas* presented by Spix and Martius in their book *Reise in Brasilien* (Journey Through Brazil), a narrative covering 1817–20. The most remarkable difference between the *modinhas* known to be sung in Brazil in the early nineteenth century and the ones sung in Portugal 20 years earlier is that the former are invariably composed for one melodic voice only, whereas the latter prominently featured two melodic voices singing together.

In Brazil, sheet music began to be printed in the 1830s, and throughout the nineteenth century *modinhas* had a significant share of the written and printed sheet music in Rio de Janeiro (then the capital of Brazil). They were referred to as '*modinhas de salão*' (salon *modinhas*) (Mascarenhas 1989), due to the fact that they were written for piano accompaniment and published in sheet music for an amateur audience, who could read music, afford to have the instrument and perform it at home. Nonetheless, neither Joaquim Manoel's *modinhas* nor the ones in the book by Spix and Martius were initially available as sheet music. This suggests that there were local songs dating as far back as the 1810s in Brazil to which the designation *modinha* could be applied; they were orally composed and performed. These were the *modinhas de rua*, (literally 'street *modinhas*,' but perhaps better understood as 'serenade *modinhas*') which were accompanied by instruments including different types of guitars, *cavaquinhos* or mandolins, and performed by amateurs, who would sing and play them by ear. There appears, however, to be no real division between the two types: instead, the designations '*modinhas de salão*' and '*modinhas de rua*' only indicate performance contexts, and many of them usually passed from one context to the other. Among these, some of the more significant include 'Beijo a mão que me condena' (I Kiss the Hand That Condemns Me) (José Maurício Nunes Garcia, 1767–1830), 'Nestas praias de límpidas areias' (On These Clean Sandy Shores) (Januário da Silva Arvellos Filho, ca. 1820/ca. 1890) and 'Quando as glórias que gozei' (When The Glory I Enjoyed) (Cândido Inácio da Silva ca. 1800/ca. 1838).

After the 1860s *modinhas* were not only published as sheet music but were included as texts (i.e., without music) in magazines and songbooks. This indicates the genre's popularity, as the melodies, being broadly known by the audience, did not need to be printed. In this context, the term *modinha* acquired a superordinate value: collections said to comprise '*modinhas*' also included *lundus*, *cançonetas*, *romances*, *fados* and so on. Simultaneously, up to the 1910s *modinhas* also took on an important position in public entertainment venues, for instance in circuses, theaters, music halls and *café chantants*. Indeed, some of the best-known composers and performers of *modinhas* of the day were essentially theatrical artists, for example, the actor Xisto Bahia (1841–94) and the circus clown Eduardo das Neves (1874–1919). This was not the case, however, with another important *modinha* composer, Catulo da Paixão Cearense (1863–1946). Although he could eventually sing and play the guitar, he became well known, primarily, as the lyricist of *fin-de-siècle modinhas*, including 'Não vê-la mais' (Never See Her Again) and 'O talento e a formosura' (Talent and Beauty) (with music composed by Edmundo O. Ferreira).

In 1902, with the beginning of commercial recordings in Rio de Janeiro, *modinha* attained a primary position among the recordings being released, mostly by the company Casa Edison. The previously mentioned Eduardo das Neves and the singer Manoel Pedro dos Santos, known as Baiano (1870–1944), and Mário Pinheiro (1880–1923) were among the most important recorded *modinha* performers. Pinheiro recorded Paixão Cearense's 'O talento e a formosura' for Odeon between 1904 and 1907 and Baiano recorded his 'Não vê-la mais' between 1907 and 1912. Some other famous *modinhas* recorded in this period were 'Casinha pequenina' (Little Cottage) (unknown composer), recorded by Patricio Teixeira in 1927, 'Na casa branca da serra' (In the White House in the Mountains) (Miguel E. Pestana/Guimarães Passos), recorded by Mário Pinheiro between 1904 and 1907 and 'Perdão Emília' (Please Forgive Me Emilia) (unknown composer), recorded by Pinheiro between 1907 and 1912. In these recordings, the instrumental accompaniment was mostly on guitar.

Oral transmission, sheet music, magazines and recordings each contributed to the dissemination of *modinhas*. The main production center was Rio de Janeiro, but *modinha* was never considered to be specifically connected to that city. Many of its most famous composers and performers had different origins and diverse local composing and performance traditions developed around *modinhas* in different parts of the country.

The *modinha* has continued to be played by amateur musicians into the twenty-first century, but after the 1930s the number of professional recordings declined drastically. Even so, a few composers who started their careers in the 1950s have continued to use the term *modinha* as a genre classification or song title, suggesting songs that are highly sentimental and somehow old-fashioned in style. Examples are 'Modinha,' by Tom Jobim and Vinícius de Moraes (1958), 'Modinha,' by Maurício Tapajós, Cacaso and Hermínio Bello de Carvalho (1967) and Chico Buarque de Holanda's 'Até pensei' (So I Thought) (1968).

Morenada

Also known as *Danza de Morenos* (Black Dance), *morenada* is a popular musical form that is inextricably linked to the dance it accompanies. Although it originated in Bolivia, during the late twentieth century the influence of the *morenada* expanded into neighboring countries such as Peru and the north of Chile.

The origin of the dance is controversial. However, it is clear that it is closely related to the presence of black slaves in the territory that is now Bolivia. *Danza de Morenos* may have been a form of mockery by the original inhabitants (Aymará) against black slaves who enjoyed some privileges during colonial times due to their high price; some authors believe it may have been a representation of the transporting of slaves to the mines in Potosí. Either way, *Danza de Morenos* first appeared in Bolivian territory – most likely in the city of La Paz – as a mestizo dance that was developed by tailors during the nineteenth century. Some versions place its origin in the region of Oruro.

In musical terms, *morenadas* have been identified with the traditional music of the Aymará. In fact, they were originally performed using wind instruments belonging to Aymaran organology. Today, *morenadas* are interpreted using diverse instrumental forces, which will vary according to the physical and social context in which the *morenadas* are performed.

In rural areas the *morenada* is still performed with *pifanos* (i.e., fife, a type of flute made out of bamboo) following the tradition of the *altiplano*. The presence of text is infrequent. Conversely, in urban areas there are two distinct uses of the *morenada* as music: one in which text is a driving force, and another in which the music functions as accompaniment to the dance.

The first type of *morenada* is performed by voices as well as instruments of both indigenous and Western origin. A typical ensemble features guitars, *charango*, *bombos* (bass drums) or drumset, *matraca* (wooden ratchet of the idiophone family of instruments) and voices. Occasionally, an electric bass is also included. In these *morenadas* the text is very important – through it a collective notion is built around the meaning of both the dance and the music. Recurring themes revolve around economic power, celebrations and desired, loved or misleading women.

In the second type of *morenada* the music accompanies a street dance (i.e., a popular event that features several parade-style dances). Instrumentation for this type of *morenada* consists of a brass ensemble of variable size, ranging from seven or eight musicians to over one hundred. In music performed by larger ensembles, the orchestration preserves the linear nature of traditional Aymará music (several instruments playing the same melody) while incorporating the vertical aspect of Western music (tubas carrying the rhythm using fundamentals, trombones and *bombardinos* [saxhorns] arpeggiating chords, and trumpets carrying the melody).

The most characteristic sound in *morenadas* is that of the *matraca* (ideophone). In group dances, each dancer plays a *matraca* that has been shaped to represent each individual group. The sound of the *matraca* may represent the sound of the chains worn by the slaves during colonial times, or the sound of grapes being crushed in the making of wine – a task supposedly given to slaves who did not acclimatize to the rigorous weather at the Potosí mines.

The music of *Danza de Morenos* is built upon a marked and rigid duple meter (2/4) in the manner of a slow march. The tempo is usually *andante*. The formal structure is in three sections – two themes of four to eight measures each and a third section called '*Fuerte de bajos*' (literally, 'strong of basses') where the melody appears in a lower register.

There are specialized composers of *morenadas,* among them José Félix Flores Orozco el Jach'a, Manuel Solíz Flores and Oscar Elías Siles.

OSCAR GARCÍA GUZMÁN (TRANSLATED BY PAMELA NARBONA JEREZ)

MPB

The initials MPB, standing for 'Música Popular Brasileira' (Brazilian popular music), were used for the first time in the context of competitive music festivals organized by Rio de Janeiro and São Paulo television stations as of 1965. The audience at these festivals mainly comprised university students, styling themselves as politically, morally, aesthetically and musically enlightened. These festivals took place against the backdrop of the dictatorship that was installed following the military coup of 1964. Internationally, the Cold War was at its peak.

The term 'MPB' suggests the inclusion of all types of Brazilian popular music, but this is not the case. In fact it is selective, indicating a particular type of song – suggestive of genres such as *samba*, *baião*, *frevo*, *choro* and others – and excluding genres not considered by those within the MPB circle as advanced enough in the above-mentioned areas. One of MPB's defining features is its rhetorical emphasis on sophistication in harmony, melody, rhythm, arrangements and lyrics. Its performers, who in general consider themselves as heirs of the *bossa nova*, are still active in the early twenty-first century, including Caetano Veloso, Gilberto Gil and Tom Zé (who were part of the *Tropicalismo* movement); Geraldo Vandré and other *canção de protesto* artists; Chico Buarque, Edu Lobo, Jorge Ben Jor, Alceu Valença, João Bosco and Tim Maia; Milton Nascimento and others from the Clube da Esquina movement; singer-songwriters Ivan Lins and Paulinho da Viola; vocal-instrumental groups MPB-4 and Os Mutantes; performers Nara Leão, Maria Bethânia, Gal Costa and Elis Regina; and others. MPB's selectivity was constantly under challenge by those excluded from it – especially by those involved in the rock, *choro* and *música instrumental* scenes – who argued that it was false and arrogant to brand the characteristics inherited from *bossa nova* as markers of MPB, and that the real reason for this appropriation was to do with marketing. The outstanding figures of MPB continue to be venerated in Brazil and internationally. They enjoy great market success and a strong presence in narratives about Brazilian popular music.

From 1970 onward MPB began to include successful artists from a younger generation of musicians, such as Os Novos Baianos, O Som Imaginário and 14Bis (vocal-instrumental groups), Djavan, Arrigo Barnabé, Itamar Assumpção, Cazuza, Marina Lima, Lenine, Cássia Eller, Adriana Calcanhotto, Arnaldo Antunes, Marisa Monte, Carlinhos Brown, Chico César, Paulinho Moska, Zeca Baleiro and many others; additionally, it moved more and more into the realm of pop. Gradually, MPB has distanced itself from the meaning referred to in its name, and become an umbrella term for a wide array of genres.

Social, Cultural and Historical Context

In 1965 TV Excelsior produced the first Brazilian Popular Music Festival in São Paulo. Subsequently, many more such festivals were organized, both in São Paulo and in Rio de Janeiro, and through the 1970s they constituted the main platform for a new popular music scene, with a young audience consisting mainly of university students (Mello 2003; Ribeiro 2002; Vilarino 1999). It was within this context that the expression *música popular brasileira* – abbreviated to MPB – took on its new meaning. Until the 1960s, the expression had been used by scholars, taking their cue from folklorists, to designate what is known today as *música folclórica* (folkloric music), perceived as rural and orally transmitted. This sense of the term had been consolidated by Alvarenga (1960 [1947]), in accordance with the idea that only certain genres – *modinha*, *lundu*, *maxixe*, *samba*, *choro*, *marcha*, *frevo* and others – ought to be considered popular music (283–301). The rest was pejoratively labeled *música popularesca* ('popularesque' music). This sense of the expression gained currency among music critics and chroniclers in the media in the 1950s and 1960s: that which had been seen as peripheral in the (urban) eyes of folklorists gradually came to occupy a central position. Rangel (1962) was one of the first to use the expression to designate popular music as an authentic type, in the way folkloric and art music already were. Nevertheless, this designation was also selective, encompassing only *samba* and *choro* from Rio de Janeiro. Vasconcelos (1964) broadened this perspective in historical terms, though maintaining the status of Rio de Janeiro as its near-exclusive niche. With Tinhorão (1966), this usage became more firmly established, incorporating a sociological and political dimension. With the festivals of the 1960s, the expression, which in the beginning became synonymous with the initials 'MPB,' was adopted to identify an array of trends which, at the time, had been known as *música universitária* (university music), recognized as the heir to *bossa nova*. The rest was dismissed as residual.

These festivals were modeled after the San Remo International Festival in Italy. They were also strongly linked to the practice employed by Brazilian radio stations – which went back to the 1930s and were linked to the Carnival in Rio de Janeiro – of holding competitions for composers, and, later on, live on-air programs. Designed to feature talent, they were known as *programas de auditório* (radio programs with live audiences) and *programas de calouros* (newcomer programs) (Tinhorão 1981, 175–7). It is important to emphasize that in Brazil, television always drew its performers from the world of radio, not from cinema as was usual in the United States (Ortiz 1988).

The festivals made possible a repositioning of popular music in Brazil involving television, radio and the press in general, the recording and entertainment industry as a whole, musicians and lyricists, audiences, civil society and the state. Politically, with the military dictatorship and the Cold War setting the scene, the sense of opposition between left and right was significant among audiences, although, due to factionalism (on musical, aesthetic and moral levels), it tended to lose its meaning: fans of music that was held as technically advanced and not morally traditionalist (regarding sexuality, sexual orientation and gender relations) accused the self-proclaimed political left of being conservative, styling itself the 'real left.' Public participation in live broadcasts of the festivals was very spirited, with clapping, screaming, booing and sometimes fist-fighting. This inclination spread through the universities, the press and the expanding range of publications focusing on popular music (Barbosa 1966; Schwartz 1978).

Through the festivals, a new type of live program in Brazil was created on Brazilian television, linked to MPB's main figures. *O Fino da Bossa*' (The Best of *Bossa*) was the first of them, launched by São Paulo's TV Record station after the first festival in 1965 and presented by Elis Regina and Jair Rodrigues. Regina had won first prize at the first festival with her performance of the song 'Arrastão' (Trawler; music by Edu Lobo, lyrics by Vinícius de Moraes). In 1967 TV Record launched the program *Disparada*, directed by Geraldo Vandré, who penned the lyrics of the song 'Disparada' (Stampede; music by Théo de Barros) which tied for first place with Chico Buarque's 'A Banda' at the second TV Record festival in 1966. Finally, in 1968, São Paulo's TV Tupi hired Caetano Veloso and Gilberto Gil, who had won third place at the fourth TV Record Festival with the song 'Divino, maravilhoso' (Divine, Wonderful; music by Gilberto Gil, lyrics by Caetano Veloso), to host a program of the same name. The program was banned by the military toward the end of the year as morally and politically subversive and the two musicians were subsequently exiled to London. All these programs had far-reaching consequences for MPB as they provided important spaces for its cultivation, dissemination and celebration.

Beginning at the end of the 1970s, MPB went through a period of expansion, integrating many musicians from younger generations. It moved progressively closer to pop, though without losing its rhetoric of progressiveness. These new musicians included Moraes Moreira (and others from the group Os Novos Baianos), Djavan, Arrigo Barnabé, Itamar Assumpção, Cazuza, Marina Lima, Lenine, Cássia Eller, Adriana Calcanhotto, Arnaldo Antunes, Marisa Monte, Carlinhos Brown, Chico César, Paulinho Moska, Zeca Baleiro, Chico Science (leader of the band Nação Zumbi) and Fred 04 (leader of the group Mundo Livre S/A). The term 'MPB' became progressively more ambiguous and removed from its original meaning. This ambiguity was made evident by a fluctuation between a supposedly descriptive meaning – according to which 'MPB,' abbreviating 'Brazilian popular music,' is viewed as a type of music in the same way as is 'folkloric' or 'classical' – and a selective meaning whose basis became more and more difficult to substantiate. This process also involved a tendency toward dilution; by the early twentieth century, MPB was considered by many as '*música de barzinho*' (small bar music).

Analytical Considerations

Despite having an overall sound, MPB is not monolithic. This becomes apparent when the various constituencies (such as *Tropicalismo* and *Clube da Esquina*) and artists (such as Chico Buarque and Edu Lobo) that come within its ambit are compared. In what follows, a comparison is made of the two principal groups within MPB, *Clube da Esquina* and *Tropicalismo*. From the outset, their identification with the states of Minas Gerais and Bahia, respectively, must be highlighted. This points to a particular feature of MPB, and indeed, of all the popular music in Brazil: a mooring of identity in the region and in the states, that is, Bahia, Minas Gerais, Pernambuco and so on. In Brazil, among the debates that occurred through the twentieth century and which can be summarized through binary opposites (e.g., modern/traditional, urban/rural and change/preservation [see Oliveira 2009]), that which sets the regional and the national in opposition had particular importance. As of the 1930s, the national was equated with Rio de Janeiro (Vianna 1995), the country's capital until 1960; any other musics were considered regional, referencing their states.

Tropicalismo (see Veloso 1997; Menezes Bastos 2005) involved musicians, poets and other artists (from areas such as cinema, theater and visual arts), mainly from Bahia and São Paulo, in 1967 and 1968. Its main figures included its leaders, Caetano Veloso and Gilberto Gil, as well as Tom Zé, Gal Costa, Maria Bethânia, the band Os Mutantes, and arrangers Rogério Duprat, Damiano Cozzela and Júlio Medaglia. Its poets (lyricists) included José Carlos Capinam and Torquato Neto. The group's ethos can be summarized as a tendency toward mockery – a type of 'Carnivalization' (Bakhtin 1997, 1999) – signaling a critical attitude toward the traditional/modern, Brazilian/foreign and scholarly/popular dichotomies. Performances featured extravagant outfits and theatrical body language. One of its icons was Carmen Miranda, the famous singer known in the United States as the 'Brazilian Bombshell' during the 1940s and 1950s. *Tropicalismo* made use of collage and pastiche; its lyrics were influenced by Concretism and its aesthetics by the cultural cannibalism movement (*antropofagia*), espoused in the 1920s by the modernist intellectual Oswald de Andrade (see Maltz 1993). Musical arrangements featured harmonic and contrapuntal configurations common to the art music that was at the forefront during that period.

The *Clube da Esquina*, led by Milton Nascimento, involved, toward the end of the 1960s, musicians and poets (lyricists) mainly from the state of Minas Gerais (see Borges 1996; Beraldo 2005). The main figures included Toninho Horta, Wagner Tiso, Lô Borges, Beto Guedes, Tavinho Moura and Flávio Venturini, and the bands O Som Imaginário and 14Bis. Lyricists included Márcio Borges, Fernando Brant and Ronaldo Bastos. In 1967 Nascimento achieved fame at the second International Song Festival with the song 'Travessia' (Crossing; lyrics by Fernando Brandt). He then began collaborating with musicians involved in the emerging Brazilian *música instrumental* genre (see Cirino 2009), and in 1968, through the arranger Eumir Deodato, traveled to the United States, where he recorded his first LP. His subsequent success, both nationally and internationally, opened the doors for success to other *Clube da Esquina* figures. Musically, *Clube da Esquina* tends toward the sophistication typical of *música instrumental* (which includes the human voice), jazz and international pop. In 1975 and 1976 Nascimento consolidated his international profile, recording with Wayne Shorter, Airto Moreira and Herbie Hancock. Guitarist and musical arranger Toninho Horta's career took a similar turn.

Comparing these two groups reveals a point in common, expressed by the narrative of progressive thinking and the appropriation of musical-aesthetic, political and moral qualities associated with this narrative. In the case of *Tropicalismo*, the musical-aesthetic vanguard of the period acts as a mirror, with mockery and jest playing important roles. *Clube da Esquina*, on the other hand, took jazz as its model, its ethos tending more toward austerity. This point in common makes explicit the international connections achieved by both movements. At the same time, they also hold in common the quest for identification with traditional Brazilian music models, in particular folkloric music. For both movements, this quest results in a focus on region or state.

Pinheiro (1992) demonstrated that relationships between MPB musicians (as well as their audiences) are ridden with conflict and characterized by mutual political, ideological, moral and musical-aesthetic accusations. Piedade (2003) reached similar conclusions in his research on *música instrumental brasileira* (Brazilian jazz), applying his concept of 'friction of musicalities' to understand these accusations as a discursive system. Based on these findings, among others, it can be stated that on a musical level, the central discursive element of the system in question is technical sophistication, extending into aesthetics in general, since many MPB subgroupings forge links with cinema, theater, visual arts, literature and other arts (authors such as Chico Buarque and movements like *Tropicalismo* are notable in this respect). In this situation, the term 'technical' seeks to neutralize the arbitrariness of artists' musical and aesthetic choices, presenting them as neutral and universal. On the political and ideological planes, the central element of the accusations is *loyalty* (as opposed to *betrayal*) to Brazilianness and Brazilians, in particular to the masses, their cultural traditions and their liberation from exploitation and domination within the capitalist system. The viewpoint that capitalism is diabolizing, socialism is messianic and the artist is a kind of Prometheus who can liberate the weak and oppressed becomes relevant. Morally, the system's central element is a nontraditionalist position, particularly with regard to sexuality, sexual orientation and gender relations. These three elements – technical sophistication, loyalty and nontraditional sexual values – are values within an ideological system (Dumont 1985), pointing toward an ideal of perfection that extends beyond the domain of the professional.

As any discourse is, by definition, inconsistent and contestable, further light can be shed on the situation by examining narratives suggesting counterargument. Caiado (2001) compared transcriptions of *bossa nova* performances by João Gilberto with old-time *sambas* and *choros*, concluding that the latter are 'more complex' than the former in terms of rhythmic, melodic and harmonic structures. Here, technical progressiveness, a touchstone of the narratives surrounding *bossa nova* and its heirs (see Garcia 1999), is counterexemplified. In addition, these narratives are considered by the author not only as false and arrogant, but as pieces of a marketing strategy – he also seeks to demonstrate that the consecration of *bossa nova* and MPB resulted in many old-time musicians losing their standing in the market. Nonetheless it should be noted, as a counter to this argument, that Gilberto's notability has never rested on a concept of complexity, but rather on one of innovation in his singing and playing.

Midani, a producer within the Brazilian recording industry, posited a counterargument (2008) in relation to the notion of loyalty to the Brazilian people which is so central to the system on the political and ideological levels. As already stated, a corollary to this notion of loyalty is the demonization of capitalism and a messianic sort of socialism, equated, respectively, to Evil and Good. At the same time, the artist takes on a Promethean role. Midani was a powerful figure within a number of influential record companies, such as EMI-Odeon, Capitol Records, Companhia Brasileira de Discos (a subsidiary of Phonogram) and Warner Music, from the late 1950s, era of the birth of *bossa nova*, to the 1980s, the golden age of BRock, the term applied to Brazilian rock of that decade (Menezes Bastos 2005). He played a fundamental part in the launching, development and consolidation of the careers of Gilberto, Veloso, Buarque, Gil and the rock bands Ultraje a Rigor, Titãs and Barão Vermelho. His viewpoint contradicts the Manichean nature of this concept of loyalty, taking the view that the recording industry should not merely be subjected to generalization and equated with the *status quo*.

A counterargument also exists concerning the nontraditionalist – in other words, libertarian – stance associated with MPB with regard to sexuality, sexual orientation and gender relations. As stated above, this is the central element of the discursive system in terms of morality, pointing on the one hand toward ostensible sexual freedom and on the other to an equally ostensible symmetry in terms of the relationship between partners in an affective-conjugal relationship, be it heterosexual or homosexual. Although this subject has rarely been examined in Brazil, existing literature points toward the hypothesis that the sexual ethos described above – especially for couple relationships – practiced by adherents of MPB is far from libertarian, and in fact presents characteristics that might be considered conservative (Grossi 2000), including those related to conjugal violence (Cantera 2007; Nunan 2004; Faour 2006).

Conclusion

Since its earliest days, Brazilian popular music has demonstrated a great capacity to articulate its own characteristics – many originating in folkloric music – along with the major currents of popular music worldwide: Latin-American, Caribbean, European, African and American. This was consolidated first with *bossa nova*, then with MPB: it was a conscious approach adopted by the musicians themselves, especially with *Tropicalismo*, *Clube da Esquina* and, as of the 1990s, the *manguebeat* movement which arose in Recife and was led by Chico Science and Fred 04. This capacity has two principal sources: first, since the 1970s Brazil has been one of the few countries in the world where the consumption of national popular music exceeds that of music from outside the country; and second, since the 1960s, again with *bossa nova* and MPB, Brazilian music has had a strong impact internationally, acknowledged by musicians, scholars and the general public alike.

Murga

Murga is a name given to a musical phenomenon with theatrical elements that is performed in Uruguay and Argentina during the annual Carnival period, and to the groups that perform it. Although the two countries' traditions share some similarities with each other, they are nevertheless distinct. The term began to be used in Buenos Aires, the capital city of Argentina, at about the same time as in Montevideo, the capital city of Uruguay, but apparently no connection existed between the respective genres in the two cities during most of their histories. The Argentinian *murga* is a street parade phenomenon, while the Uruguayan *murga* is mainly a stage one. The *murga* of Montevideo went through a particular process of development that lasted through the whole of the twentieth century, whereas in Buenos Aires the early form of the genre declined in popularity; when it was revived, the influence of the Uruguayan *murga* was apparent in some of its characteristic features.

Murga in Uruguay

In Uruguay, *murga* is performed in many towns. In Montevideo, where the Carnival season lasts for a month or more and involves many open-air stage performances in different neighborhoods, *murga* has a prominent place among the Carnival genres. The term 'murga,' which carries pejorative connotations in Spanish, has been in use in Montevideo since the 1910s. It is also used to refer to popular music in Uruguay that incorporates musical features of Carnival *murga*. Since around 1920 the format of the Carnival *murga* has been that of a small choral group of a dozen singers (all of them male, in principle) accompanied by a percussion trio, performing in a theatrical manner (including the conductor, who executes pirouettes while he conducts). No serious conclusions can be established about the history of the phenomenon prior to that time. By the mid-century, a period happily documented in some basic recordings, the performance characteristics of *murga* seem to have become firmly established. From their first appearances up to the 1970s, the Montevidean *murgas* have been a product of people occupying the city's low social strata. Their search for grotesque costumes has been solved for decades with very low budgets, a situation that changed radically by the end of the twentieth century.

Musical Style

The male choir that is a defining characteristic of the Montevidean *murga* is structured on the general basis of three voices, from high to low register: *sobreprimos*, *primos* and *segundos*. The *primos* are subdivided into *primos altos* and *primos lisos*, and the *segundos* into *segundos* proper and *bajos*. Members of the *sobreprimos* can separate off and sing another part, called the *tercia,* which has a more soloistic character, thus 'escaping' the choir and establishing a dialogue with it. The choral sections alternate with soloist sections, producing standardized structures. There are very fixed harmonic criteria, with the principal melody often below the highest part (depending on the ensemble and the particular song), and with insistently parallel voice movements (or apparently so, because the voices often intersect each other), as well as a particular repertoire of contrapuntal resources. The intervallic relations can seem not at all orthodox if considered in relation to the dominant conservatory-like view of musical culture.

The choral character of *murga* makes it exceptional among local musics. The various regional traditions are almost exclusively non-choral, soloistic, typically isolating a single individual and featuring two voices at most, exceptionally three, or one individual voice alternating with another. Choral groups are found in some types of Carnival expression, especially in the Afro-Montevidean ensembles, but the *murga* solution does not seem to correspond to this model. The structural foundation of *murga*, with the principal voice often 'in the middle,' may be perhaps related to some Mediterranean traditions, but this possibility remains to be proven.

The way the voice is produced is very specific to *murga*. It is nasal and twanging, especially in the higher registers, and projection is strong, which means it can be clearly heard at a distance at open-air performances. For the dominant Western taste, it may be perceived as wounding to the senses and rough. Vocal attacks are very strong, lending a hard edge to a 'sound wall' that is generated by just a dozen singers. This kind of vocal production does not correspond to the various models of the local tradition: not to the projection of the *payador* (the troubadour of the Rio de la Plata region), the chamber music approach of the *estilo*, or any other regional singing style; it seems to have emerged from the void. Further research into cultural influences on the *murga* should take care to explore this point.

The Montevidean *murga* has a rhythmic system of its own, implicit in its way of singing and explicit in the accompanying percussion ensemble of *bombo* (bass drum), *redoblante* (snare drum) and *platillos* (clash cymbals). The rhythmic sense is sluggish (uncouth or coarse on first approach), and tends to slide. It has many influences, not necessarily explicit, including rhythmic gestures from other Latin American regions, as well as from the Afro-Montevidean *candombe* and the cultural complex of *milonga* and *tango.*

The *murga* freely uses popular melodies of the moment (especially those that have been circulating since the last Carnival), or ones taken from the collective memory, preferring these resources to the composition of new music. Creativity is focused in devouring and reassembling preexisting melodies, which gives rise to a new syntactic process. The texts are written *ad hoc*, and they give the structural sense to those preexisting melodies. This procedure has roots in diverse cultural traditions and appears in various expressions of the European popular culture. In the Uruguayan case, it also preserves a relationship with the local tradition of seeing melodies as freely available, a custom that has been attacked by the gradual imposition, over the twentieth century, of intellectual property laws, followed by institutional activities such as songwriting competitions organized by municipal authorities and the authors' rights society, each of which privileges the composition of original melodies and discourages the borrowing and rehashing of musical material.

In terms of its theatrical aspects, *murga* involves a very particular system of corporal gestures and characteristic choreographic criteria. The performers' faces are completely painted in a mask-like manner. Costumes are bizarre, grotesque and usually related to the storyline being narrated in the lyrics, which focuses on satire and criticism, mainly social and political, of whatever has happened during the last year. The members of the ensemble have a particular way of moving. The problem of the portrayal of feminine characters (in an all-male ensemble) is solved by transvestism, which is not seen as unusual by the audience.

Important *murgas* founded during its first half century are Los Amantes al Engrudo (1907?), Patos Cabreros (1910?), Curtidores de Hongos (1912?), Los Saltimbanquis (1922), Asaltantes con Patente (1928), La Gran Muñeca (1931), Araca la Cana (1935), La Milonga Nacional (1939), Diablos Verdes (1939), Línea Maginot (1940), Don Timoteo (1944) and La Nueva Milonga (1952). Periods of transition (marked by moves in different stylistic directions) are represented by La Soberana (1969), La Reina de La Teja (1980), Falta y Resto (1980), Antimurga BCG (1982), Contrafarsa (1987) and La Gran Siete (1989). Since the early 1990s A Contramano (1992), La Mojigata (1999), Queso Magro (1999) and Agarrate Catalina (2000) have been created, among others.

From the late 1960s on the *murga* phenomenon underwent various changes. Apart from its influence on Uruguayan popular song (discussed below), including the incorporation of one of its rhythms, the *marcha camión*, attempts have been made by different ensembles to modify some rules. For example, in some *murga*s (such as Falta y Resto), the vocal production has been turned into a more standard one, pseudo-operatic soloists have occasionally been incorporated (e.g., by La Soberana and La Reina de La Teja), and influences from other theatrical traditions have played a role. At the same time, a form of expression that was once the domain of marginal sectors of society has been shifting to more wealthy strata, thus dispossessing lower-class citizens of an element of language of their own. A significant proportion of the *murgas* at the beginning of the twenty-first century were formed by middle-class young people, often university students.

Murga in Uruguayan Popular Music

Murga has deeply influenced Uruguayan popular music. After several decades of a socially disqualified existence, during which it was considered to be in bad taste, elements of the language of *murga* began to be integrated into Uruguayan popular song in the late 1960s. By the end of the 1970s there had been a qualitative leap in this direction in people's estimation, and by the mid-1980s the hearts of large portions of the Uruguayan audiences had been conquered. The principal element introduced into popular music has been the *marcha camión*, a characteristic rhythmic pattern in *murga* rendered by the percussionists, which in popular music was transferred to other instruments, including the guitar (see separate entry). Other rhythmic gestures from *murga* have also migrated from the world of Carnival into that of popular song, as well as forms and resources of its choral behavior and the alternation of soli and chorus. The element of the *murga* language to which there was most resistance among both musicians and the public – its characteristic vocal production – was incorporated as well. Popular music that included *murga* gestures began to be also called '*murga*,' at the expense of semantic precision.

Los Olimareños, working with composer Rubén Lena, were among the first popular musicians to draw on the *murga* vocabulary in their music. When they began to record songs featuring elements of the language of Montevidean *murga*, these were defined on the record sleeve as '*canción carnavalera*' (Carnival song), thus avoiding the very word '*murga*.' The album *Todos detrás de Momo* (Everything Behind Momo [1971]), adventurous at the time, was predominantly in *murga* style (and with real *murga* percussionists). The album was a commercial failure. The enormous popularity of the performers could not compensate for the fact that up to that point the *murga* had been confined to the Carnival context, had not been broadcast outside the Carnival period and had scarcely ever been recorded for public release.

At the end of the 1970s the most important impulse to the adoption of *murga* techniques was given by Jaime Roos, who proposed a guitar version of the *marcha camión*. Notwithstanding the commercial failure of the Los Olimareños album, it left an important legacy and by the end of the 1970s was to exert a profound influence on many restless musicians of the younger generation (Los que iban cantando, for instance, in 1977), and the *murga* spirit, or '*murguez*,' began to gain ground. In dialectical terms, the public rejection of aspects of the *murga* language concealed an identification with them at very deep psychic layers. And so, 'A redoblar,' a song in *murga* style composed in 1979 by Rubén Olivera and Mauricio Ubal (and recorded by Rumbo and by Olivera [both 1980]), was not only not rejected, but quickly became the anthem of the resistance against the political dictatorship of the time. Soon afterward, in 1985, Jaime Roos took a big risk when he incorporated the *murga*'s particular style of vocal production – which had hitherto been felt to be coarse, suitable for Carnival stages but not for other purposes – in the solo voice of his song 'Brindis por Pierrot' (Toast for Pierrot).

Freed from the Carnival context, the new genre traveled through a very wide range of expressive situations, from the dramatic to the humorous and from political commitment to love song. By the beginning of the twenty-first century *murga*-infused popular song had accumulated a history and a number of high-standard compositions that themselves constituted an already firm tradition; for instance, 'A mi gente' (To My People) (José Carbajal, El Sabalero), 'Al Paco Bilbao' (To Paco Bilbao) (Rubén Lena), 'Los olímpicos' (The Olympics), 'Adiós juventud' (Goodbye Youth) or 'Los futuros murguistas' (The Future *Murguistas*) (Jaime Roos), 'Baile de máscaras' (Masked Ball) (Raúl Castro and Jorge Lazaroff), 'Como el clavel del aire' (Mauricio Ubal) (*clavel del aire* is a species of tillandsia, or air plant), 'Terapia de murga' (*Murga* Therapy) (Ruben Rada), 'Las agujas de un reloj' (The Hands of a Clock) (Daniel Viglietti) and the already mentioned 'A redoblar' and 'Brindis por Pierrot.'

In parallel with this, by the 1990s some musicians from Buenos Aires began to adopt elements from the Montevidean *murga* song in their popular music, thus provoking a confusion with their own, different, *murga* tradition.

Murga in Argentina

Murga in Argentina integrates diverse components – music, dance and theater – in group performances by named ensembles of men, women and children, who parade under their own group name during the pageants of the Carnival period, particularly in the city of Buenos Aires, the country's capital and its most important port (hence its alternative name, *murga porteña*, referring to the native population of the city of Buenos Aires). These groups also perform in clubs, theaters or dance halls.

In Argentina, *murga* first appeared at the end of the nineteenth century among popular musical and theater ensembles established by diverse immigrant communities. As neighboring groups collaborated, they slowly expanded in size, and the genre enjoyed its heyday in the years between the 1940s and the 1960s. A decline set in during the 1970s, in part because the military dictatorship eliminated the carnival days from the festivities calendar. In the mid-1980s a revival began, with certain groups adopting elements from Uruguayan *murga*, in particular the singing style, while others returned to the original *porteño* model from the early twentieth century. Thanks to neighborhood associations in different areas of the city the genre was practiced and disseminated by means of workshops, meetings and showcases, achieving rapid acceptance and contributing to the birth of new and numerous *murga* ensembles.

The songs performed by the *murgas* are based on popular music genres, such as *tango*, rock or *cumbia*, among others. Each *murga* group starts its parade with a presentation song in which the name of the ensemble and its neighborhood are mentioned. After that, the group performs songs criticizing social situations or political or public personalities. Often, well-known compositions are used but the lyrics are modified. The group may also perform songs that pay homage to significant figures of popular culture from various historical periods. At the end of the performance, a farewell is sung announcing the return of the *murga* in the next carnival. The songs are interpreted by most of the ensemble; in exceptional cases a song may be performed as a solo or a duet, and sometimes the group singing adopts a call-and-response mode.

One of the most important accompanying instruments is the *bombo* with cymbals. It is a membranaphone with double skins, similar to the one used by military bands. In one hand the player holds a felt-covered stick, with which the drum is beaten, while the other hand holds a cymbal which strikes a second cymbal, attached to the top of the drum. The function of the instrument is to mark the beat and execute different rhythmic designs. *Murga* ensembles include several *bombos*, never less than three or four. In recent periods, some ensembles have incorporated drums or snare drums and other membranophones of Afro-Brazilian or Afro-Cuban origin. They also employ a whistle which is used occasionally to signal modifications in the percussion rhythm or the dancers' movements. The members of the *murga* enter the parade performing either improvised or previously rehearsed, coordinated dance steps, according to the rhythmic patterns of the musical instruments.

The members of the *murga* all dress in identical outfits, which in most ensembles means a dress-coat, that is, a swallow-tail coat but with the tails crossed in the front. These outfits are made of satin cloth in the identifying colors of each group. Each participant adds decorations and individualized sequin embroidery. Headgear or hats of various designs, but always in the same color, are also worn, as well as very elaborate makeup. Each *murga* carries a banner with the name of the ensemble, the year in which it was established and the year in which it is parading.

AND HÉCTOR LUÍS GOYENA (ARGENTINA;
TRANSLATED BY ZUZANA PICK)

Música Caipira

Música caipira is a term used to denote the large group of musical subgenres performed in the rural areas of the 'Middle-South' of Brazil, that is, the states of São Paulo, Mato Grosso, Mato Grosso do Sul, Paraná and the southern areas of Minas Gerais and Goiás. The term 'caipira,' which originated in the second half of the nineteenth century, designates the people who live in this area, which is historically linked to the state (province) of São Paulo. *Música caipira*, therefore, is one of the stronger representations of *paulista* culture (i.e., culture of São Paulo) (Martins 2004).

Many of the group of subgenres that are embraced by the term *música caipira* share few similarities among themselves. This is a reflection of the urban origin of the term. From an urban viewpoint, in the 1920s and 1930s – a very important period for Brazilian popular music, when many genres, such as *música caipira*, began to be recorded – any musical practices undertaken in the rural areas of Brazil's Middle-South, the *caipira* area, could be described as *música caipira*. It was music denotative of a specific area.

Música caipira has a direct connection with *música sertaneja*, which resulted from the insertion of *música caipira* into the urban entertainment market in the 1930s, and has to be examined in that light. *Música sertaneja* brought about a considerable transformation in the subgenres of *caipira*, the song forms of which were changed and simplified. *Música caipira* can be seen, therefore, as a musical genre with a place both in the *folklore* of rural areas and the popular music of the urban environment (Nepomuceno 1999).

History

The origins of genres that are collected under the label *música caipira* are located in the colonial period of Brazilian history, from the sixteenth to the eighteenth centuries, when there was a mixing of indigenous, Portuguese and African traditions. The *cururu* is a good example of this: it developed from the adaptation of indigenous traditions by Jesuits interested in the conversion of the indigenous people to Christianity (Cândido 1956). The same process occurred in the formation of *catira, dança de São Gonçalo* (a Portuguese saint), *dança de Santa-Cruz, cana-verde* and *querumana*.

The expression *música caipira* began to be used in the late 1920s, when these genres were first recorded. These recordings came at a time when urban populations, in Brazil and elsewhere, were greatly taken with all things they considered exotic. In Brazil, this translated into an interest in the music of rural areas, among them the *paulista* area. In 1929 Cornélio Pires, a journalist and writer, made the first records of *música caipira*, for the Columbia record label (Souza 2005), including *modas-de-viola, cururus* and *catiras*. These recordings were well received by the urban public and many others followed. With these recordings, *música caipira* began to change to *música sertaneja* (Tinhorão 2001; Caldas n.d).

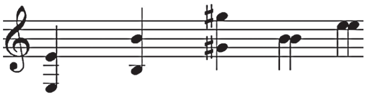
When the term *caipira* itself first began to be used, about 1870, it had connotations of Romantic thought (Moraes Leite 1994): the *caipira*, as a human type, was described as a being whose existence close to nature made him or her pure and full of honor. This vision in turn created a discourse valuing the authenticity of *música caipira*, which was seen as the real expression of the peasant soul. In the 1960s, as *música sertaneja* and pop music grew closer together, some musicians – Inezita Barroso, Tonico e Tinoco, Moreno e Moreninho and others – began to use the expression *música caipira* to denote their works. They played *música sertaneja*, but called it *música caipira*, as a means of displaying greater authenticity. In the early twenty-first century there is a strong movement in support of the idea of *música sertaneja* as containing a rootedness that uses the expression *música caipira* as a discursive symbol (Marchi 2002).

The Romantic discourse of purity was not the only one involved, however. Between 1890 and 1920 another discourse emerged, one with a more deprecating view, formulated by sections of urban society. In it, the *caipira* appeared as a symbol of the underdevelopment of Brazilian society, ignorant and sick. In 1914, in his book *Urupês*, the writer Monteiro Lobato created a character who embodied this negative view, Jeca Tatu: physically weak, intellectually foolish, lacking any spirit of enterprise (Saliba 1998). Jeca Tatu became a powerful and influential representation of the *caipira,* and, for decades, was the model for discourses about *caipira* culture. The Jeca Tatu character is central to an understanding of typical performance practice in both *música caipira* and *música sertaneja*. The dress or manner speech of many artists in contemporary *música sertaneja*, for example, is an attempt to escape the Jeca Tatu characterization. For the 'rootedness' movement, cited above, the Jeca Tatu character is detestable and only goes to prove the hateful vision that urban elites have of peasant life and culture (Sant'Anna 2000). Unlike their contemporaries in *música sertaneja*, many artists linked to the rootedness movement – who use the expression *música caipira* to indicate their works – emphasize the influence of Jeca Tatu in dress and in manners of speech, in a deliberate attempt to invert Monteiro Lobato's enduring stereotype.

Musical Elements

As a collective idea, the term *música caipira* embraces many different musical practices: dances (such as *catira, dança de São Gonçalo, dança de Santa Cruz*), religious rites (such as *folia de Reis* or *festa do Divino*), dances with sung duels (*cururu* or *cana-verde*), among others. Within these practices some specific parts later became autonomous genres. Such was the case with the *moda-de-viola*, the sung first part of the *catira*. The *catira* is a dance in which two musicians play and sing, while two parallel lines of dancers tap dance and clap. In effect, it is in the form of a suite, in which the sung and instrumental parts alternate with parts for dancing. An analogous suite form appears in the *dança de São Gonçalo* and *dança de Santa Cruz,* with the difference that women are included, unlike in the *catira*. With the entry of *música caipira* into the world of radio broadcasting, beginning in the 1930s, musicians wanted to include performances of these musical suites in radio programs, but radio, being an aural medium, inevitably limited the effectiveness of dance performances. So the dance parts were dropped and the *moda-de-viola* was played by itself, gradually becoming an autonomous genre.

Alongside their numerous differences, the subgenres within *música caipira* also share some common elements. One of these is the great symbol of *música caipira*: the *viola caipira,* a type of acoustic guitar. The *viola* is a very popular instrument in rural areas in Brazil, and different types are connected to each area. In Brazil as a whole *violas* can come with four, seven or ten strings. In the *caipira* area, the type with ten strings – five-double strings – is the most common. Its tunings, called by specific names, have been the subject of numerous studies, because there are many different versions (for example, Souza 2005; Correa 2000). Since the 1940s, in *música caipira*, one tuning has predominated: *cebolão* [literally 'big onion']. The name has a variety of explanations, reflecting different representations of capira culture. Some musicians say the name refers to the fact that women cry when they hear the guitar with this tuning, as they do when chopping onions. Others say that the name is a reference to the tuning of the strings in 'layers,' as in an onion: in the first 'layer,' the fifth and first pair of strings are tuned in E; in the second 'layer,' the second and fourth pair are tuned in B (see Example 1).



Example 1: *Cebolão* tuning, the most common tuning in *música caipira*. Here, it appears in the E major version, but it is common in D# or D major also

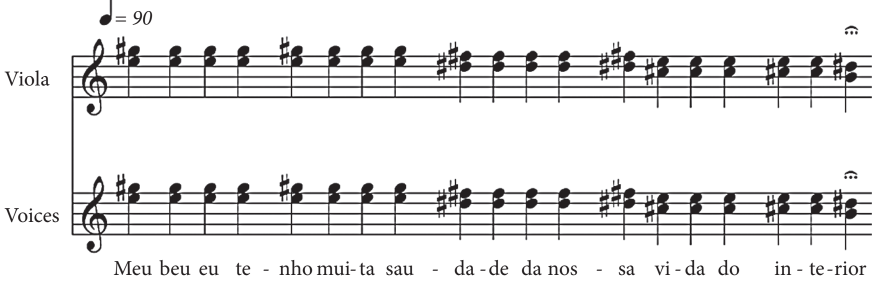
The *cebolão* permits the *viola caipira* player to perform the *recortado*, a kind of rhythmic pattern used in many *música caipira* genres. In the *recortado*, the *viola* player alternates between the chords, played with pressed strings, and the free strings, creating a strong rhythmic sense (Correa 2000).

Instruments such as the *adufe* (a kind of tambourine) and the *ganzá* (a kind of rattle) are common in *música caipira* also. They appear, for example, in the *folia de Reis* or *dança de São Gonçalo*, subgenres that have a percussion accompaniment to the *viola caipira*. Sometimes, the subgenres also feature the accordion and the *rabeca* (a kind of fiddle). The latter appears mainly in the *folia de Reis,* which is performed in the north of Minas Gerais state.

Another important characteristic of the practice of most of the *música caipira* genres is the vocal duet singing in thirds. This feature was established in *música sertaneja*, but it is common in many *caipira* subgenres as well, and in fact became the main symbol of both *música caipira* and *música sertaneja*. The sung parts in *catiras*, for instance, are performed this way. It appears also in the *cururus* and in other dances such as the *cana-verde, querumana* or *dança de São Gonçalo*.

The lyrics of *música caipira* are another element that has been widely studied, and indeed, for many researchers, they represent the greatest distinguishing factor between traditional *música caipira* and modern *música sertaneja* (Sant'Anna 2000). In *música caipira*, the main themes are provided by life in a rural environment – nature, animals and narrative tales about journeys or hunts – and express many values of peasant life. In *música sertaneja*, by contrast, the main subject was love, and during the decades of the twentieth century, this tendency became more and more apparent.

A good example of how *música caipira* expresses the values of peasant life is the *moda-de-viola*, widely seen as its noblest subgenre. Always sung as a duet, its lyrics almost always describe the land, the moral questions of life or some narrative tale. *Moda-de-viola* is sung in a particular way: one of the singers and the *viola* perform the same melody line, while the other singer



= 90
Viola
Voices
Meu beu eu te - nho mui- ta sau - da - de da nos - sa vi - da do in - te - rior

Example 2: Excerpt from a *moda-de-viola*. The lyric says, 'My dear, I miss our life in the country ...'

sings the melody line a third above or below; there is no instrument to establish the rhythmic beat (see Example 2 above). It is almost 'speech song,' to which audiences listen with great attention. For some researchers (for example, Sant'Anna 2000, Nepomuceno 1999), an important difference between *música sertaneja* and *música caipira* is the fact that the modern duets of *música sertaneja* almost never sing *modas-de-viola*.

Conclusion

In the twenty-first century *música caipira* is regarded as a basis of Brazilian popular music, one of its most traditional genres. It can be heard in many places in the Middle-South, chiefly at communitarian events such as parties or on specialist radio programs. Although it has some exposure on television, in shows such as that of singer Inezita Barroso, which has run since the 1970s, *música caipira* lacks the media profile of *música sertaneja* and in general terms occupies a small portion of the Brazilian music market. At the same time, *música caipira* is at the heart of debate about the transformations that urbanization and modernization have wrought in Brazilian society and Brazilian popular music. For many musicians and critics, the process of modernization that *música caipira* underwent, and the emergence of *música sertaneja,* are seen through a negative lens, one that laments the dissolution of many traditions. From this viewpoint, *música caipira* is a good index of the problems created by the modernization of society. Yet in spite of this, *música caipira* remains a powerful symbol of Brazilian musical and cultural traditions, in particular those of the Middle-South.

Música Costeña

The term '*música costeña*' literally means 'music of the coast.' The term is most current in Colombia, where it refers to music associated with the country's Caribbean coastal region, although the term may also be heard in Mexico, to refer to music from the Costa Chica region of the country's Pacific littoral and music from its Caribbean coast, and also in Nicaragua, again to refer to music or bands from the Caribbean coast.

In Colombia, the term is a generic umbrella category used to encompass a wide variety of styles, principally *cumbia*, *porro*, *fandango*, *gaita* and other more minor genres such as *bullerengue* and *mapalé*. It may be used to include the accordion-based *vallenato* as well. Historically, it is difficult to trace the emergence of such a general term, but in Bogotá a radio show called 'La Hora Costeña' aired in 1942 and showcased musical styles from the Colombian Caribbean region (Wade 2000, 123). This was linked to the increasing popularity and commercialization of genres such as *cumbia, gaita* and *porro*, which were originally part of peasant and town brass-band repertoires, but were being played in the cities of the Colombian Caribbean region from the late 1920s by jazz-band lineups and were beginning to spread to the rest of the country, spearheaded by band-leader Lucho Bermúdez, himself from the Caribbean coastal region (Wade 2000). As the music industry commodified these styles, the term *música costeña* became more common in Colombia. Such styles of music might also be referred to by the equally umbrella term, *música tropical*, evoking its 'tropical,' Caribbean origins, although this term could easily include other non-Colombian Caribbean styles such as Dominican *merengue* and Afro-Cuban music. *Música costeña* is not a category often used by the national record industry, which tends to use terms such as *música tropical* or *música bailable* (danceable music). Outside the country, too, more specific labels, such as *cumbia*, were used. As *cumbia* became transnationalized from the 1960s (Fernández L'Hoeste 2007), spreading especially to Mexico, it became a central element in the repertoire of bands, such as Los Bukis, playing 'tropical music' and *música grupera* there.

It is important to note that *música costeña* and *música tropical* have racial connotations, certainly in Colombia and also in Mexico. *Música costeña* was seen as being relatively 'black,' partly because the Caribbean coastal region of Colombia is relatively black in the cultural-geographical imaginary of the nation (as is the case for Mexico and many Central American countries), and partly because of the perceived 'Africanness' and 'hotness' of the rhythms that listeners found in styles such as *cumbia*.

PETER WADE

Música de Capoeira

Combat games, known under the generic name *capoeira,* were widely practiced by African and Creole slaves and freedmen in late colonial and nineteenth-century Brazil. Different styles developed in Bahia, Pernambuco, Rio de Janeiro and other regions. *Capoeira* usually involved some form of acrobatic mock combat in a circle (*roda*), using feet, head and hands for attack, accompanied by instruments, handclapping and singing. While friendly games were part of slave and popular diversions, rougher games could end in brawls, injuries and even death. Gangs also used *capoeira* as a fighting technique to impose their rule over the streets. Authorities considered *capoeira* a threat to public order and tried to suppress its practice. After the abolition of slavery (1888), *capoeira* further developed in Salvador, Bahia, especially among port workers (sailors, fishermen, stevedores). Together with *samba-de-roda* and *batuque* it was part of Afro-Bahian culture and as such it had a prominent place in the cycle of celebrations to honor Catholic saints and associated African divinities from December to Carnival. During the twentieth century *capoeira* underwent an intense process of modernization. Paramount in this development are the 'regional' and 'Angola' styles developed in Bahia from the 1930s onward by *mestres* (teachers, 'masters') such as Bimba and Pastinha. These styles were exported to other regions of Brazil, where they underwent further changes. Since the 1980s *capoeira* has undergone an impressive process of globalization and is practiced by several million people around the world.

There is only very patchy information on *capoeira* music prior to the 1930s. One of the earliest representations of *capoeira*, an engraving based on drawings by Bavarian artist Rugendas, suggests that *capoeira* players used a drum in the *roda*. In the 1930s and 1940s anthropologists started to study the art more systematically in Salvador, and Lorenzo D. Turner made the first known recording, of M. Bimba and his group and M. Cabeçinha with the group Esperança Angola, in 1940. Photographs from the same period and oral history suggest that up to three musical bows (*berimbaus*) and two tambourines (*pandeiros*) were used in Bahian *capoeira* orchestras before its modernization. M. Bimba, however, preferred to have only one *berimbau* playing. M. Pastinha codified the use of three *berimbaus*, with the *gunga* providing the basic rhythm, the *médio* playing the counterpart and the *viola* improvising. He also introduced other popular instruments such as the bell (*agogô*), the scraper (*reco-reco*) and a medium-sized drum (*atabaque*). Hence a *capoeira* Angola orchestra is almost inevitably constituted by these eight instruments, while in other contemporary styles the composition varies.

The *berimbau* called *gunga* takes the lead. The old Bahian *mestres* had an established number of *toques*, which they taught and played in the *roda* (the circle where *capoeira* is played). A *toque* consists of a basic rhythmic and melodic pattern, to which variations are added according to individual taste. There is not and never was complete consistency in the naming and performing of these *toques* (Shaffer 1977). The most common and well known are Angola, Angolinha, São Bento Grande, São Bento Pequeno, Iúna, Jogo de Dentro, Santa Maria and Cavalaria. Typical for the regional style of Bimba are Amazonas, Idalina, Iúna, São Bento Grande and São Bento Pequeno. Each *toque* demands a specific type of game. The slower Angola, for example, suggests a more ritual, playful pace for the game than the faster, more antagonistic São Bento Grande. Santa Maria is played specifically for the money game, when the two players try to pick up a banknote thrown into the *roda* by the audience. Cavalaria is said to serve the purpose of alerting everyone present that the mounted police are approaching, and that the *roda* is about to disintegrate so everybody can run away. *Capoeira* music thus provides a framework for the game in the *roda*; it can suggest a faster pace, or induce the players to slow down if the *gunga* player or the *mestre* considers it necessary.

The lyrics fulfil a similar role: they can stimulate a faster and more aggressive play, or on the contrary induce a slowing down, to play more and fight less. They comment on the character of the players, the game or anything else happening in the *roda*. They also remember famous *capoeira* fighters, wars and street battles. In pre-1940s *capoeira*, in *capoeira* Angola and in some other contemporary *capoeira* styles, the initial *ladainha* ('litany') consists in a monologue by the lead singer, who passes on his view of the world or hails famous *capoeiras* of the past. This is followed by the *louvação* ('praise,' also called *canto de entrada* or *chula*), where the lead singer intones a short verse, which is repeated by a chorus formed by the orchestra and audience. The *louvação* usually honors one's own *mestre*, mentions landmarks of *capoeira* geography in Bahia, or alludes to weapons and fight. During the *louvação* and *ladainha* there is no *capoeira* play, as they have an introductory function, which is to create the proper atmosphere for the subsequent games. The *corrido* accompanies the players in the *roda*. It consists of a part by the lead singer, and the answer of the chorus, and is usually introduced by the lead singer intoning both parts. In older *capoeira* there used to exist a further form called *quadra*, a poetic challenge between two lead singers. Rego (1968, 89) made it clear that no clean division is possible between the 'old' and the 'present-day' *capoeira* songs. Many *mestres* start with a 'traditional' verse from the public domain to which the chorus knows the answer and then start to improvise or sing their own compositions. He also pointed out the difficulty of distinguishing between *capoeira* songs proper and those of other provenance (samba, *candomblé*, etc.) that are sung in *rodas.* On the other hand, *capoeira* songs have often been used in MPB (*Música Popular Brasileira*), from Baden Powell's 'Berimbau' (1960s) to Caetano Veloso's 'Meia lua inteira' (Half Moon) (1989). The strong association of the *berimbau* with *capoeira* remains, despite its use in other musical genres. In the early twenty-first century *capoeira* music is frequently used in movies and publicity. All major *capoeira* groups issue CDs recording their masters' songs as well as interpretations of songs from the public domain and from other composers. Important groups record a CD at regular intervals (Muzenza, for instance, has issued one on a yearly basis, in a total of more than 20 years). These CDs circulate mainly within the group and are sold at events and workshops. *Capoeira* CDs now constitute a sizeable market, with hundreds, probably thousands of titles, most of which are quite difficult to obtain as they are not issued by commercial labels.

MATTHIAS RÖHRIG ASSUNÇÃO

Música de Carrilera

Also known as *música cantinera, guasca, música de despecho* or generically just as *música popular, música de carrilera* (literally, railroad music) is a commercially derived umbrella term coined in the 1950s in Colombia to describe a wide repertory of drinking songs produced by the local recording industry. Commercial recording began in 1949 in Colombia, when several record labels opened for business in Bogotá and Medellín. Several small record labels in Medellín, including Zeida, Silver, Ondina and Victoria, began to produce very inexpensive records to supply jukeboxes in rural bars and canteens across the wealthy Antioquia province. The railway network connected the coffee-growing hinterlands with Medellín, the region's main urban center, and therefore, the train became fundamental for the distribution and commercialization of those records. In this way, *carrilera* music turned into a strong cultural marker of the whole coffee region in central Colombia, which comprises the *departamentos* (provinces) of Antioquia, Caldas, Risaralda and Quindío, as well as parts of Valle del Cauca, Tolima and Huila.

Carrilera lyrics are usually full of passion but also gloomy and nostalgic; their most common topic is unrequited love, and many songs praise drinking as an effective remedy to drown one's sorrows. Musically, *carrillera* includes several styles drawn from Spanish-language popular genres including Mexican *ranchera*, *corrido*, *norteña,* Cuban *bolero*, Peruvian *vals*, Argentinian *tango*, Ecuadorian *pasillo* and Colombian *bambuco*. Several songs are covers or local reissues of old foreign hits, but there are also many original pieces indistinctly combining musical traits from different genres, particularly concerning instrumentation. Some of the most important singers include Julio Jaramillo, Alci Acosta, Darío Gómez 'el rey del despecho' (the lovelorn king), Gali Galiano and Juan Gabriel González 'el Charrito Negro.'

In spite of the prominence of grief in their lyrics, more than a few *carrilera* songs indulge in sorrow by means of witty black humor, evident in Hermanas Calle's songs, such as 'La cuchilla.' This particular feature links *carrilera* with the so-called *música parrandera*, which is also a product of Medellín's record industry aimed at rural audiences in Antioquia, but unlike *carrilera*, *parrandera* is especially created for partying and dancing during the Christmas and New Year's celebrations. Both *carrilera* and *parrandera* are important musical sources for Medellín-born Colombian pop star Juanes.

Carrilera singers, most of whom identify themselves simply as singers of *música popular*, have thousands of followers in Colombia, Ecuador, Venezuela and Central America, but rarely appear in mainstream media. The reason might be that their music appeals mainly to rural and blue-collar urban audiences. In the 1990s, *tecnocarrilera* was a short-lived and not very successful attempt by the singer Marbelle to make *carrilera* attractive to urban youth. In spite of it, *carrilera*'s commercial niche is a great business for local labels such as Discos Fuentes and Sonolux.

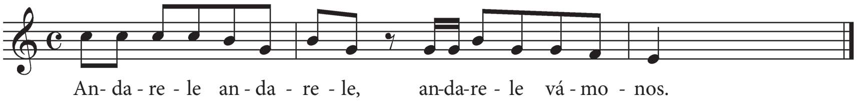
CAROLINA SANTAMARÍA DELGADO

Música de Marimba (Colombia and Ecuador)

'*Música de marimba*' is a general term used to refer to a group of Afro-Colombian and Ecuadorian traditional musical genres, specifically those practiced along, and identified with, the coastal strip running through southern Colombia (departments of Valle del Cauca, Cauca and Nariño) and northern Ecuador (province of Esmeraldas), an area whose population is almost completely made up of descendants of African peoples. Although the term refers to the *marimba*, a type of xylophone, not all of the traditional musics included within the label '*música de marimba*' actually feature the *marimba*. In Colombia, *música de marimba* is also known as *currulao*, a term which can also refer to a specific genre within *música de marimba*, a particular instrumental ensemble that includes a *marimba*, and a social event. '*Música de marimba*' is also used to refer to adaptations of these Afro-Pacific musics into popular music recordings and stage performances, primarily in Colombia. Finally, it can designate the traditional *marimba*-based musics of several indigenous groups in adjoining regions in Ecuador.

Afro-Pacific *música de marimba* has its historical origins in the black slave communities that were put to work in the gold mines of Colombia's southern Pacific region. Slave activity in this region peaked in the eighteenth century and was focused on the mines of Barbacoas (Nariño), located midway between what are known today as the cities of Pasto, in the Andes, and Tumaco, a coastal port. Concurrent with moves over the first half of the nineteenth century to abolish slavery, the slave population began to migrate toward the coastal areas, first to Tumaco and Guapi, and then on to Buenaventura further north and Esmeraldas to the south. Today's *música de marimba* is rooted in these



An- da - re - le an - da - re - le, an-da-re - le vá - mo - nos.

Example 1: Stock melody and lyric of the *anderele* genre of *música de marimba*

areas, around the Colombian towns of Buenaventura, Timbiquí, Guapi, Iscuandé, El Charco and Tumaco, and San Lorenzo and Esmeraldas in Ecuador. These are rural regions with high levels of poverty, isolated from other parts of their countries.

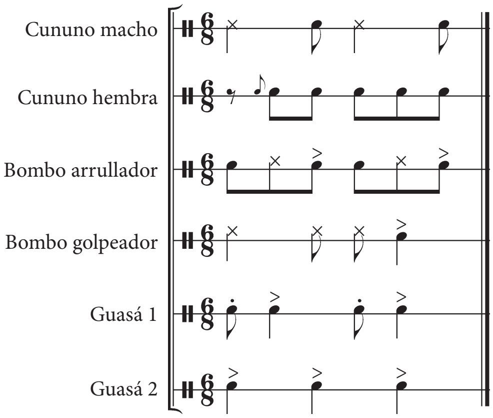
In the Colombian regions, *música de marimba* is showcased at two types of events: the *arrullo* and the *baile de marimba* (also known as the *baile de currulao*). The term *arrullo* refers to an event dedicated to the adoration of Catholic saints, the Virgin Mary or the Christ Child at which people get together to sing religious songs. '*Arrullo*,' which means 'lullaby,' is a reference to the songs sung on 24 December to the Christ Child to help it sleep. *Arrullos* may take place on the feast days of the Virgin Mary (6 December) and of particular saints, and through the pre-Christmas novena (16–24 December). The *baile de marimba* ('*marimba* dance') is a gathering for the purpose of fun and relaxation; here the repertoire is secular rather than sacred. After an *arrullo* has taken place, it is common for the festivities to segue into a *baile de marimba*, in the same location and with the same participants.

In Ecuador, the *baile de marimba* was still performed in the mid-1960s at the *casas de marimba* (*marimba* houses), community centers that brought Afro-Ecuadorian people together for activities involving *marimba* performance, as well as in private households. The *bailes* and *casas de marimba* provided social spaces for the preservation of the *marimba* tradition. The *casas de marimba* disappeared by the mid-1970s, and private *bailes* probably a short time after that, as a result of the social transformations caused by the construction of a railroad system connecting the highland city of Ibarra to the port of San Lorenzo (1957) and an oil pipeline from the Amazonian old fields to San Lorenzo (1972), including urbanization, industrialization and the migration of highlanders to Esmeraldas and of Afro-Ecuadorians to other parts of the country in search of wage labor. *Marimba* music has survived in Ecuador in folkloric performances at festivals and other public events by Afro-Ecuadorian musical ensembles. Due to the disappearance of *marimba* houses, the *marimba* repertoire is limited and comprises just a few pieces that are well known to all *marimba* players. For example, the repertoire of the *andarele* has now essentially been reduced to a single song with the lyrics 'Andarele, andarele vámonos' ('Andarele, let's go'; see Example 1). Other Afro-Ecuadorian musical expressions in Esmeraldas province include the *arrullo* and the *chigualo* (child's wake), both of which are performed without *marimba* accompaniment.

Música de marimba, which is in call-and-response form, features singing accompanied by percussion instruments and sometimes *marimba*. The *marimba* ensemble generally includes two *cununos* (single-headed conical drum), two *bombos* (double-headed bass drum), a lead singer (either male, known as the *glosador*, who may also play a *marimba de chonta* [xylophone], or female, known as *entonadora*) and three or more *respondedoras* (female singers who respond to the calls of the lead singer) who also play various *guasás* (shakers). The *cununo* is struck with the hands while the *bombo* is played with two beaters, one for striking the wooden side of the drum and the other covered with fabric at one end and used to strike the head. The shakers, used to continuously mark the time, are made of tubes of *guadua* (a local type of bamboo) filled with seeds and fitted with strips on the inside to slow the seeds as they pass from one end of the instrument to the other when it is played. The *marimba de chonta* generally has between 19 and 23 keys made of local varieties of palm (such as *chontaduro*, *gualte* and *pambil*), with bamboo resonators. Traditionally, the use of the *marimba* has been essential to only one of the genres included within the contemporary *música de marimba* label, the *currulao* or *bambuco viejo*; more recently, the *marimba* has been adopted into other Afro-Pacific genres, especially in performances at public events or festivals. Traditionally, the keys of the *marimba* have been tuned to seven pitches per octave, falling somewhere between Western diatonic tuning and isoheptatonic tuning; in the 1990s Western-tempered tunings (diatonic or chromatic) began to be used. Where the tuning of the *marimba* is diatonic or chromatic, major and minor keys are both employed according to the singer's preference.

The lyrics of *música de marimba* usually consist of a few lines, or even a single one, specific or improvised, sung repeatedly in call-and-response format. Depending on the genre, lyrics may allude to everyday topics such as geographic locations, local concerns, religious themes or personal relationships, and may incorporate puns, sexual innuendo or other devices. For example, Franco (2005: 149) gives the lyrics of an *arrullo* entitled 'Esmeraldas': 'Esmeraldas es grande/Más grande dicen que es Quito/Más bonito es mi Señor Jesucristo' ('Esmeraldas is a big place/They say Quito is even bigger/But none as beautiful as my Lord Jesus Christ'). Another example is the chorus of 'Caderona' ('Caderona, vení, menéate'), which playfully invites a wide-hipped woman to move her body seductively.

The most representative genres within the *música de marimba* designation in Colombia are *currulao* (or *bambuco viejo*), *juga*, *torbellino*, *bunde* and *rumba*; in Ecuador, they include *caderona*, *bambuco*, *andarele* and *agua larga* (known as *juga grande* in Colombia). Apart from the *bunde* and *rumba*, they are all in 6/8 meter and share the same basic rhythmic structure (see Example 2).



Example 2: Typical rhythmic structure of *música de marimba*

Typically the harmonic sequence alternates regularly between the tonic and the dominant, the frequency of alteration varying between genres. The *marimba* performs a brief introduction, the percussion instruments enter and call-and-response begins with the female chorus responding to the soloist. Some variations between genres include the following examples. In *currulao*, the call-and-response singing is preceded by the *marimba* player singing three or four renditions of a typical melody known as *glosa* or *chureo*. In the *juga*, the voices begin and guide the song as the *marimba* is not traditionally used. The *torbellino* is an adaptation of the Andean genre *rajaleña*, which is typical of the departments of Huila and Tolima. *Rajaleña* features a repetitive melodic line, sometimes with variations, the lyrics changing with each new verse; the *torbellino* retains this melodic structure but features standard lyrics. The rhythm of the *juga grande* is identical to *juga* and *currulao*, but its melody and harmony are built upon a pentatonic scale. *Bunde* is associated with children and is sometimes performed at *chigualos* or children's wakes. The *rumba* genre was recently established as a local adaptation of *salsa* music to the *marimba* ensemble. Sometimes the name of a specific song within a genre's repertoire may be referred to as a genre in and of itself, such as Patacoré, Pango and Berejú, which are traditional *currulaos*, and Caderona, a popular *juga*.

Since 1997 *música de marimba* has gained in national visibility in Colombia, primarily due to the establishment that year of the Petronio Álvarez Pacific Music Festival, which takes place every August in the Colombian city of Cali. Before 'El Petronio,' as the festival is popularly known, few recordings existed of *música de marimba*, and those that did exist were academic field recordings of an unpolished, rustic nature. The festival has resulted in the formation of formal performance groups dedicated to *música de marimba* and a corresponding rise in studio-produced recordings. Prominent groups have included Naidy, Socavón, Buscajá and Grupo Gualajo. Their recordings are designed to conform to the expectations of an urban, record-buying public, favoring 'clean' production values, the inclusion of the *marimba* in the ensemble even in genres where traditional practice would not have done so, a preference for tempered tunings, predefined vocal arrangements with little improvisation, and the development of a standard formal structure (introduction, call-and-response, *marimba* solo, call-and-response and coda). This highly polished, practiced approach is also evident in these groups' live performances, especially those of Socavón. Performing groups participate in official competitions, wearing stylized versions of traditional costumes and presenting predetermined musical sets. They position themselves not in a circle as in traditional practice, but facing the public, placing the *marimba* prominently center stage, closely flanked by the other percussion instruments, with the singers out front or to the side. Although these features of these groups' work represent a departure from practices at *arrullos* and *bailes de currulao*, these groups maintain the traditional musical format, and both consider and position themselves as representatives of the traditional style.

Well-known traditional *marimba* players in Colombia include José Antonio Torres 'Gualajo,' Baudilio Cuama and Marino Beltrán; the best-known singers are Juana Angulo, Gladys 'Tití' Bazán, Elizabeth Sinisterra, Inés Granjaherrera, Nidia Góngora, Alba

Elena Aramburo and Benigna Solís. These musicians, mostly of an older generation, not only are active in traditional *música de marimba* in their communities of origin, but also travel to perform at events such as El Petronio.

Another phenomenon arising from El Petronio is the rise, in major centers such as Cali and Bogotá, of music groups that have taken up *música de marimba* in order to fuse it with other types of music. Dance orchestras such as Bahía and Herencia in Cali have mixed it with elements of *salsa*, and sometimes reggae and rock, while in Bogotá the best-known example has been La Revuelta, which has added bass, drum kit and stylistic elements of rock and rap to traditional *marimba*.

The rise of formal performance groups working the *música de marimba* style must be seen in the context of a more general discourse seeking to reaffirm 'ancestral' culture of the Pacific coastal region in both Ecuador and Colombia and the strengthening of a sense of ethnic and cultural identity there. In Colombia, these processes are linked to the adoption in 1991 of a new Constitution, which formally designated the country as pluriethnic and multicultural. This has led to a greater recognition within Colombia of the contributions of its minorities, including the Afro-Colombians of its Pacific region, to the nation's cultural patrimony. This must be seen in the context of a history of discrimination against blacks of which the effects are still felt in contemporary times. *Música de marimba* in particular been transformed into a powerful symbol of Afro-Pacific culture within Colombia and a marker of identity for these communities. Because the *marimba* instrument is at the core of this process, these groups have incorporated it into Afro-Pacific genres that did not traditionally feature it. While *música de marimba* cannot be considered a popular music genre in Colombia in the sense that it has not been fully commercialized, its visibility at the national level has continued to increase, primarily through recorded works and exposure at festivals, contexts which allow for institutional support of Afro-Pacific culture.

In Ecuador since the early 2000s, Afro-Ecuadorian musicians have been teaching children to play and dance *marimba* music in an effort to revive the *marimba* tradition, which has become a marker of Afro-Ecuadorian identity. Renowned performers include Papá Roncón and his group La Katanga, and Petita Palma and her group Tierra Caliente. In 2002 *marimba* player Lindberg Valencia, in collaboration with other members of the Afro-Ecuadorian community, composed an Afro-Ecuadorian mass for the Sacred Music Festival in Quito. Performed by the typical *marimba* ensemble (*marimba*, *bombo*, *cununo*, *guasá*, *glosador* and *respondedoras*), the themes of each mass section are based on Afro-Ecuadorian religious songs. Rock bands, such as La Grupa, have released a series of songs with *marimba* accompaniment. The Orquesta de Instrumentos Andinos from Quito has recorded the *andarele* in an arrangement for *marimba* and Andean instruments. Academic composers have arranged the same piece for the symphony orchestra format. Although Ecuadorian musicians and composers from different stylistic trends have incorporated the *marimba* timbre in their works, *música de marimba* nonetheless remains an ethnic expression that does not have commercial visibility or significant political implications at the national level.

The *marimba* is also popular among the indigenous groups Chachi, Tsa'chila and Awá in the provinces of Esmeraldas and Pichincha. German travelers chronicled the use of *marimba* by indigenous people in the early twentieth century. It is likely that these peoples adopted the *marimba* from Afro-Ecuadorian practice, although this point is debated. In these communities, both the construction and performance of the *marimba* instrument are linked to the animal and spiritual world, and the music has musical characteristics, tuning systems and performance contexts distinctive from those of the Afro-Ecuadorian tradition. For example, Tsa'chila people perform *marimba* music at their rituals, weddings and community celebrations. The most important Tsa'chila festivity is the Kasa'ma (the New Day celebration), which takes place on the winter equinox and coincides with Easter week. Four typical rhythms characterize their music: *pirpa kotochi*, *bonkoro teka*, *donebele kinfu* and *tseinasa marimba*. As in Afro-Ecuadorian practice, the ensemble used by these indigenous groups is formed by one or two *cununos* and *bombos*, a *marimba* and shakers. However, the rhythmic structure is less complex than the polyphonic texture of Afro-Ecuadorian music – it is characterized by a more regular meter – and uses soloist rather than call-and-response singing.

Música del Recuerdo

Música del recuerdo (music of yesteryear) comprises a specific repertoire of romantic *balada*s (ballads) from the 1960s and 1970s, which are currently listened to by Ecuadorian lower-class youths in large concerts of Ecuadorian popular music. In these venues, *música del recuerdo* is played together with other styles of Ecuadorian music associated with a stigmatized lower-class population such as *música chichera*, *música rocolera* and *tecnocumbia*. Thus, in Ecuador the term *música del recuerdo* points not just to 'music of yesteryear' but also to a category of romantic music that has been re-signified by the lower-class youth.

The *balada* genre, which replaced the old-fashioned romantic *bolero* with its lively rhythm, was popular among all social classes in Ecuador in the 1970s. As a modern popular music at the time, it represented the musical aesthetics of the upper-middle classes in terms of lyrical content and performance practice. By the late 1980s and 1990s, *baladas* from the 1970s were frequently listened to on the radio as an expression of nostalgia for yesteryear. At the beginning of the twenty-first century, however, these *baladas* are listened to by lower-class youth seeking a collective expression of modernity and romantic love. In general, lower-class youth regards Ecuadorian popular music as old-fashioned because its lyrics usually deal with themes of negative love (breakups and unrequited love), topics that are reminiscent of the *pasillo* and *música rocolera*. For lower-class youth, modernity manifests itself in the use of electronic instruments and the preference for the *balada* genre, which provides an alternative outlet for expressing positive feelings, particularly experiences of falling in love.

Música del recuerdo is performed by local bands from Quito, such as Caravana, Israel and Sahiro, which were popular in the mid-1970s and 1980s. These bands, made up of electric guitars, synthesizers and drum set, played covers of songs by international *artists* such as Leo Dan (Argentina), Buddy Richard (Chile) and Los Iracundos (Uruguay). Caravana and Sahiro also played original songs composed by their band leaders – Franklin Villegas and Saúl Proaño – in the *balada* style of the period, some of which have become 'classics' of *música del recuerdo*. Caravana, Israel and Sahiro disbanded in the early 1990s, then reunited in the 2000s and have had enormous success singing their old repertoire for a younger generation of lower-class Ecuadorians. Other bands with the same type of repertoire, such as Los Búfalos and Primos G, emerged with moderate success in the 2000s. With the massive exodus of Ecuadorians at the beginning of the twenty-first century, Sahiro and Los Búfalos tour internationally, performing *música del recuerdo* mainly for the Ecuadorian migrant population living in Spain and the United States.

Música Gauchesca/Música Nativista

The term *gaúcho* refers, in Brazil, to the native inhabitants of the extreme south of the country, more specifically the people born in the state of Rio Grande do Sul, where the country borders on Argentina and Uruguay. By extension, *música gauchesca* is understood as the traditional music of this region, known for having a very specific cultural identity in relation to the rest of Brazil. The term *música nativista* points, in a broader sense, to the same cultural universe, while also being used to designate a specific aesthetic tendency within *música gauchesca*.

The figure of the *gaúcho* is central to the construction of cultural identity in Rio Grande do Sul. A pejorative term until the end of the eighteenth century, associated with the rogues and cattle thieves who populated the border region that was still being disputed between the Portuguese and Spanish Crowns, the *gaúcho* image acquired a more positive aspect, and indeed began a path to idealization, from the second half of the nineteenth century, when the economy of the region began to stabilize, with ranching and cattle-raising work as its central activities. The first cultural associations dedicated to the cultivation and promotion of *gaúcha* culture date from this time – Partenon Literário (1868) and Grêmio Gaúcho de Porto Alegre (1898). By the end of the 1940s, the Centros de Tradições Gaúchas (Centers of Gaucho Tradition (CTG)) were appearing, the first of which was the *35 CTG*, founded in Porto Alegre – capital city of Rio Grande do Sul – in 1948 by students from the countryside. The spread of these centers, inside and outside the state, and the collaboration between its promoters gave form, in the 1960s, to the Movimento Tradicionalista Gaúcho (Traditionalist Gaucho Movement (MTG)).

Music and dance designed within this context as 'traditional' were among the major themes treated by some very renowned intellectuals and ideologists from this movement, as one can see in *Manual de danças gaúchas* from Paixão Côrtes and Barbosa Lessa (1955), a book widely adopted as a pedagogical reference. The original ideology of the movement was largely based on conservative ideas about maintaining the original rural aspects of the tradition. A tough character, and a way of life associated with the countryside (specifically with cattle), are essential points of the *gaúcho* image, and important themes in the symbolic dimension of *música gauchesca/nativista*. Similarities with the *gaúcho* traditions in Argentina and Uruguay are discussed, sometimes affirmed and sometimes minimized, as well as providing empirical evidence of the existence of a cultural identity that is, to some degree, transborder.

By the early twenty-first century, the officialization process, and even the institutionalization of the *gaúcha* regional identity in Brazil, had been developing for more than a century. Involving several actors – within cultural and intellectual associations, means of communication, artists, consumers and even the state – it was permeated by ideological polemics and relations of power. In the midst of these processes, the musicality of the *gaúcho* tradition is one of the most essential and most discussed elements. In geographical terms, the region covered and influenced by the so-called *gaúcho* cult extends beyond the Rio Grande do Sul and includes the states of Santa Catarina, Paraná, Mato Grosso do Sul and beyond.

In 1971 the CTG *Sinuelo do Pago* promoted the *Califórnia da Canção Nativa* in the city of Uruguaiana, the first *nativista* music festival to take place in the state. During the 1970s and the 1980s there was a marked increase and diffusion of such competitive festivals, generating a large market of records and other products related to this identity, and revitalizing the cult of regional culture for, and partly by, young people from urban middle classes. These festivals became the *locus* of an ideological polarization, sometimes very intense, between a conservative 'voice of tradition' and a more progressive stance that was open to aesthetic and thematic changes. The argument between these two groups, the first known as *traditionalist* and the second as *nativist,* centered primarily around music, and many musical subjects were intensively discussed and disputed – subjects such as instrumentation (whether or not particular genres incorporating electronic instruments should be considered authentic), and the topics dealt with in song lyrics – but other related, though not strictly musical, topics were featured also, notably the issue of innovations in traditional; *gaúcho* dress among both musician and participants.

A Musical Supergenre

In a sense, *música gauchesca/nativista* is best understood as a musical *super-genre* or umbrella genre, comprising a certain number of specific genres (Hoffmann 2007, 07). The mixture of traditional dances brought by the Açores colonizers from the eighteenth century and European ballroom dances, diffused mostly through Paris in the second half of the nineteenth century and widely adopted in Brazil and elsewhere, is generally accepted as providing the basis of what has become known as *música gauchesca/nativista.* Spanish influence is apparent too, emanating from the Rio de La Plata region and verifiable, for instance, in the increasingly common practice, originally begun at festivals in Brazil in the 1970s, of adopting such genres as *chamamé* and *milonga*. Lucas (1990, 223–9) lists as the main *música nativista* genres: *bugio*, *rancheira*, *vanerão* (also called *vaneira*), *polca*, *toada* and *milonga*. Ferraro (2006, 41) adds to this list *chamamé*, *xote*, *chimarrita* and *rancheira*.

Linking these together as an identifiable whole are the acoustic guitar and the accordion, considered the most characteristic instruments of *música gauchesca/nativista*, together with a virile and intense, essentially male, vocal quality, one that is very different, for instance, from the soft voice that characterizes *bossa nova* singing. To the traditional set of acoustic guitar and accordion is added the *bombo legüero*, an instrument associated with the *rio-platense* culture of Argentina and Uruguay. The use of this instrument was diffused by the festivals and was sometimes judged as adding an international component.

In the twenty-first century, the instrumentation of groups of *música gauchesca/nativista* is often composed of drums, electric bass, electric guitar (played at the same time as, or substituting for, the acoustic guitar) and keyboards, together with the virtually indispensable accordion, which acts as a central identifying characteristic. Within the genre (or super-genre), a great deal of variation can be found with regard to arrangements and styles according to the particular aesthetic orientations and interests of the different groups and/or musicians.

From the encounter between *música gauchesca/nativista* and other musical genres such as *música sertaneja*, *axé* and *pagode*, a new genre appeared in the 1990s, called *tchê music* – also designated as *vanera pop, música de baile, vanera maxixada, estilo fandangueiro jovem, estilo do sul* and *linha mais aberta* (Hoffmann 2007, 32–3). It is to be found in urban dances, not only in Rio Grande do Sul, but in other states, covering almost the entire south of Brazil, in contexts unlike those of the traditional CTGs, and is considered to be more commercial in character. The *vaneira* or *vaneirão* is perhaps the most significant genre in these contexts, in which the music is essentially a function of the dance. In such developments are found dynamic new ways and new scenarios for the expression of the polarization between tradition and innovation that lies at the heart of the universe of *música gauchesca/nativista*.

LUÍS FERNANDO HERING COELHO

Música Grupera

The term *grupo* is used in Mexico to refer to a 'group' or band of musicians that does not prioritize any of its members (although many groups have one or more better-known members, for example, the vocalist). The 'group phenomenon' is commonly referred to as *onda grupera* (literally 'the group wave'). *Grupos* are ensembles with electric guitar, synthesized instruments and a lead vocalist which play easy-listening Mexican and international pop ballads, as well as *cumbias* (a Mexican variety, not to be confused with Afro-Colombian *cumbias* which are often called *cumbia tropical* in Mexico). Among the top bands are Los Bukis, Los Temerarios, Liberación and Los Fugitivos. As well as the ensemble type, the term *grupo* also refers to the music these groups perform. *Música grupera* ('group music') is one of Mexico's most commercially successful forms of popular music.

Grupo is a hybrid as well as a transnational type of music, enjoyed mostly by younger people. It has its origins in the 1960s Mexican pop ballad/rock groups (such as Los Babys, Los Ángeles Negros, Enrique Guzmán, Los Locos del Ritmo and Los Freddy's) that imitated English and US rock groups like the Beatles, the Rolling Stones and the Beach Boys. Inspired by 1960s youth music, the Mexican *rocanroleros* (rock 'n' rollers) Los Teen Tops in turn stimulated a number of rock groups which all signed to the Peerless label. Although the Mexican recording industry did not yet believe in the country's rock groups and much foreign music could be heard on radio, *rock en español* (rock in Spanish) was soon to surpass English rock in popularity. *Grupo* is also indebted to the Colombian *cumbia* craze that had reached Mexico in the late 1950s and early 1960s, and was soon appropriated by *ex-rocanroleros* such as Mike Laure y sus Cometas and later Rigo Tovar y su Costa Azul. During live performances, typically held at regional fairs of a public or private nature and dance events in smaller towns and villages, Mexican groups would usually also interpret pop *baladas* (ballads) for romantic dancing. Due to a lack of access to the mainstream media as well as for economic survival in the local music market, the first generation of *gruperos* (*grupo* musicians) in the

1970s developed a mixed repertoire that borrowed from the *pop balada* (singers such as Julio Iglesias, José José and Camilo Sesto), *cumbia tropical*, rock and *ranchera* (Mexican country music). This hybrid music style would mainly appeal to the lower classes. The pioneer groups hailed from anywhere between the southeastern peninsula of Yucatán to Acapulco on the Pacific coast, but eventually Mexico's north-east became the hub for the *grupo* movement due to the growing importance of Monterrey's recording industry.

Cumbia, a genre which is incorporated under the umbrella of (what is known in Mexico and elsewhere as) *música tropical* (tropical music) and is a form of *música bailable* (danceable music), has been popular among Mexico's lower-class dancing audiences since the 1960s. Seminal in *cumbia*'s internationalization was the Colombian group Sonora Dinamita (formed in 1960 in Medellín) with its brassy, innuendo-drenched *cumbias* such as 'A mover la colita' ('Let's Move the Little Tail'). Mexican regional ensembles, from accordion-based groups to brass bands, joined the *cumbia* craze, popularizing the genre in urban and rural areas alike. *Cumbia* became a distinctively Mexican genre or style when it was played by *rocanroleros* who failed in their genre and turned into *tropicaleros* (musicians of the tropical genre). Mexican *cumbieros* (*cumbia* musicians) simplified the complex polyrhythmic patterns of the popular Colombia *cumbia* of the time and introduced the electric organ or synthesizer, the drum set and the güiro (gourd scraper). In the 1980s, their fusion of American rock/*rock en español* and *cumbia mexicana* (Mexican *cumbia*) became known as *chunchaca*, a derogative term ('chunchaca' is onomatopoetic for the kind of guitar strum and the drum rhythm of this music: quarter note followed by two eighth notes). *Cumbia* music had become more associated with Mexico's lower and working classes.

Instrumental in the development and dissemination of Mexican *cumbia* has been Monterrey, capital city of the northeastern state of Nuevo León and the center of a potent cultural industry that promotes predominantly *música norteña* and *música grupera*. During the 1980s Monterrey's increasingly professionalized recording and entertainment industries propelled the pop-influenced *grupera* music and *grupo/norteño* fusions (bands such as Los Mier, Bronco and Grupo Límite) out of their regional confines. Although northern groups did not yet have airplay in Mexico City, the music began to attract a larger audience, notably the growing Mexican immigrant population in the United States. After an earthquake devastated Mexico City's infrastructure (including its recording industry) in 1985, *norteño* music made huge inroads into the capital. By the early 1990s Monterrey's commercially promoted *cumbias* enjoyed prominence in the whole of Mexico as well as in parts of the United States. Due to the increasing decentralization of Mexico's culture industry and the proliferation of new channels of communication in the 1990s, popular genres such as *cumbia tropical* began to be recorded outside of the established recording centers, both south and north of the border.

The *grupo* phenomenon peaked in the early 1990s when it became part of another expanding fashion in Mexico: massive, Woodstock-style dance concerts in major cities such as Monterrey and Guadalajara. Televisa, the world's largest Spanish-language media company with headquarters in Mexico City, for example, developed a 540,000-square foot multipurpose facility in Guadalajara. Music shows at this entertainment center routinely drew between 70,000 and 90,000 fans who listened and danced to *grupos*, *norteños*, *bandas* and fusion bands. These marathon concerts would typically feature up to five stages and ran from 7 p.m. to 7 a.m. *Norteño* and *tejano* groups such as Ramón Ayala, Mazz, La Mafia and Selena competed with the *onda grupera*'s popularity in the mid-1990s.

Leading Groups

Among the most notable musicians/bands who spearheaded the *grupo* movement in the 1970s were Marco Antonio Solís y Los Bukis, Rigo Tovar y su Costa Azul, Liberación and Bronco.

Los Bukis, headed by singer/songwriter/producer Marco Antonio Solís, led and dominated the *onda grupera* for more than two decades. Formed in 1970 in Michoacán, Los Bukis became the role model for dozens of bands – among the most successful were Los Yonics (formed in 1977 in Guerrero) and Los Temerarios (formed in 1982 in Zacatecas). They imitated not only Los Bukis' romantic pop repertoire, but also their elegant coat-and-tie look. Los Bukis also dominated the pop *grupero* scene in Mexico in the 1980s with their highly melodic and easily danceable romantic pop tunes and with elaborate stage shows featuring giant videos, sophisticated light shows and high-tech sound systems. Los Bukis' fan base, although still rooted in the lower socioeconomic classes, was able to transcend class barriers with the support of the Mexican and Latino media in the 1990s. Solís departed from the band for a solo career in 1995. The remaining band members regrouped as Los Mismos ('The Same Ones').

Singer/songwriter Rigo Tovar (Rigoberto Tovar García), originally from Matamoros, Tamaulipas, formed his band, Costa Azul, in 1972 in Houston, Texas. Like other Mexican rock musicians of the time, he turned to *música tropical* to make a living. In the mid-1970s Tovar's name became synonymous with the keyboard-driven *cumbia* genre. His trademark style was a creative mixture of *cumbia tropical*, rock, *ranchera* and *balada pop*.

Liberación (named after the feminist and Palestinian liberation movements of the time) was created in 1976 in Monterrey with an egalitarian *grupero* concept, though they also covered disco music, such as the Bee Gees. Soon, however, the group rivaled Los Bukis with their romantic pop-*cumbia* keyboard-heavy style, which relied on a strong rhythm section (with the addition of a second keyboard) and sentimental, apolitical lyrics. Many of the pioneer *grupos* broke up or ceased to function, particularly after the rise of *tejano* music in the late 1980s, although Liberación's success continued. However, the popularity of *tejano* was short-lived, dramatically halted by the death of the tejano star, Selena, in 1995. Grupera music made a comeback and by 2010, commercially oriented banda ensembles (such as Banda El Recodo) and norteño groups (like Los Tigres del Norte) had entered the *movimiento grupero* (with a similarity in dress, dance routines, use of modern technology and so forth).

Los Temerarios, a group formed by the brothers Adolfo and Gustavo Ángel in 1982 in Fresnillo, Zacatecas, similarly was catapulted to stardom in the mid-1990s with a series of hit pop-ballad tunes in a mariachi-influenced style. Starting with a number of independently produced albums with organ-driven ballads, *rancheras*, good-time *cumbias* and even *corridos*, Los Temerarios were signed by the Monterrey-based indie label Disa in the late 1980s. Combining elements of sentimental ballads and Mexican *ranchera* music with keyboards, electric guitar, bass and percussion, they created a sound that propelled them to superstardom and frequently took them to the top tier of Billboard's Latin charts. In 1993, Los Temerarios ventured into the business side of music by setting up a modern studio in Monterrey and creating their own AFG Sigma label, which signed dozens of other groups including pioneer *grupo* Mr Chivo and Conjunto Primavera. Three years later, however, Los Temerarios signed with Fonovisa, the leading seller of 'Mexican Regional Music' in the United States (until the late-1990s, when Disa, EMI Latin and PolyGram Latino challenged Fonovisa's supremacy in the US market). In 2000 the band collected an award for Best Grupero Performance at the first annual Latin Grammy Awards.

The *grupo* sound is not clearly defined, as groups explore their individual creativity and develop their own repertoire, often fusing different popular styles. Probably the most successful of such 'fusion bands' was Bronco, which started in 1978 (Nuevo León) as a *norteño* band dressed in cowboy hats and colorful fringed cowboy suits imitating the highly popular binational *norteño* band Los Tigres del Norte in both clothing style and repertoire. Influenced by Los Bukis and Los Ángeles Negros, Bronco exploded on the *grupero* scene in 1990 with a new type of *norteño-grupo* fusion. The four-man band (accordion/keyboard, electric guitar, bass/vocals, drums) developed a repertoire of original *corridos* and *norteña rancheras*, as well as witty *cumbias* and romantic *baladas*. After a worldwide good-bye tour, Bronco ended its glorious career in 1997 at the Estadio Azteca in Mexico City in front of 115,000 fans. Other successful *norteño-grupo* fusion bands include Los Mier (1980s, Nuevo León), Los Fugitivos (1991, California), Grupo Tentación (1991, Guanajuato) and Grupo Límite (1995, Monterrey), the latter headed by singer/songwriter Alicia Villarreal. Grupo Límite is noteworthy for its many awards in both the Billboard 'Regional Mexican' and 'Tejano' categories, but also for being the only (commercially successful) female-led *norteño* fusion band.

Grupo's Influence on Other Transnational Popular Music Phenomena

Mexico's political opening and neoliberal tendencies since the 1980s, which have caused a gradual democratization of the media, aided the emergence and success of new popular music phenomena across the US-Mexico border. In the mid-1980s a grupo version of the acoustic *banda sinaloense* appeared in Guadalajara. This fusion became known as *tecnobanda* (*technobanda*) or simply *banda* (consisting of electric bass, keyboard synthesizer, saxophone, trumpets, drums and vocalist). In the early 1990s Southern California was swept by the 'banda movement,' carried and supported by large numbers of recent immigrants from Mexico and Central America. *Tecnobanda*'s accelerated tempo and powerful amplification set off a dance craze that spread to other parts of the United States and back to Mexico. A decade after *tecnobanda*'s international breakthrough, a new type of group that, like *tecnobanda*, fused Mexican rural-rooted music with synthesizers and drum sets, burst out of Chicago and made headlines in the United States after topping the Billboard

Latin charts in 2003. The novelty sound became known as *pasito duranguense* ('little step from Durango'). Although the Durango groups mainly reinterpret Mexican standards (*rancheras* and *baladas*), *el pasito duranguense* is a distinctly Chicago invention, and in the Mexican home state of Durango it is consequently called 'Chicago sound.' Both the *tecnobanda* and the *pasito duranguense* phenomena owe much to the *onda grupera* which paved the way in the music industry for keyboard-driven, eclectic youth musics rooted in Mexican sensibilities.

Música Instrumental Brasileira

Brazilian instrumental popular music, called *música instrumental* in Brazil, is also known as Brazilian jazz, in the specific sense of a distinct musical genre with its own characteristics and sociocultural nexus, and not as a national adaptation of jazz. While the word 'instrumental' itself denotes music that does not have any lyrics or text, including genres from Western European art music, the term *música instrumental* is used by Brazilian musicians to identify the specific corpus of musical productions of Brazilian jazz.

There are many types of Brazilian instrumental music, such as *choro* or concert music, and Brazilian jazz musicians are aware of the inadequacy of the term *música instrumental* to refer to this music. A more accurate designation would be *música popular instrumental brasileira* (Brazilian instrumental popular music), but *música instrumental* is the commonly used term. In magazines and stores outside of Brazil, it is termed 'Brazilian jazz' or 'Latin Jazz,' especially in the United States, where Brazilian jazz is frequently regarded as a kind of Latin jazz. Brazilian jazz musicians, however, refuse to call *música instrumental* 'Brazilian jazz,' as the category 'jazz' is regarded as too limiting and does not encompass all the musical diversity of *música instrumental.*

According to Brazilian musicians, *música instrumental* originated at the beginning of the twentieth century, with the emergence of the instrumental genre of Portuguese influence known as *choro*, which to this day is played and greatly appreciated (Cazes 1998), and is considered by musicians as the ancestor of Brazilian jazz. It was only with the advent of *bossa nova*, however, in the 1950s, that Brazilian jazz differentiated itself most clearly from *choro* and emerged in its own right.

Brazilian jazz musicians have much respect for *choro* performers, especially great masters such as Pixinguinha, yet there is a very subtle rivalry between them, resulting from the *choro* musicians' self-conscious strategy of avoiding the jazz influence, an attitude which touches on several symbolic points to which the Brazilian musicians are sensitive. But even though a certain tension exists between *choro* and *música instrumental,* as a consequence of the symbolic advantage that *choro* holds from being a kind of 'roots' music and from not having undergone the influence of jazz, *música instrumental* absorbs much of *choro's* musicality. This musicality is primarily enacted through a nostalgic ethos inscribed in melodic characteristics, which emerge in the typical shaping of the melody and use of *appoggiatura* and *arpeggios*, often in *scherzando* spirit.

In the 1950s, when *bossa nova* was flourishing, artists such as João Gilberto and Antônio Carlos Jobim became known worldwide, constituting landmarks in Brazilian and world popular music (Castro 1990). While the wider world was discovering *bossa nova,* an entire generation of jazz-influenced Brazilian instrumentalists became involved with it, creating mostly instrumental *bossa nova* trios, such as the Milton Banana trio, Tamba trio, Jongo trio and larger groups, such as J. T. Meireles and the Copa 5. All these groups have frequently played at bars and jazz clubs, such as Bottle's and Farney's bar in Rio de Janeiro. US West Coast jazz was very much appreciated and played, and its influence on *bossa nova* is undeniable, even though the 'cool' element of *bossa nova* may have an older connection with the nineteenth-century *modinhas* in Brazil (Menezes Bastos 1999). The crystallization of Brazilian jazz as a musical genre happened precisely in this environment – the instrumental universe around *bossa nova* – and it developed apart from *choro*, which would still cultivate its conservative nature.

Even before the 1980s, Brazilian jazz musicians began to participate in international festivals such as the Montreux Jazz Festival. Brazilian jazz of this period achieved its maturity in the music of Hermeto Pascoal and of Egberto Gismonti, forming a musical body that remains to this day relatively homogeneous in thematic, structural and stylistic terms, and consisting, therefore, of a genre of recent tradition (Piedade 2003). Brazilian musicians feel the need to enact very jazzy musical phrases when they improvise. They refer to *bebopear* ('to bebop') as meaning to articulate phrases according to this style, which means it is necessary to know, respect and follow its rules. *Bebopear* expresses the Brazilian reading of jazz musicality, yet this musicality seems simultaneously both valuable and fearsome for most Brazilian jazz musicians. The mastering of bebop demonstrates technical knowledge of the jazz language, which is a passport to communicating with jazz musicians anywhere on the globe. Yet, at the same time, the natives feel a need to dissolve bebop itself and express Brazilian musicality by means of its many idioms and topics, therefore establishing a tense relationship that is constitutive of *música instrumental*.

Since the 1990s the number of Brazilian jazz musicians and bands has increased at an impressive rate, even though there has been no corresponding growth in space in the media, and in the number of record labels, producers, specialized studios and places to play. In the early 2000s the new generations no longer voraciously pursue bebop as their predecessors did. Regional instrumental music is growing and as a consequence so is decentralization in relation to the Rio de Janeiro/São Paulo axis. An increasing number of young people are playing the *cavaquinho*, *viola caipira*, *zabumba* and the accordion, instruments that until now had been left out of *música instrumental*. A much less prejudiced and more advantageous relationship with the world of art music has also been established, and chamber music groups, such as clarinet quintets and guitar quartets, have emerged, dedicated to playing *música instrumental*. What is now maintained from the spirit of jazz is much less the *bebop* phrasing and the worship of great jazz masters and much more the freedom of creation and improvisation.

Música Junina

The term *Música junina* (June Music) refers to music performed in Brazil during the period of the annual Festas Juninas (June Festivals). While the practice of organizing annual festive celebrations, including music, at that time of year has a long history and strong religious associations, going back to the colonial period, and to the efforts of the Jesuits to convert and catechize the indigenous population, '*música junina*' itself began to be used in the first half of the twentieth century as a catchall term by the media and the music industry to turn public interest in specific musics at that time of year (which is also harvest time) to economic advantage.

In the colonial period, Jesuits and European settlers relived the celebrations of harvest time that had been part of their culture in their native countries. Settlers organized celebrations in their villages' and towns' farming and cattle-raising regions, holding them in the name of the Catholic saints Anthony, John and Peter, as a form of thankfulness for the abundance of crops. The indigenous population was involved also, as the celebrations radiated outward from the chapels, lighting bonfires and disseminating songs and tidbits.

The June celebrations have continued to be held in many parts of the country, usually in a *kermesse* (funfair) fashion, with decorated market stalls and plays to entertain the public. In addition to bonfires built in front of houses and in the center of the main town square, there is invariably a fireworks display, as well as the mast with the saint's flag. On the dancing court, a varied mix of local musical genres is performed, gathering the population together: *baião*, *polka*, *rancheira*, *marchinha*, *xote* and *forró*, a repertoire of traditional music, played by small groups made up of accordion, *zabumba* (big bass drum) and triangle. The introduction of *vaneirão,* a dance from the state of Rio Grande do Sul that migrated with its rice, grape and soybean farmers to the Brazilian North-east, has blended there with *forró,* generating a mixed genre, called '*forroneirão*,' which has now been incorporated into the June celebrations in several Brazilian states.

Other dances that stand out, because they are held only around the June festivities,. include the *quadrilha* (square dance) and the *dança do pau-de-fita* (ribbon tree dance). The roots of *quadrilha* date back to the European courts of the eighteenth century, where it developed from the old square dances. In England it was called country-dance, in France *quadrille* and in Portugal, *quadrilha*. The *quadrilha* had significant success in the Brazilian court during the Regency period (nineteenth century), in Rio de Janeiro. From the aristocratic salons it was appropriated by the wider populace, who adapted it to the Brazilian rural culture. Thus groups of *quadrilha* dancers were established right after *Carnaval* for competition in the June contests. Though modified over time, the essence of *quadrilha* remains in the choreography, where men and women dance in pairs, and are characterized as people from the hinterland.

In the *dança do pau de fita*, a heritage from the Portuguese and Spanish settlers, and similar to the English maypole dance, participants are organized in a circle around a mast decorated with colorful ribbons, each tied at the top and held at the tips by a dancer. The dance involves braiding and unbraiding the ribbons, to the accompaniment of a group made up of an accordion, guitar and tambourine.

Little by little, in the first half of the twentieth century, the *quadrilha* and other June dances began to be used by the media and music industry to fill a production gap in the interval between *Carnaval* and the festivities at the end of the year. With the dissemination and expansion of radio, the attention of composers, lyricists and singers started turning to the traditional June songs and from that interest, commercially speaking a new genre, *música junina* appeared. Its heyday lasted from the 1930s to the 1950s.

Some specific examples of music used during the June celebrations were noted in 1837 by the priest Lopes Gama (*Dicionário Houaiss* 2006, 510). For example, he mentions some ballads such as the one beginning 'Acordai, acordai, acordai João/ela está dormindo/Não acorda não, acordai/Acordai João/Ela está dormindo/Não acorda não' (Wake up, wake up/wake up John/she is sleeping/Do not wake her up). Beginning in 1930, traditional ballads such as these began to be discovered by recording artists and record companies. 'Acordai, acordai,' for example, was reinterpreted in 1949 by composers João de Barro and Alberto Ribeiro for singer Emilinha Borba to perform, under the title 'Capelinha de melão' (Melon Chapel). In the 1940s, the radio played a major part in making public a rich repertoire with its origins in the less sophisticated areas of nineteenth-century society, in the rhythm of *baião*, *xote, xaxado*, etc.

Between the years 1930 and 1950, popular music composers such as Lamartine Babo, Braguinha (Carlos Alberto Ferreira Braga), Ari Barroso and others composed several songs specifically for the June festivities. Among them are 'Chegou a hora da fogueira' (The Time for the Bonfire Has Come) (1933) by Lamartine Babo, which Carmen Miranda and Mário Reis recorded on the Victor label; 'Cai, cai balão' (Fall, Fall Balloon), a popular ditty developed by composer Assis Valente with orchestration of

Simon Bountman, and recorded on the Odeon label in 1933 by Francisco Alves and Aurora Miranda; and 'Noites de Junho' (June Nights), a march by João de Barro and Alberto Ribeiro recorded by Columbia Records in 1939 by Dalva de Oliveira. In 1950 Luiz Gonzaga and Zé Dantas – taking advantage of the national success of *baião,* in which they had been prominent in promoting and stylizing – composed and recorded (for RCA Victor) 'A dança da moda' (The Fashion Dance) specially for the June Celebrations. Thereafter, Gonzaga, Dantas and Humberto Teixeira recorded a number of songs in styles such as *marchinha, rancheira, polka* and *baião*, all with June motifs and all for RCA Victor, including compositions that have since become classics of this festive time of year. Among them are 'Olha pro céu' (Look at the Sky [1951]) by José Fernandes and Luiz Gonzaga; 'São João na Roça' (Saint John in the Countryside [1952]) by Zé Dantas and Luiz Gonzaga; 'Noites brasileiras' (Brazilian Nights [1954]) by Zé Dantas and Luiz Gonzaga; 'São João Antigo' (Old Saint John [1957]) by Zé Dantas and Luiz Gonzaga; and 'São João no Arraiá' (Saint John at the Country Festivity [1960]) by Zé Dantas.

Since its peak in the 1950s, *música junina* has continued to claim a high percentage of interest in the media and music industry and has, in addition, aroused the interest of Brazilian society, which uses this musical style as a way of evoking nights in the Brazilian hinterlands on the occasion of festivities held for the three saints in backwoods towns.

Música junina traces the cultural and social transformations of regional communities, from Mario Zan's 1951 'Festa na Roça' to the *marchinha* written by João Fernandes and Wadinho 'Sonhei que eu era balão dourado' (I Dreamed I Was a Golden Balloon) interpreted by the band Chiclete com Banana (2005) and 'Festa no Interior' (Party in the Backlands), a *frevo* song by Moraes Moreira (1997), originally composed for Carnaval and which today integrates the musical repertoire of the June festivities.

With changes and cultural transformations, the music has adapted itself, without sacrificing its traditions, in order to satisfy the tastes and requirements of a globalized and technologically dominated world, for example by being interpreted in a mestizo manner with the fusion of several rhythms. In the twenty-first century, *música junina* allies its traditional instrumentation – the accordion, the *zabumba* (big bass drum) and the triangle – to external influences and accepts electronic instruments and a mix of rhythms and genres such as funk, reggae and hip-hop.

MARIA ANGÉLICA RODRIGUES ELLERY

Música Montubia

The music of the coastal peasants in Ecuador, *música montubia*, survives in folkloric renditions performed by professional dance groups. This term is collective and embraces a number of smaller musical genres popular in the nineteenth and early twentieth centuries. Folklorists Manuel de Jesús Álvarez (1929), Rodrigo Chávez González (1930s) and Guido Garay (1987) have compiled and reconstructed the music and choreography of *montubio* dances through their own experiences and oral histories provided by older people. The word *montubio* is a local term used in Ecuador to describe the Ecuadorian *campesino* (peasant) of the rural areas of the lowland provinces of Manabí, Guayas and Los Ríos. Although *montubios* have assimilated to the dominant culture, they distinguish themselves for their particular sense of humor, way of speaking and horse riding dexterity. In search of a distinctive ethnic identity, *montubios* have been fostering a revival of *montubio* traditions since the late 1990s, especially in the areas of music, dance and rodeo competitions.

In the cities, *música montubia* is often performed in school festivals and civic parades as the ‘typical’ music of the coast. Dancers usually wear white outfits, straw hats and a colorful handkerchief around the neck, which they usually wave in the air during the dance. Women wear blouses and ample skirts with flounces. Music recorded by Guido Garay in the 1960s usually provides the musical accompaniment for the dances. According to Garay’s research, typical *montubio* musical instruments were originally cane flutes and drums made of *zaino* (wild boar) leather; however, contemporary recordings of *música montubia* do not include these instruments.

In the early twentieth century *música montubia* was passed down to the next generation by oral transmission. The main musical genres included the *amorfino*, the *alza que te han visto*, the *moño*, the *iguana,* the *corre que te pincho*, the *galope*, the *baile del sombrerito* and the *polca montubia*. Songs in these genres were usually composed in the major mode. The *amorfino* was a song performed by two singers who improvised *coplas* (rhymed verses) in a verbal duel. They displayed great creativity, mental dexterity and command of the rhyme in their improvisations. The texts were usually related to love and scenes of rural life. The center of attention tends to be on the singers’ ingenuity and improvisation skills rather than the fairly simple melodic line and harmonic accompaniment. The few *amorfinos* known today are characterized by a duple meter and a binary form, though a few transcriptions from the late nineteenth century show rhythmic patterns in 6/8 meter. *Amorfinos* are no longer improvised, and the few examples known at the beginning of the twenty-first century survive in recordings produced in the 1960s by folklorist Guido Garay. The *alza que te han visto* was a very popular dance in the early twentieth century, as 78-rpm recordings from the early 1910s demonstrate. Written examples of the *alza* in both binary and ternary meters (*sesquiáltera*) point to its versatility. Because *música montubia* is considered an ethnic music, it has not entered the song repertoire of the national music anthology. Academic composers, such as Luis Humberto Salgado and Segundo Luis Moreno, included stylizations of *alzas* in their nationalist works.

Música Rocolera

Música rocolera is a term widely used in Ecuador to refer to a style of music associated with drunkenness, violence and a stigmatized working-class population. It emerged in the 1970s in the aftermath of the massive rural-to-urban migration caused by the effects of agrarian reform and modernization of the country. *Música rocolera* has no relation to rock music. The name derives from the word *rocola*, the Ecuadorian word for jukebox. In the 1950s the *rocola* was found in a variety of upper-middle-class public spaces such as coffee shops, restaurants and open-air venues for entertainment. By the 1970s, it was an old device replaced by the 33-rpm record and the cassette. The *rocola* was gradually confined to *cantinas* (bars) located in lower-class neighborhoods, particularly in the 'red zones.' The *cantina*, the *rocola* and liquor are frequently referred to in *música rocolera* lyrics.

In Ecuador, there is no consensus on what *música rocolera* is among its listeners and detractors. It means different things to different people in different contexts according to people's ethnicity, social class, gender, age and educational background. Basically, *música rocolera* is an umbrella term that encompasses a repertoire of songs in three specific musical genres: the *bolero*, the *valse* and the *pasillo*. Many Ecuadorians, however, define *música rocolera* as the music that one might hear coming from a *rocola*. This vague definition is problematic because many types of national and international music were listened to in the *rocola* in the 1950s and 1960s, yet only specific performers such as Daniel Santos, Julio Jaramillo and Alci Acosta, and specific types of *boleros*, *valses* and *pasillos* composed in the 1970s and 1980s, have come to be identified with *música rocolera*. Broadly, these are *boleros* and *pasillos* written by a new generation of Ecuadorian composers born in the 1940s, such as Naldo Campos, Fausto Galarza and Nicolás Fiallos, whose music reflects the aesthetics and urban sensitivity of the lower-class populations.

Música rocolera is often called '*música cortavenas*' (literally, 'music to slash your veins to') because many listeners perceive it as depressingly melodramatic and sentimental. The lyrics of *valses* and *boleros rocoleros* usually deal with negative aspects of the couple relationship such as despair, betrayals, love triangles and breakups. Using colloquial language, most lyrics portray men as victims of women, who are generally depicted in derogatory terms. The *pasillo* from the 1970s, however, is distinguished from the *bolero* and the *valse* in the avoidance of pejorative terms toward women and allusions to drunkenness. This type of *pasillo* also diverges from the traditional *pasillo* from the 1920s to the 1950s, which is considered the musical symbol of the Ecuadorian national identity, in that it uses colloquial rather than poetic language and less elaborate musical forms and arrangements. Notwithstanding the differences in lyrical and musical form, the main distinction between the two types of *pasillo* derives more from the social background of the listeners, the performers' singing style and the performance contexts associated with the lower classes and *mestizo* (mixed Hispanic and indigenous) people.

The upper-middle classes scorn *música rocolera* and condemn the vulgar language, the immorality of the texts, the lack of artistic quality, the massive commercialization and the short lifespan they think this music has. In contrast, the lower classes criticize upper-middle-class Ecuadorians for having a double discourse toward *música rocolera* since, despite their critiques, some of the latter attend these concerts disguised with hats and sunglasses so that they cannot be recognized. Interestingly, most lower-class Ecuadorians perceive *música rocolera* as a national music because it is composed, performed and listened to by Ecuadorian people.

Música rocolera is usually performed by a soloist singer to the accompaniment of a guitar ensemble, which includes an acoustic guitar, *requinto* (small high-pitched guitar), synthesizers and percussion instruments. *Boleros* are always played with *bongo* drums and *maracas*, which emphasize the typical 4/4 rhythmic pattern characteristic of the Antillean *boleros*. *Valses* and *pasillos* may occasionally include light percussion, which is atypical for these genres because they normally do not have percussion accompaniment as the *bolero* does. The use of synthesizers with various types of organ and accordion timbres, which are typically used in arrangements of other national music genres, gives *música rocolera* a distinctive Ecuadorian sound. Singers usually sing with a loud, nasal and high-pitched voice. Main performers of *música rocolera* are Segundo Rosero, Claudio Vallejo, Roberto Zumba, Aladino, Ana Lucía Proaño, Juanita Burbano and Teresita Andrade. FEDISCOS and IFESA, the two major national recording companies which have promoted Ecuadorian national music, first recorded and released this type of music. Later, Producciones Calle became the main recording company involved in this type of music.

In the late 1970s music entrepreneurs organized the first *música rocolera* festival in Ecuador, basically a one-night-concert event with the participation of singers from Ecuador, Peru and Colombia. The presence of singers from the latter countries was appropriate because these countries have similar genres of music dealing with breakups and betrayals, known respectively as *música cebollera* (onion music) and *música de carrilera* (railroad music). These festivals became regular events, usually sponsored by Ecuadorian liquor companies such as Trópico and Licor Cristal. In the 1980s René Torres and Hugo Zavala organized their own festivals in New York and Chicago for the '*colonia ecuatoriana*' (Ecuadorian residents in the United States). Since the late 1990s *música rocolera* has been performed in massive concerts of Ecuadorian popular music, and alternates with other types of Ecuadorian dance music such as *música chicha* and *tecnocumbia*.

Música Sertaneja

Música sertaneja is a vocal duet-based genre that first emerged in Brazil in the 1930s as a result of the process of urbanization and modernization of the traditional rural musical genre called *música caipira*. The histories of the two genres are profoundly related. Since the second half of the 1980s, *música sertaneja* has been one of the best-selling musical genres in the Brazilian market, along with *pagode* and *axé music*. According to ABPD (the Brazilian Association of Recordings Producers) in 2009, the 'top 20' list of best-selling compact discs in the Brazilian market included seven *música sertaneja* titles (ABPD 2009).

Música sertaneja is directly related to a specific Brazilian geographical area, the 'Middle South': the states of Paraná, Mato Grosso, Mato Grosso do Sul, the south sides of Minas Gerais and Goiás. This area, with an agricultural industry central to Brazil's economy, contains almost 50 percent of Brazil's population. The Middle-South was historically colonized by São Paulo and the inhabitants of its countryside are defined by the term *caipira*. The culture of Middle-South rural areas is also known as *caipira* culture, which includes the traditional musical genre known as *música caipira*.

Música Sertaneja and *Música Caipira*

At the beginning of the twentieth century, with the first recordings in Brazil, the term *música sertaneja* (from the Portuguese term *sertão*, meaning rural areas) described any rural Brazilian music, while the term *música caipira* referred specifically to genres from the rural Middle-South region. However, over time, the connotations of the term *música sertaneja* changed and the term ultimately described urbanized music with its roots in the *música caipira* of the Middle-South region.

The differences between these genres are difficult to define. *Música sertaneja* is a product of transformations that occurred in *música caipira*, including changes in the arrangements (such as the introduction of electric instruments) and lyrics, including a preponderance of romantic themes, and the influence of foreign musical genres such as *bolero* and *guarânia.* Traditionally, *música caipira* is played by a vocal duo, singing in thirds, and accompanied by a six-string acoustic guitar (*violão*) and a ten-string acoustic guitar (*viola caipira*). The lyrics describe traditional activities of rural areas – hunting, for example – or traditional elements of rural culture, such as beliefs and tales. Romantic themes are rare. Several processes related to the urbanization of Brazilian society – the introduction of new instruments such as the accordion in the 1930s and the electric guitar in the 1960s, the fusion with foreign genres, the change of lyrical themes (to include romantic contents) – were responsible for the shift from *música caipira* to *música sertaneja*.

Although *música sertaneja* was a product of the urbanization of *música caipira*, its name retained a rural reference. However, since its history is connected to rural-to-urban migration, *música sertaneja* is the subject of intense debates about its rural references (Dent 2009). While some people (musicians, critics and fans) lament its loss of rural references, others see this as an unavoidable historical process.

History

In the early twentieth century, any music produced outside Rio de Janeiro – then the capital of Brazil and the symbol of Brazilian urban life – was called *música sertaneja*, regardless of region of origin. For example, in the 1920s *cateretê* and *embolada* were popular musical genres that were both called *música sertaneja*, despite the fact that the former was typical of Middle-South rural areas while the latter was from the North-east. The meaning of the term changed in the 1930s with the transformations of the recording industry, including the entrance of companies new to Brazil such as Victor and Columbia and the introduction of sound recording. The emergence of radio broadcasting in 1922 and the combination of radio and commercial advertising also brought changes. At this time, the expression *música sertaneja* began to denote the musical genres typical of Middle-South rural areas only, while musical genres from northeastern regions received other names. This Middle-South connotation persists in the early twenty-first century (Oliveira 2009).

Whereas *sertão* originally denoted any rural area, the term *caipira*, used by writers such as José de Alencar since about 1875, always referred specifically to the Middle-South rural area and its culture. Foreshadowing later debates about *música sertaneja*, in the last quarter of the nineteenth century there was a debate around the term *caipira*. For some romantic writers and thinkers who were critical of urban ways of life, *caipira* denoted purity and a more elevated lifestyle. To others, chiefly urban people of Rio de Janeiro, *caipira* was a negative term and indicated the absence of progress and health.

The music of *caipira* culture was called *música caipira*, but until 1929 there were no recordings with this label; any recordings of the genre were described on the records as *música sertaneja*. In 1929 the first records labeled *música caipira* appeared, spearheaded by Cornélio Pires (see, for example, Nepomuceno 1999 and Souza 2005). Pires, a writer and journalist with a great knowledge of the culture of the countryside of the Middle-South, signed a contract with Columbia Records and produced, between 1929 and 1931, 43 78-rpm records containing *música caipira* and its different subgenres. At this time, with recording companies including Victor and Columbia entering the Brazilian market, Pires offered Columbia the possibility of a new public, chiefly in São Paulo and in Middle-South cities such as Campinas, Sorocaba, Itú and others.

These recordings, along with a presence on the radio, then an emerging media form in Brazil, began to effect some changes in *música caipira*. For example, many of its subgenres were originally danced, with improvised lyrics and potentially unlimited duration time. On the radio, the phonographic effect (Katz 2010) meant that some subgenres were modified to conform to new song forms, with precomposed lyrics and a prescribed duration time – the famous three-minute time limit imposed by the recording industry due to the capacity of the disc. Between 1930 and 1950 other changes included the introduction of electric instruments and the influence of foreign music genres. As a result of these changes, many musicians, music critics and fans rejected *música caipira* and began to show a marked preference for the term *música sertaneja*. Around the 1960s, *música caipira* was being used to refer to the more traditional style of *música sertaneja*, played with acoustic instruments and containing lyrics with traditional themes, such as the land or hunting stories. Thus, from the moment it was recorded, in 1929, in its own name, ironically *música caipira* began to take on a new identity as *música sertaneja*.

To urban listeners, the *música sertaneja* with *caipira* roots that they heard on the radio in the 1930s sounded exotic and denoted an area of Brazil – the Middle-South countryside – that was seen as backward. For these listeners, *música sertaneja* was perceived as humorous and its artists of the period exploited this aspect (Oliveira 2006). Duos such as Jararaca and Ratinho, Alvarenga e Ranchinho, along with solo artists such as Raul Torres, all famous in the 1930s, presented themselves dressed as peasants and used many performance elements that denoted the countryside, such as speech style.

In the 1940s and 1950s many changes occurred, including the emergence of duos with a less humorous style. Their music was closer to their *caipira* roots (they played *caipira* subgenres including *catira, catererê, cururu* along with the *moda-de-viola*, considered the most traditional subgenre *of caipira* culture), and many of them recorded folklore themes. Famous duos such as Vieira and Vierinha (known as the kings of *catira*), Luizinho and Limeira, among others, started their careers in the 1940s and 1950s.

Tonico and Tinoco, a duo who also began their career in the 1940s, was an important example of these more serious duos. With an image related to the romantic vision of peasants uncorrupted by civilization, the duo performed songs in traditional style (generally with acoustic guitar and *viola* only) and their lyric themes related to rural life. For 50 years the duo of Tonico and Tinoco was *the* symbol of a more traditional *música sertaneja* with few influences from foreign genres. In the 1940s duos with a more traditional sound became a symbol of discourse opposing foreign influences in Brazilian popular music (Tinhorão 2001; Martins, 1975; Caldas n.d). In addition to Tonico and Tinoco, the singer Inezita Barroso, who emerged in the 1950s, was an important figure in these discourses. In the twenty-first century she remains a very strong critic of changes in *música sertaneja* and her television program is an important venue for more traditional practice. Inezita Barroso and duos including Tonico and Tinoco became symbols of the advocacy of more traditional *música sertaneja* and its *caipira* roots. Sometimes their music is referred to by the older name *música caipira* (Oliveira 2009; Nepomuceno 2000).

Beginning in the 1940s, the gap between the style of *música sertaneja* that was closer to its *caipira* roots and the modern *música sertaneja* widened when *música sertaneja* began to be influenced by musical genres from outside the country. One of these foreign genres was the Paraguayan *guarânia*, which had been transformed into the musical symbol of Paraguay in the 1930s. *Guarânia* was introduced in Brazil in the 1940s through a circuit of musical exchanges, hitherto little known, that involved recording companies, radio broadcasting and the contact between Brazilian and Paraguayan musicians on the border of the two countries (Higa 2010). From this point on, a hybrid style of *música sertaneja* developed that combined Paraguayan elements – for example, the use of Paraguayan harp or styles of playing the guitar, such as the *rasqueado* (scraping strum) – and *música sertaneja* elements – such as the vocal duet sung in thirds. In the 1950s the duo that epitomized this mix, Cascatinha and Inhana, emerged, recording many Portuguese versions of Paraguayan songs, including the guarânias 'Índia' ('Indian Woman') and 'Meu primeiro amor' ('My First Love'). The work of Cascatinha and Inhana consecrated this style and it became one of the more popular musical styles of the Middle-South of Brazil.

Another significant foreign genre was the Mexican *bolero*, which began to be internationally known in the 1940s and expanded its influence throughout Latin America between the 1940s and 1960s, through the huge impact of Mexican romantic movies, influencing many Brazilian music genres, including *samba* and *música sertaneja* (Tota 2000; Borges 1982). The 1940s and 1950s are widely considered the Golden Age of Mexican Movies, when actors such as Dolores del Río, Maria Felix and Mario Cantinflas became very popular throughout Latin America. Mexican movies such as *Flor Silvestre* (Wild Flower, 1943) and *Las Abandonadas* (The Abandoned, 1945) achieved great success in Brazil and helped to disseminate Mexican songs in many genres, including the *bolero*. Recordings of *boleros* by American singers such as Nat King Cole, Perry Como and Dean Martin also achieved acclaim in Brazil in the 1950s and 1960s in a process related to the USA's Good Neighbor Policy.

The *bolero*'s influence on *música sertaneja* included romantic themes in the lyrics and the use of instruments including *congas* and *claves* playing the *bolero*'s rhythmic patterns. A good example is the recording 'Boneca Cobiçada' ('Coveted Baby') by the duo Palmeira and Biá (1956). Many duos worked in this *bolero* style, including Tibagi and Miltinho, Irmãs Galvão and others. Even more traditional duos, such as Tonico and Tinoco, performed *boleros*, and their influence on the *música sertaneja* scene has remained strong.

Like the *bolero*, two other influential Mexican genres, *ranchera* and *corrido,* entered Brazil by way of Mexican movies between the 1940s and 1960s, when Mexican actor-singers such as Pedro Infante and Miguel Aceves Mejía became very popular in the country. American Western movies, which attained great popularity in Brazil beginning in the second half of the 1930s, were also important in introducing these genres in Brazil. A mixture of *música sertaneja* aesthetics and *ranchera* and *corrido* elements – such as the use of trumpets or vocal cries – began to appear, in addition to performance elements such as dress. The acclaimed duo that represented this mix was Pedro Bento and Zé da Estrada, who performed dressed in the style of *mariachi* musicians (Oliveira 2009; Souza 2005).

By the 1960s the *música sertaneja* scene was very diverse. There were traditional duos that also used the name *música caipira,* such as Tonico and Tinoco, Moreno and Moreninho, among others; duos influenced by Paraguayan music or Mexican genres such as Cascatinha and Inhana, Pedro Bento and Zé da Estrada; and duos that moved between these tendencies, such as Tião Carreiro and Pardinho, one of the most popular duos in *música sertaneja* history, who sang traditional *modas-de-viola* and *cururu* as well as *boleros*.

In the late 1960s and the 1970s a new style emerged, influenced by the foreign genres discussed above but also incorporating a new element: the rock music that entered Brazil during the 1960s and created a musical movement called *Jovem Guarda* (Young Guard). As a result of this influence, *música sertaneja* became increasingly urbanized and the rural references (clothes, speech and so on) were eliminated in performances in the pop-rock style. The duo style remained but new instruments – electric guitar and bass, drumset and keyboards – were appropriated from rock. The work of the Léo Canhoto and Robertinho duo was very important in this process, and this duo is frequently cited by musicians and fans of *música sertaneja* as the first to produce this hybrid style, with elements of both *música sertaneja* and pop-rock music. Other duos, such as Milionário and José Rico, mixed this pop influence with the Paraguayan and Mexican styles discussed above to create a very strong formula that would last for several decades. Duos such as Matogrosso and Mathias, Chitãozinho and Xororó, along with trios such as Trio Parada Dura, who began their careers in the 1970s and 1980s, were influenced by this blending of musical idioms (Ulhoa 1999).

The emergence in the 1960s and 1970s of the style more linked to pop-rock profoundly increased the gap between traditional and modern tendencies in *música sertaneja*, and the debates that began with the first recordings of *música caipira* in the 1930s intensified, although many duos worked in both styles. Fans and musicians of the traditional style began to reject the label *música sertaneja* and many returned to *música caipira* to mark the difference. Musicians such as Inezita Barroso and Rolando Boldrin became very critical of *música sertaneja* that was produced beginning in the 1970s. Other duos that appeared on the musical scene in the 1970s, such as Pena Branca and Xavantinho along with Zé Mulato and Cassiano, made the rejection of pop influences a trademark of their work.

In the 1960s and 1970s *música sertaneja* was associated with a specific public: migrant workers who moved from rural areas to cities such as São Paulo (Reily 1992). In the 1970s and the 1980s, with economic development and social changes in Brazil, this public increased its acquisitive power and as a result *música sertaneja* began to expand its public and its presence on radio and television. The duo that represents this ascension of *música sertaneja* is Chitãozinho and Xororó. They began in the 1970s, but with the 1982 recording *Fio de Cabelo* [Hair] they achieved national fame and their music began to be played on the radio and on television programs aimed at the middle class, which was now reinforced by former migrant workers who had moved up in the social scale. In 1989 another duo, Leandro and Leonardo, recorded a hit called 'Entre tapas e beijos' ('Between Slaps and Kisses') that attained national success. With this exposure, *música sertaneja* was transformed into one of the three biggest popular music genres in the country and remained so throughout the 1990s, when there were many successful duos, such as Zezé di Camargo and Luciano, Bruno and Marrone, among others.

With the popular success of *música sertaneja*, new mixtures began to appear, particularly blends with American country music, which was seen in Brazil as the American equivalent of *música sertaneja* because of its rural roots. *Música sertaneja* borrowed some elements from American country culture and music, chiefly the fashion for hats and belts. Dances, such as the Lindy Hop (transmitted through popular music and the movies), were also appropriated. This process is visible chiefly in the towns of the Middle-South countryside and where traditional fairs, related to *caipira* culture, were changed to rodeos. In this sense, the distinction was blurred between the rodeo aesthetic, typical of American rural culture, and *caipira* culture, and in this process *música sertaneja* was a central factor. A good example can be heard in the 1998 recording by Chitãozinho and Xororó: '*Pura emoção*' ('Pure Emotion'), a Portuguese version of 'Achy Breaky Heart' (a 1992 success by Billy Ray Cyrus, who sang with the Brazilian duos in some shows). This country style became very influential in the second half of the 1990s and deepened the international character of the *música sertaneja* (Ulhôa 1999; Dent 2003).

Musical Elements and Subgenres

Música sertaneja is known for its characteristic vocal duet sung in thirds (Dent 2007; Oliveira 2005). This style, developed from some *música caipira* genres, became a symbol of *música sertaneja*. In twenty-first-century Brazil, thousands of duos sing *música sertaneja* and the names of acclaimed artists who have performed this genre over the years demonstrate its importance: Tonico and Tinoco, Tião Carreiro and Pardinho, Chitãozinho and Xororó, among others.

The duets are organized simply into *primeira* (first) and *segunda* (second) voices. The *primeira* sings the melodic line and the *segunda* sings the same line a third above or, more often, below. Until the 1960s, singers often demonstrated a high level of tension in the voice and little use of vibrato. Beginning in the 1960s, the duos began to sing in a lower (e.g., softer) style but with plentiful use of vibrato (Ulhôa 1999). This change is related to the predominance of romantic themes in the lyrics that began in the 1960s (previously lyrics were more often about rural life).

The classic duo is formed by two singers with their instruments: one acoustic guitar and one *viola caipira*. In the 1940s and 1950s other instruments began to be used: accordion, trumpet (as a result of Mexican influence) and harp (as a result of Paraguayan influence). Later, in the 1960s, the duos began to be accompanied by bands, with drums, bass, keyboards, guitars and, eventually, horn sections. In the 1970s duos began to appear with two acoustic guitars and without *viola caipira*. Since the 1980s the most popular duos have not included *viola caipira* and the singers have not played instruments but have been accompanied by a band.

Melodic lines generally are composed from diatonic scales in a major mode, without the use of dissonance. The accompaniment typically follows a simple I–IV–V (or V7)–I progression, with some variations. Key changes are very rare and only began to be used in the 1990s as a result of the influence of pop music.

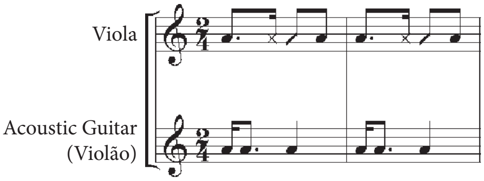
Música sertaneja has many subgenres (Mugnaini Jr 2001; Correa 2000). Some are rhythmic adaptations of *música caipira* genres such as *cururu*. While in *música caipira* the *cururu* is a sung duel between two vocalists accompanied by *viola* (Oliveira 2008), in *música sertaneja* it is a pattern of rhythmic accompaniment related to the music of the sung duel (see *música caipira*). Other *caipira*-related subgenres of *música sertaneja* include *catira, moda-de-viola, querumana* and *cateretê*.

Example 1: Rhythmic pattern of *cururu* (acoustic guitar accompaniment)

When foreign styles are included in *música sertaneja*, especially those derived from Paraguayan and Mexican music, the musical characteristics of these subgenres are basically the same as their foreign progenitors. Many songs are Portuguese versions of Paraguayan and Mexican hits, with the same instrumentation or a few changes. In *música sertaneja*, these subgenres are renamed *guarânia, rasqueado, polca mato-grossense* and *xamamé* when derived from Paraguayan influences, or *rancheira* and *corrido* when borrowed from Mexican influences. The Paraguayan group is characterized by its ternary meter, the use of instruments including Paraguayan harp (often replaced by the *viola*) and a *rasqueado* (scraped) accompaniment technique for the *viola* and acoustic guitar. The Mexican group is characterized by the use of instruments such as trumpets or by vocal cries.

Example 2: Rhythm of *rasqueado* (accompaniment of *viola* or acoustic guitar), where (x) indicates the scraping motion

An important subgenre is the *pagode-de-viola*, developed by *viola* player Tião Carreiro in the 1960s. A very danceable style, it has lyrics full of humor and demonstrates a specific accompaniment technique in which the *viola* plays the *recortado* (a rhythmic pattern produced by the combination or *rasqueado* [scraped strum] and the muffling of the guitar strings with the left hand).



Example 3: Accompaniment of *pagode-de-viola*. The last eighth note of the viola part and x are sounded on undamped strings
x: right-hand upward *rasqueado* movement
/: left hand muffles the strings

The influence of pop music is seen in the subgenres *batidão* (big beat) and *balanço*. These subgenres are characterized by 4/4 time and the use of instruments including drumset and electric guitar. In essence, they are pop songs performed by *sertaneja*-style vocal duos.

Conclusion

Música sertaneja's popularity demonstrates its importance in Brazil. In addition, it is a musical element that is not part of hegemonic discourses about national identity, in which samba, as the 'official' music of Brazil, with its center in Rio de Janeiro, is dominant. *Música sertaneja* claims a Brazilian space that is seen not as national, but as regional. Thus, its study illuminates alternative ways to represent Brazil. Furthermore, as its history is full of processes of appropriation and the construction of new significations based on foreign elements, *música sertaneja* is an excellent example for the study of modern social phenomena in the social sciences, such as world systems and globalization (Hannerz 1997).

ALLAN DE PAULA OLIVEIRA

Música Tropical

Música tropical is an umbrella term found in many areas of Latin America to refer to styles thought to have a 'tropical' flavor, often linked to the Caribbean. It is a category used by the music industry in countries such as Mexico, Colombia and Peru and now also the United States. A central component of the category is Colombian *cumbia*, a style that, in the early twentieth century, was part of the peasant repertoire of the Colombian Caribbean coastal region, but became commercialized in Colombia from the 1930s, as part of the national popularization of *música costeña* in the country (Wade 2000). *Cumbia* became internationalized and hybridized from the 1960s, spreading into Mexico in particular (and from there into the southern USA), but also into the Andean region, where it fused with Andean *huaynos* to form *chicha* and later *tecnocumbia*, and into Argentina where, from the 1990s, it spawned *cumbia villera* in poor districts of Buenos Aires (Fernández L'Hoeste 2007). It is notable that *cumbia* found particular favor among working-class people and urban migrants in these places. *Música tropical* may be used to refer to *cumbia* and its hybrids in any of these countries, but it also includes other Caribbean styles such as *merengue* and the post-1990s music that draws heavily on Colombian accordion-based *vallenato*, especially as purveyed by Carlos Vives. In Mexico in particular, the category also includes *música romántica* (mainly *baladas* [ballads]), and *baladas* and *cumbia* are both mainstays of the small four-piece *grupos* that play *música grupera* on electric guitar, synthesizer, bass and trap drums. In some regions – for example, in the Andean region – the term may include salsa, but in others – for example, Colombia and Mexico – it generally does not.

Important exponents of *música tropical* include Colombian artists such as Juan Carlos Coronel, Pastor López, Los Tupamaros and La Sonora Dinamita (the latter more popular in Mexico than in Colombia), and Mexican bands such as Rigo Tovar y su Costa Azul, Los Yonic's and Los Bukis. A more international definition of the term would encompass such artists as the *merengue* star Juan Luis Guerra and the Peruvian *tecnocumbia* singer Rossy War.

PETER WADE

Nengón

Nengón is a music and dance genre that has its geographical origins in the coffee-growing regions of Oriente (Eastern Cuba) particularly in Baracoa and in other rural areas of the Guantánamo province. The genre is also performed in areas surrounding Santiago de Cuba, such as El Cauto, that were formerly part of the larger Oriente province prior to the redrawing of its borders in 1976. At a *changüí* gathering (a party where people play and dance to *changüí*), a *nengón* provides an opportunity for musicians to play with less intensity, since the focus is on lyrical content and long vocal improvisations rather than on instrumental improvisation. *Nengón* is considered to be the oldest of three associated styles: *changüí*, *nengón* and *kiribá*. This determination is largely based on the absence in *nengón* of the *pasos de calle* (arpeggiations played between lines of text) found in *changüí* and the fact that it is slower in tempo than *kiribá*. *Nengón* also lacks the complex rhythmic emphasis of *changüí* and *kiribá*. Numerous genres related to *nengón* are also found throughout the region, such as the *contrapás*, *manajú*, *rompía* and others.

The word *nengón* is believed to be a corruption of the Spanish word *negrón*. In his considerable field research exploring the diversity of genres in the often overlooked region of Eastern Cuba, musicologist Danilo Orozco has identified sub-styles of *nengón* such as *nengón-manajú*, *nengón-serrano*, *nengón de cuenca del cauto* and *nengón de Toa*.

Origins

Important *nengón* compositions recorded in the twentieth century date to the late nineteenth century and they included the use of the *bajo en tierra* or *tumbandera* (groundharp), a strummed *tiple*, a *bongó de monte* (tuned with heat rather than metal tuning lugs) and a *quijada* (horse jawbone). The ground harp's structure gives it a volume that can be heard from great distances. In the twentieth century, the *tres* (small, guitar-like instrument) was substituted for the *tiple* and the *botija* (clay jug) replaced the *bajo en tierra*. Soon, the *guayo* (metal scraper) and *maracas* were added to this configuration. Around the mid-twentieth century, the *marímbula* (large lamellophone of Bantu origin) replaced the *botíja*. Some traditional groups, such as Kiribá Y Nengón, include a guitar and they use a wooden *güiro* (gourd scraper) instead of a guayo. Some modern groups have added *tumbadoras* (*conga* drums), double bass instead of *marímbula*, as well as other instruments. In his 1983 fieldwork in the Cauto region, Danilo Orozco documented the continued use of the *bajo en tierra* and the unique way in which its performance technique combines both the plucking of the string and percussive attacks on the fibrous stalk of the palm tree used to cover the resonating chamber dug into the ground. He convincingly argued that this musical concept is present throughout many musical traditions in Oriente. One example of this technique as applied to another instrument can be easily seen and heard when observing the *marímbula* in *changüí*, *kiribá*, *nengón*, *son* and the performance of other genres.

Music, Dance and Lyrical Characteristics

Nengón is deceptive in its simplicity. The *tres* plays a constant syncopated melodic pattern that outlines tonic and dominant chords, while the *maracas* and *guayo* accent both downbeats and upbeats as in *changüí*, albeit slower. On many occasions, the *tres* player will employ *doblando*, a tremolo technique that adds further syncopation to the music. The *marímbula* and the bongó parts accent beat 2, the 'and' of beat 2 and beat 4. The *bongosero* does not improvise during *nengón* performance as he or she does in *changüí*, but the *bongo* may be heard playing short fills and phrases that emphasize beat 4. The choral refrain begins on the downbeat or on an anacrusis, so the vocalist must take care not to enter at the wrong point when improvising. Traditional choral refrains usually include the phrase '*cogelo pa' ti nengón*,' '*para ti nengón*' or '*pa' ti nengón*,' each one accenting a different entrance point. Modern composers have used other refrains, but they follow the general structure and instrumental expectations of the genre. When a vocalist improvises a *copla* (ABBA) or a *décima* (ABBAACCDDC), he or she enters with a long melodic shout that may last one or two repeated cycles. When two *trovadores* (vocalists who improvise longer poetic forms) engage one another in a musical duel, it is called a *controversia*. These improvisations are often humorous and well crafted and have been memorized and repeated by many vocalists.

Numerous *nengones* are dated back to the two wars of independence: the Ten Years War (1868–78) and the War of Independence (1895–8). Orozco has identified a penchant for using names of birds to describe Spanish colonial forces in *nengón* songs from Cuba's second war of independence. Judith Bettleheim has indicated that in Santiago de Cuba these birds were actually launched at Spanish colonial authorities by *tumba francesa* musicians as a means of distracting them from their duties.

Some groups perform *nengón* without any percussion accompaniment other than handclaps on beats 1 and 3. On recordings by groups such as La Familia Valera Miranda, the performers combine handclaps with percussion and traditional instrumentation.

There is some debate among *tres* players regarding the standard *tres* tuning used in *nengón*. Traditionally, the instrument is tuned gG-cc-Ee. However, this traditional tuning changes to gG-bb-Ee when executing *nengón*, and aspiring *treseros* (*tres* players) are taught to retune the middle course of the instrument. This tuning is similar to the three highest strings on the guitar and it renders the movement from tonic to dominant in a slightly easier fingering than that employed in the gG-cc-Ee tuning. However, other *tres* players point out that there are many different tunings for the *tres*, and they maintain that a novice player could play *nengón* in any of these tunings, including the traditional gG-cc-Ee. One of the foremost exponents of the *tres*, Pancho Amat, tunes his *tres* gG-bb-ee and plays traditional *nengón*.

Scholars have noted that, depending on where the variant of *nengón* is performed, its choreography reflects local agriculture or cultural characteristics. This is the case in Baracoa, where dancers move one foot in a circle on beat 4 (male moving forward and female moving backward), and shift their weight on beats 2 and the 'and' of beat 2. The latter movement is believed to be mimetic of spreading coffee out to dry. Recently, Cuban musicologist Olavo Alén has suggested that Cubans tend to move their bodies when not dancing as if they were dancing to *nengón*, rather than to *son, danzón* or *rumba* (Soroa Fernández 2012).

Diffusion

The musician who is most responsible for placing *nengón* firmly into the core of Cuban music, albeit without it being recognized as such, is the composer, arranger and pianist Luis Martínez Griñan or 'Lilí.' Starting in the 1930s, Martínez Griñan incorporated *nengón* patterns into his piano accompaniment style after studying and transcribing the *treseros* (*tres* players) he heard in his hometown of Guantánamo, such as Chito Latamblé, among others. In 1937 he founded a dance orchestra called Los Champions that performed regularly on the radio station CMKS, and this group included Latamblé and his brother. Martínez Griñan continued to incorporate *nengón* into his recorded work as a performer and an arranger with Arsenio Rodríguez, Estrellas de Chocolate, Conjunto Chappottín and with his own groups. As a result, these patterns have become part of the lexicon of Cuban piano technique and by extension they are prominent in non-Cuban salsa as performed by Larry Harlow, Papo Lucca, Eddie Palmieri and countless others.

Based in Santiago, but hailing from the Cauto region, La Familia Valera Miranda is perhaps the only group that tours internationally and has performed and recorded *nengón* for generations. This family of musicians provided Danilo Orozco with important historical and musical information about the development of *nengón a*nd related styles. Additionally, the Guantanamo-based hip-hop group Madera Limpia has released several tracks using *nengón, changüí* and *kiribá* in their traditional forms and continues to tour internationally promoting these genres in modern iterations.

A number of Cuban groups based in Baracoa and in other municipalities in the Guantánamo province, such as Kiribá y Nengón, Nengón de Imías, El Sexteto Yumurí and Maravilla Yunqueña, have dedicated their repertoire exclusively to *nengón*. Additionally, the *nueva trova* pioneer Pedro Luis Ferrer has incorporated *nengón* into his modern compositions. The Santiago de Cuba-based musician Eliades Ochoa frequently performs *nengón* and has also recorded *nengones*. The Miami-based Cuban vocalist Albita Rodríguez, Canadian saxophonist Jane Bunnett and The Mexican-American percussionist Poncho Sánchez have also recorded and performed *nengón*.

Conclusion

In light of the aforementioned information, it is reasonable to consider *nengón* as the oldest and least complicated of the *changüí*-related genres found in the region of Guantánamo and elsewhere in Oriente. Locals and, more recently, scholars beyond the region, consider the chronological order of development to be *nengón*, *kiribá* and *changüí* from oldest to most recent. These three genres can be conceived of as parts of a *changüí* complex that would also include other lesser-known styles beyond these three dominant genres. At present, all three are heard in a *changüí* gathering or performance. This chronological placement does not diminish the fact that composers and performers in the region and beyond continue to use the salient features of *nengón* to create new iterations and understandings of the genre. Ramón Gómez Blanco, Jesús Álvarez and Ariel Daudinot Brooks are three such composers and performers whose internationally known *nengón* compositions use other words in addition to, or which substitute, the traditional *nengón* refrain.

BENJAMIN LAPIDUS

Neofolklore (Bolivia)

In Bolivia, the term neofolklore refers to a group of musical styles that emerged in the late 1960s among urban middle-class musicians. Neofolklore is characterized by the renewal of Bolivian traditional music according to the new aesthetic values to which the youth at the time ascribed. As changes and transformations in musical tastes rippled through Latin America, Bolivian neofolklore asserted itself as a renovating force within the repertoire of traditional music, allowing young people to become fans of the traditional music of Bolivia. In this sense, neofolklore represents a generational issue comparable to that presented by pop, rock and Caribbean music, genres that also influenced the musical tastes of Bolivians starting in the 1960s.

In Bolivia, the terms *música folklórica* (folk music), folklore and neofolklore are used interchangeably to refer to the musical current that emerged in the 1960s, which comprised several styles that could easily be assimilated under the idea of a new folklore. Bolivian neofolklore relies heavily on the existing system of commercial labels, implying that Bolivian folk music of recent years is not a product of tradition, but rather the product of communicational transformations that took place in the twentieth century. Following Hobsbawm's perspective on tradition (1983), Bolivian neofolklore is an invented tradition; it is also a cultural artifact which is fundamental to the construction of the National State, as it has been asserted by a number of scholars (for example, Abercrombie 1992; Céspedes 1984; Rosells 1996; Sánchez C. 1996).

Emergence

While the Revolution of 1952 did not accomplish immediate cultural or artistic changes, these changes began to surface in folk music in the mid-1960s. The creative predisposition of young musicians – a condition that stemmed from their nonconformist attitudes toward the political order and the cultural environment of the time – allowed the repertoire of traditional-popular music to be renewed by the contributions of new popular music composers and by new performance practices. The success that folklore had in the 1960s among young audiences, along with the growth of the Bolivian recording industry and the support given by communication media (especially the radio), helped pave the way for a new musical sensitivity that was characterized since the beginning by a sense of national pride; this new musical phenomenon began to be identified as neofolklore.

By 1960 the lessons of nationalist folklore were beginning to be set in the population. Folk music festivals appeared in various cities as a way to incentivize a nationalist social conscience among the younger generation. In addition, concerns about the so-called 'defense of artistic wealth' and the desire to improve the production and dissemination of national music were already a constant at the time. The nationalist spirit made cultural chauvinism one of its most frequent narrative axes. Broadcasters, journalists, teachers and folklorists took up the demands for the 'nationalization of music' to confront the heretofore solid international cultural industries. Their goal was to increase the dissemination of Bolivian folk music through records and radio broadcasts.

The national record industry was the first to notice the economic potential that Bolivian national music had: in 1949 the label Discos Méndez was founded in La Paz; in 1958 Lauro y Cía appeared in Cochabamba; and in 1964 Discolandia emerged in La Paz. These labels began to record musicians who were involved in Bolivian traditional music, adapting arrangements to the popular tastes of the time. In the 1950s and 1960s – decades known as the 'golden age' of Bolivian music – the national repertoire experienced a renewal through recordings by artists such as Gladys Moreno, Raúl Shaw Moreno (later a member of the Mexican trio Los Panchos) and Arturo Sobenes; and by duos such as the Kantutas, Hermanitas Saldaña and Hermanitas Arteaga, who traveled to Brazil to record their LPs using elaborate orchestral accompaniments.

By the mid-1960s a new musical taste had emerged among the younger generation living in the major cities. Influenced by cultural changes, young audiences began to valorize the sounds of 'authentic' traditional indigenous music and to prefer them over the sound of big bands and orchestras. This change in musical sensibilities found its paradigm in the emergence of the group Los Jairas in 1965. The group was initially formed by guitarist Julio Godoy, singer and *bombo legüero* player Edgar 'Yayo' Jofre, *charango* player Ernesto Cavour and Swiss *quena* player Gilbert Favre, with notable composer and guitarist Alfredo Domínguez joining in on occasion. Around this time, *peñas folklóricas* (nighttime locales featuring only traditional and folk music that was adapted from its Chilean and Argentinian counterparts) became fashionable. (The Peña Naira, founded in La Paz in 1966 by Pepe Ballón and Swiss musician Gilbert Favre, was inspired by the Peña de los Parra [i.e., peña of the Parra family] in Santiago, Chile.) Los Jairas, along with other groups that emerged during these years such as Los Chaskas, Los Payas, Los Caminantes, Los Kory Huayras, Los Caballeros del Folklore and Intiwara, began to sell considerable numbers of records, gradually also becoming stars of Bolivian radio. *Peñas folklóricas* became spaces where middle-class intellectuals and artists listened to folk music, while popular sectors attended open-air theaters, coliseums and stadiums where big festivals were held, usually on Sundays, featuring the new ensembles of Bolivian music.

The sound of Los Jairas set a new musical standard. In contrast to earlier ensembles whose records involved large orchestras, the new sound was based on a singing line plus five basic instruments: guitar, *charango, quena, zampoña* and *bombo legüero* (instrument adapted from Argentine traditional music). The new sound was greatly influenced by Gilbert Favre, who quickly became an icon of the new style. Cavour expanded performance techniques for the *quena* by introducing resources from European music such as the glissando, vibrato and staccato. He also enriched interpretive techniques for the *charango*, following what the noted musician Mauro Núñez had been doing since the 1940s. Musicians were experimenting with traditional Andean music, endowing it with a flavor of 'authenticity' to urban ears; they were also to some extent fashioning the neofolklore style under the influence of the changes taking place in Chile at the same time – developments that produced figures such as Violeta Parra, Victor Jara and the ensemble Cuncumén. In fact, Bolivian traditional music of the 1960s enjoyed widespread acceptance and esteem among Chilean musicians, who were shaping what would eventually emerge as *nueva canción chilena*. Influence was reciprocal, and Bolivian musicians borrowed stylistic resources from Chilean musicians in the consolidation of the new sound of neofolklore.

During the 1970s neofolkloric music exploded with the emergence of numerous new bands and ensembles across Bolivia. The production of vinyl records increased from 800,500 copies in 1969 to 2,356,442 copies in 1974 (García 1975, 87). At least 40 percent of these records, if not more, were of folkloric music that had already assimilated the new stylistic resources of neofolklore. By the 1980s, the presence of folklore and neofolklore ensembles was astounding. This decade saw the release of hundreds of records, the formation of many new groups and the appearance of *peñas* in schools and universities as well as song festivals, of which the Festival Lauro de la Canción Boliviana, created in 1961, is the best known and the one which has generated the largest number of artists of the new style.

Sub-styles

From its inception, neofolklore generated a number of sub-styles. First, musicians looking for a more authentic approach and to show respect for the original sources of Aymara and Quechua music formed what would later be known as 'cultural centers of autochthonous music.' These centers attracted many college students who sought to learn from the musical 'guides' in peasant communities. Among the groups to emerge from this environment, the most notable were Los de Canata, Kollamarka, Nayjama, Los Masis and Jaya Mara. Meanwhile, starting in the 1970s the first musical ensembles of autochthonous music began to travel to Europe, where some of them, such as Ruphay, Aymara and Boliviamanta, remained. There, their search for the true spirit of Andean music found success among intellectual audiences, who had their own idealization of indigenous peoples of the Bolivian Andes. It is a paradox that, in the name of indigenous music, migrant Bolivian musicians were able to lead Western lives and to consume modern culture in the countries in which they settled.

In the mid-1970s a new version of neofolklore emerged in Cochabamba in the music of the group Los Kjarkas. Widely considered the best interpreter of neofolklore, the group, led by brothers Wilson, Castel, Gonzalo, Ulises and Elmer Hermosa, is known for their daring musical experimentations in the context of neofolklore, adding new instruments such as the *wanq'ara* (a type of Andean bass drum) and the *ronroco* (a large *charango*, harmonically in between a guitar and a *charango*) to the basic formation. Los Kjarkas also experimented with traditional genres and styles that had been introduced to the urban repertoire by musicians such as Ernesto Cavour and Mauro Núñez, among them *chuntunqui, pasacalle, trote, tonada* and the so-called '*aire de cueca*' (*cueca* air). Following their first LP *Bolivia* each new album was received as an event by the audience at large, shaping musical tastes and marking styles and tendencies that would influence other neofolklore ensembles such as Proyección Kjarkas (later renamed Proyección), Amaru, Khiswara, Los Quipus, Jach'a Mallku, Semilla, Horizontes and Bonanza. The radio success of the group imposed an aesthetic upon an entire generation of young listeners, and the sound of the first wave of neofolklore (i.e., of groups such as Los Jairas, Los Payas or los Chaskas) was soon replaced by the Kjarka style.

A third sub-style in neofolklore, and one that greatly impacted Bolivian urban taste, is represented by the ensemble Savia Andina, who proposed a more cultivated, almost academic musical aesthetic, under the presumption that Bolivian music must be on par with the art music tradition of the West. Formed by Gerardo Arias, Eddy Navia, Alcides Mejía, Oscar Castro and Julio César Paredes, the group not only refined arrangements of instrumental works from the Bolivian repertoire, but also performed pieces by the great European composers using traditional Andean instruments (i.e., guitar, *charango, quena* and *zampoñas*). Examples include *Rondo alla Turca* by W. A. Mozart and the *Minuet in G Major* by J. S. Bach. In all cases, Savia Andina sought the instrumental refinement of the traditional sound of Bolivian music, although many of their albums evoke the sounds of background music in the 1970s and 1980s.

A fourth stream within neofolklore (and in many ways a genre on its own) is represented by the 'nueva canción boliviana' movement. After the impact of *nueva canción chilena* in the late 1960s, the Bolivian version was founded in 1983 following the return of democracy in 1982. This sub-style differs from others in neofolklore in the attitude of political involvement that its main expositors (mostly singer-songwriters) sought to portray. These musicians fostered the idea that popular and folk music in Bolivia and Latin America were the foundation for the revolutionary transformation of society. The *nueva canción boliviana* movement, which lasted until 1986, sought to detach itself from the so-called 'protest song' movement of the 1960s. Although both produced lyrics of high poetic complexity, *nueva canción boliviana* was also inserted into the Latin American search for new forms of musical expression, drawing resources from both traditional and contemporary music. Similarly, it sought to retrace the path set forth by those musicians whose leftist political affiliations caused them to lose their lives in the guerrilla war (as it is the case of Benjo Cruz) or to be incarcerated or forced into exile (as happened to Nilo Soruco). However, *nueva canción* musicians did not pursue their political militancy in a coherent manner; on the contrary, each singer-songwriter or group chose their own musical road, some closer to pop while others turned to issues of Christian faith.

Lastly, and perhaps as a direct consequence of the eroding effect of so many sub-styles, in the early twenty-first century a new form of neofolklore emerged, identified by scholars such as Amílcar Copa (2006) as 'post-neofolklore.' When the musicians who carried the first generation began to turn 50 or 60 years old, musicians under 30 revamped the aesthetic of neofolklore following the styles of *pop tropical* or *cumbia* groups and basing their work not so much on the crafting of music and lyrics but more on live performances and a strong interaction with the audience (Copa 2006).

Social Importance

The long process of consolidation of a national musical aesthetic ended in the 1970s with neofolklore. This style summarizes all the expressive contributions of popular music national in character. Young folklorists in the 1970s encouraged many other older musical tendencies that also sought to be an expression of the national. Neofolklore added a musical language supposedly Andean (but very Western) into the quest. In addition, the new style allowed for the union of nationalist inquiry with many others, attractive especially to young audiences, and showed a successful ability to dominate the recording market in Bolivia. Neofolklore was a structured movement as well as a defined and characteristic space for the production, dissemination and consuming of music that developed in tandem with the construction of new identities.

Neofolklore was constituted as a musical style capable of making questions around nationalist and indigenous identities a regular procedure. It was also capable, however, of including within its ample expressive spectrum other kinds of inquiry about identity: ethnic, generational, class-based, political, erotic, generic and so on. It is this richness that calls for a detailed analysis that will emphasize the narrative, metaphoric, symbolic and imagined aspects that the style has promoted.

The popularity of neofolklore in Bolivia has waned since the 1990s, when competition with Bolivian tropical music and with *rock nacional* (national rock) began to question its aesthetic. However, it continues to exist and thrive where groups such as Los Kjarkas, Proyección and Savia Andina are still considered the ultimate expressions of Bolivian popular culture and ambassadors of Bolivian culture and pride.

MAURICIO SÁNCHEZ-PATZY (TRANSLATED BY PAMELA NARBONA JEREZ)

Neofolklore (Chile)

Neofolklore – in its Chilean context – describes a musical trend that developed between 1963 and 1968, especially in the capital city of Santiago, representing a modernization of the practice of mass folklore, or folklore produced within the cultural industry. Neofolklore was created in the early 1960s by the Chilean musical industry, administrating the tendency of young people who wanted to renew mass folklore practices of that period. At the time, mass folklore was the realm of musicians who were professional (duos and female solo singers), semiprofessional (male quartets with no lead part) or amateur (mixed ensembles). Performances included vocals in two or three parts in parallel thirds rendered at the microphone with proper, trained vocal production, accompanied by two or more guitars and perhaps a harp, with performers dressed in the typical clothing of the rural people of central Chile. Folklore was dominated by two genres from central Chile, both based on 6/8 + 3/4 rhythmic structures: the *tonada*, a song form, and the *cueca*, a non-embraced couple dance featuring twirling handkerchiefs.

By contrast, neofolklore favored minimal instrumentation, just a single guitar with the occasional inclusion of an Argentine *bombo legüero*. Instead, the emphasis was placed on a four-part vocal arrangement featuring a balanced homophonic texture interrupted by brief polyphonic passages, a wide vocal range extending from deep bass to high tenor and the use of onomatopoeia to evoke the sound of the guitar and the *bombo legüero*. Neofolklore groups performed in tuxedos, projecting a kind of relaxed, refined image. Performance contexts included radio studios, nightclubs, casinos and song festivals.

The development of choral singing in Chile in the 1950s for student and professional groups paved the way for the rise of young amateur vocal groups performing in several parts and drawing from folkloric as well as international repertoires. By the mid-1960s, such groups had become fixtures in the student festivals of song. The two main neofolklore groups were the male quintet Los Cuatro Cuartos (1963–66) and the female quartet Las Cuatro Brujas (1964–66). Other well-known groups were Los de Las Condes (1964–70), Los de Santiago (1964–67) and Los de la Escuela (1965–70). In addition, the main singer-songwriters of Chilean Nueva Canción – Patricio Manns, Rolando Alarcón, Víctor Jara and Violeta, Isabel and Ángel Parra – most of them in the early part of their careers, contributed to the heyday of neofolklore as solo artists with their arrangements of songs drawn from the Latin American repertoire, their own compositions, and appearances on radio and in folk clubs all over Chile. Other important figures were Luis 'Chino' Urquidi (1935–94) for his vocal arrangements, Guillermo Bascuñán (1942–) for his compositions and Camilo Fernández (1930–2011), the leading producer, who managed two independent labels, Demon and Arena, distributed by RCA.

The neofolklore repertoire was primarily drawn from obscure, antiquated or extinct genres that were disseminated in Chile due to the incorporation of *proyección folklórica*, a folk revival movement, into Odeon's Chilean catalogue. These genres proved amenable to the development of costumbristic and historical subject matter within folkloric song, evoking places, people, occupations, cookery and customs associated with tradition and making reference to historical events. Neofolkloric song cultivated in the popular imagination figures that were socially distinct from both the performer and the listener of folkloric music. The singer avoided references to him/herself or to the audience, instead focusing on an 'Other' that was at first just a figure with strange customs, but who, over time, acquired a social dimension that was extensively developed by Chilean *nueva canción*.

The collection and dissemination of folkloric music was laden with a regional and didactic agenda. Performances and LP releases painted a broad picture of Chilean folklore's newfound diversity, grouped into three distinct geographic and cultural areas: the north (Andean culture), the center (Hispanic and Creole culture) and the south (Mapuche and mestizo culture). Neofolklore, relying on this agenda without adopting it as its own, included at least one genre from each of these three areas, typically the north's *cachimbo*, the center's *refalosa* and the south's *sirilla*. These are all danceable musics in 6/8 with a major/minor tonality, characteristics that were familiar to regular listeners of folklore, but that also carried a note of novelty since the use of the minor key had been less common in the Chilean folklore that had been disseminated up to that point.

Not only did neofolklore adopt genres that had been disappearing in Chile, it also promoted a pan-Americanist outlook that was gaining ground in Latin America in the mid-1960s, drawing repertoire from other Latin American countries and employing and developing vocal arrangement techniques that had originated among Argentine groups.

Neofolklore reached its peak in 1965, which was characterized by the press as the year of 'folkloric effervescence.' In 1967 the genre began its decline. The music industry had inundated the public with dozens of songs of 'Andean sadness,' and following Los Cuatro Cuartos' success, the national artistic sphere, much reduced, was saturated with a host of new groups, most of which turned out to be short-lived.

Despite its brief duration, neofolklore made several important contributions to Chile's popular music in the 1960s. It provided new approaches to vocal arranging and increased the spectrum of genres used in folklore-based song, allowed composers of national importance to come to the fore and stimulated public interest in traditional folkloric music. In this way, the horizons of the folkloric music listener, previously restricted to the repertoire of Chile's central region which formed the basis of *música típica*, were broadened to include music from beyond that repertoire. Neofolklore also increased the harmonic, metric and expressive resources available in Chilean song. Finally, it fostered an interest in Chilean and Latin American folklore among the young, who by then were already under the influence of the development of rock 'n' roll and its local permutations.

JUAN-PABLO GONZÁLEZ

Neofolklore (Venezuela)

In Venezuela, the term neofolklore indicates the use of traditional Venezuelan folk music by popular music artists or groups, in which the instruments and music procedures are different from those used in the original folk music, but in which the main formal, rhythmic, melodic and harmonic elements of the original are maintained or referred to strongly. Its intentions are to promote traditional Venezuelan folk music through professional live or recorded music productions – as well as to market the artist's or group's production, performance and arrangement abilities. Since 2005, however, the definition has shifted with the application of the term by disc jockeys on Venezuelan radio stations to designate a category in recorded popular music in which any type of appearance of folk music elements exists. This is a result of a new law sanctioned by the *Asamblea Nacional* (National Assembly) in December 2004, the *Ley de Responsabilidad Social de la Radio y Televisión* (Law of Social Responsibility of the Radio and Television). The law regulates the amount of hours that radio stations must reserve to transmit music derived from national productions which are defined by having at least 70 percent of Venezuelan staff, performers, investment capital, localities and Venezuelan cultural values (Gobierno 2006). Therefore, in order to obtain broadcasting space in radio stations without the 'payola,' or at least a fairer treatment, Venezuelan popular music productions of all genres began in 2005 to include folk elements in their music, providing at the same time the music needed by the stations to comply with this category, which was broadly named neofolklore. The term has also been lightly used to designate music that is more experimental and progressive in nature, although still using some aspects of the traditional folk music. This usage can be better understood within the term *fusión* (see separate entry).

Neofolklore in Venezuela may be distinguished from both *proyección* and *fusión,* keeping in mind that music groups or individual artists may change their production from one category to another as a natural development of their creative progress, or coexist in more than one at the same time. *Proyección* (see below) designates individual popular music artists and groups who aim to present the traditional folk music in a way that is as faithful as possible to the sound produced by the original folk musicians, but through professional live or recorded music productions. *Fusión* denotes new compositions, experimental in nature, that use elements of traditional Venezuelan music.

Characteristics of Neofolklore

In Venezuelan neofolklore the instruments are different from those employed in the original folk music. Nevertheless, a traditional folk instrument such as the *cuatro* or the maracas is usually included. Instrumental variations may include changes in performing practices, instrumental combinations, inclusion of symphonic instruments, arrangements for symphonic orchestra, for choir and for rock/jazz band, use of electronics, amplification and digital technology. Compositional procedures not found in the original folk music are used, including larger changes in formal structures in the way of introductions, interludes and endings, but conserving the original form of the folk music pieces in a considerable proportion. Neofolklore also employs tempo changes, extensive part counterpoint, extended harmonization, instrumental virtuosity and improvisation in jazz style, change of rhythm while maintaining the melodic and/or harmonic structure or the other way round, collage and fragmentation of original material, mixing of genres, among many other resources. It achieves a good balance in sounding different, appealing to a larger media audience, and at the same time still being recognized as belonging to Venezuelan traditional music. Some of the major characteristics of neofolklore are

- professional music productions (live and recorded) of traditional folk music
- adaptation of time scales for media formats
- may include new lyrics and music, in accordance with style
- independent of fixed calendar/place occurrences of the folk expression
- single artist or group may perform different folk genres
- popular music behavior: professional quality in recordings and in performance productions, staged concerts, sound amplification, artist-audience relationship, vinyl/CD making, tours, sales-oriented market-strategy development
- substitution of the original folk music as reference for identity and values at the national level.

All of the above are shared with the music of the *grupos de proyección*; in other respects, however, neofolklore is different:

- different instruments and instrumental combinations from the original version, but usually including at least one traditional instrument
- larger structural and formal changes, but conservation of a considerable part of the original form
- inclusion of different compositional procedures from the original music
- original function of folk expression changed to entertainment and money-making (as is the case with the *grupos proyección*), but without the pedagogical element that is present in many of the latter

The first neofolklore practices can be dated to the 300 plus transcriptions and arrangements of Venezuelan folk music to choir, piano or guitar by the composer and music-leader Vicente Emilio Sojo, which he began in 1937. Although intended for academic music disciplines because of its time context, the many different recordings of his arrangements have become popular music and influenced the whole development of neofolklore thereafter. One of the first major groups in this category was the Quinteto Contrapunto, a mixed-vocal ensemble from 1962, which set the trend not only for later choir contrapuntal arrangements of folk music, but also for the instrumental ensembles that flourished from the 1980s onward. The distinct voices of Jesús Sevillano and Morela Muñoz, a soprano with formal training, characterized this famous vocal quintet. They were followed in the

1970s with a similar formula by Serenata Guayanesa, an all-male voice quartet. Two of the main instrumental ensembles were El Cuarteto (1978) and Ensamble Gurrufío (1984), both having the concert flute as their main melodic instrument. The year 1975 saw the beginning of a large youth orchestral movement in Venezuela, reaching national proportions and international fame. By 2013 the total number of orchestras stood at 285. The prevalence of symphonic instruments in the country from the mid-1970s was a key factor in the development of neofolklore and of *fusión* groups of hybrid instrumental combinations (folk and symphonic instruments), especially with instruments such as the traverse flute, clarinet and oboe, which are absent from the traditional folk music instrumental. The use of symphonic instruments to perform traditional folk arrangements is one of the main lines of expansion in Venezuelan neofolklore, which incorporates a level of musicianship and instrumental virtuosity never heard before; this procedure was pioneered by the Quinteto Contrapunto.

The flute has gained a renowned position as the *flauta venezolana* (Venezuelan flute), through the success of the above-mentioned ensembles, based on a neofolklore repertoire with demanding virtuoso performing techniques. Other instruments are approaching the same direction, such as the violin in the case of Alexis Cárdenas, and the piano in the *joropo* productions of Claudia Calderón, performing on this instrument exact transcriptions of field recordings of music from *joropo central* and *joropo llanero* harp players. The jazz pianist Prisca Dávila includes some *joropo central* inspirations in her repertoire. The violin already existed in folk music from the Andean region, and the *piano joropo* had indistinctly survived in the ambience of hotel lounges. However, these new artists have introduced classically trained performance virtuosity into a popular music market. A trend present in many contemporary instrumental groups is to develop their neofolklore practices toward experimenting and creation, which would place them in the category of *fusión* music. Afro-Venezuelan groups who devoted themselves to *proyección* music have also started to follow the trend of elaborating their music and thus moving toward neofolklore and *fusión*; an example is Tambor Urbano from 1996 onward.

Proyección

In *proyección* priority is always given to the employment of the same instruments as in the original version. Performance may involve arrangements and adaptations of the original music to concert-stage presentation or to recorded track-time limits, in the way of introductions, solos, codas and small changes in the formal structure. Composing new lyrics within the traditional harmonic and rhythmic formats, as well as composing new songs maintaining a close relation to the traditional style, are all part of the objective of mass-media promotion of the traditional music. The musicians involved often refer to their activity as a '*rescate*-type' of amateur research, in other words they see themselves as 'rescuing' Venezuelan traditional music from oblivion, through their promotional activity. Performances of *música de proyección* can take place in any concert hall, at any time of the year, allowing the consumption of this folk-substitute to be removed from its cultural, time–place relationship. In a similar practical way, one single artist or group may include in a performance many different folk genres, although it is also common that a *grupo de proyección* specializes in only one folk genre, such as the Afro-Venezuelan music commonly known as *grupos de tambor* (drum groups).

One of the first *grupos de proyección* to make an impact on popular music in Venezuela was the Grupo Madera in 1978. Un Solo Pueblo, founded in 1976, headed a large list of groups that flourished in the mid-1970s and the 1980s, performing Afro-Venezuelan traditional folk music and becoming successful with the nation-wide insertion of the *parranda* music from the Barlovento region at Christmas time. Simón Díaz, a solo *llanero* (plainsman) singer, has been producing music extensively since 1961, and has become an identity figure of Venezuelan culture through his recordings of *tonadas, pasajes* (slow *joropo* music from the plains), and by achieving various well-known hits in this genre. Many such solo artists work around the representation of folk music as a niche in their popular music careers, especially *joropo* singers, and they fit perfectly in the category of *proyección*.

In *grupos de proyección* there is a marked difference between all-genre and single-genre groups. All-genre *proyección* groups have a more pedagogical orientation in their concerts, with the support of slides, verbal explanations and programs structured by regions or instrumental families. They were led by Convenezuela (founded in 1974), performing Venezuelan folk music of all kinds, and by the Orquesta de Instrumentos Latinoamericanos (Odila), which started in 1982. This large ensemble concentrated on performing music with the original instruments from the whole of Latin American and the Caribbean, based on the audiovisual information and the collection of instruments at the Instituto Interamericano de Etnomusicología y Folklore (INIDEF) in Caracas. Since 1990 the Vasallos del Sol have remained as one of the most important all-genre *grupos de proyección.* Financed by the Fundación Bigott, they are known for the high professional level of their performances and recordings. However, the polyphonic vocal arrangements and harmonization in their recordings from 1999 onward, such as *Tibio calor* (Warm Heat), went beyond the musical procedures of traditional folk music, and with these productions, the group stepped into the category of neofolklore.

The single-genre *grupos de proyección* devote themselves to certain musical regions of Venezuela, or to a specific music type or rhythm, becoming the specialists of the chosen genre. Most single-genre *proyección* groups are found in the Afro-Venezuelan folk tradition, with music from Barlovento, from the central coast states or from the south of the Maracaibo Lake. Another of the Bigott Foundation's group, Yuruari (founded in 2002), had a repertoire consisting only of traditional *calipsos de El Callao.* Caraota, Ñema y Tajá from the Lara state concentrates on the music of the *golpe larense*. Old *merengue* music from Caracas is performed by Los Antaños del Stadium and Cañón Contigo. Neither *joropo* music, whether *llanero*, central or *oriental*, nor the *calipso* groups from El Callao or other cities in the Bolívar state, can be considered as *proyección* music, although they share some characteristics of popular music behavior. Rather they are actual folk performers in a process of media conversion.

EMILIO MENDOZA

Nortec

Nortec (also known as *Nor-tec*) is a type of electronic dance music (EDM) developed in Tijuana, Mexico, in 1999. Like the music, the word *nortec* is a hybrid that stands for *nor* (for northern or *norteño*) and tec (for technology). It refers to a music that combines traditional music elements from the north of Mexico with computer technology and innovative compositional techniques. Thus, *nortec* takes the sounds of the accordion, *bajo sexto* (a six double-course guitar-like instrument) and snare drum that characterize *música norteña*, as well as the tuba, clarinets, *charchetas* (saxhorns) and brassy harmonies typical of *banda sinaloense*, and organizes and transforms them through the technology of EDM: manipulation through computer software, filters, sequencers and synthesizers in order to make beats, rhythmic patterns, loops and harmonic progressions. However, *nortec* is not an attempt to reproduce the sound and repertoire of *conjunto norteño* or *banda sinaloense* groups technologically; instead, the *nortec* aesthetic seeks to decontextualize these sounds, transforming them into completely new sonic experiences where obvious local references often disappear.

Soon after the inception of *nortec*, a group of local video artists adopted the idea of transforming local elements through computer technology and began to translate the music into a visual experience. The result is a type of visual art that takes stereotypical images of Tijuana and transforms them into images that transcend their locality and exude an aura of cosmopolitanism. Music and video artists soon decided to pool their efforts by forming the Nortec Collective. This group included music acts like Bostich, Clorofila, Fussible, Hiperboreal, Panóptica, Plankton Man and Terrestre, and video artists like VJ CBrown, VJ Mashaka, VJ Sal, VJ TCR and VJ Wero Palma. As musicians and visual artists began to produce works outside the ambit of the Collective, the hyphenated version of the term (*nor-tec*) came to mean the hybrid aesthetic, while the non-hyphenated version (*nortec*) came to designate the efforts and activities of the Collective and its current members.

The first *nortec* recording was released independently by the Collective in 1999. After a process of underground, 'do-it-yourself' marketing and distribution that emphasized internet-based strategies, the Collective was signed by Palm Pictures, which distributed the musicians' first commercial recording, *The Tijuana Sessions, Vol. 1*. The commercial success of the album is difficult to measure due to an unorthodox marketing strategy that emphasized both the actual purchasing of the album and its internet distribution through file-sharing websites. Nevertheless, the international acceptance of the music attracted the interest of a number of local, national and international musicians and DJs who eventually worked in the genre and, in some cases, collaborated with the Collective; among them, Alan Parsons, Balboa, Beck, Calexico, DJ Matsuoka, David J, Julieta Venegas, the Kronos Quartet, Tampopo and Tovar. In 2005, after a four-year hiatus that allowed individual members of the Collective to produce a string of solo *nortec* recordings, the Collective released its second album, *Tijuana Sessions, Vol. 3* on Nacional Records (Volume 3 is actually Volume 2. The title is an inside joke among the members of the Collective, referring to the length of time it took to produce the second collective volume).

Between the Collective's first and second releases, the genre underwent a period of musical consolidation, the results of which can be seen by a comparison between the two albums. The tracks in *The Tijuana Sessions, Vol. 1* present a juxtaposition of a wide variety of individual styles united by the general *nortec* aesthetic of 'hybridity' (drawing from García Canclini 1990). The album contains a series of tracks that combine *norteña* and *banda* sounds alien to the EDM scene with Latin house, jazz house, minimal techno, intelligent dance music (IDM), neurofunk and other EDM genres according to the particular musical taste of each member of the Collective. This type of production also characterizes the solo *nortec* efforts of Fussible, Panóptica, Terrestre and Plankton Man produced in between the release of the two joint albums. *Tijuana Sessions, Vol. 3* presents a more unified approach and musical style, in which the music is characterized by an assertive foregrounding of *norteña* and *banda sinaloense* samples, a largely down-tempo dance style, and the almost exaggerated presence of elements from Tijuana's popular culture that might go unnoticed to a neophyte but that emphasize the project's reliance on resignifying local popular culture. So sounds from *norteña* and *banda* are sampled and taken out of their local context, before being resignified through their combination with electronic sounds and transformation through technological devices. These elements, combined with the musical and visual supervision of Pepe Mogt (Fussible) and Jorge Verdín (Clorofila), resulted in an overall homogeneity that eliminated the differences among individual styles that characterized early *nortec* productions.

Mostly consumed by middle- and upper-class young people, *nortec* should be understood within the larger phenomenon of underground dance music (UDM), since it is its alternative status that provides the project with an aura of uniqueness and independence. *Nortec*'s involvement with the commercial mainstream was short and restricted: Palm Pictures never really promoted the Collective's *Tijuana Sessions, Vol. 1* so they had to do it themselves through underground mechanisms, and their collaborations with Alan Parsons and Calexico were limited to the Collective remixing a few of their songs. Like most UDM, the production, distribution and consumption of *nortec* takes place in sites and through mechanisms that exist beyond mainstream commercial channels. Thus, *nortec* tracks are produced in home studios and distributed by independent labels and over the internet. Fans meet at local clubs and discotheques that often lack the glamour and sophistication of mainstream theaters and dance halls; they also travel to hear the music (people from San Diego, for example, sometimes attend *nortec* parties in Tijuana). But for the most part *nortec*'s appeal and fanbase is international. Ironically, it was *nortec*'s underground strategy, its condition as an independent project from an unlikely corner of Latin America, and its articulation of local traditions through global technologies that provided it with powerful cultural capital for EDM fans worldwide. The fact that the musicians were from Tijuana was also important for the initial development of the music in the 1980s, since the geographic location gave the musicians access to the latest music trends in the United States as well as equipment and technology well before they could reach central Mexico. Indeed, the birth of *nortec* in Tijuana challenges many of the center-periphery assumptions that characterize a centralized society such as Mexico's.

ALEJANDRO L. MADRID

Norteño

Música norteña (northern music), or simply *norteño,* is a popular music genre originally from the north-east of Mexico. It shares many similarities with the Texas-based *conjunto* (ensemble), its counterpart across the US-Mexico border. Both *norteño* and *conjunto* have folk-based rural origins and feature a core instrumentation of button accordion and *bajo sexto* (a type of guitar with six double courses of strings). This duo has grown to include other instruments such as *tololoche* (double bass), which has largely been replaced by the electric bass since the mid-1950s, *tambora de rancho*, a homemade drum later replaced by the drum set, and saxophone, but the two core instruments still characterize the sound of the ensemble. The *norteño* and *conjunto* traditions have mutually influenced each other, both becoming favorite music styles in the area and strong markers of northeastern Mexican identity.

The exact origins of *norteño* music are impossible to reconstruct, because it was a specific expression of a common people, learned and passed down from generation to generation by ear. Moreover, Mexican music scholars have largely ignored the musical life in the provinces, either because of the scarcity of historical documents or because of the assumed irrelevance of regional expression to culture at large. In the nineteenth century the music of Mexico's then sparsely populated northern area was considered unrefined, rustic and raucous (if at all noticed) by the capital's genteel people, who were eager to emulate European, in particular Parisian, customs and practices. Although folk music did emerge as a major trend after the Mexican Revolution (1910–20) and with the rise of radio and the recording industries, *norteño* continued to be marginalized by the center: 'regional music' of the nation included only *marimba* from the Yucatán peninsula in the south, *mariachi* from Jalisco in the west, *jarocho* from the east coast and *huasteca huapango* from the northeast coast. Regional music styles such as *norteño* and *banda* from the vast northern and northwestern territories were largely disregarded. Northern-born entertainers who hoped to succeed in the national and international music market had to settle for local or regional fame or switch musical style. It was not until the 1990s that rural-rooted, regional music from Mexico's North turned into an attractive commodity.

Early History

Música norteña emerged as an intercultural practice when Spanish colonial, Mexican national and nineteenth-century immigrant traditions were blended to create a joyous musical style with new instrumental sounds and dance steps. The beginnings of *norteño* as a distinct genre can be traced to the arrival of the accordion in the US-Mexico border area in the 1860s and 1870s, where it was introduced by European settlers, notably of German and Czech origin. Mexican people not only adopted the loud, sturdy and inexpensive instrument but also the popular European dances of the time: polka, waltz, mazurka, quadrille and schottische. In the late 1800s the northeastern city of Monterrey, capital of Nuevo León, experienced an economic boom due to its flourishing steel industry. The growing city attracted large numbers of peasant migrants as well as European settlers, who had initially come to work on the railroad lines from central Texas to northern Mexico, but later stayed and invested in steelmaking and brewing businesses. The beer brewing industry in Monterrey was developed in part by German immigrants, and the distributors of German-made accordions aggressively marketed the little 'squeeze boxes' to the local population as far back as the late 1800s. As a result, musicians in Mexico and Texas remained loyal to the German-style button accordion (manufactured by the Hohner company). Local musicians, who came together to play at *tardeadas* (dancing events held in the afternoon and outdoors where large, wooden dance floors could be set up) and special occasions such as wedding and *quinceañera* (coming of age) celebrations, appreciated the qualities of the accordion because it was loud and durable and thus, like the popular brass instruments, ideal for outdoor performances. Although the accordion served well as a one-man band, the combination of accordion with the *bajo sexto*, and sometimes with the addition of a *tololoche* or a drum, eventually became the favorite music ensemble for the *cantina*, the working-class bar, ubiquitous in both rural and urban areas. Both Mexican *norteño* and Texas-Mexican *conjunto* musicians used diatonic two-row button accordions manufactured in central Europe. Their repertoire consisted of a combination of instrumental polkas, schottisches and redowas with the lyric-oriented *canciones mexicanas* (Mexican songs), huapangos (fast dance pieces in 6/8) and *corridos* (folk ballads). In the early 1900s, the latter became the main narrative expression of the *norteño* tradition. The traditional way of dancing to *norteño* music is a hybrid way strongly influenced by the basic steps of the paso doble, polka and schottische. It is danced by couples.

Like Texas-Mexican *conjunto*, whose historical development has been documented by Manuel Peña (1985), the early history of *norteño* (1860s–1920s) is rather diffuse. With the interest of the emerging recording industry in regional music expression, the history of these genres becomes more tangible. North of the border, recording companies such as Vocalion, Okeh, Decca and Bluebird (a subsidiary of RCA Victor) launched a major effort to record native Texas-Mexican/Mexican musicians and singers. The first accordion recordings were made in 1930 in San Antonio, Texas, by accordionist Bruno Villareal, from the Rio Grande Valley in southern Texas (Spottswood 1990, 2379). At the same time, increased migration of Mexicans into the US Southwest replenished and reinforced the local music market. The *conjunto* ensemble and its musical style began to consolidate with the first commercial recordings by artists such as Narcisco Martínez and Santiago Jiménez in the mid-1930s. By that time, *conjunto* had already become a preferred musical style among working-class Texas-Mexicans. South of the border, the industrial capital Monterrey became a leading force in the development of a potent media industry, which was not only decisive in the shaping of regional popular musics, but also furthered transregional expressions by disseminating regional musics to other parts of Mexico via powerful radio stations. By the 1940s the typical *norteño* ensemble had consolidated, featuring the three-row diatonic button accordion, *bajo sexto*, saxophone, contrabass and drum set. Vocal genres were performed in a characteristic Hispanic type of folk polyphony – two high-pitched voices singing in parallel 3rds and 6ths (usually the accordion and *bajo sexto* players), in a fast tempo, and with a strongly tonal harmonic support.

Modern History

The crystallization of a distinct northern music style was stimulated by musical interrelations between South Texas and northern Mexico. After World War II, large numbers of Mexican migrants seeking work in the United States continued to fuel the musical replenishment from the south. Texan recording companies owned by Mexican-origin entrepreneurs promoted musicians of Mexican origin residing on both sides of the Rio Grande. Mexican musicians such as Los Alegres de Terán, Antonio Tanguma and Lalo García gained popularity on both sides of the border. New popular dance rhythms such as the *bolero* and the *cumbia* were incorporated into the *norteña* repertory by Pedro Yerena and Juan Montoya in the 1940s and by Beto Villa and Ramón Ayala in the 1960s. Changes in the instrumentation consolidated the modern *conjunto* sound in the 1950s when most groups added a modern drum set, substituted an electric bass guitar for the contrabass, and introduced amplification for the accordion and the *bajo sexto* as well as microphones for the singers.

In the 1960s the modern *conjunto* and the older *norteño* ensemble grew closer. Leading figures in this development were the members of Los Relámpagos del Norte, a group led by accordionist Ramón Ayala and *bajo sexto* player Cornelio Reyna. By 1967 the band had risen to unparalleled fame on both sides of the border. After it disbanded in 1971, Ayala formed his own group, Los Bravos del Norte, which came to dominate the *norteño* market for the next decade. Like Ayala, the group Los Tigres del Norte have had over 30 years of success. The group's members originated from northern Sinaloa, a state on Mexico's Pacific coast, but moved to San Jose, California, in the late 1960s. After Los Tigres del Norte launched their first big hit, 'Contrabando y traición' in 1973, they went on to become one of the top-selling groups in the Latino market, and figure among the most influential binational bands. The maintenance of the *corrido* song form has enabled Los Tigres to tell compelling stories that are relevant to an audience accustomed to oral traditions. Their songs are particularly popular among recent immigrants to the United States and those who have not assimilated (usually due to their undocumented and low economic status) and who maintain strong connections to Mexico and their Mexican identity. Through their songs, Los Tigres have come to function as spokesmen for 'the people.' In 1988 the band was awarded a GRAMMY, but despite their remarkable career, Los Tigres del Norte have remained virtually unknown to US society at large.

Because of the music's strong connection with the working class, it had been a source of embarrassment to many Mexican Americans since the mid-twentieth century, especially to those in the emerging middle class eager to disassociate themselves from their Mexican roots and emulate American customs and culture. In the 1990s, however, Tejano music proliferated and gained international attention in the early 1990s as one of the fastest-growing types of Latin music in the United States. With young and dynamic artists such as Selena and Bobby Pulido, the music enjoyed a great increase in popularity beyond its regional audience. *Norteña* music for its part, while remaining marginalized by the US mainstream, has continued to play a significant role as a vehicle of expression of the migrant experience and cultural heritage of many Mexicans.

Subcultural *Norteño* Music

Alongside their bittersweet songs about immigration, which captured the imagination of hundreds of thousands of Mexicans north of the border, Los Tigres del Norte also sang about narcotics, and indeed their first major hit (noted above), 'Contrabando y traicion' (1973) was a *corrido* about cross-border drug smuggling. This song also established the band in Mexico. Since then, hundreds of *norteño* bands have emerged on both sides of the border taking up the theme of narcotrafficking. The flourishing business with *narcocorridos* (ballads that narrate the adventurous life of drug traffickers) in Los Angeles nightclubs and recording studios began around 1990. The Sinaloan singer and songwriter Chalino Sánchez (1960–92), who immortalized and embodied the narco-subculture that encompasses both the United States and Mexico, was largely responsible for this development. By the late 1990s *narcomúsica* (music related to drug trafficking or traffickers) had become popular among a predominantly young Spanish-speaking audience – not just in the regions where cultivation of marijuana is prevalent but also in the cities north of the border where traffickers make a fortune by selling the illegal goods. The most commercially successful bands that play the narco-repertory – Los Tigres del Norte, Los Tucanes de Tijuana and Banda El Recodo – all originate from Sinaloa, a state with a long history of cultivating and trading drugs.

By the beginning of the twenty-first century narco-music had become a fast-growing business, notably in the United States, where big music corporations sign promising narco-bands and where the GRAMMY Awards officially recognize and validate this type of popular music. In the early twenty-first century commercial narco-music brings in the sounds, images, values and language from a rural, premodern culture and mixes them with the technology and aesthetics of an urban, postmodern culture. This syncretic fusion of traditional elements and contemporary features is an expression of its creators' and listeners' own senses of identity. A decade after Sánchez's death, a handful of young, mostly USA-born singers from Los Angeles transcended his legacy and created a raw but urban sound that appeals to a young audience that derives its social conventions, fashions and aspirations from both the narco-world and US youth culture. Chief among them was Lupillo Rivera, whose CD *Despreciado* ('Despised') was listed by Billboard magazine as the fifth best-selling Latin music album in the United States in 2001.

Nueva Canción

The music and movement known as *nueva canción* (or 'new song') spans an active period of some 50 years, beginning in the early 1960s, when Latin American and Spanish singers and songwriters (often but not always called *cantautores*) created music in the context of activism in social and political struggles in their countries and across the continent as a whole. *Nueva canción* was for many an integral part of a larger cultural effort to bring about change on the continent, following the example of the 1959 Cuban revolution and other antecedents, embedded in several decades of struggle by liberal, radical and socialist parties. *Nueva canción* emerged as a genuine force in the mid-1960s, when various political parties on the continent were trying democratically to effect social change. The search for a Latin American cultural identity became a spontaneous part of this wider struggle for self-determination, and music was a part of the process.

As a movement, *nueva cancion* embraced a founding generation of creative musicians, both soloists and groups, in countries across the continent from Argentina to Cuba, Chile to Venezuela, Uruguay to Nicaragua, Mexico to Peru, Brazil to Bolivia, El Salvador to Paraguay. ‘*Nueva canción*’ is used here as an umbrella term to embrace other variants known as *nuevo cancionero*, *canciones de lucha y esperanza*, *nueva trova*, *volcanto*, *canto nuevo*, without diminishing the fact that there are subtle differences in what these terms mean, depending on either country or historical moment. A broad overview of *nueva cancion* must inevitably include Chile in its compass, as the genre was especially significant there, and Chilean musicians made many important contributions to its history, but for a more detailed account of *nueva canción* in Chile, readers are referred to the entry for *Nueva Canción Chilena*.

Background and Early History

The 1960s was a time of activism rooted in an idealistic vision that life could change for the better for all in South America. The continent’s obvious inequalities, its oligarchies, the iniquities of land ownership and inherited power, the concentration of wealth in the hands of small numbers, corrupt regimes, coupled with the denial of suffrage, literacy and education to much of the population, presented a stark challenge. It is within this context that *nueva canción* singers and composers can be understood. With voices and guitars, they performed songs of *lucha y esperanza* (struggle and hope), embedded in personal and collective experience, in places such as Chile’s Peña de los Parra, a popular folk-night club opened in June 1965 in the country’s capital, Santiago (see below).

Two key figures whose music bridged rural and urban life and culture in the 1940s and 1950s can be considered as antecedents for the *nueva canción* movement: Argentina’s Atahualpa Yupanqui (born Héctor Roberto Chavero, 1908–92) and Chile’s Violeta Parra (1917–67). Each had a passionate interest in their nation’s rural musical traditions which shared an Iberian and Amerindian sensibility; and each traveled and collected songs from rural musicians. Their work was paralleled in a very different vein in Cuba by *trovador* Carlos Puebla and his group Los Tradicionales, who composed key songs in homage to heroes such as Che Guevara and to moments such as when Fidel Castro and the *guerilleros* marched into Havana to end the regime of dictator Fulgencio Batista in January 1959.

Both Yupanqui and Parra followed a popular tradition of using medieval Spanish troubadour *coplas*, *versos* and the octasyllabic *décima* form. Yupanqui’s first song, ‘Caminito del indio’ (The Path of the Indian), was composed in 1926 (and first recorded in 1936), and during a long career, he introduced a new integrity and a distinguished guitar playing style to Argentine folk music. He also introduced an assertive outlook: his most famous song ‘Basta ya!’ (That’s Enough!) (1971), with its memorable lines ‘¡Basta ya, basta ya/que el yanqui mande!’ (‘That’s enough of the Yankee telling us what to do’), inspired the next generation, who learned his songs by heart. Yupanqui was forced into exile in 1932, 1949 and again in 1967, at which point he moved more or less permanently to Paris.

In the 1950s in Paris Yupanqui played in Left Bank clubs, where he met French singer Edith Piaf and shared stages with Violeta Parra, whose own career in Chile mirrored his own. Both were influenced indirectly by the French *chanson* tradition. In Chile, Parra had sung with and collected songs from rural popular poets called *payadores,* preserving and popularizing them through live performance, radio broadcasts and recordings. She composed her own material based on these rural traditions, creating a model and repertoire for what became *nueva canción*. Her legacy of potent songs includes ‘Que dirá el Santo Padre?’ (What Does the Sainted Pope Say?), which challenged the power of the Catholic Church, and the unparalleled ‘Gracias a la vida’(Thanks to Life), later covered by Joan Baez and other international artists. As Parra wrote in her *Décimas: autobiográfia en versos chilenos* (Autobiography in *décima* Form), written in the late 1950s and published posthumously:

..no tomo la guitarra	(I don’t take up the guitar
por conseguir un aplauso.	to win applause
Yo canto la diferiencia que hay de lo cierto a lo falso.	I sing of the difference there is between what is certain and what is false.
De lo contrario no canto	Otherwise I don’t sing)

The first acknowledged crystallization of a *nueva canción* ideal emerged in Argentina in 1963 at a meeting of the Círculo de Periodistas (Journalists’ Circle) in Mendoza, where singers and poets, among them Mercedes Sosa, her then husband Manuel Oscar Matus, composer Ariel Ramírez and poet Félix Luna, unveiled the *Manifiesto Fundacional del Movimiento del Nuevo Cancionero*, a musical manifesto which aimed to reevaluate and reinvigorate 'la música popular nativa' and to be the voice of poor and marginalized Argentinians. Though not a composer herself, Sosa became a key singer for the movement, her powerful interpretation of songs from across the continent, notably the songs of singers such as Violeta Parra (Chile), Silvio Rodriguez (Cuba) and Milton Nascimento (Brazil), bringing them huge audiences.

Much activity in Argentina emanated from the annual Cosquín Festivals, which had begun in 1961 with the idea of using folk music to entertain tourists during the summer. In the 1960s and early 1970s it grew to become the motor of what became Argentina's *boom folklorico*, boosted by the official 1962 government decision to make the last week of January National Folklore week. Broadcast on radio and recorded by major record companies, the music of Cosquín was heard all over the continent. In 1967 Yupanqui was honored with the first-ever festival prize and in 1972 the main stage was named after him. In later years the Cosquín festival went from strength to strength, its nine days (known as the 'nine moons') attracting vast audiences.

From the early 1960s many musicians began to wear the traditional woven poncho of the peasant and some played Andean instruments such as panpipes, bamboo flutes, the small *charango* lute, the indigenous *bombo* drum, and the maracas and shakers of the original peoples of the Americas and the Caribbean. Apart from their sound, these instruments were important as they had the added symbolism of being the instruments of the indigenous communities who had managed somehow to survive slavery and to resist colonialism and imperialism. The fact that students wore the poncho of the worker-peasant and played indigenous instruments and music rooted in the folklore of the continent was an expression of the relationships envisaged between student-intellectuals, workers and peasants of the left-wing political parties.

In Chile, Violeta Parra had herself been a pioneer in the use of the Amerindian Andean instruments. While Andean instruments were undoubtedly found in Andean festivals in the northern desert of Chile, Parra's example also gave impetus to university students, notably those who formed the groups Inti-illimani, Quilapayún and Los Curacas, all of whom also took indigenous names. In the 1950s she had been influenced by and had influenced Gilbert Favre, a Swiss-French flautist who was a founding member of influential Bolivian band, Los Jairas. Los Jairas were part of a cultural reevaluation of the indigenous peoples which emerged in the years following the 1952 Bolivian Revolution. Based at the Peña Naira in the capital, La Paz, they gained public fame through bringing together into one group instruments of hitherto separate Andean traditions – the armadillo-shelled *charango*, the *quena* (bamboo flute). This Andean sound and image was quintessential to the impact of *nueva canción* worldwide. Parra was also influential in her use of the small Venezuelan *cuatro* guitar.

A key event, and one which helped the new song movement to crystallize on a wide scale, was the *Encuentro de Canción Protesta,* held in Cuba between 29 July and 10 August 1967. Drawing 50 participants from 18 countries and 5 continents together, the event was part of a number of Cuban initiatives of the island known by the acronym OLAS (Organización Latino Americana de Solidaridad), designed to make waves (the word *olas* itself means waves). While the meeting's title betrays its English-language origins (OLAS stands more comfortably for 'Organization of Latin-American Solidarity'), the event in a sense reclaimed the word 'protest' as used by the US media and government to ghettoize and diminish first the 'freedom songs' of the Civil Rights Movement and the music associated with the anti-Vietnam War effort, as well as individual artists such as Bob Dylan, Peter, Paul and Mary, Pete Seeger and Joan Baez. Notably, in discussions during the event in Cuba, the actual term 'protesta' was rejected by the musicians who were there, as the songs that were the subject of the event were not protesting as such, even when they had overt social and political themes. With many songwriters acknowledging that they composed music and text simultaneously, any didactic function of such songs was seen as centering on their texts, the majority of which are poetic, often heavily metaphoric, with any sociopolitical message dependent on context and public.

The symbol of the Encuentro, a graphic drawing of a rose with two sharp, spike-like leaves, one shaded at the end, and two drops of blood falling from it, subsequently became a widely used image for committed song in Latin America. In Cuba it was used for activities at the cultural powerhouse Casa de las Americas, while in Chile it was taken as the symbol for the Peña de los Parra record label (part of the Dicap label).

A Pan-Latin-American Movement

The sense that there was a pan-Latin-American movement rather than a series of activities by individuals or groups acting independently in different countries, grew as those involved met one another at festivals in Cuba, Nicaragua, Peru, Mexico, Argentina, Brazil and elsewhere, discussed the viability of a formal organization (with the establishment for a time of an actual *nueva canción* movement office in Mexico, whose efforts were thwarted by difficulties of coordinating so many people in so many places), visited each other's countries and in notable instances sang each other's songs, thus bringing them to new audiences. The first *Festival de la Canción de Protesta*, for example, took place in 1972 in Agua Dulce, Peru, led by Peruvian singer/composer Chabuca Granda, with the participation of singers and composers including Alfredo Zitarrosa (Uruguay), Soledad Bravo (Venezuela), Guadalupe Trigo (México), Víctor Heredia (Argentina) and Patricio Manns (Chile) along with many others. As different musicians made it to different festivals, their attendance depending on a gamut of decisions including feasibility, availability, finances and other constraints, they identified with others who were 'like minded' and as such formed a significant supportive network. Certain later recordings bear testimony to this, notably *En Vivo en Argentina* (Live in Argentina), which captures the concert given in 1984, following the fall of the military dictatorship at the end of the Malvinas War. The concert marked the first ever visit of Cubans Silvio Rodríguez and Pablo Milanés to Buenos Aires, when they shared the stage with their Argentine 'guests,' following a favored format with musicians joining together in duos and small groups to sing each other's songs. The concert concludes with all those involved singing César Isella and Armando Tejada Gómez's 'Canción con todos' (Song for All), an unofficial hymn of the movement. Pablo Milanés's album *Querido Pablo* (Dear Pablo), recorded in Spain in 1985 with singers from Spain, Cuba and Brazil, sums up the creative nature of such friendships. Another later event that symbolized the mutual support that musicians gave to each other occurred in 1990, after the end of the Pinochet dictatorship, when Rodríguez was invited to return to Chile for the first time since 1972, to give the first major stadium concert in the name of his friend, the murdered Chilean singer Víctor Jara.

Nueva canción was (and indeed has remained) an expression of politics in its broadest sense. It cannot be encompassed by the limited designation 'protest song' as such: while it is true that some songs gained a function of protest (such as the 1972–73 *canciones contingentes* composed by Sergio Ortega with Quilapayún and Inti-illimani), such a categorization comes more from the media and those opposing such creativity than from those involved in it. The musicians involved were not card-carrying members of any international organization and were often independent of political parties, although in the 1960s many worked with various socialist, Communist and revolutionary parties of the continent, especially in Chile where the Juventud Comunista (JJCC) had cogent cultural objectives embracing education, trade union affiliation and human rights. Many musicians met up in the German Democratic Republic, in the international atmosphere of the annual Festivals of Political Song held in East Berlin.

In the 1970s, when the democracies in their countries were brutally overthrown by military dictatorships, many musicians suffered alongside their compatriots as a consequence of the impact of their songs and music making, the context of their performances and their involvement in activities beyond music. Some were forced into exile, while others were imprisoned, tortured or killed. This not only halted their activities and prohibited the sound of their music, but in the process also banished a generation of cultural activists from Latin America.

The most emblematic case is that of Chilean theater director and singer-songwriter and composer Víctor Jara, joint winner of the July 1969 *Primer Festival de la Nueva Canción Chilena* with his song 'Plegaría a un labrador,' a secular reworking of the Lord's Prayer. Before coming to the city with many other rural migrants, Jara had lived in the countryside where his mother, a *cantaora*, sang the popular *cantos a lo divino y a lo humano* (songs of the divine and the human) at rituals for infant deaths and at community events. Arrested after the *coup d'état* of 11 September 1973 along with other colleagues at Santiago's Technical University, Jara was taken to the downtown Chile Stadium, an arena usually used for basketball but which had been speedily turned into a make-shift prison camp. Here he was recognized, tortured and last seen alive. His body was later found with five others, machine-gunned up against a wall near the Metropolitan Cemetery, and identified by his wife Joan among piles of corpses in a Santiago mortuary after a phone call from a sympathetic official (Jara 1983).

Jara's dramatic and tragic death at the age of 35 highlights how the music of this generation not only had immense meaning for those who heard it, and the power to change their consciousness, but was recognized as dangerous by the authorities. Charismatic and fun-loving, Jara was nevertheless clear about his role as a singer: 'The authentic revolutionary should be behind the guitar, so that the guitar becomes an instrument of struggle, so that it can also shoot like a gun' (quoted in Taffet 1997, 97). As he sang in his song

‘Manifiesto,’ a tender serenade, released on record after his death, which with hindsight has been seen as his testimony:

Yo no canto por cantar	(I don’t sing for love of singing
ni por tener buena voz	Or to have a good voice
canto porque la guitarra	I sing because my guitar
tiene sentido y razón.	Has sense and reason.
Tiene corazón de tierra	It has a heart of earth,
y alas de palomita …	And the wings of a dove ...
… canto que a sido valiente	Song that has been brave
siempre será canción nueva.	Will always be a new song.)

After the *coup d’état* anything in Chile remotely associated with the previous government of President Salvador Allende and its values came under censorship, including books and records, which were burnt in the streets and their possession could be cause for arrest. The junta issued warnings that it would be unwise for anyone to play *nueva canción*, or indeed any of the Andean instruments associated with its sound. This did not hinder the group Barroco Andino who bravely, within months of the coup, started playing Baroque music on Andean instruments at concerts in churches.

Exile

At the time of the coup in Chile, both Inti-illimani and Quilapayun were traveling in Europe as the Popular Unity government’s Cultural Ambassadors, seeking support from governments in Europe at a time when Chile was besieged economically by a US blockade and undermined by CIA activity. Now in exile, these groups were pivotal in making the sound of *nueva canción* central to the ‘Solidarity with Chile’ movement. Their passionate and tireless performances all over the world brought the Andean sound into the homes of millions. It was so pervasive as to change European music library definitions of Latin American music, as well as inspire satirical tribute songs in Italy, where the music was particularly popular, reaching the pop music charts. The influence of the music of these two groups in Europe in the 1970s and 1980s – and in many other places worldwide, particularly where the solidarity movement was active and where Chilean exiles came to live – cannot be underestimated. For Inti-illimani, the 1972 tour turned into a 15-year and 54-day exile (‘the longest tour in history,’ as they jokingly described it at their concerts), one which successfully defined *nueva canción* and Amerindian music as Latin American music.

Many other Chilean musicians spent time in exile – including composer Sergio Ortega, *cantautores* Patricio Manns, Isabel and Angel Parra, Patricio Castillo, and later the group Illapu – but they were not alone. Notable musicians from other countries were exiled also, among them Uruguayan Daniel Viglietti, Argentina’s Mercedes Sosa and Brazilian MPB singers Chico Buarque, Caetano Veloso and Gilberto Gil. The lyrics of Viglietti’s seminal 1963 song ‘ Canción para mi America’ (Song for My America) had done much to set the tone for the *nueva canción* movement, with its lyrics beginning ‘Dale tu mano al indio/Dale que te hará bien’ (Give your hand to the Indian, it will do you good), and ending ‘La guitarra americana/Peleando aprendió a cantar’ (The American guitar/Fighting learned to sing). In 1969 Viglietti’s anti-*latifundista* song ‘A desalambrar!’ (Take Down the Fences), which called for the redistribution of land to those who worked it, had been banned by the authorities, and in 1972 he was imprisoned after the military authorities objected to one of his performances. Freed in 1973 following international protests (including that of Jean-Paul Sartre), he went into exile, first in Argentina and then in France.

In Spain, where the oppression and censorship of the Franco dictatorship was ongoing, the movement had a strong impact, with a number of significant musicians based in Madrid and a powerful movement in Catalonia in particular. Mercedes Sosa was exiled to Spain from Argentina in 1979 after the military arrested both her and much of her audience at a concert. In exile, her voice was a constant of political commitment, particularly during the state-sponsored violence of the so-called ‘Dirty War,’ and again during the Malvinas-Falklands war. Allowed to return in 1982, she began to include in her repertoire *rock nacional* songs, which challenged the regime during this period. Working with rock musician Charly Garcia, as well as folk-rock singers Victor Heredía and León Gieco and others, Sosa crossed over between different genres and publics in her inimitable way, bringing musics and peoples together: ‘An artist isn’t political in the party political sense – they have a constituency which is their public – it is the poetry which matters most of all’ (quoted in Meyer 2009). On 21 December 1984 Sosa, León Gieco and Milton Nascimento met up in Brazil for the emotional *Corazón Américano* concert. In the early twenty-first century, Sosa won Latin Grammy Awards for Best Folk Album in 2000 (*Misa Criolla*), 2003 (*Acústico*) and 2006 (*Corazón Libre*), became a UNESCO Goodwill Ambassador and sang the song 'Balderrama' in Steven Soderbergh's 2008 film *Che*. She died in 2009.

New Songs Movements and Revolution

In Cuba, a group of young musicians including Silvio Rodríguez and Pablo Milanés came together at the country's Cinematographic Institute (ICAIC) under the patronage of intellectual Alfredo Guevara to work together under the guidance of composer-guitarist Leo Brouwer. Their music-making hitherto had attracted the unsympathetic attention of cultural Stalinists, with Milanés imprisoned in an infamous UMAP work camp in the Cuban countryside in 1967 for 'bohemian activities.' An early champion was Haydée Santa María who had fought with Che Guevara and Fidel Castro in the Sierra Maestra mountains and had founded the Casa de las Americas, Cuba's intellectual powerhouse. At ICAIC the musicians became known as GESI (Grupo Experimental Sonora), composing music for films while also creating their own songs, thereby forging a new tradition of poetic song texts expressing inner reflections, desire, emotional experience, dreams, self-doubt, everyday hopes and beliefs (see Moore 2006). Over time these songs were given the name *nueva trova* (so contrasting them with the music of older black troubadours, known as *vieja trova*) and in 1972 became institutionalized within the politics of revolutionary culture by the young communist movement as an island-wide movement. The songs of both Rodríguez and Milanés so captured the zeitgeist of their times that despite the fact they had no media support, they became known throughout the Spanish-speaking world and beyond. Their songs became synonymous with the struggle for liberation in Nicaragua and El Salvador, and for freedom from military dictatorship in Spain, Chile, Argentina, influencing a new generation of songwriters.

In Nicaragua, before the Sandinistas' 1979 victory over the Somoza dictatorship, brothers Carlos and Luis Enrique Mejia Godoy's song 'Carabina – M1' (The M-1 Carbine) and other instructional songs were broadcast on clandestine guerrilla radio, cheerfully giving instructions to a scattered population, many of them illiterate, on how to clean and assemble their weapons and participate in the armed uprising. The Godoys' songs, captured on the record *Guitarra Armada: Music of the Sandinista Guerillas (*1979), were important as much for their stories and hymns for unity as for direct advice on how to make Molotov cocktails, and for the contact and solidarity they gave to isolated groups of fighters.

During the Sandinistas' period in power (1979–90), the *volcanto* (a fusion of 'volcano and song') movement was launched, symbolized by Luis Enrique's serenading song 'Yo soy de un pueblo sencillo' (I Am From a Small Country) and Carlos's 'Ay Nicaragua, Nicaraguita,' his love song to his newly liberated country. In Nicaragua, song was involved in much-needed literacy campaigns and educational projects, even in encouraging people to eat maize products when a US embargo caused a wheat shortage. In fact, the entire story of the Nicaraguan Revolution – from the guerrillas fighting behind the lines to the Sandinistas in power and their defeat at the ballot box – can be mapped in the work of the Mejia Godoys, who latterly turned their attention to indigenous Amerindian motifs. The April 1983 concert in the Nicaraguan capital entitled *Abríl en Managua: Concierto Para la Paz* (April in Managua: Peace Concert) brought together a host of key new song singers from ten countries, including Rodríguez and Sosa, who performed under a Sandino banner in a main square in Managua. The concert ends with Sosa first singing Leon Gieco's 'Solo la pidó a Díos': 'Solo le pido a Dios/ Que la guerra no me sea indiferente/Es un monstro grande y pisa fuerte/ Toda la pobre inocencia de la gente' ('I only ask God/Not to make me indifferent to war./ It is a great monster that tramples on/ All the poor innocence of the people'); and finally Daniel Toro and Ariel Petrocelli's 'Cuando tenga la tierra' (When You Have the Land), with her wild declamation of the lines 'Campesino, Cuando tenga la tierra/Le pondre la luna en el bolsillo' (Campesino, when you have the land /You will have the moon in your pocket).

In El Salvador, Yolocamba I-ta and Cutumay Camones composed lively revolutionary songs broadcast in favor of freedom fighters (e.g., Yolocamba I-ta's *Canto a la patria revolucionaria*). In Mexico, the work of Amparo Ochoa (*El cancionero popular*, 1975), Gabino Palomares and the group Los Folkloristas was influential (particularly Ochoa's interpretation of Palomares's song 'La maldición de Malinche'[The Curse of Malinche]), as were the new *corridos* of Judith Reyes. In Venezuela, new song was represented in the songs and voices of Soledad Bravo, Alí Primera and Gloria Martin. Primera became known as 'el cantor del pueblo' (the people's singer) with records such as *Vamos gente de mi tierra* (Let's Go, People of My Country), remaining popular until his untimely death in 1985. In the twenty-first century, Primera's songs have been used in various campaigns of President Hugo Chávez, and he was recognized posthumously as national heritage in 2005.

New Song and the Music Industry

New song found its home in live performance at concerts and festivals. The lack of involvement of major record companies in recording and distributing new song throughout Latin America and Spain meant that much of what was recorded was the result of other, often individual initiatives. Recordings made in national countries and by partner/supporters in Europe and North America capture many key events, with much of the funding coming from political sources or left-wing sympathizers. For example, Yolocamba I-ta's *Canto a la patria revolucionaria,* which was recorded in 1981 in Vancouver while they were on tour, was made possible by the Canadian Solidarity Movement and pressed and distributed in 1982 in the Netherlands with support from collective publisher Polypoepka and the El Salvador Komitee Nederland. Much music circulated privately on cassette recordings.

In Chile, the company Dicap (Discoteca del Cantar Popular) was set up by members of the Communist Party/JJCC Young Communists in the late 1960s, its beginnings coming from an initiative by the group Quilayapún, who wanted to press a record to take to an international youth festival, and who were lent money to finance the disc *Por Vietnam* (or *X Vietnam*), with distribution from Pathe Marconi EMI. Home sales were so positive that DICAP was established to record and promote the music of arts during the period of the Allende government. After the 1973 coup the Madrid-based company Movieplay and the French company Le Chant du Monde re-pressed music of the Allende period and new discs made by Chilean musicians. These were distributed throughout the world through the solidarity campaigns, with sales at festivals and concerts. In the later 1970s the small independent Alerce was established in Chile giving support to post-coup *canto nuevo* singers in the military period (for example, in the concerts it organized under the title 'La gran noche del folklore'). Alerce eventually became the recording company of Cuba's Silvio Rodríguez. In Cuba the state record company Egrem brought out key sets of discs by GESI and of Rodríguez and Milanés.

Legacy and Future

With democracy restored after dictatorships throughout most of the continent, the *nueva canción* movement, tied to an era of ideals and struggle and the years of survival under dictatorship, remains influential if less prominent. Among a new generation of musicians, Colombian superstar Juanes confesses to knowing Silvio Rodríguez' songs off by heart in his preteen years, seeing him as a formative influence in his own songwriting, which takes up issues of AIDS and landmines as well as migration, family, love and the concerns of everyday life.

The long-term integrity and commitment of those involved or related to the movement has not been in doubt. In the early 2000s, a number of musicians associated with the movement took up key cultural roles in their national governments. In Cuba, for example, Silvio Rodríguez has served three terms as a member of Cuba's People's Parliament, having in the difficult 1990s supported the island's music industry by helping finance and master-mind the building of the state-of-the-art Abdala recording studios. In Brazil, Gilberto Gil was Minister of Culture in the government of Luiz Inácio Lula (2003–08). In Panama, lawyer, film actor and consummate musician Rubén Blades, who brought new song concerns and values into New York *salsa*, notably through the disc *Buscando America* (Messidor LC 8393), stood for President in 1994 and was Minister of Tourism (2004–) in the government of Martín Torrijo. As Blades has said, 'It's easy to talk, it's another thing to take the risk and give up your comforts and try to do something. The point of Pablo Pueblo [one of his key early songs] was look how this man lives. The point of President Torrijo's government is to say, "Let's change the life of this man and his family: we've moved from protest to proposal"' (quoted in Gurza 2007).

Nueva Canción Chilena

Nueva canción chilena (Chilean New Song) is a vocal and instrumental genre that emerged in Chile in the mid-1960s in the context of movements for social and political change within the country and beyond. Part of a widespread development which saw similar musical trends develop in Argentina, Uruguay and Cuba in the 1960s, *nueva canción chilena* (hereafter NCC) differentiated itself from those trends by integrating influences from other Latin American countries to a greater and wider extent. NCC articulated influences from the vast Andean territory, from Argentinian *nuevo cancionero*, Uruguayan *canto popular*, Cuban *nueva trova* and the folk music of Colombia, Venezuela and Mexico. In this way, NCC musicians not only manifested the ideal of Latin American integration that was widely present in the 1960s, but also reflected the need felt by Chilean musicians to compensate for the lack of African-derived elements in Chilean culture and the minimal presence of Amerindian influences in Chilean folk music, two elements highly appreciated by NCC musicians.

Another way in which NCC differed from many other popular music genres in Latin America was that instead of developing from a long, marginalized and anonymous historical process, its existence was predicated on the work of specific authors living in Santiago and had become recognized as such within a few years of its inception, ca. 1966. As such, it had to generate its own production system. Because of this, NCC may be seen not as a genre so much as a musical movement, in which an innovative trend in song-making developed and was disseminated alongside social and political trends that were also innovative and progressive. This was a folk-rooted musical practice based on a political and social platform that had more to with propagation or propaganda than with broadcasting songs and artists. It placed ideological intervention above market concerns.

NCC received its name in 1969 after the first of three annual festivals of the *nueva canción* organized by disc jockey Ricardo García in Santiago, but the Latin American musical blending that was one of its basic features had already been developed by Violeta Parra (1917–67), beginning in the early 1960s in her work in Paris, Santiago and Concepción. For example, Parra's famous song 'Gracias a la vida' (Thanks to Life) is based on the *sirilla*, a 6/8 genre of Hispanic origin from the south of Chile, but it was composed and performed on the Bolivian *charango* (a small guitar-type instrument prevalent among indigenous and mestizo musicians in the Andes) which became Violeta Parra's trademark instrument at the time.

A second fundamental characteristic of NCC present from its early stages was its engagement with social content, which was given a political impulse by the election of the left-wing government of Salvador Allende in 1970. NCC's political orientation developed in the early 1970s with the support of universities, political parties and the government. With the military coup of September 1973 and the advent of a right-wing dictatorship under General Augusto Pinochet, NCC musicians went into exile, developing careers in Europe supported by an international movement that sympathized with the Chilean cause. With the return of democracy to Chile in the late 1980s, the exiled musicians also returned, giving back to the country all the experience and recognition they achieved abroad, but also finding a country with different social priorities and a new generation with different musical interests, more oriented toward rock and pop.

Historical Background and Early Development

When folk music of Hispanic origin was absorbed by the incipient musical industry of the 1920s, a mainstream Chilean genre, later called *música típica* (typical music), was born. The upper classes supported *música típica* because it represented the Western, Catholic and white heritage that they wanted to impose in the country. As urban immigration in Chile increased by the mid-twentieth century, *música típica* came to evoke the 'lost paradise' of the countryside. Meanwhile a new trend in folk music was being developed in Chile and elsewhere, a revival of old genres and repertoire from folklore, called in Chile *proyección folklórica* (folk projection).

The incorporation of remote genres into urban music practices in the *proyección folklórica* of the late 1950s introduced figures from rural and marginalized areas of Chilean society who were previously distant from the concerns of performers and listeners. Performers began to favor references to these types of subjects rather than focusing on autobiographical narratives or references to the listener. Such subjects were also absorbed into mass culture in the early 1960s by neofolklore, a musical trend based on vocal arrangements developed by the recording industry to *modernize* folk music for a new youth audience. In presenting such figures, often characterized by quaint, even strange customs, neofolklore revealed a social dimension with which Chilean popular music had hitherto only rarely engaged. NCC songwriters elaborated upon this dimension in songs such as 'Yo canto la diferencia' (I Sing the Difference) (1960) and 'La carta' (The Letter) (1963) by Violeta Parra; 'El arado' (The Plow) (1966), the first of Víctor Jara's epic songs; and *Sueño Americano* (Latin American Dream) (1966), Patricio Manns's conceptual album.

The movement for the integration of the Latin American continent, influential throughout the century at political, economic and cultural levels, manifested itself strongly in the 1950s and 1960s. This heightened the dissemination and adoption in Chile of music from other parts of Latin America and increased exposure in Chile to songs from all over the continent, especially those of Argentinian, Uruguayan and Cuban *cantautores* (singer-songwriters), such as Atahualpa Yupanqui, Daniel Viglietti and Silvio Rodríguez, who were themselves engaged in the renewal of the popular repertoire and traditional song-making of their countries. Venezuelan songs were also in circulation, and the impact of the movement to update Brazilian song through *bossa nova* and the up-and-coming MPB (Brazilian Popular Music) also began to be felt.

Latin American songs had arrived in Paris at a time when the French capital was becoming the European center for Latin American music. When Violeta Parra and her children Ángel and Isabel were living in Paris from 1961 to 1965, they became familiar with this repertoire and took it back to Chile upon their return. Also, the recording, broadcasting and stardom industries of the Southern Cone, which had already been interconnected for two decades, placed at the disposal of the new mass-mediated folklore a network of business people, radio stations, labels and record distributors. These bolstered the circulation of repertoire and local practices throughout the region, but with some difficulties within Chile (see below).

The first NCC ensembles appeared in 1965, at a time when the interest in neofolklore among Chilean youth was at its peak and the music was receiving good press and music industry support. In this environment, the folklore boom served to foster the early development of NCC ensembles. However, as these groups developed more explicit political agendas, and as the political climate within Chile became more polarized, with the country divided in three thirds – right, center and left – the media and much of the music industry ignored them in the late 1960s, leaving NCC musicians to seek to base their continued development on an alternative to the mainstream industry. Meanwhile, by 1968 the folklore boom in Chile had passed its peak, and the *balada romántica* (romantic pop song) and songs in English had reached their apex of popularity, with Italian, French, Spanish and Argentinian singers touring the country.

Aware of the obstacles to mass-market penetration, members of NCC groups maintained their status as university students and in this way received support from their academic and political environment. Both the expansion of NCC and the university reform process were fed by the expectations of change aroused by the program of 'Revolución en Libertad' (Revolution in Freedom) of the Christian-Democrat government of Eduardo Frei (1964–70). These expectations were expressed by the defense of Latin American cultural independence against the cultural uniformity perceived to be encouraged by the United States during the Cold War.

NCC proved itself too radical for Chile's media and music industry, which at that time had settled into a pattern of loyalty to repertoires that had become entrenched, such as *música típica*, or to new phenomena that originated within the music industry, such as neofolklore and the rockabilly trend of *nueva ola* (new wave). For these reasons, NCC not only received low coverage in the specialized press of the 1960s, but also attracted little airplay on radio and television, despite having its own label, Dicap (*Discoteca del Cantar Popular),* which was created by the youth section of the Chilean Communist Party in the late 1960s, and being well represented by EMI Odeon and the local label Demon.

However, even the handful of stations sympathetic to NCC could not ignore the immense popularity of the *balada romántica* in Chile, another obstacle to the dissemination of NCC within the country. By 1971, around 100 of the 134 radio stations in Chile were keeping their distance from President Salvador Allende's Unidad Popular government, an ally of NCC. This further restricted the dissemination of NCC, which was compelled to find its own way. It did so by developing new performance spaces, such as the *peñas folklóricas* (folk clubs); continuing to establish record labels; organizing song festivals; and obtaining funding from government and universities. These accomplishments were achieved with the support of left-wing sectors of society, as well as that of the university environment, where NCC's most loyal artists, fans and promoters could be found. In the early 1970s the fan base widened to include the working classes; later, during Chile's period of political exile (1973–88), it was to extend to a broader audience across Latin America, in the United States and in Europe.

The *peña folklórica* provided an intimate space in which the distance between the performer and the audience was minimized, as in Parisian cabarets of old. *Peñas folklóricas* were managed by the musicians themselves, as were the Chilean *casas de canto* (song houses) of the early twentieth century. They also existed at the universities, which resulted in the institutionalization of the *guitarreo*, a common student activity of getting together around the guitar to sing and play. The informal nature of the *peña folklórica* meant that musicians could interact with their audiences and try out new songs that might later be recorded. Ensembles would also visit the *peñas* in search of new repertoire, approaching the composers directly to ask them for songs that may have been debuted that very night. Some important *peñas* included the *Peña de los Parra in Santiago* (1965), the *Peña de Valparaíso* (1965) and the *Peña de la Universidad Técnica del Estado* also in Santiago (1966).

As of 1969, Dicap was also selling its releases at performances of its artists at *peñas folklóricas*, universities and labor unions, thus setting up an alternative distribution system that had no intermediaries and functioned parallel to the established record industry. Two years later, the label IRT (the nationalized form of RCA) began following the same model. Judging by the accounts of people who remember the peak period of NCC and by media reports of the day (González, Ohlsen and Rolle 2009, 110–11), Dicap had built up a constant flow of production and a wide distribution network by the early 1970s. In this way, because NCC was primarily disseminated through live performance and in cultural and political circles (rather than through commercial means), enjoyed little radio and television airplay and eschewed the star system in favor of the songsmith, it did not fit well into the concept of popular music as it had been conceived in the twentieth century. Instead, it was more akin to folkloric and art music, which were similarly restricted at the level of distribution.

The catalyst for the consolidation of NCC as a movement was provided by disc jockey Ricardo García, who decided to quit hosting the *Festival de la Canción de Viña del Mar* (1960) because he was unhappy with its commercial nature and its poor engagement with folklore. In 1969 García obtained funding from the Department of Cultural Activities at the Universidad Católica de Chile to organize the first NCC festival. There were two programs on separate stages, one in the gymnasium of the Catholic University and one in the Chile Stadium. This festival, which took place on three occasions up to 1971, was not associated with the music industry or the press, was not sponsored by any radio station, label or publication, and did not have industry representatives to vouch for it. These factors enabled the festival to break with the prevailing idea that song festivals ought to be competitive and commercial. Instead, it created an alternative platform for the professionalization of this music, which helped consolidate it as a movement that was to prove of central importance in the subsequent history of popular music in Chile and Latin America.

Musical and Lyrical Characteristics

NCC's development included input from both solo artists and instrumental groups. The solo artists composed their own songs and later came to be known as *cantautores* (singer-songwriters). They also performed each other's as well as songs by additional Chilean and Latin American singer-songwriters and from folklore. Chilean *cantautoría* (singing-songwriting) of the 1960s had its roots in rural peasant song and poetry, drawing from the Argentine and Uruguayan *cantautoría* of the time but also developing its own characteristics based on many different influences, local as well as from a number of Latin American countries, as we have seen. Along with Violeta Parra, the most important artists were

Patricio Manns (1937), who was also well known as a writer; Víctor Jara (1932–73), who was also a theater director and artistic director of NCC groups; Rolando Alarcón (1929–73), a school teacher and a folk researcher; Isabel Parra (b. 1939) and Ángel Parra (b. 1943), children of Violeta Parra and active promoters of NCC; and from the port city of Valparaíso, Osvaldo 'Gitano' Rodríguez (1943–96) and Gonzalo 'Payo' Grondona (b. 1945).

Violeta Parra and Víctor Jara came from different creative spheres but shared a common interest in imbuing popular music with Chilean and Latin American folklore, experimenting with language and intertwining music with drama and dance. Violeta Parra took the first step in the late 1950s with her five 'Anticuecas' for solo guitar, which incorporated a modern harmonic language, and her 12-minute-long 'El gavilán' for guitar and voice. Víctor Jara took the second step with 'Doncella encantada' (1962), an innovative dance piece for two guitars.

In their songs, Chilean *cantautores* made little use of local folk genres, instead delving into wider Latin American repertoire to find new genres that they could blend with total freedom. Familiar with the hegemonic 6/8 + 3/4 pattern from Chilean folklore, they adopted genres that had a similar meter, such as the Argentine *zamba,* the Paraguayan *guarania* and the Mexican *huapango*. Another characteristic feature of their songs was the use of Dorian, Aeolian and Mixolydian modes, also present in folklore. In addition, the links between Chile and Cuba in the 1970s allowed the *cantautores* to learn about Cuban genres, such as the *son* and the *guaracha*, and incorporate these into their songs. Both the Chilean *cantautores* and the NCC groups also broadened their repertoire with songs from the Mexican Revolution and the Spanish Civil War.

While Chilean *cantautores* supported and collaborated with one another and, because they lived off their work, were able to establish NCC as a professional option, NCC ensembles by contrast were student groups who only turned their work into a profession after they went into exile. The main ensembles of NCC were Quilapayún (formed in 1965), Inti-illimani (formed in 1967 at the Universidad Técnica del Estado during the reform process), Aparcoa (1966), Amerindios (1969) and Illapu (1970) from Antofagasta. Most of their names are in indigenous languages as an expression of empathy with the native peoples of Latin America. All of them wore *ponchos*, a distinctive clothing of the native people of the Americas. These groups participated in a circuit of university folk clubs, university theaters and political meetings. For the first time, radio shows – still active in Chile in the late 1960s, but with a format related to the star system – were not an option for a Chilean band.

The histories of each of these groups were intertwined with that of the NCC and involved permanent dialogues with the *cantautores* in terms of aesthetics, ideology and production. NCC groups were supported by the professional *cantautores*, who served as their artistic directors and taught them to play Latin American instruments and songs, and by composers who wrote and arranged for them. Some of the groups' members were music students, placing an emphasis on the development of the instrumental side of the music and the arrangements and constantly pursuing innovation and diversity. Group members managed their own artistic careers, placing political and artistic interests above commercial ones.

The NCC groups injected new energy into folklore-based popular music in Chile, taking neofolklore's use of the guitar to new levels and adding many Latin American instruments to their ensemble, with a clear Andean primacy. They used cordophones such as the Bolivian *charango* (ten double-string lute), Colombian *tiple* (guitar with four triple strings), Venezuelan *cuatro* (small guitar with four single strings) and Mexican *guitarrón* (large guitar with six single strings used as double bass)*;* aerophones such as the Andean *quena* (end-notch flute) and *zampoña* (double panpipe) and Ecuadorean *rondador* (single panpipe); and membranophones and idiophones from all over Latin America.

Though the Andean region encompasses a wide variety of local cultures and languages, the Andean mountains themselves have served as a natural path to integrate that diversity. This first happened during the Inca Empire (1438–1533), which built roads to link its expansive territories; and then during the Spanish colonial era (1533–1810), whose rulers used the same Inca roads to administer their own empire. In time, these roads would also allow interaction among dominated Andean cultures. The Inca and the Spanish thus transformed the Andes into the dorsal spine of South America, through which both Quechua and Catholic influences spread. These influences come from the common threads of the music and culture of a vast region, which covers the north of Chile and Argentina, most of Bolivia, Peru and Ecuador, and the south of Colombia. As a consequence, throughout this whole area we find descending pentatonic scales, predominant binary rhythms, speeding cadential tempos, common indigenous, mestizo and Western instruments, the practice of Carnival, and the worship of the Virgin Mary and patron saints.

The features of Andean music running through NCC symbolized social and cultural unity in Latin America and the championing of indigenous expression. For international audiences, Andean music acted as a major signifier of Latin America in general and little by little it came to be adopted by the NCC groups. A *charango*, a *bombo* (Argentinian bass drum) and a *quena* were all that was needed to play a vast repertoire that drew nations together and demonstrated solidarity with those excluded from modernity. What is more, Andean music served as the central core of Latin American music as a whole in terms of its performance in Europe or the United States to a public interested in the traditions of the continent.

The vocal ensemble of NCC was more robust and had a more homophonic texture than that of neofolklore since it did away with the soloist, in this way creating a collective and cohesive sound that reflected the concept of unity of the people promoted by the NCC groups. Just as neofolklore groups such as Los Cuatro Cuartos and Las Cuatro Brujas from the early 1960s became known for their vocal arrangements, NCC groups became known for their instrumental arrangements. Their members not only played the many different Latin American instruments named above, they also used them in two ways: by following traditional practice and by exploring new uses and sonorities. In this way, the ensembles – following the lead of Violeta Parra and Víctor Jara – developed fusions of Latin American practices, genres and instruments to produce the distinctive sound that constituted an important aspect of NCC's legacy.

Jara's instrumental work 'La partida' (The Farewell) for instance, recorded by Inti-illimani in 1972, is scored for *quena*, *charango*, two *tiples*, two standard guitars, *bombo*, tambourine, maracas, claves and tubular bells, mainly instruments of Andean, Creole and Caribbean origins. Jara also uses this unusual blending of instruments from different cultural settings in a non-idiomatic fashion. In this work, we find harmonic pedals and chromatic harmony, and the use of harmony as instrumental color. This modernist impulse in the development of a popular music with folk roots is another central feature of NCC thoroughly developed by groups such as Quilapayún in the 1980s.

As early as 1966, Patricio Manns, in his position as writer and analyst of the Chilean musical scene in the press, took on the task of elucidating the principles that were NCC's main source of inspiration, and published a sort of manifesto in the youth magazine *Ritmo*. In his text, Manns proclaimed the importance of improving the quality of songs being written within the country and endorsed a new movement in Chilean music that would work toward this goal. Manns called for songs to exhibit greater depth and meaning, but without compromising the new opportunities created by the commercial success of neofolklore. Singers were admonished to turn their gaze to their surroundings in order to take up topics specific to Chile.

The emphasis on the poetic quality of the songs encouraged NCC musicians to set existing Chilean and Latin American poetry to music, but also to write lyrics of poetic content themselves. They continued the focus on rural and marginalized figures who had been a central feature of neofolklore, but placed greater emphasis on details of their marginalized condition. The setting of the song moved to the extremes of the country, a land of inclement weather, and into the outskirts of the city. In those extreme settings, a working-class or a mestizo subject was presented struggling for better living conditions. NCC musicians also wrote love songs, articulating love and social commitment, and songs engaging with the political issues of their time.

Relationships

The NCC movement was also involved in theater and the visual arts, developing its own progressive aesthetic within mass culture. Graphic design acquired new social meaning with the development of posters that became collectibles within youth culture, incorporating references to Californian hippie culture and Cuban political pamphlets. In Chile, one important graphic arts workshop was that of Vicente and Antonio Larrea, who, between 1967 and 1973 produced approximately 120 record covers for Dicap, 300 poster designs and numerous photographs of NCC artists, giving expression to their new style of design. This style incorporated elements of Pop Art, Psychedelic Art, Social Realism and high-contrast photography, as well as local influences including political muralism, primitive xylographic designs and historical photography.

As part of its mingling with the artistic world, a central element to understanding the NCC phenomenon was the relationship that it established between popular musicians and conservatory-trained composers, be it in the form of mutual learning opportunities or ideological commonalities. The focal point of this intersection was the Escuela Musical Vespertina (Vespers Music School) of the University of Chile (1966–73). People of all ages with no prior musical education could attend classes given by the main composers of the time. Material that normally took long years of study at the conservatory was taught intensively at the Escuela Musical Vespertina, in accordance with popular musicians' ability to learn quickly and with their status as mature students.

Eager to broaden their audiences and incorporate elements into their music that would link them with society in a more direct manner, three Chilean composers of the mid-twentieth-century generation – Gustavo Becerra (1925–2010), Luis Advis (1935–2004) and Sergio Ortega (1938–2003) – entered into productive relationships with NCC. In the late 1960s these composers began producing large-scale popular works, often in collaboration with NCC groups. The performance of these works allowed for new levels of interaction between the oral and the written and between the creative process and performance, establishing a new means of working that has continued to be used in Chile into the twenty-first century.

The preferred format for these works was the revived Italian secular cantata of the end of the seventeenth century – with its arias, duets, recitatives and choral textures – which had been brought back by Neoclassical composers of the 1920s. Thus, at the end of the 1960s, a process began that brought an antiquated musical form, already revived by concert music, closer to popular music, using it to relate historical events and pay tribute to well-known figures within the artistic and political worlds. The first of these works, and the most important because of its staying power and subsequent influence, was the cantata *Santa María del Iquique* (1970) by Luis Advis and the group Quilapayún. Other major works included *Canto general* (1970), a setting of Pablo Neruda texts by the group Aparcoa; *La fragua* (The Forge [1972]) by Sergio Ortega; and *Canto para una semilla* (Song for a Seed [1972]) by Luis Advis, based on texts by Violeta Parra, performed by Inti-illimani and Isabel Parra.

Within this climate of affiliation with art, popular musicians moved decisively toward the creation of instrumental music with high levels of sophistication. Three factors came together in the rise of instrumental music within the context of NCC: the existence of instrumental music in Andean culture, which fed strongly into the NCC movement, as we have seen, and appeared in the work of Violeta Parra and Víctor Jara; the use of instrumental music as incidental music for theater and dance; and the exploration of the possibilities of the guitar, NCC's central instrument.

Because of its receptiveness to songs from all over Latin America and its affinity with the world of art, NCC acquired cultural and learned overtones. This, along with its links with oppositional political ideologies of the 1960s, attracted the attention of intellectual circles, both within Chile and abroad. In this way, even though NCC did not achieve mass acceptance in the way *música típica* did, for example, with the passage of time it became the source of more written discourse and reflection than any other popular music of Chile.

Scholarship

From the book by Fernando Barraza (1972) to this Encyclopedia, several articles, dissertations, and autobiographic, journalistic and academic books have been published in Chile, France, Great Britain, United States, Spain, Italy and elsewhere on Chilean New Song and its artists. Musicology, history, sociology, cultural studies, literature and journalism have joined in an effort to elucidate the musical, literary, social, political, cultural and historical features of NCC. Figures such as Violeta Parra and Víctor Jara have been the most studied both in Chile and abroad during the exile and after the return of democracy.

A comprehensive study of the life and musical style of Víctor Jara was published in a collective book (Acevedo et al. 1996), while some articles published by *Revista Musical Chilena* since the 1990s include musical analytical approaches to the work of Violeta Parra. Books on the other NCC artists, such as Quilapayún (Carrasco 1988), Inti-illimani (Cifuentes 1989) and Isabel Parra (Parra 2003), are mostly autobiographical. A musical study of the features of NCC was published by Luis Advis (1998) and studies on its relation to art music, rock and folklore were published by Becerra (1985), Salas (2003) and González et al. (2009) respectively. Studies on the industry that supported NCC are found in Bravo et al. (2009), Castillo et al. (2006), González et al. (2009) and Larrea et al. (1997).

Later Developments

The military coup of 1973 led to the death of Víctor Jara as a prisoner in the Chile Stadium of Santiago (a gymnasium, since 2004 called Víctor Jara Stadium) and the exile of all other NCC artists. Until the late 1970s, these artists engaged in political activism abroad and fully expected to return home. New groups were created, but they did not last long. By the early 1980s, the exiled NCC artists, especially the Parra brothers and Quilapayún in France and Inti-illimani in Italy had begun to 'unpack their bags' and integrate into the European circuit. In this way, they continued to work on the project of developing and renewing folklore that they had begun in Chile, and in so doing reached high levels of artistic development.

During their exile in Europe (1973–89), Inti-illimani and Quilapayún continued the process of extending folk roots, begun in Chile in the early 1960s, by incorporating Mediterranean influences, especially from Italy and Spain, into the mix. This unexpected expansion of Latin American roots, emphasizing the search for universals of folklore (something that ethnomusicology had already tried to systematize in the 1970s), needed to be justified only to the musicians themselves and not to the far-away Chilean public. Both Inti-illimani and Quilapayun augmented their own repertoires, inviting classical and popular musicians to create, perform and record with them. These groups achieved full recognition in the European scene of the 1980s, doing so with the support of an international audience base that sympathized with the Chilean political cause, and to which the musicians offered their synthesis of Latin American music and highly professional performances. The theme of exile entered their repertoire in songs such as 'Vuelvo' (I'm Coming Back) by Inti-illimani, 'Ni toda la tierra entera' (Not Even the Whole Earth) by Isabel Parra, 'Cuando me acuerdo de mi país' (When I Remember My Country) by Patricio Manns and 'Vuelvo para vivir' (I'm Coming Back to Live Here), by Illapu.

With the end of Pinochet's dictatorship in 1988, most of these exiled artists returned to Chile, where they were warmly received by their home audience and reintegrated into Chile's cultural life. However, new social, cultural and political scenarios and the changed musical orientations of the new generation (more toward pop-rock) left NCC singer-songwriters and groups without the media coverage and the public attention that they deserved. The new century brought an unexpected situation for the two main NCC groups: a division due to internal conflicts. One part of Quilapayún remained in Paris and the other in Santiago. All Inti-illimani musicians remained in Chile, but they too were divided, in two groups: Inti-illimani and Inti-illimani histórico (Historical Inti-illimani).

A new way of understanding folk roots was to mark the renewal of the national music scene in the first decade of the twenty-first century, continuing the trend of Chilean musicians and public of incorporating world music into their practice and consumption. Those responsible were a third generation of Chilean singer-songwriters, who came on the scene in the 1990s, such as Francisco Villa (b. 1967), Manuel Garcia (b. 1970), Chinoy (b. 1983), Nano Stern (b. 1985) and Camila Moreno (b. 1985), among others. For these *cantautores*, folk roots do not need their own particular land or soil; rather they are *hydroponically* fed by a mediated and universal folklore. With this generation, roots began to be a personal choice rather than a collective heritage, generating social networks of personal choices that find in music its most effective medium to knit communities from margins and divergence.

JUAN PABLO GONZÁLEZ

Nuevo Cancionero (Argentina)

The Movimiento del Nuevo Cancionero (New Songbook Movement) originated in Argentina in the early 1960s, leading to the creation of music that was widely disseminated in subsequent decades to the rest of Latin America and the Caribbean. The movement was initiated by a group of poets and musicians, joined later by singer-songwriters and folklore-oriented groups. Movements with similar characteristics appeared in Uruguay and Chile (*nueva canción chilena*); in Paraguay, Nicaragua and Mexico there emerged the so-called *canción testimonial* and in Cuba the *nueva trova*. All these movements shared an opposition to musical production that followed the logic of pure commercialism and expressed a left-wing ideological posture within the historical context of revolutionary movements in Latin America during the twentieth century.

In Argentina, the historical context in which the *nuevo cancionero* movement developed was marked by the ideological struggle between diverse social groups with opposing views about the country's economical and political future, a struggle which crossed over into the intellectual and cultural spheres. It was also a period in which, internationally, the effects of the Cold War had repercussions in Latin America. In the mid-1970s in Argentina, the political struggle resulted in a violent escalation, ending in a new *coup d'état* that brought to power a right-wing military dictatorship, which ruled from 1976 to 1983. During this period, the majority of the musicians who represented the *nuevo cancionero* movement and were involved in political activities suffered from systematic censorship and persecution, which led them to exile in various European countries.

The Goals of *Nuevo Cancionero*

In 1963 in the town of Mendoza, a group of Argentinian musicians, poets and composers wrote and published the *Manifiesto Fundacional del Movimiento del Nuevo Cancionero* (Manifesto for the Foundation of the *Nuevo Cancionero* Movement). In this document they articulated their position in favor of the defense of freedom of expression and formulated the basis for the renovation of popular music, exhorting artists and intellectuals to work together to find better means of aesthetic expression. The *Manifiesto* envisions 'la búsqueda de una música nacional de raíz popular, que exprese al país en su totalidad humana regional' ('the search for a national music with popular roots that expresses the country in its human and regional totality'). The search was to include subjects that reflected the sociocultural and political reality of the Latin American citizen of that time, with an emphasis on national and popular issues.

In the *Manifiesto*, the group criticized the so-called '*nueva ola*' (new wave) music that was currently being produced by the recording and television industry. From the perspective of the *nuevo cancionero* movement, *nueva ola*, which was strongly influenced by Western rock and pop, demonstrated a banal life style disconnected from the political militancy of young people that was characteristic of the 1960s and 1970s.

Members of the *nuevo cancionero* group included musicians Oscar Matus, Mercedes Sosa, Tito Francia and poets Armando Tejada Gómez, Pedro Tusoli and Eduardo Aragón among others. They were joined later by other poets and musicians, among them Hamlet Lima Quintana, Ariel Petrocelli, Antonio Nella Castro, Ramón Navarro, Daniel Toro, César Isella, Horacio Guarany, Chito Zeballos, Dúo Salteño, Gustavo Leguizamón and Manuel Castilla. During the years of the military dictatorship many of these artists, who were political activists and were deeply involved in and affiliated with the Communist party, disseminated the politically charged 'canción testimonial' (testimonial song), which was representative of the policies of the movement, in solidarity concerts in Bolivia, Peru, Nicaragua, Guatemala, Cuba, El Salvador, Russia, Germany, France, Holland, Sweden and Italy. Among the Argentinian singers and composers admired for their continued expression of the testimonial song genre are León Gieco and Víctor Heredia.

Stylistic Features

In terms of composition, *nuevo cancionero* musicians chose to break away from the inherited molds of traditional folkloric music, which, although respected as part of the people's culture, they considered outdated. The new movement provided the opportunity to explore new harmonies and instrumental ensembles in ways that demonstrated a convergence between traditional and modern elements.

In the subjects it explored *nuevo cancionero* turned its gaze upon those sectors of society that had been absent in the *tango* of Buenos Aires or in traditional folklore. The texts explicitly denounced child labor and the exploitation of *zafra* (sugar cane) workers, miners, lumberjacks, artisans and fishermen who represented the invisible majorities in the inland provinces of the country and who were ignored by state policies and isolated by the metropolis and the mass media. Songs about these issues included Tejada Gómez and Matus's 'La zafrera' (The [female] Harvester) and 'Los hombres del río'(The River Men) (both recorded by Mercedes Sosa in 1961, predating the *Manifiesto*), Antonio Nella Castro and Hilda Herrera's 'Zamba del Chaguanco' (also recorded by Sosa) and Aníbal Sampayo's 'Peoncito del mandiocal'(The Little Peon of the Cassava Plantation) (recorded by Jorge Cafrune and by Chilean musicians Víctor Jara and Quilapayún, among others).

Not only was it viewed as necessary to renovate poetic and musical aspects through the *nuevo cancionero*, but singing itself also became a strategy to defend the constitutional freedom and right to free expression that was silenced by the military dictatorships affecting the entire region, in Argentina and beyond. Composers who were close to the movement referenced the guerrillas and land reform or decried their enforced clandestinity. Examples include Atahualpa Yupanqui's 'Le tengo rabia al silencio' (I Am Angry at the Silence), Horacio Guarany's 'Si se calla el cantor' (If the Singer Falls Silent) and Daniel Viglietti's 'A desalambrar' (Take Down the Fences), 'Canción nueva,' 'Declaración de amor a Nicaragua' (Declaration of Love For Nicaragua) and 'Canto libre.' In addition, the poems from many countries that fitted the movement's ideals – by, for example, Pablo Neruda, José Martí, Miguel Hernández, Nicomedes Santa Cruz and Mario Benedetti – were set to music and spread all over the world. These artists shared their political activism in defense of the ideologies of Latin American liberation and most of them were members of the Communist Party.

Musically, the *nueva canción* genre, in its various local manifestations throughout Latin America, employed the characteristic rhythms of Argentina, Chile, Uruguay, Bolivia, Peru (*zamba, milonga, chacarera, wayno, cuecas, candombe, tonada*) and the Caribbean (*son*, *guaracha* and *guajira*). In *nuevo cancionero,* for the first time, songs outside of the folk and indigenous traditions also included the aboriginal languages of the region (Toba, Guaraní, Quechua, Aymara and Mapuche). In addition, both Argentinian *nuevo cancionero* groups such as Huerque Mapu and *nueva canción chilena* groups such as Quilapayún and Inti-illimani 'rescued' the vernacular instruments of the indigenous and *criollo* populations of their countries, including, for example, *quena* and *pincullo* (both Andean flutes), *rondador* (panpipes from Ecuador), *moxeño* (Bolivian flute), *charango* (Andean lute), *guitarrón* (Mexican guitar), *cuatro venezolano* (Venezuelan guitar), along with other instruments including the Cuban *tiple*, the harmonica and the Paraguayan harp. Forms that allow for more extended narration, such as the cantata and the mass, also become fashionable. Examples from Argentina include Huerque Mapu's 'Cantata montonera' and Félix Luna and Ariel Ramírez' 'Cantata sudamericana' (1971, recorded by Mercedes Sosa in 1972).

Conclusion

The *nuevo cancionero* movement took on continental dimensions. For example, the *nueva canción chilena*, represented by Víctor Jara, Ángel and Isabel Parra, Luis Advis, and influenced by Violeta Parra, was closely linked to the Argentinian phenomenon. Festivals were held in those countries where the best exponents of Latin American popular song were found, resulting in recordings and mass media diffusion. In the 1980s and 1990s in Argentina, singer-songwriters Víctor Heredia and León Gieco, both of whom had been the victims of censorship and persecution, reemerged, continuing the composition of songs in the spirit of social commitment, also becoming strongly connected to Mercedes Sosa. The songs of these and others fill the repertoire created by the *nuevo cancionero* movement, which continues to be relevant in the twenty-first century, thanks to its ability to become an obligatory referent to express feelings against neoliberal capitalism and to show support for ideas of equal distribution of wealth. In addition, these are emblematic songs in mobilizations around social and cultural issues, as well as symbols of the memory of those who died or disappeared for their political militancy during the dictatorships that plagued South America in the 1970s.

NANCY M. SÁNCHEZ (TRANSLATED BY
ZUZANA PICK WITH PAMELA NARBONA JEREZ)

Nuevo Cancionero (Paraguay)

Highly cultivated in the 1970s and 1980s and developed in stylistic parallel with the Argentine *nuevo cancionero* (new songbook) and Chilean *nueva canción* (new song) which inspired it, the Paraguayan *nuevo cancionero* movement denounced social injustice and oppression through texts set to the music of the various Paraguayan traditional musical genres – *guarania, polca canción, rasguido doble* – as well as other forms such as the ballad and the march. While some performers choose to explain the *nuevo cancionero* as a musical genre in and of itself, others view it as part of a larger Latin American movement propagating a voice of social protest.

From the mid-1970s to the late 1980s, texts by Paraguayan intellectuals and poets such as José Luis Appleyard (1927–98), Juan Manuel Marcos (b. 1950), Augusto Roa Bastos (1917–2005), Elvio Romero (1926–2004), Rudi Torga (1938–2002) and Carlos Villagra Marsal (b. 1932) were set to music by harpist César Cataldo (b. 1951), and singer-songwriters Rolando Chaparro (b. 1965), Félix Roberto ‘Maneco’ Galeano (1945–80), Jorge Garbett (b. 1954), Carlos Noguera (b. 1950), Guillermo Sequera (b. 1948) and others. Texts by Maneco Galeano and Carlos Noguera epitomized the essence of the Paraguayan *nuevo cancionero*. For calling out against the social injustice that characterized Paraguayan society during the dictatorship of President Alfredo Stroessner (1912–2006) and promoting change within the hearts of the people, two songs in particular, ‘Despertar’ (Awakening) by Galeano and ‘Canto de esperanza’ (Song of Hope) by Noguera, have become representative pieces of the repertoire. Galeano and Noguera also co-composed ‘Al caído en la víspera’ (To the Fallen [One] on this Eve), later known as ‘Víctor libre’ (Free Victor), a composition dedicated to Chilean *nueva canción* singer-songwriter Víctor Jara, who was murdered in 1973 during the *coup d'état* in Chile. In the midst of police control and government regulations, *nuevo cancionero* musicians performed at popular music festivals sponsored by university student organizations or young adult groups within the Catholic Church. Frequently, these popular festivals were canceled before or in the middle of performances.

Paying tribute to the figure of Maneco Galeano and his contribution to the Paraguayan repertoire, Juan Manuel Marcos published a study and an analysis of the singer-songwriter, which recognizes at least four major aspects of his literary output: lyricism, epic themes, satire and pictorial or descriptive subjects (Marcos 1995, 7). Although the chosen group of texts exemplifies the work of Galeano, they also reflect the approach and source of inspiration of other Paraguayan poets and composers working within the *nuevo cancionero* movement. Juglares, Sembrador, Vocal dos and other musical groups that embraced the movement employed traditional folk instruments from Paraguay and Latin America (accordion, *bandoneón*, *bombo leguero*, *charango*, guitar, panpipes and Paraguayan harp), as well as others such as violin, cello, electric guitar and bass, drums and synthesizers. Throughout the 1970s and 1980s, Paraguayan *nuevo cancionero* songs served as the voice of college students and young professionals who witnessed and wished to express concern over the social unrest and political distress of the times in Paraguay. The movement essentially dissolved after 1989, when a *coup d'état* ended the 35 years of military government, forcing President Stroessner into exile. In the early twenty-first century some groups, such as Vocal Dos, continue to participate in folk music festivals and give recitals benefiting social causes or paying tribute to popular musicians.

ALFREDO COLMAN

Nyabinghi

Nyabinghi is primarily a drum and vocal music of the Jamaican Rastafarian religion that started in Jamaica in the 1930s. Nyabinghi music, which emerged in the 1940s, provided the Rastafarian religion with its own neo-African form of music for spiritual and religious functions, and it was also influential in the emergence and development of ska and reggae (see, for example, Clarke 1980, 36, 52–70; White 1984, 64–5). Jamaican Rastafarian drummer Oswald 'Count Ossie' Williams and other musicians created nyabinghi by combining elements from existing traditional and popular musics with a central role devoted to African-derived ensemble drumming. Nyabinghi drumming has been featured on some Jamaican recordings which achieved significant public prominence, notably the Folkes Brothers' 'Oh Carolina' (1960), the first recording to expose Rastafarian drumming to a mainstream audience. Since the 1990s, nyabinghi-influenced drumming has been featured in dancehall recordings by Anthony B (Keith Blair) and others, but nyabinghi itself has never become an internationally popular style in its own right.

Background and Origins

Rastafarianism is both a belief system and a social movement. It is rooted in Ethiopianism (an ideological movement based on biblical portrayals of Egypt and Ethiopia as the source of human civilization), the Pan-Africanist philosophy of the influential

Jamaica-born writer and orator Marcus Garvey, and many Christian elements (Barrett 1977a, 76–80). Its principle tenet is that Ethiopian Emperor Haile Selassie was God incarnate (see bibliography for analyses of Rastafarianism). In 1930, Ras Tafari was crowned emperor of Ethiopia, and took on the name 'Haile Selassie' (might of the Trinity) (Barrett 1977a, 80). Between 1930 and 1933, four of Garvey's followers (Leonard Howell, Joseph Hibbert, Archibald Dunkley and Robert Hinds) founded separate groups claiming to have received information that Haile Selassie was the Messiah of black people. They began to develop what became Rastafarianism, a blend of Garvey's ideology with Christian fundamentalist beliefs (Barrett 1977a, 81, 4).

When Rastafarianism began in the 1930s in the hills of St. Catherine Parish, east of the capital city of Kingston, Rastas (i.e., Rastafarians) had no unique music (Reckford 1977, 7). They sang Pukkumina/Revival hymns (a Jamaican syncretic mixture of Christian hymns with dominant neo-African performance practices) accompanied by hand-clapping, shakers and rhumba boxes, but many Rastas were uncomfortable with the European style of these hymns (Reckford 1977, 7). Most were Jamaican adaptations chosen from the mass of late nineteenth-century Protestant hymnody, some of it with roots back to the eighteenth-century British hymn writers such as Isaac Watts and Charles Wesley, others with origins in the plethora of US revival movements such as that led by Dwight Moody and Ira Sankey (Miller 1989, 406).

Rastafarian music emerged in the 1940s with Rasta drummer Count Ossie cited most frequently as the central inspiration for what became its musical and ideological features (Katz 2003). When first created, Rastafarian music had no name and was simply called 'Rasta music.'

The origins of the term 'nyabinghi' are obscure. According to Barrett (1977a, 121), it was the name of an East African religio-political cult (from an unidentified country) that resisted colonial domination between the late 1800s and the late 1920s, but there is no agreement about the true meaning of the term or its actual origins. Sometime between 1930 and 1950 the term was first used in Jamaica to name weekly or monthly Rastafarian meetings held to discuss and solve problems, usually beginning with prayers and chants. By the mid-1970s the term 'nyabinghi' had emerged to refer to a number of related Rastafarian ideas, including a religious gathering (similar to a convention, lasting from 1 to 7 days, also called a grounation). The word was also thought by some to mean 'death to the black and white oppressors.' Its application to the music and dance performed at grounations did not appear until sometime in the early 1980s. At this time, for no documented reason, 'nyabinghi' came to refer to both Rasta music and dance; 'grounation' became the preferred term to refer to Rasta meetings and large gatherings.

To create nyabinghi music, Count Ossie combined Buru (or Burru) drumming (a neo-African style practiced in St Catherine Parish) with Kumina music (a Jamaican adaptation of West African religion and ritual practices). He also added elements from jazz, mento and Jonkonnu – a Jamaican neo-African music and dance tradition that combines parading, miming, fife and drums, synthesizing elements from West African harvest festivals and British Mumming traditions practiced during the Christmas season (Ryman 1984a, 1984b; White 1984, 63–4; Wynter 1970). By the early 1950s, however, nyabinghi possessed both Kumina and Buru characteristics, but was more than simply the sum of these parts; it had become a new style of its own (Bilby 1995, 162–3).

In the 1950s and early 1960s Count Ossie and his drummers performed at grounations, community events and public venues, mostly in Kingston's Trenchtown area. These performances were attended by many musicians who became prominent in the emergence of ska, rocksteady and reggae. Musicians cite these performances – which often turned into late-night jam sessions – as seminal in the development of ska (see, for example, Foehr 2000, 88–91; Reckford 1977, 1998; Neely 2008, 11, 302; White 1982b, 39; 1984, 57–8, 62–4).

Musical Characteristics

Early nyabinghi music consisted primarily of singing accompanied by hand drums. In the 1950s guitar, wind instruments, bass and drum set were incorporated (Carbone 2007). Count Ossie's Trenchtown jam sessions often included saxophone, trumpet, trombone, guitars, harmonica, graters and other percussion (Reckford 1977, 3).

Nyabinghi hand drums were adapted from three Buru instruments. While there are few detailed accounts of Buru music in the literature, it is generally believed to be a Jamaican version of West African hand drumming. Musicologists note that Buru rhythmic patterns are often identical to those found in Revival drumming and nyabinghi, the drums themselves are virtually identical to nyabinghi drums, and the same names are used. Some commentators claim that Buru drums, themselves, are Jamaican versions of Ghanaian Ashanti talking drums: *atumpan* (high lead), *apentemma* (alto) and *petia* (bass) (White 1982a, 27; Foehr 2001, 44). The three corresponding nyabinghi drums are repeater (high-pitched), fundeh (mid-pitched) and bass drum (low-pitched). The fundeh plays a steady 'heartbeat' pattern, in two variations: (a) 'churchical' (see Example 1) for religious chants and (b) 'heartical' (see Example 2) – for secular songs.

Example 1: Churchical pattern

Example 2: Heartical pattern

The bass drum plays fundeh *ostinato* patterns with rhythmic variations. The repeater has total rhythmic freedom, playing complex counter-rhythms with many timbral variations (Reckford 1977, 8).

Drum patterns and performance styles are interpreted symbolically. The bass drum represents the beating down of oppression. The repeater defies or protests against the rigid bass pattern, and the fundeh's regularity is a balance between these two – a rational 'head' that keeps the peace by playing figures influenced by the other two drums (Reckford 1977, 8–10; 1998, 244–5, 249). Offbeats, or 'afterbeats,' are generally played louder than onbeats, along with consistent accents. Jamaican musicologist Garth White and American musicologist and reggae bassist Luke Ehrlich suggest using 'afterbeat' instead of 'offbeat' for the consistently accented sounds that appear in-between beats in Jamaican folk, religious and popular music (White 1982c, 38; Ehrlich 1982, 55). Afterbeats range from single pitches to full chords, and they sustain the harmony of the preceding beat rather than anticipating the harmony of the following beat (see 'Reggae' entry for a detailed rationale for using 'afterbeat' instead of other terms). A notable characteristic of afterbeats is that they are consistently louder and heavier than sounds on the beats; see Example 3.

Example 3: Afterbeat accents

Nyabinghi afterbeat accents are displayed in dance and movement styles (discussed below) and are characterized by short, percussive sounds performed by instruments or voices.

Most nyabinghi songs are either based on Revival hymns or composed in a similar style employing neo-African rhythms, call-and-response refrains and open-ended, interactive structures (McCarthy 2007, 164). Most lyrics are adapted from, or similar to, the Christian hymns upon which most songs are derived, with an emphasis on Jamaican Creole linguistic expressions and Rastafarian imagery and metaphors. Adapted songs are often truncated and involve the repetition of short phrases along with the addition of improvisatory West African-styled ornamentation, asides and responses – a mixture of spontaneity and an underlying plan (Witmer 1995, 28). In terms of vocal style, the timbre, rhythmic and melodic approach is distinctly non-European, showing influences from West African, African-American and Jamaican folk practices, dominated by overlapping parts performed in a communal, participatory manner. Melodies utilize the major hexatonic scale (without the leading tone), major and minor pentatonic scales and the diatonic major scale (Rouse 2000, 234–8).

In the late 1950s and early 1960s some of the earliest Jamaican popular music recordings used the heartical groove and nyabinghi percussion (Barrow and Dalton 2001, 24; Hebdige 1990, 58–61; Katz 2003, 34; White 1984, 64–5). Also, the Folkes Brothers' 'Oh Carolina' (1960) – featuring Count Ossie performing Buru drumming – was popular at DJ dances. The success of these recordings paved the way for others to proclaim an African musical identity (Katz 2003, 34; see also Bradley 2000, 61–3).

The 1970s and 1980s saw releases by Count Ossie and the Mystical Revelation of Rastafari (*Grounation* – 1973), The Light of Saba (*The Light of Saba* – 1974) and Ras Michael and the Sons of Negus (*Peace and Love + Nyahbinghi* – 1974), although none of these recordings achieved mainstream exposure or significant commercial success. In the 1990s dancehall artists Anthony B (Keith Blair), Buju Banton (Mark Anthony Myrie), Capleton (Clifton George Bailey), Luciano (Jepther McClymont), Prezident Brown (Fitzroy Cotterell) and Sizzla (Manuel Collins) all released recordings that featured nyabinghi-influenced drumming and achieved strong mainstream exposure and commercial success (see Discographical References for representative recordings). One of the biggest international successes was a remake of 'Oh Carolina' by Shaggy (Orville Richard Burrell) in 1993.

Nyabinghi Dancing

Nyabinghi movements – exemplified by Bob Marley's performance style – include emphatic footwork; jerky, taut, arm movements; hopping, stamping and abrupt turns; shifting of weight from leg to leg; and sudden stops/starts, abrupt breaks and fierce mime (Wynter 1970, 47; Ryman 1979, 13).

Like drumming patterns, movements are symbolic. Dance ethnologist Thomas Pinnock, who specializes in West African and Caribbean practices, interprets the shifting of weight and leaping as the depiction of an African hunter stalking his prey or throwing a spear at his enemies, then signaling his victory by twirling on one foot while defying gravity – a representation of a Rasta warrior defending himself and his family against evil Rastafarian enemies (Pinnock 2002, 98, 100).

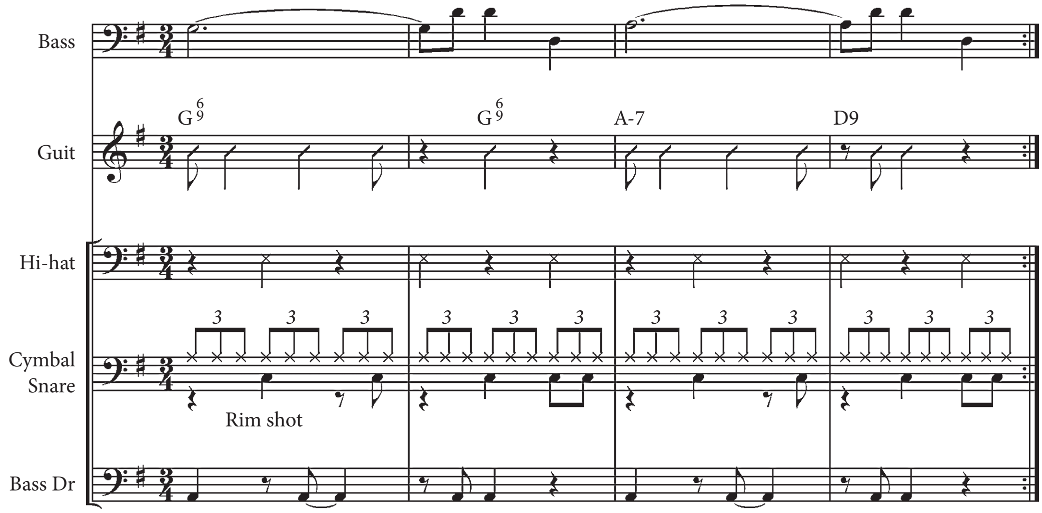
Onda Nueva

Onda nueva ('New Wave') is a Venezuelan musical genre created in the early 1970s by noted composer and arranger Aldemaro Romero (1928–2007).

The appearance of *onda nueva* was circumstantial: during the recording of a commercial jingle that had similarities to the Venezuelan *joropo* 'Araguita,' Aldemaro Romero introduced a few important variations which yielded a new genre. His innovations included: the use of rhythms and harmonies from jazz and *bossa nova* on the piano that were supported by an agile, modern and syncopated bass line executed by Jorge



Example 1: Basic rhythmic pattern of *onda nueva*

Romero 'Romerito'; the creation of a peculiar rhythmic design in 3/4 by drummer Frank Hernández 'El pavo Frank'; and the incorporation of a vocal quartet led by Ali Agüero that offered original and modern harmonies using contrapuntal vocal lines. The final product was labeled 'onda nueva' by local radio host and producer Jacques Braunstein, and it represented a new genre of Venezuelan music that sought to give international recognition to the Venezuelan *joropo*. Hernández developed the basic rhythmic pattern of the *onda nueva* as a pedagogical exercise (see Example 1).

Romero composed a number of pieces in the new style using fresh, light and jovial lyrics. Among them are 'De repente' (Suddenly), 'Tonta, gafa, boba' (Dumb, Fool, Silly) and 'Doña Mentira' (Mrs Lie), as well as new versions in the style of *onda nueva* of popular songs from Venezuela and other countries.

The new genre was promoted through FIDOF (Federation Internationale des Organisations de Festivals), which helped organize international festivals of *onda nueva* in Venezuela for three consecutive years in 1971–73. At these festivals, performances by noted musicians such as Frank Pourcel, Ástor Piazzolla and Amelita Baltar, Esquivel, Juan Gabriel, Armando Manzanero, La Lupe, Tito Puente, Chico Navarro, Ray Coniff, Elmer Berstein, Dave Grustin, Augusto Algueró, Nino Bravo and Paul Mouriat gave international recognition to the genre. Musicians invited to these festivals were required to include at least one piece written in the style of *onda nueva*, a condition that generated many new works. Through these works, composers and performers offered their individual and personal interpretations of *onda nueva,* which gave the genre an international dimension.

A number of works in *onda nueva* consisted of old or popular songs that were rewritten in the style, which boosted the dissemination of music in this genre. Noted examples include Monna Bell's *onda nueva* version of Mexican composer Rubén Fuentes's 1964 song 'La Bikina,' and US songwriter Burt Bacharach's 'South American Getaway,' which was used in the Oscar-winning film *Butch Cassidy and the Sundance Kid* (1969). The box office success and worldwide distribution of this movie introduced the song as well as the genre to a large international audience.

In the twenty-first century, the influence of *onda nueva* has continued to be felt and acknowledged, as for example in the 2006 compilation *Nueva Onda Nueva – Electronic Aldemaro,* which interprets *onda nueva* through contemporary electronic styles.

Pachanga

The *pachanga* is a fast-paced Cuban dance music that first appeared in 1959 and soon after rode a brief wave of popularity in the dance halls of New York City's Latin music scene. The *pachanga* was principally performed by *charanga* ensembles, which typically include a flute, three violins, contrabass, piano, percussion (*timbales, güiro* and *congas*) and a chorus (of usually three male singers), though a violoncello is infrequently found in some ensembles (see Orovio 2004, s.v. '*charanga*'). Unlike the Cuban *son* tradition, the musical basis of most contemporary Cuban dance music and commercial salsa, the *charanga* ensemble does not typically foreground a lead vocalist. Though a lead voice may be featured from time to time, voices singing in unison with only passing moments of diatonic harmonization are the norm – it is the flute that most frequently takes on the principal melodic role in the ensemble.

In its broadest sense, the term *pachanga* denotes a party or boisterous gathering, though *pachanga*, the musical genre, should not be aligned with the *pachanga* gatherings of South Texas political life. The word *pachanga* took on its musical significance in 1959 when 'La Pachanga,' a composition penned by Cuban writer-composer Eduardo Davidson (1929–94), was first performed by the Orquesta Sublime in Havana's renowned ballroom, El Salón Rosado de La Tropical.

Davidson's real name was Claudio Cuza. He was born in Baracoa, Cuba, in the eastern province of Guantánamo. Arriving in Havana sometime around 1950, Davidson soon after began writing radio scripts and incidental music for variety shows and soap operas. In 1957 Davidson began working as a composer at Panart Records, Cuba's first domestic recording studio and record label, and it was there that he collaborated with the pianist-arranger-composer Rolando Fundora, who was an in-house musical director for the Panart label. From this partnership emerged the historic connection between Davidson and the Orquesta Sublime (also under contract with Panart Records at the time): Melquiades Fundora, Rolando's brother, was the flautist and musical director of the ensemble. Nonetheless, it was Richard Egües (1926–2006), the legendary flautist from Orquesta Aragón, who arranged Davidson's 'La Pachanga' at the request of Rolando Fundora, and the musical number quickly ascended the Cuban charts. The success of the new rhythm was also due, in no small part, to an attendant dance fad: in a period when musicians were not known for their movement in performance – in sharp contrast to contemporary Cuban dance bands – the novel steps and choreography of the Sublime spread throughout Havana's dance halls and sparked the *pachanga* dance craze, one in a line of many musical innovations that exemplified the creative fervor that took hold of post-revolutionary Cuba.

Pachanga in New York City

The brevity of the *pachanga* fad in Cuba was not indicative of its impact abroad. The success of the *pachanga* in New York was ushered in by the emerging success of the *charanga* ensemble itself. Being more economical than the big bands that had dominated the 1950s Latin dance scene in New York (such as those of Tito Rodríguez, Tito Puente or

Machito), the smaller, string-dominated *charanga*s offered a wider range of performing opportunities for Latin musicians and provided the public with a novel sound vis-à-vis the more clamorous punch of the Latin big bands. In 1959 New York pianist Charlie Palmieri formed the influential *charanga*, La Duboney, featuring four violins and flautist Johnny Pacheco – the latter went on to become a cofounder of the renowned record label Fania (Manuel 1991). With the release of *Pachanga at the Caravana Club* (Alegre 1961), La Duboney achieved near-instant popularity in New York's Latin community, both for their *charanga* ensemble and for the new *pachanga* rhythm, which dominated the LP.

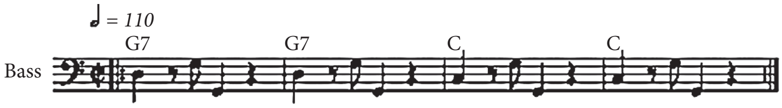
By 1960, *pachanga* and *charanga* fever had taken hold of New York's Latin youth and various musical ambassadors contributed to the cause, including the leading Cuban *charanga*s of the day such as the Orquesta Aragón, which included the flautist Egües, and Fajardo y sus Estrellas, led by the other renowned Cuban flautist José Fajardo (1919–91). Fajardo, in particular, took advantage of the new musical trend, covering Davidson's 'La Pachanga' with Panart (1961), and then recording with Columbia the following year (*Mister Pachanga*, 1962). Nonetheless, it was La Duboney and various other homegrown ensembles that sustained the *pachanga* in New York City, and in the hands of these groups the *pachanga* also began to take on the distinct musical characteristics that set it apart from its Cuban predecessor. It was the formulation of the *pachanga* arising out of New York that ultimately had the lasting impact on the dance music scene in Cali (Colombia) and other transnational sites (Waxer 2002).

The *Pachanga* Style

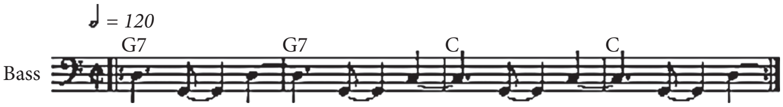
Although it has become almost axiomatic to make mention of the syncopated quality of Cuban-derived music – as though this, in and of itself, is unambiguous proof of an African presence in Cuba's musical heritage – the *pachanga* is in fact one of the more downbeat-oriented Cuban styles (Waxer 2001, 26), not wholly unlike the *chachachá* and *mambo* in this regard. Distinct from the musical lineage of Cuban *son*, the *charanga* orchestra and its more gentrified salon repertoires necessitate a more measured evaluation of the European musical antecedents against the backdrop of ubiquitous and vague musical qualifiers such as 'Afro-Cuban' and 'syncopated,' which are often applied rather casually to Cuban music.

The ensemble types in New York circa 1960 varied greatly, both in their composition and in the repertoires that they played. After Cuban singer Rolando La Serie recorded a rather *merengue*-esque version of Davidson's 'La Pachanga' on his album *Sabor a mi* (1960), it became apparent that the *pachanga* was no longer the exclusive domain of the *charanga* – Bebo Valdés's big band accompanied La Serie on this recording, just before the two great talents left Cuba. Soon after, Latin stars of the 1950s such as Tito Rodríguez (*Charanga Pachanga*, 1961) and Tito Puente (*Pachanga con Puente*, 1961) put forward *pachanga* recordings with their large ensembles. And singer Joe Quijano's group, Conjunto Cachana, created one of the most popular *pachanga* sounds of early 1960s New York by substituting the strings of the *charanga* with two trumpets.

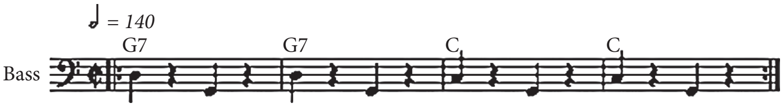
The *pachanga* sound of New York tended to favor the anticipated bass of *son*-derived dance musics, as



Example 1a: Model *pachanga* bass line



Example 1b: Model 'anticipated' *son* bass line



Example 1c: Model *merengue* bass line

opposed to the one-and-three-oriented bass line of Sublime's original *pachanga* (cf., *Cuba Morning*, 1996). Earliest examples of the *pachanga* in Cuba had a bass isorhythm that stressed beats one and three (Example 1a above), unlike the anticipated bass of Cuba's popular *son*-derived dance musics (Example 1b above). The more symmetric bass pattern of the Cuban *pachanga*, in addition to its up-tempo pace, likely contributed to opinions that this musical genre borrowed from the Dominican *merengue*. Certainly the string *ostinati* of Sublime's first version of the 'La Pachanga' (*Cuba Morning*, 1996) bolster this downbeat emphasis found in the *merengue* bass line (Example 1c above) and also sound remarkably similar to the accordion or saxophone *ostinati* typical of *merengue*. Interestingly, more recent recordings by Orquesta Sublime of 'La Pachanga' in fact sound more like *merengues* than *pachangas* (2000, 2006).

By comparison, listening to iconic *pachanga* recordings from New York City, such as Duboney's 'Pacheco's Descarga' (Pacheco's Band) or 'La Pachanga Se Baila Así' (Pachanga Is Danced Like This) (Palmieri 1961), one can hear a greater affinity for bass lines that stressed beat four of the measure, modeled on the *son* bass line that 'anticipates' the harmony of the coming measure (Examples 2a–c below; Manuel 1985).

Ultimately, however, the iconic sonic marker of the New York *pachanga* sound, and the one that has been sustained by the transnational movement of LPs to Latin American locales such as Cali, was the driving 'ta-tum' rhythm (Example 3 below). This downbeat-oriented pattern was played by the timbale player, either on a mounted cowbell or on the shell of the drums (*cáscara*), and is remarkably assonant of the early *pachanga* bass lines in Cuba (cf., Example 1a).

Conclusion

The *pachanga* has rightly been called an ephemeral genre (Manuel 1988, ii, 31). By 1963–64 the *pachanga*'s popularity had faded in favor of other musical innovations, such as the *mozambique* in Cuba and the boogaloo (*bugalú*) in the United States. Particularly in the Unites States, the *pachanga*s of the early 1960s exhibited little stylistic homogeneity, being a musical genre that was performed by a variety of ensemble types and with an even greater variety of musical elements distilled from the different Cuban genres at play in New York City at the time. It is perhaps more advantageous to understand the *pachanga* as both a heterogeneous style and one of the earliest forms of 'salsa' (Waxer 2001, 26), the particular mix of Cuban-derived dance musics that coalesced within New York City's diverse Latin community beginning in the 1960s under the prevalent mediation of Puerto Rican musicians. The *pachanga* was the last Cuban musical genre to enter the United States before its trade embargo with Cuba, which effectively came to stifle an exuberant flow of musical interaction between the two countries; however, the heterogeneity of the genre in 1960s New York seems to be a hopeful indicator of the enduring, accommodating nature of this transnational musical community *vis-à-vis* the unwavering political positions of the respective nations. In the light of this, it should come as no surprise that the *pachanga* also had a profound influence on the production of popular music in West Africa (particularly Senegal), a continuation of the longstanding influence of Cuban recorded musics in the popular music of Africa after 1920 (see Duran 1989; Kubik 1985, 52; Roberts 1990; Shain 2002; Waterman 1990).

MICHAEL MARCUZZI

Pagode

Pagode usually refers to a movement of *samba* artists in Brazil that began in the 1980s and was very influential on later *samba* developments.

Early Usage

In Brazil, the term *pagode* has long been associated with musical gatherings, feasts, fun and mirthmaking in general. From at least the second half of the nineteenth century, the term was used to designate private parties, where fashionable styles of music such as polkas, waltzes and the Brazilian popular genres *lundus* and *modinhas* were common. However, the groups involved in the initial phases of *samba* also used the term to describe their gatherings; hence, *pagode* ended up referring to the feasts, to the practices involved and to the music itself.

'Grassroots' *Pagode* Movement

In 1986 a musical movement consisting of mostly unknown artists burst into mainstream radio broadcasting, TV music shows, the press and sales charts. The *pagode* movement stated clearly and strongly that it was possible to make a profit in the music business by directly addressing the lower strata of society. Indeed, during the 1980s, the music industry was shifting its focus toward marketing music to the poorer sections of Brazilian society. Up to that time *samba*, as well as other styles closely linked to lower-income groups, had served as fertile sources of profit for the industry, but their potential as commodities required that they be diluted or transformed so as to please the tastes of middle and higher classes.

Pagode appeared in the 1980s as a reinvention of the *samba* tradition, and its success cannot be separated from the history of *samba* itself. *Samba* originated around 1900 in Rio de Janeiro, in communities of ex-slave descendants and migrants. By the end of the 1920s, the 'paradigmatic' form of *samba* had become established. This form was associated with the appearance of *samba* schools, which by the 1960s had become major tourist events and provided most of the music related to the *samba* tradition. Yet the growth of *samba* schools had a counter-effect: the space for informal meetings around *samba* performances diminished.

Starting in 1977, the carnival association Cacique de Ramos (from the neighborhood of Ramos in Rio) sponsored large parties, which attracted increasingly large numbers of people. Cacique's *pagodes* soon became notorious musical events and their fame spread far beyond the local group. Other similar 'backyard parties' were also successful as meeting places for *samba* practitioners, and their number grew steadily. These settings were defined by their informality, and *samba* musicians preferred *pagodes* because there they were more at liberty to show their talents than in most other settings, notably the *samba* schools. Besides, as *pagodes* spread, radio stations started to air more *samba* tunes – a more direct barometer of public taste than LPs.

In 1978 singer Beth Carvalho used musicians from Cacique de Ramos on her album *De pé no chão* (Bare Feet on the Ground), a move that inaugurated the integration of *pagode* into the music business environment. The success of Carvalho's LP boosted the careers of musicians and composers from Cacique. Soon they were hired to perform with other musicians, thus spreading *pagode* sounds into ever more diverse settings. In 1979 the group Fundo de Quintal ('Backyard'), around which most of those musicians gathered, released their own LP (*Samba é no Fundo de Quintal, Vol. 1)*, while also providing songs and accompaniment for other artists. Fundo de Quintal's ensemble became a standard for other *pagode* groups, with a combination of instruments new to *samba*. It included three single-headed percussion instruments (membranophones) played with the hands – *pandeiro* (tambourine), *repique de mão* and *tantã* – and three stringed instruments – guitar, *cavaquinho* (four-string small guitar) and banjo. The *repique* was already used in *samba* schools, but Fundo de Quintal started to play it with the hands rather than with sticks. One hand beats on the skin, while the other completes the rhythm by beating on the body. The *tantã* replaced the *surdo* as a bass drum, played in a similar way to the *repique*. The banjo, which used to be part of *samba* gatherings in its early phases, was reintroduced. The other instruments were common in *samba* in general. The ensemble adapted well to small performance settings, and it could easily be imitated by other groups.

Pagode music was variegated, but the style known as *partido alto*, based on the improvisation of verses and competition, was the most distinguished version. New songs by composers from the local communities and carnival music were included, as well as hits by well-known *samba* artists and ancient *samba* songs.

It was not until 1985 that the music industry felt confident enough to make more investments in *pagode*. Indeed, in that year the breakthrough anthology *Raça Brasileira* appeared. It was the first *pagode* album as such to enjoy really successful sales. Virtually unknown artists Zeca Pagodinho, Jovelina Pérola Negra, Elaine Machado, Pedrinho da Flor and Mauro Diniz succeeded in reaching a large consumer audience, mostly from Rio de Janeiro and surrounding towns. The songs in this album have most of the typical features of the *pagode* movement, which contrasted sharply with the average standards of the music commodities sold as albums or played at FM radio stations and TV shows until then. The album included *pagode* anthems such as 'Feirinha da Pavuna' ('Pavuna Street Market'), describing a quarrel among vegetables sold in a suburb street market, and 'Avaca' ('The Cow'), a song about a negotiation to buy a cow, in the traditional form of *partido alto*.

In 1986 and 1987 the main *pagode* artists reached the top of the Brazilian music charts and became nationally known. Icons of *pagode* – Fundo de Quintal, Zeca Pagodinho, Almir Guineto, Jovelina Pérola Negra, Jorge Aragão and Arlindo Cruz, among others – made appearances in many places and have continued to be well known. In fact, the entire Brazilian music industry enjoyed a marked growth in that period. Low-income groups could afford to buy recordings (especially LPs) in great quantities for the first time in the history of the Brazilian music business. *Pagode* thus found an attractive economic environment at that time.

'New' *Pagode*

After two years of great success, in 1988 *pagode* started to face a decline. At the same time, a more romantic vein of *pagode* emerged, along with other styles aimed at the poorer classes, as preferred music commodities in the Brazilian market.

Perhaps the most symptomatic index of this situation was the group Raça Negra ('Black Race') and its model of *samba* performances. Raça Negra appeared around 1990, displaying a romantic style that incorporated hybrid patterns: harmonic devices taken from international pop ballads and *música sertaneja,* in addition to synthesizers, electric guitars and bass with saxophones in the foreground. Yet Raça Negra continued to use a few *samba* instruments, such as *tantã*, *cavaquinho* and *surdo*, and to rely on rhythmic structures redolent of the *samba* tradition. These rhythms were not, however, combined polyphonically – perhaps the most distinctive trait of *samba* – but appeared in a synthetic, more monorhythmic and stylized form. The effect of all this was to gain an audience even larger than that of the former *pagode*, since the newer style made room for groups of aficionados not closely attached to *samba* also to enjoy the music.

'New' *pagode* also differed from earlier *pagode* in terms of its lyrics, which moved from concrete situations in daily life to overly romantic themes. Furthermore, the split from the *samba* tradition derived from regional displacements, because 'new' *pagode* groups were often from São Paulo rather than from Rio de Janeiro.

Groups similar to Raça Negra soon appeared, and the success of 'new' *pagode* affected various realms of the Brazilian music business. Unlike former *samba* practitioners, who were often present in the media but who were seldom assimilated as part of its structure, 'new' *pagode* stars attained the status of 'top-stars' in its broadest sense. 'New' *pagode* musicians achieved fame and money to an extent beyond that ever reached by *samba* artists.

By the mid-1990s it was clear that 'grassroots' *samba* was not keeping up with the 'new' *pagode*. The artists of the first *pagode* boom continued to perform and record, but sales of their music tapered off and after the mid-1990s the term *pagode* usually refers to 'new' *pagode* renditions. A reaction ensued, bringing 'true' *samba* once more into the foreground.

This reaction came from many quarters, but the catalyst came in the form of singer/composer Zeca Pagodinho's 1995 album *Samba pras moças* ('Samba for the Girls'). Pagodinho had been at the forefront of the 1986–7 *pagode* boom, and until 1995 his recordings followed the aesthetics of his earlier releases, but the new trends brought by Raça Negra and its followers pushed him into the background. In 1995 Zeca Pagodinho became associated with arranger/producer Rildo Hora, retaining most 'grassroots' *pagode* traits while combining them with fine arrangements in a 'clean' design. *Samba pras moças* heralded a compromise, according to which early *pagode* artists (now referred to as *pagode raiz* – 'grassroots') would have to 'modernize' their productions in order to survive in the newly competitive environment. In the long run, Zeca Pagodinho became the strongest reference point for 'authentic' *samba* that could also be commercially profitable.

LUIZ FERNANDO NASCIMENTO DE LIMA

Palo de Mayo

Palo de mayo (which means May Pole) is the modern reworking of the principal Nicaraguan Creole acoustic folk song form known generically as 'song,' but also called 'mento.' The clear similarities between Nicaraguan song/mento and Jamaican mento and Trinidadian calypso testify to the continued strong connections between English Afro-Caribbean and Atlantic Coast Creole culture. A major part of Nicaragua's Creole population migrated to the country from the West Indies in the late nineteenth and early twentieth centuries. The western half of the country, where around 90 percent of the national population resides, is mestizo with small indigenous enclaves (the small amount of African ancestry from the colonial era is so mixed that any Afro-based group is no longer recognizable). *Palo de mayo* retains fundamental characteristics of Creole song/mento: major tonality; 4/4 meter in a moderate to slow tempo with a syncopated rhythmic accompaniment similar to Trinidadian calypso; singing in an open vocal style, and structured around single lines by the lead singer immediately repeated by the chorus in a basic call-and-response fashion. The instrumentation also reflects the Creoles' common cultural links with other parts of the English-speaking Caribbean: banjo, ass's jaw, washpan (wash tub) bass, scraper, guitar and, in the 1970s, accordion. On the heels of the success of electrified *palo de mayo*, the acoustic group Zinica toured outside of the Atlantic Coast and in 1983 made the only recordings of the earlier style.

The modern version of this music essentially reworks the Creole song/mento repertoire with key elements of Trinidadian soca: stylistic features of traditional songs, such as lyrics, basic melodies, chordal patterns and other musical elements, are retained but the tempo is increased and the banjo, wash tub bass and accordion are replaced with a popular music instrumentation of trap drums, horn sections and electric instruments, including electric bass, guitar and inexpensive organ. Last, but not least, the music's popularity was tied to the notoriety of the accompanying dance, denounced by many (usually older) Creoles as too overtly sexual and lascivious. Harold Hodgson, a native of Bluefields, the main city of Nicaragua's Atlantic coast, is most often credited with transforming dance movements from the annual May Pole traditional dancing with acoustic songs into a sensual couple dance that emphasized pelvic movements and close body contact, a sensuality that became increasingly pronounced as electrified *palo de mayo* developed.

In the early 1970s, *palo de mayo* was introduced to the Pacific Coast via informal networks and the first bands ventured from Bluefields westward to the nation's sprawling capital of Managua. The acclaim that greeted the music and dance prompted Managua producer Luis Felipe Andino in 1976 to record a full-length album of one of the best-known groups at the time, Los Bárbaros del Ritmo (literally, The Fantastic Rhythm Masters; also a reference to the nickname of the immensely popular Cuban singer Benny Moré). The goal of crossing over the east-west geo-cultural divide and target urban mestizo youth in Managua and other major cities is evident in the group's Spanish name and the album's title, *Palo de Mayo*. The limited success of *palo de mayo* with Managua youth in the first half of the 1970s was derailed by the breakout of the military insurrections against the Somoza dictatorship throughout the Pacific Coast. With the triumph of the Sandinista Popular Revolution in 1979 a strong, second wave of popularity of electrically amplified *palo de mayo* reached most of the country's population for the first time. *Palo de mayo* exploded in popularity to replace the *cumbia* as the dance music of choice on the Pacific Coast in the 1980s; even traditional small *marimba de arco* trios integrated it into their repertoire. The sensual dance served as an emblem of the newly liberated Nicaragua: for much of the young population, excited by the possibilities the new social order might offer them, *palo de mayo* represented a breaking with a past, restrictive morality, especially freeing the sexuality of women. In addition, young mestizos were curious to learn about the eastern part of the country, which they were 'discovering' for the first time. Even though practically no one understood the Creole English lyrics, Pacific Coast residents were proud to embrace a potent music and dance whose origin was Afro-Nicaraguan and for once not imported from outside the country. The popularity of Atlantic Coast *palo de mayo* on the western

Pacific Coast played a significant role in bringing about a new stage in the development of a Nicaraguan national consciousness that embraced both coasts.

The most popular band in the nation in the 1980s was Dimensión Costeña (Coastal Dimension), one of several Creole groups that formed to satisfy the growing mestizo audience, and the only one to survive intact into the 1990s. *Palo de mayo* bands typically centered around Creole players, especially the lead singer, but included a handful of mestizo musicians as well. *Palo de mayo* groups reworked the acoustic traditional Creole songs to the point of exhausting the small repertoire; Grupo Gamma, several of whose members went on to form Dimensión Costeña, were the first to further an awareness of Atlantic Coast peoples and culture when they adapted a song from the Atlantic Coast Miskitu people. Indigenous Miskitus, heavily mixed with Afro-Creoles over many generations, live mostly along northeastern waterways but some reside in Bluefields. The historical-cultural interchange between Miskitus, Creoles and mestizos is shown in the familiarity of Grupo Gamma's musicians with their music, and the song 'Sirpiki Mayram' (Miskitu: 'Dear Woman') became a national hit in the early 1980s, despite neither Creoles nor mestizos understanding the lyrics. This song and others in Miskitu demonstrate how music, particularly *palo de mayo*, became the principal point of contact and cultural reference between these three ethnic groups, one that left an indelible social imprint that carried into future decades.

Palo de mayo remains popular in twenty-first-century Nicaragua, though it has lost ground to hip-hop and other cosmopolitan styles. The most popular band in Nicaragua in the 1990s, Macolla, featured several songs in *palo de mayo* style on its best-selling album *Bailarlo contigo* that show its continued creative development: an original composition, and a remake of a *palo de mayo* song but with the chorus now half in English and a short Spanish rap section added in the middle. The popularity of a Caribbean Coast African-Central American music among the majority mestizo population also occurred later in Honduras, and to a lesser extent in Costa Rica and Guatemala. *Punta*, the music of the African-indigenous Garifuna people in Honduras, enjoyed promotion that brought it to international audiences, an extra-national economic success that Nicaraguan musicians such as the collective Bluefields Sound System still hope to achieve for *palo de mayo*.

Palos

Since the late eighteenth century, *palos* long drumming has been associated with black religious brotherhoods (*cofradías*) in the Dominican Republic, especially their funeral rites and *velaciones,* or annual patron saint festivities. While songs accompanied by *palos* often have religious significance (especially in reference to the dead and ancestral lineages of a brotherhood), they do not traditionally serve the functions of altar devotional music as do *salves.* Except in the slow-tempo *palos de los muertos* (palos of the dead) style, many *palos* songs serve festive interests, including accompanying the *baile de palos,* a couples dance symbolizing ritual pursuit. *Palos* are most frequently played in an outdoor *enramada* which serves as a place of social gathering and dancing during popular religious events, or may be played at the portal of a church, religious shrine or private residence. Though its roots are rural and concentrated most strongly in the island's southern half, *palos* has diffused in a variety of styles to most regions of the country and many urban centers. Since the 1970s, *palos* performance has also extended to religious pilgrimages, celebrations of neo-African spirits (Dominican *Vodú*), personally sponsored *velaciones*, folklore concerts – and since the 1990s – discos and street-corner bars in small towns and urban sectors dominated by Dominican blacks.

Palos music is more nationally homogeneous in instrumentation and style than *salves,* but is still quite varied from one region to the next, especially between the more traditional varieties. The word *palo* means simply 'tree' or 'piece of wood,' and among Dominicans is the colloquial term applied to any type of wooden drum as well as drumming music in general. Given this colloquial expression and variety of music which might be called '*palos*,' folklore groups and researchers have emphasized instrumentation as the most distinguishing feature of *palos:* two or three long-drums (also called *atabales*) and idiophone(s), either one or more shakers (*maracas*), one to three metal scrapers (*güiros* or *guayos*) and/or a stick struck on the drum body (*catá*). The *atabales* are played by the hands, with the largest and lowest-sounding as the lead drum or *palo mayor.* The other smaller *palo* or pair of *palos* of equal size is called *alcahuete.* When there are three different sizes with different musical functions, the middle *palo* may be called *chivita, brincador* or *palo segundo* depending on location.

The repertoire of *palos* is sung in Spanish, frequently using colloquial expressions, occasionally African-derived words, and in some styles, chorus melodies elaborated without text. To improvise verses, soloists draw for inspiration upon fragments of the refrain, religious themes, their immediate surroundings and daily social events. *Palos* melodies are typically short (between one to four phrases), and are either identical for verse and refrain or divided between them antiphonally. In successive repetitions, the refrain is maintained while the soloist continues to improvise verses, all the time varying melodic delivery. Usually there is a gradual surge in intensity as *atabales* drummers increase the rhythmic density of their variations, frequently exploiting ternary beat accents over an established duple meter (or *vice versa*), and initiating rapid conversational dialogue between the parts. This increased intensity may also be supported by a shift to a truncated refrain and a cyclic structure one-half or one-quarter the length of the first, in some cases accompanied by a similar truncation or variation of drum rhythms. Beyond these generalities of style, a number of distinctions exist from region to region, and even between localities, in *palos* instrument design, core drum patterns, technique of singing, melodic type, repertoire and contexts of use.

Since the 1970s, massive rural to urban migration increased visibility of Dominican *Vodú*, leftist movements promoting popular culture and Afro-Dominican traditions, and a youthful generation of *palos* musicians have led to the emergence of some new trends. New song repertoires, faster and more varied rhythms and rehearsed ensemble arrangements have been developed and popularized for *palos,* and many organized *palos* ensembles have become available for hire, traveling regionally and sometimes nationally to working the 'circuit' of *velaciones* and *Vodú* ceremonies. While closely associated with Dominican *Vodú* and spirit possession, the accentuated dance and party orientation of the newer style parallels an accelerated secularization of *palos*: in the early twenty-first century *palos* fills the stages of Dominican folklore festivals, has stimulated several commercial recordings and appears in dancing establishments and street-corner liquor stores (*colmados*). This newer up-tempo style of *palos* includes two repertoires distinct from earlier *palos* music – '*salves con palos*' and 'contemporary *palos* songs.' In the first type, *salves* songs derived from devotional singing for Vodú spirits (*misterios/luases*) and Catholic saints are arranged with *palos* accompaniment. Contemporary *palos* songs emerged since the late 1990s and are sufficiently distinct in musical style and/or function from both *salves* and the varieties of traditional danced *palos.* While the rapid diffusion and professionalization of *palos* is promoting greater stylistic homogenization and secularization, competition and creative interest has generated musical innovations, especially through the synthesis of elements from various regional styles and the adaptation of rhythms, ensemble breaks and other techniques from commercial *merengue*. Also, the innovations in *palos,* coupled with leftist movements and folklore festivals stimulating urban popular interest in Afro-Dominican music, have attracted the attention of some Dominican popular music artists, inspiring their fusions of *palos* rhythms, instruments and songs with *merengue,* Dominican jazz, rock and reggae.

DANIEL C. PIPER

Panalivio

The *panalivio* is a sung Afro-Peruvian lament genre that was banned by church ordinance in 1722 and revived in the twentieth century. The name may originally have been 'penalivio' (alleviation of pain), and the songs are believed to have originated in the rural Peruvian *haciendas* where slaves worked the fields (Tompkins 1981, 344). *Panalivios* normally contain rhythmic accompaniment, rural themes and lyrics protesting against or lamenting exploitation (especially racial discrimination) (Santa Cruz 1975, 23). The Church banned the genre (along with another genre called *serini*) because of the 'scandalous' nature of both its lyrical couplets and its movements (Estenssoro Fuchs 1988, 166; Romero 1939), but little is known today about the precise nature of the early *panalivio* and its objectionable content. Ethnomusicologist William Tompkins suggests that the *panalivio* may once have contained a sexually provocative dance (1981, 343). However, by the twentieth century, the *panalivio* did not include dancing or sexually suggestive lyrics. It is also possible that the 'scandalous' content of the lyrics referred to their function as political protest against slavery (ibid., 344).

There is disagreement regarding the classification of certain songs as *panalivios*, depending on whether the thematic content or the rhythmic accompaniment is viewed as the defining factor. According to Tompkins, because the *panalivio* has been associated with lyrics denouncing mistreatment of blacks, several songs that should be classified as *danza* or *canción* (a Peruvian sung genre using the Cuban *habanera* rhythm) are mistakenly designated as *panalivios*. A prime example is the song 'A La Molina,' compiled and recreated by Samuel Márquez and Francisco Ballesteros (ibid., 347–8). For Afro-Peruvian revival leader Nicomedes Santa Cruz, however, the poetic content of 'A La Molina,' with lyrics protesting against the physical abuse of slaves, classifies the song as an authentic *panalivio* (1969, 121–2).

Tompkins notes that two forms of *panalivio* exist in Peru (1981, 344–7). In the department of Lima, *panalivios* are strophic ballads sung with a good deal of rubato, accompanied by guitar and *cajón* along with optional additional percussion instruments. Lima-style *panalivios* are often performed by a soloist in alternation with a chorus, and may begin with a brief, rhythmically and melodically free introduction by the soloist (Santa Cruz 1975, 23). Although a recorded example of a Lima-style *panalivio*, 'Ahí viene mi caporal' (There Comes My Foreman), is provided on Nicomedes Santa Cruz's album *Cumanana* (1994 [1964]), Tompkins suggests that the guitar accompaniment is greatly simplified (1981, 344–5). The text 'Ahí viene mi caporal' celebrates Lima's black bullfighters (Santa Cruz 1970, 44). Since the late twentieth century, *panalivio* song texts have frequently been *pregones*, emulating or describing the street cries of the vendors who populated the streets in the colonial era.

In the department of Ica, 'Panalivio' is one of the songs performed by the *hatajos de negritos*, groups of boys and men who sing and dance in adoration of baby Jesus and the Virgin Mary at Christmas time. The song is performed chorally to solo violin accompaniment, with *zapateo* dancing between strophes. The dancing and costumes refer to the Magi kings as well as to black slaves, and lyrics describe the hardships endured by slaves. A version of this song recorded in the 1990s by rock musician Miki González with members of the Ballumbrosio family from El Carmen's *hatajo de negritos* revises the lyrics to emphasize the happier times since abolition (see Feldman 2006; León Quirós 1998). Another stylized version was recorded by Afro-Peruvian singer Susana Baca in 2000.

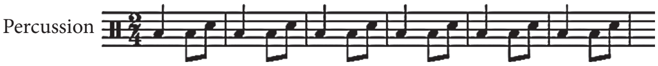
HEIDI CAROLYN FELDMAN

Paranda

Paranda (Spanish for 'binge' or 'carousal') is the popular Latin-American-influenced, male, social-commentary song form of the Garifuna of Central America. *Parandas* are accompanied on the acoustic guitar and are usually moderate in tempo. They are serious in nature and are performed in the style of a serenade by individuals called *paranderos* (men who perform *parandas*). The Garifuna (collectively known as the Garinagu) are a people of West African and Native American descent who share a common language and system of beliefs and customs. They live along the Caribbean coast of Belize, Guatemala, Honduras and Nicaragua and in urban centers in the United States. The Garifuna maintain a series of ancestor rituals and annual processions as well as a body of musical repertoires that include dance-song genres (secular and semisacred), women's work songs and men's social commentary songs. Of the estimated 400,000 Garifuna, more than 300,000 live in Central America with the majority residing in Honduras.

Although performances of *parandas* occasionally feature Garifuna *garawoun* (drums), specifically the *segunda* (bass drum) and *primero* (lead drum), the guitar and the solo voice are the only musical components necessary. When drums accompany *paranda* songs, *segunda* drummers perform the characteristic duple meter ostinato that accompanies *parandas* while *primero* drummers add variety by improvising rhythmic motives. The *paranda* ostinato is very similar to that of *punta*, the popular women's social commentary dance-song genre. The rhythmic pattern features a quarter note and an eighth note played in the center of the drum followed by an



Example 1: The characteristic ostinato rhythm of *paranda*

eighth note played near the rim of the drum head to produce a higher pitch (see Example 1).

Older Garifuna state that performances of *parandas* were particularly popular during the Christmas season. *Parandas* entered the repertoire of Garifuna music in the nineteenth century after the Garifuna arrived in Honduras, where they encountered the acoustic guitar and incorporated elements of Latin American and Spanish rhythms into their music (Rosenburg 1999). The existence of string bands and drum-accompanied, regional Christmas songs performed in door-to-door processions known as *parandas* (or a derivative thereof) support the existence of Spanish-derived song forms in the Circum-Caribbean. These include the *parranda* of the Dominican Republic, Puerto Rico and Venezuela and the *parang* in Trinidad & Tobago and Grenada (a corruption of the word 'parranda' and a derivative of the Venezuelan genre). The texts of Garifuna *parandas* may be proverbial or instructional or address issues such as unrequited love, the desire for a wife, the loss of a loved one, slander or improper behavior. Therefore, they are performed year-round unlike the previously discussed, non-Garifuna song forms that bear the same or a similar name and usually comment on the birth of Christ or other Christmastide themes.

During the past decade Garifuna musicians and advocates of traditional music have helped re-establish *paranda* as the genre of choice for male recording artists, especially men in their mid-to-late thirties and older. This can be attributed to the commercial success of three internationally acclaimed recordings of *parandas* or *paranda*-influenced songs: the compilation *Paranda: Africa in Central America* (1999), *Garifuna Soul* (2004) by Aurelio Martinez and *Watina* (2007) by the late Andy Palacio and the Garifuna Collective, an ensemble of Garifuna and non-Garifuna musicians. The popularity of the first recording established *paranda* as a blues and folk-like style of Garifuna music with noted regional and global appeal. It was the first recording of acoustic Garifuna music to surpass *punta rock* in sales. (*Punta rock*, a derivative of *punta* and *paranda* songs, continues to be the most popular style of music among younger Garifuna.) *Paranda: Africa in Central America*, features *paranderos* from Belize, Guatemala and Honduras ranging in age from 27 to 94 years. The success of 'Nuguya Nei' ('I am ill'), the most popular of the songs on the disc, launched the career of 88-year-old Paul Nabor of Belize, perhaps the oldest active Garifuna *parandero* in Central America. *Watina*, winner of the 2007 WOMEX (World Music Expo) award, is a compilation of Afro-Caribbean and Latin-American-influenced Garifuna songs, many of which are based on the *paranda*.

Parang

In Trinidad and Tobago, *parang* denotes an array of several kinds of music related to the Christmas period that display special musical characteristics common in the Hispanic Caribbean. The vital instruments are the *cuatro* (small Renaissance four-string guitar), rattles, the *toc toc* (wood block), mandolin, acoustic guitar, scraper and box bass. In the early 2000s, other instruments, such as the electric guitar and bass, are also used. Lyrics are in Spanish, English or both and tend to be about the birth of the Baby Jesus, although topics may also include other themes ranging from social protest to December's frivolities.

In the mid-nineteenth century, members of the cocoa-panyol ethnic group of Venezuela arrived in the south of Trinidad, where they developed a social life over a period of long isolation. They retained the custom of the Christmas *parang*, and groups of musicians performed from house to house. By the 1950s this musical practice was integrated into Trinidadian society. When *parang* music was presented on the radio, it developed a wide audience and there was a surge of new *parang* groups, especially among urban middle-class Venezuelan immigrants and other social groups in Trinidad. In the 1970s the two most important *parang* associations, though opposite in certain respects, were formed: the National Parang Association of Trinidad and Tobago (N.P.A.T.T.) and the Trinidad and Tobago Parang Association (T.T.P.A.). These groups organized the competition festivals and prescribed procedures for the events. Beginning in the 1970s, the presence of *parang* in the media, along with competition among groups and the embrace of other Latin genres, led to commercialization, secularization and changes in aesthetics, language, repertoire, context and other musical elements.

Traditional and modern *parang* groups coexist, and by the 2000s performance venues include open streets along with restaurants and bars with dance floors, where *parang* groups present live performances before Christmas. By comparison, in Venezuela the Christmas *parranda* is not used for social dance. The Trinidad *parang* is also used in TV jingles, which are always linked to the image of the *cuatro*, a typical Venezuelan instrument, and to the *pastelle*, the typical Trinidadian Christmas food associated with the Venezuelan *hallaca* a corn-based dish stuffed with meat and spices and cooked in tied banana leaves.

While in the Venezuelan *parranda* the lyrics are more important than the music because of their religious meaning and the improvisations honoring the hosts, in the modern street *parang* of Trinidad the music predominates. There are still lyrics with Catholic messages but a considerable number of *parangs* have secular lyrics, along with a growing number of solely instrumental creations. The songs are sung in English as well as in Spanish. Spanish lyrics can have quite peculiar syntax, grammar and pronunciation that adhere to the formal Spanish spoken in Venezuela or in Spain.

Musically, like many other Latin Caribbean expressions, *parangs* are typically perceived as rhythmically complex, happy and animated. Still present from its origins is the *aguinaldo* or Christmas song from eastern Venezuela, interpreted by a soloist and choral group, which tends to be in major mode with a characteristic 6/8 measure using three primary triads and two musical phrases. At the same time, the European waltz, the Venezuelan *gaita*, the Dominican *merengue*, the Cuban *bolero* and other Latin American genres have been infused in the mainstream repertoire of parang. *Soca parang* was introduced in the 1990s and has grown in popularity. A danced genre, *soca parang* combines *calypso*, *soca* and other Latin music styles, accompanied by more continuous and prevalent percussion as compared with previous forms as parang. Whereas the *cuatro* dominates in traditional parang, the drum overshadows other instruments in *soca parang*.

By the late twentieth and early twenty-first centuries, *parang* diversified to appeal to many different classes and tastes. Comparing *parang* groups and compositions, Allard (2000) distinguishes different tendencies after 1975 such as 'very *parang*' (The Lara Brothers [1995, 2007], La Familia de Rio Claro), 'quite *parang*' (Dinamicos 1996), 'a little *parang*' (Crazy, Scrunter in Montano, et al. 2005) and 'no sign of *parang*' (Christmas calypsos: Big B).

KATRIN LENGWINAT AND CARLOS TORREALBA

Parranda

The *parranda* is a lively Venezuelan musical ensemble and genre. Its participants take to the streets and other public places to celebrate, primarily at Christmas time, but also on other occasions, with a basic ensemble of *cuatro* (a small Renaissance four-string guitar), drum and rattles. *The parranda* is sung in couplets by a soloist, sometimes in alternation with a chorus, and it can also be danced.

One typical version of *parranda* is found in Christmas traditions in the Venezuelan countryside, where groups with instruments travel from house to house, performing *aguinaldos* with devotional lyrics. When the themes treat secular topics, they are considered *parranda-aguinaldos*. While the *aguinaldo* is circumscribed only to Christmas, the *parranda* can be performed the whole year. The *parranda* inherited its instrumentation partly from the *aguinaldo*: *cuatro*, drums played with sticks, *furruco* (a friction and/or struck drum), rattles and scraper. But a melodic instrument such as a mandolin or violin may be added, and, since the 1970s, congas and electric bass are also heard. The *parranda* songs are usually couplets with improvised verses of eight syllables per line, frequently rhyming in ABBA manner, sung by a chorus and a soloist or sometimes by successive soloists.

The *parranda*'s repertory is perceived as happy in mood and lively in nature. Different regional styles produce both slower and more accelerated tempos. As a danced genre, the *parranda* takes its choreographic inspiration from the Venezuelan *merengue* (*merengue venezolano*), which is danced by couples with sensual hip movements. The rhythmic design of the *parranda* is very similar to that of both the *merengue* and the *aguinaldo*, combining binary and ternary pulses in one rhythmical unit. The resulting pattern is difficult to notate due to its sense of 'swing,' perhaps most closely approximating 5/8 meter while in some places giving way to a 6/8 feel.

At the beginning of the twentieth century the urban form of *parranda* developed, and groups began to give public performances in which they were presented as uniformed ensembles. Many of these groups, such as Los Turpiales de Aragua (founded 1944), have long histories and sometimes were associated with big companies, such as La Verde Clarita (founded 1941), which is related to a sugar company. These ensembles, devoted exclusively to the performance of *parrandas*, have between 12 and 14 members, all of whom sing and play an instrument, so that some instruments are doubled both in timbre and in rhythmic function. Every *parranda* group stands out by performing its own compositions. The groups with sufficient financial support produce records, but the majority work to self-promote their music through the informal market.

The *parranda* was boosted by the Venezuelan media beginning in the 1970s, through Venezuelan urban folklore groups such as Un Solo Pueblo and Grupo Vera. Recordings by these groups received vast dissemination in the mass media, especially at Christmas time. During Christmas, these groups used the traditional *parranda* instrumentation. Other groups, however, employed larger musical arrangements, especially vocally orientated groups such as Serenata Guayanesa and Quinteto Contrapunto, along with more recent groups such as Vasallos del Sol. Another musical innovation showcased a soloist, whose voice stood out above the choir and instrumental background.

Beginning in the 1940s, fundamental changes were implemented. The *parranda* groups began to present staged performances with a homogeneous group appearance. Also, the original solo voice began to be treated in a polyphonic manner or changed to an opera timbre. Voices sounded clearer, diction became more precise and there was no more improvisation. Finally, the melodic instrument tended to be used like a soloist producing a counterpart, while in the rural *parranda* it simply doubled the voice. Features that did not change include the complex rhythm and the festive and cheerful mood.

Since the 1980s the Venezuelan *gaita* genre has increasingly competed with the *parranda* as the nation's favored Christmas music. Nevertheless, *parranda* retains its place as a music genre that is linked with Venezuelan national identity, especially at Christmas time.

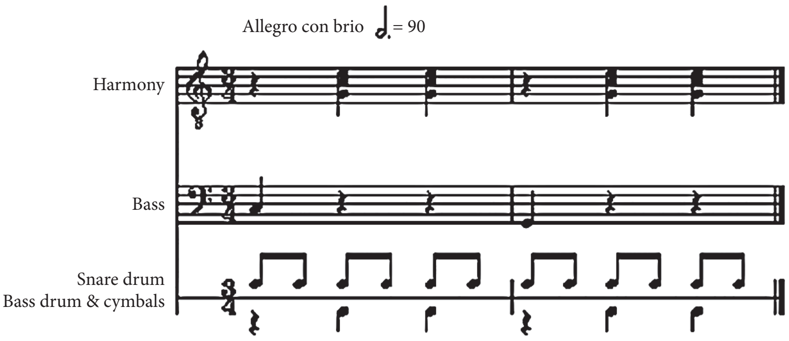
KATRIN LENGWINAT

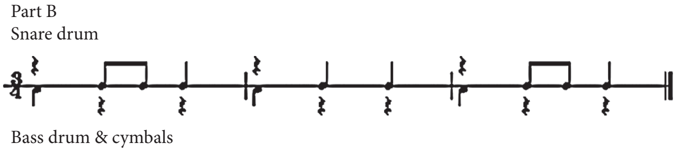
Parrandera

The parrandera is considered the most important and representative musical genre of Guanacaste, the northwestern region of Costa Rica. It is a joyful and festive dance in 3/4 or 6/8 meter with either binary or ternary structure. It is usually interpreted by *filarmonías* (groups of 15–20 players of wind and percussion instruments) or by a marimba (one to five players). Its name derives from the Spanish word *parranda* (meaning 'noisy party'). Sometimes it is also called *callejera* (meaning 'played in the street').

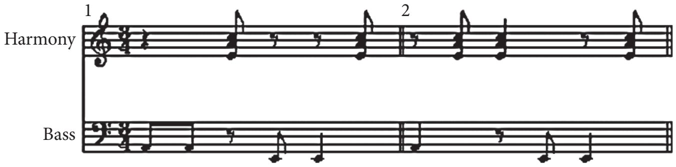
There are two types of 3/4 *parranderas*. The first one has a simple binary form and its typical rhythmic accompaniment on percussion remains constant throughout the entire piece (see Example 1).



Example 1: Typical Binary Form for 3/4 *Parrandera*



Example 2: Typical Ternary Form for 3/4 *Parrandera*



Example 3: Typical Rhythmic Cells in 3/4 *Parrandera*

The second type of *parrandera* in 3/4 has ternary form. In this case, part B, which is often presented in the subdominant, adopts a more *cantabile* nature and the rhythmic pattern of the accompaniment varies in relation to part A, but keeps the same tempo (see Example 2).

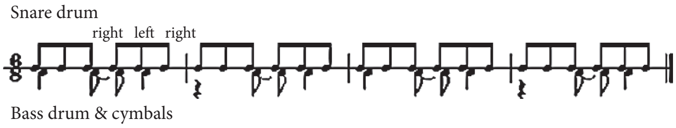
The other major type of *parrandera* has 6/8 meter and several variants. The first variant is in simple binary form, has a unique character and is interpreted without changes in tempo. The second and most frequent variant displays ternary form. There are several types of the second variant. The three most common types have the following structure:

Type 1: Dance – counter dance – dance
Type 2: *Allegro* – dance - *allegro*
Type 3: *Allegro* in 2/4 – *allegro* in 6/8 – *Allegro* in 2/4

An important element present in Types 1 and 2 is the adoption of a variant of the *habanera* rhythmic pattern that alternates the characteristic rhythmic cell (dotted eighth note – sixteenth note – eighth note – eighth note) with another rhythmic cell (eighth note – eighth rest – eighth note – eighth rest). In Type 1, called dance and counter dance, the *habanera* is present in section A (dance), followed by a B section (counter dance) in *tempo allegro* in 6/8. In Type 2, the *habanera* is found in the central section and is slower in nature. Type 3 does not include the *habanera* rhythm. Type 3 is an *allegro* in 6/8 preceded by a section in 2/4 and is usually played *da capo*. There are other more complex cases of *parranderas* in 6/8, in which the above-mentioned sections mix either with each other or with a *pasillo.* Their rhythmic cells are presented in Example 3 above.

One of the basic features of the accompaniment pattern for the *parrandera* in 6/8 is *hemiola*, found in the percussion (drums and cymbals) when played by *filarmonías*, or in the harmony when played on a marimba (see Example 4 below). *Hemiola* is used at the end of each phrase or period, also functioning as a link to the following phrase or period. The player decides how frequently to use this resource.

Even though documents that date back to the eighteenth and nineteenth centuries (see Thiel 1927; von Seebach 1922) mention noisy and joyful music played during a variety of activities in the province of Guanacaste, the word *parrandera* does not appear in the literature until the early twentieth century. At



Example 4: *Hemiola* in 6/8 *Parrandera*

that time *parranderas* were played on the marimba in country fairs, and couples danced to *parranderas* both in 3/4 and in 6/8. In the twenty-first century they are mainly played by *filarmonías* at activities such as bullfights and traditional fairs in the province of Guanacaste (e.g., the Fiestas del Cristo de Esquipulas in Santa Cruz, Fiesta de la Yegüita in Nicoya, and religious gatherings and festivities in honor of the patron saint, among others).

Until the early twentieth century this genre was transmitted primarily by oral tradition. The oldest manuscripts of *particellas* date back to the first decades of the twentieth century. Even in the early twenty-first century some of the voices are improvised, with a few exceptions (such as secondary voices and the ornamentation). The percussion accompaniment, never notated, requires highly skilful and experienced musicians who are familiar with the tradition.

Some of the most renowned traditional composers of the region who wrote *parranderas* were Mario Cañas (early twentieth century), Benito Saizar (1900–?), Jesús Bonilla (1911–99), Medardo Guido (1912–2007), Sacramento Villegas (1920–97), Ulpiano Duarte (b. 1929), Isidoro Guadamuz (b. 1935), Teodoro Guadamuz (b. 1936), Arnoldo Sandoval (1937–2006) and Tomás Guadamuz (1949).

GERARDO DUARTE RODRÍGUEZ

Partido Alto

Partido alto is a *samba* subgenre which first developed in the urban context of Rio de Janeiro, Brazil, at around the beginning of the twentieth century. Its name literally means 'high party' and alludes, many argue, to the high respect devoted to the practitioners of this type of *samba* as a group. In its most typical form, it is composed of a chorus sung by all the participants and of verses improvised in turns by solo singers. This style of *samba* has its roots in different traditions – both Afro-Brazilian and of Iberian origin – brought to the city of Rio de Janeiro by immigrant workers coming from different regions. As in various rural forms of *samba* (*samba de roda*, *coco*, etc.), *partido alto* is performed in a circle (*roda*) in which center dancers take turns in solo performances. In one of its most appreciated forms, *partido alto* is sung as an improvised dispute between two or more singers.

As shown by Nei Lopes (2005) in his study on this musical practice, besides their ability to create verses on the spot, *partideiros* (*partido alto* singers) used to develop their verses using a wide repertory of poetic formulas borrowed from a great variety of Brazilian musical traditions (*calango*, *lundu*, *samba de roda*, *cantoria*, etc.).

Performed mainly within the context of informal and relaxed gatherings, *partido alto* was first popularized in the recording industry by Martinho da Vila in the late 1960s. The great success of this style of *samba*, however, came in the 1980s with the sudden boom of what came to be called the *pagode* movement. A group of *samba* singers and musicians (among them Zeca Pagodinho, Arlindo Cruz, Jovelina Perola Negra, Almir Guineto and the Fundo de Quintal group), who met regularly at 'Cacique de Ramos,' a lower-middle-class carnival group of a suburban area of the city, was 'discovered' by the famous *samba* singer Beth Carvalho and diffused the *partido alto* style of *samba*, transforming it into a profitable commodity. The Fundo de Quintal group also dictated a new standard for the instrumentation used by *pagode* ensembles, introducing new percussion instruments – such as the *tan-tan* bass drum and the *repique de mão* – and adding a banjo to the string section formed by guitar and *cavaquinho* (ukulele-like, four-string guitar).

With commercial recording, one of the main features of *partido alto* was significantly affected: the verses of *partido alto* songs began increasingly to be pre-composed and repeated in every subsequent performance. For this reason, this genre in the twenty-first century is frequently regarded more as a particular *samba* style (with a distinctive rhythmic construction) than as an improvisatory singing practice.

Partido alto lyrics deal with different experiences of the urban lower-middle-class daily life and are usually humorous in character. The improvised verses commonly (but not necessarily) develop the theme suggested by the chorus.

Famous *partideiros* of the past include Aniceto do Imperio, Geraldo Babão, Padeirinho and Candeia. Some of its most appreciated current exponents are Xangô da Mangueira, Grupo Fundo de Quintal, Tantinho da Mangueira, Arlindo Cruz and Zeca Pagodinho.

VINCENZO CAMBRIA

Pasacalle

Popular in the coastal and highland regions of Ecuador, the *pasacalle* emerged in the 1940s as a song-dance genre of mestizo (mixing of Spanish and Amerindian cultures) origin. Almost every city in Ecuador has a *pasacalle* dedicated to it, which is usually more popular than the official city anthem. Some examples include 'El Chulla quiteño' (The Man from Quito), 'Chola cuencana' (Woman from Cuenca), 'Guayaquileño, madera de guerrero' (Man from Guayaquil, Warrior Spirit), 'Ambato tierra de flores' (Ambato Land of Flowers) and 'Soy del Carchi' (I Am from Carchi Province). These *pasacalles* are part of the national music anthology, which are usually sung in medleys of Ecuadorian popular music. Historian Jorge Núñez (1998, 23, 41) defines the *pasacalle* as a 'hymn of the small homeland' ('himno de la patria chica') and 'song of roots' ('canción de arraigo') because the lyrical content emphasizes love and pride for one's place of birth.

The *pasacalle* is an embraced dance with a simple choreography consisting of short walking steps. It shows the influence of the Spanish *pasodoble*, the

European polka and the Mexican *corrido*. It is characterized by a binary meter, lively tempo and rhythmic accompaniment based on four eighth notes. *Pasacalles* are usually in the minor mode, with harmonic progressions based on simple sequences of I-IV-V-I. People sing to the accompaniment of a guitar, although performances by brass bands, piano and other instrumental ensembles are also popular.

Well-known *pasacalle* composers are Jorge Araújo Chiriboga (1892–1970), Alfredo Carpio Flores (1909–56) and Carlos Rubira Infante (1921). The latter, one of the most prolific Ecuadorian composers and songwriters, has composed a *pasacalle* for almost every city in Ecuador. In his songs, Rubira describes the beauty of the landscapes and people of a particular city or region. His *pasacalles* are well known, and at concerts, audiences often sing along to them. Discos Granja, FEDISCOS and IFESA were the main recording companies for traditional *pasacalles* in the 1950s and 1960s.

Since the 1990s the lower classes have appropriated and transformed the *pasacalle* into a modern dance music pejoratively known as *música chicha.* Some traditional *pasacalles* have been arranged in this style of music, which includes synthesizers, electric guitars and percussion instruments. These versions are often scorned by upper-middle-class people, who associate this music with drunkenness and lower-class social contexts.

Pasillo

The *pasillo* is an urban musical genre derived from the European waltz and characterized by sentimental lyrics and guitar accompaniment. It is popular in Ecuador, Colombia and Costa Rica. In Ecuador, the *pasillo* is considered the musical symbol of national identity. In Colombia, it acquired national overtones and was considered one of the musical genres representing the Andean elites, until the mid-twentieth century, when the *cumbia* displaced it and came to represent 'Colombianness' at national and international levels (Wade 2000). In Costa Rica, *marimba* (an African-derived xylophone) renditions of *pasillos* are considered a regional expression of the Guanacaste province.

In the late nineteenth century, the Colombian and Ecuadorian *pasillos* were similar in character; however, at the turn of the twentieth century they began to be differentiated in terms of function, instrumentation and lyrical content. Ecuadorian music researchers suggest that military bands from Colombia introduced the *pasillo* to current Ecuadorian territories during the independence wars in the early 1820s. At first, the *pasillo* was an instrumental music. It developed into a salon-music genre, composed by musicians with conservatory training such as Aparicio Córdova (ca. 1840–1934), Carlos Amable Ortiz (1859–1937) and Sixto María Durán (1875–1947) in Ecuador, and Emilio Murillo (1880–1942) and Pedro Morales Pinto (1863–1926) in Colombia. Known as *vals del país* (waltz of the country), the *pasillo* became a popular dance in both countries. The term 'pasillo' is a diminutive form of the word *paso* (step), a reference to the dance's characteristic short steps. In the early twentieth century, the *pasillo* was sung in serenades and performed in *retretas* (concerts at open air venues) by military bands and *estudiantinas* (ensemble of guitar-like instruments). *Pasillos* were first recorded in the early 1910s by Columbia and Victor Records in studios located in Spain and Italy. These were instrumental versions performed by studio orchestras and aimed at the Ecuadorian and Colombian markets.

In Ecuador, early vocal *pasillos* were known as 'songs of damnation' because their lyrics usually dealt with themes related to unfaithful women, the breakup of relationships, revenge and death as a way of coping with heartbreak. In the 1920s upper-middle-class Ecuadorians transformed these lyrics into a poetic expression of love which idealizes the woman. Other lyrics sing of Ecuador's beautiful landscapes and the bravery of its people. Upper-middle-class Ecuadorians usually define the *pasillo* as a 'poem set to music' because the lyrics are actually poems nourished by Latin American *modernismo*, a literary stream that sought an aesthetic of personal lyricism through the rhymes and consonance of the verses. In the mid-twentieth century the *pasillo* lost its dance function when performers from the highland region began singing it in a slow tempo, and since the 1970s there has been a generalized perception among Ecuadorians that it is synonymous with sadness.

The *pasillo* has been central to the construction of elite images of the Ecuadorian nationhood. Discourses about its origin reflect Ecuadorians' desire to find the roots of their identity, be they in European or indigenous cultures. Most discourses lack historical and musicological evidence. Historians and upper-middle-class writers tend to regard the *pasillo* as a local version of the German *Lied*, the Portuguese *fado*, the Basque *zortzico* or the French *passepied* (Guerrero 1996). The *pasillo* is also said to bear a resemblance to the Spanish *bolero* and the Austrian waltz due to the common triple meter of these genres (ibid.). Nationalist writers and musicologists on the other hand seek the origin of the *pasillo* in the *sanjuanito*, the *yaraví* and the *pase del niño*, three musical genres associated with the indigenous population. From a diffusionist point of view, most researchers have agreed that the *pasillo* is derived from the European waltz and came to Ecuador from Colombia. During the colonial period, Ecuador belonged to the Viceroyalty of Nueva Granada, which also included present-day Colombia and Venezuela. It is logical to assume that people from these countries shared the *pasillo* genre, though each national population gave the music a regional flavor. The Colombian *pasillo* was influenced by the *bambuco*, the Venezuelan *pasillo* by the *joropo*, and the Ecuadorian *pasillo* by the *sanjuanito* and the *yaraví* (Portaccio 1994, v. 2, 136).

Musically, the *pasillo* is distinguished by a basic rhythmic pattern formed by a quarter note, an eighth rest, an eighth note and a quarter note. The accompaniment is characterized by simple European-derived combinations of harmonic patterns (I-V-I, I-IV-V-I), often enriched with brief modulations to the secondary dominant. Piano transcriptions of late nineteenth-century *pasillos* show a variety of rhythms in triple meter that notate various guitar strumming patterns rather than changes in the *pasillo*'s rhythmic structure *per se*. It took several decades for the *pasillo* to acquire the standardized musical form and instrumentation it has today. Following the structure of the poems, many traditional *pasillos* from the 1920s and 1930s were organized into three–four sections, each of which developed new melodic and tonal material. Since the mid-twentieth century a binary form and a minor key in all sections have been prevalent features. While an alternation of duple and triple meters (*sesquiáltera*) was characteristic of early vocal *pasillos,* a regular triple meter became the norm in the 1950s. *Pasillos* have traditionally been sung by duos and in parallel thirds.

In the first half of the twentieth century Ecuadorian *pasillos* were performed by military bands and diverse ensembles made up of piano, violin, guitar or any other available instruments. Influenced by the Mexican group Trio Los Panchos, popular all over Latin America in the 1950s for their arrangements of *boleros*, the Ecuadorian *pasillo* adopted a similar instrumentation: guitar, which provides the rhythmic base and an embellished bass line, and *requinto* (a small high-pitched guitar), which plays melodic counterpoints to the vocal part. In Colombia, *pasillos* were performed by *estudiantinas*, large string ensembles also known as *liras*, *rondallas* or *tunas*. These ensembles included the guitar, the *tiple* (a 12-stringed flat-backed lute) and the *bandola* (a teardrop-shaped lute with 16 strings).

In Ecuador, there is an anthology of favorite Ecuadorian *pasillos* known as *música nacional* (national music). The most prolific and best-known Ecuadorian composers include Francisco Paredes Herrera (1891–1952), Nicasio Safadi (1897–1968) and Carlos Rubira Infante (b. 1921). Renowned performers include Carlota Jaramillo (known as 'The Queen of the *Pasillo*'), Julio Jaramillo, Dúo Benítez-Valencia, Trio Los Brillantes and Hermanos Miño-Naranjo. In Colombia, Pedro Morales Pino (1863–1926), Emilio Murillo (1880–1942) and Fulgencio García (1880–1945) were among the best-known composers of instrumental *pasillos*. The Dúo Garzón y Collazos were nationally known performers of Colombian *pasillos.*

The Colombian *pasillo* is classified into two subcategories which point to distinctions based on character, function and performance tempo: *pasillo lento* (slow *pasillo*) and *pasillo de baile* (*pasillo* for dance). In Ecuador, *pasillos* are distinguished by their geographical region: *pasillo costeño* (*pasillo* from the coast) and *pasillo serrano* (*pasillo* from the highlands). The former tends to be cheerful and in fast tempo; the latter is generally slow, sad and sentimental.

Since the 1960s, the Ecuadorian working classes have appropriated and transformed the *pasillo* into *música rocolera,* a style of music associated with the *rocola* (the jukebox), the *cantina* (the bar, and getting drunk). The new *pasillos* lack the poetic language characteristic of traditional *pasillos*. Singers perform *pasillos rocoleros* with exacerbated sentiments and usually high-pitched nasal voices. Upper-middle-class Ecuadorians stigmatize this type of *pasillo* as vulgar and assume that the traditional *pasillo* is disappearing because it does not have commercial visibility. They fail to recognize the dynamic changes affecting the *pasillo* and engage in lengthy discussions over the standing of the *pasillo* as the symbol of 'Ecuadorianness.' Young Ecuadorians do not normally listen to traditional *pasillos* because they consider them to be old-fashioned. In the 1990s intellectuals and musicians advocated the need to innovate and modernize the *pasillo* with new instruments and jazz and rock harmonies. Despite its low visibility in the music market, the traditional *pasillo* continues to be perceived as a dominant national expression. With the massive exodus of Ecuadorians abroad in the aftermath of the economic crisis of the late 1990s, the *pasillo* is experiencing a renaissance among young expatriate Ecuadorians who are nostalgic for the homeland.

In honor of Julio Jaramillo, the most internationally known Ecuadorian singer, the Ecuadorian government declared his day of birth, 1 October, the Day of the Ecuadorian Pasillo. In Colombia, the Festival of the Colombian Pasillo takes place every year in the month of August in the city of Aguadas, Department of Caldas.

Payada (Décima)

Payada is a practice of improvised solo song, traditional and to some extent current in Argentina, Uruguay and Chile, typically taking place as a contest between two singers (*payadores*) who accompany themselves on the guitar. *Décima* is the preferred poetical form, and the term is occasionally used as a synonym. The stanzas are composed of ten octosyllabic lines, rhyming ABBAACCDDC. Earlier verse forms such as couplets or quatrains have fallen out of use.

Following this norm of versification, the contenders pose questions to each other and answer them. Each participation occupies a full stanza, except for *media payada*, in which the second singer is obliged to answer in the second half of a stanza (thus respecting the rhymes chosen by his adversary). The subjects treated vary greatly: love, philosophy of life, politics, current affairs, riddles, etc. Although traditionally the musical setting was that of *cifra* or *estilo*, to which in the early twentieth century was added the waltz or *valseado*, the practice since the second half of the century has relied overwhelmingly on the *milonga*. Each one of the singers chooses his own melody from a stock of formulas, according to his preferences and vocal range; he then repeats it as many times as he intervenes. The *payada* used to go on until one of the contenders declared himself beaten, but nowadays more cooperative arrangements are made beforehand.

In contrast to the prevalence of females in the *copleras* improvisational practice in the mountainous Argentinian Northwest, the *payada* of the pampas is a strictly male affair. The roving *payador* (*gaucho*-style minstrel) of the nineteenth century, who exercised his art in the thinly scattered *pulperias* (general stores and pubs) of the pampas in return for food and drink, has been highly idealized as the quintessential *gaucho* figure. In that vein, but with a strong autobiographical nucleus, the figure of the *payador* has been the subject of a highly celebrated, forty-minute-long narration with *milonga* music by Atahualpa Yupanqui, *El payador perseguido* (The Hunted Payador), first recorded in 1963 and published in book form in 1972. *Payadores* are still active on some circuits, mainly *peñas* (pubs), where occasional *payada* sessions are heard, but the improvisatory nature of the art does not lend itself to mass production and circulation. Recordings of *payada* sessions are few, and they tend to take the form of anthologies. One famous Uruguayan-born improviser is Gustavo Guichón, who every year performs for hours at a time during the *folclore* and rodeo festival at Jesús María (Córdoba, Argentina) commenting in *payada* style, through the loudspeakers of a large stadium, the triumphs and misfortunes of the riders.

LEONARDO WAISMAN

Pindín

Pindín is one of several sobriquets used to describe Panamanian *música típica*. Throughout Latin America, *música típica* is used to describe a country's particular compendium of traditional musical styles, whether it is rural, folkloric or indigenous in origin. Panamanians interpret *música típica* in a similar respect, sometimes using the term interchangeably with *música folklorica*. However, Panama also attaches the *música típica* label to a particular genre of violin and accordion-based dance music that emerged during the late nineteenth and early twentieth centuries. Due to Panama's polysemous usage of the *música típica* label, terms such as *pindín*, *música típica popular* and, to a lesser extent, *ritmo guarare,* are used informally to describe the country's primary popular music genre.

Historically, *música típica* comes from an area of Panama's interior stretching from the Western province of Chiriqui to the Azuero Peninsula, a large peninsula in southern Panama that is divided into three provinces: Herrera, Los Santos and Veraguas. The inhabitants of these regions are primarily of Spanish descent, and despite Panama's considerable cultural and ethnic diversity, the people, culture and musical traditions of these particular provinces are often taken by the Panamanian government to symbolize the national essence of Panama.

Pindín is the name of a popular rural dance event that was organized in cantinas, bars, open-air plazas or private homes. These dances were often accompanied by a violin-led *música típica* ensemble. The violin, serving as the principal melodic instrument, was supported by a Spanish guitar, triangle, one or more *tambores* (hand percussion instruments) and a *caja* (a double-headed drum played with hand and stick). Eventually, the repertoire of instrumental music performed at these dances came to be known as *música de píndin*, or simply, *píndin*. Although the repertoire of this period did not contain song lyrics, this did not preclude the inclusion of a female vocalist who performed vocal ululations in a strained and high-pitched voice known as a *saloma.*

The dance rhythms executed by these ensembles derive from Panama's musical folklore such as the *mejorana*, *tamborito* and *cumbia*. It was also a common practice, especially in Chiriquí, to incorporate the *waltz*, *mazurka*, *polka* and other European dances into the repertoire, resulting in musical blends such as the *mazurka de píndin* and *vals de píndin*.

Throughout the twentieth century, *pindín* acquired pejorative connotations, becoming a term used disparagingly by urban, middle and upper-class Panamanians to describe the rural peasants (*campesinos*) who patronize the disreputable bars and cantinas that frequently held these particular social dances. It is perhaps this unfavorable connotation that has prevented the widespread acceptance of *pindín* as an official genre label.

Starting in the 1930s and 1940s, Panama's increasing exposure to transnational popular music genres – facilitated by the rise of radio and a growing demand for sound recordings and touring musicians from the USA and Latin America – sparked musical experimentation and innovations within the *música típica* genre. The most significant change to occur during the first half of the twentieth century was the supplanting of the violin in favor of the diatonic button accordion as the principal melodic instrument. Esteemed violinists such as Gelo Cordoba, Dorindo Cardenas and Ceferino Nieto abandoned the violin in favor of the more sonically powerful accordion. In the late 1960s, *música típica* composers and musicians, deeply influenced by Afro-Cuban music, experimented with different musical forms and instrumentation. Changes to the percussion section were significant, replacing the Panamanian *tambores* (*repicador* and *pujador*) with Cuban-derived instruments such as the *timbales* and *conga* drums (also known as *tumbadores* in Panama). During the same period, Ceferino Nieto and Roberto 'Papi' Brandao were the first to incorporate the electric bass and stand-up bass, respectively.

In the 1970s acclaimed accordionist Osvaldo Ayala, influenced by Colombian *vallenato* music, was the first *música típica* artist to record songs with greater narrative lyricism, tackling issues such as love and estrangement with keen emotional breadth and depth. Ayala is also cited as being the first to experiment with the latest advances in music technology, most notably incorporating the electronic keyboard and percussion into his ensemble in the early 1980s.

Early twenty-first-century *música típica* uses the standard ensemble of a diatonic button accordion, one or two vocalists, timbales, congas, the *churucca* (metallic guiro), drum synthesizers, an electric bass and an electric guitar. The role of the *salomadora*, though absent in an increasing number of *música típica conjuntos* in recent years, persists for the time being.

Música típica underwent a commercial boom in the 1990s, thanks in part to the stylistic experimentation of artists such as Victorio Vergara, Osvaldo Ayala and Samy and Sandra Sandoval, who all aspired to appeal to an ethnically diverse Panamanian population. The brother-sister duo Samy y Sandra Sandoval have continued to make significant stylistic contributions to the *música típica* genre, incorporating musical elements from salsa, reggae, *merengue* and hip-hop into their repertoire. Their experimentation continues to attract younger generations of Panamanians as well as a broader global music market. They have performed throughout the Americas and Europe and have made numerous television and film appearances such as a cameo in the motion picture *The Tailor of Panama* (2001). Most importantly, vocalist Sandra Sandoval, with the backing of her brother Samy on the accordion, is one of the first women to sing lead vocals in a *música típica* ensemble. Although no other female artist has been able to follow suit with equal success, Sandra Sandoval's entrance into an otherwise male-dominated musical role and scene is noteworthy. The boom also increased the national exposure of long-established *música típica* artists such as Dorindo Cardenas, Ulpiano Vergara and Alfredo Escudero, all of whom have been commemorated by the Panamanian government for their artistic contributions to Panamanian folkloric and popular culture. Most notably, Osvaldo Ayala has served as Panama's Cultural Ambassador since 1995 and has performed and recorded on several occasions with the country's National Symphony Orchestra.

Plena

Plena is a primarily Afro-Puerto Rican musical genre that connects the histories of Puerto Rican workers with the broader struggles of the Afro-Caribbean working classes as heirs of the repressive experiences of slavery. Emerging in Ponce, a coastal urban enclave in the south of the island, *plena* is a product of the period that followed the US invasion of Puerto Rico in 1898. Since its beginnings, *plena* has been a means to comment upon both ordinary and historical events. It has long been practiced in the interstices of the recording industry, the lettered spheres of society and the street corners of Puerto Rican neighborhoods. It has played a central role in the discussions about Puerto Rican identity and culture since at least the 1930s. *Plena* is a hybrid musical expression in which performers sing in a call-and-response format of mostly four-line repetitive verses. The vocals are accompanied by the *pandero* or *pandereta*, a hand held portable drum of African and Arabic origins, which is *plena*'s central instrument. The genre has experienced diverse periods of commercial success through its century-old history. Despite its current decrease in commercial popularity, *plena* remains a vital cultural expression and a mark of national pride among Puerto Ricans both on the island and throughout the diaspora.

Plena is often described as a derivative of *bomba*, a distinct Afro-Puerto Rican musical genre that dates back to the eighteenth century. They are so closely related that people often refer to them as if they were a single genre called '*bomba y plena*.' Furthermore, some musicians even speak of *plena* as the little sister of *bomba*. Although they have indeed shared performance and practice spaces since early in the twentieth century, *plena* and *bomba* are genres with different instrumentations, dance steps, rhythms and structures.

Historical Overview

It is a fundamental understanding among musicians, folklorists and scholars that *plena* developed in the southern part of Puerto Rico, more specifically in the city of Ponce. After the military invasion of the island by the United States in 1898, sugar cane haciendas owned by Puerto Rican Creoles were consolidated into huge plantations and mill towns, many of which were established in the south. Puerto Rico saw an increment of migrants from English-speaking Caribbean countries such as St Kitts, St Thomas and Barbados in the early decades of the century. Most of them settled in working-class communities in the south and west of the island. A strong labor force composed mostly of black Puerto Ricans, Creole Puerto Rican peasants and Caribbean immigrants was formed in the midst of the social and economic changes brought by the new capitalist system implanted by the United States (López 2008; Flores 1993; Echevarría-Alvarado 1984). The genre spread quickly as laborers traveled throughout the island and began migrating to the United States.

Plena first emerged in La Joya del Castillo, an urban shantytown in Ponce. John Clark and Catherine George, a Barbadian couple remembered as 'Los Ingleses' (the English), used to play a guitar and a *pandereta* throughout the streets of the city musicalizing the everyday lives of the community and singing jingles for local commercial stores (Echevarría-Alvarado 1984). Their daughter Carola Clark was the first well-known *plena* percussionist during the 1910s before she migrated to New York. By the early 1920s Joselino 'Bunbún' Oppenheimer, also from La Joya del Castillo, became known as the first 'King of Plena' (López 2008; Flores 1993; Echevarría-Alvarado 1984). Even though he died in 1929, many of Bunbún's compositions became foundational in the history of *plena* as the genre was recorded for the first time.

Plena was first recorded in the late 1920s in New York by Manuel 'Canario' Jiménez, a dock worker, merchant marine and popular music singer who is remembered as the man who made *plena* internationally famous. Canario popularized the genre under a contract with the RCA-Victor record label. He recorded mostly sanitized versions of streetwise compositions written by Bunbún and other *pleneros* (plena musicians). The three-minute format of the 78-rpm discs imposed a rigid structure to a music that was about spontaneity. Also, the instrumentation of Canario's group responded to the demands of the entertainment industry in which the Cuban *conjunto* was the sound of the day. The *pandero* was excluded from recordings or used in a minor role compared to that of accordion, *güiro*, guitar and trumpet. Although *plena* was not the main genre in Canario's repertoire, he became its iconic figure among Puerto Ricans both in the island and in New York, and he is responsible for the first, albeit brief, *plena* commercial fever.

Following the commercial boom of Canario's recordings, small ensembles recorded *plenas* for labels such as Columbia and Brunswick. Preeminent Puerto Rican popular musicians such as Pedro Flores, Rafael Hernández and Plácido Acevedo also recorded *plenas*. The genre remained a central musical expression among the working-class communities even when it was experiencing commercial success. According to historian Edwin Albino, the legendary *plenero* Ramón Rivera Alers, 'El Viejo Mon,' worked the streets of Mayagüez, a coastal town in the West of Puerto Rico, during the early 1930s singing *plena* commercial jingles on a daily basis, and more prominently during the Tree Kings festivities (Personal communication, Mayagüez 2010). By the late 1930s the commercial popularity of *plena* had vanished as the recording industry favored other genres.

Plena's commercial popularity arose once again during the late 1940s when the upper levels of society in Puerto Rico embraced the genre. César Concepción, a well-known ballroom bandleader whose big band performed mainly European and Cuban dance music, created *plena de salón* or ballroom *plena*. He adapted the genre to the Latin popular music orchestra of the time that included trumpet, saxophone, *congas*, *timbales*, *güiro*, bass and piano. *Panderos* were excluded from Concepción's orchestra. Perhaps his main contribution to the history of *plena* was the *plena-mambo*, which responded to the *mambo* fever of the time.

During the 1950s and 1960s *plena* was recorded by preeminent Puerto Rican popular music figures such as Myrta Silva and Daniel Santos. The genre was also embraced and folklorized by the Institute for Puerto Rican Culture which edited an anthology of Canario's old *plenas*. Flor 'Ramito' Morales Ramos, an iconic figure in the *jíbaro* music (songs from the country-side of Puerto Rico), composed and recorded one of the most beloved *plenas* of all time: 'Qué bonita bandera' (What a Beautiful Flag). In Mayagüez, Cheo Pérez became a foundational figure of the streetwise *plena*. Meanwhile in New York, two migrant *pleneros* from Mayagüez became two of the most popular figures of the genre: Ángel Torruellas and Mon Rivera. The former was crowned the new 'King of Plena' due to his *plenas jíbaras* influenced by *merengue* and *cumbia*. The latter marked the sound of Puerto Rican music in New York for decades to come with his trombone-laden urban *plenas*. Rivera was also crucial in bringing back the laborer struggles to the center of *plena* with one of his preeminent songs 'Aló ¿quién ñama?' (Hello, Who's Calling?). Composed by his father 'El Viejo Mon,' this tune narrates the struggles endured a couple of decades earlier by a group of female workers in the textile industry in Mayagüez.

In the midst of this surge of *plena*, Rafael Cortijo and Ismael Rivera became arguably the two most important figures of the genre. In the mid-1950s, Cortijo y su Combo, an all-black group of musicians with no formal musical training, occupied the Puerto Rican media, toured Latin America and the Caribbean, and challenged the hegemony of big bands in the Palladium in New York. Their first mayor hit was 'El bombón de Elena,' composed by the late Rafael Cepeda, the patriarch of *bomba* and *plena*. They popularized the musical traditions from Santurce, a working-class neighborhood in San Juan known for its rich *bomba* and *plena* practices. Even though Cortijo y su Combo did not use *panderos*, the group is beloved and respected by *pleneros* because they orchestrated the street-corner flavor of these genres into a *conjunto* format always performing with great strength and freedom.

In the 1970s, salsa became a major force in the recording industry led by the hegemonic New York-based enterprise of Fania Records. The marks of *plena* were sparked throughout the work of many Puerto Rican *salseros* whose repertoires and musical practices were influenced by Mon Rivera and Cortijo y su Combo (López 2008; Berríos 1999). Also, traditional *pleneros* such as Ángel Torruellas and Víctor Montañez made recordings in New York and maestros such as Sammy Tanco maintained the community-based traditions of *plena* in the city. Willie Colón produced two albums for Mon Rivera, *There Goes the Neighborhood* (1975) and *Forever* (1978), that relocated *plena* on the charts and brought the genre to the younger generation. Nonetheless, *plena* was marginalized during this period and it became a minor commercial force.

In 1976 a group of streetwise *pleneros* lead by José Manuel 'Chema' Soto founded El Rincón Criollo (The Creole Corner), a cultural institution in the South Bronx that has become the most important place for the practice of *plena* in New York during the last 30 years. Also known as La Casita de Chema (Chema's Little House), El Rincón has served as the place for legendary maestros such as Marcial Reyes, El Viejo Tivo and Benny Ayala to practise the traditional *plena* on a daily basis. Los Pleneros de la 21, arguably the most important *bomba* and *plena* ensemble in the United States, was founded by Juan Gutiérrez at La Casita in 1983.

In Puerto Rico, *pleneros* from a younger generation posed a conscious response to the hegemony of salsa by enhancing the orchestration of *plena* ensembles. Los Pleneros del Quinto Olivo, a band from Santurce, is responsible for the development of a new commercial *plena* that emulated the sound and orchestration of most salsa bands in the mid-1970s (López 2008). The characteristic features of Los Pleneros del Quinto Olivo were a reinforced line of trumpets and trombones, an expanded chorus, an increment in the number of *panderos*, and a new way of playing the drums (López 2008). Also, Los Pleneros de la 23 Abajo, directed by Roberto Cipriani, presented a distinct *plena* ensemble with a less commercial style that reaffirmed the political significance of the genre as the voice of the working class.

In 1980, and right before his death in 1982, Rafael Cortijo brought *plena* back to the radio with his version of the classic song 'Elena, Elena.' In 1985 the well-known salsa singer Lalo Rodríguez recorded the album *El niño, el hombre, el soñador y el loco* (The Child, the Man, the Dreamer and the Mad Man). Originally conceptualized by Rafael Cortijo, this was the first album in which *plena* and *bomba* were recorded with violins and classical-type sound. According to the well-known *plenero* Héctor 'Tito' Matos, a group of foundational figures of the genre such as Tomasito Flores, Emilio Escobar, Ismael 'Cocolai' Rivera, Paquito Cerniéra, Baltazár Carrero, Ramón Pedraza, Héctor Rodríguez and Toñín Romero remained active both recording and on the community-based *plena* scenes (Personal communication, June 2012). A surge of *plena* groups in the 1980s and 1990s saw the emergence, among others, of Atabal, Los Pleneros del Truco, Los Pleneros del Pueblo, Los Sapos del Caño, Son del Manglar, Los Guayacanes de San Antón and Tipikón. Also, *pleneros* such as Luis Daniel 'Chichito' Cepeda, Joe Medina, Gallego, Víctor Toro, Félix Díaz, Héctor 'Tito' Matos, Richard Martínez, Luis 'Lagarto' Figueroa, Erik Noel Rosado and Llonsi Martínez, among many others, participated prominently in these and other ensembles.

A gap developed between the new *plena* styles that flourished in the island during the 1970s and 1980s and the traditional *plena* practices that were mostly nourished in New York. According to Juan Gutiérrez director of Los Pleneros de la 21, new bridges between these traditions were established by Tito Matos and Pedro 'Único' Noguet, two young but experimental *pleneros* who moved to New York separately in the early 1990s (Personal communication, New York 2012). Meanwhile, Plena Libre became the new face of commercial *plena* in the mid-1990s. Directed by Gary Nuñez, the group had several international hits and toured the United States, Europe and Latin America. Plenéalo, a band with a very similar sound, also experienced commercial popularity in the late 1990s. Truco y Zaperoko (a joint venture of Los Pleneros del Truco, a traditional *plena* group, and Zaperoko, a more Cuban sound-oriented band directed by Edwin Feliciano) was also founded in the late 1990s. Between 1999 and 2009 they recorded three albums that merge the Afro-Puerto Rican and Afro-Cuban traditions. Also in the late 1990s, the iconic salsa singer Andy Montañez recorded 'Quién no se siente patriota' (Who Does Not Feel Like a Patriot) one of the most popular *plenas* of recent times.

Beginning in the 1990s, Tito Matos became an influential figure in the development of the genre both in New York and in Puerto Rico. He founded Viento de Agua in 1997 alongside Ricardo Pons, Alberto Toro and other New York-based musicians. Their first album *De Puerto Rico al mundo* (1998) located *plena* within the most important jazz and Latin sounds of the day. Their second album *Viento de Agua Unplugged: Materia prima* (2004) became a crucial influence in the contemporary practices of *plena*. When Matos moved back to Puerto Rico, he and his fellow *plenero* Richard Martínez organized the Plenazos Callejeros, monthly community-based gatherings of *pleneros* that for seven years afforded a generational dialogue between professional and streetwise musicians.

In the early twenty-first century, *plena* has been recorded by salsa orchestras in France, Ukraine, Colombia and Spain. There is also a well-established tradition of *plena* orchestras in Uruguay influenced by the music of Rafael Cortijo and Ismael Rivera, among others. Grupo Esencia, Terraplén, Billy Van y Los Pleneros del Chékere, Tato Torres & Yerbabuena, and composer Jerry Ferrao have also marked the recent history of the genre. Meanwhile, Ricky Martin brought *plena* back to the charts in 2006 with the song 'Pégate,' which he recorded accompanied by *Viento de Agua Unplugged* for his album *Ricky Martin MTV Unplugged*. In 2009, the well-known Puerto Rican jazz saxophonist Miguel Zenón recorded the album *Esta plena* also in collaboration with Tito Matos.

Plena: Social Significance

Soon after *plena* emerged in the streets of Ponce, it became entangled in the discussions about Puerto Rican culture and identity. The genre has developed in the midst of the tensions and negotiations between its community-based practices, the recording industry and the lettered spheres of society. The economic, racial and gender tensions that have long existed among Puerto Ricans have played out in *plena* since at least the 1930s. *Plena* was viewed by the educated intelligentsia with diverse degrees of suspicion and acceptance (Miller 2004). Already in 1935 Tomás Blanco published the essay *Elogio de la plena* that presented the genre as part of the national discourse but only by neglecting its Afro-Caribbean marks. An opposition was created between plena and *danza,* a genre that is said to be a descendant of English and European country dance. *Danza* has long been portrayed as a 'white lady,' as the music of the elites. *Plena*, on the other hand, has long been described as a 'sensual mulatta,' the tri-ethnic music of the working class (Aparicio 1998).

Plena is commonly known as 'the people's newspaper,' understanding this musical genre as the people's means to communicate the news of the neighborhoods. This is one of the most beloved metaphors among *pleneros* and Puerto Ricans in general. Anthropologist Ramón López (2008, 21–55) thoroughly deconstructs the notion of *plena* as a newspaper. He argues that even though it narrates the everyday events of the neighborhoods, *plena*'s structure and storytelling have nothing to do with the rigid language of journalism. López also asserts that the image of *plena* as a newspaper is part of a conscious effort to control a genre that has always been too chaotic and too black for the elites of Puerto Rico. However, the idea of 'the people's newspaper' has become a key component of the *plena* vernacular.

Plena as Music

In *plena*, a soloist and a chorus sing call-and-response patterns that mostly consist of four-line repetitive verses. *Plena* has long served its creators as a means to narrate the ordinary experiences of their communities and to comment upon the historically significant events of the day. Hence, *plenas* can be satirical, iconoclastic, joyful, humorous, religious, ordinary or philosophical. Also, they are often strongly political as the genre has been since its beginnings the voice of the Puerto Rican workers.

Instrumentation

Plena is a flexible musical genre that has changed greatly over the years, often absorbing different instrumentations into its basic ensemble. Nonetheless, the *pandero* has always been nourished as 'the soul of plena' (Echevarría-Alvarado 1984, 31). *Panderos* are handheld circular drums with a low-depth echo chamber that have a goatskin attached to the frame through a screw-and-lug tuning system. Historically, p*leneros* have manufactured them by recycling ordinary objects such as cheese boxes, kitchen cauldrons, pieces of metal and PVC. Since the 1990s there has been a surge of crafted professionalized *panderos* of bigger sizes and new styles that follow the influence in sound and style developed by Pepe Olivo (López 2008).

The basic instrumentation of *plena* has long been standardized as an ensemble of tree *panderos* whose syncopated and polyrhythmic beats are held tightly together by a *güiro* (scraped gourd), the other quintessential instrument of traditional *plena*. The ensemble consists of two supporting drums called *seguidor* and *punteador*, and a lead drum called *requinto*. The *seguidor* is a low-tuned and usually bigger drum, which provides a constant beat that is the basic rhythm of *plena.* The *punteador* is a middle-tuned and usually middle-sized drum that plays a beat that serves as a bridge between the *seguidor* and the *requinto*. This is the smallest and higher-tuned *pandero* and is used to improvise over the other drums. Other instruments commonly used in *plena* are the harmonica, the accordion, the guitar, the trumpet, the trombone and the clarinet. Ultimately, *pleneros* often say that they play *plena* with whatever instruments they have to hand (Singer 1994, 214).

Dance

Dance does not play such a preeminent role in the practice of *plena* as it does in *bomba*. *Plena* percussionists do not necessarily converse directly with dancers. Traditionally, *plena* was danced in couples but the genre has long been danced individually or in spontaneous group choreographies.

Historiography of *Plena*

The formal scholarly work on *plena* began in the 1970s and 1980s both in Puerto Rico and New York. In the 1970s, the Center for Puerto Rican Studies at Hunter College in New York documented the practices of *plena* in the city. The book *La plena: origen, sentido y desarrollo en el folkore puertorriqueño* (Plena: Its Origins, Sense and Evolution in Puerto Rican Folklore), written by the late folklorist Félix Echevarría-Alvarado in 1984, is the keystone work for the study of the origins of *plena* in Ponce. Juan Flores, a Puerto Rican studies scholar who is the most prolific *plena* writer in English, has written historical and ethnographic articles about the genre. In 1993 he published the article 'Bumbún and the Beginnings of La Plena.' In 1994 ethnomusicologist Roberta Singer published a foundational essay entitled 'The Power of Plena,' and ethnomusicologist José Emanuel Dufrasne published *Puerto Rico también tiene tambó* (Puerto Rico Also Has the Drum). In 1997 Ruth Glasser published a thorough study of Manuel 'Canario' Jiménez that was included in her book *My Music Is My Flag*. Meanwhile, in 1998 Frances Aparicio published a gender study of *plena* as part of her book *Listening to Salsa: Gender, Latin Popular Music, and Puerto Rican Culture*. In 2004 Marilyn Miller published 'Plena and the Negotiation of "National" Identity in Puerto Rico,' an essay that situates *plena* within the lettered discussions about national identity. Ultimately, Puerto Rican anthropologist and *plenero* Ramón López is the most prolific and accomplished *plena* scholar. His 2008 book *Los bembeteos de la plena puertorriqueña* was the most comprehensive and critical study of the genre published up to that date.

Conclusion

Plena is a latent cultural manifestation in the everyday lives and a symbol of national pride among Puerto Ricans both on the island and throughout the diaspora. For decades, hundreds of *pleneros* have gathered in the streets of Old San Juan during a weekend in January to celebrate *Las Fiestas de la Calle San Sebastián*, the equivalent to a Puerto Rican carnival. In New York, El Rincón Criollo remains a central place for the practice of *plena* on a daily basis. Since 2003 the Hostos Community College in the South Bronx has celebrated the *Bomplenazos*, a biannual reunion of *bomba* and *plena* musicians from New York and Puerto Rico. Also, several *bomba* and *plena* festivals have flourished throughout the island and other cities in the United States. *Los Pleneros de la 21* has been a consistent institution in the performance, preservation and education of the genre. They actively engage in the United States and international folk and world music festivals, and have been recognized by national endowments and foundations. Meanwhile, the *Plenazos Callejeros* have inspired a surge of similar *plena* gatherings around Puerto Rico. In sum, despite its current decline in commercial success, *plena* is practiced by many more people and in many more spaces than ever in its century-old history.

Polca Paraguaya

Perhaps the best known and most cultivated of all Paraguayan musical forms, the *polca paraguaya,* or simply *polca*, is a song and dance genre in compound duple (6/8) meter characterized by its lively, rhythmic drive derived from sesquialtera or hemiola rhythmic elements. Sharing its history and some general musical traits with other Latin American musical genres in 6/8, the history of the Paraguayan *polca* could be traced back to colonial times, when the region was heavily influenced by social and cultural Iberian practices. From the early to the mid-twentieth century, helped by live radio broadcasts and the newly established recording industry, Paraguayan popular music composers and performers disseminated new compositions based on the musical characteristics of the Paraguayan *polca*, thus affirming its own local identity. The genre has continued to be a favorite among all social groups in Paraguay. Although the sound and structure of the traditional Paraguayan *polca* have remained essentially unchanged, the early twenty-first century has witnessed a search for experimentations between the genre and other popular counterparts, such as jazz, rock and world music.

The name *polca* derives from the transplanted Bohemian polka that became very popular in Paraguay during the second half of the nineteenth century; however, apart from sharing its name, the Paraguayan *polca*'s melodic, harmonic and rhythmic features do not correspond to the dance of European origin. The short melodic phrases of the Paraguayan *polca* are highly syncopated, usually connecting the last beat of a measure with the first beat of the following one. This singular characteristic of the Paraguayan *polca*, known as *sincopado paraguayo* (Paraguayan syncopation), has the aural effect of a playful anticipation of the beat (Boettner 1997, 205). In general, tonal harmonies in parallel thirds or sixths, frequently following a I-V-I-IV-I-V-I harmonic sequence, accompany the melodic line. Bolstering the *polca*'s characteristic steady rhythmic propulsion is a typical accompaniment pattern consisting of broken chords punctuation and systematic strumming usually performed on the guitar and/or the Paraguayan harp.

One of the first documented Paraguayan references to the name *polca* appears in *El Semanario*, the main newspaper published during the presidency of Carlos Antonio López (1790–1862), first president of Paraguay. An excerpt from an article published on 27 November 1858 recounts the details of a celebration in honor of the opening of Vice-President Venancio López’s new house. According to the article, a band was hired to play *polcas* and *mazurcas* as entertainment for the crowd at the event (Boettner 1997, 199). Despite the article’s mention of the *polca* in its adapted spelling, no conclusive evidence exists to link the *polcas* played at the López residency to the Bohemian polka or to the 6/8 Paraguayan *polca* as it is known today. Surviving anonymous *polcas* from the late nineteenth century such as ‘Campamento Cerro León’ (León Hill Campground), ‘Guaimí pysapẽ’ (The Old Lady’s Toenail), ‘Mamá kumandá’ (Mother’s Beans), ‘[El] Solito’ (Alone), ‘Ndarekói la culpa’ (It Is not My Fault) and ‘Polca ka’ú’ (The Drunkard’s *Polca*) exhibit compound duple meter with syncopated melodies. Boettner (ibid.) links the inception of the Paraguayan *polca* to a particular dance of Iberian origin that reached the continent around 1750. He associates the Paraguayan *polca* with the *gato* dance, supporting his inference by quoting musicologist Carlos Vega, who indicated that the Spanish *Gato Mis-Mis* dance, later referred to as *gato* in Argentina, was already known in Peru in 1780. Boettner reinforces this view by citing Italian traveler Giovanni Pelleschi, who visited Humaitá (in southern Paraguay) in 1880 and recorded names of dances in his diary, among them the *gato*.

Having studied the rhythmic characteristics of the Paraguayan *polca*, Cardozo Ocampo (2005, 69–71) classifies at least four distinctive subcategories within the genre: *polca syryry* (dragging *polca*), characterized by a more relaxed pace than the average fast *polca*; *polca kyre’ỹ* (lively *polca*); *polca popó* (jumping *polca*) or *jeroky popó* (dancing and jumping *polka*); and *polca galopa*, a *polca* accompanied by a *banda típica* (folk band) using the rhythmic form of the *galopa*. Szarán (1997, 392) mentions two further subcategories: the *polca sarakí* (playful *polca*), a fast-paced instrumental *polca*, and the *polca jekutú* (plunging *polca*). Ruiz Domínguez (2000, 163) adds the *polca corrida* (running *polca*), perhaps a Spanish designation and rendition of the term *polca syryry*, and the *polca valseada* (waltz *polca*), danced with a waltz-like motion.

Opinions on this complex subject are far from unanimous. Composer Florentín Giménez (1997, 117) fundamentally disagrees with the classifications proposed by Cardozo Ocampo and Szarán, maintaining that the Paraguayan *polca* and the *purahéi* ([Paraguayan] song), are *géneros intermedios* (in-between genres), stages in the development of two main forms of musical expression: the *guarania* and the *kyre’ỹ*. He labels the *polca* as a subgenre with a slower rhythm than the *kyre’ỹ* which for Giménez was the appropriate term to describe the lively rhythmic compositions in 6/8, commonly referred to as the *polca*, found in Paraguayan traditional music. Nevertheless, in a study on the Argentine *chamamé*, a traditional genre from the northern Province of Corrientes closely connected in style and history to the Paraguayan *polca*, Rubén Pérez Bugallo (1996, 198) indicates that the *chamamé*, the Argentine *zamba* and the Paraguayan *polca* all seem to share a common origin in the practices of the Iberian-Peruvian musical traditions, highly influenced by the Spanish *fandango* (ibid., 19, 178).

When Paraguayan *polcas* are presented as vocal music, compositions are usually, though not exclusively, performed at a slower pace and referred to as *polca-canción* (sung *polca*) or simply, *polca*. Various initiatives to replace the name *polca* with a Guaraní or Spanish term have been unsuccessful, as the present denomination is deeply embedded in the popular tradition. While composers Remberto Giménez (1898–1977) and José Asunción Flores (1908–72) have endorsed the Guaraní word *kyre’ỹ* (lively, playful, witty), composer and band conductor Luis Cavedagni (1858–1916) and guitarist Agustín Pío Barrios (1885–1944) used the term *danza paraguaya* (Paraguayan dance) to refer to the [*polca*] instrumental and dance form. In regard to the song form, composer Juan Carlos Moreno González (1916–83) has assigned the Guaraní word *techagaú* (nostalgia) in reference to the *polca-canción* compositions, while others prefer *canción paraguaya* (Paraguayan song) and *purahéi* ([Paraguayan] song) (Boettner 1997, 198). In 2007 Florentín Giménez proposed the Guaraní term *pupyasy* (*pupy* means ‘world of sound’; *asy* means ‘sentiment’), which for the composer indicates a more accurate description of the musical characteristics of the genre known as Paraguayan *polca* (2007, 265–70).

Major themes found in Paraguayan *polca* texts may include descriptive onomatopoeic titles, romance, nature, name and description of towns, nostalgia for home and mother, and epic subjects, as well as compositions celebrating the main political parties and *clubes de fútbol* (football – soccer – clubs). Some of these themes are also common to other Latin American musical genres, and although the language and poetry construction might appear similar, Paraguayan lyricists, besides describing local traditions, views and ideas, may also include words and phrases in Guaraní. Tracing back the Paraguayan *polca* to colonial times and its affirmation as a local musical genre in the early to the mid-twentieth century, one could see that in the late twentieth and early twenty-first century its continuous popularity has been the result of numerous musical and social agents. Among them, the private and official establishment of numerous music festivals celebrating popular Paraguayan culture, and the influence of the media and the recording industry have been the main factors supporting the cultivation and dissemination of Paraguay's most representative musical form.

Polca Paraguaya *in Brazil*

The importance of Paraguayan *polca* to cultural identity extends beyond the borders of Paraguay into the northern regions of Argentina and to the central southern Brazilian region of Mato Grosso do Sul. In Brazil, the assimilation of '*polca paraguia*' is an ongoing process.

The *polca paraguaia* is the main musical representation of cultural identity in Mato Grosso do Sul, and is linked with the fact that the entire region was occupied by the Guaraní Indians during the colonial period and was the scene of intensive migration on the part of Paraguayan people during the nineteenth and twentieth centuries.

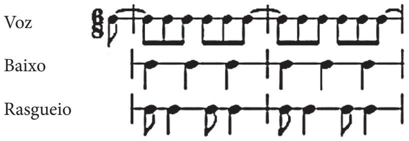
After the war involving Paraguay, Brazil, Argentina and Uruguay (1864–70), the resulting redrawing of Paraguay's borders was treated as an invisible obstacle by the country's population, who migrated in considerable numbers to the south of the state of Mato Grosso. In the twentieth century, extreme poverty combined with other political events, such as the Chaco war (1932–5) and the civilian war of 1947 in Paraguay, resulted in continued migration, which the porous state of these frontiers enabled to continue.

Once established in the south of Mato Grosso, Paraguayan immigrants went to work at the *erva-mate* harvest and in cattle breeding, bringing their cultural legacies as the Guaraní language, parties, creeds, myths, culinary art, customs and music. The *erva-mate* harvest was the main factor responsible for the foundation of numerous villages in Mato Grosso do Sul, such as Porto Murtinho, Bela Vista, Amambai, Itaporã, Ponta Porã and many others. Here, Paraguayan music, particularly *polca paraguaia*, naturally became the dominant form of music.

During the first half of the twentieth century, the repertory became linked with the country music of Brazil (*música caipira*), engendering a local Paraguayan *polca*, with its characteristic transformation in the rhythmic configuration and in the formal structure that is usually designated by the name *rasqueado*. This usage became extensive in Brazil during the 1930s when composers and singers such as Raul Torres, Mário Zan, Nhô Pai and Capitão Furtado returned from travels in Paraguay to introduce the *guarânia* and the *polca paraguaia* into the field of Brazilian country music. Among the best-known Brazilian *rasqueados* are 'Morena Linda' by Raul Torres, 'Paraguayita, Pepita de Oro' by Capitão Furtado, 'Flor Matogrossense' by Zacharias Mourão, 'Pé de Cedro' by Zacharias Mourão and Goiá, 'Cidades de Mato Grosso' and 'Seriema do Mato Grosso' by Mário Zan and Nhô Pai and the very popular 'Chalana' by Mário Zan and Arlindo Pinto. Famous contemporary composers and interpreters of *rasqueado* in the state of Mato Grosso do Sul include Helena Meirelles, Almir Sater, Paulo Simões, Guilherme Rondon, Marcelo Loureiro and Lígia Mourão, Délio and Delinha, and Beth and Betinha.

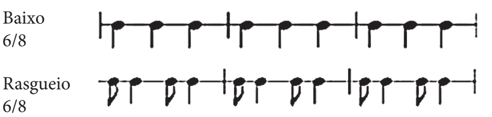
One of the most evident transformations to be seen in *rasqueados* is in the rhythmic configuration of the melodic line, which can neutralize the melodic syncopation characteristic of *polca paraguaia* or change the original 6/8 time of the melody into one in 3/4 or 2/4, while the guitar accompaniment and the bass line keep the 6/8 time.

The original rhythmic configuration of *polca paraguaia* in 6/8 time is as follows:



Example 1: Rhythmic configuration of *polca paraguaia* in 6/8 time

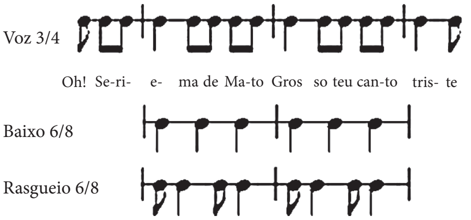
The same rhythmic structure appears in the Brazilian *rasqueado* but without the syncopation, called *sincopado paraguaio,* at the end of each bar and the beginning of the next one, as can be seen in Example 2 below (a fragment of 'À matogrossense,' composed by Zacarias Mourão and Flor da Serra).



Voz
6/8
Fui co-nhe- cer o be-lo Mato Gros-so láen-com-trei o meu pri-mei-ro (a)-mor
Baixo
6/8
Rasgueio
6/8

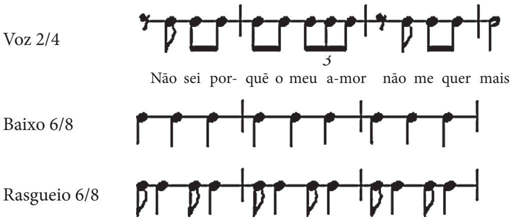
Example 2: *Rasqueado* 'A matogrossense' showing lack of syncopation of *polca paraguaia*

Another example shows us the transformation of the melody line in 6/8 to one in 3/4. This is a fragment of 'Seriema de Mato Grosso,' composed by Mario Zan and Nhô Pai:



Example 3: *Rasqueado* 'Seriema de Mato Grosso' showing transformation of melody line in 6/8 to one in 3/4

The final example is of a melody in 2/4 time as it appears in the song 'Uma saudade,' composed by Rodrigo and Rodriguinho:



Example 4: *Rasqueado* 'Uma saudade' in 2/4 time

The lyrics of the songs can be sung in Portuguese (both original songs and Brazilian versions of original Paraguayan *polcas*), in Spanish, in the Guaraní language or in *yopará* (a mixture of Spanish and the Guaraní language). The formal structure of Brazilian *rasqueados* does not always follow the conventional AB form found in the original *polcas*. It is common to have songs with an A section only. Instruments such as the Paraguayan harp can be found in some musical groups, but it is more common to replace the harp by the accordion, and groups that play in early twenty-first century dances have introduced percussion and the pop drum set into their performances.

Alongside *rasqueado*, it is possible to find musicians in Mato Grosso do Sul whose songs conform more closely to the original configurations of Paraguayan polka. The reason is partly geographical contiguity, but it also reflects the common history and systems of symbols and cultural signs that permeate the daily life of the people of Mato Grosso do Sul.

Porro

Porro originated in the Caribbean coastal region of Colombia. Although it is identified by folklorists as a variant of *cumbia*, played by the same small ensembles based on drums, rattles and cane flutes, it is commonly spoken of as emerging from local wind bands in the mid-nineteenth century, drawing on a variety of local and translocal influences and typically played in village and town festivities by lineups including trumpets, tubas, clarinets, and bass and snare drums, but without vocals. In the middle decades of the twentieth century, *porro* was adapted by local 'jazz bands,' similar in makeup to popular big-band orchestras all over the Americas. *Porro* became a commercial and international product, and one of Colombia's best-known genres, more popular for a time than *cumbia*. Wind-band traditions have continued into the twenty-first century as an expression of regional 'folklore,' and there are local competitive festivals of *porro*. The big-band style of *porro* was adapted to slightly smaller ensembles from about the 1960s and these had a less polished style, with more of the feel of the wind-band renditions. By the 1990s in Colombia, *porro* was a genre associated mainly with the past, with the Caribbean coastal region and with folklore; its international profile had almost vanished, outshone by *cumbia* and *vallenato*, although a few innovators experimented with rock-*porro* fusions, often as part of attempts to 'rescue' and reinvigorate regional traditions.

Styles of *Porro*

Traditional wind-band *porro* is often divided into subgenres of *porro palitiao* (where the rim of the round double-headed *bombo* bass drum is hit with the drumstick) and the *porro tapao* (where one of the membranes of the *bombo* is muffled with the hand). This distinction is lost in jazz-band and subsequent orchestrations from the 1940s. The two varieties differ in arrangement but a typical wind-band *porro* has an eight-bar introduction, called the *danza* and said to sound like a Cuban *danzón* (there were Cuban music teachers in the Caribbean coastal area in the mid to late nineteenth century), followed by a section in which trumpets alternate with clarinets and *bombardinos* (small tubas), with a 4/4 beat carried by the *bombo* and cymbals. In the *porro palitiao*, there is then a section called the *bozá* in which the *bombo* player beats the rim of his drum and only the clarinets (and perhaps the *bombardinos*) interweave. The *porro* may finish with another *danza* section. As played by a jazz band like that of Lucho Bermúdez (see below), the *porro* retains a medium tempo (around 180 bpm), a steady 2/4 rhythm held principally by the *maracas*, which play a rhythmic ostinato like that of the *cumbia* (crochet, two quavers, crochet, two quavers), overlain by the characteristic interweaving of brass motifs played by trumpets and saxes, alternating with clarinets.

History

Porro is said to have ancient roots in the intercultural exchanges in the hinterland areas of the Caribbean coastal region of Colombia, where African slaves and their descendants mixed, culturally and sexually, with indigenous and Spanish peoples. *Porro* is identified as a genre originally performed by the four- or five-man *conjuntos* (ensembles), which, today in folkloric contexts, use transverse or vertical cane flutes, two conical drums (one *conga*-sized, the *tambor mayor*, the other bongo-sized, the *llamador*) and maracas or shakers to perform traditional *cumbia* (Abadía Morales 1983, 206; Fortich Díaz 1994; List 1980, 573). The origin of the name is unknown. Fortich (1994, 12–15) links it speculatively to the West African secret society *poro*; Abadía Morales (1983, 206) says the name may refer to a *conga*-like conical drum and/or to the blow (Spanish: *porrazo*) that is given to a drum. However, the name does not appear in the historical record before the late nineteenth century: terms such as *fandango*, *currulao*, *mapalé* and *bunde* are used to describe peasant and working-class urban music prior to this time. An early appearance of the name is in the 1877 poem 'El boga charlatán' (The Charlatan Boatman) by local poet Candelario Obeso (Obeso 1977 [1877]). It is uncertain if *porro* was danced in early peasant contexts, but it seems likely that it formed part of the musical repertoire for the dances, often labeled as *cumbia*, which involved wheels of male/female pairs moving slowly in circles, often around a hub of musicians.

The narratives that trace the emergence of the wind-band *porro* focus on the period around 1850 to 1880 (Alzate 1980; Fals Borda 1981; Fortich Díaz 1994; González Henríquez 1987; Lotero Botero 1989; Wade 2000, 55–9). Wind bands were spreading all over Colombia and Latin America from the early to mid-nineteenth century, often linked to military bands. One account of *porro* (Fals Borda 1981; see also González Henríquez 1987) focuses on the town of El Carmen de Bolívar between 1850 and 1875, when it was the center of a tobacco boom and thus a hub of movement and migration. Wind bands were employed by local farming and merchant elites for town and religious festivities and, although made up of local men, often had a musically trained director, in some cases from abroad. The story tells how the local wind band, made up of players from various parts of the Caribbean coastal region and accustomed to playing waltzes, *pasillos* (a Latin American waltz), *danzas*, *contradanzas* and marches, began to adapt local peasant styles, based on cane flutes, drums and shakers, to the wind-band ensemble.

A similar story (Fortich Díaz 1994) focuses on the late 1890s in the town of San Pelayo, often reputed to be the 'cradle' of *porro*. A key part of this story is the *fiestas de corraleja* (bull-running festivals), arranged by local landowners and a venue for wind bands. Again, local musicians – although in this case the key figures are well-educated and musically trained men who had traveled the region and merchants who obtained instruments from the United States – adapted local peasant music to the wind band lineup. What remains unclear in these stories is how much the local music influenced the musical innovations of these musicians, versed in other traditions. It is also unclear how dance styles changed: it is very possible that couple dancing was associated with these wind-band forms.

In the early decades of the twentieth century, jazz bands began to spring up in Colombia and, in the Caribbean coastal region, they made efforts to adopt and adapt local styles such as *porro*, *cumbia*, *fandango* and *gaita* (Nieves Oviedo 2008). Jazz bands such as the Orquesta A Número Uno and the Orquesta Caribe (directed by Lucho Bermúdez) played in elite social clubs, despite some initial resistance to genres associated with rural plebeians. Couple dancing was a staple element of the club scene at this time. Radio stations were established in Barranquilla and Cartagena in the 1930s and recordings were made first abroad, then in Colombia. In 1929 recordings made by Ángel Camacho y Cano for Brunswick included a *porro*, as well as *cumbia* and *mapalé*. The first Colombian record company, Discos Fuentes, based in Cartagena, began a catalogue in the early 1940s in which *porro* was soon the dominant genre. Traditionally an instrumental genre, the jazz bands began to use vocal accompaniment in their *porros*, alongside purely instrumental renditions. Lucho Bermúdez made inroads into the cities of the interior of the country, with hits such as 'Tolú,' 'Salsipuedes' and 'Carmen de Bolívar,' with his then wife, Matilde Díaz, on vocals. Other important band leaders included Francisco 'Pacho' Galán, Edmundo Arias and, from the 1950s, Pedro Laza (with Clímaco Sarmiento and Rufo Garrido).

In the press, there was initially some critical reception of *porro*: it was too sexually explicit, vulgar and 'black' (although Bermúdez's orchestra became a good deal 'whiter' during the 1940s, as his Cartagena-based players were replaced by musicians from the cities of the Andean interior). The way young adults danced to the music was often criticized as vulgar. The lyrics and song titles often referred to rural themes, provincial places, partying and dancing in small-town *fiestas* rather than urban clubs. But *porro* was also associated with fashionable modernity, as these jazz bands played a variety of internationally popular styles. Lucho Bermúdez raised the international profile of *porro* (and related genres such as *cumbia*) as he toured and recorded in Argentina, Cuba, Central America, Mexico and the United States. From the 1940s to the 1960s, *porro* was a central genre of Colombian music at home and abroad. Artists in Venezuela (Billo's Caracas Boys), Cuba (La Sonora Matancera), Mexico (Pérez Prado) and Argentina (Eduardo Armani) all recorded *porros*.

In the 1960s, the importance of the polished jazz-band performances in the elite social clubs of the cities continued, but orchestras such as Pedro Laza y Sus Pelayeros produced a slightly rougher sound, with more strident brass and more unabashedly plebeian appeal in the overall presentation. By the late 1960s the larger orchestras were being displaced by smaller *conjuntos* which made more use of electric instruments, such as bass and Hammond organ, and had just a couple of horns. At the same time, *cumbia* began to displace *porro* as the main sound of Colombian *música tropical*, an umbrella term that included *porro*, *cumbia* and a variety of related genres (*gaita*, *mapalé*, *fandango*), often hard for the casual consumer to distinguish from one another. Laza's orchestra was disbanded in 1973, Matilde Díaz left the Lucho Bermúdez orchestra in 1965 (although Bermúdez continued performing through the 1980s) and in 1977 the Festival del Porro was established in San Pelayo in view of the genre's perceived neglect and degeneration. In the 1990s *porro* was still easily available in Colombian record stores, mainly in compilations of older material. There were also some efforts at a revival, such as an album of 'modernized' Lucho Bermúdez covers, performed by a young *salsa* singer, Juan Carlos Coronel (*Un maestro, una voz*, 1994), and experiments in rock-funk-pop-*porro* fusion (Moisés Angulo, *Fusión*, 1994; Andrés Cabas, *Cabas*, 2002). Efforts at revival were linked both to a regional movement of cultural activism, which sought to reinvigorate the cultural identity of the Caribbean coastal region, especially vis-à-vis the perceived dominance of the Andean interior, and to record industry interest in commoditizing 'nostalgia.' By then, however, *porro* was a music already associated with the past, or with folklore, outshone by *cumbia* and *vallenato* and other non-Colombian genres such as *salsa* and *merengue*.

Pukkumina

Pukkumina (also known as Pocomania, Poco, Pukkumina and Pukumina) is a Jamaican neo-African religion that emerged in the mid-1800s concurrent with the wave of fundamental Christianity that spread across the United States in the late 1850s (known as the Great Revival movement). Pukkumina combined elements from Christianity and African religions, and by the 1950s it was the main religion of the country's poor. Its practices employ music, body movements and rituals. Between 1950 and 1970 Pukkumina was a major influence upon ska and reggae. Since the 1990s many dancehall hits have employed Pukkumina rhythms.

Etymology and Emergence

Pukkumina was first called 'Pocomania,' a possible European corruption of 'Poco-Kumina,' the name used by Jamaican Maroons and their descendants for Kumina services held by slaves on plantations (Barrett 1976: 27). Kumina is a Central African-derived religion that first emerged between 1841 and 1865 when it was practiced by West and Central Africans who worked in Jamaica as indentured laborers (Bilby 1995, 16; Carty 1988, 20–1; Warner Lewis 2002, 90). 'Kumina' comes from two West African Twi words: 'Akom' – 'to be possessed,' and 'Ana' – by an ancestor (Barrett 1977, 17). In 1956 folklorist Edward Seaga introduced the spelling 'Pukkumina' to correspond to practitioners' pronunciation (Seaga 1956, 2; 1969, 4), but many Jamaicans have continued to use 'Pocomania' and incorrectly think it is Spanish for 'a little madness' or 'a little crazy.'

Kumina is strongly intertwined with Myal (Mayal, Mayaal), a religious complex derived from religions of West and Central Africa, particularly from regions presently known as Nigeria and the Democratic Republic of Congo (Alleyne 1988, 98; Barrett 1976, 27; Burton 1997, 37, 14; Ryman 1983; Warner-Lewis 2002, 2003, 2004). Myal beliefs and practices figured prominently in Maroon communities, and are similar to those of secret cult societies in West Africa, Nigeria and Zaire and reminiscent of religious practices influenced by Central African ones (Alleyne 1988, 85; Warner-Lewis 2003, 193; 2004, 26). Myal's primary function is to communicate with God and one's ancestor-spirits. These spirits (called duppies – from the Twi word 'dopi,' meaning 'spirit of the dead') contact the living in dreams or during religious trance states (Warner-Lewis 2003, 145). Herbs are used for spiritual and physical healing (Murray 1971, 121–5; Ryman 1984a, 19).

In the late 1700s American Christian missionaries arrived in Jamaica. Among these missionaries were former African-American slaves (including George Lewis, an African-born Native Baptist minister) who attracted large followings by syncretizing Myal with Christian practices. The emphasis in this syncretism was upon spirit possession and ecstatic ritual dancing rather than on written Scripture. Lewis was persecuted by authorities, driving this practice underground (Alleyne 1988, 89–100). In the early 1840s, however, Lewis's syncretic religion experienced a revival and became the dominant Jamaican religious practice for the poor (Beckwith 1969 [1929], 158). This period also saw an influx of Central African indentured laborers who brought their religion (Kumina), which was then added to the Myal-Baptist syncretism (Ryman 1984a, 13; Warner-Lewis 2003, 190–5).

At the same time that this new level of syncretism was emerging, the first wave of American missionaries stemming from the Great Revival arrived in Jamaica in the early 1860s. Although the subsequent attempts to fully Christianize Jamaicans have often been described as the start of what became known as the Jamaican Revival tradition exemplifying predominantly Christian traits, many scholars (for example, Alleyne 1988; Barrett 1976, 1977; Maynard-Reid 2000 and Warner-Lewis 2002, 2003, 2004) consider the resulting belief system and practices to be dominated by Myal rather than Christian ideology. Thus, in the Jamaican context, 'Revival' and 'Revivalism' became labels for a primarily African-rooted religious movement dedicated to Myal under the guise of Christianity.

Revival developed into two forms: Revival Zion (aka 'Zion'), dominated by Christian beliefs/practices, and Pukkumina, dominated by West African beliefs/practices (Bilby 1995, 162; Carty 1988, 20–1, 66; Ryman 1984b, 51). By the early 1950s, however, the two were basically indistinguishable, although Pukkumina practitioners often exhibited stronger neo-Africanisms, such as multiunit dancing (i.e., polyrhythmic isolation of different body parts and flexible torso with flailing arms), hand drumming and an emphasis on ancestor possession and ritual dancing (Simpson and Moore 1980 [1957], 190; Carty 1988, 66).

Revival rituals were based on Myal ones, and because Revival ceremonies were often outdoors, they influenced both practitioners and onlookers (Lewin 2000, 196; Seaga 1969, 6). Many of the musicians who participated in the birth of ska and reggae were involved in Zion or Pukkumina either as participants or as observers (Katz 2003).

In the late 1950s Jamaican musicians made recordings that synthesized traits from Revival (hand drumming and consistent offbeat accents, called 'afterbeats' – explained below), mento (bass and percussion patterns, banjo/guitar strumming techniques), American R&B (small combo instrumentation, repertoire, melodic and harmonic vocabulary) and other Caribbean styles (such as calypso rhythmic patterns). The late 1960s and early 1970s saw a resurgence of traditional Jamaican folk musics, including Pukkumina, which was a factor in the emergence of reggae in the late 1960s.

In 1989 and 1990 Lloyd Lovindeer – a popular Jamaican dancehall DJ – released 'Pocomania Day,' 'Poco Party,' 'Find Your Way' and *One Day Christian*, influential singles and an album that employed Revival rhythms and Pukkumina drumming, with consistently accented afterbeats and heavy backbeats in combination with polyrhythmic hand drumming that emphasizes virtuosic accents and irregular patterns. In 1990 Steely (Wycliff Johnson) and Clevie (Cleveland Browne) produced 'Poco Man Jam,' a massive dancehall hit for Gregory Peck (Gregory Williams), and two albums (under the artist title 'Stevie & Clevie') – *Poco in the East* and *More Poco* – that featured toasting over electronic Pukkumina and dancehall rhythms. In 1993 another DJ named Mad Cobra (Ewart Everton Brown) had a hit with 'Poco Jump.' These releases were major influences upon raggamuffin or ragga, a 1990s Jamaican dancehall style (Bilby 1995, 176–9).

Musical Characteristics

Most Revival songs as practiced in the late nineteenth and early twentieth centuries utilized European Christian hymns in services derived from two-part West African rituals (Pitts 1988, 1989). Part One featured slow, sustained *a cappella* unison singing employing simple rhythms (Pitts 1989, 288). In Part Two, hymns were repeated with polyrhythmic hand-clapping, foot-stomping and percussion – usually tambourines and two drums: *tumba* (bass), and *rakkeling* ('rattling') drum (Pitts 1989, 285, 288–90). Sometime in the mid-twentieth century, guitar, bass, piano and drum set were introduced. These songs are dominated by Protestant hymns, some dating to the eighteenth century, by British hymnwriters such as Isaac Watts and Charles Wesley, and others to the US revivalist movement of the second half of the nineteenth century, such as those by Dwight Moody and Ira Sankey. Jamaicans learned these hymns from Baptist, Methodist and Anglican hymnals published in the late 1800s (Miller 1989, 406). European aspects of Revival hymns were significantly altered by Myal performance practices (Alleyne 1988; Barrett 1976; Burton 1997; Ryman 1984a, 1984b; Wynter 1970). Singers and instrumentalists flattened third, fifth and seventh scale degrees, improvised harmony parts and added vocables or interjections to fill in gaps (for example, see 'He Brought Me Out,' from *The Pentecostal Hymnal*, transcribed in Hopkin 1978, 37–8 and McCarthy 2007, 153). Although sung in English, Jamaican Creole pronunciation altered accents and word groupings, often substituting West or Central African words and/or syntax (Roberts 1989, 412). Simple rhythms were syncopated and accompanied by polyrhythmic clapping and percussion patterns that emphasized accented offbeats, or 'afterbeats' (see Example 1) which is the preferred term (Hopkin 1978, 30; White 1982a, 53).

Jamaican musicologist Garth White and American musicologist and reggae bassist Luke Ehrlich suggest using 'afterbeat' instead of 'offbeat' for the consistently accented sounds that appear in-between beats in Jamaican folk, religious and popular music (White 1982b, 38; Ehrlich 1982, 55). A notable characteristic of afterbeats is that they are consistently louder and heavier than sounds on the beats (see Example 1). Jamaican afterbeats sustain the harmony of the previous beat, rather than anticipate the harmony of the subsequent beat. They are accented and performed in a variety of ways, from single notes to full chords, and frequently with percussive instruments or sounds, and are usually accompanied with vigorous body movements that travel upward (on the afterbeat). (See the 'Reggae' entry for a detailed rationale for using 'afterbeat' instead of other terms).

Example 1: Afterbeat accents

In the late 1950s Jamaican musicians added heavily accented afterbeats – similar to those employed in Revival practices – and nyabinghi polyrhythms to American R&B-style songs, and ska was born. The meter (primarily simple duple and quadruple meters) and symmetrical phrasing of Christian hymns (two- and four-bar phrases, in four-phrase sections) were unaltered in Revival hymns (Rouse 2000, 229–34; Hopkin 1978, 36) and also prominent in ska, rocksteady and reggae.

Bodily Orientations

Physical movements in Revival services are best described as bodily orientations rather than as 'dance steps.' Jamaican dance scholars (such as Carty and Ryman) note that Revival movements are not predetermined sequences of choreographed steps and body shapes; rather, they are ways of moving the body in a free, often individualistic multiunit style. These movements are designed to induce emotional and physical states leading to possession. In a state of possession, it is believed that the spirit of an ancestor takes control of one's body, which involves losing control of speech and faculties, actually *becoming* the ancestor temporarily. Movements are derived from Kumina, Myal, Buru and Dinki Mini (a Jamaican funeral rite) rituals (see Carty 1988, 23–9 and Ryman 1979). Participants step counterclockwise in a circle – a formation and movement style also common in West African rituals. Each beat is stamped forcefully; participants move their torsos forward and downward on downbeats, with the pelvis thrust back, pushing extended arms down while exhaling loudly with a grunt. On afterbeats, both torso and arms are raised suddenly while inhaling loudly and groaning. This set of movements is called 'trumping' (also trooping, tramping and tromping; see Carty 1988, 81, 85 for illustrations). Both sonic and corporeal afterbeats are stronger than onbeat sounds and movements (Nettleford 1969, 23). This experience of strong, corporeally articulated beats with sonically louder and heavier afterbeat sounds (paired with jerking upward and groaning) is the foundational rhythmic orientation of all Jamaican popular music and dance, including ska, rocksteady and reggae.

Pumpin

Pumpin (pronounced 'poom-peen') is a distinctive subgenre of Carnival music originating in the Fajardo Province of Ayacucho, Peru, located in the southcentral Andean highlands. According to oral tradition, *pumpin* developed in the late nineteenth and early twentieth centuries in the wake of seasonal labor migration to the coast, when young men returned to the highlands bearing guitars and fragments of song traditions learned on their overland journey. These varied influences coalesced into the contemporary *pumpin* genre, featuring twelve-string guitar and female vocals, widely recognized today as the representative folk music of the central Fajardo region.

Musically, *pumpin*'s distinctive traits include paired melodic phrases (usually AABB), a heavy rhythmic emphasis on the downbeat, anchoring syncopated melodies, an extremely high vocal tessitura and use of a twelve-string guitar. The guitar is tuned to F#-A-D-F#-B-E, also referred to as 'harp tuning,' and a capo is used to transpose the guitar up a fifth or more to produce the genre's high-pitched characteristic sound. Guitarists, almost exclusively men, perform a repetitive bass line with the thumb, plucking the lower series of strings steadily on the downbeat, while the melody is played on the upper strings with a plectrum tied to the forefinger. Other string instruments are also played occasionally in a *pumpin* ensemble, most notably a four- or eight-string, flat-backed version of the Andean *charango*. Vocalists, generally small groups of two to six women, sing in the high, strident style typical of most indigenous music in Quechua-speaking communities. Song texts, derived from oral tradition as well as newly composed and/or improvised verses, address themes ranging from love and betrayal to agricultural activities and local politics.

Until the 1970s, *pumpin* was only played in the rural communities of the Fajardo Province during the growing season to accompany a round dance known as the *qachwa*, culminating in several days of festivities during the annual celebration of carnival in February or March. Beginning in 1976, this practice was formalized with the founding of the first *concurso*, or music and dance contest, held on the high Waswantu Plateau in the Fajardo Province, on the Sunday prior to Ash Wednesday. This contest played an important role in standardizing the genre's song form and ensemble instrumentation, as well as in reorienting its topical focus toward themes of social and political commentary. *Pumpin* was adopted by Shining Path guerrillas in the late 1970s and early 1980s as a vehicle for revolutionary propaganda at song contests, and reinvented later that decade again among people from Fajardo as a testimonial genre for protesting the ensuing political violence that enveloped the region (Ritter 2002). The first commercial cassette recordings of *pumpin* appeared in the 1980s, cementing and expanding the genre's popularity, especially in the highland migrant community living in Lima.

Pumpin continues today as a popular form of ritual music and dance in the rural Fajardo province, and also as a vehicle for social commentary in the annual contests held in Fajardo, Ayacucho and Lima. As a form of mass-mediated popular music, recordings and videos of the contests and individual groups circulate in Ayacuchan communities throughout the country, produced and distributed by numerous micro-recording labels or self-produced by the groups themselves; these recordings are increasingly available online as video clips. Since 2005, young musicians from the Fajardo migrant community in Ayacucho and Lima have also experimented with new fusions of *pumpin* and rock instrumentation, including electric bass and drumset (e.g., Punpho, Naranjitas de San Jose). Sometimes referred to as '*techno-pumpin*,' this new music has significant appeal among Fajardo's youth, and points to the genre's continued popularity.

Punta

Punta is the most celebrated of the secular dance-song genres of the Garifuna of Central America. The name *punta* is also used to describe the duple-meter rhythmic motive, the women's social commentary song form and the characteristic dance of procreation that form the basis for this musical genre. *Puntas* are typically performed at secular social gatherings and community events such as parties, birth and anniversary celebrations and annual Settlement Day festivities including the Miss Garifuna Pageant. They also function as cathartic activity when performed during festive drum and dance sessions that follow community rituals such as *belurias* (nine-night wakes for deceased family members) and *dügüs* (ancestor veneration rituals). Garifuna men and women dance *punta* from childhood to elder stages of life.

The Garifuna (collectively known as the Garinagu) are a people of West African and Native American descent who live along the Caribbean coasts of Belize, Guatemala, Honduras and Nicaragua and in US urban centers. They share a common language, system of beliefs and customs, series of ancestor rituals and seasonal processionals, and repertoire of secular and semisacred dance-song genres. Of the estimated 400,000 Garifuna, more than 300,000 live in Central America, the vast majority residing in Honduras.

Punta songs are performed in a call-and-response manner by a male or female soloist and a *gayusa* (a chorus, primarily made of women) and are traditionally accompanied by an ensemble of men playing indigenous acoustic instruments. These small ensembles include lead and bass drums, rattles and occasionally a conch shell trumpet.

The Garifuna employ only two types of *garawoun* (drums). Both are single-headed membranophones made of mayflower, or another hard wood, and animal skin, and both are identical in construction. The *segunda* (bass drum) is approximately 90 centimeters in height and ranges from 60 to 90 centimeters in diameter and provides the characteristic rhythmic ostinato that is the basis for each Garifuna dance-song genre, including *punta*. The *primero* (tenor or lead drum), a single-headed treble drum about 30–45 centimeters in diameter and approximately 60 centimeters high, provides rhythmic variety with syncopated and rapid improvised motives.

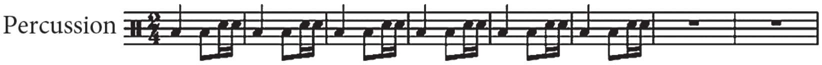
Shakkas (calabash container rattles) and struck turtle shells are the two indigenous idiophones used by the Garifuna. Similar rattles are found among Africans and Native Americans. *Shakkas* are always played in pairs and are made of a medium-sized, round calabash into which seeds or pebbles have been placed, with a wooden handle attached. The use of turtle shells in acoustic secular music such as *punta* began in the late 1970s and early 1980s with the creation of *punta rock* (a style characterized by arrangements of traditional and newly composed songs that employ the ostinato rhythms of indigenous Garifuna song forms, most often *punta*, and faster-paced tempos to appeal to youth) by Pen Cayetano, a visual artist in Dangriga, Belize, who made the first recordings of *punta rock* with his Turtle Shell Band. To fashion shells into instruments players attach the hollow shells to one another using heavy cotton rope. The rope is placed around the performer's neck with the belly portion of the shells facing outward. Handmade wooden mallets allow performers to play a variety of rhythmic patterns during *punta* songs. Turtle shells of different sizes produce variations of high and low indefinite pitched sounds. Because of the immediate and broad popularity of *punta rock* in the early 1980s and the unique timbre of the turtle shell, the latter was frequently added to drum and rattle ensembles when accompanying traditional *puntas*. Though turtle shells were synonymous with early *punta rock*, they are seldom heard in recordings of *punta rock* today.

The only aerophone (wind instrument) used by the Garifuna in *punta* and other genres is the indefinite pitched conch shell trumpet. A conch shell is made into a wind instrument when the pointed spiral top is cut off and air is blown through the aperture using the same closed, buzzing-lip embouchure employed when playing orchestral brass instruments. A single tone is played on each shell and the relative highness or lowness of the pitch is determined by the size of the shell. Smaller shells produce higher pitches and larger shells produce lower pitches. Three- to four-note repetitive patterns are blown during extended interludes of drumming, before and after groups of songs and between song verses.

Punta songs are topical and are usually composed by women who comment on issues ranging from male infidelity, love relationships and the loss of loved ones to employment and social matters. *Punta* songs are performed in succession without pause, as are all indigenous Garifuna dance-song genres, that is, in groups of songs of the same genre to create extended periods for dancing. After participants sing several verses and choruses of a song, the song leader simply begins the first verse of a new *punta* song. Each song contains distinct lyrics and melodic material for the verses and refrain. However, because the rhythmic accompaniment remains the same for all Garifuna songs of the same dance-song genre, the transition between songs can be difficult to detect for individuals who are not familiar with the Garifuna language or the repertoire of a particular genre of songs.

The characteristic duple meter ostinato of *punta* features a quarter note and an eighth note played in the center of the drum followed by two sixteenth notes played near the rim of the drum head to produce a higher pitch (see Example 1).

The *punta* ostinato is very similar to the ostinato of *paranda*, the duple-meter, social-commentary song genre traditionally composed and performed by men who accompany themselves on the guitar. The characteristic ostinato of *paranda* is a quarter note and an eighth note played in the center of the drum followed by an eighth note played near the rim of the drum head. Because the repetitive rhythms of *punta* and *paranda* are almost identical, songs composed as *parandas* may also be accompanied with the *punta* ostinato. Since the advent of *punta rock*, popular *puntas* and *parandas* have been arranged or recast by solo artists and groups as lively dance tunes in the Garifuna language accompanied by bands featuring a *primero*, *shakkas,* turtle shell rattles, electric lead and bass guitars, a synthesized keyboard and a drum machine when a s*egunda* is not employed (Lovell 2009). Popular *puntas* that have been recorded by numerous Garifuna artists or bands and that have been arranged as *punta rock* songs include: 'Bungiu Baba' (Father God), 'Gumagurugu' (a river in Dangriga, Belize), 'Luguchu Deo' (His Mother) and 'One, Two, Three.' Celebrated



Example 1: The characteristic ostinato rhythm of *punta*

parandas that have been performed and recorded by solo Garifuna artist or bands as *puntas* or *punta rock* songs include 'Fiura' (a woman's name) and 'Malate isien' (Love That Is Bought Is Worthless).

The *punta* dance is a reenactment of the cock and hen mating ritual, similar to the Cuban *rumba* and other dance forms of the circum-Caribbean. It features rapid movement of the hips and buttocks caused by a shuffling of the feet. As dancers hold their arms slightly extended to either side of their bodies, they keep their upper torsos upright and motionless. During this form of sexual dialogue, men often move around women: dancing in front, to the side and sometimes behind them.

Punta is the most salient musical symbol of Garifuna identity because of its position within the culture as the most frequently performed and popular of the indigenous social-commentary and dance-song genres. *Punta* has remained among the most popular of the traditional dances for Garifuna and non-Garifuna in Belize, Guatemala and Honduras for the past three decades. Non-Garifuna in Central America, the circum-Caribbean and North America who are familiar with Garifuna music recognize *punta* and its derivative *punta rock* as the most influential of the Garifuna styles of music. The success of the *soca* tune 'Leh we Punta' (1987), composed by the Trinidadian artist Calypso Rose following a visit to Belize, attests to the popularity and regional appeal of *punta*. Although recordings of *punta rock* and *parranda* have long eclipsed studio and field recordings of traditional Garifuna music, *punta* remains the music of choice among Garifuna of all ages because of its rhythmic drive, the sexual interplay of the dance movements, and the proverbial messages implied in the song texts.

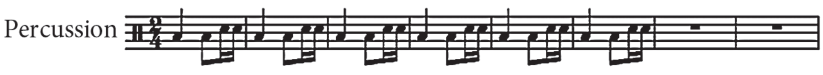
Punta Rock

Punta rock, a popular genre of contemporary Garifuna music created in the early 1980s, is based on arrangements of traditional songs and newly composed songs that employ the ostinato rhythm of the older Garifuna genre *punta*, a dance of procreation and its associated social commentary song form composed by women. *Punta rock* is most commonly performed by ensembles (usually composed of men) that combine indigenous Garifuna instruments – specifically, drums, rattles and occasionally struck turtle shells – and instruments typically found in rock and rhythm and blues bands – electric guitars, synthesized keyboards and drum machines. *Punta rock* songs are often based on popular, previously composed *puntas* and *parandas*, the Garifuna guitar-accompanied male social commentary song form. The characteristic rhythm of *paranda* is very similar to that of *punta* and the ostinato rhythmic patterns of both are played at a faster tempo in *punta rock*. By the mid-1980s, *punta rock* appealed to Central and North American Garifuna audiences, and the growing commercial market for it was seen as an avenue for potential financial success.

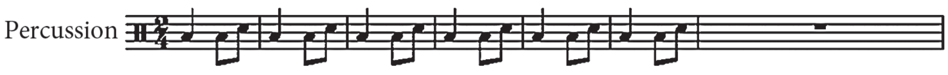
The Garifuna (collectively known as the Garinagu) are a people of West African and Native American descent who live along the Caribbean coast of Belize, Guatemala, Honduras and Nicaragua and in US urban centers. They share a common language, system of beliefs and customs, series of ancestor veneration rituals and seasonal processionals, and repertoire of secular and semisacred dance-song genres. In the 1950s Garifuna, in search of better employment and education opportunities, began migrating in large numbers to US urban centers, primarily New York, Los Angeles and Chicago. This population shift resulted in tens of thousands of Garifuna living in the United States and it had a direct impact on the production of *punta rock* music in the region. Of the estimated 500,000 Garifuna worldwide, approximately 15,000 reside in Belize, 4,000 in Guatemala and 300,000 in the Honduras. Forty-five Garifuna communities are located in Honduras, six in Belize, two in Guatemala and two in Nicaragua. Sizeable populations of Garifuna also reside in New York, Los Angeles, Chicago and New Orleans (National Garifuna Council of Belize, 2010).

Musical Characteristics: *Punta, Paranda* and *Punta Rock*

Because the Garifuna *punta* and *paranda* genres are foundations of *punta rock*, it is useful to outline the musical characteristics of all three styles. *Punta* is fast in tempo and features a repetitive pattern of a quarter note and an eighth note played in the center of the *segunda* (bass) drumhead followed by two sixteenth notes played near the rim of the drumhead to produce a higher pitch (Example 1 below). The *primero* (tenor or lead) drummer improvises rhythmic motives based



Example 1: The characteristic ostinato rhythm of *punta*



Example 2: The characteristic ostinato rhythm of *paranda*

on a repertoire of potential patterns. *Puntas*, like most Garifuna song forms, are sung in a call-and-response manner and are accompanied by drumming and the playing of *shakkas* (calabash rattles). The most popular of the secular Garifuna dance forms, *punta* is the symbolic re-enactment of the cock and hen mating dance and is characterized by a motionless upper torso and rapid movement of the buttock and hips attributed to the continuous shuffling of the feet (Greene, 'Punta'). Popular *puntas* are arranged or recast as *punta rock* songs by new and well-known solo artists as well as *punta rock* bands (Lovell 2009).

The Garifuna *paranda* evolved as a genre in the nineteenth century after the Garifuna arrived in Honduras, where they encountered the acoustic guitar and Latin and Spanish rhythms (Rosenburg 1999) and created their own genre of guitar-accompanied topical songs. *Parandas* that frequently have been arranged into *punta rock* songs include 'Fiura,' a song about a man's love for his wife, and 'Malate isien,' a warning that love cannot be bought.

Parandas are performed at moderate tempos and are sung by men who accompany themselves on the guitar. When drums accompany the singing of *parandas*, the accompaniment features a repetitive pattern of a quarter note and an eighth note played in the center of the *segunda* drum head followed by a single eighth note played near the rim of the drum head to produce a higher pitch (Example 2 above). The *primero* drum improvises rhythmic patterns when accompanying *parandas*, as in performances of *punta*, but plays at a lower dynamic level so as not to distract from the sound of the guitar and voice, the principal instruments.

Until the advent of *punta rock* in the early 1980s, *parandas* were performed primarily during the Christmas season, much like the various forms of *paranda* found in other locations in the region. The existence of string and occasionally drum-accompanied Christmas song forms such as *parranda* in Venezuela and its derivative *parang* in Trinidad and Tobago, and *parranda* in Puerto Rico, along with the pre-Christmas festival in Cuba named *parranda* support the existence of a Spanish-derived song form from the region. In the twenty-first century, *parandas* and *paranda*-based songs of the Garifuna are performed year-round because the lyrics typically make no reference to Advent or Christmas as do many *parrandas* in other regions of the circum-Caribbean.

Punta rock songs are typically faster in tempo than the traditional Garifuna songs from which they are derived, and dance movements performed to *punta rock* are more provocative than those performed to *punta*. Compact discs released as *punta rock* often include selections in other traditional Garifuna song forms as well as newly composed songs. The latter are considered *punta rock* songs if they (1) are fast in tempo – most *punta rock* songs have a metronome marking of 120 to 160 for the quarter note, (2) employ the characteristic *punta* motive on the *segunda* and (3) feature the typical fusion of indigenous Garifuna and Western pop music instruments (Lovell 2009). *Punta rock* usually employs standard tonic, subdominant and dominant harmonic progressions and maintains the alternating verse-chorus, responsorial format characteristic of most traditional genres of Garifuna music. Musicians usually preserve the unique melodic contour and structure of the song on which the contemporary arrangement is based. Although Garifuna traditionally perform melodies and refrains of *punta* and *paranda* songs in unison in communal and social settings, *punta rock* musicians occasionally perform melodies and refrains in harmonic intervals of thirds and sixths.

Some Garifuna songs have been recast in non-Garifuna song forms such as reggae and dub-poetry, as demonstrated on the disc *Rhodee* (2002), by the Belizean Garifuna Rhodel Castillo, who lives in Chicago. *Punta rock* recordings by Los Angeles-based Belizean vocalist and producer Aziatic such as *The Rebirth* (1999) often contain elements of rhythm and blues, soca, rap and hip-hop, and traditional love ballads. Recordings by Guatemalan and Honduran musicians often contain ballads in Spanish and Garifuna and display the influence of Latin American musical styles such as salsa, *merengue* and *bolero*. Multinational New York-based bands such as Garifuna Legacy produce recordings that employ elements of a wide range of Caribbean, Latin American and North American urban music styles. Some artists release remakes of songs originally composed as *punta rock* songs. For example, 'Huya' (It's Raining) by Aziatic y Los Nuevos Conceptos (1999) is distinctly different from 'Huya Belice' (It's Raining in Belize) (1982) by Pen Cayetano and the Original Turtle Shell Band.

Origin of *Punta Rock*

Views concerning the origin and development of *punta rock* differ in Honduras and Belize, the two leading commercial exponents of the music for many years. Aurelio Martinez, the most popular Honduran Garifuna recording artist and former elected Congressman (2005 to 2009), credits Gobana, an ensemble of young black Hondurans, with starting *punta rock* in the 1980s (Martinez 2003). Hector Vera, a noted Honduran promoter, believes *punta rock* began almost simultaneously in Belize and Honduras. Vera states that soca and other styles of Caribbean music from English-speaking countries in the region directly influenced Garifuna popular music in Belize just as salsa and various forms of Latin-American music from Spanish-speaking countries influenced Garifuna music in Honduras (2000).

Belizeans attribute the creation and early development of the genre to Delvin Rudoph 'Pen' Cayetano, a highly celebrated, self-taught musician and Garifuna painter from Dangriga, the largest Garifuna settlement in Belize (R. Cayetano 1982). Cayetano, with the assistance of several local musicians, is credited with forming the Turtle Shell Band, the first *punta rock* band, in the late 1970s. This was a period when popular US rhythm and blues and Anglo-Caribbean music, played on Belizean radio stations, attracted the attention of Garifuna youth. The ongoing emigration of Garifuna to the United States that had begun in the 1950s resulted in a generation gap in many Garifuna villages, primarily composed of youth and their grandparents. This phenomenon contributed to the separation Garifuna youth felt from their indigenous music and language, expressions of identity they associated with elders.

Pen Cayetano maintains that an incident in which Garifuna youth disrespected their elders at the 1978 Settlement Day festivities was the primary catalyst for the creation of *punta rock*.

> I knew that the Garinagu culture had reached the time for a change. I studied the old songs and played the Garifuna drums and also discovered how to use different sizes of turtle shells as percussion instruments. ... I finally got the idea of quickening the traditional Punta rhythm, adding the electric guitar and the turtle shell to it and called the music Punta Rock and named the group 'The Turtle Shell Band' (P. Cayetano n.d.).

The original members of the band included 'Pen' (guitar, lead vocals and background vocals), Horace 'Mohobob' Flores (lead turtle shells, lead vocals and background vocals), Conrad 'Faltas' Nolberto ('cricket-snare,' an original drum made of scraps of truck metal, other percussion instruments and background vocals), Egbert 'Myme' Martinez (double drums, a pair of single-headed membranophones played by one person, and background vocals), Peter 'Jeep' Lewis (MC, shakkas, whistle and background vocals) and Bernard 'Higgins' Higinio (small turtle shells and background vocals) (P. Cayetano 2007; E. R. Cayetano 1982). In October 2010 Pen Cayetano and the Turtle Shell Band reunited for a series of concerts in Chicago after 29 years. Pen and Mohobob Flores remain the most active members of the original band as solo performers, and Myme Martinez lives and performs primarily in Los Angeles.

The immediate success of the Turtle Shell Band in the early 1980s resulted in Friday evening roadblock performances and engagements at house parties. In July 1982 the band traveled to Belize City, the largest city in the country, where it performed at a local club, a park and ultimately on Radio Belize. Most of the songs were in the Garifuna language and emphasized themes such as history, cultural identity and pride, and love. By 1983 the band had performed at the New Orleans Jazz Festival and in several locations in the Caribbean and Mexico (Greene 2002, 199).

Punta rock bands, from their inception in the 1970s, featured an amalgam of indigenous and electric instruments. Through experimentation, Pen Cayetano discovered that combinations of turtle shells of different sizes produced variations of high and low indefinite pitched sounds and that a unique instrumental balance could be achieved when played with the Garifuna *garawouns*, drums (E. R. Cayetano 1982). By the mid-1980s the bass guitar had been added to the ensemble, and by the early to mid-1990s recordings featured synthesized keyboards playing countermelodies and drum machines. Bands found it financially advantageous to perform without *segunda* players because the drum machine could reproduce the *ostinato* pattern played on the *segunda*. The *primero* remained the primary percussion instrument because *primero* drummers added rhythmic variety to the music and because of their highly valued ability to interpret rhythmically the movement of dancers.

Turtle shells, the characteristic instrument of early *punta rock*, were seldom heard on recordings in the last decades of the twentieth century and the first decade of the twenty-first century. First-generation *punta rock* performers such as Pen Cayetano and his contemporaries, Chico Ramos, the late Andy Palacio, Aurelio Martinez and Rhodel Castillo, were generally successful in their efforts to encourage younger musicians to reinstate the *segunda* as a staple instrument of *punta rock*. These older musicians and Garifuna elders continue to advocate the correct grammatical use of the Garifuna language among younger *punta rock* artists, many of whom have included English, Belizean Creole or words that are a fusion of these languages with Garifuna in their songs.

With the birth and early development of *punta rock* in the late 1970s and early 1980s, a musical medium was created to promote Garifuna identity through the maintenance of the Garifuna language and song forms rooted in a common history and social and cultural ideals (Greene 2002, 190). By the mid-1980s *punta rock* had become the genre of choice for many Garifuna musicians for several reasons. First, recordings could include *punta rock* arrangement of songs based on *puntas* and *parandas* as well as acoustic versions of these songs and other traditional song forms familiar to most Garifuna. Second, most songs were in the Garifuna language and therefore accessible to Garifuna from either English- or Spanish-speaking countries. Third, the characteristic rhythm of *punta* and the instrumentation and typical sound associated with *punta rock* provided a stylistic framework for new compositions. Finally, because *punta rock* music was popular among youth and young adults, the potential for sales of this new style of music was seen as far greater than those other forms of Garifuna music.

Stages of Development

From the mid-1980s though the late 1990s *punta rock* reigned as the focal point and principal medium through which record labels, music producers, popular music advocates and musicians promoted Garifuna cultural identity. Because *punta rock* is often a recasting of preexisting songs and therefore intimately linked to language and social commentary, it has remained a vital link to the past and to the expression of identity. However, neither *punta rock* nor its predecessor, *punta*, is responsible for the meteoric rise of Garifuna music on the world music market. This rise can be attributed to the broad success of acoustic genres of Garifuna music such as *paranda* and songs composed by women other than *punta*. Acoustic and derived forms of Garifuna music are now classified as world music because they communicate the groove and cultural allure of traditional Garifuna musical identity (Stone 2006, 68). The advent of Garifuna music as world music can be attributed primarily to the international success of three acoustic-based recordings: *Paranda: Africa in Central America* (1999), *Watina* (Palacio 2007), which contains hints of Afro-Caribbean music but no punta, and *Umalali*: *The Garifuna Women's Project* (2008), arrangements of songs by female vocalists from Belize, Honduras and Guatemala that also contain elements of Afro-Caribbean music. The popularity of *Paranda: Africa in Central America* paved the way for *Watina* and *Umalali,* collaborative recordings between Stonetree and Cumbancha Records, the later of which has an established market for global distribution. Each of these influential and commercially successful recordings was produced by Ivan Duran, the Cuban-trained musician who founded Stonetree Records in Belize. The late Andy Palacio, *punta rock* musician and former Cultural Ambassador for Belize, and Ivan Duran were cowinners of the 2007 WOMEX (World Music Expo) award for their work on *Watina*, the highest-selling recording of Garifuna music to date.

Conclusion

Although no songs in the style of *punta rock* are featured on *Watina*, the global popularity of this compact disk sparked renewed interest in indigenous music among Garifuna youth and young adults, collectively, the largest consumer group of Garifuna popular music. According to Isani Cayetano, host of radio and TV shows in Belize City, Belize, many Garifuna youth had begun to develop a preference for American hip-hop and rap, reggaeton, reggae and other forms of contemporary regional music before the advent of *Watina* (Cayetano 2005). However, *punta rock* remains the preferred genre of musical expression among Garifuna youth and young adults for three primary reasons. First, *punta rock* promotes the use of the indigenous language. Second, it continues to be based primarily on preexisting social commentary songs, many of which have been familiar to most Garifuna since childhood. Finally, because dance is arguably the most important use for popular music, *punta rock* assures the survival of the *punta* dance, the most celebrated of the traditional dance forms. Young *punta rock* artists and bands who have begun to establish themselves as the second generation of Garifuna popular musicians include Super G (Lensford Martinez) and Aziatic (Vincent Lewis) of Belize, Eddie GNG (Eddie Alvarez and the Garifuna New Generation band) and Socié Style (Carlos Bonia) from Guatemala; and Young Gari (Frank Ruiz) and Lil June (La Punta Chow) from Honduras. Although groundbreaking recordings such as *Watina* may become more frequent in the near future, *punta rock* will likely remain the most celebrated expression of popular music identity because its value lies in its role as a medium for reinterpreting and recasting traditional Garifuna rhythms, melodies and social-commentary themes in new ways.

Punto Cubano

Punto cubano is a musical genre of the Cuban people that appeared for the first time, according to historical bibliographies, in the middle of the eighteenth century. Comparison and analysis of similar genres that emerged in Spain shows that the *punto cubano* shared characteristics related to musical tempo and formal, timbre, modal and textual structures. The following overview is based on María Teresa Linares's comparative analysis (published in part in Linares 1999) of the work of Spanish musicologists who studied the period from the fifteenth century on, including the elements that settlers, most of whom came from Spain, introduced in Cuba. The songs brought by the immigrants, through constant group regulation, had an impact on the creation of habits and the use or manipulation of formative elements. Over time, changes, incorporations and appropriations led to the collective formation of a new cultural product that enables us to acknowledge its nationality 500 years later: the *punto cubano.*

The *punto cubano* has been performed by farmers across the island for nearly five centuries. Some Spanish elements have remained unchanged during this time. The song, called *tonada,* employs the *décima espinela* form for its lyrics. The *décima espinela* is a type of poetic verse known since the sixteenth century and named after the Spanish poet Espinel. In the early years, *punto* was sung without accompaniment due to the lack of instruments. Eventually, instruments were incorporated and the choice of singing with or without accompaniment was maintained. The vocal part was first accompanied by a *tiple* (treble guitar) and later by the *bandurria* (mandola) and the Cuban *laud* (lute), all stringed instruments of Spanish origin. The guitar was soon incorporated along with the *güiro* or *guayo* and the *claves*, Cuban percussion instruments of African origin.

Despite enduring changes and innovations, those features that designated *punto* as the oldest folk genre of Cuban music have remained. Thus, *punto cubano* is described as 'people's product and patrimony … it has a non-academic assimilation, but through oral transmission or imitation, and though it can be found in books … it is not commonly written. The transmission of the folklore is spontaneous action, there is not any systematization or organization for its learning, apart from the compiling work of researchers ….' (Linares 1974, author's translation). In the early twenty-first century the oral transmission of *punto cubano* among children and youth is stimulated and encouraged through the creation of workshops in improvisation and instrument methods such as *tres*, guitar and *laud*. These workshops are offered in the Casas de Cultura of each province.

History

The first European settlers after Cuban colonization were primarily immigrants from Andalucia, Estremadura and Castille who were farmers and growers looking for economic progress, most of them single men. They mixed with the female natives and African slaves, and from these unions the first generations of Creoles were born. Jesús Guanche notes that the European population was augmented by waves of immigrants from the Canary Islands who began to arrive in Cuba in the sixteenth century, with particularly massive emigration in the second half of that century, due to the Canary Islands' location as a stopover in the transatlantic trade between Spain and America (Guanche 1992, 36–7).

These European settlers took up residence on lands that were used for massive cultivation near towns in homesteaded areas. Farming diversification with tobacco, fruits and other products played an important role in the development of villages. As farmers were later replaced by urban development, they brought with them a number of cultural elements that went through transformations as a consequence of the cultural encounter among different groups of Spaniards who emigrated to Cuba in several periods. For this reason, according to Argeliers León, '... there was a process of assimilation by the Cuban peasants of (those) cultural Spanish elements coming from an urban environment: the *décima*, the guitar, the *bandurria*, the way of plucking these instruments and some Spanish tap dances of the time, and the most important element: the assimilation involved an isolated process of evolution that determined certain traditionalism and a regional differentiation' (1974, 93–4; author's translation). Farmers and peasants of both European and African descent were called *guajiros*. The stylistic elements that would constitute their identifying music and dance genres, the *punto* and the *zapateo*, emerged from their way of life and habits, dances, songs and poetic manifestations after being imported by the Spanish immigrants.

The exact date of the emergence of the *décima* in the Americas and of its incorporation in the formal structure of the *tonada* is imprecise. In 1591 Vicente Espinel created and perfected a type of stanza commonly known as decima because each stanza contains ten lines. The *décima* is made up of two *redondillas* (stanza of four octosyllabic lines with a rhyme scheme of ABBA and CDDC, respectively) with two lines of verse (with a rhyme scheme of AC) in between. Spanish playwrights Calderón de la Barca and Lope de Vega used it extensively in their works. Lope called it *Espinela* after its author. The *décima* is present in *Espejo de Paciencia*, the first Cuban epic poem, written in 1630 by Spanish poet Silvestre de Balboa. A *motete* (religious vocal part) with *décimas* forming a repetitive refrain appears in this poem. Likewise, a poem in *décima espinela* and other stanzas called *Llanto de Panamá* was written in Panama in 1642. The *décima* was taught and recommended as a poetic cultivated form in ecclesiastic schools, especially the Jesuit, since the 1620s (Serrano de Haro 1984, 76).

Historically, the *décima* is known to have included lyrics with social relevance. For example, both cultured poets and the people at large sang *décimas* to the defenders of the city during the English capture of Havana in 1762. It is also known that the *décima* has been used in the form of *controversia* (controversy, or sung duel). In 1839 Spanish traveler José Jacinto Salas Quiroga visited the then rural area of Havana and described the *décimas* he heard as 'a strange conversation in verse' sung as 'a continuous and monotonous cry: it began with impetuosity and concluded with a cadence which imitated listlessness and softness ... it sounded like a prolonged sigh' (Salas Quiroga 1964, 151–2; author's translation).

Perhaps due to the style of singing, the *sung décima* in Cuba has been known as *punto guajiro*, *ay*, *ay-el-ay* or *llanto.* Esteban Pichardo has defined it as a 'common favorite chant of farmers whose lyrics (generally *décimas*) mostly begin with this interjection. The singers enthusiastically compete by blaring, accompanied by the *tiple*, the guitar or the harp. Some people call it the cry. It is quite sentimental in the major mode and in 3/8 time' (Pichardo 1976, 68).

Other authors such as Manuel García de Arboleya, Vicente Díaz de Comas and Ildefonso Estrada agree with Pichardo that the *punto cubano* contained danceable sections that alternate with the vocal sections, as do some Mexican dances which have the same origin. However, in Cuba both styles of performing *punto* – danced and sung – have been executed independently since the end of the nineteenth century.

It is possible that the combination of the poetic and the musical elements emerged from the use of song genres with repeating verses imported from Spain and already incipient in the seventeenth and eighteenth centuries such as the *soleares*, *rondeñas* and other styles of the *cante flamenco*. The similarity between *punto cubano* and *fandango* elements suggests that, as the latter emerged in several regions of Spain, the *punto* may have been created with similar elements in Cuba, and that it may have been named after the plectrum used to pluck the strings of certain musical instruments, such as the guitar or the lute. As there are no records of written pieces with these popular elements, Linares compared them with scores of a *fandango* by Domenico Scarlatti, who lived in Spain and Portugal for many years, and 'Fandango' by Scarlatti's pupil, Father Antonio Soler (1729–83). The relationship between Scarlatti's *fandango* and Cuban peasant music is very close and confirms not only the origins of Cuban music, but also the valuable structural elements of Spanish descent – especially from Andalucia – that are still preserved from the time they appeared and were adopted (Linares 1999, 29).

With colonization and settlement, new musical and literary elements emerged in Cuba derived from a process of transculturation that was taking place in Spain. This contributed to the appearance in Cuba of literary genres, songs and dances that were closely related to their origins until a process of fusion took place among the cultural components of the different groups that coexisted in the island over several years, reinforcing the Cuban identity with new cultural elements. The stylistic elements related to the *fandango* arrived in Cuba during the same period that it reached other Spanish colonies, the seventeenth and eighteenth centuries. Thus, they functioned to create a song and dance genre, as it was at the beginning, that was later called *punto cubano* and that shared the same structures as other Spanish *fandangos*. A fact that supports this hypothesis is the early return of the new genre to Spain, where it could not be yet discerned from its origins. For this reason, it is said in Spain that the *fandango* comes from America.

Musical and Poetic Form

During the evolution of song elements that occurred in the fifteenth century, an adoption of the *décima espinela* with three parts may have occurred: a first quatrain with a rigid structure rhyming in the pattern a-b-b-a, whose musical phrases coincide with each line of verse, and in which the verse suggests a topic; then a link or bridge with two lines of verse a-c, separated by a short instrumental interlude with the musical phrases of the lines of verse a-b, and the content of the text prepares the resolution. Another quatrain follows with the different rhyme pattern c-d-d-c, having the same musical structure as the first one – similar to the *vuelta* of many other previous songs – and in which the *décima* develops and concludes the poetic idea. This is the structure of the *tonada de punto*, whatever the lyrics and corresponding melodic structure may be (Example 1).

There are also songs with fixed refrains that repeat in each of the intermediate or final sections of the two repeating quatrains. These songs with refrains display a great variety and, with the repetition of the refrains, a pattern that may also have been common in some old *romances* (Example 2).

Similarly, the *décima espinela* follows the *tonada* structure. The first quatrain employs a musical phrase which coincides with a final cadence. In the bridge, the first musical semi-phrase is repeated and then the first phrase is repeated with the second quatrain. Navarro Tomas writes: 'The *décima* has more symmetrical proportions [than other strophic forms] and can be used with more freedom; it can be equally used as an independent unit and as a serial stanza' (1998, 251).

Thus, a very important relationship is established: the cadential nature of the *tonada de punto* leads to a cyclic continuity. There is harmony between the written text and the musical text. When a rural singer sings a story, he or she represents the cyclic continuity by singing several *décimas* related to the theme, linked by musical interludes and expressed with a single tune that completes its two-part form with an imperfect cadence over the fifth-scale degree. In addition, the performer can choose to intercalate a refrain between the stanzas, a technique that is frequent in some *romances*.

In the *romance* and the *villancico*, Spanish songs from the sixteenth century, as well as in the Cuban *punto guajiro*, the relationship between the syllable and the musical note is strict: one musical note per syllable of text. This is one of the most stable elements of the Hispanic heritage.

Another relationship between the poetic *décima* form and sung music is established by prosodic accents of the texts and melodic accents. The accent in songs with a more common text structure is metric and rhythmic, while the sung *décima* conforms to the mensural and dynamic accent that must adapt to the text. This happens in most song genres of narrative nature. Nicómaco de Gerasa explained, in his *Enchiridion, Manual of Harmonica*: 'If somebody while speaking or reading reveals the magnitude between the sounds, by spacing

Example 3: *Punto libre*. Song by Juan Pagés, with musical arrangement for voices

the voice out and linking a sound with another one as he talks, one says we are neither talking nor reading but singing' (cited in Salazar 1958, 44). In this way, the Cuban rural improviser sings with *portamento*, linking a sound with another one (Example 3).

Examples 1 through 3, transcribed from field recordings by María Teresa Linares of farmers throughout Cuba, represent models of everyday tunes that are sung in Cuba and which are considered the oldest examples of the genre according to chroniclers' descriptions. The sung expression is subjected to the demands of accentuations of the text, taking into account the song chosen by the singer, so that the message is clearly received. Songs expressed freely with no musical metrics are called *punto libre* or *a placer* by the rural people, since they are performed in *tempo rubato*, played *a piacere*. This performance style is appropriate for improvisation, since it allows the singer to follow his or her poetic impulse. It is widely used in the western region of the island, although internal migrations and the radio have contributed to its spreading throughout the country. It was also called *punto pinareño* or *veltabajero* since it was very prevalent in the rural zones and tobacco plantations of Vueltabajo and the western provinces of Pinar del Rio, Havana and Matanzas. The *punto libre* has a 3/4 time signature, which corresponds to the accentuations of the octosyllable verse.

The Punto Fijo

Punto fijo tunes possibly have their origin in songs that Garcia Matos (1960) called *metrados* (metered). There is a music–text relation differentiated by the strength of the accompanying rhythm, in which the instruments perform a continuous basso ostinato to which the singer is subordinate, alternating the prosodic accentuation of the verse and producing separation between the words imposed by the music. In this case, the sung *décima* conforms to the mensural and dynamic accents of the accompaniment. As a consequence, the semantic content of the text is modified. In order to make this alteration obvious, the singing style is usually modified with regard to the accompaniment, producing syncopation as rhythmic values move from one measure to another, or from one part of the measure to another. Rural singers have described this phenomenon as *punto cruzado*, since the rhythm of the melody runs across the fixed accompaniment.

In *punto fijo* songs, notations in 6/8 and in 3/4 are commonly used. The metric accentuation in the accompaniment makes demands upon the singer,

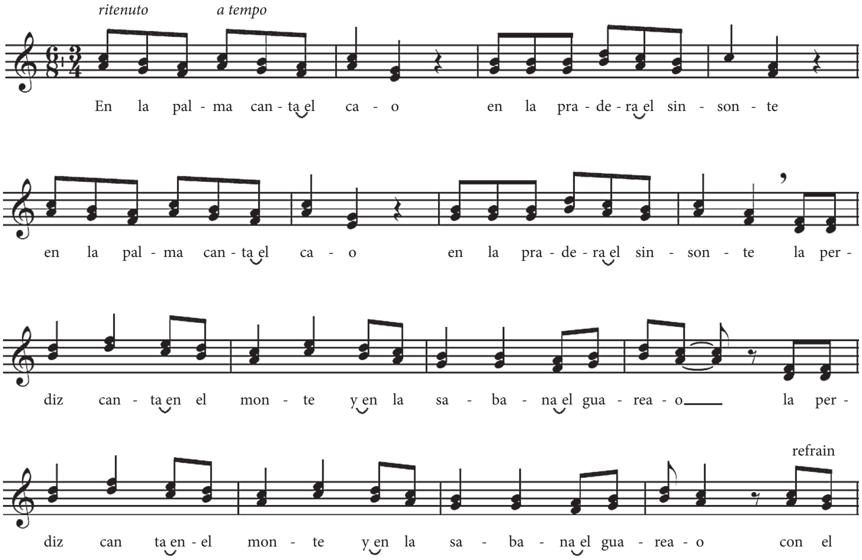
refrain
diz can ta en - el mon - te y en la sa - ba - na el gua - rea - o con el

Example 4: *Punto fijo* in Mixolydian mode. *Parranda* for a duet



ritenuto
a tempo
En la pal - ma can - ta el ca - o en la pra - de - ra el sin - son - te
en la pal - ma can - ta el ca - o en la pra - de - ra el sin - son - te la per -
diz can - ta en el mon - te y en la sa - ba - na el gua - rea - o la per -
refrain
diz can ta en - el mon - te y en la sa - ba - na el gua - rea - o con el

Example 5: *Tonada libre* from Spain. ‘La esposa se da en amor’ either to emphasize the metric accent of the instrumental rhythm if it coincides with an atonic syllable, or to displace the metric accent through syncopation or a pause that sometimes breaks the word into two parts. These *tonadas de punto fijo* are generally sung with memorized *décimas* since it is difficult to improvise *a tempo giusto* and make the accentuation of the *décima* coincide with that of the song. The *tonadas de punto fijo* are traditionally located in the central and eastern regions of the island and are known as *Camagüeyanas, Trinitarias* or *Cienfuegueras* depending on the territory from which they originate.

Modal Characteristics

The oldest surviving feature that still distinguishes the *punto cubano* is its modal characteristics. The Mixolydian mode is used to attain a greater sonority (based on C major) with the scale GABCDEFG. The absence of the leading tone (*sensible* or *sottotonica)* forces the cadence to be performed on the fifth scale degree, becoming the Andalusian cadence CBAG (Example 4 above).

The Phrygian mode is used in the C major scale with the notes EFGABCDE in an ascending sequence. In the descending sequence, the sixth-scale degree is used: EDCBAG#FE, concluding with the Andalusian cadence AG#FE.

Songs in minor key are *tonadas tristes* or *tonadas españolas*; in some places they are known as *tonadas Carvajal* after a singer who composed and popularized many of them (Example 5 above).

Evolution of the Genre

Punto cubano has been mentioned in novels and in short stories published by travelers. Its first printed appearance was in *Álbum Regio* (Regal Album) by Vicente Díaz de Comas, a Spanish composer living in Cuba. Díaz published a *zapateo* with *tonadas* that were interpolated as it was customary during the nineteenth century. Although the *décima* was published in hundreds of loose sheets and in novelettes that were distributed in villages, it was and still is essentially a genre of oral transmission that continues to gain popularity among various sectors of the Cuban population.

At the end of the nineteenth century *punto* was already incorporated as a theater piece in Cuban *zarzuelas* but with a structure which differed from those used in *cuartetas* (quatrains), a major mode that modulated to the relative minor to preserve some similarity to the original modal sonority. In addition, *punto* was sung accompanied by a small orchestra. Authors such as Jorge Anckermann and José Marín Varona, among others, composed *guajiras*, thus establishing the stylized form of the *punto cubano*. Later on, with the emergence of *son* as an urban dance, the *guajira-son* incorporated the danceable rhythm of *son* and also used bucolic descriptions in its texts, although in some *sones* of rural origins *décimas espinelas* are used in the final section, known as *montuno*.

In the discography of early Cuban recordings, there are some *puntos cubanos* that, starting in the nineteenth century, were recorded on cylinders and LPs until the appearance of the radio in the 1920s; *punto* was later disseminated through radio shows and, beginning in the 1950s, through television. Folk music artists and ensembles have recoded many albums, which have been well received in Spain, the Canary Islands, Dominican Republic, Puerto Rico and other Latin American countries.

Radio shows, in particular, played a pivotal role in the dissemination of the genre and its acceptance in the country's capital in the 1940s. These programs established virtuoso competitions and in leisure areas such as the Jardines de La Tropical there were Festivales de los Bandos competitions, in which competing teams, identified by color (with team names Red, Blue, Purple and Tricolor) were represented by poet or improviser. In the 1940s and 1950s almost all radio stations in the country had one or two shows dedicated exclusively to *punto cubano*. These shows also introduced and featured poets, among them Adolfo Alfonso, Inocente Iznaga, Gustavo Tacoronte, Pablo León, Justo Lamas, José Sánchez León, Ángel Valiente, el Indio Naborí, Francisco Riberón Hernández, as well as Vitalia Figueroa, Mercedita Sosa, Radeunda Lima and Celina González, the author and interpreter who formed a famous duo with husband Reutilio Domínguez. Thanks to the rise of figures in *punto* between 1940 and 1945, this stage became known as the 'golden age of *punto cubano*.'

Since the 1959 revolution, the number of competitions and festivals that promote and develop *punto* has increased. The Jornada Cucalambeana has become the most representative festivity of Cuban peasant culture. Founded in 1964 by Jesús Orta Ruiz, José Ramírez Cruz, Ramón Veloz and Manuel Fernández, the festival adopted poet Juan Cristóbal Nápoles Fajardo 'El Cucalambé' as its patron figure; thus, the festival is celebrated in El Cornito (Las Tunas province) where Nápoles was born in the nineteenth century. One of the most anticipated moments in the festivities is the election of the 'Flor de Birama' (Flower of Birama), an honor bestowed upon the most beautiful woman in the province.

In 1968 the 'Concurso Nacional El Cucalambé en Décima' (National Competition of the Cucalambé in Décima) was founded. For more than 20 years these festivities have been expanding to other regions of the country and to eight municipalities in the province through the 'Cucalambeanas de Base,' a celebration organized in two bands or teams (red and blue), which each have a group of youths to represent and defend them. Other activities include exhibitions of farming products such as viands, fruits and vegetables, animals, and equipment that facilitates field labor (i.e., yokes, plows, spurs, clubs saddles, etc.) set up by the farmers and members of cooperatives. The mural of the Salón Nacional de Paisaje y Décima represents the expression of Cuban contemporary artistic talent. There are also spaces for traditional children's and adult games, which attract a large number of participants and spectators. A space is also dedicated to the spreading of traditional Cuban dances such as *zapateo*, *son*, *caringa*, *baile del gavilán*, *papalote*, *chivo*, *papelón* and *nengón* among others, which are performed by youths and adults alike.

In addition to the Jornada Cucambelana, each area of the country hosts competitions in improvisation of and in written *décima*, which rely on the support of a number of government institutions such as the Centro Iberoamericano de la Décima y el Verso Improvisado (CIDVI).

In the 1990s, a generation of improvisers emerged who 'valued, perhaps for the first time, the performance character of improvised poetry, and see the improvised oeuvre as a "mise-en-scène" above the text, recognizing that the latter is one part, not necessarily the principal' (Díaz-Pimienta N.d.) Some of the characteristics of this generation of poets are the speed of the *controversias*, the equilibrium between the theatrical and the textual, and the interpretive-musical aspect underlying the textual parts (ibid.). Among the latest generation of poets cultivating the genre we find Irán Caballeros, Juan Antonio Díaz Pérez, Héctor Gutiérrez, Yosvani León, Luis Paz Esquivel, Noel Sánchez, Tomasita Quiala, Luis Quintana, Emiliano Sardiñas and Alexis Díaz-Pimienta.

The natural stage for the practice of *punto cubano* is the *canturía*, a traditional rural festivity that is held in rural homes to commemorate birthdays, anniversaries and other important dates, or for no reason at all. Another social gathering and performance opportunity is the *guateque*, a celebration very similar to the *canturía* with the addition of dancing accompanied by a popular music band. Although *canturías* and *guateques* have been systematically performed in rural communities, recently their practice has increased in urban sectors in tandem with a phenomenon known as 'repentismo' (the art of improvising poetry in song with musical accompaniment); in fact, the number of people learning and practicing *punto cubano* in cities continues to increase.

The CIDVI was founded in 2000 by the Cuban government with the purpose of contributing to the promotion, fostering and investigation of the *décima* and the improvised verse, and to acknowledge their principal representatives in Cuba and the rest of Latin America. For over a decade, CIDVI has carried out an intense education and dissemination program for *repentismo* and *punto cubano* through the creation of Casas de la Décima (Houses of the Décima) and of Talleres Especializados de Repentismo Infantil (Specialized Workshops in Repentismo for Children) and Talleres de Acompañamiento del Punto Cubano (Punto Cubano Accompaniment Workshops) in almost all Cuban provinces. The idea for these workshops first appeared in 2000 with the creation of the Cátedra Experimental de Poesía Improvisada (Experimental Masterclass on Improvised Poetry) at the music school of the Instituto Superior de Arte (ISA). The masterclass was intended to grow and spread across the country, and to provide all children interested in the *décima* or in *repentismo* with an instructor and a learning space to channel their curiosity; the affiliated classes created throughout the country eventually became the Talleres Especializados de Repentismo Infantil, which prioritize the teaching of techniques for the improvisation of poetry and of mechanisms for improvised creation. Other measures taken by CIDVI in favor of *repentismo* and *punto cubano* are methodological seminars for the teaching of *repentismo* (2001), the National Seminar for Child Improvisers (2001) and the Youth Meeting of Repentismo (2002).

The 2010 Cubadisco International Fair was entirely dedicated to peasant and rural music, especially *punto cubano*. Since then, collaborative projects between poets and institutions from Cuba and from the rest of Latin America have continued to emerge. The Fair also encouraged the Instituto Cubano de la Música to implement a program for the development of the *décima* and *punto cubano*. In the early twenty-first century, thanks to the synergy between institutions such as CIDVI, Casas de la Décima, Casas de Cultura (Culture Houses) and the Instituto Cubano de la Música, *punto cubano* has been greatly revitalized.

Quelbe

The Virgin Islands, though divided politically into British and United States territories, share many common threads of history and culture. The folksong invention known as *quelbe* (also, *quelbey*) and the ensemble that plays it, called scratch band (also, fungi band), are two such threads. The *quelbe* emerged before the globalizing spread of pop culture via television, radio, recordings and internet, when social and cultural connections were strongly local and *quelbe* songs that have endured express the intrigues, humor, moral codes and eccentricities of local people. On St Croix, for example, 'Queen Mary' commemorates a young girl who helped lead the 1878 revolt of desperate plantation workers, and 'Father Malloy' recounts the many promises of a local priest to marry a woman with whom he already had several children. The general attitude, content and style of these songs suggest longstanding musical ties to the broader Anglophone Antilles. In contrast to the minor mode and freer rhythmic flow favored in the other culturally iconic Virgin Islands song form, *cariso*, major mode and a calypso-like duple meter mark *quelbe*.

As popular music vogues from the United States and calypso music from larger West Indies islands came to dominate Virgin Islands musical life in the second half of the twentieth century, *quelbe* was first marginalized, then privileged as a marker of local identity. Its history and fate parallels that of the scratch band. The cane flute-led historical version of this ensemble reflects similarities with other older Anglo circum-Caribbean groups, including a steel (triangle), squash (serrated gourd rasp scraped with a metal-pronged comb) and banjo ukulele. Popular opinion points to the scraping of the squash as the origin of the term 'scratch band.' Its alternative, 'fungi band,' apparently takes its name from the African-derived, local cornmeal-based dish called fungi. Elders recall the 'asspipe' bass, a section of car exhaust pipe played with the lips in the fashion of a trumpet, as part of the group. By the end of the twentieth century, the saxophone (alto, especially) surpassed the flute as the scratch band's lead melody instrument, enabling it to compete more successfully in the musical marketplace. A typical group might include alto sax, steel, squash, banjo uke, electric bass, electric guitar, *conga* drums and perhaps washboard and electronic keyboard. *Quelbe* songs are central to the scratch band repertoire, taking their place alongside jigs, *merengues*, *boleros*, calypsos and other popular music genres.

While scratch bands and their *quelbe* songs enliven musical life in both British and American territories, the more populous islands, St Croix in particular, are home to most groups. Blinky and the Roadmasters, Stanley and the Sleepless Knights, and Bully and the Kafooners are prominent groups that carry forward older *quelbe* repertoire, as well as music to accompany local traditions of quadrille dancing. James 'Jamesie' Brewster and Joe Parris are among the most honored of their predecessors. Occasions for performance include nightclubs, weddings, fairs, hotels, tourist cruise ships, cultural festivals and other celebrations.

Racin

In the 1970s and 1980, a wave of '*racin*' (roots) music arose in Haiti. *Racin* combined traditional melodies and rhythms borrowed from the *Vodou* religion with instrumentation and other elements of rock and progressive jazz. Alive to pan-Africanism and political engagement, the movement gained momentum as young urban musicians brought the spiritual and political messages of the *Vodou* religion into the sphere of urban, globalizing, mass-mediated culture. The *racin* music movement developed in the aftermath of early and mid-twentieth-century invocations of African-based culture by the Haitian middle and upper classes that had played a significant role in the development of the arts, including a vibrant musical genre known as *Vodou-jazz*. But while *Vodou-jazz* expressed romanticized notions of peasant culture and invoked *Vodou* in order to promote a national identity, *racin* music celebrated African-based Haitian traditions for their intrinsic merit (Averill 1997, 132–3).

In 1977, a group of urban Haitian musicians began studying rural music and experimenting by fusing it with rock. In 1982 drummer Ronald 'Aboudja' Derencourt, guitarist Wilfred 'Tido' Laveaud, bassist Yves 'Chiko' Boyer and others formed a roots music band called Group Sa, which performed its first concert at the Rex Theater in the summer of 1982. Aboudja later explained that Group Sa's members never thought of themselves as creators of a movement, instead viewing their rehearsals at his house as 'get-togethers,' where musicians without prior mastery of roots music and drumming learned to play together (Averill 1997, 135).

When Group Sa broke up in 1984, several former members founded Foula, which continued the legacy of 1940s *Vodou-jazz* by blending Haitian rhythms with jazz. Foula was influenced by Miles Davis's jazz-rock rather than the swing-era jazz that had influenced earlier generations of Haitian musicians. In 1985 Aboudja left Foula to form Sanba-yo with drummer Gaston 'Bonga' Jean-Baptiste; the new band moved away from Foula's progressive jazz, fusing *Vodou* drumming with rock and funk. A third band, named Boukman Eksperyans, was founded in the same year.

Racin proponents seriously studied and embraced not only *Vodou* music, but the religion itself; musicians visited famous rural *Vodou* temples, learning traditional drumming styles from peasant musicians who had preserved traditions of the various African ethnic influences such as Ibo, Kongo, Dahome and Nago (Yoruba), which are still alive and well in Haiti. Members of the *racin* movement considered their music a form of '*Vodou adjae*,' the music and dance performed at *Vodou* temples after the conclusions of formal rituals. *Racin* bands even occasionally played at major rural ceremonies. Of course, bands also performed in urban contexts, but even there, audience members sometimes entered into trances, a phenomenon that musicians saw as an affirmation of authenticity. Many *racin* musicians were initiated in *Vodou*, and some, such as Aboudja, became prominent *Vodou* priests.

The *racin* movement's ideology called upon the *Vodou* concept of *Ginen* – the African homeland and a virtual spiritual space – in the same way that Jamaican Rastafarians call for a return to Africa as a concept as much as a place. And while the *racin* movement was certainly inspired by Bob Marley's adoption of Rastafarianism, it was in no way an imitation of Jamaican currents. For example, while young Haitian musicians who grew dreadlocks were partly influenced by Rasta style, they also were also calling upon the *Vodou lwa* (or spirit) Simbi, who wears dreads. The *racin* musicians' clothing was countercultural, featuring peasant hats and jeans in the style of Kouzen Zaka, the 'country cousin' *lwa* of agriculture and hard work. The invocation of these rural *lwa* was a defiant gesture in the face of conventional bourgeois norms; dressing in this way meant ostracism from polite society. And whereas the reigning Haitian government had risen to power in 1957 as a manifestation of the black power movement known as *noirisme*, Jean-Claude 'Baby Doc' Duvalier's dictatorship focus was on its *own* power, and the *racin* musicians' countercultural defiance was a threat to the established order (Averill 1997, 131–9).

Featuring vocalist Theodore 'Lolo' Beaubrum, Boukman Eksperyans became the most successful exponent of *racin* music. Named for Boukman Jetty, who, at a *Vodou* ceremony at Bwa Kayman (Cayman Woods) in 1791, launched a slave rebellion that led to the Haitian Revolution, the group called upon both the revolutionary spirit of *Vodou* and its musical style. The group was also influenced by reggae and Jimi Hendrix, taking the second part of its name from the Jimi Hendrix Experience. Its style featured rock guitar and bass with synthesizers and drum set (sometimes augmented by electronic percussion) and *Vodou* drums. Boukman's song 'Se kreyol nou ye' (We Are Creoles) attacked the Eurocentric world-view espoused by the middle class, stating that bourgeois Haitians should drop the pretense of speaking French and instead adopt the local Creole (Averill 1997, 138). *Racin* groups initially received practically no media attention, partly because they were not perceived to be commercially viable, but also because their open embrace of *Vodou* challenged bourgeois norms and their political stance was controversial in the repressive political climate of the Duvalier dictatorship.

The period following Jean-Claude Duvalier's fall in 1986 was marked by political instability, and music played a role in political struggles. Some felt that, as an escapist popular dance music closely identified with Duvalier, *konpa* should be deposed along with the dictator. *Angaje* ('engaged,' or activist) musicians coming from backgrounds in guitar-based *twoubadou* music mounted vibrant critiques of social injustice. Boukman Eksperyans, Sanba-yo and Foula began to obtain more work in nightclubs, and Boukman gained respect from the established Haitian music community in 1989 when it won the 3ème Konkou Mizik (Third Music Contest) for its song 'Prann chenn, wet chenn' (Get Angry, Remove the Chains), which incorporated traditional *Rara*, a musical style associated with traditional processional celebrations performed during Lent in Haiti (re-released on Boukman Ekperyans, *Vodou adjae*). The international 'world music' scene recognized *racin* as being more countercultural than *konpa* and Boukman gained press attention in the USA. Foula toured in Louisiana and Mexico and *racin* bands were founded in the diaspora: Rara Machine in New York, Kazak in Miami (Averill 1997, 179–80). Bands such as Boukan-Ginen and RAM also gained prominence in the growing *racin* soundscape. Significantly, a few New York-based groups playing *mini-djaz konpa* (an offshoot of *konpa*), such as System Band, Skah-Shah and Ti-Manno, began to incorporate *Rara* rhythms occasionally (Averill 1997, 131).

The year 1990 saw the election of Jean-Bertrande Aristide, a Catholic priest active in the Liberation Theology movement, to the Haitian presidency with support from the peasantry, urban underclass and progressive bourgeoisie. The Haitian oligarchy, however, was unenthusiastic about this wave of popular power, and the following year saw a *coup d'état*. Aristide was exiled, mass arrests ensued and an embargo was imposed by the Organization of American States and the United States. Because of his commitment to the Haitian masses (and in spite of his affiliation with the Catholic Church, which traditionally has had an antagonistic relationship with *Vodou*), Aristide received support from *racin* musicians during this period. Many *racin* musicians went into exile, participating in an active pro-Aristide movement that developed in the Haitian diaspora and playing at political events. Foula played at pro-Aristide events and Rara Machine released an anti-coup song entitled 'Pan-n se pa-n' (What's Ours Is Ours) (Averill 1997, 196–200). The Mango Records re-release of Boukman's first album, retitled *Vodou adjae*, was nominated for a Grammy (Averill 1997, 198). While they were intimidated by the government, Boukman members were not arrested, possibly because of their broad international profile. A group of soldiers bearing machine guns, however, came to a

1992 Boukman performance to prevent the group from singing 'Nwèl inosan' (Innocent Christmas), with lyrics that lamented the use of weapons and the loss of freedom in Haiti (Boukman Eksperyans, *Nwèl inosan*, quoted in Averill 1997, 198). Refused airplay on the national television station, Boukman's 'Kalfou danjere' (Dangerous Crossroads) was a huge hit, invoking the *Vodou* trope of the crossroads as a locus of change and judgment: 'Liars, you'll be in deep trouble / At the crossroads of the Congo people' (translated in Averill 1997, 198).

With Aristide's temporary return to power in 1994, *racin* musicians began to blend into the Haitian soundscape, and by the twenty-first century they took a back seat to the new generation's musical agenda, vibrantly addressed through hip-hop. Nevertheless, contemporary *racin* groups such as that led by singer and *Vodou* priest Erol Josué, the all-percussion group dubbed Chay Namn, and Badji, a roots-jazz band led by Foula veteran Thurgot Theodat, retain their position at the auspicious crossroads of tradition, modernity, spirituality and the struggle for social justice.

Ragga Soca

Ragga soca is a style of popular music that emerged in Trinidad and Tobago in the 1990s and has since become an established subgenre of Trinidadian soca music. Ragga soca has its roots in the overwhelming popularity of dancehall reggae among Trinidadian youth in the 1980s and 1990s. In Trinidad, dancehall has usually been referred to as dub, which is not to be confused with the different genre of that name in Jamaica. In due course, Trinidadians cleared up the confusion by calling the style 'ragga' and later 'ragga soca,' as musicians started fusing dancehall with aspects of soca music.

The Development of Ragga Soca

A factor that Trinidadian 'dub' or 'ragga' does share with Jamaican dub is that both began with the work of DJs. In the case of Trinidad, it was DJs such as Dr Hyde and Chinese Laundry (Tony Chow Lin On), who played Jamaican dancehall at fêtes and block parties in Trinidad in the early 1990s. They also created mix cassettes that were distributed among fans or via pirate cassette vendors. Dr Hyde Sounds produced Trinidad's first dancehall star, Curtis 'General' Grant, who along with other artists participated in the widely successful Kisskidee Caravan concert series. By the end of the decade, artists had made a move toward a sound that incorporated more aspects of Trinidadian soca, while still maintaining the Jamaican sound that audiences enjoyed.

The term 'ragga soca' is attributed to bandleader Byron Lee, who released a song of that name in 1996. Machel Montano and his band Xtatik featured a contrasting ragga section in their 1997 song 'Big Truck,' and it is thought they won the Trinidad Carnival road march because of this. In 1998 Montano recorded 'Toro Toro' with dancehall artist Shaggy, the first ragga soca hit featuring both Trinidadian and Jamaican artists. However, the interest of Byron Lee and Machel Montano in the style was somewhat peripheral. Among the primary proponents of ragga soca have been Ghetto Flex (Hilton Dalzell), Maximus Dan (Edghill Thomas), Bunji Garlin (Ian Alvarez) and KMC (Ken Marlon Charles).

In 1999 Caribbean Prestige Promotions held the first Ragga Soca Monarch competition, in which Iwer George placed first with 'Iwer and Half,' a controversial decision as his song was not considered ragga soca by most fans of the genre. There were two further competitions in 2000 and 2001, both won by Bunji Garlin with 'Chant Down Babylon' and 'Licks' respectively. No separate Ragga Soca Monarch competition has been held since 2001, due to lack of interest, sponsorship and financial resources. Artists such as Bunji Garlin have responded by performing more command-style soca songs (so-called power soca and 'jump and wave' songs) to compete with established soca artists at the International Soca Monarch competition.

Stylistic Features

In the early twenty-first century there has been some debate within Trinidad and Tobago as to what distinguishes ragga soca from 'regular' soca. As noted above, many soca artists have recorded ragga soca tunes, without converting entirely to the style. Newspaper clippings suggest that some individuals, such as producer/engineer Kenny Phillips, argue that ragga soca is simply 'soca with a Jamaican accent,' while others, such as ragga soca artist Bunji Garlin, have discerned particular features that set ragga soca apart from other subgenres of calypso and soca, though again it resists easy classification. What truly sets ragga soca apart from other styles of soca is the speech-song delivery typical of Jamaican dancehall. This in turn can cause confusion (or crossover) with rapso, which is also a form of speech-song, but ragga soca artists use a more rapid-fire delivery than is typical in rapso, and they emphasize creative use of language rather than the direct and political messages of rapso poetry.

Ragga soca songs from the late 1990s were moderate in tempo (120 beats per minute), but by 2004 they had become noticeably faster (130–160 beats per minute). Contemporary artists such as Bunji Garlin alternate between fast and moderate tempos, particularly in live performances. Electronic music is the primary accompaniment to ragga soca songs, with the snare and cymbals mixed higher than the other percussive sounds. Since the beginning of the twenty-first century there has been a movement toward creating 'riddims' in the manner of Jamaican music, with compilations of a number of different singers accompanied by the same backing track. This is not universal and seems reserved to certain labels and producers such as Machel Montano's arranger Kernal Roberts and DJ/producer Chinese Laundry (Tony Chow Lin On).

Swagger, bravado and aggressiveness of delivery are all hallmarks of the genre, and this is the main reason why ragga soca is dominated by male performers. Among the few women in ragga soca is Denise Belfon, who has recorded and performed a number of duets with Ghetto Flex, including 'Rock Yuh Body' and 'Wine and Bend Over.' Ragga soca has been very successful in competitions – Bunji Garlin has been a frequent winner of the 'power soca' category of the International Soca Monarch competition. There have been a few chutney ragga soca songs, including a remix of Sonny Mann's 'Lootala' featuring General Grant and Denise Belfon. Ragga soca came to international attention when 'Fighter' by Maximus Dan became one of the anthems of the Soca Warriors during the 2006 World Cup Competition. Thus, despite the fact that ragga soca artists are in the minority, their influence is far-reaching in the contemporary Caribbean music scene.

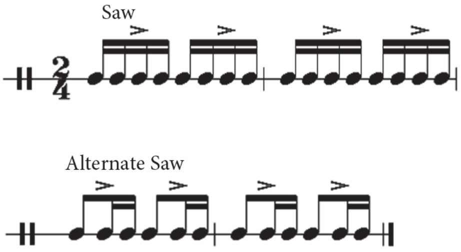
HOPE MUNRO SMITH

Rake-n-Scrape

The musical style called rake-n-scrape originally accompanied social dancing such as quadrilles and jumping dances in the Bahamas. Rake-n-scrape, however, has not always been known by that name. In fact, from the time of its emergence within the Bahamas in the nineteenth century until well into the 1960s, it was commonly called goombay music (Ed Moxey, personal communication, 2007). The moment at which rake-n-scrape replaced goombay is significant, however, for the label took hold in a period of tremendous political and social change. Goombay became rake-n-scrape in the years during which the Bahamas was pushing toward national independence (1967–73). This was right around the time that the 'Out Islands' (a name that highlighted the center/periphery dynamics at play in the Bahamas and which applied to every inhabited island excepting New Providence) became the Family Islands (still peripheral but now also rethought as sources of Bahamian heritage) in the national imagination (1971). It was also at a time when goombay music was not only rapidly losing its close ties to social dancing but also, and importantly, simultaneously being mobilized as a useful cultural marker within the growing nation building project. Rake-n-scrape music has occupied and continues to inhabit at least three spaces within the Bahamian musical landscape. These spaces find rake-n-scrape deployed as (1) peripheral, traditional music; (2) popular, urban soundtrack; and (3) roots music.

Rake-n-Scrape as Traditional Music

Though the instrumentation of the ensemble has, in recent decades, come to be standardized around accordion, carpenter's saw and goat skin drum, the ensembles that were used on the occasion of accompanying social dances such as quadrille and jumping dance were generally highly flexible throughout most of the nineteenth and twentieth centuries, typically consisting of whatever instruments happened to be at hand (Bethel 1983). The central rhythm that carries across dance genres and drumming styles finds its modern expression on the saw and consists of a continuous sixteenth-note pattern with accents on the off beats of one and two in 2/4 meter (see Example 1). The repertory is characterized by melodies that play out over the course of only two or three short phrases and lend themselves to repetition. A good example of this is the tune called 'Times Table,' which is comprised of three, eight-measure phrases (in 2/4), arranged in ABA' form. The song is repeated as many times as the performers wish.



Example 1: Characteristic saw rhythm in rake-n-scrape

Traditional systems of tutelage and the context within which social dancing was a central activity were both significantly disrupted, however, by increased out-migration from the Family Islands to Nassau and the United States in pursuit of employment, and by the 1960s goombay music (as it was then still called) was perforce gradually acquiring a new function in Bahamian life. The process of separating the music from its primary social context – that is, of re-situating it as entertainment for its own sake, separate from social dancing – continued throughout the 1970s, eventually causing traditional rake-n-scrape music to stand out in sharp relief as a traditional practice in its own right. Groups such as Bo Hog and the Rooters, Thomas Cartwright and the Boys, Ophie and the Websites and Ed Moxey's Rake-n-scrape thus found themselves playing music increasingly understood as folkloric within the national imagination. Although this shift toward the folkloric and the traditional cleared space for rake-n-scrape as a musical practice, it also reinforced the center/periphery dynamics at play within the Bahamas, resulting in an atmosphere within which traditional rake-n-scrape bands continued generally to be maligned among Bahamians. This remained the case even as late as the 1980s, especially in places like Freeport and Nassau, spaces considered too cosmopolitan for such provincial musical fare. Ophie Webb, for example, remembers vividly how, when he first arrived on Grand Bahama in the mid-1980s, Freeport audiences booed him every time he played rake-n-scrape (Ophie Webb, personal communication, 2007).

Beginning in the late 1990s, however, the sounds of traditional rake-n-scrape met with something of a revival among Bahamians. There are multiple sources for this renaissance, including the inauguration in 1997 of an annual, heritage-oriented, rake-n-scrape festival on Cat Island during the early summer, and a new version of Charles Carter's *Young Bahamians* radio program (which also began in 1997), renamed *Bahamians* and broadcast on Island FM102.9, through which rake-n-scrape has been featured and promoted. A third source came in the form of the roots-oriented rake-n-scrape artists who, since 2002, have been incorporating the sounds of traditional rake-n-scrape bands into their popular music creations.

Rake-n-Scrape as Popular Music

Although the sounds and instruments of traditional rake-n-scrape did not readily translate into the urban nightclub scene in the Bahamas, the goombay artists of the 1950s and 1960s managed to incorporate some allusions to the rhythms of rake-n-scrape into their repertories. These, more often than not, took the form of playing the characteristic saw rhythms on maracas and approximating goat skin drumming on congas. One artist in particular – Ronnie Butler – experimented with and arrived at an ensemble approach that went significantly beyond his contemporaries' musical nods to rake-n-scrape. His approach to rake-n-scrape privileged the instrumental roles of the saw and goat skin drum while systematically embedding these dynamics within the context of a typical electric band (drum kit, two guitars, bass and, later on, keyboard).

The main mechanisms by which Butler accomplished this include (1) moving the saw rhythm to the hi-hat, (2) reinforcing that line in the rhythm guitar through a strumming pattern that mirrors the hi-hat and takes advantage of the sonic difference between damped strings and sounding chords in order to accomplish the appropriate accents in each bar – a technique called the 'yuk,' (3) assigning the kick drum to play beats one and two of each measure, thereby translating into this context the foot stomping that generally accompanies traditional rake-n-scrape, (4) assigning the lead guitar the melodic role ordinarily filled by the accordion and (5) standardizing a bass line that consistently performs on 'two-and' of each measure. Through these means, Butler created a sound that has clear parallels within traditional rake-n-scrape, and he went on to record a series of extremely influential songs, including 'Burma Road,' 'Crow Calypso' and 'Native Woman,' in this style (all released on an LP entitled *Burma Road* in 1969), establishing a new set of possibilities for Bahamian popular music in the process. Importantly, however, the popular rake-n-scrape sound he introduced in the mid-1960s did not include any of the instruments or symbolic associations, for these were considered too provincial for the nightclub scene in Nassau.

Rake-n-Scrape as Roots Music

In the succeeding years, Bahamian musicians continued to draw inspiration from Ronnie Butler's approach and many followed his lead. By the first years of the twenty-first century, this thread of influence was being combined with a growing desire to explore more thoroughly the sounds of traditional rake-n-scrape. In the music of artists such as Ancient Man, Elon Moxey, The Lassido Boys and Da Energizers, to name but a few, the traditional instruments previously left out of the popular music scene were being reintroduced to their electric ensembles. The use of goat skin drums and saw within an ensemble context, where electric guitars (both rhythm and lead) and electric bass are reinforcing the Ronnie Butler approach to popular rake-n-scrape, was providing a distinctly roots feel to these performers' sound. Some reincorporated the accordion in order to make these connections more explicit. The saw, in particular, had become a much more audible marker in popular rake-n-scrape recordings, and in collections like the *Best of the Best, Volume 6* and *Island Jams 2* (both 2006), numerous rake-n-scrape songs were included alongside the junkanoo songs that had been so prevalent throughout the 1990s. The ideological return to the Family Islands, figured as both a temporal and a symbolic journey, was at the core of this roots-oriented rake-n-scrape music.

In the early twenty-first century, traditional rake-n-scrape is staged alongside both popular and roots-oriented rake-n-scrape, and all of these instantiations of rake-n-scrape receive radio play and are recorded locally. That said, the social dancing that the music initially accompanied is no longer central to its function or meaning within Bahamian life and it seems likely that rake-n-scrape will continue to move within this relatively new space of musical entertainment/heritage until such time as a renaissance in social dancing moves Bahamians to a roots movement revolving around quadrilles and jumping dances.

TIMOTHY ROMMEN

Ranchera (Southern Cone)

In the Southern Cone, the term *ranchera* refers to a couple dance in 3/4 meter that originated in Argentina in the 1920s. This genre is unrelated to the Mexican style of the same name (also known as *canción ranchera*). The *ranchera* of the Southern Cone derives from the mazurka, which spread from Europe to South America in the mid-nineteenth century.

The mazurka came into vogue in the salons and ballrooms of the Rio de la Plata area along with the polka and the schottische (*chotis* in Spanish) in the early 1850s, after being taken up in Paris around 1845. Within a few years of their introduction in Buenos Aires and Montevideo, these dances spread to rural areas of Argentina, Uruguay and Paraguay, and were adapted for accordion and guitar.

By the early twentieth century the mazurka was no longer fashionable in urban salons and was falling out of favor in the countryside. In the 1920s Buenos Aires-based sheet music publishers began printing music that conformed to the musical parameters of the mazurka under the genre name '*ranchera*.' According to Vega (1944, 1956) and Ayestarán (1953, 1994), publishers changed the genre's name in order to increase sales. *Ranchera* texts embraced rural themes, and the genre experienced a vogue from the mid-1920s through the late 1940s.

At its zenith, the *ranchera* enjoyed tremendous popularity throughout the Southern Cone and musicians from Argentina, Chile and Uruguay composed and recorded in the genre. The first *ranchera* recordings, produced during the mid-1920s, featured small ensembles (usually duos and trios on accordion, guitar and voice), but Argentine *orquestas típicas*, ensembles principally dedicated to the performance of *tangos*, soon began incorporating the genre into their repertoires. In the early twenty-first century, the *ranchera* is played primarily by traditional and folkloric groups in Argentina, Uruguay and Chile.

The *ranchera* is distinguished from other Argentine dance genres by the rhythmic, metric and melodic factors that influence the nature of the dance. Pieces are in 3/4 meter and can have up to four or five sections, usually of eight measures each. Melodies tend to emphasize either successive eighth notes or dotted-eighth, sixteenth patterns. Ayestarán (1994) observes that melodic lines in *rancheras* often end on the second beat of the measure. In most contemporary interpretations, accordion and guitar predominate and the *ranchera* is danced by couples in a waltz hold.

There is some discrepancy throughout the Southern Cone as to whether the *ranchera* is folk or popular music. Most of the historians of Argentine and Uruguayan music cited here see the mazurka as having been 'folklorized' through its adoption in rural settings. Thus Assunção (1968) speaks of the genre gaining its 'citizenship' in Uruguay, Ayestarán (1994) calls it a 'folklorized form of expression' and Vega (1944) includes the genre among a group of 'folkloric Argentine dances.' These historians are relatively silent on the genre position of the *ranchera*, possibly because of its emergence as a commercially oriented urban popular music several decades before their monographs were published. Today, the *ranchera* seems to be regarded as old-fashioned popular music in areas of Argentina where it is still in practice. One exception to this concept of *ranchera* as popular music is found in the Region of Aisén in southern Chile. Aisén has a long history of Argentine influence and locals have come to consider the *ranchera* to be one of the most important genres of regional traditional music.

GREGORY ROBINSON

Rancho

In the context of the modernization of Rio de Janeiro in the first decade of the twentieth century, music-and-dance groups called *ranchos* were given enthusiastic attention in local newspapers as a form of synthesis between the orderly, European, modeled pageants and lower-class spontaneous manifestations, thus offering a counter-model to the previously popular and socially tense *entrudo*, the typical, free carnival form of the late nineteenth century. Their distinctive music generally consisted of the unison choral singing of a theme song over an accompaniment provided by an *ad hoc* ensemble of marching-band wind instruments, guitars and light percussion. When the first *ranchos* appeared among Rio de Janeiro's lower middle classes in the last two decades of the nineteenth century, they recreated the countryside Christmas pageants of that name that were still found in certain areas of the north-east of Brazil. Once in the city, recreated by small neighborhood-based groups of migrants from the state of Bahia, the *ranchos* grew in terms both of their social constituency and of their influence. They reached their apex during the first three decades of the twentieth century as popular and relatively organized Carnival associations and, as musical dance dramas, interacting in many ways with contemporary stage practices from the musical theater to the opera, while simultaneously maintaining close relationships with other street Carnival forms (such as *cucumbis*, *blocos* and *cordões*).

The arrival of the Portuguese Royal family and its court in Rio de Janeiro in 1808 transformed the city into the new Ultramarine Capital of the Portuguese Empire, producing an intensification of commercial activities and the consequent expansion and greater political influence of a local bourgeoisie, who demonstrated an increasing desire to adopt symbols of European modernity and consequently to abandon 'old' Portuguese practices. The latter objective found one of its more easily identifiable forms in the so-called '*entrudo* problem.' Disparaged by the ruling elites as disorder, *entrudo* basically consisted of all kinds of mockery directed by unorganized groups of slaves and free people of all social ranks toward passing individuals, including soaking them with large, handmade syringes and water jars, often filled with dirty water obtained from the precarious sewage system (Eneida 1987, 21).

The news found in a newspaper such as *Jornal do Brasil (JB),* which may be considered a mirror of elite aspirations toward modernity and bourgeois civilization after the French model, targeted the persistence of *entrudo*, as a reason for domesticating the threat posed by the poor by organizing new models for behavior. *Entrudo* and other types of 'unruly' behavior were written about in the news as related to remnants of slavery and as signs of the uncivilized state of the urban masses.

In this context, the relative refinement and organization of the *ranchos*, apparent in their pageants as well as in the other social activities held in their economically modest headquarters, were praised by *Jornal do Brasil*, highlighting in particular their orchestral rehearsals. As noted by newspaper chroniclers of the day, *ranchos* included directors of singing and harmony (the latter term applying not to musical chord formation but to the equilibrium among the various aspects of the pageant), a considerable set of wind and (plucked rather than bowed) string instruments. The first news item about Ameno Resedá, the foremost organization model in the perception of the elite, appeared on 4 February 1909, announcing a rehearsal organized in homage to *JB* (a common practice that indicates the direct relationships between the *ranchos*' news coverage and the newspapers' personal interests). In recognition, the newspaper would allow their preferred *ranchos* to display their flags and emblems in the newspaper headquarters.

Carnival news of the period provides evidence that journalists participated directly in the popular manifestations they reported, in spite of belonging to a socially privileged, literate minority. These individuals may be considered as true mediators (Bakhtin 1984) in processes of cultural circularity, alongside the mid-lower-class musicians who alternated between playing in the *ranchos*, the opera and the musical theater. The latter, however, had come from the lower social strati, some being born to slave parents, and had ascended to higher levels through music. One example is found in a news item in *JB* on 2 February 1911, concerning the *rancho* Filhas da Jardineira and its wind-and-string orchestra:

> The orchestra was thus constituted: Irineu de Almeida, 1st harmony director, opheclyd [sic]; Manuel Theodoro, 2nd director, flute; Henrique Vianna, Arnaldo Peçanha, Martiniano Cruz and Aventino Silva, guitars; Alfredo Vianna Júnior [Pixinguinha], flute; Adalberto de Azevedo, mandolin; Napoleão Teixeira and Francisco Torres, trumpets; Manuel Xavier Couto, clarinet; Pedro dias, bass [i.e., tuba]; Júlio Campos, bombardino; Victor de Ramos and Antônio, tambourines.

This short document contains the names of at least two distinguished musicians: Alfredo Vianna Júnior, known by his nickname, Pixinguinha, and Irineu de Almeida. Pixinguinha, widely recognized as one of the greatest ever Brazilian musicians, had been a pupil of Almeida, an ophicleid player and harmony director (in the sense outlined above) of the *rancho* Filhas da Jardineira. Almeida was also the leader of the legendary Choro Carioca ensemble, which made several recordings featuring the young Pixinguinha on flute. Alexandre Goncalves Pinto, an early twentieth-century *choro* musician and author of a unique book (1936) documenting this musical milieu from the inside, wrote of Almeida that he 'played trombone in the opera house, bombardino in the musical theater and ophicleid in choros' (103; author's translation).

The aim of the music in *ranchos* was to produce coherence with the scenic ideals of the plot development. The experiences of a few *rancho* musicians in other upper-class settings, playing arrangements of operatic arias or Italian *canzones*, provided valuable models for the kind of melodic-harmonic refinement that was sought. A good example is a recording by Ameno Resedá (see Discographical References below), made sometime between 1911 and 1914, of a march called 'Viúva alegre' (The Merry Widow), a parody of the famous 1905 operetta overture by Austrian military band musician and composer Franz Lehar. In addition to the predominance of wind instruments, derived from military bands, another consistent characteristic in the extant *rancho* sound recordings is the use of a mixed choir. The typical arrangement is one in which male and female choral passages alternate with each other, each sung in unison. Eventually, an individual voice sings in counterpoint, usually adding a parallel melody in thirds or sixths to the choral song.

A further aspect to be highlighted is that the music of the *ranchos* exhibits several of the signs that are present in genres perceived as products of the Luso-African diaspora, such as well-defined syncopation and displacement of dynamic stresses observed in the contemporary *lundu* and *samba*, as well as quatrain poetical structures and sectional musical forms.

SAMUEL ARAÚJO

Rapso

Rapso is a style of speech-song that emerged in Trinidad and Tobago in the 1970s and went on to become an important platform for social commentary in addition to older forms of calypso. Although widely considered to be simply a blending of American rap with calypso or soca (hence rapso), rapso developed independently of North American hip-hop culture. Its roots are in Trinidad's Black Power movement of 1970, which saw widespread sociopolitical protests and a growing pro-African sentiment among the nation's young people. One of the primary goals of this social movement was to promote African and Afro-Trinidadian expressive forms. Young people showed a growing interest in African drumming and in learning long-neglected Afro-Trinidadian folk genres such as the *bongo* and *bele*, at the same time as college-educated Afro-Trinidadians were renewing interest in the Orisha religion and the Spiritual Baptist faith. Rapso shares features with Jamaican dub poetry, which emerged at the same time and under similar political circumstances in Jamaica.

The Development of Rapso

The precursors of rapso were the speech-songs and street poetry that were performed at trade union meetings and on picket lines in the 1960s and 1970s as a form of consciousness-raising, accompanied by Afro-Trinidadian drumming. Like the street poetry of North American groups such as the Last Poets, these artists intended to capture the everyday experiences of ordinary people. This has always been one of the functions of Trinidadian calypso, and thus this new style re-emphasized the political nature of Trinidadian music. 'Blow Away' by Lancelot Layne (1971) is acknowledged as the first rapso recording, although the term *rapso* would not be attached to the style for another decade (Rohlehr 2004, 224). Layne was also a key promoter of African culture, making a number of visits to West Africa and collaborating with highlife musician Koo Nimo. Unfortunately, many of Layne's songs were never recorded. The first rapso poet to perform in a calypso tent was Cheryl Byron, a visual artist and dancer who later went on to form several performing arts companies dedicated to the performance of the art and culture of the African Diaspora.

In 1980 Brother Resistance (Lutalo Masimba) and his Network Riddim Band released their debut album *Busting Out*, and coined the term *rapso* to describe their style. Brother Resistance, in his book *Rapso Explosion*, further defined rapso as 'the power of the word and the rhythm of the word, the living experience of the voice' (1986, viii). He draws a direct relationship between rapso poets and the griots of West Africa as 'the vessel of speech, the storehouse of knowledge and history, the teacher and communicator for this new generation' (ibid.). He compares the poetry of rapso to that of the speech and street theater of the old-time chantwells of calypso as well as Carnival characters such as Pierrot Grenade and the Midnight Robber.

In the 1990s a new generation of rapso artists emerged who sought to merge the positive message of this street poetry with upbeat dance rhythms. The most popular artists of this period include Homefront, Kindred, Black Lyrics and 3canal. More female rapso artists also appeared during this time, most notably Gillian Moor of Homefront. While many of these groups later disbanded, 3canal and Brother Resistance have remained the best known and most prolific of early twenty-first-century rapso musicians. Various soca artists have experimented with the rapso style, most notably David Rudder and Andre Tanker, and rapso artists have been more prevalent in the casts of the calypso tents. Since 1991 there has been an annual RapsoFest during the months of April and May to showcase the art form separately from Carnival and to offer workshops to aspiring rapso artists.

Musical Style and Lyrics

As with calypso and soca, rapso is performed in a variety of styles with varying musical accompaniment. Early rapso artists were clearly celebrating pride in their African heritage, and their arrangements feature more use of African percussion and the steel pan than other styles of Trinidadian music. The horn-heavy musical arrangements accompanying Brother Resistance's songs, along with the intense call-and-response between the lead vocalist and chorus, have been compared to those of Afro-Beat pioneer Fela Anikulapo Kuti. Slower tempos and short melodic phrases made rapso clearly distinguishable from other styles of calypso.

Contemporary artists have created more dance-oriented musical arrangements, while maintaining the positive social message of rapso lyrics. Their lyrics also celebrate aspects of Trinidadian cultural history, including traditional Carnival characters such as the Midnight Robber. Since the late 1990s, 3canal have organized and provided musical accompaniment for their own Jouvay band and mounted an annual stage production called the 3canal Show that runs during the Carnival Season. In songs such as 'Mud Madness' and 'Blue,' 3canal celebrate the renewal of Jouvay and Carnival with catchy, mid-tempo soca arrangements that prominently feature the instruments of the steelband 'engine room.'

Unlike calypso, which tends to target the specific political leaders responsible for social problems, rapso artists express their messages in universal terms. Brother Resistance in particular connects his music to an international consciousness of Black Power and social progress. Younger artists have moved away from the Black Power ideology of rapso pioneers, yet still express messages that address social injustice and liberation from oppression, as in 'Talk Yuh Talk' and 'Revolution' by 3canal. Most of the early twenty-first-century practitioners of rapso, and thus also the primary audience, remain educated, middle-class Afro-Trinidadians. The social and political consciousness evident in its poetry is obviously relevant to lower-class youth, but rapso faces stiff competition from Jamaican dancehall and American rap, as well as from local forms such as ragga soca that are based on these foreign musical styles. However, despite its limited audience, rapso remains an important forum for social commentary in contemporary Trinidad and Tobago.

Rara

Rara is a parading musical festival originating in Haiti, also practiced in Haitian diasporic communities in the USA and Canada. (In the Dominican Republic the festival is known as *Gagá*, and is practiced by Dominican groups in New York City.) The term *Rara* refers to the festival, the type of parading band and the genre of music. The festival takes place during the 6 weeks of Lent and culminates on Easter Week.

Most *Rara* bands in Haiti consider their activities to be a form of religious obligation to the Afro-Haitian deities called *lwa* (McAlister 2002). Neighborhood-based bands begin playing and conduct rituals in *ounfò* (Vodou temple); they then move into the streets where they attract followers with music and dance. After visiting key religious spots such as crossroads, trees and cemeteries, they move from house to house playing and dancing for contributions. *Rara* bands sing both traditional religious songs and songs composed by specific bands with original lyrics. Historically, the bands have been a means for the rural (and more recently urban) poor to express popular opinion in the context of their general economic and political disenfranchisement (McAlister 2002).

The *Rara* festival almost certainly developed during the period of colonial slavery, when enslaved Africans and Afro-Creoles in the colony of Saint-Domingue were said to parade with drums and instruments on Easter Sunday. There is also some evidence that troupes of Maroons marched with drummers, horns and singers, not unlike the way *Rara* bands parade. In the rural areas *Rara* bands from the twentieth century to the early twenty-first have been infused with a sense of militarism, and members consider themselves to be small army regiments. *Rara* members hold political and military ranks such as General, President, Colonel, Major, Minister of State, King and Queen. Bands compete with other bands in the local area for followers, contributions, reputation and prestige. These competitions are usually aesthetic but occasionally bands engage in low-level conflict. They set 'magical traps' designed to *kraze* (crash) a neighboring band and stop it from performing. In rare but much-remembered instances, bands will physically fight one another (McAlister 2002).

A *Rara* leader with the title of Colonel leads the band and its followers. He brandishes a whip and blows a whistle to control the crowds and also to activate spiritual forces along the roads or streets. *Rara* band musicians play handmade musical instruments, the most distinctive of which are hollowed lengths of bamboo called *vaksin*. Sometimes the *vaksin* are made of plastic PVC tubing. The vaksin are played in the technique called hocketing, in which each player plays a single note (or its octave) while tapping a rhythm on the side of the bamboo with a stick. Multiple players rhythmically create a short, catchy melody. Each *Rara* band works to develop its own 'signature' melody by which it is known throughout the neighborhood. The melody usually also corresponds to a lyrical phrase, often a cryptic slogan that can be humorous or send a political message.

In addition to the *vaksin*, which are distinct to *Rara* music, musicians also play *kongo* or *petro* drums called *tanbou a lign* (drum on a cord) carried by a rope across the shoulder, *kès* (double-headed and stick-beaten drums, often with a snare-like device), *konè* (tin trumpet), *twompet* (trumpet), *tcha-tcha* (cha-cha), *graj* (metal scraper), *ogan* (garden hoe blade played with a metal striker), cowbells, bamboo flutes and various kinds of shakers made from tin such as the *tchancy,* a can filled with seeds. In the town of Leogâne, which has developed an elaborate *Rara* tradition, bands also feature brass marching band instruments such as trumpets, trombones and saxophones. In Leogâne during Easter weekend, bands compete before judges and are awarded official prizes.

Composers called *sanba* create lyrics (in Haitian Creole) for *Rara* songs and bands are proud to sing their own songs each year. Often a *sanba* weaves a cryptic message known as *pwen* (point) into song lyrics as a way to send a veiled message to local or national leaders without fear of direct retribution. Because of this political element, and because many people from the disenfranchised classes take over public space during *Rara* season, the elite urban classes have long disdained *Rara* and even been fearful of the bands when large numbers of singing followers are dancing along. *Rara* is also used in rural funerals, as well as in popular street protests, political rallies and demonstrations. Haitians from Leogâne (and elsewhere) who live abroad often return for *Rara* week, much like Carnival. *Rasin* (roots) bands and some hip-hop artists (such as Wyclef Jean) have incorporated refrains of *Rara* music in songs, where the singular sound of the bamboo *vaksin* becomes a sonic marker of Haitianness.

Rasguido Doble

In Paraguay, where *rasguido doble* originated in the early twentieth century, the term refers to a song genre. When it spread to Argentina and Uruguay, it became known principally as a music (instrumental or vocal/instrumental) for dancing.

The duple meter Paraguayan *rasguido doble* (literally, double strumming) bases its rhythmic foundation on an adaptation of the *candombe* and *habanera* patterns. The term *rasguido doble* derives from the type of strumming pattern performed by the guitar, which emphasizes two *golpes* of sixteenth notes (or one sixteenth note followed by an eighth note) on the first half of beat one. As in the case of the Paraguayan *polca* and other traditional genres, parallel thirds or sixths may accompany the melodic line, musical phrases are short and syncopated, and harmonies are tonal in nature (Example 1 below).

While Cardozo Ocampo (2005, 72) and Szarán (1997, 406–7) trace the origin of the *rasguido doble* to the habanera, Giménez (1997, 128–30) emphasizes that it must be considered a distinctive genre that during the first quarter of the twentieth century was adapted and incorporated into the local musical language with unique rhythmic characteristics. Generally speaking, the Paraguayan *rasguido doble* shares rhythmic similarities with other Latin American genres such as the Argentine *milonga* and the Uruguayan *candombe*.

Although the *rasguido doble* is not as popular in the early twenty-first century as the Paraguayan *polca* or the *guarania*, its performance practice at local music festivals and its inclusion in musical recordings bring change and fresh air into the Paraguayan musical vocabulary. A few of the most frequently performed *rasguido doble* compositions are 'Despierta mi Angelina' (Awake, My Angelina) (ca. 1930) with music and lyrics by Emiliano R. Fernández (see, for example, recordings by Ñamandu and Juan Carlos Oviedo con Los Hermanos Acuña); 'Pancha Garmendia' (ca. 1925), a *compuesto* text by Narciso R. Colmán – known as Rosicrán – with music by anonymous composer (see, for example, the recording by Los Compuesteros de Carapeguá); 'Rojas Silva rekávo' (Searching for [Captain] Rojas Silva) (ca. 1930), with lyrics by Emiliano R. Fernández and music by Julio Sánchez (see, for example, the recordings by Anibal Lovera y su Conjunto Folklorico Paraguayo and Efrén Echeverría); and 'Un cielo de ñandutíes' (literally, 'a sky of ñanduties,' a reference to the web-like patterns of Paraguayan ñandutí lace) (ca. 1980), with lyrics by Rolando Niella and music by Oscar Cardozo Ocampo (see, for example, the recording by Delia Picaguá Bordón). The genre has also been adapted and incorporated by composers of academic music, among them Juan Carlos Moreno

González (1916–83) and Manuel Frutos Pane (1906–90) for their 1956 two-act Paraguayan *zarzuela*, *La tejedora de ñandutí* (The Ñanduti Weaver).

Rasguido Doble in Argentina and Uruguay

In Argentina and Uruguay, *rasguido doble* is a dance of interlocked couples that first became well known in Argentina in the 1940s and has remained popular in the Mesopotamic regions of the coastal provinces of Argentina, mainly in the province of Corrientes. It can be exclusively instrumental or alternatively can be sung by one or two voices in parallel thirds, accompanied by the characteristic instrumental ensembles of the coastal regions, groups that perform at popular dances or 'bailantas' with accordions and/or *bandoneóns*, guitars and sometimes the double-bass. The 1950s signaled the emergence of *rasguidos dobles* that were widely circulated and popularly accepted, such as 'Puente Pexoa' by Armando Neri and Tránsito Cocomarola and 'El rancho e' la Cambicha' by Mario Millán Medina. A 78-rpm recording of the latter, performed by singer Antonio Tormo, sold more than 4 million copies throughout Argentina in the 1950s.

In Uruguay it is important to highlight Aníbal Sampayo, who created several 'sobrepasos,' among which is 'Peoncito del mandiocal.' Since the turn of the twenty-first century, some composers and interpreters have incorporated percussion instruments, notably the Argentine accordionist Raúl Barboza in his *rasguidos dobles* 'Bailanta en la frontera,' 'Nostalgia del Negro Juan,' 'Bienvenido' and 'Candombera.'

Reggae

Reggae is a music and dance style that emerged in Jamaica between late 1967 and mid-1968, ultimately attracting widespread global audiences to Jamaican music and dance culture. Reggae music's main characteristics include a slow tempo (60 to 85 beats per minute), complex beat subdivisions and polyrhythms, consistent afterbeats accents (a preferred term for 'offbeats' used in Jamaican music, explained below), frequent use of minor keys and modes, static harmonic progressions, call-and-response techniques, circular song structures, rough timbres, songs frequently constructed over one- to two-bar ostinato bass riffs, rock and R&B instrumentation and techniques, neo-African hand percussion and lyrics dominated by spiritual and social justice issues. Reggae dancing is a synthesis of Jamaican and African American movement styles.

Beginning in the early 1970s, the term 'reggae' has also been used by Jamaican and international musicians, producers, journalists and scholars to label all Jamaican popular music created since the 1960s, including ska, rocksteady, reggae, dub, toasting, dancehall and ragga. This article confines itself to examining the actual reggae style; to avoid confusion, the terms 'Jamaican popular music' and 'JPM' are used below to refer to the broader categorization.

Precursors

Reggae developed from rocksteady, a Jamaican style popular between 1966 and 1968 that was in turn derived from ska, another Jamaican style that was popular between the late 1950s and the mid-1960s. Ska is an uptempo Jamaican dance music that synthesized US R&B with Jamaican folk and religious musics. Rocksteady was a synthesis of ska – at a slower tempo – with contemporary African-American soul and R&B elements, along with a heightening of the uniquely Jamaican traits that characterized ska and were also retained in reggae. These Jamaican traits include strong consistent accents on afterbeats (discussed below), and a metric organization in which backbeats (i.e., second and fourth beats) are the heaviest and loudest beats in a 4/4 measure, often with weak sounds or silences on first and third beats.

Most of the musicians (and several producers) responsible for the emergence of reggae were Rastafarians who used neo-African music as the primary vehicle to express their feelings, beliefs and identities. Rastafarian religious music is called nyabinghi. Jamaican popular, folk and religious musics share an aesthetic approach that scholars call 'neo-African' because of its roots in West African religion, music and dance practices that were retained by Jamaican Maroons (slaves who escaped to the forested, mountainous interior of the island between the sixteenth and mid-nineteenth centuries) and eventually appeared in all Jamaican folk and religious music/dance forms (Carty 1988; Ryman 1983). Rastafarian philosophy and music inspired a return to the musical elements of traditional Jamaican work songs and neo-African and/or Creole Jamaican styles including mento, Jonkonnu, Kumina, Jamaican Pukkimina/Revival and Buru. The result was reggae, a new, secular, popular style in which neo-African elements were more prominent than they had been in ska or rocksteady (Grass 1982, 47).

The Term 'Reggae'

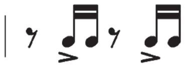
There are many different and often contradictory accounts concerning the origin and meaning of the term 'reggae' and of the actual style itself. The absence of documentation, along with the lack of agreement among practitioners, journalists and scholars, has thus far made it impossible to determine which account is accurate or even most likely.

In the literature on Jamaican popular music, the first appearance of 'reggae' as a name for a particular music and dance is usually cited as being the Maytals' recording 'Do The Reggay' (1968), written by lead vocalist Frederick 'Toots' Hibbert and produced by Leslie Kong. In the early 1970s, for no documented reason, the spelling became 'reggae' and it also became a term used by artists, journalists and some scholars to label all Jamaican Popular Music (JPM). When Hibbert first used 'reggay,' apparently neither he nor anyone else at the time knew the origins of the word (Ward 1980, 447), but according to the *Jamaican Dictionary of Jamaican English* (1967), the term 'reggae' had been used before this song. Defined as a recently established spelling for the word 'rege' – meaning 'ragged' – the *Dictionary* noted that it referred to African-American ragtime music, and to new musical innovations emanating from the Kingston slums – that is, reggae music (Cassidy and LePage 1980, 504).

Another similar word, 'rags,' was used in the late 1950s to refer to music of the lower classes, which at this time was dominated by Jamaican recordings that synthesized African-American R&B (especially boogie woogie shuffle rhythms) with traditional Jamaican music and dance practices such as mento and Pukkumina/Revival music (Clarke 1980, 67).

After 1967 Hibbert provided no fewer than three other explanations for the meaning of 'reggae.' In 1977 he said that it referred to something that came from 'ordinary people,' that is, from the Kingston ghetto where Rastafarians were the majority. In this context, 'reggae' was synonymous with the 'regular,' everyday Rastafarian lifestyle, including their religious beliefs, experiences of poverty and suffering, as well as their music (Davis and Simon 1977, 91–2). In 1982 Hibbert defined 'reggae' as meaning 'raggedy, everyday stuff' (Grass 1982, 45); then in 2001, he said that it was a word derived from 'streggae' – a woman of low morals or someone to be avoided (Salewicz and Boot 2001, 64). Since 2003, Hibbert has consistently claimed that he actually invented the term (Katz 2003, 98).

Producer Edward 'Bunny' Lee remembers hearing studio musicians use 'reggae' in 1968 to describe organ rhythms, which sounded like 'Reggae! Reggae! Reggae!' (Johnson and Pines 1982, 61). Guitarist-producer Ernest Ranglin says that he also first heard it around this time, but to describe guitar rhythms which sounded like 'reggae-reggae' (Chang and Chen 1998, 43) (see Example 1).



Example 1: The most common guitar reggae rhythm – a double-afterbeat pattern

Clarke provides yet another explanation, based on nonmusical origins. He says that 'reggae' has a meaning similar to that of the African-American term 'funk,' which first referred to a state of sexiness or earthiness and was later applied to the highly polyrhythmic and syncopated R&B music developed in the late 1960s by James Brown and Sly and the Family Stone. Clarke argues that reggae's polyrhythmic similarities to funk – discussed below – resulted in the term 'reggae's application to the new Jamaican style (Clarke 1980, 96).

Many other theories about the origins of the term 'reggae' appear in the Jamaican popular music literature. In Jamaica in the early 1970s, 'reggae' was a common middle-class insult for lower-class music – 'raggamuffin music' or 'ragga' – which uptown people pronounced 'reggae' (Thomas 1973, 328). Others attribute it to the Nigerian phrase *e rega*, which is said to mean 'royal music' (Chang and Chen 1998, 42). Bob Marley believed that it was Spanish for 'the king's music' (which he linked to Ethiopian Emperor Haile Selassie) – although there are no Spanish words with this meaning that sound like 'reggae' (White 1983, 16). Bunny 'Wailer' Livingstone thinks it was derived from 'regal' (Stolzoff 2000, 258). Lastly, some people think that it comes from the name of a Tanzanian Bantu-speaking tribe (White 1983, 16).

Jamaica in the Mid-1960s and Early 1970s

During the 1960s Jamaicans explored and asserted their African roots, producing a climate of social change in which Jamaican musicians synthesized modernization and Westernization with an inward-turning celebration of their Jamaican culture and 'blackness.' Witmer labels this synthesis an 'ideologically motivated control of musical styles.' Jamaican Popular Music (JPM) reflected the Jamaican societal emphasis on the revitalization of Jamaican culture (primarily a result of the government's promotion of traditional music via festivals and competitions created after Jamaican independence in 1962) in which Africanization was a strong component (Witmer 1981, 113).

In the 1960s Jamaicans were also strongly influenced by American politics, especially the viewpoints of African-American leaders Dr Martin Luther King Jr., Malcolm X and Black Panther Eldridge Cleaver, and in particular their criticisms of institutional racial injustices (Masouri 2008, 97–8, 162). These leaders demanded, and gradually achieved, improvements in African-American economic and political equity, and they promoted black dignity, cultural pride and Black Nationalism – ideas which were actually rooted in Jamaican Marcus Garvey's pan-Africanist philosophy and also central to Rastafarianism. The Jamaican government, on the other hand, was less receptive to public criticism and was not respectful toward Rastafarianism. In 1967 newly appointed Prime Minister Hugh Shearer was particularly aggressive in responding to what he considered to be 'fringe political groups' that might be viewed as attempting to overthrow Jamaican society. During his first year in office there were 52 shootouts between the police and poor people, resulting in many victims who were killed, maimed or imprisoned (Clarke 1980, 85).

In 1968 Guyanese scholar Walter Rodney, a lecturer at the University of the West Indies in Kingston, promoted Black Nationalism and Black Power and criticized government persecution of Rastafarians (Edwards 1999, 1593). After Rodney attended a conference in Canada (in 1968), the Jamaican government classified him as 'dangerous,' refused his reentry to Jamaica and used military vehicles to disperse public protests concerning this decision (Bradley 2000, 196). In this climate, only a few reggae artists addressed politics or social injustices in their music. By the 1970s, however, after a government sympathetic to Rastafarians was elected, songs expressing social and political criticism were to flourish.

Two events in the 1960s boosted Rastafarianism's popularity with the lower class, especially among musicians. On 12 April 1966 the Jamaican government invited Ethiopian Emperor Haile Selassie to Jamaica in order to acknowledge the growing numbers and influence of Rastafarians, and with the hope of winning their support. The subsequent reaction of Rastas to the trip was not what the government had anticipated, however. Selassie's visit was viewed as verification of his divinity – Rastafarians believed that he was God incarnate – which bolstered Rastafarians' opposition to the current government as well as generating many new converts, including musician Bob Marley, his wife Rita and the other members of Marley's group the Wailers (Peter Tosh and Bunny Livingstone) (Bradley 2000, 192–3).

On 12 July 1966 the police bulldozed Back o' Wall, a Rasta camp in Kingston, to make way for a housing project. Rastas dispersed all over Kingston, especially to Trenchtown, a West Kingston slum where many Jamaican artists lived, including Ken Boothe, Alton Ellis, Bob Marley and the Wailers, Sylvan Morris (engineer), Johnny Osbourne and the Pioneers. Mortimer 'Mortimo' Planno (aka 'Planner') – a Rasta elder – became a major influence upon Bob Marley, Ken Boothe, the Wailing Souls and the Abyssinians (Foehr 2000, 17; Davison 2006).

In 1971 Michael Manley – the People's National Party leader – ran for election and promised better education, jobs and higher wages for the poor. Many Rastafarian musicians – including Delroy Wilson (whose 1971 roots reggae song 'Better Must Come' was chosen by Manley as the PNP campaign song), Clancy Eccles, Alton Ellis, the Inner Circle, Bob and Rita Marley and Judy Mowatt – supported him with performances at rallies. Once elected in 1972, Manley started delivering his election promises and soon the outlook of the country was transformed. Rather than looking toward American and traditional European allies, Manley forged alliances with Cuba and embraced Afrocentricity, Black Consciousness, Rastafarian theology and a general anti-imperialist perspective (Chang and Chen 1998, 53). In this new environment, African rhythms were now allowed to become the main element of the reggae songs, bringing to the surface what had always been submerged (Grass 1982, 47). This shift ushered in the 'roots reggae' period – which went unnamed until the mid-1970s.

Another important factor behind the emergence of reggae was government promotion of traditional Jamaican musics. In 1963 and 1966 Minister of Culture Edward Seaga instituted the Jamaica Festival of Arts and the Independence Festival Song Competition (later renamed the Popular Song Competition) to promote and preserve Jamaica's African heritage (Thomas 2004, 66; see also Bradley 2000, 206–7 and Lewin 2000, 50). The first Festival Song Competition winner in 1966, the Maytals' song 'Bam, Bam,' cited by Chang and Chen as foreshadowing the 'roots reggae' style (Chang and Chen 1998, 102), synthesized a pentatonic folk-style melody with digging songs, Jamaican revival hymns, nyabinghi-style bongo drums, electric organ, R&B bass, tenor sax, steel drum and mento-inflected guitar playing a circular I-V chord progression with a rhythmic ostinato that combined onbeat and afterbeat accents at 110 beats per minute (bpm) (see Example 2).

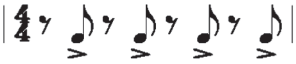
Example 2: 'Bam, Bam' ostinato pattern

Early Reggae Characteristics (1968–72)

Between late 1967 and mid-1968 11 recordings appeared, each of which is often cited as 'the first reggae record.' Poor documentation has made it impossible to determine the actual recording or release dates of these recordings, however, and participants' memories are often contradictory (Katz 2003, 97–161). In alphabetical order by artist (with the producer in brackets), they are: 'No More Heartaches' by the Beltones (Harry Johnson); 'Pop A Top' by Andy Capp (aka Lynford Anderson); 'Bangarang' by Wilburn 'Stranger' Cole and Lester Sterling (Bunny Lee); 'Dulcemania' by Drumbago and the Dynamites (Clancy Eccles); 'Feel the Rhythm' by Clancy Eccles (Clancy Eccles); 'Nanny Goat' by Larry (Marshall) and Alvin (Perkins) (Coxsone Dodd); 'Do the Reggay' by the Maytals (Leslie Kong); 'Say What You're Saying' by Eric 'Monty' Morris (Clancy Eccles); 'People Funny Boy' by Lee Perry (Lee Perry); 'Long Shot' by the Pioneers (Lee Perry) and 'Everybody Needs Love' by Slim Smith (Bunny Lee). For additional information about these songs see Barrow and Dalton (2001, 93–146), Bradley (2000, 198–201) and Katz (2000, 58–88, 2003, 97–133).

The study of the first reggae records is complicated by the fact that in terms of their essential style traits, mature rocksteady and early reggae songs are basically a single kind of music, with differences often being a matter of degree rather than the result of two clearly delineated styles or approaches (Witmer 1981, 107). Reggae musicians synthesized Jamaican musics with jazz, R&B, soul, gospel, rock, Tin Pan Alley, country, Christian hymns, Anglo-Celtic folksongs, Brazilian *bossa nova*, Trinidadian calypso and Cuban *son* (White 1982a, 41). The results were usually much more than simply collage, however. The most creative artists added something personal to satisfy their needs and those of their audiences (Alleyne 1984, 1988, 4; Nettleford 1979, 78). Jamaican scholars (for example, Alleyne 1984, 1988; Brathwaite 1971, 1978; Lewin 2000; Nettleford 1979; Ryman 1979, 1983; White 1982a, 1984) call this process 'creolization.' These scholars believe that this process involves a deep African structure and a surface structure that is influenced by other cultures experienced by Jamaicans (Alleyne 1988, 149; Brathwaite 1971, 26).

Many of the most noticeable characteristics of early reggae are in the areas of rhythm, meter and tempo. In some cases, features are retained from earlier Jamaican music. For example, reggae's accented afterbeats are also found in Pukkumina/Revival, nyabinghi, mento, ska and rocksteady. A notable characteristic of afterbeats is that they are consistently louder and heavier than sounds on the beats; see Example 3.

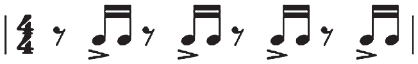


Example 3: Afterbeat accents

Jamaican musicologist Garth White and American musicologist and reggae bassist Luke Ehrlich prefer to call these offbeats 'afterbeats' because of the frequent conflation of offbeats with 'upbeats' and 'backbeats.' The rationale for this preference is based upon the characteristic of Jamaican offbeats – often chordal combinations of notes – which consist of the harmony of the preceding beats, rather than anticipating the harmony of the following beat (White 1982c, 38; Ehrlich 1982, 55). See McCarthy (2007, 64–7) regarding different terminology for sounds in-between beats.

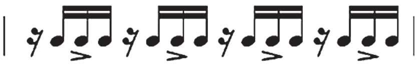
Afterbeats are also accented in Jamaican folk and religious music and dances, such as mento and Revival hymns (and Revival dance movements, called 'trumping,' which involve deep downward movements on beats – accompanied by a grunted exhalation – followed by strong accents with an upward flinging of the arms on afterbeats – accompanied by forceful, quick inhalation) and Rastafarian nyabinghi music/dance. Accented afterbeats are also prominent in traditional West African music, and in the earliest Jamaican music (by the Maroons), although they are more prominent and consistently accented in Jamaican folk, religious and popular music than in West African music. Some analysts have misperceived afterbeats as occurring on the beat, and state that reggae tempo is twice as fast as rocksteady, even though most Jamaican musicians perceive reggae as slower than rocksteady (Grass 1982, White 1982b, 1984, 1998). This misperception results in the problematic claim that afterbeats are backbeats (i.e., occurring on the second and fourth beats of a 4/4 measure), and that the placement of one-drop bass drum accents occur on beat three of 4/4 measures. This interpretation of 'afterbeat' and 'one-drop' is inconsistent with their placements in ska, rocksteady, mento and Jamaican folk musics. Interpreting the placement of afterbeats as occurring on the beat becomes even more problematic when they are played with a swing groove, since it implies that beats two and four can somehow be delayed.

Reggae afterbeats are usually played by guitar and keyboard; some of the early recordings have a double afterbeat (usually notated as two sixteenth notes); see Example 4. For recordings with double afterbeats, see Wilburn 'Stranger' Cole and Lester Sterling's 'Bangarang' and Larry (Marshall) and Alvin (Perkin)'s 'Nanny Goat.'



Example 4: Double sixteenth-note reggae afterbeat pattern

Recording engineer Sylvan Morris (at Coxsone Dodd's Studio One) first created this pattern by feeding guitarist Eric Frater's single eighth-note afterbeats (in 'Nanny Goat,' by Larry and Alvin) through a delay unit (called 'Echoplex Sound Dimension') which produced a rapid single echo (Soul Jazz Records 2002, 22, 47–50). Other guitarists and keyboard players copied this rhythm by playing two (or more) sixteenth-note afterbeats. Combined guitar and keyboard afterbeats are similar to the sound of banjo 'bubble' rhythms (Bradley 2000, 204–5; Grass 1982, 55; Neely 2008, 287); see Example 5.



Example 5: Mento-influenced guitar and afterbeat bubble rhythm

The metric feel of ska and rocksteady is also retained. This involves the combination of accented afterbeats with heavy backbeats (the second and fourth beats in a 4/4 measure) and weak or silent first and third beats. Bass drum backbeat accents are frequently synchronized with rim-shot snare shots and often reinforce bass parts (along with extra bass drum pickup notes and afterbeat accents). Downbeats are weakly sounded, often silent and synchronized with strong corporeal onbeat accents. If the bass drum does appear on beats one and three, it is usually played more lightly and softly than when it appears on backbeats.

Tempos are much slower than those in rocksteady, however: between 60 and 85 bpm. Early reggae tempos are in the upper tempo range – from 72 to 85 bpm. Beat subdivisions are increased, rhythms are faster and polyrhythms and syncopations are more complex than in rocksteady. Beats are most frequently subdivided into four parts – usually written as sixteenth notes with a strong underlying eighth note pulse – which can create an 8/8 feel. In most of the recordings, sixteenth notes are often swung in a shuffle style; the only early reggae recording with straight sixteenths is 'Pop a Top,' by Andy Capp.

Most reggae arrangements feature collaborative improvisation, call and response in instrumental and vocal parts, and hocketing techniques. Hocketing – usually arranged collectively by ear – involves the division of phrases or rhythms into short segments performed sequentially by drums, bass, guitars, piano and/or organ, often with overlapping call and response.

In the reggae style, each instrument (except for those playing melodic lines) functions as if it is part of a drum ensemble and most instrumental parts are extremely percussive. Ehrlich calls this reggae's African aspect (Ehrlich 1982, 52). Witmer notes that the attack of chordal instruments such as guitar and organ is often so sharp and short that they function more as percussion instruments than as harmonic ones (Witmer 1981, 109). Bradley (2000), Ehrlich (1982) and Witmer (1981) consider percussiveness to be one of reggae's most prominent traits, if not its most distinguishing feature.

The way in which some instruments are used also differentiates early reggae from ska and rocksteady. Horns (saxophones, trumpets and trombones) are used less often and differently than in the earlier genres. Horn phrases and riffs usually function as introductory melodic material or filler, sometimes in hocketed patterns with the rhythm section, versus their predominant role in ska (and occasionally in rocksteady) of playing afterbeats.

Reggae bass parts usually consist of ostinati (one to four bars in length) played on electric bass, with rhythms that subdivide the beats in two (commonly notated in eighth notes, with occasional sixteenths), and beginning or ending on afterbeats. Reggae bass is also usually louder and fuller than in rocksteady. See Ehrlich (1982, 54) for examples of typical reggae bass patterns – short, rhythmically animated tunes. Stutter guitar – playing rapid reiterations of single notes – often doubles bass an octave higher, with a muted, trebly timbre. Rocksteady-style guitar fills and tremolos usually appear between bass phrases; for example, in 'No More Heartaches,' by the Beltones, 'Feel the Rhythm,' by Clancy Eccles and 'Long Shot,' by the Pioneers.

Electric organ (usually a Hammond-style instrument with two keyboard manuals) appears in most reggae arrangements, often employing two keyboards on one instrument – with the possibility of different timbres, overtones and attack for each manual. Fast rhythms – usually swung sixteenth notes – are played with alternating hands voicing the same chord on each of the manuals, which usually have different timbral settings. Winston Wright and Glen Adams were the main exponents of this style – called 'shuffle organ' (Bradley 2000, 201–2; Ehrlich 1982, 54–5). Producers Bunny Lee, Harry J (Johnson) and guitarist Ernest Ranglin consider shuffle organ to be early reggae's defining feature (Bradley 2000, 201–3). See Ehrlich (1982, 55) for examples of typical shuffle organ patterns – highly percussive one-bar figures.

In terms of melodic and harmonic traits, reggae melodies frequently use diatonic major, minor or modal scales with blues inflections. Vocalists often employ sighs, sobs, falsetto, melisma, speech, chants and shouts with ambiguous pitches. Melodic phrases are often two or four bars long. Chord progressions often consist of one chord for long stretches, or repeat two or three chords (usually tonic [I], subdominant [IV] and/or dominant [V] triads). For example, the I–IV progression occurs repeatedly in extended sections in several songs, including 'Dulcemania,' by Drumbago and the Dynamites, 'Do the Reggay,' by the Maytals, and 'Say What You're Saying,' by Eric 'Monty' Morris.

The lyrical themes of reggae songs are similar to those of rocksteady – romance, entertainment, escapism – with an overall increase in socially conscious, Rastafarian and philosophical themes. In the 1970s the emphasis on social issues and spirituality became dominant; songs with these characteristics (as well as some additional musical traits, discussed below) exemplify the 'roots reggae' style.

In terms of timbre and song structures, reggae music is similar to African-American popular music of the period. Most instruments and vocal parts employ buzzy timbres. This neo-African aesthetic is often more pronounced than those that appear in ska or rocksteady, however. Most reggae songs are in verse-chorus form, with distinctions between sections blurred by improvisation, call-and-response and hocketing. The verse-chorus form is influenced by its prominence in European folksongs, hymns, Tin Pan Alley songs and the majority of popular song structures of the late 1960s and early 1970s. In live performances, some artists, notably Bob Marley and the Wailers, Toots and the Maytals, Burning Spear and Black Uhuru, employ a jazz-like flexibility and freedom with many spontaneous changes of melodic and harmonic material, as well as alterations of the ordering and length of sections, in combination with the inclusion of new or freshly adapted introductions, transitory sections and endings.

Overall, the most idiosyncratic features of early reggae are afterbeat accents (usually played with a quick, double rhythm – see Example 1), heavy backbeats (along with light and sometimes silent first and third beats), swung subdivision of the beat into four parts (usually notated as sixteenth notes), a percussive tendency of instrumental parts, ostinato bass riffs, stutter guitar and electric organ (played in the two-handed shuffle style). In the roots reggae style, other traits emerge – discussed below.

The Influence of US and British Popular Music

Reggae musicians were strongly influenced by late-1960s US R&B artists, especially James Brown, the Chambers Brothers, Aretha Franklin and the Sweet Inspirations, Marvin Gaye, Jimi Hendrix, Curtis Mayfield and the Impressions, Otis Redding, Sly and the Family Stone, Edwin Starr and Stevie Wonder (Masouri 2008, 98–101, 485). Witmer notes that although most neo-African reggae traits also appear in US R&B and were the conscious result of imitation of R&B by many Jamaican musicians and producers, Jamaican popular music is nevertheless distinct from R&B, primarily due to the Jamaican folk and religious music which also exerted a profound influence upon these musicians (Witmer 1981, 106, 113). Neo-African reggae traits therefore usually differ from those in R&B counterparts because Jamaican creolization produced local variations, while the synchronicity and proximity of R&B and reggae problematizes the claim that frequently appears in the Jamaican Popular Music (JPM) literature that Jamaican neo-African traits came directly from West Africa (ibid., 106, 113).

About two-thirds of the early reggae traits described above also appeared in late 1960s US R&B – that is, slower tempo, increased beat subdivision, collaborative improvisation, use of call-and-response techniques in instrumental and vocal parts, percussive approach of instrumental parts, static harmonic progressions, blues-inflected melodies and preference for buzzy timbres (especially in solo singing styles).

McCarthy's studies (2001 and 2007) of late 1960s British and US popular music indicate many similar shifts in tempo demonstrated by both this repertoire and JPM throughout the 1960s, specifically that slower tempos and increased beat subdivisions occurred synchronously between US R&B and JPM throughout the 1960s. (Note: the percentages that follow are all *approximate*.) In 1963, when most ska song tempos were between 120 and 130 bpm, British and US hit songs were also generally quick, dominated by tempos above 120 bpm. Forty percent of British/US songs were between 141 and 170 bpm ('fast'), 45 percent were between 81 and 140 bpm ('medium') and 15 percent were between 40 and 80 bpm ('slow'). In 1966, when rocksteady emerged at a slower tempo than ska (averaging between 85 and 120 bpm), there was a similar tempo shift in British and US music. Thirty-eight percent of British and US songs were fast, 52 percent were at medium tempos and 10 percent were slow. When funk became the dominant British and US style in the late 1960s and early 1970s – the same period when early reggae emerged, averaging between 72 and 85 bpm – British and US releases were also slower overall. In 1971 only 15 percent of hit songs were fast, 61 percent were medium tempo and 24 percent were slow (McCarthy 2001, 219–26).

Regarding increased beat subdivisions (usually notated as sixteenth notes), McCarthy's (2001) study indicates that slower tempos in Jamaican, British and US popular music resulted in increased beat subdivision, polyrhythmic activity and syncopation. In 1963 ska was dominated by eighth-note subdivisions, which were often swung. Eighth note-subdivisions also dominated 50 percent of British and US hit songs, and less than 10 percent employed sixteenths. In 1971 only 30 percent of British and US songs were dominated by eighth-note subdivisions and 50 percent employed sixteenth-note subdivisions (McCarthy 2001, 220–7). Early reggae was also dominated by sixteenth-note subdivisions, which were often swung.

Given the popularity of British and US music in Jamaica throughout the 1960s, it seems likely that the similarity between these overall tempo preferences and changes in beat subdivision indicates the influence of British and US popular music upon Jamaican aesthetic preferences, but it might also be argued that these similarities are due to other sociocultural factors indigenous to Jamaica.

Of the remaining early reggae traits, four also appeared in late 1960s and early 1970s US R&B but with notable differences in reggae: swung sixteenth notes, ostinato bass guitar parts, doubling of bass guitar with electric guitar (which is transformed into stutter guitar) and the prominence of electric organ.

Swung sixteenth notes dominated early reggae repertoire, but were rare in British/US popular music – in only 1 percent of 1966 hit songs and in 5 percent of 1971 songs (McCarthy 2001, 226), which demonstrates the uniqueness of this particular Jamaican trait.

In the United States in the late 1960s and early 1970s funk and R&B ostinato bass guitar parts were commonplace, but Jamaican reggae bass players' ostinati parts emphasized afterbeat accents and phrasing, and their patterns were characterized by an overall Jamaican metric organization. In the 1960s US R&B bass parts were also sometimes doubled at the octave by electric guitar in 1960s R&B recordings (especially on recordings on the Stax label which employed the house band Booker T & the MGs and on the Motown label which employed the house band the Funk Brothers). Jamaican guitarists often did the same, but sometimes their parts veered away from the bass line into what became known as the stutter guitar style – a technique developed by Lynn Taitt, as an imitation of steel drums (Katz 2003, 71). This produced an ornamented variation of the bass line. Regarding the prominence of electric organ, although electric organs appeared frequently in 1960s R&B recordings (especially those on the Stax and Motown labels), the Jamaican shuffle organ style (discussed earlier) is a uniquely Jamaican one.

The above differences provide evidence that although Jamaican musicians were strongly influenced by British/US popular music, their creative endeavors were not entirely guided by the desire to emulate these influences. The emergence of roots reggae – in which Jamaican folkloric elements are highlighted – provides further evidence of this.

Significant Early Reggae Musicians and Producers

It was characteristic of early reggae that many of the same studio musicians and studio house bands could be found on the records, accompanying vocalists or supplementing existing bands. Many studio groups were active in the 1970s, a testament to the popularity of reggae at the time. The most prominent were the Aggrovators (led by Roland Alphonso), the Hippy Boys (Carlton and Aston Barrett), Lynn Tait and the Jets, the Soul Vendors/Sound Dimension (led by Jackie Mittoo), the Supersonics (led by Tommy McCook) and the Upsetters (used in many of Lee Perry's productions). Among the influential members of these (and other) studio groups were guitarists such as Hux Brown, Eric Frater, Ernest Ranglin and Lynn Taitt; keyboardists such as Glen Adams, Ansel Collins, Jackie Mittoo and Winston Wright; saxophonists Roland Alphonso, Cedric Brooks, Glen DaCosta, Lester Sterling and Tommy McCook; trombonists Vin Gordon and Rico Rodriguez; trumpeters Bobby Ellis, Dave Madden and Johnny 'Dizzy' Moore and percussionists Ansel Collins, Lowell 'Sly' Dunbar, Winston Grennan, Arkland 'Drumbago' Park, Zoot 'Skully' Sims and Leroy 'Horsemouth' Wallace. For a fuller list, see the liner notes to Mango records' 1993 compilation *Tougher Than Tough: The Story of Jamaican Music*. The most significant early reggae producers include Lynford Anderson, Clement 'Coxsone' Dodd, Clancy Eccles, Leslie Kong, Bunny 'Striker' Lee, Lee 'Scratch' Perry, Jack Ruby (Lawrence Lindo), Sonia Pottinger and Arthur 'Duke' Reid.

Many early reggae records featured the same studio musicians or studio house bands accompanying vocalists or supplementing existing bands. The most influential early reggae artists and producers include bassists Aston 'Family Man' Barrett (who also played in the Hippy Boys and the Wailers), Lloyd Brevett, Lloyd Parkes and Robbie Shakespeare (who also played in Black Uhuru); percussionists Carlton Barrett (who also played in the Hippy Boys and the Wailers), Ansel Collins, Lowell 'Sly' Dunbar (who also played in Black Uhuru), Winston Grennan, Arkland 'Drumbago' Park, Zoot 'Skully' Sims and Leroy 'Horsemouth' Wallace; guitarists Hux Brown, Eric Frater, Ernest Ranglin and Lynn Taitt; keyboardists (piano/organ) Glen Adams, Ansel Collins, Jackie Mittoo and Winston Wright; saxophonists Roland Alphonso, Cedric Brooks, Glen DaCosta, Lester Sterling and Tommy McCook; trombonists Vin Gordon and Rico Rodriguez; and trumpeters Bobby Ellis, Dave Madden and Johnny 'Dizzy' Moore. These musicians performed as members of one or more of the studio groups that were active in the 1970s; leaders' names appear in brackets: the Aggrovators (Roland Alphonso), Beverley's All Stars, the Crystalites (Derrick Harriott), the Dynamites (Clancy Eccles), the Fabulous Five, the Hippy Boys (Carlton and Aston Barrett), Lynn Taitt and the Jets, Soul Vendors/Sound Dimension (Jackie Mittoo), the Supersonics (Tommy McCook) and the Upsetters (Lee Perry). The most significant early reggae producers include Lynford Anderson, Clement 'Coxsone' Dodd, Clancy Eccles, Leslie Kong, Bunny 'Striker' Lee, Lee 'Scratch' Perry, Jack Ruby (Lawrence Lindo), Sonia Pottinger and Arthur 'Duke' Reid.

Significant Early Reggae Artists

In addition to the artists noted above, many others released recordings in the late 1960s and early 1970s that were huge local hits and are frequently cited by musicians and writers as establishing the early reggae style. Examples of these recordings include the Uniques' 1968 'My Conversation,' the Ethiopians' 'Reggae Hit the Town' (1969), Slim Smith and the Uniques' 'Watch This Sound' (1969) (based upon Buffalo Springfield's 1967 hit 'For What It's Worth'), the Heptones' 'Message From a Black Man' (1970) which espoused Jamaican Black Power, the Melodians' 'Rivers of Babylon' (1969), a reggae version of a Rastafarian hymn featured on the 1973 soundtrack album of *The Harder They Come* that was converted into a massive international disco hit in 1978 by Bony M (whose four original members were all Jamaicans).

A number of Jamaican reggae releases in the early 1970s were big hits in the United Kingdom. As a group, these songs were highly melodic and often featured orchestrated backings which resulted in a smoother sound that was more in keeping with non-Jamaican pop records of the period. Examples include Bob (Andy) and Marcia (Griffiths) – 'Young, Gifted and Black' (1970) – a reggae-style cover of US R&B singer Nina Simone's song; Dennis Brown – 'Money in My Pocket' (1972); Dave and Ansel Collins – 'Double Barrell' (1971) – a number one hit featured on BBC TV's *Top Of The Pops*; Boris Gardiner and the Love People – 'Elizabethan Reggae' (1970) – a number one UK reggae hit adaptation of 'Elizabethan Serenade,' a 1951 hit by the Mantovani Orchestra; and the Upsetters – 'Return of Django' – produced by Lee Perry, featuring the Hippy Boys under a different name.

Roots Reggae

Roots reggae, which integrated Rastafarian beliefs and music, emerged in the early 1970s, when a greater emphasis was placed upon African roots and culture by many Jamaicans than ever before. The term 'roots' referred equally to the Kingston ghetto experience and to the African sources of Jamaican culture, but was not widely used to refer to the musical changes of what has since been labeled as 'roots reggae' until the mid-1970s. This greater emphasis upon African roots and culture generated musical changes that resulted in syntheses between reggae and traditional Jamaican forms (such as Pukkumina, Revival hymns and Rasta nyabinghi drumming and chanting), in which neo-African elements overshadowed the US R&B and rock traits that were prominent in ska and rocksteady (Bilby 1995, 165; see also Jones 1988, 27). By the mid-1970s the roots reggae genre, spearheaded and exemplified by Bob Marley and the Wailers, along with Burning Spear (Winston Rodney), the Abyssinians and Niney 'The Observer' (George Boswell aka Winston Holness), fueled international interest in Rastafarian ideas, spiritual beliefs and music (Salewicz and Boot 2001, 108). Masouri notes the irony that the more Jamaican musicians moved away from the American R&B influence and emphasized a more overtly Jamaican sound, the more popular JPM became outside of Jamaica (Masouri 2008, 277).

Between 1975 and 1984 roots reggae was also the most popular music in Jamaica itself. The earliest roots reggae releases sometimes succeeded in spite of little airplay. Burning Spear's first single, 'Door Peeper' (1969), was unlike most previous reggae records (that featured tuneful pop melodies with light-hearted lyrics). This song called listeners to 'Chant Down Babylon' with a melody that owed more to religious folk music than any previous Jamaican recording (Barrow and Dalton 2004, 132), but it had an immediate impact upon and success with the lower classes (Katz 2003, 155). Its melody is highly idiosyncratic and ominous, with shifts from major to minor keys, combined with its use of Creole lyrics, electric organ, sax, trumpet, nyabinghi-style hand drums, one-drop drumming and an afterbeat-accented bass ostinato, at a tempo of 60 bpm (see Example 6).

Example 6: Bass ostinato in Burning Spear's 'Door Peeper'

Although 'Door Peeper' (and followup singles) received little airplay in either Jamaica or the United Kingdom (Masouri 2008, 270), Burning Spear's artistic impact and influence was second only to that of Bob Marley in the 1970s, inspiring many other performers to adopt the 'roots' style (Chang and Chen 1998, 54). Burning Spear's 1975 and 1976 albums (*Marcus Garvey* and *Man in the Hills*) were significant local and foreign hits (Bradley 2000, 269–76).

The Abyssinians were another highly influential group that foreshadowed the roots reggae period of the mid-1970s. Their first single, 'Satta Massa Ganna' (meaning 'give thanks and praise' [1969]), was sung mostly in Amharic, an ancient Ethiopian language. Ethiopia – an ancient, highly developed African civilization, cited frequently in the Old Testament – holds deep significance for Rastafarians as a symbol of both 'The Mother Country' and of their spiritual beliefs. The Abyssinians' combination of Amharic with a more pronounced foregrounding of Jamaican folkloric elements thus resonated strongly with the

Rastafarian community. It employed modal minor chords, shuffle organ, piano, double-afterbeat guitar lines, stutter guitar, hand percussion (shaker and Rasta drums), saxes, trumpets, one-drop drumming and an afterbeat-accented bass pattern at a tempo of 74 bpm (see Example 7).

Example 7: Bass ostinato in the Abyssinians' 'Satta Massa Ganna'

The Abyssinians' second single, 'Yim Mas Gan' ('Give Thanks to God'), was also in Amharic, and the third, 'Declaration of Rights,' called for social justice. These singles initially achieved little airplay and poor sales, but were major influences on other artists, and fared well when re-released on the group's 1976 album *Satta Massagana*.

Roots reggae records that were more commercially arranged with memorable, singable melodies and harmonies, and repetitive instrumental parts reached mainstream audiences. Niney The Observer's 'Blood and Fire' won Jamaican Record of the Year in 1970 with lyrics about social unrest, cleansing fire and smoking ganja sung to a catchy, major-key pentatonic melody, with smooth harmonies and a distinctively Jamaican-style sparse bass part, at a tempo of 82 bpm (see Example 8).

Example 8: Bass ostinato in Niney The Observer's 'Blood and Fire'

Niney produced many mainstream hits for other roots reggae artists, some of which also became internationally successful, including Horace Andy's 'Nice and Easy' (1975), Black Uhuru's 'Guess Who's Coming to Dinner' (1980), Junior Byles's 'King of Babylon' (1972), Gregory Isaacs's 'Rock Away' (1975) and Dillinger's (Lester Bullock's) 'Flat Foot Hustling' (1977) (Thompson 2002, 194–5).

Between 1964 and 1966 Bob Marley and the Wailers had many hits with producer Coxsone Dodd (compiled on *One Love at Studio One 1964–1966)*, but airplay and sales plummeted when they left him in 1966. In 1968 Rasta elder Mortimo Planno introduced Marley to Rastafarianism. He motivated Marley to be more than an entertainer and use his music to promote Rastafarianism (Foehr 2001, 20–2, 53). By 1970 Marley's Rastafarian beliefs influenced everything that he did. He saw himself as an evangelist, which affected how he handled his business affairs, how he spoke, ate and presented himself (Masouri 2008, 462), and now the only purpose of his songs was to carry the message of Rastafari (Masouri 2008, 470). In mid-1970 the Wailers recorded three dozen songs with Rastafarian producer Lee Perry, who experimented with a slower, different beat that he described as 'waxy,' 'like stepping in glue,' resulting in a different style of bass playing that he called a 'rebel' bass (Perry in Davis 1990, 81). This style refers to the approach of Wailers' bassist Aston 'Family Man' Barrett, which consisted of short, powerful, melodic riffs that often were equal in prominence to the songs' vocal parts. Marley's lyrics combined biblical verses, traditional Jamaican proverbs and Rastafarian imagery with descriptions of everyday life and love. Perry suggested a slower, heavier, Jamaican sound to complement Marley's serious, philosophical songs. Using brothers Carlton and Aston 'Family Man' Barrett (from his Upsetters studio group) on drums and dark and stark bass (Davis 1990, 81) to build a rugged foundation, Perry added percussive, trebly guitars, funky keyboards, folk percussion (hand drums, shakers, cowbells and scrapers) and occasional horns. He also showed Marley how to sing in a looser, jazzy style that was more urgent and raw (Davis 1990, 81), and suggested neo-African descants and overlapping responses instead of the more conventional R&B-style background vocals employed on their previous records. Finally, he used new dub mixing techniques that he called his 'dread' sound: voices or instruments suddenly changed tone or balance, and disappeared (or reappeared) in swirling echoes and mysterious sound effects. In 1971 the Wailers charted 12 singles in Jamaica and England, including 'Duppy Conqueror,' 'Kaya,' 'Mr. Brown,' 'Small Axe,' 'Sun Is Shining' and 'Trenchtown Rock,' which was number one on the charts in Jamaica for five months. These groundbreaking recordings were influential with a tough, yet simultaneously more spiritual sound that launched a new direction in Jamaican popular music, with black self-determination as its central theme (Barrow and Dalton 2001, 140). They reaffirmed the Wailer's status in Jamaica as spiritual leaders, as 'soul rebels,' and elevated them to the role of spokesmen for a generation of Jamaicans who were determined to suffer no longer because of persecution for their beliefs or social status (Davis 1990, 82).

The Wailers wanted to conquer non-Jamaican markets, however, and in 1972 they signed with Island records. Marley (and bandleader and bassist

Aston Barrett, who arranged and mixed most of the Wailers' recordings) wanted to create music with a wider appeal and an 'international sound' (Masouri 2008, 430, 434). So when producer Chris Blackwell told Marley that he believed the Wailers had the potential to reach worldwide mainstream audiences (Veal 2007, 103), Marley eagerly agreed to Blackwell's suggestion to combine reggae with other popular styles in order to achieve this goal. Blackwell's productions were cleaner and less distorted than those of typical Jamaican records, but he admired and emulated Perry's mixing techniques, especially the foregrounding and polyrhythmic interplay between the Barrett brothers' bass and drum 'riddims' and Seeco Patterson's nyabinghi-influenced hand percussion to create a thick African 'undertone' (ibid.). Together, Barrett's arrangements, Perry's mixing techniques, Blackwell's production style, Marley's catchy melodies, poetic language, charismatic personality, and especially his desire to reach non-Jamaican fans, resulted in greater worldwide acceptance than any other Jamaican artist had ever received before – or since (Masouri 2008, 480).

Characteristics of Roots Reggae

In roots reggae, most early reggae rhythmic and arranging traits and techniques were retained and intensified, and new ones were introduced. The same prominence of accented afterbeats and the same metric feel (i.e., heavy backbeats along with weak or silent first and third beats) were present, but afterbeats (which most often consisted of a doubled sixteenth note grouping; see Example 1) sometimes appeared alone or only with backbeats or bass, creating a new, uniquely Jamaican texture. Double afterbeats were frequently combined with other afterbeat patterns (usually played by the drummer on hi-hat or folk hand percussion). Roots reggae was often very slow (with tempos between 60 and 71 bpm), but it employed denser, more rapid beat subdivisions in combination with swung sixteenths or swung thirty-second notes, which together increased the overall sonic and corporeal rhythmic energy. This increase in rhythmic energy led some analysts erroneously to conclude that the tempo had increased. Roots reggae drummers sometimes imitated the sound of the nyabinghi repeater drum by alternating snare drum rim accents (without striking the drumskin) with hi-hat or bass drum, which created complex beat subdivisions and rapid timbral shifts (White 1977, 16).

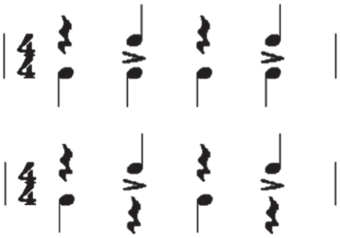
With regard to arranging techniques, collaborative improvisation, call-and-response and hocketing were intensified. Melodic instruments were often played more percussively than in early reggae, rocksteady or ska, and (drum set) drummers sometimes stopped time-keeping to introduce irregular accents or contrasting rhythms employing Buru, Kumina, Jonkonnu or nyabinghi patterns (White 1977, 16). The use of horns diminished further; when employed, horn roles were similar to those in early reggae. Bass parts were often busier, with more frequently silent downbeats. The overall effect of these rhythmic and textural changes resulted in a more pronounced neo-African emphasis than what had previously been heard in Jamaican Popular Music. Stutter guitar was uncommon in roots reggae; guitar sometimes doubled the bass at the octave, but rarely throughout an entire song. Electric organs were still frequently employed, and sometimes played in the shuffle style, but keyboardists frequently played organ with one hand and a different keyboard instrument with the other. Overall, the preference for buzzy vocal and instrumental timbres was retained.

In terms of melodic and harmonic tendencies, the use of modal scales and non-pitched lyrical delivery, called 'toasting,' increased significantly in the roots style. The tendency to use few chords was intensified and modal progressions increasingly became the norm. This emphasis was synchronous with James Brown's 1970s funk, which also often employed one chord or circular modal chord progressions for entire songs. Verse-chorus form remained the most common, although improvised structures derived from work songs and religious chants dominated live performances. Bob Marley and Toots Hibbert (of the Maytals) increasingly employed jazz-like scat singing and rarely performed any songs the same way twice; song structures were usually altered from performance to performance and Marley frequently segued or alternated between songs in spontaneous ways. Lyrical themes often expressed social criticism, philosophy and spirituality, and were usually sung in Jamaican Creole – vernacular Jamaican English. In the late 1970s some roots artists – for example, Dennis Brown, Gregory Isaacs and Freddie McGregor – performed love songs in a roots style, called 'Lover's Rock,' that became very popular in Britain (Barrow and Dalton 2004, 195–8; Bradley 2000, 438–46).

Most of the new elements in the roots era involved changes in orchestration and new rhythmic approaches and techniques. Jamaican folk percussion, including hand drums, shakers, scrapers, tambourines and/or cowbells, was common, usually playing complex beat subdivisions and afterbeat accents. Songs that dealt with Rastafarian themes often featured nyabinghi drums. Additional electric keyboards and synthesizers were also featured, used for sustained parts, afterbeats and reinforcement of guitar, bass, string lines and horn lines. The most strikingly different approach to instrumentation was the introduction of lead guitar, which was first heard on the Wailers' *Catch A Fire* album in 1973, when producer Chris Blackwell invited US rock and R&B session guitarist Wayne Perkins to overdub lead rock guitar lines. When the Wailers went on tour, they hired US R&B guitarist Al Anderson to play lead guitar. Afterward, most reggae artists imitated this practice.

There were a number of unique rhythmic innovations during the roots era, notably the 'straight four' feel, the 'flyers style' (aka 'flying cymbals') and the 'rockers' or 'steppers' drumming styles. Many new hi-hat afterbeat patterns were also introduced.

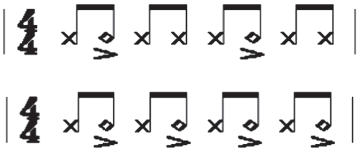
The 'straight four' feel refers to two similar bass drum and snare drum patterns that were used occasionally in early reggae. Producer Bunny Lee coined the term 'straight fours' to describe this pattern (interviewed in *Deep Roots Music 2 – The Bunny Lee Story*) (see Examples 9 and 10).



Examples 9 and 10: Two common roots reggae drum patterns (called 'straight fours')

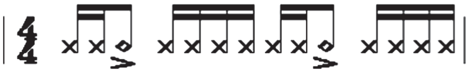
The term 'straight fours' refers to the fact that each beat is articulated by a drum. Although these two patterns are similar to those played by country, rock or R&B drummers, in performance they sounded quite different when played by Jamaican drummers because Jamaican backbeats were played stronger and louder than the sounds played on beats one and three – exemplifying the same backbeat emphasis present in ska and rocksteady – and because Jamaican bass drums were generally tuned at a higher pitch and less resonant (i.e., with a tighter, more muted sound) than those in non-Jamaican drum kits. When the rockers/steppers style emerged in 1975, 'straight four' patterns were often also called 'rockers' or 'steppers,' which makes analysis of interviews problematic.

The 'flyers style' (aka flying cymbals) refers to an open hi-hat pattern – first used by 1950s Caribbean calypso drummers – in which afterbeats are accented by opening the hi-hat, creating a 'pssh' sound (see Examples 11 and 12).



Examples 11 and 12: Two common calypso hi-hat patterns. (x's indicate closed hi-hat; o's indicate an open hi-hat)

In 1968 funk drummer Greg Errico (of Sly and the Family Stone) played Example 12 on 'Are You Ready?' and 'Dance to the Music.' In 1969 both patterns appeared on a few reggae records, although they were not labeled as 'flying cymbals' by musicians or producers at the time. For example, 'Wet Dream' by Max Romeo employs a variation of Example 11 (an open hi-hat on the afterbeats of beats one and three; see Example 13).

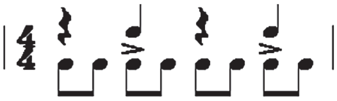


Example 13: Hi-hat pattern in Max Romeo's 'Wet Dream'

In the early 1970s Example 12 appeared in some US funk records, and in 1973 it became a disco cliché after R&B drummer Earl Young used it throughout MFSB's 'The Sound of Philadelphia.' The flyers hi-hat style was prominent on many roots reggae records for the next few years (Bradley 2000, 351).

In 1974 Jamaican drummer Carlton 'Santa' Davis, inspired by Earl Young's technique and style (Masouri 2008, 265), combined the pattern illustrated in Example 12 with one-drop drumming on Johnny Clarke's 'None Shall Escape the Judgement.' Producer Bunny Lee called this technique 'flying cymbals' (in spite of this being a new hybrid of 'flying cymbals' [referring exclusively to a hi-hat technique] combined with one-drop drumming) and asked Davis to play it on records he produced for Horace Andy, Johnny Clarke, John Holt and Delroy Wilson.

The terms 'rockers' and 'steppers' were used interchangeably for a disco-influenced bass drum style created in 1975 by Jamaican drummer Sly Dunbar, employed on the Mighty Diamonds' 'Back Weh A Mafia' and 'The Right Time.' He transformed disco's four-to-the-bar quarter-note bass drum pattern into a steady eighth-note rhythm, although his Jamaican-tuned bass drum, weak downbeats, afterbeat accents and heavy backbeats created a different sound/feel from the sound of repeated bass drums 'hits' in disco drumming (see Example 14).



Example 14: Sly Dunbar's Rockers/Steppers style

Many roots reggae drummers frequently combined flyers and rockers patterns.

Significant Roots Reggae Musicians and Producers

Bassists such as Aston 'Family Man' Barrett, George 'Fully' Fullwood, Errol 'Flabba' Holt and Lloyd Parkes created propulsive bass lines that often were the most distinctive elements of the songs. Drummers Carlton Barrett, Carlton 'Santa' Davis, Lowell 'Sly' Dunbar, Winston Grennan, Hugh Malcolm, Arkland 'Drumbago' Park and Leroy 'Horsemouth' Wallace combined mastery of ska, rocksteady and reggae techniques with ideas from rock and R&B. Guitarists Valentine 'Tony' Chin, Julian 'Junior' Marvin and Earl 'Chinna' Smith mastered every aspect of reggae techniques and also became highly skilled soloists. Keyboardists Tyrone Downie, Bernard 'Touter' Harvey, Earl 'Wire' Lindo and Robbie Lynn were not only proficient on organ and piano, but also introduced other electronic keyboards. Percussionists 'Bongo Les,' 'Bongo Herman' Davis, 'Skully' Sims, Uziah 'Sticky' Thompson and Alvin 'Seeco' Patterson played a variety of neo-African hand percussion, but most often performed on nyabinghi drums. Saxophonists Cedric Brooks, Glen DaCosta and Herman Marquis, trombonists Calvin Cameron and Vin Gordon, and trumpeters Bobby Ellis and Dave Madden usually performed in small horn sections of two to four players. In spite of the large number of roots reggae releases, a relatively small number of studio groups (featuring different combinations of the above musicians) played on the majority of roots reggae records: the Black Disciples, the Roots Radics Band, the Revolutionaries, the Soul Syndicate and Zap Pow.

Since the roots era produced the greatest number of Jamaican releases – especially in international markets – the number of producers also increased. The best known were Chris Blackwell (who produced all of the Wailers' recordings, including those issued after Marley's death in 1981), Glen Brown (who produced recordings by U Roy, Gregory Isaacs, Big Youth, I-Roy, Prince Jazzbo, Johnny Clarke, Lloyd Parks and Little Roy), Lee 'Scratch' Perry (who produced recordings by Max Romeo, the Heptones, the Congos, the Meditations, Junior Murvin and the Upsetters) and Clive Chin (who produced recordings by Dennis Brown, Lee Perry [as a solo artist] and Black Uhuru). Also, Dr Alimantado (Winston Thompson) was known for dub versions, and his recordings became especially popular with UK punk fans in the late 1970s; Harry 'Harry J' Johnson produced recordings by Burning Spear, the Heptones, Ken Boothe and Augustus Pablo; and Jack Ruby's (aka Lawrence Lindo) productions for Burning Spear – *Marcus Garvey* and *Man in the Hills* – became internationally successful albums shortly after Bob Marley and the Wailers' breakthrough to mainstream audiences in the mid-1970s. A number of producers became known for innovative dub recordings, frequently remixing songs and albums by other artists: Lloyd 'King Jammy' James, 'King Tubby' (Osbourne Ruddock), Augustus Pablo (Horace Swaby) and Lee 'Scratch' Perry.

In addition to the artists mentioned above, many reggae artists specialized in the roots style: the Congos, Culture, Carlene Davis, Israel Vibration, Barrington Levy, the Meditations (who also sang backing vocals on a number of Bob Marley's songs), Junior Murvin (Murvin Junior Smith) (whose 1976 song 'Police and Thieves' was covered by UK punk rockers the Clash on their debut album that same year) and Prince Alla (Keith Blake) (whose mid-1970s hits 'Bucket Bottom,' 'Lot's Wife' and 'Sun Is Shining' are considered classics of the genre).

Early International Spread of Reggae

Reggae was created initially for Jamaican audiences, but by 1969 it had become popular in Britain and some records were international hits, starting with releases in the United Kingdom. British fans included Jamaican immigrants and British youth, especially skinheads and Mods – two subcultural groups who enjoyed reggae's outsider image and danceability. The best-selling early reggae singles were those released both in Jamaica and in Britain between 1968 and 1971. Over 20 reggae songs appeared in British charts, many others were popular in clubs, and Jamaican artists performed to integrated UK audiences (Barrow and Dalton 2001, 103). Because BBC radio preferred recordings with strings, horns and a mix with more treble and less bass, Jamaican producers mixed records specifically for the British market (Masouri 2008, 90). When 'roots reggae' emerged in the early 1970s, however, reggae entries on British charts initially vanished (Barrow and Dalton 2001, 103), but by the mid-1970s – after it was marketed to university students and rock audiences – reggae became very popular in the United Kingdom (Masouri 2008, 314–15). For details regarding reggae in Britain, see Bradley (2000, 370–95), de Koningh and Cane-Honeysett (2003), de Koningh and Griffiths (2003), Hebdige (1974, 1982, 1990) and Jones (1988).

In 1968 American soul singer Johnny Nash released the first international reggae hits, recorded in Kingston, Jamaica (produced by Jamaican producer Harry J), with Jamaican studio musicians, strings and a 'British mix.' 'Hold Me Tight' – written by Nash – reached Number 5 in the USA and Britain, and 'Cupid' – written by Sam Cooke – reached Number 6 in Britain and Number 21 in the United States (Charles 1993).

In 1969 Desmond Dekker and the Aces' 'Israelites,' produced by Leslie Kong, attained the Number 1 spot on the charts in Britain, Canada, Sweden, West Germany, Holland and South Africa, and Number 9 in America). Jimmy Cliff's 'Wonderful World, Beautiful People,' produced by Chris Blackwell, was Number 25 in the USA and Number 6 in Britain.

The first internationally successful Jamaican reggae album was *The Harder They Come* (1973), the soundtrack of the first Jamaican-produced movie. It featured rocksteady and reggae songs by Jamaicans Jimmy Cliff (in the lead role), Desmond Dekker, the Maytals (also in the film), the Melodians and others. Marketing of the film and the majority of reviews made no distinction between rocksteady and reggae, which has contributed to the ongoing confusion about rocksteady as a genre distinct from reggae.

In 1973 and 1974 Bob Marley and the Wailers' albums *Catch A Fire* and *Burnin'* were released internationally on Island Records; their previous records had only been released in Jamaica and Britain. Producer Chris Blackwell targeted mainstream European and North American audiences with rock-style production and overdubs by US rock musicians Wayne Perkins (guitar) and John 'Rabbit' Bundrick (keyboards), but sales were marginal until British rock guitarist Eric Clapton reached Number 1 on the US charts in 1974 with his funk-rock cover version of Marley's 'I Shot the Sheriff' (from *Burnin'*). Subsequently, the Wailers' recordings received critical praise and sold well. After several global tours in the 1970s, Marley had become the most influential and best-selling reggae artist, but in 1981 he died of cancer at the age of 36. In 1999 *Time* magazine named Bob Marley and the Wailers' *Exodus* (1977) the best album of the twentieth century. *Legend*, the group's 1984 greatest hits album, was the biggest-selling reggae recording of all time, topping 20 million sales in 2009 (Timmons 2004). Jamaicans Jimmy Cliff, Toots and the Maytals, Burning Spear and Third World also scored international hits between 1973 and 1985, and in 1985 Black Uhuru won the first reggae Grammy Award for best album with *Anthem*.

Early Non-Jamaican Reggae Adaptations

By the late 1970s, non-Jamaican artists had recorded reggae-influenced songs, for example, one by Paul Simon in 1972 (recorded in Jamaica with Toots and the Maytals' musicians), hits in 1972 and 1973 by Paul McCartney, one by Led Zeppelin in 1973, 1977 hits by Elvis Costello and the Eagles, 1978 hits by Bony M and 1979 hits by the Clash, Madness, the Police and the Specials; see discography for specific song titles. Of these artists, only a few (e.g., Madness, the Police, Paul Simon and the Specials) are considered to have replicated most of the nuances of the reggae feel (McCarthy 2007, 511–50).

In these early efforts by non-Jamaicans to replicate the reggae style, the results were highly varied, with the majority of recordings including only a number of surface features related to the style. These surface features include accented afterbeats (usually a double afterbeat as per Example 1), slower tempos, increased beat subdivision, reggae-style orchestration, ostinato bass riffs and frequent use of the straight four and rockers/steppers grooves. Less common is the use of a swing or shuffle sixteenth-note groove, and use of Jamaican folk percussion. What is generally missing, however, is the Jamaican metric feel (i.e., the synchronization of accented afterbeats with heavy backbeats and weak first and third beats). Instead, the surface features are usually supported by drumming and bass parts that retain the metric weight of rock and R&B (i.e., heavy first and third beats and a fuller, more resonant bass drum timbre) in which primary accents fall on beats, rather than on afterbeats. This is especially commonplace when most non-Jamaican drummers play the straight four or rockers/steppers patterns or when bassists and drummers create fills in between phrases. While the rhythms resulting from these fill-ins are frequently similar to Jamaican ones, the metric weight is usually perceived as 'non-Jamaican,' which results in stylistically uncharacteristic syncopation in which the basic groove is altered; see McCarthy (2007, 511–50) regarding the complications of reggae performed by non-Jamaican artists. Since the absence of the Jamaican metric feel usually alters the other reggae traits significantly, this indicates that this trait is central to establishing and maintaining the same type of groove found in Jamaican ska, rocksteady and reggae recordings.

Reggae Dance/Movement

Reggae dancing involves many neo-African dance movements adapted from Jamaican folk traditions rooted in West African music-dance rituals. When combined with Jamaican metric weight (i.e., accented afterbeats synchronized to heavy backbeats and weak first and third beats), they create a uniquely Jamaican sound-movement pairing (Mulvaney 1985, 155). Most Jamaican dancers and musicians synchronize heavy downward gestures with lightly played (often silent) beats, as opposed to European sound-movement pairings, in which heavy downward gestures are synchronized with strongly played (usually accented) beats. For analysis of this pairing in JPM performances, and how changes in movement patterns alter characteristics of the sounds with which they are paired, see McCarthy (2007). Davis and Simon (1977, 49), O'Gorman (1972, 52) and Pinnock (2002, 102) note that reggae movements are a variation of those in rocksteady dancing, in which dancers make deliberate walking movements, usually alone, and when couple dancing, adopt a 'rent-a-tile' style of slowly grinding to the music in basically one spot.

Reggae dancers place their feet on the ground while making a dipping movement (Mulvaney 1985, 158), which Louise Bennett notes is also the description of a West African movement called the 'yanga step' (Bennett in Johnson and Pines 1982, 47). One of the basic reggae steps is called 'skanking,' a term that is also used to label guitar afterbeats (Mulvaney 1985, 157). The body is held straight with one arm on the belly and the other stretched out to the side. Arms swing up and down in alternation, the head and body rock back and forth, and the pelvis rotates (Wynter 1970). Dancers emphasize beats called 'drops' (which are frequently silent) with downward movements. Each leg is bent in alternation, lowering the body toward the ground in a deliberate manner, with the arms relaxed at the side. On each of the afterbeats, the dancers' bodies move upward, they pull one of their feet off the ground and raise the opposite arm in front. Each subsequent beat involves a repetition of these fluid movements, but with the opposite leg moving forward, while the first leg trails behind, accompanied by raising the initial arm behind the body. Everything is repeated throughout each bar of the piece; skanking's simplicity and predictability easily accommodate slight variations and personal touches (Mulvaney 1985, 157–8). According to Mulvaney, the skank has the appearance of slow, confident determination. Even though reggae lyrics often present the poverty and oppression of the lower classes, reggae movements (which are shaped by the rhythmic structure) may be interpreted as subverting this situation through positive actions (Mulvaney 1985, 158, 160).

McCarthy's (2007) study of reggae movement analysed 878 video performances by 299 JPM and Jamaican folk music artists. His findings confirm the movement traits noted above in Mulvaney's descriptions: 69 percent of Jamaican musicians in live performances make heavy downward gestures synchronized with lightly sounded/played, often-silent beats, pairings which are acquired and transmitted primarily via mimesis (McCarthy 2007, 474).

Bennett (in Johnson and Pines 1982, 47) identifies another West African step in reggae dancing – the Kongo step, in which one (flat) foot pushes down on the beat followed by pushing up with the ball of the opposite foot on afterbeats. Reckford (1977, 13) and Ryman (1979, 13) note similarities between reggae's shoulder thrusts and those in Jamaican neo-African religious rituals, and between reggae's pelvic movement style, mento dance and nyabinghi ritual movements.

Reggae in the 1990s to the Early Twenty-first Century

In 1985 dancehall – a Jamaican dance music that foregrounds digitally produced rhythms and toasting (talkover lyrics) rather than live music – superseded reggae as the most popular music in Jamaica. In the early 1990s there was a resurgence of the roots reggae style (Barrow and Dalton 2004, 355–71), which some called the 'Bobo Dread Sound' (ibid., 371–9). Buju Banton (Mark Anthony Myrie), Capleton (Clifton George Bailey), Luciano (Jepther McClymont) and Sizzla (Miguel Collins) topped Jamaican charts, initially with little international success. Although only popular in Jamaica at first, international sales of these artists have increased in recent years. Other significant roots reggae revivalists recording in the early twenty-first century include Anthony B (Keith Blair), Everton 'Blender' (Dennis Williams), Junior Kelly (Keith Morgan), Morgan Heritage, Tony Rebel (Patrick Barrett) and Garnett Silk (Garnet Smith).

Twenty-first-Century Global Reggae

Although still strongly identified with Jamaica, reggae has become a global style, with many syntheses of reggae with local, non-Jamaican styles, such as British, American and African reggae (Barrow and Dalton 2004, 383–443), reggae by Australian Aboriginal bands (Bennet 2010, 85–6), and the series of Putumayo World Music CDs (for example, 2004's *World Reggae*, 2008's *Latin Reggae,* 2009's *African Reggae*) with examples of reggae from 27 countries. Although many of these syntheses retain early reggae and roots reggae traits, overall the emphasis has been to prioritize local musical styles, resulting in many yet unnamed hybrids that may emerge as new genres in the years to come.

Discographical References

Note: Most of the discographical references for this entry consist of CD reissues and compilations, rather than the original releases of 45 RPM singles. The availability of accurate Jamaican discographical information, especially for recordings issued from the mid-1950s to the late 1970s, has been problematic for several reasons. Most of these records were created for local Jamaican audiences (both on the island and abroad, notably in Britain), rather than being international releases. They were often initially released as one-off acetate recordings (with blank labels) to Jamaican DJs and often not issued commercially until many months (or years) later, sometimes with different takes or mixes from these initial releases. From the mid-1960s to the late 1970s, it was also common practice for record producers to create several different mixes and versions of songs (simultaneously released only as singles) that were either limited runs and/or not reissued after the first pressing sold out. Many of these singles were also not compiled in album form until decades later, usually when the original recordings were acquired and reissued by major labels such as *Island Records* or *Trojan Records*. As of 2013, no definitive print source exists with a complete accounting of Jamaican releases either by artist or by label documentation about release dates, the many different versions of records, totals of copies pressed, distribution details, sales figures, etc., although John Gray's *Jamaican Popular Music, from Mento to Dancehall Reggae: A Bibliographic Guide* (2011) lists a number of discographies (which are typically very circumscribed in scope) that have been published to date. In late 2012, however, an online database of all known information about Jamaican releases was created by Michael Turner and Robert Schoenfeld. Called *Roots Knotty Roots* (www.reggaefever.ch/rkr/guide), this database incorporates all of the discographical data from their 2004 book of the same name. Because it is updated regularly with new information submitted by fans and collectors worldwide, it has the potential to become the best (and most accurate) source in the future for all Jamaican discographical information. Other websites, like www.discogs.com and www.roots-archives.com, also have large databases of original recording information submitted by members (although only the latter focuses exclusively on Jamaican music). The only Jamaican discographical area/period that *is* well documented are the UK *Trojan* releases, from 1968 to the mid-1980s; see two 2003 books by de Koningh et al. in References.

Reggae en Español

A remarkably global style, reggae is sung in as many tongues as places it reaches, and Spanish is no exception. But although Spanish-language reggae artists enjoy popularity in Spain and across Latin America, not to mention wider international circulation via 'Latin Reggae' compilations, the term (or *reggae-español*) tends to refer to a more specific, and significant, locus for the music: Panama.

Panama is important not only as one of the first places to adapt reggae to local language, but for reshaping the genre, if subtly and faithfully, in a manner that would prove seminal elsewhere, especially in what eventually emerges as reggaeton in Puerto Rico. Thanks to longstanding links to the Anglo-Caribbean and to Jamaica in particular, Panamanian artists were well poised to play the role of translator for Spanish speakers elsewhere.

Historical Background

In the late nineteenth and early twentieth centuries, large numbers of migrant workers from the West Indies were lured to the Caribbean coast of Central America by such construction projects as the Panama Canal and the railroads that supported plantation commerce. From 1880 to 1920 as many Jamaicans moved to Panama as to the USA; prior to 1911 Panama received 62 percent of all Jamaican emigrants (Thomas 2004, 23). Stretching from Panama up the coast to Belize, these workers and their descendants established bilingual communities with transnational ties. Putative aliens due to language and race, often their assimilation into new nation-states proved a challenging project in which music played no minor role.

By the 1930s, West Indian migrant communities were hosting outdoor dances animated by a circum-Caribbean soundtrack that mixed New Orleans jazz, Jamaican mento, Cuban *son* and Trinidadian calypso, among others. According to historian Lara Putnam (forthcoming 2012), these weekly dances offered an important site for Afro-Caribbean youth sociability, though the events were also criticized by British West Indian community leaders promoting self-improvement and community respectability. While even 50 years later the project of national integration remained freighted by matters of race and language, the social institution of dancing to a modern, black, pan-American and cosmopolitan soundtrack would lay a foundation for the eventual embrace and transformation of reggae in Panama.

By the mid-1970s, as reggae began to travel the world, especially thanks to Island Records' savvy marketing of Bob Marley, diasporic sites such as Panama were well situated as sites of consumption and, eventually, production. Family ties and personal travel facilitated the circulation of reggae recordings to emigrant towns such as Colón and Panama City, where DJs and musicians seamlessly integrated the latest reggae hits into a repertory that by this time also included soca, salsa, soul and *konpa* (or 'haitiano' as it was called locally). Inspired by the Jamaican model, mobile sound systems or *discos moviles*, such as Electro Disco, served as crucial conduits for the music to reach a public, as did the *diablos rojos* (literally, 'red devils') or minibuses, popular forms of transport that employ music as part of their draw for customers.

Early Pioneers

It was not, however, until the early 1980s and the emergence of the dancehall style in Jamaica and amateur recording capacity that Panamanian artists really got into the act. Generally credited as the pioneer of *reggae en español*, Leonardo Renato Aulder (aka Renato) started out as a dancer and assistant to a popular English-speaking DJ called Wassabanga who encouraged Renato to translate some of the standard reggae party chants ('Lift up your hand!') into Spanish for club patrons. Ironically, Renato spoke relatively little Spanish at the time, having grown up alongside other English-speaking labor migrants in the Canal Zone. Before long, Renato was using Jamaican instrumentals, often issued as the B-side of reggae records, to produce his own Spanish-language recordings for drivers of *diablos rojos*, who began commissioning special versions of popular songs glorifying themselves and their buses. He also began performing with Electro Disco as well as with his own group, Renato y Las 4 Estrellas, which included a young vocalist named Edgardo Franco, aka El General, who would go on to become one of the most famous and influential practitioners of *reggae en español*.

Initially, Renato and his cohorts would produce a limited run of cassettes featuring their translations of contemporary reggae hits, selling them to bus-drivers for 3 dollars a piece (Nwankwo 2009, 93). In 1985 Renato recorded a song called 'El D.E.N.I.' which took as its template Lovindeer's dancehall favorite, 'Babylon Boops (What Police Can Do),' in order to critique Panama's secret police. An underground hit, the song became so popular on the buses that a radio DJ, Héctor Tuñón, played it over and over again on the air, turning the local ditty into a national hit, eventually selling thousands of copies once Renato and some colleagues had the recording pressed onto vinyl. The popularity of 'El D.E.N.I.' led to sponsorships and other opportunities to record. Renato's followup, 'La chica de los ojos café' (The Girl with Brown Eyes) (1985), a romantic song with lighter subject material (if, according to Renato, a protest against soap-operas), was a small sensation, becoming the first true radio hit for *reggae en español* and even garnering airplay and record sales outside of Panama, finding its way to Colombia, Venezuela and across Latin America. Although Panamanian radio had been slow to embrace the style, 'La chica' confirmed local reggae's commercial potential and created an opening for artists such as Nando Boom, Chicho Man and Aldo Ranks, all bearing names in tribute to Jamaican models.

Panamanians in New York and the Rise of Reggaeton

Despite the growing popularity in Panama of *reggae en español*, or '*plena*' as it is often called there (not to be confused with the Puerto Rican genre), the most popular and influential recordings of the late 1980s and early 1990s were recorded not in Panama City but in New York City. Local stars such as Nando Boom and El General relocated to the United States for various reasons: to seek better jobs, to reunite with family and even, according to some, to evade censorship from the military dictatorship. Brokered by the Panamanian manager and producer Ramón 'Pucho' Bustamante, these vocalists continued the practice of translating the latest Jamaican hits for Spanish-speaking audiences, often covering songs suggested by NYC-based Jamaican collaborators, especially those working at Philip Smart's HC&F studio in Long Island, the premier reggae studio in the United States at this time. Together, they recorded such seminal work as Nando Boom's album, *Reggae español* (1991), a set of translated dancehall hits that lists the Jamaican recordings alongside their Spanish counterparts, and El General's underground anthem, 'Pu Tun Tun' (1991). A compilation on Columbia records, *Dancehall Reggaespañol* (1991), stands as a telling testament to the degree of entrepreneurial activity and industrial interest in *reggae en español* at this time.

Finding their way to Puerto Rico rather rapidly, the popularity of these NYC-based *reggae en español* recordings would initiate a stylistic turn in the hip-hop scene there that would sow the seeds for what eventually emerges as reggaeton. On the one hand, the dance hall-indebted vocal performances of Panamanian artists offered Puerto Rican listeners a new, more audibly Caribbean template for rapping in Spanish, where El General soon joined Vico C as a model for aspiring vocalists. On the other, the instrumental B-sides of *reggae en español* records provided reggae-inflected accompaniment for lively freestyle sessions in San Juan's burgeoning hip-hop scene. Before long, local DJs such as Playero and DJ Negro began sampling and rearranging the most popular tracks in order to stitch together marathon rap sessions marketed as mixtapes. Especially notable in this regard is that reggaeton's ubiquitous, bedrock rhythm, the Dem Bow, does not derive directly from Shabba Ranks's dancehall hit, 'Dem Bow' (1991), but rather from a cover version (Nando Boom's 'Ellos Benia'), produced by Jamaican instrumentalist Dennis the Menace in collaboration with Pucho Bustamante at HC&F in Long Island – quite a legacy for these New York-based *reggae en español* sessions.

The Reanimation of Reggae in Panama

In addition to Puerto Rico, of course, these recordings also circulated back to Panama where they reshaped a still lively local reggae scene. In Colón and Panama City, singers and producers continued to follow their own muses (especially via contemporary Jamaica) and to uphold a faithful approach to reggae, even as they inevitably localized and otherwise transformed the latest sounds and styles. Throughout the 1990s and into the new millennium Panamanian reggae was reanimated by a second generation of artists. Having grown up with *reggae en español* as a national soundtrack, artists such as Kafu Banton, Jam & Suppose and Danger Man took the local style in new directions even while engaging closely with new and traditional styles from Kingston. One local style that emerged at this time was known as '110' because of the popularity of that tempo (110 beats-per-minute), a slightly fast pace for dancehall reggae and hence a platform for virtuosic, spry-tongued vocalists. Sometimes called *bultrón* (or *vultrón*), marking the music's localization, *reggae en español* was also colloquially called 'petróleo' in the mid–late 1990s, a term indexing the music's putative blackness (similar to 'melaza' in Puerto Rico) but also bearing witness to the broad influence of producer Rodney Clark (aka El Chombo) and his label, Oilers Music, and annual mix series, *Spanish Oil* (1995–9).

Like *reggae en español*, El Chombo's moniker, a local slur for non-Spanish speaking blacks, is itself a product of the long, ambivalent history of Afro-Caribbean immigration and integration in Panama. Embracing this legacy, Clark became the leading light in Panamanian reggae by producing local hits that also found popularity in the region and more widely, such as his *Cuentos de la cripta* (Tales from the Crypt) albums (1997–2004), which were distributed internationally by Sony. Less grounded in strict Jamaican style than some of his peers, El Chombo shrewdly drew from American pop and hip-hop as well as Puerto Rican reggaeton to produce the kinds of records, if sometimes novelty numbers (see, for example, 1997's 'El gato volador' [The Flying Cat] or 2006's 'Chacarron'), that could cross over to audiences outside of Panama's reggae scene. His biggest hit in this regard is Lorna's 'Papi Chulo' (2003), arguably the first reggaeton song to become an international chart-topper, predating the success of Daddy Yankee's 'Gasolina' (2004). Suturing a sample from Dee-Lite's 'Groove Is in the Heart' (1990) onto Dem Bow-style drums, 'Papi Chulo' was a top ten hit in several European countries (Number 1 in France, Number 2 in Italy) and huge across Latin America.

Beginning around 2000 and continuing to the present day, another chapter in the story of *reggae en español* has unfolded under the banner of *romantiqueo*. Fusing reggae rhythms with pop sheen and romantic ballads, and led by such popular acts as La Factoría, Eddy Lover, Flex and Makano, *romantiqueo* marks a remarkably commercial turn for Panama's reggae scene. These singers and groups sell out stadium shows and reign at the top of the charts in Panama as well as across Central and South America, giving Puerto Rican reggaeton a run for its money. At the same time, Panama still plays host to a vibrant dancehall and roots reggae scene looking primarily toward Jamaica for inspiration, if at this point inextricably inflected by reggaeton too. Some artists, such as vocalist El Roockie and producer Predikador, collaborate with Puerto Rican producers, while others, such as Ruff Dad or Scaredem Fish, eschew reggaeton style for a closer engagement with contemporary reggae, especially the use of new Jamaican instrumentals and songs as the basis for their own inventions. Moreover, the flowering of independent and amateur pro-grade production via home studios and other modest enterprises means that *reggae en español* is as big and vibrant a tent as ever, circulating online via local sites like Plena507.com, and closely engaged with the shifting styles of Afrodiasporic pop. In the second decade of the twenty-first century, as at any time over the previous 30 years, one can safely assume that the latest reggae hits will be faithfully and almost immediately translated and transformed for Panamanian audiences by local artists.

Reggaeton

Reggaeton (also spelled reggaetón or reguetón) is a commercially successful genre of music that developed in Puerto Rico during the 1990s and became increasingly popular on an international level throughout the late twentieth and early twenty-first centuries. Most obviously influenced by reggae and hip-hop, reggaeton features rapped vocals, a danceable beat usually produced electronically and party-themed lyrics. It is not, however, simply the Spanish-language version of either of these two types of music (the Spanish-language version of reggae is better known as or *reggae en españo*l and the Spanish-language version of hip-hop is usually recognized as *rap en español*). Rather, reggaeton is a unique blend of both these genres, characterized by its own specific rhythm known as the 'Dem Bow' beat. It also borrows from other Caribbean genres, such as *bomba*, *merengue* and salsa, resulting in a transnational musical fusion.

When reggaeton became popular among Latin American and Caribbean youth in the United States in the early 2000s, many critics believed that the trend was simply a passing fad. But the music has continued to resonate strongly with youth across the United States and throughout Latin America. The Spanish-language lyrics address issues of inequality, discrimination and cultural pride, in addition to the popular themes of dancing, romantic and sexual relationships, and partying. These topics in some cases foster a sense of pan-Latino pride among fans by focusing on the history and culture that unites Latinos and Latin Americans on a global and national level. Mega-concerts, which often feature several top-billing artists on one night and can last more than six hours, are key to the sustained popularity of reggaeton, and also provide a space for fans to recognize their cultural commonalities.

Reggaeton has been criticized in the Puerto Rican media for its sometimes explicitly sexual or violent lyrics, similar to those featured in hip-hop. The genre is known for *el perreo* (roughly meaning 'doggy-style dance'), a sexually suggestive dance that usually involves a man grinding against the backside of a woman. Because of its sexual and violent themes, policy makers in Puerto Rico have at times attempted to ban the music and the dance, claiming that it leads to criminal and deviant behavior. On the other hand, the commercial success of reggaeton has prompted many critics eventually to acknowledge the music as a valuable cultural export that has thrust Puerto Rico into the international spotlight and unquestionably made an impact on the global economy.

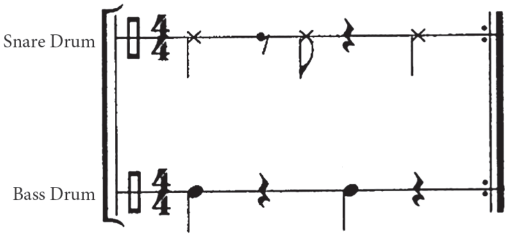
The Roots of Reggaeton: *Reggae-Español* and *Rap en Español*

Although reggaeton is most closely associated with Puerto Rico, its roots lie in Panama. In the early twentieth century, many Jamaicans migrated to Central America to work on the construction of the Panama Canal. As they established permanent residence there, they continued to foster transnational ties to Jamaica. When reggae emerged in the late 1960s, it quickly spread throughout the Afro-Panamanian community as a result of these diasporic circuits. During the 1970s Panamanian artists began to cover popular Jamaican reggae songs, translating the lyrics into Spanish and mostly preserving the rhythm, instrumentation and melodies of the original song. Over the course of the next couple of decades, DJs continued to cover popular tunes while also creating original versions of their own, blending the stylistic elements of reggae and dancehall with a Latin American musical flavor. This Spanish-language, Latin American version of reggae, *reggae en español*, was popular throughout Panamanian nightclubs for decades. In the 1990s the genre exploded onto the international scene. Panamanian DJs such as Nando Boom and El General experienced great success during this decade, and *reggae en español* compilation albums soon became standard rotation for nightclubs and Spanish-language radio stations across Latin America, the Caribbean and the United States. Because of the way in which these artists fused Jamaican and Latin American traits, *reggae en español* is understood to be the predecessor of contemporary reggaeton. In particular, modern reggaeton artists often pay tribute to El General (born Edgardo A. Franco) as the 'Grandfather of Reggaeton.' Tracing his multicultural heritage to Trinidad, Jamaica, Panama and Colombia, El General was a primary innovator of *reggae en español* and experienced international success in the early 1990s with danceable Spanish-language hits such as 'Muévelo' (Move It) and 'Te ves buena' (You Look Good).

While Panamanian artists integrated reggae into their own musical traditions, Puerto Rican artists experimented with hip-hop beats and rapped vocals. During the late 1980s and early 1990s American hip-hop infiltrated the island largely because of Puerto Rico's special status as a commonwealth of the United States; music and people could travel without sanctions. Puerto Rican rappers sometimes sampled the instrumental parts of popular American rap songs, adding their own Spanish lyrics and vocal melodies on top of the borrowed foundation. As Spanish-language rap in Puerto Rico continued to develop, producers increasingly created entirely original rap songs, making their own beats. A particularly influential Puerto Rican *rap en español* artist was Vico C (born Armando Lozada Cruz), known for his socially conscious rap lyrics that explored urban themes of poverty, violence and discrimination. The success of Vico C's 1989 hit 'La Recta Final' (The Home Straight) was followed up by 'Saboréalo' and 'María' in 1992 (also released on his 1993 album Xplosion). 'María' demonstrates the extent to which Puerto Rican rappers would borrow from popular rap songs from the United States, superimposing their own Spanish lyrics: Vico C samples beats and sound effects from the single 'Jump Around' by Irish-American rap group House of Pain and also references 'Jump,' a song released by young African-American rap duo Kriss Kross.

Becoming a Unique Genre

By the 1990s, Puerto Rican dance clubs were alive with the sounds of both *reggae en español* and *rap en español*, setting the stage for the creation of reggaeton, a combination of these two genres set to a specific beat borrowed from Jamaican dancehall. Reggaeton is primarily defined and recognized by its unmistakable 'boom-ch-boom-chick' beat, produced by interlocking a bass drum on beats 1 and 3, with a snare sample that plays a modified backbeat against it (see Example 1).



Example 1: Reggaeton's 'boom-ch-boom-chick' beat

Although this snare pattern may differ slightly from song to song, it usually emphasizes the 'and of 2' and beat 4. Many musicians directly trace the reggaeton beat back to the electronically generated bass and snare rhythm featured in Shabba Ranks's 1991 song 'Dem Bow.' Within the 'Dem Bow' rhythm, the syncopated snare pattern is reminiscent of the 'tresillo' part of a *clave* rhythm, lending a particularly 'pan-Caribbean' flavor to the rhythm because the '3 against 2' juxtaposition of a *clave* pattern over a duple-meter pulse can be found in rhythms throughout the Caribbean, including Jamaican reggae, dancehall and mento, Trinidadian soca and calypso, Haitian *méringue* (*mereng*) and *konpa*, Puerto Rican *bomba* and *plena*, Dominican *merengue* and *bachata*, Cuban *son* and *mambo*, and salsa from New York.

When Spanish-language rap vocals were placed on top of this synthesized dancehall beat, reggaeton was essentially born. However, the new genre was not originally known as 'reggaeton'; it was alternatively called 'Underground,' 'Melaza' and 'Dem Bow' (after the most prominent 'riddim'). A Puerto Rican club called 'The Noise' was particularly important in the development of this subculture in the 1990s. Producers and DJs popularized songs which fused the attributes of rap and dancehall, used Spanish-language lyrics about common hip-hop themes, and featured the Dem Bow beat produced on a drum machine. The lyrics touched on issues that people in the poor, urban *barrios* (neighborhoods) could relate to: discrimination, poverty, gang violence and the desire to seek pleasure through sex and partying. They released compilation albums which featured this unique new blend but these were not typically available to the general public, because the Puerto Rican government repeatedly banned reggaeton from stores, radio and TV throughout the 1990s, due to its controversial subject matter. Instead, DJs, artists and producers sold cassettes in the housing projects and dance clubs, creating street buzz throughout the low-income *barrios*. Although *reggae en español*, *rap en español* and dancehall continued to flow between Puerto Rico, Panama, Jamaica and the United States, most of the original Spanish-language fusions of rap and reggae (soon to be known as 'reggaeton') were developed in Puerto Rico.

International Popularity and Important Artists

In the early 2000s the hybrid genre increasingly became known as 'reggaeton,' a distinction which marked it as its own unique genre, specifically different from either *reggae en español* or *rap en español*. In 2003 and 2004 reggaeton quickly began to break international ground, particularly in the United States. Singles produced in Puerto Rico became hits in the United States after earning standard rotation on Spanish-language radio stations and music television channels. Reggaeton became particularly popular in large cities with a significant number of Latin American immigrants and Spanish-speakers, such as Miami, Los Angeles and New York. One important aspect of reggaeton was that it appealed to a pan-Latino audience including Mexicans, Colombians, Venezuelans and Dominicans, rather than catering only to Puerto Ricans. It also acted as a Spanish-language alternative to the mainstream American music that Latino youth usually consumed, such as hip-hop and pop. It was modern and new, unlike some of the Spanish-language music that their parents listened to, such as salsa, *canción romantica*, *bachata* and *ranchera*. Finally, reggaeton lyrics commented on topics that resonated with Latino youth in the United States, touching on poverty, discrimination and Latino pride while also privileging lighter topics having to do with romantic and sexual relationships, parties and consumerism.

While reggaeton had been developing in Puerto Rico for years, the first single that brought the genre to national attention in the United States was N.O.R.E.'s 2004 single 'Oye mi canto' ('Hear My Song'). The hit featured vocals by N.O.R.E., a half Puerto Rican, half African-American rapper (born Victor Santiago, Jr., 6 September 1977, in New York), with special appearances by reggaeton stars Daddy Yankee, Nina Skyy, Gem Star and Big Mato. Because N.O.R.E. was already a popular rapper in the United States, he was particularly successful at exposing the American audience to the Puerto Rican fusion, reaching both African-American and pan-Latino demographics. Through widespread exposure on radio, TV and award shows, 'Oye Mi Canto' quickly propelled reggaeton into the spotlight.

Although the single 'Oye Mi Canto' could be heard booming from stereos throughout major US cities, the first reggaeton artist to have true star potential in both Puerto Rico and the United States was Daddy Yankee (born Ramón Ayala, 3 February 1977, in San Juan). He developed his style through his involvement in the underground *rap en español* scene in Puerto Rico during the 1990s. Daddy Yankee achieved moderate success on the island and in the United States with his independently released albums. But it was his 2004 album *Barrio Fino*, with hits such as 'Gasolina,' 'Lo Que Pasó, Pasó' (What Happens, Happens) and 'No Me Dejes Solo' (Don't Leave Me Alone) that turned Daddy Yankee into an instant star. The album combined elements of traditional hip-hop, reggaeton and salsa, and featured a diverse array of guest artists and producers. Ayala promoted his album with an extensive tour throughout the Americas, and *Barrio Fino* quickly went platinum in several countries, topped the Latin charts at number 1 in the United States, and reached number 26 on the US *Billboard* Top 200 list. By 2006 two million copies of the album had been sold. Daddy Yankee was named one of the 100 most influential people by *Time* magazine in 2006, has set records for concert attendance at stadiums around the world, collaborated with a variety of hip-hop, Latin and pop performers, and continued to receive numerous awards. Known for his business acumen, Ayala negotiated a contract with the Pepsi company and became the first Latin artist to sign a promotional deal with the Reebok corporation. He has also branched out into the film industry; he produced and starred in a semiautobiographical feature film called *Talento de Barrio* and has played minor roles in other movies and television shows. He has received awards for his commitment to social issues in *barrios*; he founded a charitable organization in Puerto Rico, *Fundación Corazón Guerrero*, which helps incarcerated youth, and has remained active in politics, encouraging Latino youth to participate in the voting process.

Facing off for the title of 'King of Reggaeton' is Don Omar (born William Omar Landrón, 10 February 1978, in San Juan). With singles such as 'Dale Don Dale,' 'Dile' and 'Pobre Diabla' from his 2003 debut album *The Last Don*, Don Omar was quickly catapulted to international fame. Both the studio version and the live edition of the album went platinum and earned him awards for 'Latin Pop Album of the Year' and 'New Artist & Latin Rap/Hip-Hop Album of the Year' at the *Billboar*d Latin Music Awards in 2003. He had a major hit in 2004 with 'Reggaeton Latino,' a club anthem that became a rallying cry for pan-Latino pride. Following this success, Don Omar released one of the best-selling reggaeton albums yet, *King of Kings* (2006). The album won 'Reggaeton Album of the Year' at the *Billboard* Latin Music Awards, and the single 'Angelito' earned a 'Nuestro Lo Premio' Award for 'Best Latin Music Video.' The album achieved the highest-charting debut ever from a reggaeton artist, reaching number 7 on the Billboard 200 and number 1 on the Latin Chart. In 2009 *Billboard* recognized *King of Kings* as the most successful album of the decade in Latin America, having sold over four million copies since its release. Don Omar even shattered the in-store appearance sales record at Downtown Disney's Virgin music store, previously held by Britney Spears.

Finally, Tego Calderón (born Tegui Calderón Rosario, 2 February 1972, in Santurce, Puerto Rico) also deserves mention for the popularity of reggaeton among Latino youth in the United States. When he was young, his family moved from Puerto Rico to Miami where he was exposed to diverse pan-Caribbean and pan-Latino musical styles such as salsa, dancehall, hip-hop and Puerto Rican folkloric styles such as *plena* and *bomba*. Calderón's music highlights this musical variety and his lyrics tend to avoid the party-oriented topics of mainstream reggaeton, focusing instead on politics and social justice. He has headlined AIDS-awareness concerts, refused to sign contracts with companies that use sweatshops, and implored fans to boycott conflict diamonds from Africa. Calderón is also known for his collaborations with African-American and Latino hip-hop and R&B musicians in the USA, crossing over to multicultural rap audiences with hits such as 'Latin Thugs' (a collaboration with Cypress Hill). Proud of his Afro-Puerto Rican heritage, Tego Calderón explores racial discrimination and ethnic pride in his songs more often than other reggaeton artists, many of whom have more of a Hispanic background.

One particular production duo, known as Luny Tunes, was responsible for many of the hits during the early years of reggaeton's mainstream and international popularity. Francisco Saldaña (born 23 June 1979) and Víctor Cabrera (born 12 April 1981) were born in the Dominican Republic and raised on the east coast of the United States. When they both moved to Puerto Rico, they quickly became one of the most accomplished reggaeton production groups. In 2003 they released a successful compilation album, *Mas Flow*, which featured their beats overlaid with vocals by some of the up-and-coming stars of reggaeton, such as Don Omar, Tego Calderón, Wisin Y Yandel, Héctor Y Tito, Nicky Jam, Zion Y Lennox, Baby Ranks and Daddy Yankee. Over the next few years, they produced several of reggaeton's biggest hits, including Don Omar's 'Dale Don Dale' (2003), Daddy Yankee's platinum song 'Gasolina' (2004) and Wisin Y Yandel's hit 'Rakata' (2005). The duo continued to release compilations that solidified their reputation as one of the most desirable production teams. Many of these 'mixtapes' (compilations) charted near the top of Billboard's Latin, Reggae, Rap, Tropical and Top 200 Charts, and achieved gold or platinum status in the United States. Their success was due in part to their ability to create interesting patterns with the standard reggaeton beat template by drawing on *merengue*, *bachata*, *bolero*, *cumbia*, salsa and hip-hop rhythms. By 2007 they had produced more than 500 songs and earned numerous accolades from the Latin Billboard Awards, the Latin Grammy Awards and the Reggaeton People's Choice Awards.

Reggaeton has been dominated primarily by male performers and producers. There are some notable female artists, such as Ivy Queen, Glory, La Sista, Nina Skyy and Adassa, who have competed for popularity, but many critics have commented on both the relatively low number of female artists who have attained success and the sexually explicit or misogynistic nature of reggaeton's themes, dance moves and fashion styles.

Conclusion

Although many critics believed that reggaeton's popularity would fade within a few years, the genre continues to resonate from car speakers, nightclubs and concert arenas in the second decade of the twenty-first century. The music and lyrics continue to appeal to a pan-Latino audience not only in the United States and Puerto Rico but around the world, particularly in Mexico, the Caribbean, Central America, South America and parts of Europe and Asia. International fans support tours by Puerto Rican stars and have also witnessed the rise of local reggaeton artists. The genre has been fused with many other world genres, resulting in hybrid subgenres such as *bhangraton* (reggaeton mixed with South Asian *bhangra*, particularly by DJs in England), *salsaton* (salsa and reggaeton), *merenton* (merengue and reggaeton), *reggaecrunk* (reggaeton infused with the bass-driven crunk style of Southern US hip-hop), *cumbiaton* (*cumbia* and reggaeton), *romantikeo* (zouk and R&B mixed with reggaeton) and *bachateo* (*bachata* and reggaeton).

Because the genre is comparatively new, the amount of academic research published on the subject so far is relatively small. Nevertheless, several significant works have been produced. Wayne Marshall (2006, 2008) has contributed to the understanding of reggaeton's musical influences and historical development, Deborah Pacini Hernandez (2009) has reflected on Dominican involvement, Geoff Baker (2011) is an expert on reggaeton and rap in Cuba, and Jan Fairley (2009) has written about gender and sexuality as reflected in reggaeton dancing. The anthology of articles entitled *Reggaeton* (2009), edited by Raquel Rivera, Wayne Marshall and Deborah Pacini Hernandez, offers an interdisciplinary perspective on these topics. In addition, the music continues to be documented in mainstream news publications, as well as in magazines and websites that cater to the Latino and African-American communities.

Ringbang

Guyanese music composer, record producer and entrepreneur Eddy Grant coined the term 'ringbang' to define a style of Caribbean music that emerged from his Blue Wave Studio in Barbados around 1994 and spread throughout the southern and eastern Caribbean. It is closely associated with calypso's dance music, soca. Ringbang is characterized by aggressive drums, well-stated bass, the forceful vocal delivery of celebratory lyrics and the downplaying or absence of the live brass/horns and guitar strumming that are usually associated with the calypso and soca. Ringbang was popular in the region during the 1990s and had some recognition in the international arena during the early 2000s, and then again in 2008.

Controversy surrounding the origin of soca music was partly responsible for the evolution of ringbang as a musical style. Many commentators have declared the Trinidadian musician and performer Lord Shorty (later known as Ras Shorty-I) to be the originator of soca. Eddy Grant disputed this, contending that his experiment with calypso and pop produced soca, some years before Lord Shorty's work of the mid-1970s. In the early 1990s, while in Trinidad, Grant was issued with a challenge: if he had indeed been the originator of soca music, surely he could do it again and create a genre/style over whose origin there would be no dispute.

Ringbang gets its name from the scat or improvised sound that some Caribbean musicians make when they sing. For instance, some calypso singers might sing the words 'ring ring bang de bang bang bang' during the band chorus of a song or a similar moment. Despite the presence of powerful rhythmic elements, ringbang has no distinctive rhythmic patterns and is best thought of as a style or approach to rendering and performing current-day forms of Caribbean and Western popular music. It was conceived first as studio music, in which the engineer manipulated the volume level of instruments on the various recorded tracks. Ringbang is defined by the deliberate stripping of music down to some of its basic constituents. In particular, the sound level of the drums is raised in the recorded mix, or during performance, while other melodic and harmonic lines and/or instruments (excluding the lead vocals) are lowered or muted. This music has been played at the various Caribbean and Caribbean diaspora festivals, and heavily circulated via FM radio, the compact disc, and to some extent on newer formats like MP3 and on the computer and internet.

In 1994 Grant produced an album, *Rebellion,* for the Trinidad calypso/soca artist Black Stalin. The album included two songs in which the word 'ringbang' was uttered: 'Black Woman Ringbang' and 'All Saints Road.' That same year, Grant produced a full-blown post-soca compilation called *Fire in de Wave* in which he deliberately stripped the music of brass, strumming guitar and other harmonic instrument embellishments, while introducing a more aggressive vocal delivery than is usually associated with soca.

In some respects, the fact that early ringbang artists tended to deliver their lyrics by singing and/or chanting meant that its vocal tracks were closer to Jamaican dancehall. Viking Tundah's 'Ring-a-Ringbang' best exemplifies these kinds of experiments, where melodic vocals give way to rhythmic delivery. Grant's production of the Trinidadian Superblue's 1994 album *Flag Party* created what is arguably one of the most popular ringbang standards of the 1990s. The song 'Jab Molassie' featured Superblue's aggressive vocals layered within a mix dominated by a tight snare, recurring drum crash/splash, expansive floor toms and pulsating bass/foot drum.

These experiments continued throughout the 1990s. Ringbang helped to change notions about the construction and mixing (live and recorded) of Caribbean dance styles like soca and dancehall. Largely due to Grant's initiative, soca music paid even greater attention to rhythm and percussive instrumentation. Other acts such as Machel Montano of Trinidad, Tallpree of Grenada, Fireman Hooper of St Vincent, Krosfyah of Barbados and El-A-Kru of Antigua all recorded or performed some form of ringbang during the 1990s and even thereafter. Many of these artists were not using the term ringbang to define their music; rather they called it soca, raggasoca, dancehall soca and other associated terms.

In the late 1990s and early 2000s, Grant and his ICE Records company were embroiled in legal issues. Because of this, the label was not able to produce the same quantity of music as previously. Understandably, its attention seemed to be directed more toward retaining ownership of the company and all its assets. There was therefore less effort made to promote and fuel the style of music. This severely impacted on the name brand 'ringbang,' which Grant had copyrighted and which he projected would appear on a range of pop culture goods, like hats and clothing. In addition, there had been suggestions that Grant was drawing from indigenous Caribbean music forms (like Barbadian tuk and Trinidadian jab jab music) and rebranding them as ringbang. By the early 2000s there were far fewer artists who were actually using the term *ringbang* within their songs, even though their styles remained heavily rhythm-centered.

In 2001 Miami DJ Peter Black's remix of Grant's 1983 song 'Electric Avenue' caught the attention of local and then international radio. Grant endorsed the remixed version and it was promoted as 'Electric Avenue: The Ringbang Remix.' The term ringbang was therefore marketed to the world. By the late 2000s Grant's output of dedicated ringbang music was not as proliferate or celebrated as during the 1990s, but he went on a world tour during 2008 and this provided further outlet for his performance of ringbang to audiences in Africa, Europe and the United States of America.

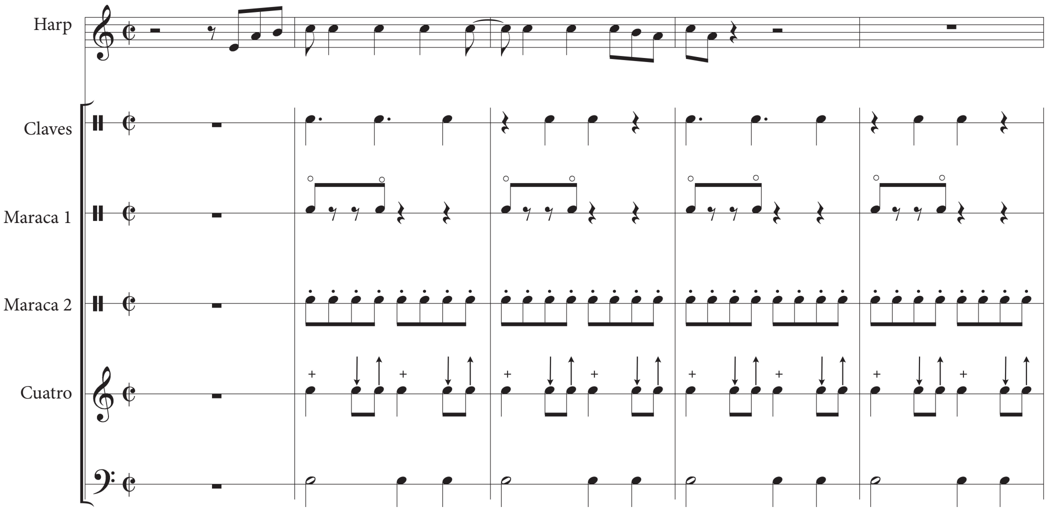
Ritmo Orquídea

In the early 1960s, Venezuelan composer Hugo Blanco created and developed a musical style which he named '*Orquídea*' ('Orchid') after the Venezuelan national flower. *Ritmo orquídea* ('Orchid Rhythm') features the melodic and timbral essence of Venezuelan folk music fused with Caribbean rhythms. This new genre is represented by the blending of *joropo* (a traditional Venezuelan genre) with the Caribbean genres *guaracha*, *son cubano* and *rumba*.

The strategic location of Venezuela at the northern tip of South America allowed for an important presence of music from the Antilles. Thus, South American folk music – which is primarily in triple meter – slowly absorbed the simple meter characteristic of Afro-Hispanic music from the Antilles. In the 1960s a folk ensemble from Caracas, Venezuela became interested in performing Caribbean music with traditional local instruments – *arpa criolla* (a diatonic harp), *cuatro* (a small guitar with four strings), maracas and double-bass. Hugo Blanco wrote music for this ensemble, restricting melodies to certain scales to accommodate the diatonic nature of the *arpa criolla* but incorporating rhythmic elements from *guaracha* and *son* (see Example 1 below). The title of Blanco's first song for this ensemble was 'Orquídea,' a name which was subsequently used to refer to the new rhythm. The widespread success of 'Orquídea' prompted El Palacio de la Música, a major record label, to produce an album of Blanco's music. One of the songs in this album, 'Moliendo Café' (Grinding Coffee), became an international success, thanks to the combination of the new rhythms with the sounds of the *arpa criolla*. It is estimated that almost 800 different versions have been made of this song.



o = Muted sound of all strings made with a closed hand ("trancao" or "stuck")
+ = Open sound of the maraca ("escobillao" or "swept", one of the three main steps in joropo)

Example 1: Typical ensemble of *Ritmo orquidea*, using melody of 'Moliendo Café'

Ritmo orquídea continued to develop through the years, becoming increasingly more complex and heterogeneous. Local folk ensembles performing this music began incorporating new elements into the genre – Caribbean rhythms such as *calypso*, *soca*, *cumbia* and *merengue dominicano*, and international styles such as Tijuana Brass and African Beat were slowly integrated into the original sounds of *ritmo orquídea*. With the assimilation of new rhythms and styles, the size of the orchestra was also expanded to include brass, reed, string and Latin percussion instruments as well as voices.

According to some musicologists, the perception of *ritmo orquídea* outside of Venezuela is generally framed by the early sounds of 'Moliendo Café' and 'El burrito sabanero' (The Savannah Donkey), a Christmas song. On a national level, however, *ritmo orquídea* is conceived as something more than a specific rhythm: it is the Venezuelan style of making Afro-Hispanic music from the Antilles.

NELSON BLANCO MANZO (TRANSLATED BY PAMELA NARBONA JEREZ)

Rock Andino

Rock andino is a musical style that combines Anglo-Saxon rock with indigenous music styles from the Andes. The particular types of rock that are favored are mainly progressive rock and its immediate predecessor, psychedelic rock, which inspired Latin American rockers to engage in musical fusions. On the one hand, the attention to Andean Music expresses the interest of progressive rock bands in the music of non-European cultures; on the other hand, it also reflects an equally typical 'folk attitude' displayed by many of these groups (Macan 1997, 18–23). Both musicians and audiences interpret indigenous music styles as symbols of cultural identity.

Rock andino developed in the late 1960s and early 1970s mainly in Bolivia (Basualdo Zambrana 2003), Chile (Salas 1999) and Peru (Cornejo 2002, 41), and to a much lesser extent in Argentina (Díaz 2010, 222). In the early twenty-first century, *rock andino* still exists amid other new trends in rock music.

Rock Andino in Bolivia

The beginning of rock *andino* in Bolivia goes back to the early 1970s, when the band Wara began to fuse rock with Andean music. Wara, consisting of Dante Uzquiano, Pedro Sanjinés, Omar León, Carlos Daza and Nataniel González, began their career as a cover band of psychedelic, hard and progressive rock bands such as Deep Purple, Pink Floyd and Uriah Heep. Thanks to contact with Klarken Orozco, a member of the band Los Aymaras, Wara became interested in the Bolivian *música folklórica* movement (Céspedes 1984, 1993) and began to use Andean instruments including *quenas*, *sikuris* and *charangos* in their songs (Leichtman 1989, 40). Although the tracks of their first album *El Inca* (1973) show extensive musical structures characteristic of progressive rock, songs such as 'El Inca' and 'Realidad' also show clear influences of Andean music. Wara subsequently abandoned the long format of progressive rock, moving closer to Andean music with songs such as 'Imillitay' (*Paya*, 1976) and 'Basta corazón' (*Quimsa*, 1978) and increasingly becoming a *grupo folklórico* (Basualdo Zambrana 2003, 40–2). In the 1990s, Wara returned to *rock andino* inspired by the emergence of the World Music genre but with less success than they enjoyed in the 1970s and 1980s.

Another important group of Bolivian *rock andino* is Octavia, consisting of Gimmer Illanes, Simón Luján, Vladimir Pérez, Ricardo Sasaki, Omar González and Martín Fox. After having issued some albums as a soft rock band named CODA 3, Octavia redefined their style in 1996, employing Andean instruments and the pentatonic scale (Basualdo Zambrana 2003, 73–4). Soon, however, Octavia abandoned pentatonic melodies and formed a rock band that used Andean instruments. Among their successes 'Seré tu música' (I Will Be Your Music) (1996), 'Después de ti' (After You) (2001), 'Talisman' (2004) and 'Lentamente' (Slowly) (2006) should be mentioned.

The group Atajo is another that has fused its style with Andean rhythms, especially in their album *Nunca más* (2004), but without limiting themselves to the Andean rock style. The band Llawar mixes Andean rhythms such as *huayno* and *saya* with a hardcore style, but without the use of Andean instruments (Basualdo Zambrana 2003, 125).

Rock Andino in Chile

In the 1960s two factors converged to enable the emergence of *rock andino* in Chile: on one side, the rise of rock music as an expression of youth counterculture, and on the other side the consolidation of the musical movement *nueva canción chilena,* which employed marginalized music from the Andes in the late 1960s and early 1970s as a cultural and political statement (Albornoz 2002, 13). In this sense, the epithet 'Andean' does not refer to direct contact with the music of the Andes as it does in Bolivia or Peru, but rather to an adaptation of it by groups such as Inti-illimani or Quilapayún that made this music more accessible to the urban middle classes.

The first group associated with Chilean *rock andino* was Los Sicodélicos. Led by Leslie Needham and Francisco Sazo, they were pioneers in using Andean instruments such as the *quena* or *charango* on their album *Sicodelirium* (1967) (Gajardo Cornejo 2010, 50). Influential too were Los Blops, consisting of Julio Villalobos, Eduardo Gatti, Juan Pablo Orrego, Juan Contreras and Sergio Berzad. Formed in 1964 as a cover band that played Beatles and Rolling Stones, Los Blops began in the early 1970s to combine their music with elements of folklore and *nueva canción chilena* (Escárate 1993, 58). In 1971 they recorded with Victor Jara the songs 'El derecho de vivir en paz' and 'María' (Salas 1999, 255). Their Albums *Del volar de las palomas* (1971) and *Locomotora* (1973) are legendary.

Whereas the aforementioned groups hinted at Andean music with the use of Andean instruments or minor scales, with Los Jaivas Andean musical forms began to be mixed with riffs and beats of Anglo-Saxon rock (Arratia, Careaga and Soriano 2002, 84). Originally founded in 1963 as 'High-Bass' by the brothers Gabriel, Claudio and Eduardo Parra, Mario Mutis and Eduardo 'Gato' Alquinta, Los Jaivas changed the spelling of their name in the 1970s and oriented their music more toward national themes (Escárate 1993, 32; Albornoz 1999, 317). In 1972 they released their album *La ventana* (The Window), which included songs such as 'Niña serrana' (Highland Girl) a composition of Raul Pereira from the Peruvian group El Polen, and 'Todos juntos' (All Together), with its clear evocations of Andean pentatonic scales and Mapuche music. In 1981 the band released the album *Alturas de Macchu Picchu* (Heights of Macchu Picchu) (1981), based on a poem by Chilean Poet Pablo Neruda.

Along with Los Jaivas, the band Congreso, formed by the brothers Sergio, Fernando and Patricio González and Francisco Sazo (from Los Sicodélicos), is representative of Chilean *rock andino* (Escárate 1993, 75–7). Their album *Terra incognita* (Unknown Land) (1975) included songs such as 'Dónde estarás' (Where Will You Be?), 'Vuelta y vuelta' (Around and Around) and 'Quenita y violin' (Little Flute and Violin), which have come to be considered classics of Chilean *rock andino*. In 1980 new frontman Joe Vasconcellos inspired innovations evident in Congreso's emblematic songs of Chilean *rock andino* 'Hijo del sol luminoso' (Child of the Shining Sun) on the album *Viaje por la cresta del mundo* (Journey to the End of the World) (1981) and 'Ha llegado carta' (A Letter Has Arrived) from the band's album by the same name (1983).

The golden age of Chilean *rock andino* most probably was between 1970 and 1985. It decreased in popularity in the 1980s, when punk bands stressed simple rock forms and musically complex styles were discredited. Los Jaivas and Congreso, however, remained active. Whereas Los Jaivas have continued producing music in the same style for more then three decades, Congreso moved away from rock to jazz fusion.

Rock Andino in Peru

The evolution of Andean rock in Peru must be understood in the context of a debate that has characterized the arts in Peru since the foundation of the republic in the nineteenth century. This debate focuses on how to represent in a national form the variety of distinctive mother cultures and their many variants that developed in the three natural regions of the country – coast, sierra (Andes) and jungle – as well as that of Afro-Peruvians, descendants of those who arrived via the slave trade. The performative representation of identity is central to the discourses around contemporary Andean rock musicians, and the related struggle to solve contradictions between modernity and tradition, the local and the global, multiculturality and nationhood. Therefore, even when, by strictly musical criteria, *rock andino* bands would be considered 'straight' rock bands, the music cannot be separated from its *mise-en-scène*, the performance of an identity which mixes the modern, represented by rock, and the traditional, alternately represented by a fragment of a popular Peruvian song, the use of a Peruvian instrument, or even garments and images that refer to non-Occidental spaces.

Andean rock developed in Lima, the capital city, where inward migration led to encounters between people from different parts of the country, Musically, it combines rock and related genres (such as blues and metal), with traditional Peruvian music. In general Andean rock bands are very eclectic, and mix elements from the music of the three regions of Peru. Some authors have argued that in most of the bands there is no real 'fusion' between harmonic, rhythmic or melodic elements of the Peruvian traditions and rock (Olazo 2000), but rather juxtapositions of these elements. Some of the most popular Andean rock songs consist of the use of the indigenous Quechua language to sing rock songs, or the use of instruments associated with Peruvian traditional music, such as the *charango* or the *cajon*, to play rock songs.

The first artists to combine elements of rock and Peruvian music, who may be considered the progenitors of Andean rock, were singer Yma Sumac and bandleader Moises Vivanco, who collaborated to produce recordings of Peruvian folk music in the 1940s. Yma Sumac (b. 1922) reached the peak of her career during the 1950s, in the context of the genre known as 'Exotica,' which gathered divas from around the world and mixed their traditions with academic orchestrations and elements of popular musics such as jazz and rock 'n' roll. Her musical representation of Peruvian identity established a stylistic trend that would influence Andean rock when the genre later emerged. Sumac's experiments with Peruvian traditional music were influenced by the *indigenismo* movement that originated in the 1920s and proposed that a national art was needed, based on the strengths of the pre-Columbian Peruvians. However this movement – and

Sumac's music, by extension – contributed more to the exoticization of the Andean world than to the inclusion of a legitimate Andean voice in the art world (Poole 1997), suggesting that Andean culture was static, isolated and unable to develop a mixture between modernity and tradition.

In the mid-1960s Andean rock emerged as a genre. During this time, the brothers Juan Luis and Raul Pereira, formerly of the popular rock band The Shain's, refused to make versions of songs by American or English bands, and began instead to reproduce the traditional music they heard on the radio and their parents' records. The band they founded, El Polen, is considered by many to be the first Andean rock band, a distinction they share with Los Jaivas from Chile. El Polen were heavily influenced by the hippy movement and New Age thought. Other bands following El Polen were El Opio, El Ayllu, El Trebol, Zulu, Cacique and Black Sugar. This stage in Andean rock spans a period from around 1965 to the end of the 1970s (Cornejo 2002).

However, the movement lost its strength following the left-wing military coup led by Juan Velasco Alvarado in 1968, who banned the broadcasting of foreign musical genres such as rock. The era of the military government, which lasted until 1980, marked a low production period for Andean rock. There was a vacuum between the hippy generation and new underground bands emerging during the mid-1970s who were searching for a sound that could mix their provincial past with their urban present.

In this context, in the early 1980s a new band appeared and took the lead in the still weak Andean rock scene. The members of Del Pueblo y del Barrio were mostly sons of immigrants in Lima, influenced by rock, traditional music and the *nueva canción* that had become popular across Latin America. Del pueblo y del Barrio's lyrics addressed the creation of a new identity in Lima, and the development of a left-wing-oriented society. Most of the groups in this scene, among them Kotosh, Andrómeda and Madrigal, never recorded.

During the second half of the 1980s, the rock scene started to blossom again. Although the end of the military dictatorship enabled the growth of the scene, it was seriously affected by the violence caused by the Shining Path guerilla organization and Peru's economic troubles. During this period, Andean rock left behind its explicit political position and entered the mainstream with artists such as Miki Gonzales, the first musician in this genre to gain a significant mainstream following. Gonzales became famous for performing on stage with Afro-Peruvian musicians. On the underground side was the birth of Andean metal, pioneered by the band Kranium. Kranium took a mythological approach in their lyrics, drawing traditional stories from the Andean world. Meanwhile, in progressive rock, the band Fragil was an interesting case.

With the 1990s came the dictatorship of Fujimori, the end of terrorist violence and the consolidation of a mixture of the urban and the rural in Lima: *chicha* culture. *Chicha music* mixed *cumbia* and Andean music, with an eclectic and festive style. Andean rockers were greatly influenced by this development and began to fuse it with rock and with other traditional genres. The main bands in this period were La Sarita and Los Mojarras. They used their lyrics to criticize the Fujimori government's crimes against human rights. Uchpa must also be mentioned among the important bands in this period.

In the twenty-first century, *chicha music* entered the mainstream as a great influence in the Andean rock scene, which has grown due to the boom of the eclectic phenomenon of World Music. La Sarita (est. 1995), the longest-running Andean rock band, began using typical scissor dance musicians (a traditional dance from Ayacucho) in their recordings. Bands such as Radiohuayco, Cimarrones, La Mente and Bareto imitated the eclectic style of *chicha* culture, nurturing their music with tropical rhythms. By contrast, Flor de Loto followed in the progressive rock steps of Fragil. The eclecticism of the genre has led some former Andean rockers to abandon rock, most notably Jaime Cuadra and Miki Gonzlaes, who turned to experiments with electronic music and folklore.

JULIO MENDÍVIL (INTRODUCTION, BOLIVIA, CHILE) AND EFRAÍN ROZAS (PERU)

Rock in Brazil

As a musical genre, rock was integrated into Brazilian music in the late 1950s. As it evolved, Brazilian rock went through several phases, incorporating various rock subgenres and mixing them with other Brazilian popular music genres. Among the main Brazilian rock trends are classic rock from the 1950s, *Jovem Guarda*, *Tropicália*, psychedelic rock, BRock, punk, *manguebeat*, metal and contemporary rock or *Novo Rock*. Some of these trends – *Tropicália*, BRock, punk and *manguebeat* – were characterized by their criticism of Brazilian political and social issues. Others – *Jovem Guarda*, psychedelic rock and *Novo Rock* – criticized conservative values and spread a hedonistic vision of the world. In Brazil, rock subgenres were frequently accused of causing alienation from Brazilian 'authentic' music and of Americanization. However, the idea of 'cannibalism,' proposed in the 1920s by the modernist poet Oswald de Andrade, is frequently employed to legitimate the integration of rock in Brazilian music and it's blending with other Brazilian genres. Andrade's 'cannibalism' is the metaphorical process by which Brazilian culture 'consumes the other,' in other words, the ability to transform the foreign into the Brazilian.

1950s Classic Rock

The 1950s was a decade of diversity in Brazilian popular music. *Bossa nova* and *baião* first appeared in the 1950s, along with the *samba* and *choro* revivals. At that time, Brazilian music incorporated various foreign genres including the Cuban *bolero* and US and European rock. The assimilation of foreign genres was considered by some intellectuals to display a lack of creativity that was to result in the dissolution of genuine Brazilian popular music. A similar argument concerning changes in what is perceived as legitimate Brazilian 'traditional' music had developed in the 1930s when the *samba* styles of Bahia and Rio were opposed, resulting in a tension between 'traditional' (Bahia) and 'modern' (Rio) music. Eventually, Rio's *samba* was viewed as Brazilian music *par excellence* (Vianna 1995; Menezes Bastos 2005).

Rock 'n' roll music made its debut in Brazil with Richard Brooks's movie *Blackboard Jungle* (1955) and Fred F. Sears's *Rock Around the Clock* (1956). In the late 1950s many rock programs emerged on the radio, such as São Paulo National Radio's *Ritmos para a Juventude* (Rhythms for Youth), Tupi Radio's *Clube do Rock* (Rock Club) and Guanabara Radio's *Os Brotos Comandam* (loosely, The Youth Command). After *Blackboard Jungle* and *Rock Around the Clock* were released, Brazilian popular musicians such as Nora Ney recorded their own versions of songs originally written by Bill Haley, Neil Sedaka and other US rock 'n' roll artists. Those versions contributed to the rise of the first Brazilian rock generation, whose main exponents were Celly Campello and her brother Tony Campello, Sérgio Murilo, Carlos Gonzaga, Ed Wilson, Ronnie Cord and some bands that mixed rock 'n' roll with surf music such as The Jordans, The Jet Blacks, The Fellows and The Clevers. Female singer Celly Campello was the host of TV Record's *Crush em Hi-Fi* (Hi-Fi Crush), and became a youth icon for her generation.

Jovem Guarda

Beginning in the 1960s rock music in Brazil, shaped by US music appropriations, was increasingly perceived in terms of its relationship with Brazilian politics and the United States. In 1964, during the Cold War, when the United States fiercely opposed the Soviet Union as well as perceived supporters of communism, a military coup occurred in Brazil. The military imposed strong civil rights restrictions and cultural censorship (Menezes Bastos 2005). As a consequence, several rebellious movements erupted and many eminent musicians went into exile. In addition, the military government established a policy of capitalism reform, modernization and anticommunism that relied on US funding. Against this politically charged backdrop, rock music became a symbolic reminder of the US support of Brazil's military regime. However, this symbolic relationship between rock and dictatorship was not taken into account by the 1960s *Jovem Guarda* movement, which ironically combined rock's spirit of youth rebellion with an apolitical stance regarding the Brazilian government.

In 1965 the emerging singer Roberto Carlos launched a television program called *Jovem Guarda* on TV Record. That broadcast inspired a musical and cultural movement, also called *Jovem Guarda*. Influenced by US and British rock, especially the Beatles, *Jovem Guarda*'s essential feature was the incorporation of electric guitars. The movement was led by Roberto Carlos, Erasmo Carlos and Wanderléa Salim, and comprised of 'old' rock 'n' roll/surf rock bands, such as The Rebels, The Jordans, The Youngsters and Os Incríveis (The Incredibles), as well as new bands, such as The Fevers, The Sunshines and Renato e Seus Blue Caps, and vocal groups such as Leno & Lilian and The Golden Boys.

Jovem Guarda disseminated the idea of youth rebellion. However, its members did not take any political stand against the military dictatorship. They were more interested in spreading the idea of youth rebellion against conservative values, expressed by the use of a specific slang and dress style (long hair for men and tight pants or miniskirts and boots for women). Their appropriation of rock, perceived as Americanization, and their lack of political engagement exacerbated the tensions between cultural critics supporting 'traditional' and 'modern' positions, while certain intellectuals and musicians considered *Jovem Guarda* a form of alienation from the Brazilian political context and collaboration with military dictatorship. In particular, this criticism came from the musicians of MPB (*Musica Popular Brasileira*), a subgenre of Brazilian popular music characterized by the ideals of loyalty to Brazilian cultural traditions and liberation from capitalist domination and featuring a lineage of songs related to *samba* and *baião* – considered 'genuine' Brazilian musical genres (Menezes Bastos 2009). The tension between *Jovem Guarda* and MPB culminated in July 1967, when some MPB musicians engaged in a public march to protest against the use of electric guitars, which they viewed as a symbol of US imperialism in Brazilian music.

Tropicália and Psychedelic Rock

In 1967 *Tropicália*, an avant-garde movement, developed arguments that justified *Jovem Guarda's* rock appropriations and provided a possible means of reconciliation between 'modern' and 'traditional' music lovers. *Tropicália*'s aesthetic goal was to achieve a revolution in MPB, supporting, to that effect, rock and pop aesthetic elements including the blending of electric and electronic instruments with typical Brazilian genres and instruments. Among *Tropicália*'s exponents were Caetano Veloso, Gilberto Gil and the band Os Mutantes. The members of *Tropicália* were extremely innovative with regard to music structures, melodies, arrangements and vocal and instrumental performances. For example, in 1967, influenced by the Beatles' album *Sgt. Pepper's Lonely Hearts Club Band*, Gilberto Gil wrote the song 'Domingo no parque' ('Sunday at the Park') for the Third Festival of Brazilian Music held by TV Record. 'Domingo no parque' mixes rock, European 'classical' music, and Brazilian music, combining the sonorities of *berimbau* – a one-stringed bow instrument used in *capoeira*, a Brazilian martial art – with electric guitars.

Thus, *Tropicália* was significantly marked by Oswald de Andrade's ideal of 'cannibalism,' and it also revived the Modernist use of irony to criticize the establishment. The military authorities did not particularly like these 'hidden' criticisms. As a result, *Tropicália*'s main channel of communication, a program on TV Record called *Divino Maravilhoso* (Wonderful Divine), was banned and Gil and Veloso, the hosts, were sent into exile. This political repression of *Tropicália*'s musicians helped legitimate rock for Brazilian musicians and intellectuals, opening the door for many rock bands. The performance of Gilberto Gil's 'Domingo no parque' at the Third Festival of Brazilian Music (on 6 October 1967) was a milestone for the acceptance of rock in Brazil. With 'Domingo no parque,' Gilberto Gil was the first MPB musician to be accompanied by a rock band. That band, Os Mutantes, was to lead the third generation of Brazilian rock.

Os Mutantes continued to criticize the establishment with a strong sense of irony. The band was closely associated with the emerging international psychedelic trend, and with experimentation with new sonorities. Their third record, *A divina comédia ou ando meio desligado* (The Divine Comedy of Mutants or I Feel a Little Spaced Out), points to the maturation of Brazilian rock (Dapieve 2000). Other important exponents of rock in the late 1960s and 1970s were singer Raul Seixas, rock bands such as Secos e Molhados and Novos Bahianos, and the psychedelic bands O Terço, Casa das Máquinas and Som Nosso de Cada Dia. These rock and psychedelic bands articulated hippie values that had been appropriated by many Brazilian young people, including sexual liberation and female empowerment. Thus, they were profoundly marked by criticism of the Establishment's conservative lifestyle and associated behaviors. Although not specifically related to Brazilian political questions, their music was perceived as having the potential to experiment and change conservative and prejudiced structures of thought.

BRock and Punk

The early 1980s was marked by demonstrations and protests calling for free presidential elections. In 1985 a democratic government was re-elected in Brazil, and artists recovered their freedom of expression. This new political context helped strengthen a new movement within rock primarily characterized by its open criticism of Brazilian political and social problems, including social inequalities, government corruption, elitist hypocrisy and violence. BRock (an abbreviation of Brazilian rock), which began in the late 1970s, firmly integrated rock into Brazilian popular music (Dapieve 2000; Menezes Bastos 2005). The political engagement of BRock musicians was fundamental to the final acceptance by Brazilian intellectuals of rock as a genuine genre of Brazilian music. Stylistically, the bands related to BRock appropriated pop-rock, punk and new wave. Legião Urbana, Paralamas do Sucesso and Titãs were among the most important bands of that period.

Despite the revolutionary intent openly expressed in BRock lyrics since its inception in the early 1980s, BRock established itself as a mainstream genre, strongly related to mass media. However, while BRock musicians signed contracts with some of the most prominent record labels in the country (EMI, WEA, Som Livre, BMG), a more radical appropriation of British and US punk rock emerged from suburban areas, with bands such as Inocentes, Cólera, Ratos de Porão and Coquetel Molotov. Those bands did not embrace the new trend combining BRock with pop music. Instead, they created their own style characterized by screaming vocals, guitar distortion and punk dress codes such as boots, torn clothes and safety pins.

Manguebeat and Metal

Between 1985 and 1994 Brazil faced a severe economic crisis, characterized by high levels of inflation and increasing social inequalities. The city of Recife in northeastern Brazil suffered particularly strong consequences of Brazilian economic problems. Amid this context in Recife in the late 1980s and early 1990s, *Manguebeat* (also known as *mangue bit* or simply *mangue*) emerged as a musical and intellectual movement strongly characterized by its criticism of Brazilian poverty. This criticism is expressed even in the choice of the movement's name: the *mangue* (meaning swamp or mangrove) is where the poor population of Recife obtains its meagre food supply. Reviving the idea of cannibalism, *manguebeat* music blended the harsh criticism, 'do it yourself' ideal, distorted electric guitars and hardcore beats of US and Brazilian punk rock with Brazilian music genres such as *maracatu*. The most important exponents of *manguebeat* were Chico Science, leader of the band Chico Science and Nação Zumbi, and Fred 04, leader of Mundo Livre S/A.

Some heavy and thrash metal bands also emerged in the late 1980s and early 1990s. Sepultura, formed in 1984, was the most prolific of these bands. On its early albums, Sepultura was concerned neither with Brazilian identity questions nor with Brazilian political problems. Its lyrics – in English – addressed fantastic images of hell and demons, which could be read as the expression of the experience of social tensions (Walser 1993). However, with *Beneath the Remains* (1989) and *Arise* (1991), the band launched a more critical approach to globally relevant issues such as mass manipulation, contradictions of modern society, state violence and distrust of science. In 1993, with the release of *Chaos*, the band began to address Brazilian problems such as disrespect of indigenous rights and violence in prisons. *Chaos* was also marked by the recovery of 'cannibalist' ideals, with lyrics in English and guitar distortion blended with Brazilian rhythms and modal scales. *Roots* (1996), recorded in collaboration with Afro-Brazilian percussionist Carlinhos Brown and with *Xavantes* Indians from the State of Mato Grosso, follows the same trend.

Novo Rock

In 1994 Brazil controlled inflation and recovered relative economic stability with the 'Plano Real' measure, consisting of the implementation of a new currency, despite the continuation of high levels of unemployment and the serious problems of government corruption. The 1990s saw independent media playing a significant role in the development of rock across the country, with the emergence of independent labels, rock festivals and fanzines. Independent media became even more important after the year 2000, when new editing technology and studio capacities lowered recording costs and made it possible for most garage bands to record their songs. The internet also played an important role in the proliferation of rock in Brazil, speeding up the dissemination of rock bands' information and contributing to the emergence of scores of new bands.

Contemporary Brazilian rock is characterized both by the revival of former rock trends, such as *Jovem Guarda*, punk, metal and psychedelic rock, and by the integration of new genres such as psychobilly, stoner rock, nu metal and grunge. These two approaches joined together in a movement called *Novo Rock* (New Rock). Among the most important bands associated with *Novo Rock* are Pitty, a female singer from Bahia and her hardcore/alternative rock band; Los Hermanos, a band from Rio blending rock, reggae and MPB; and Detonautas Roque Clube, a pop-rock band from Rio. A particular dress code, characterized by piercings, tattoos, dyed hair and black clothing – with the exception of Los Hermanos' colorful clothes – is central to *Novo Rock*. Unlike BRock and *Manguebeat*, central movements in legitimating rock in Brazil, *Novo Rock* rarely addresses Brazilian social problems and political questions, which at first appears to display a lack of political engagement. However, *Novo Rock*'s criticism is not expressed by a verbal discourse (lyrics) but by the musical form itself. This movement, strongly marked by punk 'do it yourself' ideals, is characterized by the celebration of bands' musical innovations and creativity as supreme values and by the criticism of a technocratic and rationalized music, associated with an equally technocratic and conservative society and with mass media manipulation. This emphasis on originality can be read as the intention to demarcate a rock-associated symbolic territory characterized by hedonistic values expressed in a spontaneous music.

Conclusion

In its many manifestations and subgenres, rock in Brazil has been empowered by the concept of 'cannibalism' and characterized by its mobilization as an outlet for young people to express their opposition to both social and political conditions in Brazil. The notion of 'cannibalism,' central to the constitution of Brazilian identity, became the main aesthetic principle for important musical movements such as *Tropicália* and *Manguebeat*. The appropriation and redefining of international rock styles has nourished Brazilian rock subgenres such as punk, hardcore, psychedelic rock and metal. In their Brazilian context, these subgenres combine with other popular music genres, assuming particularly 'Brazilian' features. As a result, the Brazilian rock scene is distinctive for its integral mix of subgenres.

In addition, Brazilian rock movements up to the early twenty-first century were characterized by criticism and non-conformity. This criticism is sometimes openly directed toward political discussions – as in the case of BRock, punk and *Manguebeat*. At other times, in the case of *Jovem Guarda*, psychedelic rock and *Novo Rock*, this criticism addresses social issues, especially conservative values and structures of thought. Bands related to this second type of criticism demonstrate that rock criticism is not just a question of lyric content. Purely musical elements, such as the emphasis on musical innovation, can be related to the search for alternative lifestyles and to non-conformity concerning established values. Thus, in Brazil, rock appropriation can be perceived as a project that calls for social change with its criticism of a society governed by a hypocritical morality that sometimes leads to violence, corruption and social inequalities, while at other times perpetuating repression and intolerance of non-conformist values and behaviors.

Rock in Latin America

Rock began to spread throughout Latin America in the 1950s, undergoing various stages of evolution and related cultural movements in each country and region where it took hold. While periodization is always imperfect, an examination of the major eras in which rock emerged and developed provides a framework for understanding the context of the music, including the influence of local and international cultural, political and societal movements such as *Nueva Ola, Nueva Canción, Tropicalismo* and others. Rock in Latin America thus may be viewed as the result of a series of events that, coming from various political, cultural and societal directions, contributed to the maturation of a single musical form.

The 1950s: Birth and Origins of Rock in Latin America

The early history of rock in Latin America mainly concerns the role of three countries, Mexico, Argentina and Cuba, traditionally envisioned as centers of extensive cultural distribution and production. At the core of this history are issues of language and nationality, as rock provided a local alternative for a growing Latin American population avid for modernity. In different latitudes of the Americas, youth embraced rock in particular ways, celebrating melodies that echoed the culture of the metropolis while negotiating a local presence in that modern world via the adoption of lyrics in Spanish. In some cases, these lyrics were original, resulting from new compositions. In others, despite linguistic integration, they merely reproduced the overall context of hits from abroad. Responses were largely dictated by views of class and the effort to balance the celebration of an imported cultural practice, occasionally interpreted as an imperialist imposition, with the legitimation of new national identities.

When rock initially emerged in Latin America in the 1950s, in some cases, Latin American scenes developed as a result of geographical proximity to the United States and/or close cultural contact, while in others rock emerged due to familiarity with US and British culture and the development of related fashions. By the late 1950s radio stations beaming signals with rock music were actively consumed across the US/Mexico border (just as stations with Mexican music were consumed to the north) and in Cuba. In this manner, close contact with US culture brought about a taste for the music emerging to the north, establishing it as an object of consumption for the middle and upper classes of many Latin American countries. Thanks to the expanding influence of the culture industries of Latin American countries and increased contact with the US market, many other places in Latin America developed an appetite for this musical genre. As far south as Argentina, at the very edge of the hemisphere, acquaintance with fashionable US music trends brought about initial stabs at rock 'n' roll.

Throughout the entire subcontinent, however, a significant event contributing to the popularization of the musical genre was the incorporation of rock 'n' roll songs in the repertoire of many jazz bands in the dance halls and clubs of Latin American capitals such as Mexico City, Buenos Aires and Havana. Billy Cafaro, for example, performed with the Jazz Club orchestra directed by Virgilio Espósito. As a rule, such dance halls and clubs were favored by the elites and beyond the access of most Latin Americans. In a sense, these new repertoires reflected the desire of local elites to share and consume the very same products favored by the masses of metropolitan countries. Within this context, early recordings of rock in Spanish date as far back as the mid- to late 1950s, mainly in Mexico and Argentina. Given their large populations, both countries were favored as locations for branches of major music labels, including recording and production facilities. Early recorded examples of Latin American rock include Gloria Ríos with hits such as 'El relojito' and 'La mecedora' (The Rocking Chair) (1957) and Cafaro with hits including 'Personalidad' (1958). Around the same years, a Cuban group called Los Hot Rockers arguably became the first band to sing rock 'n' roll in Spanish; nevertheless, the Rockers left no recordings and their efforts blended into popular lore.

By the end of the 1950s many bands had surfaced across Latin America, developing a following among upper-middle-class youth. At this time, shortly prior to the revolution, Cuba was a hotbed of musical experimentation. Amid this enthusiasm, Havana's Los Llopis recorded the first rock 'n' roll single for the local music industry, 'No pidas más perdón' (Don't Ask for Forgiveness Any More). After the outbreak of the Cuban revolution in 1959, the band migrated to Mexico and the United States, where it toured heavily.

A key issue for the rapid spread of rock music in Latin America was the element of language. While arrangements and rhythm were appealing, the fact that rock was a cultural practice strongly associated with the English language limited its initial appeal to only the more affluent sectors of society. After all, at this point in time, English was primarily accessible through centers of private education, dictating linguistic exclusion as part of the economic imperative of a strict class order. Thus, to generate a preference for rock, a large part of the music's future depended on the possibility of engendering a sensibility and aesthetics rooted in Spanish, in which language played a role akin to the English version, channeling rebellion and nonconformity.

Thus, though rock in English became widely available and popular throughout Latin America, thanks to distribution access at many local and regional branches of US music labels, record companies discovered by the early 1960s that, if the music was to gain a commercially reliable following, Spanish versions of US and British hits would be needed. US and European labels such as RCA Victor, Columbia and Decca favored large Latin American capitals as distribution centers, where copies of original recordings became readily available. In this way, the chain of distribution reinforced the links between large metropolitan centers and emerging economies, creating an order that was perceived as natural, accessible and relatively autonomous. Thus, the Mexican music industry soon invested in the development of music groups and stars dedicated to the release of Spanish versions of hits (covers known as *refritos*, or refried) from the United States and Britain, especially songs by Elvis Presley, Bill Haley, Little Richard, Chuck Berry and Buddy Holly. Key among these bands were names such as Los Locos del Ritmo (later known as Los Rebeldes del Rock), Los Teen Tops, Los Black Jeans (later known as Los Camisas Negras), Los Apson, Los Loud Jets and Los Hooligans, composed mainly of clean-cut kids who could appeal to the preferences of the upper-middle-class audiences, originally responsible for the flourishing of this cultural habit.

In Cuba, however, as a result of the 1959 revolution, the music scene moved in another direction. The new political regime rejected rock in Spanish (just as it brought to an end most of the tropical music bands from the 1950s), and it portrayed the genre as an object of cultural imperialism. In 1959 Fidel Castro's regime banned rock music, effectively halting Cuba's role as a forerunner of Latin American rock 'n' roll. Even within this environment, when recording music related to US imperatives was actively discouraged, Cuba managed to produce Los Zafiros, a legendary doo-wop and R&B ensemble with a short-lived career.

After the Cuban government banned rock 'n' roll, Mexico, with its thriving cultural industry and stars like Enrique Guzmán, lead singer of Los Teen Tops, and César Costa, lead vocalist of Los Black Jeans, was primarily responsible for bringing rock music to the middle classes throughout Latin American. The appearance of Mexican rock musicians in TV shows (*Cómicos y canciones* [Comedians and Songs, 1956]), as well as in various motion pictures (*Jóvenes y rebeldes* [Young and Rebellious, 1961], *Twist, locura de juventud* [Twist, a Youth Craze, 1962] and *Mi vida es una canción* [My Life Is a Song, 1963]), contributed to the formation of a bond between Latin American youth of various nationalities, as they were exposed to and consumed the Mexican cinema of the 1960s.

The 1960s: The Age of Refritos and Nueva Ola

In the 1960s, as rock gained a larger following throughout Latin America, class tensions and languages issues became paramount. Recordings of Spanish covers of hits from the United States and the United Kingdom assumed the audience's familiarity with a repertoire that, for the most part, was only accessible to members of the elite class. At the same time, the translation of the lyrics to Spanish reached out to a larger market that could only consume music in its mother tongue. Media, especially the press and television, played a major role in this process, establishing a norm across the hemisphere. In this way, the Latin American media began to emulate the dynamics of the US cultural industry, so effective at diffusion, though with a different twist: emphasizing, rather than attenuating, class differences. Eventually, with covers of US and British rock songs and Latin American expressions of teenage angst, rock evolved into a fixture in Latin America, from the Rio Grande to Patagonia.

In Argentina, the Latin American country with perhaps the most solid middle class during the 1960s, rock progressed along two routes: as in Mexico, the well-to-do developed a taste for US and English rock, while at the lower-class level a locally brewed version of rock emerged that was quite distinct from the *refritos* sponsored by the commercial industry. Followers of the upper echelon were known as *caqueros*, while working-class rock was identified as *mersa* (Argentine slang for something common and ordinary). By the mid-1960s stars such as Guzmán, Leo Dan, Sandro, Palito Ortega and Brazilian heartthrob Roberto Carlos were quite popular among middle-class sectors in Argentina. As in other parts of the subcontinent, television contributed heavily to rock's popularity with programs including *Swing, juventud y fantasía* (Swing, Youth and Fantasy), *El club del clan* (The Clan's Club) and *Ritmo y juventud* (Rhythm and Youth), broadcast in the Greater Buenos Aires area. *El club del clan*, in fact, became so popular that it was soon emulated in other Latin American countries such as Colombia.

In Mexico in the 1960s, the equivalent of these TV shows were programs like *Yeah Yeah* and *Discotheque a gogó*. Programs of this kind celebrated and sponsored the *nueva ola* (New Wave), a cultural phenomenon that brought Latin America's middle classes in contact with the repertoire, clothing and cultural attitudes of US and British countercultures, incorporating many of the previously listed stars as well as Spanish imports such as Rocío Durcal and Marisol. Hippies started appearing in the better neighborhoods of many Latin American capitals. Generally speaking, their presence was interpreted as a sign of penetration by US culture, but it also strongly asserted the class context of rock music during its initial years in the region. Because Latin America had only a small middle-class population, to embrace rock culture's typical attire, hairstyle and overall demeanor was viewed as eccentricity, in open contrast with the conservative mores and attitudes of conventional Latin American society.

While the *nueva ola* moniker in most of Spanish-speaking Latin America described different facets of life associated with music, in Mexico it also referred to a literary movement known as *La Onda*. Some of the authors involved in the movement were José Agustín and Parménides García Saldaña. Sharing a bit of a beatnik flavor, this literary movement added an adventuresome, experimental character to the Mexican version of the *nueva ola*. Its sound materialized from the influence of the early phase of the Beatles, rich in romantic ballads and songs that advocated a relaxed, laid-back lifestyle, presumably influenced by the consumption of narcotics.

Nueva ola soon became a Latin American constant that lent itself to commodification, having been disseminated by new media such as television and alternative magazines as well as the music tradition of bars and small commercial establishments, such as Mexico's *cafés cantantes*. In Mexico, magazines like *POP* celebrated singers such as Angélica María and Julissa, and bands such as Los Yaki, Los Belmonts and the Rockin' Devils. In the Argentine case, though, the emergence of a rock in Spanish tradition oriented the musical scene toward a different dynamic from the Mexican context, where Spanish-language remakes of English-language hits – the so-called *refritos* – were rampant. Just as the United States had experienced a British invasion, in the case of Argentina it is possible to speak of an Uruguayan invasion, with bands such as The Shakers and The Mockers arriving from Montevideo and imitating the flair and style of British bands such as the Beatles or the Rolling Stones. In addition to the customary covers, Argentine singers such as Mauricio Birabent (also known as Moris) and José Alberto Iglesias (also known as Tanguito) sang original material in Spanish and contributed to the rise of bands such as Los Gatos Salvajes (ex-Wild Cats) and Los Beatniks, some of which arrived in Buenos Aires from smaller cities in the interior of the country, adding to the effervescence of the musical scene. By 1968 two main bands, Manal (with Javier Martínez) and Almendra (with Luis Alberto Spinetta), were considered staples of the rock in Spanish music scene. While the local music scene evolved at a grass roots level, the Argentine music industry emulated the work of the Mexicans, developing Argentine equivalents for acts like Creedence Clearwater Revival (Trío Galleta) or Sonny & Cher (Fedra y Maximiliano). In addition, by the dawn of the new decade (1970), magazines like *Pinap* and *Pelo* catered to the tastes of early followers of this type of music.

The development of local rock scenes was largely analogous throughout the subcontinent, depending on the extent of national well-being and the consolidation of a music market for the local middle classes. However, only large markets such as Mexico or Argentina experienced substantial friction between social classes around the adoption of rock music, especially in terms of musical production; the working classes of most other Latin American nations of the period lacked the means and the resources to play an active role in the production and consumption of a newly born genre. To a large extent, the cultural industry replicated exclusive notions of nation and society, thus condoning differences in terms of taste and habits of consumption.

In general, wherever markets allowed for experimentation and successful commercialization, the dynamics of the initial phase of rock in Latin America were relatively comparable, shifting between Spanish covers and songs in English. For example, Colombian cities such as Bogotá and Medellín, where national government bureaucracy and an entrepreneurial ruling class resulted in sizeable middle classes, witnessed the emergence of bands such as Los Speakers, Los Flippers, Los Danger Twist and Los Yetis, with the usual assortment of Spanish covers. As in other latitudes, the local music industry developed equivalents for US ensembles, such as Ana y Jaime, Norman y Darío and José y Darío (in both of the latter cases, mimicking Simon and Garfunkel). As in the Argentine case, where Sandro, the ex-vocalist of Los del Fuego, was promoted as a sexy, hunky singer, in the manner of Tom Jones, Colombia's music industry promoted figures such as Oscar Golden. In Venezuela, bands such as Los Dangers and Los Impalas generated widespread interest; in Peru, Los Saicos proposed a different sound, more in line with alternative US and British bands. In Chile, groups such as Los Rockets and Los Ramblers became household names.

Brazil, with its separate linguistic tradition, emulated certain facets of the Spanish-language markets, but its rock movement operated with a different set of rules (in particular, with respect to race and influence from abroad). Brazil's rock in Portuguese movement is as old as its Mexican, Argentine and Cuban counterparts, with the following customary phase of covers. In the Brazilian context, the *Jovem Guarda* movement of the 1960s and early 1970s was the early equivalent to the Spanish-language *nueva ola*, with figures like Roberto Carlos, Erasmo Carlos and Wanderlea. To the cry of 'iê-iê-iê,' a Brazilian equivalent for the Beatlesque affirmative (yeah, yeah, yeah), they created softer, lighter arrangements with lyrics aimed at young crowds.

In general, rock in Latin America drifted toward a 'whitened' version of the music, favoring the image some Latin American audiences may have projected upon the British invasions, and catering to the racialized preferences of middle and upper-class sectors. In particular, chordal instruments, harmonies and arrangements identified with Western heritage were emphasized over percussive arrangements identified with African descent (this was particularly evident in progressive Argentine rock throughout the 1970s). Ironically, the British invasion artists covered rock and R&B songs by black US artists, but this was unknown by most Latin American audiences and elites. Further, most Latin American nations lacked a significant number of rock performers of African descent, so, during its initial phase, rock was not associated with an African-American experience. In Mexico, a significant exception was Johnny Laboriel, lead singer of Los Rebeldes del Rock until 1964, and his sister Ella, but their impact on Mexican rock was limited. The Laboriels mainly, but not exclusively, played music by African Americans. Thus, while it was not a foregone conclusion that their music would reflect their African-descended heritage, Laboriel's best-known hit is his cover of US African-American R&B group The Coasters' hit 'Poison Ivy,' titled 'Hiedra venenosa' in Spanish.

Brazil's rock scene was different in that it was more strongly influenced by what was perceived as 'black' music from the United States – that is to say, music by African Americans alluding to societal and cultural dissimilarity – with the exception of the aforementioned 'iê-iê-iê,' movement. Unlike rock scenes in other parts of Latin America, Brazilians more readily embraced performers of African descent whose lyrics alluded to racial disparity, such as Tim Maia and Ed Motta. The self-conscious uses of influences from music by US African Americans (such as Motown, US soul and funk) on *Tropicália* and Brazilian soul, evident in well-known hits such as Os Mutantes' 'Ando Meio Desiglado,' as well as the adoption of rhythms from Bahia and the popularity of *bossa*, made Brazil's rock scene distinct from its counterparts in most other Latin American nations. Due to Brazil's sizeable population of African descent (a result of its role as the largest importer of enslaved Africans in the Americas and the last Latin American country to end slavery), a greater attention from the cultural industry to the integration of African diasporic ethnomusical heritage and societal experience was to be expected. Even though many blacks toiled in poverty, they also represented a sizeable market for the local record industry, and the rise in popularity of many genres influenced by the diasporic experience coincided with a heightened sense of racial consciousness.

Tropicália, Brazil's great cultural movement of the 1960s, influenced the music scene deeply and in due course engendered engendered MPB (*Música Popular Brasileira)*, a main staple of the national cultural market. Though more pop-oriented, MPB would come to represent the hope for an independent market of national character with a voluminous record production. One of the main tenets of the *Tropicália* movement was *antropofagia*, that is, the cannibalization of all sorts of musical and cultural traditions for integration into the Brazilian landscape. Initially, however, *Tropicalismo* (an alternate name for the movement) experimented with the fusion of pop, rock and avant-garde music. Key figures such as Caetano Veloso and Gilberto Gil, who played a vital role in the movement's incorporation of rhythms from Bahia, a major center of Afro-Brazilian music in the North-east, were persecuted and arrested by the military regime, ultimately fleeing to exile in the United Kingdom. Os Mutantes (with lead singer Rita Lee), the psychedelic rock band from São Paulo, took part in the movement; in the 1990s they were to become a major influence for musicians like David Byrne, Kurt Cobain and Beck.

Thus, along with Cuba (where Los Zafiros emulated the US doo-wop group The Platters), Brazil is the other Latin American location where rock musicians determinedly contemplated the assimilation of US black musical traditions such as doo-wop and soul, adding a complementary level of texture to their repertoire. In most other Latin American nations, since rock entailed light-skinned acts performing 'lighter' musical arrangements of songs that originated in the black US community, influenced by the musical style of the British invasions, rock did not contribute significantly to the problematization of racial differences in society. The case of Brazilian soul, with renowned figures like Tim Maia, who combined US soul with Brazilian rhythms such as *baião* and *samba*, provides a contrast. Having lived for four years in the United States, where, in the end, he was jailed and deported for drug possession, Maia brought to his music a different view of race, conscious of disenfranchisement and alienation. In fact, an important consideration in the growing popularity of Brazilian soul is the fact that several of its main exponents (including Maia and his nephew, Ed Motta) lived in the United States for a while and then returned home with an enhanced sense of the possibilities US soul music held for the black community in Brazil. Influenced by James Brown, Otis Redding and Aretha Franklin, a number of Brazilian artists from the 1970s, including Paulo Diniz, Gerson King Combo, Robson Jorge and Miguel de Deus, emphasized the African diasporic aspects of their music. In due course, Brazilian soul would feed the dance scene in Rio's *favelas* and engender affirmative movements such as Black Rio, focused on the celebration of African heritage.

The rise of *nueva canción* in the Southern Cone is another key element related to the popularization of rock during the 1960s and 1970s. Chile's case, with singer Víctor Jara and groups such as Los Jaivas, is particularly relevant. While this kind of politically motivated folk music received different names in various parts of Latin America (*canción protesta*, or *nueva trova* in the Cuban case), this movement was crucial, along with the *nueva ola*, for the swift expansion of rock music beyond the *refrito* tradition. Many aspects of *nueva canción* music are reminiscent of the work of US icons such as Joan Baez or Bob Dylan, inviting the audience to adopt politically committed postures and greater social awareness. Emphasizing local contexts and incorporating Amerindian elements in many recordings (e.g., the *charango*, a small stringed instrument, was a staple of Chilean *nueva canción*), this type of music brought about the rise of a staunchly defiant kind of folk-rock in Spanish throughout the subcontinent. Jara's death during the 1973 *coup d'état* in Chile also contributed significantly to heightening the profile of Latin American folk rock, which matured until the late 1970s, eventually standing on its own as a genre.

The 1970s: Concerts, Repression and Punk

The 1970s were marked by an expansion of rock into the mass public sphere, its demonization and repression by authoritarian regimes, and, toward the end of the decade, the influence of punk and ska. In some countries, rock began to be viewed as a tool of cultural and/or political resistance. In Mexico, among other places, this juncture led to an underground rock scene. In other places, such as Argentina, it heightened rock's visibility. Coming from abroad, punk and ska played key roles in conquering this new, more discernible profile. Latin American social and political elites had become accustomed to the peace-loving hippies of the 1960s, but they were baffled by the more assertive nature of these newcomers. In both the underground and the highly visible contexts, rock expanded its audience and engaged a political discourse, leading to its eventual climax in the following decade.

Concerts were a key venue for the popularization of rock music in the 1970s. In Argentina, the popularization of working-class *mersa* bands is closely tied to this situation. Across the Americas, many local versions of the Woodstock festival were held: in Argentina, it was Buenos Aires Rock (1971); in Mexico, Avándaro (1971); in the case of Colombia, Ancón (1971). While Latin American rock concerts reproduced expressions of the US and Great Britain's rock cultures, amid Latin America's socially conservative environment they were portrayed as volatile events with an enormous potential for social instability, closely tied in the eyes of the Establishment to drug consumption and excessive sexual liberties. The case of naked women at Avándaro, for example, attained mythological proportions within Mexican society.

The backlash was soon palpable. In the Mexican case, the air of political repression, fed by the events at Tlatlelolco prior to the 1968 Olympics during which an undetermined number of students were massacred at the Plaza de las Tres Culturas, contributed heavily to the displacement and shift to the underground of the local counterculture, *La Onda*. Shortly afterward, an underground rock and blues tradition was already established in Mexico, thanks to the appearance of huge urban spaces – warehouses, mostly, where great masses could gather – known as the *hoyos fonquis*, with Javier Batiz as a principal figure. Also, contesting the political establishment's almost absolute control of language and providing a backlash against the *refrito* tradition, many bands embraced an English-language repertoire; their return to Spanish was to take place in the early 1980s. Having held on to power since the revolution, Mexico's Institutional Revolutionary Party (PRI) enjoyed such a monopoly of political discourse and culture that it left virtually no spaces available for peripheral, dissenting views; as a consequence, rock had to forge a space of its own. Eventually, rock concerts became the primary excuse for political persecution by local and state governments, forcing rock production to go dormant through a major portion of the 1970s.

The 1970s was a particularly problematic time for rock in Latin America, due to the market position of ballads. By the late 1960s music multinationals had discovered that pop ballads sold equally well on both sides of the Atlantic, maximizing returns; their generic pop appeal cut across boundaries of nationality and required minimal cost. Given the omnipresence of ballads on the radio, music labels were unwilling to invest heavily in production costs for music that would not gain substantial airplay. Lack of support for rock recordings was compounded by the suddenly absent live music scene, a consequence of relentless political demonization and cultural repression, and rock in Spanish lost visibility during the initial part of the decade. Nevertheless, a few new stars managed to emerge and establish a solid reputation within this lackluster environment: chiefly, Argentine rockers such as Carlos Alberto García Moreno, also known as Charly García (with groups such as Sui Géneris and La Máquina de Hacer Pájaros), and poetic virtuoso Luis Alberto Spinetta, a former member of Manal (later leader of Pescado Rabioso, Invisible and other groups).

By the middle of the decade, disco and salsa arrived (by 1977 both were part of the mainstream), competing for space and presence on the radio and in live music venues. Within this context, even musical movements such as Brazilian funk, which evolved organically from community life rather than from commercial or cultural imposition, saw some of their production affected. While Brazilian funk originally emerged from the dance scene in Rio's *favelas* in the 1980s, accentuating a coarse emotional response, the heavy agitation of funk was attenuated to mimic a sound closer to the disco beat, with lighter themes in lyrics and a greater incorporation of synthesizers. Brazilian funk had originally been influenced by US funk and rap, styles embraced by many early followers of Brazilian funk. For a while, disco's thematic context, which did not invite deep inquiry of harsh social differences, attenuated the music's critical verve. While funk parties in suburban Rio were already extremely popular, the music would have to surmount this phase of being light and festive in nature, closely associated with the disco scene, to attain its eventual, distinctly Brazilian character, with lyrics contemplating a particularly idiosyncratic context (life in the *favelas*, extreme class disparity, rampant drug trafficking and police brutality).

Nevertheless, while dance music had a negative impact on the continued existence of rock and related subgenres throughout the hemisphere, rock was revitalized by a set of working-class newcomers who channeled the rage and frustration of displaced sectors of society in the Thatcher era. Punk and ska arrived from the United Kingdom and posited themselves as contrasting forces to the lighthearted interests of disco and salsa, which emanated from New York. In countries such as Peru, this working-class appeal functioned effectively, and bands like Leusemia, Narcosis and Zcuela Crrada joined a first wave of emulators. Most importantly, Argentina saw the arrival of a seminal figure from Europe: Luca Prodan, the leader and founder of Sumo (1981), a band that, mixing punk and ska, arguably embodied the most insightful incarnation of an iconoclastic musical project in the Spanish-speaking Americas. Though Prodan died in 1987, his presence, full of angst and non-conformity, signaled a turning point in the history of Latin American rock.

Repression, to a certain extent, also acted as a catalyst for the revival and/or perpetuation of rock in the 1970s. With the onset of Latin American military governments, it was easy to conceive of rock as an act of cultural resistance. From long hair to a penchant for outspokenness and a taste for what were perceived as strident musical arrangements, many features of rock were viewed reprehensively by the military; hence, bands were targeted by many Latin American military regimes. A key case in point is the Guatemalan band Alux Nahual, founded in 1979, in a region with a limited rock tradition. Composed of well-versed musicians, it engaged in progressive rock and developed lyrics that alluded in a sustained but elegant fashion to the conflicts affecting the region. Alux Nahual also incorporated elements pertaining to Central America's native heritage, gaining a considerable following and popularity throughout the entire region. The band remained relevant until the late 1990s, when many of the political processes in the region had concluded with peaceful resolutions. Ultimately, following a trend set by many Anglo bands as well as Argentina's Serú Girán or Soda Stereo, its members reunited in 2006 to raise funds for victims of a hurricane. In this sense, the band always managed to portray itself as an ally of the people, thus justifying its great level of support.

Amid the societal turbulence resulting from military oppression, a particular circumstance proved highly influential: during the Malvinas/Falkland conflict that began in 1982, in an isolationist move, Argentine authorities outlawed the airplay of music in English, instigating a revival of *rock nacional*. In a hurried effort to comply with the tyrannical ruling, many radio stations dusted off old copies of national recordings of rock in Spanish and generated a channel for the massive popularization of this music, adding viability to new commercial rock productions. In short, a political crossroads led to economic feasibility for rock music. The main achievement of this juncture was its demonstration of the fact that an important economic segment of Argentine society, its middle class, was willing to invest in nationally produced rock music in Spanish and to support its integration into the media mainstream. This circumstance, closely watched by the music industry, brought about a dramatic change in the attitude toward rock of recording studios in Argentina, which now recognized an economic opportunity in a previously ignored sector of the culture.

The 1980s and 1990s: Democracy, the Mainstream and Commercialism

The 1980s marked the beginning of the end of rock's status as an ostracized cultural practice. With the return to democracy in many countries, within a decade the music was embraced and celebrated across the hemisphere. The music industry responded accordingly, supporting a wide variety of styles and preferences. Once the investment was justified, it made sense to reach out to the US Latino market, long neglected as an audience for rock. In addition, thematically speaking, the music addressed the growing economic disparity in Latin America, resulting from the improvised, rushed implementation of misguided policies, increasingly interpreted as a branch of US-led asymmetrical globalization. Neoliberalism, no less – the market-driven approach to government policies popularized during these years – became a topic for lyrics. These were, clearly, more selfish times; during the 1980s, many bands included references to the greater individualism and lack of collective spirit resulting from the implementation of new neoliberal policies (e.g., Charly García's hit 'No voy en tren' [I'm not Going by Train]).

In 1983, after the return to democracy in several Southern Cone countries, the dynamic that emphasized rock's market potential intensified. At the same time, though in a lesser light, the death of General Franco of Spain (1975) brought about a rebirth of Spanish culture, which had been restricted under Franco, with a sizeable rock component. In both cases, music labels in search of new markets promoted tours and the active circulation and distribution of the new cultural production of rock music. Even Chile, while struggling with Pinochet's oppressive regime and censorship, produced a groundbreaking band, Los Prisioneros, with a style that, though purposely musically rudimentary, addressed key uncertainties of the moment. In Mexico, a central event during this period was the increased popularity of the El Chopo street market, which resulted, for the first time in years, in a meeting of musicians and their fans, fostering a collective consciousness and excitement about the latent emerging rock scene.

Similarly, while the 1970s had witnessed the arrival of figures such as Raul Seixas in Brazil, in 1981 the Brazilian rock scene exploded with the *Nova Jovem Guarda*, a movement that incorporated the guiding principles of punk and ska, including groups such as Barão Vermelho, Legião Urbana and Paralamas do Sucesso. In heavy metal, the extensive underground scene included bands such as Ratos do Porão (from São Paulo) and Sepultura (from Belo Horizonte). Many of these bands were strongly influenced by the political climate of the times, with the impending arrival of democracy.

By the mid- to late 1980s, bands including Soda Stereo (Argentina), Enanitos Verdes (Argentina) and Hombres G (Spain) had toured much of the hemisphere with fervor, popularizing the genre at an accelerated pace. Hombres G (and other Spanish bands) played a role akin to that of British bands in the 1960s, lending a sanctioning hand to a movement previously frowned upon by the political establishment. In Mexico, attentive to these arrivals, record companies realized the existence of a demand and went to work immediately, producing local equivalents including Caifanes and Botellita de Jerez. In most Latin American capitals, manifestations of rock in Spanish began to appear: in Venezuela, there was Sentimiento Muerto; in Colombia, Compañía Ilimitada, Pasaporte and Hora Local; in Peru, Río and Miki Gonzalez. The newly evident demand even bestowed legitimacy upon working-class bands that had toiled in the background for a number of years; suddenly groups such as Mexico's El Tri (formerly Three Souls in My Mind, led by Alex Lora) were viewed differently by the middle class and gained commercial success.

At this point in the 1980s rock in Latin America began to follow commercial directives. This development was reflected by the emergence of new names. *Rock en español* and *rock en tu idioma* were labels or monikers created and sponsored by the commercial establishment to popularize rock music in a quick, effective manner. Eventually, each label was to incorporate a variety of popular genres and styles, as well as popular urban music trends. This rock music production was to embody a multiplicity of social meanings that might address changing times in Latin America as the financial crisis of the 1980s gave way to the opening of many economies in the 1990s. The label *rock nacional* also gained widespread popularity. While it was embraced quickly in countries such as Mexico and

Colombia, in truth, Argentina was the only country where the label emerged to identify the organic development of a musical tradition linked to nationalism. In Argentina, the label was a literal consequence of the sense of identification between the music and the rampant nationalism stimulated by events including the 1978 FIFA World Cup and the Malvinas/Falklands conflict. The Argentine military government used the World Cup to promote nationalism, much in the spirit of Hitler's 1936 Berlin Olympics according to some analysts. In the case of the Malvinas, the futility of the conflict underlined the overt interests of the military dictatorship.

In their eagerness to tap the newly discovered market, music labels supported a wide assortment of trends. Among the most significant was the development of a sound rooted in the rebelliousness and backbeat of punk or ska but fused with Latin music, from *huapangos* to *cumbia*. Following Mexican rock band Caifanes's wild 1988 success with 'La Negra Tomasa,' a hit that combined a lilting *cumbia* beat with British New Wave aesthetics, à la The Cure, the market became receptive to the continued integration of syncopated rhythms. Thus, in musical terms, the 1990s marked a very experimental period in Latin American rock production, when fusion became the norm and conventionally arranged production, more evocative of an Anglo flair, maintained a decidedly lower profile. The integration of popular local genres in the repertoire of many emerging bands contributed to a quick embrace of rock by the young masses that longed for a modern, contemporary version of their autochthonous music, reflective of their urban experience while remaining connected to the not-so-distant rural past.

Thus, fusion contributed significantly to the mainstreaming of Latin American rock, and the rise in the late 1980s and early 1990s of groups including Maldita Vecindad and Café Tacuba in Mexico, Aterciopelados in Colombia, Los Fabulosos Cadillacs and Divididos (ex-Sumo) in Argentina and Los Amigos Invisibles in Venezuela. Along the way, thanks to the eclectic mix of genres and styles, national musical boundaries blurred, adding to the cohesiveness of a Latin American alternative sound. A quintessential recording from this period is Tacuba's *Avalancha de éxitos* (Avalanche of Successes) (1998), in which Mexico's fab four cover a variety of songs, flirting with Cuban *bolero*, Mexican *huapango*, Brazilian *bossa nova*, international pop and Dominican *merengue*. The band's ingenious dexterity epitomizes the spirit of this period, during which musical experimentation became the all-encompassing standard.

Ultimately, record labels hit the jackpot with groups that were enormously successful in popular appeal, such as Maná, a band from Guadalajara, Mexico that blended impressive riffs, romantic lyrics and Latin musical ingredients. In addition, hip-hop and rap began surfacing throughout the subcontinent, both in places where African descent played a minor role, as in the case of Argentina, with Bersuit Vergarabat and Illya Kuryaki and The Valderramas, and Mexico, with Molotov and Control Machete, and in places where rap was viewed as a justifiable product of racial demographics, such as Cuba, with Orishas, and Brazil, with Chico Science and AfroReggae. In these latter cases, rap reincorporated the local music industry into the international music scene.

The rise of rock in Spanish in Latin America also resulted in a greater influence on the US market, since Latinos/as, a burgeoning, young US population with disposable cash and a healthy appetite for music, represented a lucrative market for this product. As fans for acts such as Ricky Martin, Latinos/as appeared to integrate themselves into the US mainstream through a mounting presence in the media. Groups that related more to the Latino/a masses, such as the Puerto Rican Puya with its mix of salsa and rap metal, California's Los Lobos with its Mexican-American heritage, or even Mexican-born electric guitar virtuoso Santana, benefited from a growing awareness on the part of the major music labels of exciting developments in the Latin music market. In contrast, mainstream US production in English reported dismal figures in the 1990s, primarily as a result of the increasing impact of new technologies that enabled the burgeoning piracy market.

Perhaps the greatest irony was that a solid rock tradition was established at the working-class level with little gain for the recording industry. In the late twentieth century, piracy skyrocketed in Latin America, accounting in some countries for close to 90 percent of music purchases. In addition, neoliberal policies brought improved technologies and increased access to independent channels of distribution via the internet, which impacted heavily upon urban working-class bands. For example, as new working-class bands emerged and gained popularity in Argentina, resulting in the rise of so-called *rock chabón* (rock of the slums or projects), with groups such as Los Ratones Paranoicos, Los Piojos, La Renga and Patricio Rey y sus Redonditos de Ricota, their followers also discovered inventive ways to share and consume the music. As time progressed, this phenomenon became more extensive and better organized.

The Twenty-first Century: Coming of Age

With the rise of new technology, the early 2000s were a time of increased trade and opening markets. With the ability to record and master music at a fraction of the previous cost, thanks to greater access to more affordable equipment, Latin American bands gained confidence and created music with a larger audience in mind. Via the internet, Mexican bands catered to Colombian audiences and vice versa, while Argentine rappers shared the stage with Cubans. In short, national boundaries began to diminish when it came to rock music. In the hope of developing a wider-reaching, more effective formula, music labels encouraged international exchange, promoting collaborations between South, North and Central Americans (and, in some cases, even Spaniards). Pop stars were designed, from their very inception, with broader markets in mind. Along the way, rock lost some of its edge.

Toward the beginning of the twenty-first century, particularly for bands from countries other than Mexico or Argentina, where the major labels were able to rely on a steady demand for musical novelties, there was a massive migration to independent labels, in some cases even linked to the Creative Commons Project (a non-profit organization dedicated to expanding the range of creative works available for sharing and sampling), inviting greater flexibility in the management of copyrights. Even in Mexico City, a stronghold of the multinational recording industry, independent labels including Noiselab and Nuevos Ricos backed bands such as Chikita Violenta and María Daniela y su Sonido Lasser, respectively.

The growing popularity of electronic and lounge music, genres that build effectively on sampling techniques, was a determining factor for this development. The rise of the internet in the region influenced the perspective of many bands that learned that it was perfectly feasible to compose, record and market their music without having to grant excessive concessions to the major multinational labels. Bands such as Sidestepper, from Colombia, and the Instituto Mexicano del Sonido promoted commercial independence and are also good examples of the new influence of lounge or chill-out music.

The 2000s also witnessed the rise of a new kind of Latin American rock superstar, evidenced in global figures like Colombians Shakira and Juanes, who tour heavily and whose recordings sell well across international borders. Bands along the US/Mexico border, such as Ozomatli and El Gran Silencio, also continued to experiment and produce multigenre recordings, seeking to appeal to both the Latin American and US market. In general, while some of the bands of the 1980s and 1990s have established themselves as veterans and gathered a continental following, perhaps a better measure of the overall level of acceptance of the music is the founding of a tradition of rock festivals including Vive Latino (2000–07 in Mexico City), Rock al Parque (1995–2007 in Bogotá), Cosquin Rock (2001–07 in Cosquín, Argentina) and Quilmes Rock (2002–04 and 2007 in Buenos Aires). In this respect, rock in Latin America in the early twenty-first century was fashionably acceptable and did not have to fight for a space in the public sphere or mass media. At the same time, detractors argued that the rock movement as a practice of cultural resistance had been largely co-opted.

Rock Nacional

In the late twentieth century, *rock nacional* became one of Argentina's most important youth music movements, the influence and impact of which extended deeply into the Argentine musical scene, and indeed beyond. In doing so it did not neglect the country's musical past but built upon it, by synthesizing and replacing in popularity the three great musical movements that preceded it: the *tango* of the 1900s–40s, the traditional folklore of the 1930s–50s and the urban staged folklore movement of the 1950s–70s.

Rock nacional, therefore, is essentially fusion music, with sounds, lyrics and performances constantly mixing elements from diverse musical traditions, both national and international. At different times in its history, *rock nacional* has blended itself with *tango*, traditional folklore, urban staged folklore, rock 'n' roll, hard rock, blues, pop, symphonic rock, punk, jazz, jazz-rock, US country, US folk, heavy metal, *bossa nova*, *samba*, reggae, ska, *bolero*, twist, *murga* (Argentina's carnival music), salsa, *candombe*, etc. *Rock nacional* is not characterized by a particular kind of melody or rhythm, because throughout its history many different styles were employed. Its trademark is a particular use of language. The bands that belong to *rock nacional* sing in Spanish and account for Argentine reality. Because of the different rhythms that *rock nacional* encompasses, its relationship with dance is extremely diverse, ranging from total exclusion to sub-variants with dance at their core.

Due to this eclecticism, different variants of *rock nacional* appeal to different social sectors within the youth population of the country. While the bulk of its constituency comes from the middle classes, some styles have appealed to the working and upper-middle classes as well. Similarly, while young people are the most fervent fans of the genre, many adults in their 30s, 40s and 50s still consider the *rock nacional* of their adolescence to be 'their' music.

History

The *rock nacional* movement appeared in the 1960s, the same decade that witnessed the Woodstock festival, the Beatles, the French student movement of 1968 and Latin American guerrilla movements including Argentina's Fuerzas Armadas Peronistas, Ejercito Revolucionario del Pueblo, Montoneros and so on. Worldwide, music was only the most visible aspect of a life attitude characterized by a deep questioning of society. In the United States, the origin of the counterculture movement's slogans (freedom, peace, love, respect for nature, etc.) was closely linked to a very important societal debate around civil rights, the Vietnam War and the capitalist model in general. In Argentina, the essential concerns were similar. The so-called 'Argentine Revolution' (1966 to 1973) of the military government promoted a model of society that young people considered rigid and repressive, characterized by a suffocating morality and plenty of oppressive censorship.

This period (late 1960s to early 1970s) is seminal in the construction of the 'origin myth' of the movement. An integral part of the imaginary that developed in this early period is the idea that *rock nacional* was a 'public' cultural manifestation, not a private cultural consumption. At the same time, a difference between cultural consumption and cultural manifestation, between 'consuming' music and 'using' music, was expressed through the agency of *rock nacional* fans when they 'used' the music artists produced for them. *Rock nacional* in the late 1960s was for listening, not dancing. Its goal was to open minds, not to liberate bodies.

In 1967 Los Gatos recorded the single 'La balsa/Ayer nomás' (The Raft/Just Yesterday), and in a few months it sold more than 250,000 records. *Rock nacional* became public, a part of mass culture for the first time. Despite the fact that Los Gatos is considered the first *rock nacional* group, there was not much distinction between the kind of music the group played and other bands of the period. What, then, made Los Gatos the pioneers of *rock nacional*? The difference is clearly a particular attitude that positioned them at the forefront of an alternative, anticommercial, musical movement. This attitude was linked to the bohemian life that many of the founders of the movement advocated: 'drifting' on Buenos Aires's streets playing their guitars, riding buses while singing (uninvited) their new songs, spending entire nights in the mythical bar 'La Perla' composing new lyrics, and so on. Beyond Los Gatos (with bandleader Litto Nebbia), other important pioneers were Tanguito, Moris, Pajarito Zaguri, Javier Martinez, Luis Alberto Spinetta, Vox Dei and Gustavo Santaolalla.

For large sectors of youth in the early 1970s, politics became a privileged form of social participation. The enemy was readily apparent: imperialism and the bourgeoisie. Revolution seemed possible, and militancy was viewed by young people as a worthwhile way of life, one that demanded the renunciation of indifference, consumerism and the superficiality of the Establishment in the eyes of middle-class youth. To these young people socialized as militants, who actively participated in legal and illegal political parties and in guerrilla movements, the tenets of *rock nacional* appeared very individualistic, with no social content and extremely diluted values. Hippism (as the militants labeled *rock nacional*'s ideology), with its emphasis on peace, love and drug experimentation, was not considered a revolutionary ideology by the more politically engaged youth. In their disdainful view, the rockers had been co-opted by the establishment. *Rock nacional* was influenced by this kind of criticism, and some of its most important representatives (Sui Generis, Alma y Vida, Pedro y Pablo, Roque Narvaja, etc.) started to write lyrics that were much more politically motivated.

During this period in the early 1970s, the *rock nacional* movement was characterized by continuous formations and disbanding of performance groups (Aquelarre, Huinca, Color Humano, Pescado Rabioso, Soluna, etc.) and by violence at concerts. The gradual politicization of Argentine society was mirrored by the increasing popularity of rock combos whose lyrics and attitudes most clearly questioned the system (Pedro y Pablo, Sui Géneris, Alma y Vida, and later Leon Gieco and Roque Narvaja). For example, Pedro y Pablo's 'Marcha de la bronca' (March of Anger) was an anthem against the state and its attempt to regulate, via repression, the life world of young people, and Alma y Vida dedicated a song to Che Guevara. Concerts at universities, political festivals and shantytowns were very common during this epoch.

After the military coup of 1976 fear became a pervasive feature of Argentine society. Out of fear and devoid of traditional points of reference, civil society turned inward. In a far-reaching attempt to redefine traditional political and social identities, the military regime proceeded to disperse all organized groups. The culture of fear made the youth movement its privileged target. Legitimizing itself through the image of the 'suspect youth,' the government directed its repression specifically at this age group (67 percent of the 30,000 people who 'disappeared' under the military coup were young people between the ages of 18 and 30).

While the student movement and the political youth movements slowly disappeared as frameworks of reference and support for collective identities, the *rock nacional* movement established itself as the sphere within which a 'we' could be constructed. Of course, many of the former participants in those student and political movements were now active participants in the rock concerts. Thus, going to concerts, listening to records and singing *rock nacional* songs with groups of friends became privileged activities through which broad sectors of youth sought to preserve their identity in a context in which they felt threatened by the military. The period 1976–77 was marked by a tremendous boom in *rock nacional* concerts. It was common in this period for Luna Park (the largest covered stadium in Buenos Aires, with a capacity of 15,000) to be filled once or even twice a month, along with innumerable theaters and café concerts. In ritual-like concerts, the movement celebrated itself and confirmed the presence of the collective actor whose identity had been questioned by the military regime.

At first, the military was unaware of *rock nacional*'s potential to serve as a sphere of social identity construction. Obsessed with the annihilation of the guerrilla movement, the government considered the *rock nacional* movement a 'minor evil.' Nevertheless, as soon as the bulk of the repression against the 'major enemies' had been launched, the military started its repression of *rock nacional*. The offensive reached such an extent that, toward the end of 1977, faced with the impossibility of producing concerts, most of the groups (La Máquina de Hacer Pájaros, Crucis, Soluna, Alas, etc.) broke up and leading musicians (Litto Nebbia, Leon Gieco, Moris, Gustavo Santaolalla, Javier Martinez, Gustavo Moretto, Pappo, etc.) were forced to move abroad in order to continue working.

Another factor that contributed to the inability of the *rock nacional* movement to resist this onslaught was the military government's political project to redefine Argentine collective identities. In a well-orchestrated endeavor backed by fierce repression, the military government discouraged any collective action (political parties, trade unions, student associations, etc.) and promoted, instead, a neoliberal conception of the citizen as an individual actor playing a role in the economic market. Opening the country to imported consumer products that were historically banned in Argentina (cars, television sets, stereos and the like), the military regime promoted rampant consumerism. At the same time, the organization and eventual winning of the soccer World Cup in 1978 gave the military a very important symbolic victory. As a result, the movement's members, like the great majority of previous targets of the military machine, relocated their activities to the private sphere, where listening to music and reading underground magazines at home with friends and family replaced the public experience of rock concerts. The private sphere replaced even the reduced public one that prevailed during 1976–77.

However, in private settings, singing the songs that interpellated them as young people was the first step to recuperating an identity that the military tried to destroy, symbolically and physically. The social space occupied by young people under the dictatorship was an absence, a negation, a no-place. The denial of youth identity was fueled both by the military regime (the idea of *desaparecidos* was the most cruel concept in this process of negation; a double negation, not only of life, but also of death) and by civil society.

Not by chance, *rock nacional*'s final rebirth in the early 1980s came at the hands of the very musicians responsible for the birth of rock in Argentina, those who provided the songs many adolescents used as symbolic weapons against the attempt to annihilate them. The slogan promoted by the most representative exponents of the movement was 'A return to the source in order to emerge from the period of darkness.' One such exponent, the pioneer group Almendra, decided to attempt a new conquest of the public sphere, having already enlisted the private one through the everyday practices of the thousands of adolescents who knew the lyrics of their songs (such as 'Muchacha ojos de papel' [Girl with Paper Eyes] and 'Laura no duerme' [Laura Doesn't Sleep]) by heart. Almendra's concerts were great successes. The band attracted more than 30,000 people to its reunion concerts in 1979 and 1980.

The reunification of Almendra was intertwined with the reconnection of the movement with itself, and thus the entire *rock nacional* movement, not just Almendra, was reborn. Interestingly, even though Almendra launched the rebirth of the movement, it was not the band that benefited most from what happened after 1980; León Gieco and Serú Girán became the new *rock nacional* leaders. Beginning with Almendra's performances in December 1979 (35,000 people), a flood of young people attended *rock nacional* concerts, peaking in December 1980, when Serú Girán (led by Charly García) brought 60,000 people to the elite ranchers' organization La Sociedad Rural's concert venue in the posh Buenos Aires neighborhood of

Palermo. Meanwhile many pioneers, including Manal, Moris and others, staged very successful comebacks. Thus, step by step, the movement moved from a self-congratulatory celebration of survival to an overt expression of dissidence against the military regime.

This was the panorama presented by *rock nacional* on the eve of the Malvinas (Falklands) War, which began in April 1982: concerts of a size never seen before, songs with an increasingly marked oppositional content, and a strongly antimilitary climate in the audience. The period between December 1981 and the Malvinas War saw the return of the military 'hard-liners.' Civil society did not accept, in general, the closure of the political space that had been opened by President Viola one year earlier, and both political parties and unions increased their oppositional activities. In this context, the Malvinas War appeared as an attempt by President Galtieri, by means of a military action that struck a chord deep in the hearts of all Argentines, to resolve domestic political conflicts and reestablish the basis for the legitimation of an authoritarian political project.

Unexpectedly, the Malvinas War inspired the consolidation of the *rock nacional* movement in the Argentine cultural and political scenes. Due to the conflict against Great Britain, the military prohibited any diffusion of music in the English language, forcing radios and television to rely on *rock nacional* music to appeal to youth audiences. Suddenly Seru Giran, Leon Gieco, La Torre, Juan Carlos Bablietto, Raul Porchetto, Alejandro Lerner, Luis Alberto Spinetta and other *rock nacional* bands became widely known. Thus 1982 is marked as the year *rock nacional* finally was accepted by Argentine society as a major political and cultural actor.

When democracy arrived in 1983, the leaders of the *rock nacional* movement were unsure how to proceed. Launched as an oppositional movement, *rock nacional* was forced to adjust to the opening of the new democratic space. Further, the leaders of the rock movement no longer felt the urgent necessity to assemble all of its distinct musical expressions together as part of one collective movement, in reality or imagination. It was no longer imperative to hear *rock nacional* in each of the different musical initiatives.

The first reaction was to use concerts to celebrate the arrival of democracy and justice in a kind of festive mood that sometimes confused frivolity with happiness. Thus, the 'democratic spring' promoted by the Alfonsín administration (1983–85) proposed to celebrate the happiness of living in liberty and an abrupt end to the repression that had characterized the dethroned military regime. In the mid-1980s, for the first time in history, the *rock nacional* movement was able to develop one of the most important features of the international rock movement that also marks youth identity: an emphasis on the body and leisure. Therefore, the first years of democracy witnessed the success of combos linked closely to the pop variants of rock 'n' roll (Los Abuelos de la Nada, Los Twists, Virus, GIT, Soda Stereo). For the first time in *rock nacional*'s history, to dance and laugh were more important than to sing and think.

The period from 1986 to the early 1990s was characterized by disenchantment and fragmentation and the absence of a unified proposal. *Rock nacional* discourse abandoned its founding mythical image of the '*náufrago*' [the shipwerecked person] and moved toward the idea of those of '*del palo*' [the same 'tribe']. The rocker was, at this historical conjuncture, someone who resisted the system, but without proposing her/himself as an alternative for the collective. There was a nascent revalorization of some initial rock proposals like blues (Memphis la blusera) and rock 'n' roll Rolling Stones-style (Los Ratones Paranóicos). But the new developments did not mean the disappearance of the old proposals. Rather, a panorama was set forth in which several very different proposals coexisted and appealed to different youth segments.

Thus in the early 1990s the very complicated and heterogeneous *rock nacional* musical scenario included the traditional rockers still linked to the pop and protest music mainstream (Charly García, Fito Páez, Luis Alberto Spinetta, León Gieco), the heavies (Pappo), the punks (Los Violadores), different variants of the 'modern rock bands' that promoted a more danceable version of *rock nacional* (Soda Stereo, Virus, Los Brujos, Los Babasónicos), blues-oriented bands (Memphis la blusera, La Mississippi Blues Band), various underground proposals (Patricio Rey y sus Redonditos de Ricota), reggae and ska bands (Los Fabulosos Cadillacs, Los Pericos), Spanish rap bands (Illya Kuryaki and The Valderramas, A Tirador Laser), *rock chabón* bands (a movement which could be translated as 'rock of the neighborhood') (Divididos, Las Pelotas, La Renga, etc.) and many others.

The flourishing of the underground as the site of the 'defenders' of the 'real *rock nacional*' also contributed to fragmentation in the early 1990s. The underground musicians claimed to be the only ones who preserved the *rock nacional* ideology combating the establishment, the ones who had resisted 'la transa' (being sold out) that the appearance of big commercial sponsors seemed to have brought to the *rock nacional* scenario. Interestingly, these underground musicians became some of the most commercially successful groups of the period. Such is the case with La Renga and Patricio Rey y sus Redonditos de Ricota.

For many young people of the popular sectors, living in neoliberal Argentina was not so different from living under a military dictatorship. Thus, it is not by chance that, for those young people excluded from the socioeconomic model, *rock nacional* continued to provide the basic interpellations through which they processed their identifications. Therefore, a new form of musical protest started against President Menem (1989–99) and his neoliberal economic model, and *rock nacional* was at the vanguard of this protest in the 1990s with a subgenre derogatorily called '*rock chabón*.'

Rock chabón addressed young people whose social integration was severely hindered by a socioeconomic process that reduced employment and diminished the culturally consecrated figure of the worker, even as it hallowed a consumer culture that frustrated more than it satisfied. *Rock chabón* was the music of the young people who contested this economic model. The stance adopted by *rock chabón* was culturally novel within the history of *rock nacional*, because it did not express the political disenchantment of the middle class. Rather, it gave expression to the more polyvalent voice through which youth from popular sectors related to democracy, to the dismantling of the last vestiges of the welfare state, and to the historical imaginaries generated by the Peronist experience, which fueled the dreams of integration (more or less egalitarian) that characterized the Argentina already dying in the late 1980s and early 1990s.

An interesting change occurred in the 1990s within *rock nacional*. If, in the previous epochs, most of the musicians were middle-class artists who sporadically addressed the working-class issues that many of their followers experienced, with *rock chabón* many lower and working-class people came forward and occupied the stage. Therefore, there were no visible class differences between the members of La Renga, Viejas Locas, Dos Minutos, Attaque 77, Flema, Gardelitos, etc., and the fans that bought tickets to see their shows. Even though *rock chabón* groups performed very different musical variants, there was a perceived unity in the subgenre, achieved through a common theme in *rock chabón*'s lyrics, a particular way of reading social reality, and the more or less homogeneous way in which the public received and categorized its messages. Thus, emblematic songs of *rock chabón*, such as 'Matador' by Los Fabulosos Cadillacs, 'Verano del 92' (Summer of 92) and 'San Jauretche' by Los Piojos, 'Nada que hacer' (Nothing to Do) and 'Demasiado tarde' (Too Late), by Dos Minutos, 'En la esquina' (On the Street Corner) by Hermetica, 'Sabado' (Saturday) by Divididos and 'Vendepatria clon' (Sellout Clone) by La Renga, advance issues of police violence, drug and alcohol consumption, antineoliberal political stances, petty crime and the like, which conform the core of *rock chabon*'s message.

Thematically this variant of rock drastically departed from the genre's history, because it glorified thieves and slums as heroes and revolutionary paradises, and it became nationalist as *rock nacional* never had been before. *Rock chabón* brought to the fore a form of social criticism rooted in the idea of the 'good old times,' and a moral stance situated far from the individualistic values that gave meaning to the sensibilities of the middle classes.

As an important part of this new direction, *rock chabón* audiences played a much more prominent role in the creation of a 'joint' performance with audience participation than was customary with previous *rock nacional*. That role was enacted, among other ways, through audience activities transplanted from soccer games to *rock chabón*'s performances, including the continuous display of banners, singing *cantitos* (brief popular songs) and firing flares during concerts. Initially an autonomous development of the public, the practice of firing flares was rapidly promoted by many musicians themselves, starting a kind of 'contest' between bands over how many flares were fired at their concerts. Eventually this practice tragically marked the end of *rock chabón*, when 194 young people were killed in December 2004 in a fire at the dance hall Cromagnon, while attending a performance of one of the most popular bands of the genre, Callejeros, which was not, by chance, one of the bands that publicly promoted the flare contest.

The Cromagnon tragedy triggered the closing and prohibition of the traditional spaces where *rock chabón* flourished. In order to survive, some of *rock chabon*'s bands decided to participate in massive rock festivals, such as Pepsi Music or Cosquin Rock, modifying, in the process, their trademark performance style. In this regard, they moved from self-production and an independent approach to their live performances to a more market-oriented approach based on commercial (and often multinational) sponsors.

At the same time, the musical map moved again to the 'festive' side of the fence, and after 2005 the most popular bands were those enrolled in this variant of *rock nacional*, such as Miranda and Babasonicos (both linked to the techno-pop musical scene). The most important event of the period, however, was the brief return of Soda Stereo (the paradigmatic pop band of the 1980s and 1990s), which gathered more than 350,000 fans in seven concerts that were held at the River Plate soccer stadium between October and December 2007.

Conclusion

Due to the diversity of subgenres that characterize *rock nacional*, it is clear difficult to typify, and that it meant different things in different periods of its almost fifty-year history. However, some constants seem pervasive in the evolution of the movement. Two of the 'founding fathers' continue to be viewed as indisputable leaders of the movement: Luis Alberto Spinetta and Charly Garcia. Additionally, *rock nacional*'s tendency to embrace fusion music has persisted, the only difference being the type of music blended with rock. At the same time, the oppositional nature of the genre has become a given, and most young people expect *rock nacional* to be meaningful (thus the early twenty-first-century divide between 'music for fun,' or *cumbia*, versus 'music to think,' or *rock nacional*).

While the Argentine music scenario is more divided than ever in the early twenty-first century, and new technologies (iPods, Youtube, Facebook, etc.) allow people to construct their own music repertoires 'outside or beyond genres' (giving the users much more agency in their use of music), the future of *rock nacional* looks as bright as was its past, as the genre that somehow has synthesized Argentine music history and may continue doing so in the immediate future.

PABLO VILA AND JOSÉ GARRIGA ZUCAL

Rocksteady

Rocksteady (variant, rock steady) music emerged in the Kingston, Jamaica recording studios in the fall of 1966, although the term first referred to a relaxed style of dancing that appeared in Kingston dance halls between 1963 and 1965 (Bradley 2000, 161; Katz 2003, 69). Rocksteady music was a variation of ska, an uptempo Jamaican dance music that synthesized US R&B with Jamaican folk and religious musics in the late 1950s and early 1960s.

Whereas ska music and dance were lively and celebratory, rocksteady arose when musicians slowed the rapid ska tempo to a more relaxed pace to accommodate dancers' requests for less frantic music and to create musical variety. The first recording in the rocksteady style was Hopeton Lewis's 'Take It Easy,' released in October 1966. Musically and lyrically, 'Take It Easy' expressed the desires of the Jamaican lower-class musicians and audiences to slow down and remain calm at a time when tension was in the air due to a rise in unemployment, crime and taxes, and this lyrical theme often surfaced in other rocksteady songs. Rocksteady's musical features comprised a broad range of musical elements from Jamaican music, traditional Anglo-Celtic folksongs and Christian hymns, and US contemporary African-American music. Rocksteady lyrics addressed a wide variety of subject matter, including light-hearted party-oriented topics, romance, social criticism, Rude Boy culture (explained below), philosophical and spiritual themes. Rocksteady's popularity was short-lived, however, and in 1968 a new genre called 'reggae' emerged when rocksteady musicians synthesized rocksteady with several other Jamaican and non-Jamaican musics.

Until the late 1960s both rocksteady and reggae were popular in Jamaica and in the United Kingdom, and the 'rocksteady' and 'reggae' labels were frequently used interchangeably by musicians, producers, disk jockeys, record labels, journalists and even musicologists to refer to the earliest reggae recordings. This imprecise labeling makes rocksteady analysis problematic when studying contemporary accounts or considering the retrospective statements of participants (e.g., interviews with rocksteady pioneers in Katz 2003). Additional problems arise because the features of the rocksteady recordings that immediately preceded the earliest reggae recordings were not markedly distinguishable from each other in term of musical elements (Witmer 1981, 107). The most notable late rocksteady–early reggae recordings released in 1967 and 1968 include 11 songs that are often individually cited by different reggae aficionados as being 'the first reggae record,' but they could just as easily be considered the final recordings of the rocksteady style since their distinguishing reggae traits are sometimes outnumbered by rocksteady ones: 'No More Heartaches' (the Beltones), 'Pop A Top' (Andy Capp [aka Lynford Anderson]), 'Bangarang' (Wilburn 'Stranger' Cole and Lester Sterling), 'Dulcemania' (Drumbago and the Dynamites), 'Feel the Rhythm' (Clancy Eccles), 'Nanny Goat' (Larry [Marshall] and Alvin [Perkins]), 'Do the Reggay' (the Maytals), 'Say What You're Saying' (Eric 'Monty' Morris), 'People Funny Boy' (Lee Perry), 'Long Shot' (the Pioneers) and 'Everybody Needs Love' (Slim Smith).

The factors that account for rocksteady's emergence as a musical style are complex and intertwined, and unfortunately were not documented at the time (Katz 2003, 65–95). Rocksteady has suffered from the least detailed analysis in the literature about Jamaican popular music, possibly due to its relatively brief period of prominence and its lack of a subsequent full-scale revival. Few scholars delve into its characteristics other than its transitional status between ska and reggae. Further, there are no films of rocksteady performances between 1966 and 1968.

Musical Characteristics

Rocksteady's Jamaican traits include rhythmic and melodic elements that appear in Jamaican folk music such as mento (a Jamaican folk music that combines Anglo-Celtic melodies and harmonies with syncopated bass lines and accompaniments that employ strong afterbeat accents; 'afterbeat' is explained below), as well as religious music and ska. Many Jamaican musics share an aesthetic approach that scholars call 'neo-African,' because of their roots in West African religious, music and dance practices that were retained by Jamaican Maroons (slaves who escaped to the forested, mountainous interior of the island between the sixteenth and mid-nineteenth centuries) (Carty 1988, Ryman 1983). Jamaican neo-African elements include a preference for overlapping syncopated polyrhythms, bass riffs that frequently begin and end on afterbeats, circular ostinato harmonic progressions and a preference for individualistic, buzzy vocal and instrumental timbres. Although these neo-African elements also appear in US African-American religious and popular musics, the degree of African elements in Jamaican music is often more pronounced than in their US counterparts.

'Afterbeats' is a term that Jamaican music scholars use to refer to the consistent accenting of offbeats (see Example 1) that appears in not only rocksteady and ska, but also in reggae, dub, dancehall and all Jamaican folk and religious musics; examples of Jamaican folk music follow below. Because of the frequent conflation of the term 'offbeat' with 'upbeats' and 'backbeats,' Jamaican musicologist Garth White and American musicologist and reggae bassist Luke Ehrlich suggest that 'afterbeat' is a more appropriate term, since afterbeats usually consist of the harmonies of the previous beat (White 1982, 38; Ehrlich 1982, 55). Another notable characteristic of afterbeats is that they are consistently louder and heavier than sounds on the beat. (See 'Reggae' entry for a more detailed analysis of the term 'afterbeat.')

Example 1: Afterbeat accents

Examples of Jamaican folk and religious musics include Jonkonnu – a Jamaican celebratory practice featuring fife and drums that involves parading and miming with neo-African music and dance and demonstrates commonalities with both West African harvest festivals and the British Mumming traditions practiced during the Christmas season (Ryman 1984a, 1984b; White 1984, 63–4; Wynter 1970). Other examples are mento and Jamaican Revival (a syncretic blend of traditional Christian practices with rituals, music and dance retained from West and Central African religions that were practiced by Jamaican Maroons).

Rocksteady songs employ a steady 4/4 tempo, accented afterbeats usually played on guitar and keyboard, and strong backbeats similar to the rhythmic emphasis found in ska, mento and other Jamaican secular and religious folk musics. Rocksteady melodic phrase structures are dominated by afterbeat entries, accents and endings, but harmonic elements include many traditional European traits: a preference for basic three-chord primary harmonies in major keys (i.e., the same I, IV and V chords employed in Christian hymns and Anglo-Celtic traditional songs) and symmetrical four-bar and four-phrase song sections.

African-American elements appear from two overlapping sources: first, their presence in ska and second, the US soul and R&B recordings that were extremely popular in Jamaican dancehalls and with musicians in the mid-1960s, exerting a significant influence upon rocksteady instrumental, vocal and arranging styles (Barrow and Dalton 2004, 11–18; Bradley 2000, 157–8, 161–2, 173; Masouri 2008, 9, 32–3). The most popular African-American R&B artists in Jamaica during the mid-1960s were Curtis Mayfield and the Impressions, Otis Redding, the Drifters, Clarence Carter, Ray Charles, Sam Cooke, Ben E. King, Chuck Jackson, Lou Rawls, and all of the Motown artists.

The influence of African-American music is evident in several areas: the predominance of small R&B combo instrumentation (lead and rhythm guitars, electric organ, electric bass, drum kit, and – occasionally – a small horn section usually consisting of a trumpet, one or two saxophones and a trombone), an emphasis on electric bass riffs, call-and-response vocal and instrumental techniques, solo and ensemble vocal and melodic approaches similar to those of 1960s African-American soul and R&B artists (use of melismas and ornaments; non-pitched techniques such as growling, scooping and semi-speech; rough timbres), and fondness for unisex ensemble singing ranging from solo vocal to three- or four-part harmony.

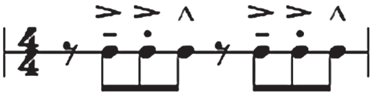
Rocksteady ensembles increasingly featured organ in addition to, or instead of, piano, primarily influenced by the organ's prominence in contemporary US soul and R&B recordings and live performance practices. Backbeats are emphasized with a drum technique used occasionally in ska that became standardized in rocksteady, called the 'one-drop' bass drum pattern. In this technique, the bass drum plays an accented quarter note on beats two and four in a 4/4 measure (rarely playing first and third beats, and often reinforced with snare drum rim shots). When combined with the rocksteady bass style (described below), this one-drop technique creates a consistent pattern in 4/4 meter (which dominates the rocksteady repertoire) in which the first and third beats are either weak or silent. This emphasis moves most rocksteady arrangements further away from the R&B inflections of ska, resulting in a style that tends to feature Jamaican elements more often than African-American ones, even when both are present.

A minority interpretation affirms that the bass drum drop is placed on the third beat of a 4/4 measure (rather than on backbeats). This minority view is held primarily, but not exclusively, by non-Jamaican musicians and musicologists, including British rock drummer Stewart Copeland of the Police, British writer Lloyd Bradley (2000) and Jamaican drummers Sly Dunbar and Winston Grennan (cited in Bradley 2000). However, the majority of scholars and musicians find this interpretation problematic, since it would place the sounds attributed to afterbeats (by the majority interpretation) on beats two and four, with no possibility of their being delayed if a swing groove is employed. Examples of those espousing the majority view include Bob Marley (interview in *Caribbean Nights* [1986]), Luke Ehrlich (1982), McCarthy (2007) and White (1984).

Although rocksteady initially emerged as a variant of ska, it differs from ska in terms of tempo, rhythmic approach and orchestration. Tempos are between 85 and 120 beats per minute (bpm) (versus 120–30 bpm for ska). Ska generally favors swing rhythms (often called a shuffle groove), but rocksteady rhythms favor even beat subdivision (usually notated as eighth notes). Rocksteady rhythmic patterns are generally more rapid (usually notated using sixteenth-notes/rests), although this increased activity is frequently implied (especially in bass and drum parts) with pickup and/or grace notes, rather than with a flurry of sounds.

Rocksteady orchestration differs from ska in terms of bass lines, use of guitars, horns and vocal parts. Rocksteady bass lines are played exclusively on electric bass and employ active, syncopated rhythmic patterns (usually notated as eighth and sixteenth notes in a 4/4 measure), versus ska bass parts that usually consist of walking bass lines (played on acoustic bass) that emphasize each beat. Rocksteady bassists usually play short repeated phrases (called 'riffs') that emphasize afterbeats and second and/or fourth beats, a style that differs significantly from the one employed by 1960s African-American bassists on soul and R&B recordings. One- or two-beat rests appear frequently between these phrases, which last from a few beats to one or two bars. Synchronous with the style on contemporary R&B records, rocksteady bass is mixed louder and with more fullness than in ska recordings.

Rocksteady arrangements usually feature two or three electric guitars – versus one guitar in ska – influenced by 1960s US and British rock and R&B recordings, although the characteristic solo lead guitar function (exemplified by George Harrison of the Beatles or Eric Clapton's work in Cream) is not employed. One guitar usually plays chordal afterbeats, frequently adding muted, accented chords on second and fourth beats which produces a pattern that Neely calls the mento banjo 'bubble' rhythm (see Example 2) (Neely 2008, 207).



Example 2: Rocksteady guitar strumming pattern derived from mento banjo bubble rhythm

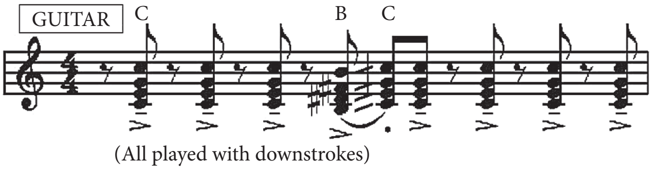
A common approach to playing these chordal afterbeats introduced by guitarist Nerlynn 'Lynn' Taitt (who grew up in Trinidad) was a 'chordal scoop' (an upward glissando between two barred guitar chords of the same shape, from a semitone below up to the target chord), usually starting on the final eighth note of a 4/4 measure and resolving on the subsequent downbeat (see Example 3).

Another guitar often plays rapid fills employing rapid tremolo picking – called stutter guitar – a technique also developed by Taitt, as an imitation of steel drums (Katz 2003, 71). An additional guitar technique (sometimes combined with stutter guitar) – also common in US R&B (especially on recordings on the Stax label that employed the house band Booker T & the MGs, and on the Motown label that employed the house band the Funk Brothers) – involves the doubling of bass parts an octave higher in a muted, clipped style.

In rocksteady arrangements, horns are used only occasionally, if at all, and their style is generally more melodic and contrapuntal than in ska, where the emphasis is upon chordal afterbeat accents. Rocksteady horn parts can involve call-and-response figures between vocal lines, short interludes and reinforcement of bass and/or guitar patterns. This approach is similar to the use of horns in mid-1960s African-American R&B recordings, especially those on the Stax record label. The reduction in horn use in rocksteady arrangements was due to several interrelated factors: the breakup of the Skatalites in 1965 (the main Jamaican house band of the early 1960s – with a 4–5 piece horn section – that played on the majority of ska recordings), an economic downturn in 1966 (which reduced budgets for recordings and live performances), and the rise of guitar-based bands in North American and British rock (e.g., the Beach Boys and the Beatles). Also, in contrast to ska, where solo singing is more commonplace, rocksteady vocal parts favor multipart voicings in a soul/gospel style, strongly influenced by contemporary US R&B vocal groups (especially on the Motown and Stax labels).

Rocksteady melodic and harmonic patterns were influenced by late-1960s African American recordings and songs. Harmonic progressions are often static – frequently consisting of just two or three oscillating chords and favoring minor modes – and melodies are dominated by blues-influenced improvisatory call-and-response techniques that create overlapping contrapuntal textures.

In terms of lyrical orientation, many rocksteady artists were inspired by Walter Rodney, a Guyana-born



Example 3: Lynn Taitt's chordal scoop technique

graduate of Jamaica's University of West Indies whose promotion of black civil rights and identity was influenced by African-American leaders (especially Malcolm X and Martin Luther King) as well as by Jamaican writer and orator Marcus Garvey's philosophies, many of which are at the heart of Rastafarianism. Lyrics that either celebrated or chastised a rebellious lifestyle (exemplified by Rude Boys or Rudies, unemployed youth who were known for their confrontational attitude and disregard for societal rules and codes [Bradley 2000, 160–3]) were also popular. Many Rudies were enamored with American movies about gangsters and Wild West cowboys, and they adopted the cool, often detached demeanor of gangsters and cowboys. This attitude did not fit the jerky, flailing down-and-up style of ska dancing, so they created a slow-moving dance style that became known as 'rocksteady,' because they mostly rocked back and forth in one place.

Although rocksteady songs generally differed from those of the ska era in the ways noted above, some rocksteady traits had appeared sporadically during the ska era: slower tempos, riff-oriented bass lines (employing quarter and eighth notes with afterbeat accents and rests between phrases), minor keys and modal melodies and harmonies. For example, the Skatalites recorded many instrumentals that were in minor keys and featured repetitive or riff-like melodies and fairly static harmonic progressions with an emphasis on the tonic minor chord, and bass parts (played by Lloyd Brevett) that often deviated from the walking bass pattern with short riffs and afterbeat accents (e.g., Don Drummond's 'Silver Dollar,' 'Confucious' and 'Re-Burial' and Roland Alphonso's 'Determination,' recorded in 1964 or 1965). These pieces were similar to US 'soul jazz' recordings from the late 1950s and early 1960s such as the Cannonball Adderley Quintet's 'Work Song' (1960) and 'Sack o' Woe' (1960) (Witmer 1986, 367).

Other Factors Influencing Rocksteady Development

Rhythmic developments in contemporary Latin musics such as *samba, bossa nova* and *son* were influential upon rocksteady, especially in the work of Jamaican rocksteady musicians who grew up elsewhere, such as guitarist Lynn Taitt (Trinidad), drummer Winston Grennan (Saint Thomas) and saxophonists Tommy McCook and Roland Alphonso (Cuba) (Katz 2003, 65–95; White 1982, 42; Masouri 2008, 10–11).

Some analysts (and some rocksteady artists and producers, notably singer Derrick Harriott and producer Bunny 'Striker' Lee) believe that the exceptionally hot summer of 1966 was a significant reason why dancers requested slower music, which ultimately led to a change in dancing and musical styles (Bradley 2000, 163). In the literature about reggae, others suggest that Ethiopian Emperor Haile Selassie's visit to Jamaica on 21 April 1966 was a factor in the shift from ska to rocksteady and then to reggae (Davis 1990, 70; Edwards 1999, 1591). When Haile Selassie visited Jamaica, hundreds of thousands of Rastafarians came out to see him, which generated many new converts to the movement. The Ethiopian emperor's visit took place as the US Black Power movement was growing, along with a general increased awareness of civil rights issues in both the United States and Jamaica, and social and political unrest in Jamaica in late 1966 and early 1967. However, according to the testimony of artists involved in the first rocksteady recordings (such as Bob Andy, Ken Boothe, the Ethiopians, the Gaylads, the Heptones and Bob Marley and the Wailers), Selassie's visit and Rastafarian philosophy may have inspired many of them to focus on their African roots, but they played only a small, indirect role in the actual emergence of both rocksteady dancing and the musical shifts noted above (Reckford 1998, 247; Katz 2003, 69–95). Rather, the primary influence cited by the above rocksteady artists appears to be that of US R&B, while the main influence of Selassie's visit and the subsequent rise of Rastafarianism seems to have been to inspire rocksteady artists to begin to create the type of socially conscious, philosophical lyrics that would ultimately dominate reggae, the next phase of Jamaican music (Barrow and Dalton 2004, 78–9).

Influential Rocksteady Producers, Artists and Songs

Because rocksteady was initially developed primarily in the studio, rather than as a live music, producers played a major role in the shaping and development of the genre. The most influential producers were Arthur 'Duke' Reid (who produced most of the earliest rocksteady recordings) and Clement 'Coxsone' Dodd, followed by Sonia Pottinger, Bunny 'Striker' Lee and Harry J (Harry Zephaniah Johnson). Most rocksteady artists were vocalists accompanied by studio house bands, and rocksteady arrangements emphasized vocal harmonies and soloists versus the prominence of instrumentalists in ska. The most frequently employed house bands were Studio One's Soul Vendors, led by Roland Alphonso and Treasure Isle's Supersonics led by Tommy McCook (both former saxophonists in the Skatalites) and Lynn Taitt and the Jets. The personnel of each band was variable, employing different combinations of the following musicians: bassists Clifton 'Jackie' Jackson and Leroy Sibbles; drummers Winston Grennan, Lloyd Knibbs, Hugh Malcolm and Arkland 'Drumbago' Parks; guitarists Ernest Ranglin and Lynn Taitt; keyboardists Gladstone Anderson, Ansel Collins, Neville Hinds, Jackie Mittoo and Winston Wright; trumpeters Baba Brooks and Johnny 'Dizzy' Moore; trombonist Vin Gordon; and saxophonists Herman Marquis, Tommy McCook and Roland Alphonso.

In spite of its brevity, the rocksteady era introduced over two dozen new artists – a mix of soloists and soul-influenced vocal harmony groups. The repertoire of most soloists was dominated by love songs performed in a US soul style similar to that of African-American artists Lou Rawls and Curtis Mayfield. The biggest hits in this style include Alton Ellis's 'Girl I've Got a Date' (1966); Dobby Dobson's 'Loving Pauper' (1967); Phyllis Dillon's 'Don't Stay Away' (1967); Dawn Penn's 'No, No, No (You Don't Love Me)' (1967), covered by Rihanna on her 2005 debut CD; and Ken 'Mr. Rock Steady' Boothe's 'Puppet on a String,' a 1968 cover version of UK pop artist Sandie Shaw's 1967 Eurovision Song Contest award-winning hit. Many vocal harmony groups also had love songs in their repertoire. Some of the biggest hits in this style were the Gaylads' 'No Good Girl' (1966); the Techniques' 'Queen Majesty' (1967), a cover version of Curtis Mayfield and the Impressions' 1963 hit 'Minstrel and Queen'; Carl Dawkins and the Carib-Beats' 'Baby I Love You' (1967); the Paragons' 'Happy Go Lucky Girl' (1967), 'On the Beach' (1967) and 'The Tide Is High' (1967), which became an international hit in 1980 in a cover version by American rock group Blondie; and Bob Marley and the Wailing Wailers' 'Nice Time' (1967).

Most dance/party songs had prominent active bass riffs and employed the one-drop drum style, which were foregrounded in the mix. Big hits in this style include Roy Shirley's 'Hold Them' (1966); Delroy Wilson's 'Dancing Mood' (1966); Alton Ellis's 'Rock Steady' (1967); Marcia Griffiths's (who would become a member of the I-Threes, the vocal trio that became part of the Wailers in 1974) 'Feel Like Jumping' (1967) and 'Melody Life' (1968); Slim Smith and the Uniques' 'People Rocksteady' (1967) and the Heptones' 'Party Time' (1968).

Many rocksteady songs either glorified or castigated the Rude Boys phenomenon. One of the earliest, 'Cry Tough' by Alton Ellis (1966), was highly critical of violent Rudie behavior. It inspired many other songs that confronted Rude Boys' attitudes, such as the Clarendonians' 'Rudie Bam Bam' (1966) and 'Rudie Gone A Jail' (1966); Justin Hinds and the Dominoes' 'No Good Rudie' (1966); Prince Buster's 'Judge Dread' (1967); and Dandy Livingstone's 'A Message to You Rudy' (1967), which became an international hit in 1979 in a cover version by the Specials – a UK punk-style band comprising former Jamaicans and British youth. Songs that glorified Rudie culture included Bob Marley and the Wailers' 'Jailhouse' (1966), Derrick Morgan's 'Tougher Than Tough' (1966) and Desmond Dekker and the Aces' '007 (Shanty Town)' (1967).

In the 1970s social justice and spirituality dominated a subgenre of reggae called 'roots reggae,' but this genre had its genesis in rocksteady hits such as the Heptones' 'Equal Rights' (1968) and the Ethiopians' 'Everything Crash' (1968), songs that addressed social injustices in a manner similar to Bob Marley and the Wailers' 'Get Up Stand Up' (1973). In 1967 Bob Andy's 'I Got to Go Back Home,' and Justin Hinds and the Dominoes' 'Carry Go Bring Home' portrayed philosophies and ideas similar to Marcus Garvey's 'back to Africa' ideology, in which all descendants of African slaves should return to the African homeland. This was to become a dominant theme during the roots reggae era, typified by Burning Spear's (Winston Rodney) 'Slavery Days' (1975) and Bob Marley and the Wailers' 'Exodus' (1977).

Some rocksteady songs also addressed spiritual issues – yet another theme that would dominate the roots reggae era. Ken Boothe's 'The Train Is Coming' (1966) used the metaphor of a train taking the singer to a place where 'we will all be free.' In 1995 a remake by Shaggy (Orville Richard Burrell) featuring Ken Boothe became a huge international hit. Bob Marley and the Wailers' 1970s repertoire featured many songs with spiritual themes, for example, 'So Jah Seh' (1974), 'Jah Live' (1976) and 'Redemption Song' (1980), but one of their first songs in this style was their 1967 rocksteady hit 'Thank You Lord.'

Most of the rocksteady recordings with lyrics about romance and dancing/partying were also big hits in Britain (see de Koningh and Cane-Honeysett 2003; de Koningh and Griffiths 2004; Hebdige 1982, 1987). In November 1968 the Beatles' 'Ob-La-Di, Ob-La-Da,' a rocksteady-influenced song, appeared on their internationally best-selling album *The Beatles* (aka 'The White Album'). This recording was the first exposure for many non-Jamaicans to the rocksteady genre, although its rocksteady traits are synthesized with (and dominated by) rock rhythms. Jamaican elements include piano and guitar playing Jamaican-style chordal afterbeat accents, an *ostinato* bass riff doubled at the octave by guitar, melody and horn parts dominated by afterbeat accents, and a simple harmonic vocabulary – just three chords for verses and choruses (I, IV and V), with a fourth chord (vi) in the bridge and coda. These Jamaican elements are combined with heavy rock-style accents by bass guitar and bass drum on first and third beats, which ends up dominating the overall rhythmic groove. This synthesis of rock-style drumming and bass parts accenting the first and third beats with rocksteady afterbeat accents was emulated in the 1970s by many non-Jamaican artists' recordings in rocksteady-inflected original songs (although most musicians and reviewers mislabeled the Jamaican component as 'reggae' in each case), including Paul McCartney's 'C Moon' (1972), Led Zeppelin's 'D'yer Mak'er' (1973) and Kenny Rogers's 'The Gambler' (1978). McCarthy (2007, 511–50) analyses Jamaican-style music recorded by a variety of non-Jamaican pop, country, R&B and rock artists.

The first internationally successful rocksteady recordings by Jamaican artists were Jimmy Cliff's 'You Can Get It if You Really Want' (1970) and Desmond Dekker and the Aces' '007 (Shanty Town)' (1967), featured on the soundtrack album of the movie *The Harder They Come* (1973). This first Jamaican feature film was about a rebellious Rude Boy-type of antihero. Although the soundtrack was a compilation of rocksteady and reggae songs (mostly Jamaican hits released in the late 1960s and early 1970s), it was marketed and reviewed by most analysts and journalists as 'reggae' music, with infrequent discussion of those songs that were actually rocksteady. Thus, although this film and soundtrack was a vehicle for the most successful dissemination of rocksteady outside of Jamaica, the mislabeling of rocksteady songs as 'reggae' became another contributing factor in the lack of awareness about and understanding of the rocksteady style as a unique genre that preceded reggae.

Rocksteady Dancing

The first rocksteady dancers were primarily Rude Boys, who wanted to be on top of the latest trend, which in the dance halls was R&B music – most of which was at a slower tempo than ska. It appears that rocksteady dancing began with movements adapted from R&B dancing which Rude Boys tried unsuccessfully with the faster ska music. According to Skatalites leader Tommy McCook (in Johnson and Pines 1982, 56), rocksteady's slower tempos emerged to accommodate Rude Boys' requests for slower music, and the music and rocksteady dance movements influenced each other (Bradley 2000, 157–97; Katz 2003, 65–95; McCarthy 2007, 211–22, 257–9).

Rocksteady dancing was more of a movement style than set gestures or steps, with limp arms and shoulders swaying from side to side and a one-step foot shuffle going in any direction (Bradley 2000, 159). Dancers usually stayed in one place and raised each shoulder alternately, with sensuous hip movements 'rocking steady' and with pounding motions with arms and hands (Bradley 2000, 159, 164; Clarke 1980, 81). Dancers marked time in one spot, which they called 'renting a tile' (Whitney and Hussey 1984, 13).

Rocksteady Post-1968

After reggae emerged in 1968, the rocksteady style faded in popularity in Jamaica, but many rocksteady songs consistently appeared on UK charts, albeit usually marketed as 'reggae' records. Examples include Ken Boothe's 'Everything I Own' (1974), a rocksteady cover of American pop band Bread's 1972 hit ballad, and Susan Cadogan's 'Nice and Easy' (1977), produced by Lee Perry. Reggae artists also still wrote and recorded songs in the rocksteady style, such as Bob Marley and the Wailers' 'Bend Down Low' (1974) and 'Cry to Me' (1976). In the 1970s and 1980s, most of the rocksteady-style hit recordings produced outside of Jamaica were made by non-Jamaican artists as either cover versions of rocksteady hits or original songs in the rocksteady style; for example, Paul Simon's 'Mother and Child Reunion' (1972), whose backing tracks were primarily recorded in Jamaica and performed by Jamaican session musicians, the Police's 'Spirits in the Material World' (1981) and UB40's 'Red, Red Wine' (1984), a rocksteady cover version of Jamaican reggae artist Tony Tribe's 1969 version, itself a cover of a song written by pop rock artist Neil Diamond in 1968. UB40 became familiar with Tribe's version when it became a hit in the United Kingdom in 1969.

In the early twenty-first century the conflation of the terms 'rocksteady' and 'reggae' persists in the media, and even among Jamaican artists, with little consistent explanation or recognition of the differences (and similarities) between the two styles. A 2009 documentary, *Rocksteady: The Roots of Reggae*, assembled many of the original artists for interviews and performances and attempted to delineate the style, but other than identifying some of the key artists and songs of the classic rocksteady era, the film presented few significant distinctions between rocksteady and reggae other than tempo and chronology. Unless there is a rocksteady resurgence, the conflation of rocksteady and reggae is likely to be persist.

Rumba

Rumba refers to a secular music and dance genre originating in Cuba among the primarily black and mulatto lower classes of Havana and Matanzas. The genre coalesced from the spontaneous and creative intermingling of West African music and dance elements (notably Congolese), with influences from Hispanic musical culture present in Cuba. With roots in the slave barracks of rural Cuba, *rumba* solidified as a style by the late nineteenth century in the lower-class black neighborhoods of Havana and Matanzas, performed informally at parties and social gatherings. The music comprises singing and percussion and is often accompanied by dancing. Since the late twentieth century *rumba* has become one of the most widespread, influential and recognizable Afro-Cuban genres both in Cuba and around the world. Although many variants of *rumba* once existed, since the mid-twentieth century three have remained: *yambú, guaguancó* and *columbia*.

The term *rumba* is used widely throughout Latin America and Spain as a general reference to dancing or a dance party. In Cuba, although the term may also be used in this manner, *rumba* (alternatively known as *timba*, although not referring to the modern style of Cuban dance music of the same name) as a genre is the umbrella term used to describe the music and dances of *yambú*, *guaguancó* and *columbia*, or the event in which these are performed.

The exact reason for the adaption of this Spanish term to designate this Afro-Cuban manifestation is uncertain. Odilio Urfé notes that the word *rumba* may have stemmed from the link between prostitutes or *mujeres de rumbo* (nineteenth-century designation) and houses of dance (1997, 215). On the other hand, Argeliers León links it to similar-sounding African-derived words such as *tumba*, *macumba* or *tambó*, with references to a reunion or collective dance party (196?, 4). *Rumba* has also long been used in southern Spain to refer to the dances and music of the *gitanos* (gypsies): *rumba flamenca*.

It must also be noted that *rumba* is not to be confused with 'rhumba,' the label applied to the commercial Cuban dance genre internationally popular during the 1930s and 1940s. Yet the two terms are not unrelated. In Cuba in the early twentieth century, staged versions of stylized *rumbas* were performed as part of comic theater shows (*teatro bufo*). These *rumbas* were actually stylistically closer to *son*, and featured dancers in ruffled sleeves. This stylized version of *rumba*, adapted and performed by big bands in the 1930s and 1940s, was marketed to largely North American audiences under the Anglicized label 'rhumba' as part of a strategy to highlight the 'exotic' and 'fiery' Cuban rhythms.

Origins of the *Rumba*

In discussing the history of *rumba*, it is important to understand the historical and ethnic background of Cuba. Christopher Columbus landed in Cuba in 1492, marking the beginning of the island's role as a colony of Spain. The Europeans brutally massacred Native Americans as they conquered their lands, and Cuba was no exception. Those who were not killed were often forced into slavery, which in the Caribbean often ended in suicide, escape or death from infectious diseases contracted from the Europeans. As the native workforce population dwindled, the Europeans looked to West Africa as a source for plantation labor. The importation of slaves increased in the eighteenth and nineteenth centuries as the sugar industry grew in Cuba, with most slaves being brought from West and Central Africa. The largest number of slaves came from the Congo area of Central Africa (Alvarado 1998, 7). The Bantu-speaking slaves originating in this area were called *congos*, and their cultural legacy in Cuba is referenced by the same name (*congo*). The *congo* and the *lucumí* (slaves from the Yoruba ethnic groups in West Africa) were the African groups with the greatest cultural impact in Cuba. The ancestor of *rumba* is found in the secular music and dance of the *congo* slaves, specifically the *yuka*.

The *yuka*, now rarely performed, contained many of the primary characteristics of *rumba*. During the colonial era, it was a popular form of secular entertainment, performed in slave barracks and *cabildos* (societies functioning as cultural and religious centers of African ethno-cultural groups) by the *congo* slaves and their descendants.

The *yuka* musical ensemble comprised three single-headed drums, pitched low to high, accompanied by sticks (called *guagua* or *katá*) played on the side of the lead drum. The songs featured call-and-response-style singing between *gallos* (singers who competed against one another) and a mixed chorus. The dance featured a male-female couple and centered on the pursuit of the female by the male, in which he tried to conquer her symbolically with a *vacunao*, touching his pelvis to hers.

During the colonial era in Cuba, some *congo cabildos* held a certain authority over other *congo cabildos*, as well as *cabildos* of other African ethnic groups, such as the *carabalí* (Ibibio-Efik). Thus the *yuka*, being the most popular entertainment music and dance form of the *congos*, was adapted and spread by these other groups as well (Moliner Castañeda and Gutierrez Rodríguez 1987, 42). New and different variations were a natural occurrence.

An important part of the continuing musical evolutions forming the prehistory of *rumba* was the gradual abolition of slavery and the migration of mass numbers of freed slaves from rural to urban areas during the mid- and late nineteenth century. After the first war of independence in Cuba (1868–78) and the formal abolition of slavery (1886), thousands of freed slaves were forced to move to Havana and Matanzas in search of employment. Here, they joined other free blacks, mulattoes and Spanish workers in the crowded ghettoes of the cities, which grew significantly in population. As the population intermixed, new, urban Creole identities were formed as elements of *congo*, *lucumí*, *carabalí*, Andalusian, Castilian, Chinese, Canarian, as well as countless other cultures were combined and transformed in the urban Cuban environment.

Living quarters in the *barrios* were tight and families lived in small apartments in buildings that often surrounded a central courtyard. These courtyards, called *solares*, were the birthplace of *rumba*. The *solar* was a social center where neighbors performed daily activities and celebrated religious and secular events with music and dance. Here, the people were poor and had limited resources, thus drums and other crafted instruments were not always available and instruments were created out of almost anything that could produce a sound when struck: dresser drawers, doors, tabletops, chairs, walls, spoons or even bottles. These were the instruments used in the earliest *rumbas*, which may have appeared as early as the 1840s.

In the late nineteenth century many *rumberos* began using *cajones* ('boxes') as the primary instruments for accompanying *rumbas* in the *barrios*. The first *cajones* were derived from wooden packaging crates from the ports of Havana and Matanzas, where many of the inhabitants of the *barrios* worked. The wooden crate in which *bacalao* ('salted codfish') was packed was particularly popular for the large *cajón*, sometimes called the *caja*. In perfecting the sound, the crates were dismantled, sanded and reassembled tightly to improve resonance. The *caja* is shaped like a box and is played while sitting on top. The primary side, which usually has the thinnest wood, is struck with the fist in the center, producing a low-pitched bass sound, while the player keeps time with his fingers on a corner of one of the other sides.

A second, smaller *cajón* also appeared, called the *cajoncito* or *quinto cajón*. This was constructed from the small boxes used by the Sabatés company to ship their candles. This *cajón* is shaped like a square dresser drawer, with the bottom side open. It fits between the legs of the player and is struck with both hands on the top side, between the knees. This side, being the thinnest, produces a full, dry sound when struck in the center of the side closest to the player. It can also be struck near the corners for a high-pitched slap sound or played in the middle of the top side with the fingers for a bass sound.

The *cajones* were the first instruments constructed specifically for playing *rumba*. The large *caja* replaced the role of the door or wall for the low-pitched sonorous plane and supplied a basic, repeating pattern. Above this, the *quinto cajón* elaborated around the rhythm of the *caja*, while strategically interacting with the singers and other instruments. The player of the *quinto cajón* often wore a pair of wrist rattles or *nkembi*, an influence from the practice of lead drummers in *congo* forms.

In the highest-pitched plane, the *claves* and sticks or spoons helped complete this early *rumba* ensemble. The *claves* were another product of the shipyards, derived from large wooden pegs. They are two pieces of hard wood struck together to produce a high-pitched sound. The *claves* replaced the role of other beaters such as the bottle or hoe blade, providing a short, repeating rhythmic cell.

Example 1: *Clave* rhythm. *Rumba*'s central rhythmic reference

This pattern, called *la clave* ('the *clave*'), became the central point of reference for both instruments and singers. Finally, the *cucharas* ('spoons') provided another repeating pattern accompanying the *clave*. Two spoons were played on a *cajita china* ('Chinese box'): a small box held between the legs of the player. In lieu of spoons, sticks could also be used, played on almost any surface. The *cucharas*' or sticks' part can also be referred to as the *catá* or *guagua*. *Catá* was the name used for the sticks' part played on the side of the lead drum in *yuka*, a practice that was later observed in early *rumba* ensembles. The *guagua* refers to a piece of dried bamboo on which sticks are beaten.

Rumba Antigua and *Rumba de Tiempo España*

An early style of *rumba* coalesced in the late nineteenth century in Havana and Matanzas. Now known as *rumba antigua*, meaning 'ancient' or 'old-style *rumba*,' it featured the use of household instruments or *cajones* and *claves*, which accompanied a lead singer and a chorus. The lead singer, also called *gallo* or *guía*, sang the main verse and improvised in antiphonal style with the chorus's repeating phrase. The common language was Spanish, and *rumbas* – unlike their African predecessors – were composed primarily in this language. These early *rumbas* had very short texts, often descriptive or erotic in content. A short verse or main body of the song (optional) was followed by an *estribillo* (chorus), a short phrase repeated by the chorus singers between which the *guía* improvised on the theme. Melodies were short and simple, yet were more diatonically clear than their *yuka* ancestors.

Rumbas in the *solares* were often spontaneous and included whoever was present at the moment. Often, *guías* had friendly or confrontational singing 'battles,' in which one would try to outdo the other, a practice similar to those seen in Cuban rural areas where singers have *controversias* ('controversies,' battles featuring the exchange of improvised sung poetry). The chorus comprised other singers, dancers and spectators. *Rumba* is a very participatory event, as are the musics and dances of its African predecessors. In effect, dancers and chorus singers, as well as drummers, could appear at any given moment, contributing to its spontaneity. These drummers, dancers and singers had informal musical educations, and were often *cabildo* musicians or dancers, performing religious and secular music of the various African ethnic groups (Moliner Castañeda and Gutierrez Rodríguez 1987).

The dancing featured one independent male-female couple at a time, similar to the *yuka*. Another feature it shared with *yuka* was the pursuit of the female by the male. Some scholars and even *rumberos* contend that the earliest *rumba* was in fact the *yambú* variant, which was slow, played on *cajones* and did not contain the *vacunao* found in *yuka*, yet this is not certain. A few early *rumbas* did in fact contain the *vacunao*, thus bringing into question the claim that the *yambú* is the eldest variant of *rumba* (Moliner Castañeda and Gutierrez Rodríguez 1987).

Some of these early *rumbas* with *vacunaos* are the *rumbas de tiempo España* (the colloquial equivalent of '*rumbas del tiempo de España*' or '*rumbas* from the time of Spain'), of colonial origins. They are sometimes confused with *yambú*, as both are said to be among the oldest manifestations of *rumba*. *Rumbas de tiempo España* were a set of highly mimetic dances, following descriptive and story-like texts and culminating in a *vacunao*. Some scholars contend that some of the *rumbas de tiempo España* were danced in Havana as early as the 1840s; thus, it is likely that they predate the *yambú* and are the earliest known *rumbas* (Esquenazi Pérez 2007).

Examples of *rumbas de tiempo España* still surviving today include 'Mamá abuela,' which describes the story of a schoolboy who gets in trouble with his grandmother for not wanting to go to school, and 'Lala no sabe hacer na',' telling of a lazy girl who does not know how to iron clothes or do other household chores a woman was expected to carry out. 'El gavilán' ('The Sparrowhawk') – about a farmer who pursues a sparrowhawk that ravaged his chickens – is particularly interesting. The movements of the male (the farmer hunting the sparrowhawk) are similar to those in the dance of Ochosi, one of the *orishas* (deities of the Yoruba pantheon) linked to hunting. The movements of the female, who represents the *gavilán*, are closely tied to the dances of the *arará* (referencing peoples brought to Cuba from Dahomey) and *congo* groups dedicated to carnivorous birds. The male often dances with a stick used as a gun – a phallic symbol – and the female is eventually caught or killed in the end when the hunter fires his gun at her, simultaneously executing a *vacunao*. The *rumbas de tiempo España* were structurally simple, based primarily on a single chorus phrase. Although these *rumbas* probably predate the *yambú*, it is likely that they overlapped in practice during the latter half of the nineteenth century.

Yambú

The *yambú* as a style appeared by the late 1870s, representing the next step in the evolution of *rumba* (Moliner Castañeda and Gutierrez Rodríguez 1987). As *yambú* is said to be traditionally played on *cajones*, it is likely that its crystallization occurred alongside the incorporation of *cajones* into *rumba*. Even today *yambú* in its simplest form is still played on *cajones, claves* and sticks.

Unlike the *rumbas de tiempo España*, the *yambú* often begins with a *diana* or *lalaleo*, a simple melodic line serving to establish the tonality of the song. The *guía* begins the *diana* and the chorus responds. It is sung with nonsense syllables such as 'a la la,' 'a na na' or 'a é,' inspired by singers of Hispanic descent, whose singing often included similar syllables. In addition, the choral styles brought from Spain, represented by groups of semiprofessional choruses in Cuba, were highly influential. These influences helped establish the characteristic pentatonic scales prevalent in the *yambú*.

Following the *diana* introduction, a short verse is usually sung by the *guía*, who then introduces the *estribillo*, which is repeated by the chorus. The *guía* and chorus then alternate between the *guia*'s improvising and the chorus's repeating phrases. This section of the song is called the *montuno*, and is where dancers enter. Dancers often enter as a pair, coming into the open space in front of the drummers and *guía*, while onlookers clap, watch and sing along.

The dance in *yambú* features a male-female couple in which the male flirts with the female, but the *vacunao* is not present. The pace is slow, with fluid and elegant movements. *Rumberos* sometimes conceptualize this dance as free; the dancers have more liberty in terms of their correspondence with the *cajones* or drums as opposed to the *guaguancó* and *columbia*, where the lead drum and dancers are in constant interaction.

Columbia

The *columbia*, unlike the other variants of *rumba*, was first developed in the countryside before being brought to Havana and Matanzas. An old railroad station called La Columbia – in the rural area between Matanzas and Sabanilla – was the birthplace of this variant. This area was dominated by sugarcane fields and the cane-cutters – the largest percentage of whom were black males – were the first to cultivate the *columbia*, which they played and danced during free time. Originating in the second half of the 1880s, the earliest *columbias* in rural areas were played on *yuka* drums, along with a *catá* and *guataca* (hoe blade struck with a metal beater, such as a railroad spike). As these drums became rare due to the eventual death of drum-makers (presumably older men of *congo* descent), they were eventually repeated by *tumbadoras* (*conga* drums), while the use of the *catá* and *guataca* remained. When *columbia* was brought to urban areas, its rhythms were also transferred to the *cajones*, since not everyone had access to *tumbadoras* (Moliner Castañeda and Gutierrez Rodríguez 1987).

Example 2: Rhythm played by *guataca* or bell in *columbia*

In a genre primarily dominated by – yet not solely reserved for – males, *columbia* is perhaps the most male-oriented. This is likely due to the nature of its original environment among groups of male cane-cutters. Here, a lead singer called a *gallo* began a song with a *llanto* ('cry') which served the same purpose as a *diana*: a melodic outline of the scale. This element was a result of the influence of *tonadas campesinas*, country tunes consisting of *décimas* sung with guitar accompaniment. These were cultivated primarily by Cuba's rural white population, many of whom were descendants of Canarian settlers and worked side by side with blacks in the cane fields. In *columbia* the *llanto* is sung as a lament, using syllables such as 'o ro ro' or 'bo rom bo.' The major pentatonic scale is employed as the singer climbs to and often sustains the upper fifth degree and then cadences on the tonic note or lower fifth degree. Sometimes the chorus responds with an extended 'aaahh' on the tonic. In the earliest *columbias*, the *llanto* was immediately followed by the *montuno*. At times, short verses were added between the *llanto* and the *montuno*, sung by the *gallo*. Later, and also as a result of the influence of *tonadas campesinas*, improvised *décimas* were introduced as verses. *Gallos* sometimes 'battled' each other, each attempting to prove superior improvisation skill. In this environment they may have sung of their superior skill or of the other's inferior abilities, yet most *décimas* were descriptive, telling of fictional accounts of talking animals or supernatural events. As the emphasis lies in the level of textual improvisation, both the verses and choruses tended to have simple, repetitive melodies, with *décimas* following a standard melodic framework.

Another focal point of *columbia* is the dance. *Columbia* features a solo dancer rather than a couple (although it is possible that couples may have danced *columbia* in rural areas long ago). The dancer enters during the *montuno* and shows off specific skills, which may include rapid foot movements, acrobatic jumps or daring feats such as dancing with machetes or knives. Dancers perform solo, each trying to outdo his opponents. As the dancer performs, the *quinto*, or lead drum, outlines the movements with a combination of fast and slow slaps and tones. Some of the most legendary *rumba* dancers have proved their abilities as performers of *columbia*. One of the most famous was José Rosario Oviedo 'Malanga' (1885–1923), supposedly murdered by another jealous *rumbero* who put ground glass in his drink (Mestas 1998, 20). Although *columbia* dancing is dominated by males, some females have also left their mark in this arena. For example, Andrea Baró is regarded in the *rumbero* community as a legendary *columbia* dancer. Unfortunately, little is known about her life. She likely lived in Matanzas during the early twentieth century where she established a name for herself as a virtuoso dancer, one of the few females to do so in what is still a male-dominated arena.

Columbia is normally played on three *tumbadoras*, a *catá* and *claves*, a *guataca* or a bell. This instrumentation may have been adapted from the *yuka* drum ensemble, which also features three cylindrical, single-headed drums. Although *tumbadoras* have their ancestors in the *yuka* drums, which are from the *congos* – hence 'conga' drum – it is unclear whether the adaption of using three *tumbadoras* in *rumba* is linked directly to the *yuka* ensemble or whether it was popularized through *comparsas* (carnival groups), who used these drums in Havana's carnival celebrations. What is certain is that the use of *tumbadoras* in Havana in carnival groups led to their popularization in that area among *rumberos* in the 1920s – themselves often the drummers in the *comparsas* – who began to integrate them into their style of *rumba*. Furthermore, in Matanzas after 1910, two *tumbadoras* and a *quinto cajón* were being used in the *yambú matancero*, the stylistic variant of *yambú* played in Matanzas. By the mid-twentieth century, the setup of three *tumbadoras*, *claves* and *catá* was standard in both Matanzas and Havana, although some *rumberos* still preserved the practice of using *cajones* (Moliner Castañeda and Gutierrez Rodríguez 1987).

Guaguancó and the *Coros de Rumba*

The *guaguancó* represents the most widespread and influential variant of *rumba*. Some scholars date its origins from the 1880s in Havana and Matanzas, but it was well established by the first decade of the twentieth century (León and Urfé 196?; Esquenazi Pérez 2007). The dance represents the chase of the female by the male and the *vacunao.* Perhaps more than the *columbia* and *yambú*, the *guaguancó* is a chronicle of the *barrios*. Its texts, mode of singing, and dance reflect the social and ethnic backgrounds of its proponents. The *guaguancó* has also experienced the greatest amount of change, continually evolving and adapting to new generations of *rumberos*. Much of the history of the *guaguancó* is tied to that of the *coros de rumba*, known as *bandos de rumba* in Matanzas.

The *coros de rumba* (‘*rumba* choruses’) were large groups present in Havana and Matanzas from the late 1880s until the 1940s. They were directly descended from the *coros de clave* (or *bandos de clave*). Both the *coros de rumba* and the *coros de clave* were made up of groups of singers and percussionists tied to certain *cabildos* or *barrios* that performed Afro-Cuban adaptations of the Hispanic traditions of choral groups and *parrandas* (groups of singers and musicians who performed in the streets during times of public celebration). They specialized in singing *claves*, a genre featuring lyrical choral arrangements, accompanied by a *viola* (single-headed drum resembling a banjo without strings) and sometimes a pair of *claves* (the word ‘*clave*’ referred to both an instrument and a genre). Originating probably around the mid-nineteenth century, the *coros de clave* adapted *rumbas* into their repertoire as this genre gained popularity toward the end of the century. As the popularity of the *clave* genre subsided, these groups began to specialize in *rumba*, evolving into *coros de rumba*. The *coros de rumba* used *cajones* for accompaniment, paralleling their usage in the *solares.* Yet since these had to be played while sitting down, the *viola* was used as a rhythmic substitute while the *coros* were in transit. These groups represented an improved literary, musical and organizational development of *rumba*.

The *coros de rumba*, in the same way as the *coros de clave*, fell under the leadership of a director, who organized rehearsals and performances. The chorus was organized by voices: *primera* (main melody), *segunda* (sung a major third above the *primera*) and *tercera* (one octave above the *primera*). The third and sixth harmonies cultivated in these *coros* came from the popular use of thirds and sixths in Hispanic musical forms, and remain standard harmonies in *rumba* today. Other members had specific duties. The *tonista* was in charge of establishing and controlling the tuning of the chorus’s melodies. The *decimista* created poetic texts and *décimas* for the group, while a *censor* made sure these texts followed correct grammar and embellished their literary character. Different *coros* often faced each other in friendly or heated competitions, and each aimed to perfect its performances in order to prove superior skill. *Rumba* – especially *guaguancó*, which became the most popular variant – was enriched with more defined and complex melodies, including *dianas* reflecting the flourishes of Andalusian and gypsy singers. Rhythms became increasingly standardized and song texts became more extensive, elaborate and poetic. Themes in *guaguancó* included political attitudes, social commentary, romance and patriotism. As *coros de rumba* often had rivalries with those from other *barrios*, such as the famous rivalry between Los Roncos and El Paso Franco in Havana, *puyas* were also sung. These were *rumbas* whose purpose was to insult an opposing group and assert the superiority of the group performing them.

While *yambú* and *columbia* often feature only a *diana* (or *llanto*), a verse and a *montuno*, the format of the *guaguancó* is more complex, and was standardized by the *coros de rumba*.

DIANA – sung by the *guía*
VERSE – sung by the *guía*, or by two or more singers
DÉCIMA – sung by the *guía*
VERSE [whole or partial] – optional
MONTUNO – sung by the *guía* alternating with the chorus

The above format became one of the standard formats for *guaguancó*, although sometimes the *décima* was not included, or it comprised the verse in and of itself. Not all *rumba* gatherings relied on such organization, however.

The spontaneous *rumbas* in the *solares* continued to emphasize the event as a mutual sharing of repertoires between singers, drummers and dancers.

Singers interjected song verses one after another or collaborated in duos, postponing the *montuno* until someone saw fit to introduce it. Drummers switched places and dancers could enter informally to enjoy themselves. These *rumbas de solar* witnessed a decline in practice in the latter half of the twentieth century. Following the lead of the elevated cultivation of *rumba* by the *coros de rumba*, the second half of the twentieth century saw a rise in new professional or semiprofessional *rumba* groups.

The Political Changes of the Twentieth Century

During the majority of Cuba's republican era (1902–59), political and administrative corruption was coupled with US economic and political hegemony. US presence also manifested itself in tourism, and Cuba became a holiday playground for American elites. For both Americans visiting Cuba and those on the mainland, Cuban big bands served as cultural ambassadors. They embodied the exotic image of Cuba cultivated in tourism advertisements for Americans beginning in the 1920s. As previously discussed, during the 1930s and 1940s a stylized version of *rumba*, Anglicized as 'rhumba,' became popular among primarily non-Cuban audiences as performed by big bands. It was stylistically closer to *son* and marketed as exotic Latin dance music. Meanwhile, *rumba* as performed in the *barrios* by *rumberos* remained marginalized from the popular mainstream, which itself primarily reflected the tastes of white Cuban – and to some extent, American – elite tastes. Even during the *afrocubanismo* movement of the 1920s and 1930s, which brought into vogue artistic and musical elements of Afro-Cuban culture, *rumba* was neglected by the mainstream as vulgar and low-class, in short, *cosa de negros* ('a black people's thing') (Moore 1997). Racism was a constant presence in the public sphere in republican-era Cuba, manifesting itself in discrimination, segregation and denigration of such *cosas de negros*.

While the overwhelmingly white Cuban upper and middle classes enjoyed relative economic comfort during the republican era, the working classes, including darker-skinned Cubans, suffered from economic and social marginalization. The presidencies of Gerardo Machado (1925–33) and Fulgencio Batista (1940–44 and 1952–59) were particularly corrupt, spurring increased political discontent. In 1959, a group of revolutionary guerrilla fighters headed by Fidel Castro Ruz overthrew Batista, marking the beginning of the Cuban Revolution.

The new Revolutionary government drastically changed the social, economic and political circumstances in Cuba. Many of the new changes favored the urban working classes and rural peasants, while the elite and middle classes were stripped of their resources, which were co-opted by the government. This, coupled with decreased freedom of political expression, resulted in mass emigration of the upper and middle strata to the United States. Revolutionary ideology emphasized nationalism and a new socialist identity for Cubans, denouncing capitalism and US imperialism. During 1959 and 1960 Castro's government brought the issue of racism into public discussion and succeeded in drastically reducing institutional discrimination and desegregating public areas. Following 1960, however, Castro effectively halted public discussions on race, implementing an official color-blind policy. Race-related discussions were deemed no longer necessary; rather, they were viewed as potentially divisive. Being a true *revolucionario* (revolutionary supporter) meant being Cuban first and foremost, not white or black or mulatto.

Afro-Cuban religious and secular drumming and peasant musics considered as noncommercial representations of 'Cubanness' gained institutional support through the government's newly established Ministry of Culture. The Ministry of Culture fostered the creation of a few folkloric groups in the early 1960s such as the Conjunto Folklórico Nacional and the Conjunto Folklórico de Trinidad to bring Afro-Cuban folkloric musical and dance traditions to the public stage, including *rumba* and religious drumming. In the 1940s and 1950s, Fernando Ortiz had attempted to bring Afro-Cuban music and culture into public discussion, bringing Afro-Cuban *batá* drumming to the public stage for the first time. Yet aside from Ortiz's efforts, Afro-Cuban drumming was virtually absent from the mass media prior to the 1950s (Moore 2007). While Afro-Cuban drumming was officially supported under the Revolution, it was fostered only as a staged production. Thus, while most of the state-sponsored folkloric groups' performers were themselves Afro-Cubans intimately acquainted with many of the genres, the instrumental parts and dance choreographies were rehearsed and standardized, as well as 'refined' for public performance. Some Afro-Cubans, such as Carlos Moore, saw this as whitening and as a de-Africanization and prostitution of their music, some of which was religious repertoire (Moore 1964). Furthermore, while the government recognized the African influence evident in these musics, Marxist and color-blind ideologies stressed their place as part of national folklore, denying the right of Afro-Cubans to embrace them as part of a black identity.

As a result of the folkloric troupes, *rumba* became increasingly standardized, first on the stage and eventually among the larger community of *rumberos*. The rhythms and dances of *yambú*, *guaguancó* and *columbia*, for example, were likely increasingly codified through instruction so as to make clear their distinctiveness on stage and create a certain uniformity among performers. As both *rumberos* and non-*rumberos* would have composed the audiences of these groups, the standardized methods of performance would have likely exerted some influence not only on the performers but also on the larger *rumbero* community. While making clear distinctions between the protocols for the specific rhythmic and dance components of *yambú*, *guaguancó* and *columbia* may not have been important (and may have been mixed) prior to the advent of the state folkloric troupes, these distinctions were increasingly codified, and remain so in the early twenty-first century.

Growth in International Popularity

The *coros de rumba* began to decrease in popularity in the 1930s and gave way in the 1940s and 1950s to smaller, semiprofessional *rumba* groups which comprise the modern *rumba* ensemble. This ensemble retained the same basic instrumentation, but downsized the chorus to a minimum (often three or four singers in total). Further, due to the migration of *rumberos*, new *rumba* groups were established in areas outside of Havana and Matanzas, such as Guantánamo and Santiago de Cuba, in which *rumba* groups had been largely absent (Esquenazi Pérez 2007). *Rumba* ensembles also became more prominent in the 1960s as government-sponsored folkloric troupes brought unprecedented public exposure to Afro-Cuban drumming. These *rumba* groups, along with their performances and recordings, became the primary conduit for the continual cultivation and influential reach of this genre. Panart, the first independent Cuban record label and specializing in Cuban popular music, was a pioneer in recording *rumba* in the 1950s, bringing the genre into the commercial market for the first time.

Through these early recordings, *rumba* gained entrance into the mass media, propelling its interest not only on the island, but also beyond Cuba for the first time, inspiring new fans, for example, among Puerto Ricans in New York City. Non-Cuban *rumba* enthusiasts, a large community of which was to be found in New York City, studied and mastered the content of these first recordings (smaller *rumba* communities also later appeared in Florida and San Francisco). The rhythms, songs and ensemble organization of these recordings were imitated, leading to the creation of a base *rumba* song repertoire and standardized rhythms among non-Cubans. For these nascent *rumberos*, the recordings were the only source of *rumba* repertoire, and since it was all new to them, there was minimal significant creation or alteration of songs or rhythmic elements. Exposure to live *rumba* groups from Cuba was minimal outside the island for decades following the Revolution, due in large part to the United States' economic embargo on the island. Thus, outside Cuba the early recordings were held in high regard and emulated. The specific songs, rhythms, structures and ensemble organizations present on the early recordings became standardized outside Cuba, creating a base repertoire for non-Cuban *rumberos*. Furthermore, the dance component of *rumba* failed to gain importance outside of Cuba during this time, as exposure to Cuban *rumba* dancers outside the island was minimal until the 1980s.

One of the earliest – and among the most influential – recordings was that of Alberto Zayas's Grupo Afro-Cubano: *El yambú de los barrios*, a full-length album recorded in Havana from 1955 to 1956. While Cuban drummers such as Chano Pozo and Mongo Santamaría had already begun to bring Afro-Cuban rhythmic influences to the United States via New York City, this recording marked a new beginning in the popularity of *rumba* in both New York and elsewhere. As Cuban music had already been widely influential among the Latino community in New York City, *rumba* – as a new and intriguing genre that displayed strongly its African roots – began to gain popularity, especially among those of Puerto Rican working-class background. Further, its humble street origin, nonreligious character and percussive rhythms made it both attractive and more accessible to the marginalized Puerto Rican (Nuyorican) population in the city. This intrigue on the part of Nuyoricans was partially due to the fact that most were estranged from their own Afro-Puerto Rican heritage, which was largely absent from public discourse concerning Puerto Ricanness during the mid-twentieth century. Most Nuyoricans in this period (late 1950s to 1960s) associated Puerto Rican music with the *jíbaro* (Puerto Rican country peasant) music and *boleros* of their parents' generation. Many young Nuyoricans were thus eager to embrace *rumba*, as an alternative to both Anglo-American mainstream culture and their parents' Puerto Rican musical culture. Afro-Cuban religious drumming for the *orishas* had been present in New York before the 1950s, but was guarded and largely controlled by Cubans. *Rumba* was not guarded in this way, due to its secular character. In *rumba*, Nuyoricans found a new working-class Latino identity that celebrated blackness. Other local working-class groups – primarily African Americans, Jews and later Dominicans – joined the Nuyoricans in becoming New York's first generation of home-grown *rumberos*, with Central Park establishing itself in the mid-1960s as the most renowned site for their gatherings (Jottar 2009).

Another early and highly influential recording for the New York *rumba* community was Patato Valdés's album *Patato y Totico*, recorded in New York City and released in 1967. Valdés, a drummer from Cuba residing in New York, teamed up with fellow drummer Eugenio 'Totico' Arango and *tres*-player Arsenio Rodríguez – both Cubans – to produce an innovative recording in which bass guitar and *tres* (Cuban guitar with three double strings used in *son*) accompanied *rumba* song and drumming. The *rumbas* on this album soon became standards in the *rumbero* community outside of Cuba.

The New York *rumberos* tended to emphasize the drumming aspect of *rumba*, and this flourished as part of a larger vogue of street drumming in New York City (López 1976). The 1980 Mariel boatlift (encompassing the waves of Cuban immigrants that left Cuba via the Peruvian Embassy) saw the influx of a large number of Cubans to New York City and neighboring areas of New Jersey. Among the new Cuban arrivals were seasoned *rumberos,* such as Manuel 'El Llanero' Martínez Olivera (Jottar 2011). Before Mariel, *rumberos* in New York City had limited access to first-hand instruction from knowledgeable Cuban *rumberos*. El Llanero, among others, helped the non-Cuban *rumberos* refine their skills, corrected misinterpretations and emphasized the importance of singing as a part of *rumba*.

Rumba's influence was also felt in the realm of Cuban dance music. For example, in the 1950s *rumba* themes and elements were incorporated into the music of Arsenio Rodríguez, whose *son montuno* style was highly influential in the formation of salsa music. In the 1960s and 1970s New York City was the center of a boom in salsa music, which often featured *rumba* rhythms as part of its recorded arrangements. Through salsa recordings from New York, Cuba and other Latin American countries, and through *rumba* recordings from Cuba, *rumba* continued to grow in popularity. The genre also gained an important following of musicians in Puerto Rico, just as it had in New York.

In the early twenty-first century, Puerto Rico boasts a number of well-versed *rumba* groups, such as Rumbakuá, Yubá Iré, Los Majaderos and Rumba Raza. In New York, groups such as Caja Dura, the Central Park *rumberos* and the *rumberos* of La Esquina Habanera in Union City hold regular gatherings featuring *rumba.* Furthermore, San Francisco and other US cities, together with cities in Canada, Europe, Japan and elsewhere, also have *rumba* scenes, disseminated by Cuban musicians or taught by those who have learned from them.

In Cuba, *rumba* exerted heavy influences on popular dance music. During the popularity of the *son* from the early to mid-twentieth century, many of the most successful *son* musicians were also *rumberos* performing and composing in the genre. This trend continued throughout the rest of the twentieth century and continues today, as popular recordings feature music and musicians incorporating *rumba* rhythms and melodies. On the other hand, *rumba* has itself absorbed song repertoire and other elements from both popular music and Afro-Cuban religious music since its origins in the nineteenth century. For example, song texts from *sones* and *boleros*, as well as refrains from Afro-Cuban religious songs have been incorporated into *rumba*. Religious drumming, such as *batá* rhythms (as well as the *batá* drums themselves), and *timba*'s *bomba*-gear percussion breakdowns, have also revealed themselves in *rumba*, especially since the 1980s.

The rise in interest in Afro-Cuban music and religion in Cuba in the 1990s as part of tourism promotion increased the economic viability of *rumba*. Previous to the 1990s tourism was not a priority for Cuba. The socialist government had from its inception criticized the vulgarity and moral degradation of pre-revolutionary Havana, caused in part by foreign (largely US) tourists who treated the city as a playground of vice. Yet when faced with the fall of the Soviet Union and the ensuing economic crisis of the early 1990s – known as the 'Special Period' – the government instituted a number of economic changes. Drawing on the Chinese model, which incorporated certain capitalistic economic practices, Cuba turned to tourism as a source of sorely needed income.

In promoting cultural tourism, the Cuban government in the 1990s exploited the marketability of 'exotic' Afro-Cuban music and dance. The state increasingly promoted Afro-Cuban folkloric ensembles, who offered live shows and workshops for foreign tourists. Some groups, such as Los Muñequitos de Matanzas, were allowed by the government to tour outside of Cuba because of the high revenues they generated, which were funneled in large part to the Cuban government. Yet they needed to have proven themselves as loyal to Revolutionary ideals and thus low-risk for defecting, due to the high number of musicians and athletes that had defected during the course of the Revolution. Afro-Cuban folkloric ensembles and other musical groups continue to tour internationally in the early twenty-first century under the same stipulations.

Rumba has expanded its fan base since the 1990s to include European countries, Canada, Japan, Australia and others. Tourists in the early twenty-first century flock to attend drum classes, dance workshops and performances, and to purchase recordings. Commercial recordings of *rumba* groups have also skyrocketed since the 1990s, with both the sponsorship of the Cuban state (Egrem studios) and North American and European record labels, such as Qbadisc, Tumbao and Ace Records. These labels have not only generated newly recorded albums, but have resuscitated the early *rumba* recordings from the 1950s and 1960s. Eager fans and musicians buy recordings of Cuban groups recognized as the leading proponents of the genre in Cuba, the three most popular of which are Yoruba Andabo, Clave y Guaguancó and Los Muñequitos de Matanzas. Popular and intellectual interest in *rumba* continues to thrive in the early twenty-first century among both Cubans and non-Cubans. In 2012, *rumba* was declared national cultural patrimony by the Union of Writers and Artists of Cuba (UNEAC), an honorable distinction for the music and its performers.

Leading *Rumba* Groups in Cuba

The Muñequitos de Matanzas is likely the most renowned *rumba* group of all time, both inside and outside of Cuba. Formed in 1952 in Matanzas under the name Guaguancó Matancero and under the leadership of Florencio Calle, their earliest recordings were highly influential in the ensuing decades, and continue to be so today. The leading proponent of the Matanzas style of *rumba*, its leadership has been passed from older to younger generations of family members over the years. In the 1960s they collaborated on recordings with Los Papines, another influential *rumba* group from Havana.

Clave y Guaguancó has its origins in Havana in the 1940s under the directorship of Augustín Pina 'Flor de Amor.' This group maintained the tradition of playing *cajones* and began recording in the 1990s. Following its initial recording, the group began integrating *tumbadoras* into its setup in the style of other popular *rumba* groups, such as Yoruba Andabo.

Originally named Guaguancó Marítimo Portuario Zona 5, the group now known as Yoruba Andabo was founded in 1961 and has also remained true to the *cajón* tradition. Calixto Callava, a founding member, was the author of many of the songs recorded by the group in the 1980s and 1990s, such as 'Tawiri' and 'Tiembla la tierra' (The Earth Trembles). Yoruba Andabo also became a leading proponent of the *guarapachangueo* style of *rumba*. The *guarapachangueo* is a style of playing *rumba* invented by the group Los Chinitos in Havana in the 1970s. Intended originally as an alternative rhythmic base for use on only two drums (or two *cajones*) instead of the standard three-drum setup, *guarapachangueo* features an increased freedom and rhythmic conversation between the drums rather than the standard repeating patterns found on early recordings such as those of Alberto Zayas, Los Papines or Los Muñequitos. Pancho Quinto, one of Yoruba Andabo's drummers, adapted elements from the *guarapachangueo* to a full-size *rumba* ensemble, inventing the style of playing that combines the *cajón* with *batá* drums, with a spoon in one hand. By the end of the 1990s, the *guarapachangueo* style permeated the playing styles of many groups in Cuba, including Clave y Guaguancó and Yoruba Andabo, and it has become a standard sound in *rumba* both on the island and in *rumbero* communities abroad.

Salsa

Salsa is an exuberant pan-Caribbean music and dance form whose trajectory has taken it from cultural integration in the Spanish Americas to adoption by distant countries, where Latin-derived culture has been imported. Originally an urban expression born of the *barrios* in New York City, salsa emerged as a countercurrent symbol deployed mainly by Colombian, Cuban, Dominican, Panamanian, Puerto Rican and Venezuelan immigrants as a means of preserving their cultural identity within the confines of one that was foreign to them. Early salsa employed genres of the Cuban *son* rhythm group, primarily the *guaracha*, as the main vehicle of development. Its arrangements were harmonically modest but played in a more aggressive manner, with greater force at the beginning of the musical phrase, and its lyrics addressed themes articulating social violence and disenfranchisement.

The rise of salsa coincided with the growth of an economic underclass in the major cities of Latin America – cities such as Caracas (Venezuela), Cali (Colombia) and San Juan (Puerto Rico) – as a consequence of rural-to-urban migration. Resonating as it did with the prevailing social experience of the 1970s, salsa came to be embraced in the *barrios* of these cities in the absence of relevant national urban expressions. Initially considered an imported style, in the Caribbean salsa developed its own centers of production, such that by the close of the 1970s they had outgrown the New York template and two cultural loci could be identified: 'salsa of the North' in New York City and 'salsa of the South' based around the Spanish Caribbean (Rondón 2008).

The subsequent successful transnationalization of salsa and its ability to cut across national boundaries may be attributed in part to the widespread nature of the conditions that favored its early adoption, but two particular properties were also significant in these processes: a flexibility that enabled salsa to absorb and express local themes, providing regional communities with an empowering sense of ownership; and its strong connection to dance – in Latin America and the Spanish Caribbean the word 'ritmo' (rhythm), often used as a synonym of 'genre,' refers equally to the associated dance. Salsa music's functional constraint to the purpose of dance must be appreciated to understand its transnationalization worldwide; it is largely the pursuit of its associated dance as a desirable secular social activity that drives the dissemination of salsa music in the non-Latin American population. For many communities of Latin American origin and/or descent, migrant and nonmigrant, where salsa remains a deep-rooted tradition, it stays true to its original role and form as a potent symbol of cultural identity through the vernacular and folkloric motifs embedded within it.

History of the Word

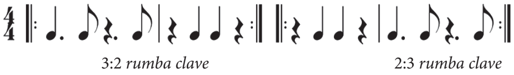
Flavor terms associated with food such as *azúcar* (sugar) and *picante* (spicy) are common in the performance of Latin popular music, as is the word *salsa* (sauce). The *son cubano* called 'Échale salsita' (Put a Little Sauce In It) by Ignacio Piñeiro and his Septeto Nacional (1933) is the first conspicuous use of the word in a musical context (Orovio 2004; Waxer 2002a). However, one of the earliest references to salsa as a stylistic label can be traced to a Radio Difusora broadcast in Caracas, Venezuela in 1962 called 'La Hora del Sabor, la Salsa y el Bembé' (The Hour of Taste, Salsa and *Bembé*), featuring the latest New York City hits from luminaries such as Eddie Palmieri and Tito Puente. Venezuela subsequently made two further historical contributions, via Federico Betancourt's album *Llegó la salsa* (Salsa Has Arrived) of June 1966: the first salsa recording by a South American band and the first such album to bear 'salsa' in its title.

Use of the word became increasingly commonplace in late 1960s New York, coinciding with the rise of Fania Records. The label deployed salsa as a marketing term, a catch-all for a variety of Cuban-derived rhythms such as *güajira*, *guaguancó*, *son*, *son montuno*, *chachachá*, *pachanga*, boogaloo and *mambo*, in a strategy to increase the accessibility of Latin popular music. Izzy Sanábria contributed much to the public acceptance of the word as Master of Ceremonies for the Fania All-Stars and as editor of the influential *Latin NY* magazine.

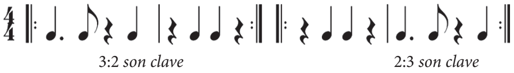
Whether or not salsa has evolved from an umbrella term into an actual genre has continued to be a matter of debate. A comparison of the *guaracha* with early salsa reveals two significant differences: a rural narrative in the former versus an urban one in the latter; and a more aggressive manner of musical interpretation on the part of early salsa. These important distinctions between salsa and its progenitors can sometimes prove too subtle for the unversed listener or non-Spanish speaker to recognize. The boundaries have been further blurred by the 'matancerization' trend in salsa of the mid-1970s, spearheaded by bandleader Johnny Pacheco, music director of Fania Records. Rondón (2008) describes 'matancerization' – referring to the style of the Cuban ensemble La Sonora Matancera (Quintero-Rivera 2010) – as a 'Cubanization' movement bent on the reclamation of older Cuban songs by playing in a conservative style harking back to the *guaracha* of the 1950s. Salsa confounds easy classification for several reasons: its rhythm pattern is capable of absorbing others; it is defined in part by its narrative; and it overlaps with prior musical forms through the practice of quotation, not in imitation so much as a means of setting a cultural anchor.

Properties of the Music

Salsa's rhythmic roots are distinctly Cuban in origin. The music is highly polyrhythmic and performers exercise the principle of cooperative musicianship, coordinated collectively through individual reference to a master rhythm which may be overtly expressed or implied. Several master rhythms exist in salsa, by far the most common being Cuba's *son clave* and *rumba clave*, although *afro 6/8* and the *cua* of Puerto Rico are also found. The word *clave* (key), derived from *clavija* (peg) (Sublette 2004), also refers to the small hardwood rods on which the rhythm is interpreted. Both *sonclave* and *rumba clave* comprise five beats played across two measures of music: three beats in one measure, called the 3-side; and two beats in the other measure, called the 2-side. ('Side' refers to the two sides of the bar line in a two-bar phrase.) Together the 3-side and the 2-side form a binary phrase, following each other in unbroken alternation (Sulsbrück 1982 (Examples 1 and 2)).



Example 1: *Rumba clave*



Example 2: *Son clave*

A property of Cuban *clave* is that the sides are not imposable on each other – none of the beats of one side shares the same location in the measure as any of the beats on the other side. Here we see the importance of *clave* as a rhythmic roadmap: a performer needs only hear one beat of the *clave* rhythm to understand his or her place in the timeline. *Clave*'s ability to mediate the meshing of multiple layers of regular and syncopated rhythms provides salsa with its potential for musical mutability, facilitating, along with other social and political factors, its transnationalization and cross-pollination with other musical styles (Waxer 2002a). *Clave* performs an important function when considered in tandem with the downbeat rhythm. Beats of the *son clave* and *rumba clave*3-side – on the upbeat following beat two (annotated as 2+) in *son clave*, and the upbeats following beats two and four (2+ and 4+) in *rumba clave* – sound before the listener expects them, that is, on the upbeat before the downbeat, thereby creating rhythmic tension (Dworsky 1994). Cubans refer to this as the *fuerte* (strong) side. The *débil* (weak) 2-side is rhythmically neutral with beats falling squarely on a backbeat and a downbeat. The buildup and dissipation of rhythmic tension every two measures is a crucial dynamic in salsa music.

Like the *clave*, the *afro 6/8* rhythm is a binary phrase, in which the two measures contain different numbers of beats or strokes (four and three in this case):

Example 3: *Afro 6/8* rhythm

It is usually played on the hand bell. This master rhythm can be elegantly deployed as an intermediary for transitions between *son* and *rumba clave* (Mauleón 1993). The Afro-Puerto Rican *cua* refers to the pair of wooden sticks and the rhythm which they interpret – the latter being a repeating syncopated pattern of five beats per measure, known throughout the Caribbean also as the *cinquillo* (Manuel 1995).

Example 4: *Cinquillo*

Salsa's percussion cycle begins one beat or more before that of the melody, as practitioners of Cuban rhythm conceive of songs – as do West African drummers – as coming in part-way through their timeline (Berríos-Miranda 2002). Players of melody, conversely, regard the start of the rhythm as a pickup relative to their timeline, as evidenced in Manuel's description of Afro-Cuban 'anticipated bass' (1985, 256). The tumbling effect of offset cycles, where one cycle continues even as the other ends, makes for highly propulsive music – a strategy also employed by saxophonists in Dominican *merengue* (Austerlitz 1996). Further tension and release is created in the harmony between the bass *tumbao* (bassline, encompassing both harmony and rhythm) and the piano *montuno* (vamp) within each measure of music (Mauleón 1993; Washburne 2002), enhancing the drive of the salsa groove. Music that has *fuerza* (force) and *afinque* (tightness) generates these dynamics in synchrony to achieve the functional criterion: 'the salsa that people like is the salsa that is good for dancing' (Berríos-Miranda 2002, 44).

Song Structure

Salsa's melodies and harmonies are descended from the Andalusian cadence (Manuel 2002) via the *son* as played by itinerant troubadours of Eastern Cuba around the end of the nineteenth century (Sublette 2004). The inclusion of a second trumpet in the *son* ensembles of the 1940s (Leymarie 2002) gave rise to more sophisticated brass arrangements influenced by jazz. The percussion stream is derived mainly from the Yoruba and Congolese of Western and Central Africa (Sanábria 2000). The resulting fusion, though originally a creolized cultural product of Cuba, exists as a broad range of phenotypes due to regional evolution.

Sequentially, salsa is a music of two halves – the first, sometimes called the *cuerpo* (body), is characterized by several features: European structural elements, typically an introduction followed by alternating verses and choruses interjected with instrumental refrains; percussion playing at lower energy levels in support of the lyrical narrative; and longer, complex harmonic progressions. The second half, confusingly also called *montuno* (vamp), displays the African heritage of salsa overtly: vocals shift to a *coro-pregón* (call-and-response) pattern, in which either element in the pattern might be emphasized or, alternatively, substituted by instrumental riffs; harmonic progressions contract to a vamp of two to four chords (Mauleón-Santana 1999); and percussion moves to a higher energy level. The *bongó* and bell drive a regular, insistent rhythm in which vocal, melodic and percussive improvisations can occur. During the extended *montunos* of a concert, vocalists are granted respite through interruptions by the horn or *charanga* (flute and violin) section playing mambos and *moñas*. Mambos are prearranged melodic figures often incorporating rhythmic breaks to build up tension on the dance floor, whereas *moñas* are spontaneous riffs akin to the *soneo* (improvised singing) of the lead vocal. The bass *tumbao* might also change, with the note on beat three moving to the preceding upbeat to increasing harmonic and rhythmic tension (Del Puerto 1994). *Descargas* (jam sessions) such as the legendary ones performed by Israel 'Cachao' López in 1957 are almost completely *montuno* – the *cuerpo* is just long enough to state the theme of the song before improvisations begin.

Styles of Salsa

Transnational salsa is commonly categorized under national genres in order to explore its association with national identity. There are five principal schools of salsa performance: Colombian, Cuban, New York, Puerto Rican and Venezuelan. The latter three have similar heavy rhythmic grooves, arrangements and executions of performance, compared to Colombia's light, crisp and attacking texture (Waxer 2002b). This is physically manifested in the basic salsa step which is taken late on the beat to reflect the heavy grooves, and early on the beat in the Colombian style.

Within salsa are a number of artistic movements, the most notable of which are *salsa dura* (hard salsa), *salsa pop* and *salsa romántica* (romantic salsa). Washburne cogently describes the latter as featuring 'highly polished and slick studio productions, smooth vocal quality, a controlled and refined brass sound, subdued percussion playing, the predominance of song texts featuring romantic themes, and often pretty-boy crooners as bandleaders' (2002, 119). In the gender discourse of salsa, *salsa romántica* has been feminized on account of its arrangements and sonority (Manuel 1991) and though classified derogatively as *salsa monga* (limp salsa) (Aparicio 2002), in contrast to the brashly assertive *salsa dura*, has stimulated the formation of all-women salsa bands in Cali such as Orquesta Canela (Waxer 2002c).

Although ensembles from any of the five centers might share similar lineups, the instrumental balance and the phrasing used during performance, whether recorded or live, are aurally distinctive (Valentín Escobar 2002). It should be emphasized that it is the traditions and local practices in each of these centers which have caused them to become recognized as global sites for salsa performance.

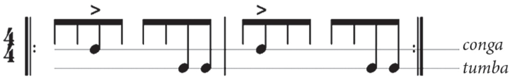
Cuba

The term 'salsa' has not been widely used on the island of Cuba, as its rise in New York as a marketing idea coincided with the severance of economic ties from the United States which began in October 1960; in Cuba, manifestations of the genre are instead referred to as *son*, *timba* or simply *música bailable* (dance music). However, the stylistic aspect of Fania's salsa concept was based on the recovery of Afro-Cuban traditions combined with jazz – a reworking of the legacies of leading figures in Cuban *mambo* and *son*greats such as Machito and Arsenio Rodríguez.

Oriente (Eastern Cuba) is widely considered the cradle of *son,* the earliest form of which, the *changüi*, dates back to the mid-nineteenth century (Leymarie 2002). Early performers of the *son* were itinerant musicians in a bardic tradition similar to Senegambian *griots*, improvising social commentary to musical accompaniment using portable instruments – guitar; *tres* (Cuban guitar); maracas; *marímbula* (bass instrument consisting of metal tongues attached to a large resonating box); and *botija* (oil jug). *Son* may have arrived in Western Cuba via members of the Permanentes (national army) (Orovio 2004), reaching its Golden Age in the 1920s.

Son's first resurgence in the 1940s assumed the form of the rhythmic *son montuno* presided over by the blind *tres* player Arsenio Rodríguez, who introduced many features of contemporary salsa: expansion of the *son* ensemble to the *conjunto* format through the inclusion of the *tumbadoras* or *congas* (Congolese single-headed drum), a piano and three trumpets (Leymarie 2002); extensive use of syncopated anticipated bass figures, and the climactic '*diablo*' (devilry) structural element as a goad to dancers. One of his enduring legacies is the ubiquitous *guajeo* or *montuno* rhythmic vamp, in which seven of its nine notes are played on the upbeats. By temporally displacing notes to the upbeats, Arsenio side-stepped the phenomenon which is now understood as 'sonic' or 'auditory masking,' where a listener will perceive only the louder of two simultaneous sounds of similar frequency (Katz 2002). The *guajeo*'s notes are located in spaces where they are least likely to be obscured; it allowed Arsenio's *conjunto* to present music with a sonic power greater than that of similarly sized rivals, more comparable to that of twenty-first-century salsa bands (García 2006). Enrique Jorrín brought about the second resurgence of *son* in 1950 with the *chachachá,* which set the trend for Latin popular music that enjoyed global appeal, propelled by dance crazes through the growth of mass media.

In the 1960s Cuban musicians sought more effective means to 'Cubanize' (Moore 2002) foreign musical ideas into *música bailable*. The result was *songo*, a rhythm which made room in *son*'s percussion for the inclusion of the trap set. The strategy was to move the open tones, normally voiced with the *conga* (medium-pitched drum) on beats four and its following upbeat, to the *tumba* (low-pitched drum).



Example 5: *Songo* rhythm

This gave the *tumbadora* player license to interpret rhythm more freely on the *conga* between these tones, while the trap set drummer played the structural accents (Quintana 2000). In the 1970s *songo* catalyzed further fusions with jazz, as well as funk, rock, rhythm and blues and rap, giving rise to Cuba's version of modern salsa – *timba*. Three members of Cuba's Los Van Van, who would later evolve into a *timba* supergroup, combined horns and synthesizers with the *charanga* format and performed at the forefront of *songo*:

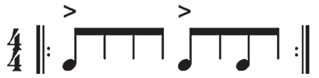
percussionist José 'Changuito' Quintero, pianist César 'Pupy' Pedroso and bandleader Juan Formell. As with the *son*, *songo* has proved to be a highly flexible rhythm. Capable of absorbing elements of Cuba's folkloric drumming traditions, *santería,* rituals the rumba complex and the Puerto Rican *bomba*, it has become a cornerstone rhythm underpinning Cuba's *música bailable* as performed by her *timba* bands, in which the freedom to improvise extends beyond individual expression to the spontaneous determination of rhythmic arrangement as a collective using *pédalos* (rhythmic gears) (Cruz 2004).

Puerto Rico and New York

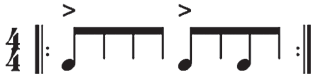
The fine tradition of brass band musicianship in Borinquen (Puerto Rico) stretches back to the early twentieth century, when friendly competition between the large numbers of municipal bands trained highly literate musicians and spawned dynasties of performers (Glassner 1995). Music-reading *Boricuas* (Puerto Ricans) formed the backbone of the Latin bands who interpreted Cuban music in New York, such as those of *mambo* stars Machito, Tito Rodríguez and Tito Puente in the 1950s. These musical sensibilities have persisted in Puerto Rican salsa, where accurate intonation, a smooth, refined timbre and a polished studio performance are preferred, as typified by El Gran Combo and Sonora Ponceña. It is impracticable to compartmentalize contributions made to salsa by resident Puerto Ricans and 'Nuyoricans' (those living in New York), given the free-flow of musicians after the Jones-Shafroth Act of 1917, which conferred US citizenship on Puerto Ricans.

Salsa has included uniquely Puerto Rican characteristics: *plena* and *bomba* drumming, the *cua* rhythm, *güira* (metal scraper) patterns derived from the *seis*, motifs from the *danza* and *aguinaldo* and sounds of the *cuatro* (Puerto Rican guitar). The Puerto Rican approach to salsa rhythm, called *afincao* (locked), is stylistically identifiable: *congas*, *timbales* and *bongó* perform as a single unit, as demonstrated in the music of Willie Rosario. By contrast, the Cuban approach of *metiendo palos* (inserting beats) allows the percussionists freedom to improvise around rhythms and accents.

New York City in the 1960s experienced two dance-driven resurgences of *son*-based music as preludes to salsa: *pachanga* and boogaloo. The primary rhythmic change in the *pachanga* was the substitution of the *tumbao moderno* rhythm, which has audible tones on beats two, four and the upbeat following four (2,4,4 +) with a *caballo,* which has audible tones on beats one, three and four (1,3,4) on the *tumbadoras.*



Example 6: *Tumbao moderno* audible tones



Example 7: *Caballo* audible tones

Thus the emphasis was shifted from the backbeat to the downbeat to create a bouncier, jauntier feel. The boogaloo distilled musical idioms from Puerto Ricans and African Americans, brought about by their cultural juxtaposition in the city, and was aptly described by *timbalero* (*timbale* player) Henry 'Pucho' Brown as 'cha-cha [*sic*] with a backbeat' (Flores 2002).

The embargo against Cuba by the United States, beginning in 1960, reduced the availability of Cuban musicians for performance and production, creating an artistic vacuum which was filled by domestic enterprises such as Alegre Records and Fania. Although Fania's salsa did draw inspiration from Afro-Cuban music of the 1940s, it was distinctly a product of the city – its lyrics spoke in hard-hitting prose of the turmoil, disenfranchisement and challenges facing inner-city life, and were underpinned by a complimentary raw sound in the horn section. The trombone assumed a 'singing' role akin to lead vocals, altering its relationship to its supporting instruments and ultimately in the music arrangements (Valentín Escobar 2002). This uniquely New York innovation was largely pioneered by Barry Rogers of Eddie Palmieri's La Perfecta and propagated by Jimmy Bosch and others. Another feature of salsa's early days in New York is the *desafinado* (out-of-tune) sound of the trombone played slightly flat to render stark relief against the background orchestration, a phenomenon common among young choristers (Alderson 1979). For some older musicians imperfect intonation is a defining characteristic of authentic Nuyorican salsa, while others prefer an accurate conservatory sound more typical of Puerto Rican salsa. In the 1980s producer Sergio George reincorporated the trapset into salsa in a development parallel to that of *songo* a decade earlier, resulting in a similar opening of musical possibilities stimulating *salsa pop*. The participation of band members on recordings became increasingly rare as modern studio production techniques such as overdubbing and reliance on session musicians became the norm. A consequence of these production centers drawing upon discretely limited pools of studio musicians is the emergence of an identifiable Nuyorican versus Puerto Rican sound.

Venezuela and Colombia

Chombos (black members of the merchant marine), bringing recordings of the Cuban *guaracha*, Puerto Rican *bomba*, New York boogaloo and later of salsa, spread music throughout Latin America via her trading ports. Salsa's arrival in Venezuelan and Colombian cities coincided with a time when its social image and expression of themes of urban life were relevant. Concerts by the Fania All-Stars in Caracas in 1974 and Cali in 1980 further cemented New York salsa's reception as a transnational style, stimulating the emergence of a common pan-Latino identity (Rondón 1980) and inspiring a new generation of musicians.

Although Colombia's passion for salsa has its roots in the popularization of Cuban *son*, it was the boogaloo that paved the way into the self-proclaimed 'world capital of salsa,' Cali. *Caleño* youths began playing 33-rpm boogaloo recordings by Joe Cuba and Pete Rodríguez at 45 rpm to suit their own style of dancing, which involved a quick shuffle on the tips of the toes in 'double-time' (Waxer 2002c). Little distinction is made between boogaloo and salsa in Colombia, as evident in the output of one of the country's top salsa bands, Sonora Carruseles. Colombia boasts its own distinct blends of salsa: Afro-Colombian elements of the *chirimía* and *currulao* from the Pacific Coast as seen in the music of Grupo Niche and Orquesta Guayacán; a myriad of Afro-Caribbean styles from the Atlantic coast in that of Joe Arroyo; the pan-Latin *cumbia* of the Latin Brothers; and the accordion-based *vallenato* of Carlos Vives. Medellin-based record label Discos Fuentes under its music director Ernesto 'Fruko' Estrada has played a central role in disseminating salsa, establishing Colombia as a major site of salsa production.

Venezuelans have also made salsa part of their national culture. Throughout the 1970s the most popular bands from New York and Puerto Rico regularly featured in the *Carnavals* of Caracas, and by 1978, on the basis of her oil wealth and the consequent rise in disposable income, Venezuela had become the principal market for international salsa (Rondón 2008). As did Colombia, Venezuela employed two broad approaches to grounding the international sound of salsa with local references: fusion with Afro-Venezuelan styles, for example in the *salsa-joropos* of Dimensión Latina; and the 'salsafication' of traditional music through a change from traditional to more salsa-like lineups and arrangements, as exemplified by Guaco's renditions of the folkloric *gaita zuliana* from Maracaibo.

On the international stage, Venezuela's salsa draws from Cuba's *son*, as well as New York's salsa, on account of the Cuban musicians domiciled there. Puerto Rican influences can also be heard, for example in the music of Salsa Mayor whose bandleader, singer and bassist Oscar D'León, known worldwide as 'El Sonero del Mundo' (The World's *Sonero*), stands out as Venezuela's greatest salsa ambassador.

Further Caribbean Salsa Sites: The Dominican Republic, Miami, Mexico and Panama

Following the salsa boom in the 1970s, several countries of the Caribbean were slower to emerge as centers of salsa production. This was because the facilities, from recording through to manufacturing, marketing, distribution and consumption, were either underdeveloped or, as was the case with *merengue* in the Dominican Republic, were dedicated to native genres.

The Dominican Republic came to be associated with salsa through Johnny Pacheco and *sonero* José 'El Canario' Alberto. Fania's music director, Pacheco, managed to incorporate the Dominican *merengue* into salsa through the shared ability of the two to express urban themes, although New York's version of *merengue* did not have the same degree of cultural grounding as the Dominican original and so remained on salsa's periphery. Nevertheless the significance of *merengue*'s impact in associating the Dominican Republic with salsa can clearly be seen – the concert commemorating the 135th anniversary of the nation's independence at New York's Radio City Music Hall on 25 February 1979 was billed as a 'Salsa Show' (Rondón 2008). The Dominican artist who has proved by far the most influential in merging the genres of *merengue* and *bachata* (another genre from the Dominican Republic) with salsa is Juan Luis Guerra, whose experimental fusions of Caribbean forms have not only found acceptance across Latin social divides, but have also garnered multiple Grammy successes – the first with *Bachata Rosa* for Best Tropical Latin Album in 1991.

Cuban music has long found a home in Mexico, from the *boleros* dramatized in Mexican cinema of the late 1920s to the *mambos* of Dámaso Perez Prado some two decades later. Singer Celia Cruz, on tour with La Sonora Matancera in 1959, chose to remain in Mexico instead of returning to post-revolutionary Cuba. She became a US citizen in 1961 and eventually joined Fania in 1973. Mexico's musical production has remained geared toward the domestic market and although Bronx-born Willie Colón, a member of the salsa boom's avant-garde, chose to domicile there, the country's role in salsa production has continued to be principally that of a finishing facility for Venezuela's music industry.

Panama's roster of salsa artists ranges from Carlos El Grande, singer with Salsa Mayor, to Henry D. Williams, writer of the salsa classic 'El Nazareno,' who recorded or toured with ensembles from the major centers. The country has been considered a site of salsa production primarily through its association with one of salsa's most iconic figures, the singer-songwriter Rubén Blades. However, the recordings which established his reputation were made for Fania in New York in the 1970s through to the early 1980s. It was Blades's coupling of his nationality with his political activism and songs of social conscience that served to locate Panama at the fore of salsa's public consciousness. The gradual increase in the country's salsa output has been obscured somewhat by the tremendous rise in popularity of reggaeton (*reggaetón*) and Panama's role in the emergence of that music.

Located on the rim of the Caribbean basin, the US city of Miami emerged as a center of production for crossover Latin pop (in *Latin Music USA*, a PBS documentary) led by influential producer Emilio Estefan Jr. from the late 1970s. The New York-based label RMM chose to record its *salsa romántica* in the city in the 1980s (Aparicio 2002). Its collapse in 2000 created a vacuum in the output of romantic salsa, which was filled by Miami's exhilic Cuban community, thereby giving Cubans direct participation in the production of Caribbean salsa. Miami's salsa output has more similarity with modern Cuban music than with that of the more established centers, on account of being the preferred destination for Cuban *timba* performers, some of whom, such as Manuel 'Manolín' Hernandez 'El Médico de la Salsa' and Issac Delgado 'El Chévere de la Salsa,' have been presented there as salsa performers.

Major Social Themes in Salsa

Salsa's origins as a music of the social underclass are reflected in the predominance of themes that are relevant to its consumers and expressed in their attitudes and opinions. The way in which salsa handles issues of gender is a prime example. Typically, the male is dominant and his thoughts and deeds are narrated in the first person. This gender positioning is directly descended from the machismo tradition, common among interpreters of the Cuban *son*, called *guaperia*. *Guaperia* is founded on the identification of the listener with the '*guapo*' (handsome man), from whom the narrative emanates. The *guapo* indulges in both smooth talking, with boasts of romantic conquests, and tough talking, which reminds his audience of his supposed ability to resolve any problem through the application of force. In the *son*, this combination was delivered with wit and guile. However, in the intervening period between the height of *son* and the rise of salsa a dramatic shift occurred in socioeconomic conditions, marked by high male unemployment and the increasing independence of women as they too became wage earners, a development which struck at the heart of a patriarchal culture where the male was expected to be the provider (Hernández 1995). *Guaperia* went from being light-hearted in *son* to being clichéd, violent, devoid of chivalry and tainted with misogyny in 1970s salsa and Dominican *bachata*. This mood was largely dissolved in the *rómantica* period of the 1980s and 1990s, and modern salsa as an international product is less overtly sexist, although tension in gender relations has nevertheless been the subject of analysis (see Aparicio 1998).

The second primary theme evident in salsa is the notion of a shared Latin identity, and here Rondón's (2008) call to distinguish between trends of cultural symbolism and those set by the music industry is relevant. Early salsa's message from the margins was a common bond linking *barrios* around the Caribbean. As salsa became increasingly accepted by, and acceptable to, the social elites, it changed from being an expression of intra-cultural resistance to being an (inter)cultural marker. This transformation was due in part to the promotion by the New York salsa music industry of the term 'Latino,' a word used in the Anglophone USA to denote those who live in the USA and are of Latin American descent. In the Caribbean, however, 'Latino' was not a term of differentiation but instead was harnessed to drive international sales of salsa by linking it to the ideal of Latin unity – a concept which resonates strongly with independence from a dominating force, as in Símón Bolivar's Gran Colombia, free from Spanish hegemony (Williamson 2003). Entire urban populations, such as the city of Cali in Colombia, in need of an expression properly reflective of their newly growing cosmopolitan identity, embraced the idea (Waxer 2002). The success of this move can be discerned by the extent to which it has become ingrained in the musical offerings of performers over time: from Hector Lavoe's 'Mi gente' (My People) in 1975, Celia Cruz's 'Pasaporte latinoamericano' (Latin American Passport) in 1993 and Adalberto Álvarez's 'Somos Latinos' (We Are Latinos) in 1995 to La Excelencia's 'Unidad' (Unity) in 2009.

Extra-Caribbean Sites of Salsa

The sounds of Cuba have long traveled beyond the Caribbean by shortwave radio. Recognizing their rhythms in the *son montuno*, West Africans have adopted it as their own, a development which has continued beyond the formation of Orchestra Baobab in Senegal to the pan-Atlantic collaborations of Africando comprising New York salsa musicians and Senegalese vocalists. The re-Africanization of Cuban-based styles has drawn new fusions with Senegalese *griot* traditions and *mbalax*, for example by Super Cayor de Dakar. Congolese-born Ricardo Lemvo is a leading proponent of modernized African-Cuban fusion, choosing the West Coast of the United States, also home to Grammy-nominated gypsy ensemble Orquesta Gitano, as his site of production.

In the early twenty-first century, the live salsa performance scene in Europe boasts a number of noteworthy musicians, including Colombian-born 'El Sonero de Paris' Yuri Buenaventura in France, who has dabbled with the sounds of Algerian *raï*, the critically acclaimed Conexion Latina in Germany, the convincing *timba* of Sweden's Calle Real and the highly original Salsa Celtica from Scotland. In Japan, where hyper-real renditions devoid of contamination by local elements are preferred, Orquesta de la Luz produced salsa's fastest-selling platinum debut album in 1990. The rise of Japanese salsa points to an important new trend only possible with transnationalization – 'the adoption of a non-Western style by another non-Western country without the intervention of North American or European influence' (Hosokawa 2002).

Beyond the Caribbean, the production and consumption of salsa differs between communities, according to whether they are expatriate Latin American or not. In the presentation of live salsa music, given the extensive knowledge base and specialist skills in language, rhythmic execution and synchrony required, it is uncommon to observe a salsa ensemble without the presence of a single Latin American. For economic reasons it is more usual to encounter salsa being 'reproduced' technologically at sites of consumption, where contrasting preferences in attitudes to recorded music are notable. Generally, Latin Americans, to whom the language and cultural symbols are identifiable, appreciate narrative and often enjoy songs with extended lyrical improvisations – the *sonero*'s art – as exemplified in recordings of live performances. Many non-Latin Americans, on the other hand, consume salsa as 'decontextualised' social dance (Skinner 2007) and to that end tend to prefer compact songs that provide more opportunities to engage with dance partners. A significant proportion are unaccustomed to synchronizing their regular dance rhythm to syncopated timelines like *clave*; they exhibit greater confidence on the dance-floor when rhythms of a regular period are pronounced, for example those interpreted by the *bongo*, bell and *güiro*.

Growth in Salsa Literature

The growth in interest in salsa in the late 1990s and early 2000s is reflected in an expansion in the literature, with styles of writing ranging from anecdote-based personal chronicles to highly researched academic studies and theses. A considerable amount of research in the ethnomusicology of salsa has been conducted by authors with significant investment in Latin American culture, for example Berríos-Miranda (2002) and Garcia (2006). Meanwhile, it is in the disciplines of social anthropology and sociology that the transnational status of salsa has been most thoroughly documented. Skinner's work on salsa in Belfast (2008) and globally (2007), and Román-Velázquez's 'The Making of Latin London' (1999) are good examples. The translation into English of texts previously available only in Spanish, most notably Carpentier's *Music in Cuba* (2002) and Rondón's *The Book of Salsa* (2008) can be read as another, albeit weaker, indicator of salsa's movement across national boundaries.

But salsa scholarship is not limited to the cutting edge of cultural research. In 2011 a burgeoning wealth of instructional material is available from webpage to printed page, in aural and visual formats, covering aspects of musicianship and dance, styles of performance, histories of development and biographies of famous artists. That these can be found in a breadth of languages confirms that salsa is a phenomenon that has grown beyond its points of origin and development in North America and the Caribbean to assume an international stature.

Salsatón

Salsatón (or salsaton) is a hybrid, transnational music that integrates elements and artists of two popular musical genres with strong Puerto Rican connections, salsa and reggaeton (reggaetón). These two genres are among a number across the Caribbean featuring a 3:2 *son clave* pattern over a duple meter pulse. Although they arose and grew in popularity at different historical and social moments, they share an original focus on urban themes and, later, the inclusion of romantic lyrics. Born in the early years of the twenty-first century, salsatón is the collaborative product of innovative artists from these two distinct genres and also lies therefore at the intersection between the youth associated with reggaeton and the broad range of ages associated with salsa, expressing similar concerns and identities.

Although some critics of salsatón deny it is even a genre – just as critics of salsa have claimed it to be nothing more than a marketing ploy by Fania Records, and reggaeton's detractors have denied it genre status because of its highly digitalized and technical sound – salsatón is construed by many as a unique musical form that combines the similar rhythms and themes of its two parents.

Both salsa, born in the urban barrios of New York in the 1960s, and reggaeton, arising in Puerto Rico and recognized by this name in the 1990s, have their roots in immigration and musical mixing and adaptation.

Puerto Rican and other Hispanic immigrants to the United States experimented by blending the *son* and other Caribbean rhythms to create salsa. The lyrics of this new music focused first on the harsh realities of urban life, later introducing romantic themes, in both cases reaching across national boundaries to contribute to a pan-Latin identity. Similarly, reggaeton grew out of the blending of dancehall, hip-hop and *reggae en español* (Panamanian adaptations of Jamaican rhythms to Spanish language songs during the 1960s and 1970s). Reggaeton's hallmark beat, known as Dem Bow after Shabba Ranks's 1991 hit of the same name, featured a strong emphasis on percussive elements that highlighted the bass drum on the first and third beat with the snare playing the backbeat against it (for further detail, see the entries on salsa and reggaeton). Like salsa, reggaeton's beginnings are deeply rooted in an urban thematic that, among other topics, criticizes poverty, unemployment and discrimination. Reggaeton, therefore, inherits the critical stance of the first salsas and other musical forms such as hip-hop. As in the case of salsa, reggaeton's lyrics have continued to include more romantic elements as the genre has evolved.

Salsatón's precise beginnings are blurred. An early sample of salsatón is the 2003 collaboration between *salsero* Jerry Rivera and *reggaetonero* Julio Voltio on a remake of the Frankie Ruiz single, 'Mi libertad' ('My Freedom'). The central themes of this song are common to both salsa and reggaeton: incarceration, the passing of youth, separation and an underlying sense of alienation. Although such a combination of salsa and reggaeton had not yet been christened as salsatón, the genre's basic characteristics – the blend of Dem bow and *clave*, singing and rapping, and traditional themes – are present in this song.

Various other musicians have participated in this blurring of musical boundaries between salsa and reggaeton. In 2005 Sony International released the album *Salsatón 2005*, a compilation of collaborations between artists such as Charlie Cruz and Tony Tun Tun; La India, Tito Nieves, John Eric and Nicky Jam; and Michael Stuart and Cheka. Similarly, La India experimented with salsatón collaborations on her album, *Soy diferente* (*I'm Different*), which features the salsera with *reggaetonero* Cheka in the title track, while the highly popular reggaeton star, Don Omar, collaborated with well-known *salseros* Gilberto Santa Rosa ('Los hombres tienen la culpa' – Men Are to Blame) and Víctor Manuelle ('Nunca había llorado así' – I Had Never Cried Like This). The young Puerto Rican duo NG2, whose NG stands for *nueva generación* – 'new generation' – also blended their *salsa joven* ('young salsa') with Julio Voltio's reggaeton in the remix of their popular 'Ella menea' (She Shakes).

One of the most significant examples of salsatón is Andy Montañez's 2006 album *Salsatón: Salsa con reggaetón*. According to *salsero* Montañez, a Puerto Rican musician with over four decades of experience in the music industry, producer Sergio George can be credited with the idea of recording an album blending salsa and reggaeton. Montañez invited a variety of *reggaetoneros* to collaborate with him, including Daddy Yankee, Cheka, La Sister and John Eric. The first single of the album, a collaboration between Montañez and Daddy Yankee, specifically refers to the experimental nature of fusing musical genres and generations as it traces the evolution of salsatón from *son* to reggaeton. Likewise, the single 'Salsatón,' featuring John Eric and La Sister collaborating with Montañez, directly states the goal of uniting the two genres and emphasizes that they should be joined so that younger generations can experience Montañez's style. This innovative album met with great popularity and Montañez was rewarded with a 2007 Grammy nomination for Best Tropical Album of the year.

Salsatón collaborations have continued to gain airplay internationally among tropical and dance selections. By mixing a pinch of salsa with a touch of reggaeton, salsatón has built not only on these genres' similar rhythmic bases but also on the way they have reflected a common history of realities shared by many Latinos, young and old, around the globe. Salsa and reggaeton, with their Puerto Rican origins, have contributed to the construction and diffusion of pan-Latin identities due to their initial focus on urban, quotidian themes, and later, romantic lyrics. Their fusion in salsatón is but one more link in this musical tradition that joins genres and generations of Latinos to find a shared language that expresses who they are, the moment in which they live, and the realities they face.

JULIE A. SELLERS

Salves

Dominican *salves* are pieces of non-liturgical religious music performed before an altar or devotional icon. They take their name from the 'Salve Regina' of the Spanish medieval liturgy, though the Dominican repertoire and performance style is substantially different and not under the jurisdiction of the Church. In a variety of regional styles, most with polyrhythmic percussive accompaniment, *salves* function as the essential religious repertoire in pilgrimages, devotional celebrations for Catholic saints (*velaciones*) and *Vodú* ceremonies (the Dominican counterpart of Haitian *Vodoun*). In the eastern and southwestern provinces of the Dominican Republic, many of the *salves marianas* (to the Virgin Mary) are still performed in a manner derivative of the archaic Spanish singing of the 'Salve Regina.' However, several other distinctly Dominican repertoires, performance styles and functions for *salves* music have emerged and diffused widely in popular religion since the ending of the colonial era, forming a new Creole musical tradition. In the southern and central provinces especially, they are characterized by thorough blending of multiple African and Spanish musical influences, and openness to stylistic innovation and cross-fertilization with other local traditional music including *palos, pri-pri, mangulina, merengue perico ripiao* and work songs of agricultural cooperatives.

In the closest Dominican variant to the medieval Spanish *salves marianas*, the original liturgical text, with minor alterations or additions to fit musical phrasing, is divided between two alternating choruses according to the particular melodic setting. Often it is sung unaccompanied without conforming to a regular pulse, though hand-clapping or light percussion can be introduced. There are a few dozen melodic settings in use for singing the verses of the *Salve Regina* in this unedited and uninterrupted manner, a style known as *salves corridas.* More numerous are the repertoires of *salves con versos*, which are likely to be sung in regular pulse accompanied by percussion in distinct combinations depending on region. In these, a soloist sings the verses of the *Salve Regina* in a modified form with frequent word additions or brief expressive 'fillers,' whereas the chorus sings a fixed response, either after each single line, couplet or quatrain of verse.

Other styles of *salves* with no relation to the liturgical text dominate the tradition in the south and central regions, and are increasingly present in other parts of the country. These styles have in common improvised single verses, couplets or quatrains sung by a soloist alternated by fixed chorus responses and accompanied by polyrhythmic percussion. While more recent *salves* tend to utilize Western major and minor scales, the melodies of older repertoires are often derived from typically African sequences of intervals and pentatonic scales or may, as in the *salves corridas*, utilize ecclesiastic modes, plagal cadences and melismas characteristic of European sacred music dating from the early colonial period. These Creole repertoires include *salves* for the Virgin which do not use the *Salve Regina* text, *salves* addressing other Catholic saints, *salves* dedicated to *Vodú* deities and those treating a variety of themes of relevance to Dominican popular religion. In addition, while at the altar or in religious processions, *salves* singers introduce themes which are secular in orientation and may borrow lyrics or an entire song from recreational music genres such as *merengue.* Likewise, *merengue* singers have on occasion drawn inspiration from *salves* melodies and lyrics. Cross-influences between *salves* and recreational music have historical precedent in part due to an overlap of musicians and performance contexts between genres. For example, in *velaciones* and *Vodú* ceremonies, *salves* are frequently performed in alternation or simultaneous with other genres intended to satisfy relatively more secular interests. Depending on region and occasion, other music may include *palos*, *tonadas, pri-prí,* brass bands and *merengue típico.*

While song texts, melodic type and vocal technique also vary, regional distinctions are marked especially clearly by instrumentation and their role in the ensemble. In towns north of Santo Domingo, several round frame drums (*panderos*) and a metal scraper (*güiro*) are combined with a small lap drum (*mongó*), and a somewhat larger lead drum (*balsié*) which is set horizontally upon the ground and played with special foot-dampening and finger-gliding techniques. In southcentral San Cristóbal, the lead drum is the *tambora* (also essential to *merengue* ensembles), which is joined by at least one smaller *balsié,* and typically two or more *güiros* played with greater improvisation and rhythmic variety than elsewhere. Further west in Baní, a set of three or more unusually large *panderos* are added to the ensemble just described, and play the lead role in polyrhythmic improvisations rather than the *tambora.* Elsewhere in the east and the Cibao (north), lighter accompaniment of small *panderos,* hand-clapping and *mongó* are typical. Since the later decades of the twentieth century, a number of groups in the southcentral provinces, looking to achieve energetic effects in *Vodú* ceremonies, have been using Kongo-derived *palos* drums to provide *salves* accompaniment or have combined them with traditional *salves* percussion into one integrated ensemble. Nevertheless, in general practice, *palos* and *salves* remain distinct genres with important sonic and functional differences.

DANIEL C. PIPER

Samba

The term 'samba' has been used in Brazil since at least the nineteenth century in many different regional contexts to refer to an equal number of distinct music genres, often related to dance forms that include the term, as well as events in which they are performed. Its possible meanings, therefore, emerge from the particular forms it may assume from rural to urban settings, along with varying emphasis on values such as community entertainment, ethnicity, social positioning, political power, social repercussion and commercial revenues. Yet, considering all these semantic possibilities, it is equally viable to think of *samba* in terms of multiple interrelationships between and beyond any circumscribed meanings.

The first known written reference to *samba* occurs in an article ('The Extravagant Taste') signed by the Catholic priest Lopes Gama in a satirical periodical published in the northeastern town of Recife, which describes the *samba d'almocreves* as being as agreeable as the *Semiramis*, the *Gaza Ladra*, the *Tancredi*, etc. (*sic*), by Rossini (*O Carapuceiro*, no. 6, 3 February 1838, p. 1). Analyzing this brief record, popular music historian José Ramos Tinhorão (2008) interprets its association with mule drivers (*almocreves*) as indicative of a possible white or mestizo lower-class borrowing from ('contamination by,' in his terms) African-derived practices such as the drum-based, belly-bump dances termed *batuque* by the Portuguese, and seen by the intellectual elites as not suitable for a civilized urban milieu (slavery was abolished in Brazil only in 1888). From then on, as shown by Tinhorão, other nineteenth-century literary references would confirm the double standard of *samba* as simultaneously referenced in African-derived, drum-based belly-bump dances held in the slave laboring haciendas and as an urban hybrid cultivated among the predominantly mestizo and black lower classes.

Origins and Historical Development

Despite all etymological and historical evidence indicating its likely origins in Southern-Central Africa (see Carneiro 1981; Machado Filho 1985), the earliest printed source for the practice of *samba* in the city of Rio de Janeiro remains an 1878 newspaper advertisement for a theatrical pantomime, 'Aladdin and the Magic Lamp,' presented simultaneously at a skating rink and a circus-theater. It asks the reader to take part in the 'Samba, ... the most authentic success of the times! The genuinely popular amusement!' (Gardel 1967, 126; author's translation). While the performance contexts mentioned may be more readily associated with white and mulatto lower-middle-class audiences, this touch of novelty may be in part attributed to broader sociodemographic changes affecting the cultural life of the Brazilian capital. With the progressive decay of the slave regime in Brazil, Rio, the country's strongest abolitionist center, became the main destination of former slaves from various provinces, many of whom spoke dialects that mixed African languages with local forms of Portuguese. Following Abolition in 1888, people of African descent made up to about 60 percent of the city's population (Mortara 1970), and most were underemployed or unemployed. The oral history of this period records the role of *samba* music and dance as creators of community bonds (eventually interchanging symbolic forms and values with Afro-Brazilian religious practices) within this heterogeneous social group whose ancestors had come from different ethnic backgrounds in Africa and mingled with distinct regional cultures in Brazil (see Borges Pereira 1970).

As was the case with every other cultural expression associated with Afro-descendants, *samba* practice was singled out as a despicable sign of backwardness that jeopardized the country's modernizing efforts, such as the 1902–28 urban reform that remodeled downtown Rio de Janeiro based on the Parisian model, and that also served as a dangerous symbol of black unity and resistance. Performances of *samba*'s percussive and syncopated music – classified in many written sources as 'noise' – and of its dance – labeled lascivious – depended on police permission and were often violently repressed.

After the 1902 opening of the first recording enterprise in Rio, Casa Edison, musical pieces described as 'samba' on the record label began to be issued commercially sometime between 1908 and 1911. The first such recording was 'Em casa da Bahiana' (In the Bahian Woman's House), an exclusively instrumental piece performed by the Conjunto da Casa Faulhaber. Recorded for the Carnival festivities of 1917 by the singer Baiano, the song 'Pelo telefone' (Over the Phone) became the first commercially successful *samba*. It had been previously copyrighted by Ernesto dos Santos (nicknamed Donga), an active participant in early-century *samba* gatherings held in Afro-Brazilian enclaves of Rio and also a part-time professional musician who played banjo and guitar. His achievement, however, was soon shadowed by accusations of plagiarism made by a number of co-participants in the same *samba* reunions, a controversy that ultimately split the community. Another allegation commonly made to deflate the claim of 'Pelo telefone' to be the first recorded *samba* is that the music itself, the rhythm in particular, has stronger associations with *maxixe*, a popular turn-of-the-century ballroom genre. Controversies notwithstanding, the success of 'Pelo telefone' initiated the systematic commercial exploitation of the term 'samba' by local record companies. The earliest *samba* hits followed the 'Pelo telefone' model closely: (1) the characteristic *maxixe* rhythmic pattern of sixteenth note/eight note/sixteenth note in a 2/4 measure; (2) the vocal style emulating lyrical singing; (3) accompaniment by a single guitar or piano, or, over time, small ensembles of two guitars, *cavaquinho* (four-string guitar), one wind instrument and almost inaudible percussion. This model was explored by some of the first exponents of Carnival music in the 1910s and early 1920s such as pianist Sinhô (nicknamed the King of Samba), Caninha and Alfredo Vianna (Pixinguinha).

By the late 1920s various changes were appearing on recorded *sambas*, notably: (a) instrumentation with a wind section and percussion instruments, the latter being typical of the popular practice; (b) a multipart rhythmic structure, with the voice and each of the accompanying instruments following its own distinctive, interlocking patterns, the instrumental ones largely developed around an ostinato figure; and (c) a vocal style that sounded more colloquial, contrasting the emulation of lyrical singing observed in earlier recorded *sambas*. The new style, also known as 'samba batucado' (thus referring to its percussive nature, from the verb *batucar*, meaning 'to play percussion'), was largely made possible through the introduction of sound recordings in Brazil around 1928, and became the hegemonic form of recorded *samba* for decades (Araujo 1992; Sandroni 2001). The prototypical *samba* songs in this style were recorded by white middle-class singers such as Francisco Alves and Mário Reis and composed by lower- or lower-middle-class blacks and mulattos such as Ismael Silva, Bide and Armando Marçal, all of whom belonged to a newly created type of Carnival association, the so-called 'samba schools.' Their lyrics depicted the songwriters' everyday lives, in which involvement with *samba* was one of the rarely available forms of social participation and mobility. In this context, the theme of the *malandro*'s (rogue's) search for a better life would acquire enormous importance. Born tired because his father had literally worked to death, with no money but with a passion for fine clothes, drink and pretty women, the *malandro* praised the easy bohemian life, in which words such as job or work were taken as insults.

The first significant white composers to write songs in this idiom and to live by its values, such as Noel Rosa, faced the disapproval of their own class as they became publicly associated with the *samba* world. Despite the persisting stigma, however, the number of white middle-class *samba* composers and singers (among the latter, the Portuguese-born Carmen Miranda) increased, helping to make *samba* a national success through records, radio and, beginning in the late 1930s, movies. This phenomenon is concomitant with the proliferation of hybridized forms of *samba* not meant for carnival, such as *samba-canção*, *samba-fox* and others.

The dictatorship of Getúlio Vargas (1937–45) centered its politico-economic strategies on two basic objectives: overthrowing the landowning oligarchies and consolidating the hegemony of industrial capitalism; and building a sense of national consciousness vis-à-vis the previously predominant politics focused on petty regional interests. The regime soon perceived the importance of *samba* in Brazilian popular culture but had, of course, serious problems with song texts praising the *malandro* way of life, which reconciled poverty and privation. Through articles in government-run periodicals and rules for state-sponsored *samba* competitions, these policy makers attacked the 'transgressive' song texts as dated, and urged the *sambistas* (samba practitioners) to use their lyrics to foster both a sentiment of national pride and a passion for hard work.

The *sambas* in tune with this patriotic appeal were no longer presented as stemming from an 'underdog culture,' but rather as distinguished symbols of the New State (Estado Novo). In this State, racial or social prejudices should have no place – in official terminology, Brazil should be a 'racial democracy' in which a man or woman should ideally be valued upon his/her hard work and 'civic consciousness.'

Musically speaking, the *sambas* of the Estado Novo in question are by no means different from their predecessors, particularly in the rhythmic rendition of the melody based on the elusive *malandro* prosody. This similarity lent a relative ambiguity to the meaning of the new lyrics. One may take as an example the song 'Vai trabalhar' (Go to Work), recorded by Aracy de Almeida in 1942. The singer reprehends her partner for being a *malandro*, living in the *samba* world all day long while she pays her dues washing clothes. The climax comes at the end of the song, when she urges him: 'Você tem que cooperar/è forte, pode ajudar/Arruma um emprego/Deixa o samba e vai trabalhar ("You must co-operate/You're strong and may help me out/Get a job/Leave the samba and go to work").' Taken at its literal meaning, the song seems overly moralistic, abiding by the principles of the New State, although its policy makers would certainly be tolerant of *samba* as, perhaps, a form of weekend leisure. However, the singer's deliverance – emphasizing each syncopation in a slow tempo, and using the *malandro*'s characteristically nasal vocal timbre and offbeat prosody – subtly suggests that she might even come to endorse her partner's choice if it were not for their daily difficulties in earning a living.

Raised to the level of a national emblem (the same status as coffee production at the time, and, later, of football [soccer]), *samba* began to play an important role in the so-called Good Neighbor policy developed during wartime by the US State Department's Office of Inter-American Affairs. That agency invested heavily in colorful Hollywood musicals that caricatured its 'happy and sensuous' neighboring Latin American countries. Despite its often adverse repercussions in Latin America itself, this idealized 'Latin fetish' formula captured minds and imaginations all over the world and made Brazilian singer-turned-actress Carmen Miranda one of Hollywood's hottest – and often said to have been the best paid – female show business stars of her era. Miranda frequently appeared in the role of a professional dancer-singer in nightclubs, usually wearing an extravagant costume and an exotic head-dress filled with bananas. Her repertoire initially consisted of the same Brazilian genres that she had performed before settling in the United

States: marches, *choros* and, notedly, *sambas*. The latter, according to newspaper coverage, were perceived as 'the' major symbol of her nationality. Singing in Portuguese, she confronted show-business entrepreneurs who pressured her to sing in English, but in the end she became successful largely due to her exquisite trademark combination of stylized *samba* singing and dancing. Despite its tortuous inspiration, the blend of caricature and sensuous exoticism that constrained Carmen Miranda's stereotyped roles in film seems to have been transgressive enough to force the Puritan mind to be more tolerant, while simultaneously outlining an acceptable model of Pan-American unity that congregated the exotic 'banana republics' under the modernizing US leadership.

Attempts to co-opt the *samba* of Rio de Janeiro have achieved mixed results. On the one hand, *samba*'s transgressive potential as an emblem of the oppressed, associated with its Afro-Brazilian roots, played a relevant role during the military dictatorship (1964–85), when many *sambistas*, such as Zé Keti, Paulinho da Viola and Elton Medeiros, took stances against the miserable living conditions and political repression of the poor. On the other, further developments in popular music – such as the remodeling of *samba*'s musical structure, worked out by *bossa nova* musicians beginning in the 1950s, and the 1990s boom of *pagode* music (initiated among lower-middle-class *samba* practitioners) – have strengthened the symbolic power of *samba* among Brazilians in general, while simultaneously raising concerns about its deviation from previous patterns. Even in the twenty-first century, when *samba* stands as a 'neutral' commodity in the world's entertainment market in that it is cultivated by people of heterogeneous social and ethnic backgrounds, its potential for transgression is not totally impossible. After all, a number of critical *sambistas* such as Leci Brandão, Martinho da Vila, Noca da Portela, Nelson Sargento and Nei Lopes were still active and influencing newer generations in the early twenty-first century, as exemplified by artists such as Teresa Cristina, Marquinhos de Osvaldo Cruz, Martinalia and others.

Nevertheless, the symbolic efficacy of the elevation of Rio's *samba* to the status of a national emblem is undeniable. To many Brazilian citizens from other regions or cultures, this association may seem arbitrary or even absurd, but to the *sambista carioca* (*samba* practitioner of Rio) it is a matter of pride. The latter tends to see this music as a strong representation of Brazilian culture, and often as the only cultural icon able to stand against other nations' musical emblems. This very status, however, can lead the *sambista* to despair, when he/she can no longer recognize in the media's spectacular forms of *samba* any of the values cultivated in his or her own backyard.

The Role of *Compositores de Samba'*

A careful consideration of the role of songwriters (*compositores*) and the making of *samba* songs in the specific context of Rio de Janeiro raises issues concerning: (1) the backgrounds and resources that a would-be *compositor* draws upon when conceiving a *samba*; (2) what differentiates and legitimizes a *compositor* within the so-called *samba* world; and (3) intersections with other stylistic formations within the broader field of popular music in Brazil.

Although it is today a widely naturalized category, it is not clear when the term *compositor* began to be applied to songwriters of popular music in Brazil. A not-so-speculative hypothesis holds that the label's first use was concurrent with the emergence of the so-called popular music market by the turn of the twentieth century. In any case, the general denomination *compositor de samba* was already in currency by the late 1920s to refer to market-oriented and/or formally untrained songwriters in all imaginable genres. The term *compositor de samba* is best translated in this context as a songwriter whose production is identified with the *samba* world; he or she is simply called *compositor* by insiders. The 'songwriter' usually has no formal training in – or, perhaps more properly, has a different way of formally approaching – the body of knowledge that academia either implicitly or explicitly legitimates as the canons of 'music,' and his or her craft is to create songs or, in his or her own terms, *sambas*.

The suffix '-writer' is in this case a bit problematic. *Compositores* rarely write down their lyrics, relying on memory alone, although this process is gradually being replaced by sound recording as a form of fixing both lyrics and melodies. One might argue that the appropriation by *compositores de samba* of the designation 'composer,' a term generally used to denote a specialist with formal training whose final 'works' may well include songs, is an example of convergent strategies of legitimation, although one could equally define their role as sound *bricoleurs*, who eventually combine sound with words.

Many *compositores* are formally associated with a single *escola de samba* (literally, *samba* school; *escolas de samba* are carnival associations, created among the lower classes in Rio beginning in the late 1920s, whose official parade competition later became the centerpiece of the tourist season in the city; in the twenty-first century, virtually all social classes and even foreign visitors, participate). In a *samba* school, *compositores* usually belong to either the *ala dos compositores* (literally, composers' wing) or to the *velha guarda* (literally, the old guard), an honorary institution of older composers populated by *samba* school members. The *ala* consists of fully active composers, the majority of whom are between their 20s and 40s in age. Traditionally, the rules of *alas de compositores* demanded the presentation of at least one *samba* every two years. Each *ala* holds regular meetings – including the one that defines the rules of the *samba-enredo* contest – and also organizes various fund-raising activities (e.g., raffles and parties). Its membership is largely constituted by lower-class and lower-middle-class males. In many but not all instances, members of the *alas* live within or have strong ties with the base community.

In major *escolas de samba* (e.g., Portela, Salgueiro and Mangueira), the *velhas guardas* host the emblematic *compositores*, those whose long-standing contribution to *samba* in general and to their *samba* schools in particular is widely acknowledged among *samba* practitioners. Being typically of relatively advanced age, they are regarded by their base communities as examples of wisdom. Due to their disagreement with certain paths taken by their particular *samba* schools or by *samba* in general, a considerable number of *compositores* have made a point of distancing themselves – physically at least – from the *samba* world. In these cases, however, some degree of relationship with the founding community is nonetheless maintained.

It is unanimously believed that these *compositores*' specific ability is innate, whereas one becomes a specialist in the other aspects of kinetic/acoustic labor termed *samba* (i.e., dancing, drumming and singing) through learning and practice (Leopoldi 1978; Araujo 1992). Such unique aptitude would primarily involve a sensitive attunement to human affairs, from everyday to unusual, from worldly to metaphysical and so on. The composer casts his or her themes in a certain light, be it humorous, emotional or critical, which is perceived as usually escaping the common man or woman and which, once unveiled, finds its most effective expression in song. The *compositor* is then a relatively powerful figure within a referential universe centered on the production of a body of songs, no matter how poor or humble his or her background may be. Given their unique stance, *compositores* hold a peculiar position within the *samba* schools (Leopoldi 1978). In a not so distant past, they were regarded by the base communities as among their most sensitive and articulate representatives, their power being often instrumental in voicing the ensemble of values and eventual demands endorsed by those communities (Goldwasser 1975; Leopoldi 1978). Simultaneously, however, their respective agency takes place within a concrete set of conditions, including the need to constantly navigate the constraints, deceptive or not, of financial opportunities in the entertainment market. Thus, their catalyzing mode of insertion in such a process, that is, as essential and uniquely gifted producers, stands out as a potential indicator of emerging trends whose significance may eventually transcend the microcosm in question.

An aspect to be highlighted in a study of *samba* songwriters' accounts of their composition process is the importance of the lyrics/melody relationship. In spite of their choreographic component, *sambas* seem to be understood by their composers as a danceable song form in which the melodic rhythm is relatively free from strict dependence on certain choreographic standards (Araujo 1992). Simultaneously, the accompanying instrumental rhythms comprise a certain stock of formulas, more directly articulated with similarly formulaic dance steps.

Thus, in creating a *samba* song, the songwriter follows prosody standards of the Portuguese language as spoken in his/her own context, adapting it to the stock of formulas of melodic rhythm, always referenced in the instrumental (usually percussive) rhythm. In fact, the relationships between the melodic rhythm and the instrumental rhythm constitute one of the main aspects of *samba* efficacy, as manifested in performance. Like the rhythm, the pitch collections found in *samba* melodies also follow patterns that are more or less recurrent.

Samba Subgenres

The definition and differentiation of diverse subgenres within the realm of *samba* is a noticeable concern for *sambistas*. Songwriters are expected to know and explore these subgenres well, writing songs in all subgenres, to enhance their prestige. There are, however, disagreements concerning taxonomy, even among the social authorities in the *samba* universe. There are also cases in which a composer's musical output contradicts his/her own formal or stylistic definitions.

General characteristics pervading all possible *samba* subgenres may be summarized as follows:

1. The performance involves a choice between one singer, alternation of soloists, an exclusively choral rendition and alternation between soloist and choir; choral singing is always in unison.
2. The singing is juxtaposed with a multipart instrumental structure, involving a stock of relatively standardized rhythmic and timbral

ostinato patterns, usually played by or evoking a given stock of percussive instrument-types (e.g., *tamborim*, *agogô*, *pandeiros*, *chocalhos*, *cuíca*, *caixa-de-guerra*, *tarol*, *repique* and *surdos*).

3. A stock of rhythms stimulates and interacts with the *samba* dance, although the strict relationships between the two have diminished over the years.
4. Certain rhythmic cells played by percussion instruments perform a strong generative role (sometimes a long ostinato, in other passages just a fragment), affecting the melodic rhythm of the song.
5. Recurrent melodic leaps of fifths, sixths and sevenths are employed.
6. Melodic stress recurrently appears on a sixteenth-note anticipation of the downbeat in 2/4 measure, while the instrumental accent appears on the second beat of each measure.
7. Poetic structure comprises an unfixed number of syllables per verse.
8. A relatively relaxed singing style is used, with recurrent use of falsetto.
9. The guitar and *cavaquinho* are consistently employed for melodic or harmonic as well as rhythmic support, contrasting with the use of flute, clarinet and mandolin as melody instruments only.

A tentative typology of the main subgenres of commercially recorded *sambas* includes: *samba-de-quadra* (or *samba-de-terreiro*), *samba-enredo* and *partido alto*.

Samba-de-quadra or *Samba-de-terreiro*

This *samba* type is presented publicly during *samba* school rehearsals or a musically oriented social gathering, some of which are held in the *samba* schools' rehearsal yards. Before the construction of stable structures for rehearsals, such events happened in unoccupied land slots, the so-called *terreiros*. In rehearsals, a *samba-de-quadra* was often sung as a warm-up before the *sambas-enredo* (see below) for Carnival. *Samba-de-quadra* songwriters sometimes performed the vocals themselves, solo or accompanied by a choir, while at other times another singer was used, quite often one whose prestige might enhance the chances of a song's social acceptance or commercial recording. The accompaniment consisted typically of a variable percussion ensemble plus *cavaquinho* and guitar.

The success and longevity of a *samba-de-quadra* would depend fundamentally on the immediate empathy it evoked among participants at a given event. Accordingly, several of these *sambas* were not premiered directly within the *samba* schools, but in smaller private social gatherings outside their realms. They were sung in the *samba* school rehearsal yards only after they had been learned by many *samba* school members. This method also is used for the selection processes of Carnival *samba-enredo*.

Sambas-de-quadra were composed all year round and several became extremely successful as commercial recordings. However, since commercially released *sambas-enredo* started breaking sales records in the 1970s, the time reserved for the presentation of *sambas-de-quadra* has diminished dramatically. Many *samba* school administrators eventually alleged that *sambas-de-quadra* were not 'lively' or 'enthusiastic' enough, thus disappointing, or even irritating the paying audience at modern *samba* school rehearsals.

The lyrics of *sambas-de-quadra* focus on a wide variety of themes, from love to social criticism, metaphysical allusions, or praise of public figures and many other subjects. In terms of style, they may also vary enormously, from good-humored narratives to lyrical evocative samples.

Sambas-de-quadra typically consist of two sections, the first usually sung by a choir (mixed or, more often, female) and the second by a soloist. There are not, however, strict rules regarding the appropriate number or gender of vocalists, allowing a plethora of possibilities for structuring the vocal performance.

In many *sambas-de-quadra*, the first section tends to be predominantly diatonic, devoid of the 'difficult' chromatic passages that are more typical of the second section. It is interesting to notice that composers, whenever asked, acknowledge that the first section of their *sambas-de-quadra* appeal more directly to their audiences – something that perhaps may be credited to the diatonicism of this section and to its frequent rendition by collective singing, somehow asking one more voice (the listener's) to join in.

While the production of *sambas-de-quadra* has not ceased – and, in fact, remains intense – they tend to be identified simply as *sambas* and presented in a less ritualized way.

Samba-enredo

Sambas-enredo are the songs composed specifically for the *samba* schools' pageant competition in Carnival. The origins of the *escolas de samba* are much debated. One of the most popular explanations traces them back to the first of such associations (of a noncompetitive character, however) to publicly assume such a descriptive name, the Escola de Samba

Deixa Falar, around 1928 (for other explanations, see Raphael 1980). According to Deixa Falar cofounder Ismael Silva, the term was originally a suggestive reference to a teachers' preparatory school located near the meeting place of the *samba* school's founders, in the Estácio neighborhood.

Whatever its origin, the designation 'escola de samba' was progressively adopted by similar Carnival groups in subsequent years. Beside this shared descriptive denomination, each *samba* school bears its own distinctive name, usually derived from its sociogeographical base. The name may refer to either a specific community or to a more encompassing unit such as a neighborhood or even a city within the Greater Rio metropolitan area. For example, some names allude to the *morros* (hills) of Rio, the hillside residential areas densely inhabited by the lower strata of the population (e.g., Estação Primeira de Mangueira, Império Serrano). The *morros* are also stigmatized by the term *favela* (often translated into English as slum), drawn from one of the first such dwellings appearing by the turn of the nineteenth century. Both *favela* and *morro* are terms equally charged in common discourse with the negative connotations of precarious or unbearable living conditions, poverty, marginality and violence. Their respective ethnic or social formations are accordingly subsumed under stigmatizing categories such as *favelados* (a discriminatory term for *favela* dwellers). Despite being 'factually explainable' (i.e., commensurate, for instance, with the immediately visible predominance of blacks in the lower social strata or with the striking substandard quality of life within *favelas*), such stigmata presuppose foregoing any critical search for historical and political determinants in the pursuit of social differentiation.

Some of the distinctive *samba* school names refer to larger areas within neighborhoods with an overwhelming majority of proletarian or low-income residents (e.g., Mocidade Independente de Padre Miguel, Caprichosos de Pilares). There are also more or less explicit references to other cities within Rio's metropolitan area, such as Nilópolis (e.g., Beija-Flor de Nilópolis) and Niterói (e.g., Unidos do Viradouro). In exceptional instances, a *samba* school may be named after a street (e.g., São Clemente) or bear no sociospatial reference whatsoever (e.g., Em Cima da Hora, which means 'on time').

Such distinctions notwithstanding, in virtually all cases a low-income, predominantly Afro-descendant constituency is at the root of a *favela*. For example, even in scarce cases in which a group is named after a relatively differentiated neighborhood (e.g., Unidos da Tijuca), its largest and most involved constituency certainly comes from underprivileged enclaves within that area (the nearby Morro dos Macacos in the example mentioned), where the ethnic contour of the division of labor in Brazil is once again reaffirmed. Consequently, expectations of a good result in the competition are often mixed with largely frustrated hopes for a positive projection of those communities in the public sphere, and desires for the open paths to fulfilment of their pressing necessities (e.g., an end to discrimination, better living conditions and socioeconomic uplifting).

One key aspect of Carnival preparation in every *samba* school is the yearly competition aimed at the selection of one *samba-enredo*, a *samba* song related to the plot to be developed through its costumes, floats, etc. This is carried out through an internal contest among each *samba* school's *compositores,* which may involve about 30 songs and which usually comes to an end by October or early November. After the last *samba* school has chosen its *samba-enredo*, all the winning songs are released on a commercial CD compilation containing that year's plot-based *sambas*.

Sambas-enredo are authored either by individuals or, more commonly, by teams, which may comprise up to about eight people. Since the 1970s and the commercial success of *sambas-enredo* on record, however, there have been allegations that several participating team members are incapable of collaborating even slightly in the composition of a *samba*. Their inclusion in a team may be due to factors such as their ability to publicize a song or their close connections to influential people.

The song themes are either chosen by the *carnavalesco* (pageant director) alone or by the so-called Carnival commission, which usually includes the pageant director, and they are summarized in a synopsis of the plot (*enredo*) distributed among all the *compositores*. The song text of a *samba-enredo* is based on this synopsis, where the *compositores* find references to the highlights of the plot, including important figures, selected events and places, as well as its main ideas. The songwriters are then supposed to treat the material freely, but a pointed reference to these highlights is expected.

After obtaining the synopsis, the *compositores* start working on their respective songs, either individually or in partnership. A deadline is set for registration in the internal competition for each *samba* school. As soon as their *sambas* are completed, each of the individual participants or teams submits a recording (initially a tape, nowadays a CD) containing the song and begins to promote it through all available means.

These may include printed lyric sheets, performances at social gatherings in and around the community, radio or even television performances, homemade CDs and the internet.

As an illustration of this process (Araujo 1992), in the 1989–90 Carnival, one major *samba* school's internal competition took place between mid-August and mid-October 1989; the composers had received the synopsis about two months in advance. Thirty-four *sambas* were registered in time, a procedure that involves providing one typed copy of the lyrics and recording a guitar-and-voice version of the *samba* on an 'official' cassette tape. One hundred and sixteen people were listed as *compositores* of these *sambas*, the majority of whom were in partnerships consisting of as many as seven people. Only one woman participated as songwriter that year, as a member of a team of five.

All *sambas* receiving grades of six or under were eliminated in the first round. The same occurred in the following two rehearsals with those *sambas* receiving eight or under and nine or under, respectively. Only four songs 'survived' these three stages of elimination and remained in the competition until the final selection of the winning *samba-enredo*.

While this selective process takes place internally in every *samba* school, several backstage maneuvers are typically made, from the more subtle and peaceful to more transparent and forceful ones. A general slang term for all these activities, describing in particular those considered unfair, is *armação* (literally, 'building up'). Not unusually, *armação* charges are raised by upset competitors and the results are forcefully contested, leading to disputes with unpredictable results.

Immediately after the winner is proclaimed, there comes a period in which *compositores* largely avoid the *samba* school grounds. According to insiders, this commonly occurs due to resentment and/or to avoid violent confrontations based on fresh memories of dissent that would disturb the preparation process. Accordingly, all the competing *sambas-enredo* with the exception of the winning one fall little by little into oblivion. Only after a brief interruption of rehearsals for Christmas and New Year's festivities do the *compositores* start to return to the *samba* school grounds in significant numbers. From then on, those who return (some will not) are, as much as any other member dedicated to their particular *samba* school's victory in the pageant.

Simultaneously, the chosen *samba-enredo* is worked out in rehearsals until all school members can sing it over and over again, as flawlessly as possible. Because they will take an active part in the pageant, they must be prepared to sing this *samba* uninterruptedly for at least 90 minutes (about 30 full repetitions). As observed at the same major *samba* school in 1989–90, highlighted above, after the internal contest was over, about half an hour of each of the following three rehearsals was dedicated to listening to and learning the winning *samba*. One individual sang it repeatedly into a stage microphone, accompanied by a single *surdo-de-marcação* (the lowest-pitched frame drum) played from the *bateria* (percussion ensemble) box. Thousands of *samba* school members remained standing on the dance floor, not dancing, listening attentively during the first rendition and trying to follow the lead singer during the repetitions, as they progressively memorized a growing number of passages. Since this process takes place simultaneously with the commercial recording and release of the compilation CD containing all major *samba* schools' respective *sambas-enredo*, by mid-November the *samba* was already confidently sung by a vast majority of people attending the rehearsals. From this point on, to know the *samba* well became a crucial, socially pervasive symbol of commitment to that particular *samba* school's quest.

Sambas-enredo are primarily distinguished from other subgenres, as already pointed out, by their thematic and contextual foci as well as by the dynamics of their production. Equally subject to qualitative diversity have been the formal aspects of these *sambas*. Generally speaking, two mutually influential trends are observed. The first one prevailed almost absolutely over the period between the seminal mid-1930s production and the late 1960s, characterized by slow-to-moderate tempo historical narratives in relatively extended poetic form, more adventurous, eventually modulating harmonies, and more frequent use of melodic chromaticism. The second trend, already identifiable in a few *sambas-enredo* of the 1950s, was consolidated after the massive sales and success of the 1971 *samba-enredo* 'Festa para um rei negro' (Party for a Black King), composed by Zuzuca for the Salgueiro *samba* school. As its general distinguishing features, one might highlight: the faster *tempi*: the relatively more compact poetic structures; new, not necessarily historical plots; and the incisive use of diatonic harmony and melody – all features present in other types of commercially successful popular music. This latter trend came to dominate *samba-enredo* production in Rio and also led this *samba* subgenre to dominate the diffusion and sales of Carnival-oriented songs in general. Despite their relative differentiation, however, since the 1970s there has been feedback between these two trends.

Partido alto

This denomination, meaning 'high party' or eminent group, is currently used in Rio to refer to songs comprising a usually compact refrain (from two to four lines of text fitting a symmetrical melodic line, in many cases spanning four or eight measures), sung either by a choir or in responsorial alternation with improvisation by one or more soloist singers. In the early twentieth century this type of song form was eventually called *partido alto* or simply *partido*. Both designations may also name a performance of such songs.

Partido alto cultivators in general, but particularly its expert text improvisers, are singled out as *partideiros*. These improvisers are often *compositores* in the sense explained above, although a number of *partido alto* specialists refrain from identifying themselves as such.

The existence of homonym practices in the State of Bahia and the decisive role played by Bahian migrants in forging an Afro-Brazilian cultural field in Rio de Janeiro by the turn of the twentieth century strongly suggests that, at least initially, the *partido alto* of Rio had a strong Bahian background, either transplanted or slightly adapted in the new context.

The improvisatory practices in early twenty-first century *partido alto* may either encompass melody and text or, in stanza-like form, may be restricted to the text alone. Even in the latter case, however, slight melodic alterations may and often do occur during the elaboration of a new improvised stanza. The improvised text may be related to the fixed part; when it does not, its content is virtually free of restrictions. Common topics in the improvised section include the everyday life of the poor and its many hardships, any aspect of an ongoing performance (e.g., a charming dancer, the good and plentiful liquor being served), or love affairs. The *partideiro*'s verbal fluency, swing (the equivalent Portuguese terms *ginga* and *balanço* are often used in this context), irony, humor, wit and sharply critical worldviews score high marks in the evaluation of participants.

Performances of a *partido alto* have no prescribed setting, and they typically take place at informal gatherings of all sorts (e.g., private parties, bars). Any relatively small accompanying ensemble drawn from common *samba* practices may be employed, but the consistent use of hand-clapping (sustaining a given rhythmic cycle) somewhat distinguishes a *partido alto* performance from those of the other subgenres discussed above. In fact, *partido alto* is frequently sung against handclaps alone.

It is also worth noting that, since *partido alto* made its way to commercial recordings in the late 1960s, in particular through the sales of composer and singer Martinho da Vila, only a small and select sample of so-called 'improvisation' is ever included (usually three or four stanzas). Often, a single individual may pre-compose all the 'improvised' sections. A *partido alto* song with identical text may be performed on different occasions.

Miscellaneous *Samba* Subgenres

A number of other denominations expand the variety of subgenres associated with the label 'samba,' many of which imply the creation of hybrids in connection with other local musical styles (e.g., *samba-canção* and *sambaião*) or international ones (e.g., *sambolero* and samba jazz). Although the creation of such hybrids is more characteristic of the sphere of pan-stylistic songwriting outside the *samba* world, it is by no means uncommon to find *sambacompositores* trying their skills at producing hybrids. Both the amount and quality of this inter-stylistic borrowing (i.e., the distinct modes of working it out) varies from case to case, and sometimes in the work of a single composer.

The *Samba Bateria*

Since *samba* is definitely shaped by time concepts, rhythmic aspects are at its center. This may be exemplified by the role that the *bateria* (percussion ensemble) plays in a *samba* school. A good *bateria* performance not only enlivens the other members but is also largely responsible for the achievement of a harmonious balance between the singing, the dancing, and, in the competition, a smooth flow of the *samba* school body through the pageant competition floor. But what aspects ensure a 'good performance' for insiders? First, it should be tightly coordinated, rhythmically speaking. This is a highly demanding task, considering the average number of players per *bateria* (about 300) and the variety, on the one hand, of instruments involved (about 10 different sets of instrument types), and of their interlocking rhythmic patterns on the other. Secondly, the *bateria* should set the proper mood between containment and euphoria. Tempo as well as timbre and intensity are key factors for producing such a climate. A third object of insiders' evaluation, not readily perceivable by outsiders, consists of distinctive rhythmic cells played by certain instrument sets. These cells provide cues at given passages of the song and help to prevent problems with the singing of the thousands of pageant participants. Given the spatial gap between the different wings and between the wings and the *bateria*, slips such as lack of coordination or even misplacement of song sections are easily made. A good system of cues should help to keep the singing lively and tight, and may end up being eventually emulated by rival *samba* schools in subsequent years.

Competence and gender stand out as the two most visible criteria of differentiation among *bateria* members, the former being more readily acknowledged as such by insiders. Tacit perceptions hindering female participation, while persisting, might well be on the verge of losing their largely undisputed status in the twenty-first century. Competence appears more sharply defined in the distinction between *mestres* (master percussionists) and *batedores* (literally, beaters or players). *Mestres* typically are required to master all the different instruments in the ensemble, although in a few cases they may acknowledge their limited skills on one or another instrument. Their main function is to assist the *bateria* director (*diretor de bateria* or *primeiro mestre*, i.e., first *mestre*) during rehearsals. A *mestre* may lead an instrument set until a certain consistency is achieved, replace the director conducting portions of the rehearsal, or simply stand by, critically watching a performance. During the Carnival competition, the director conducts the *bateria*, while each assistant master leads his or her designated set. The *bateria* director, however, is not only supposed to master all instruments (he or she gives the ultimate directions to each instrumental set with the corresponding instrument in hand), but also has to demonstrate outstanding leadership abilities. Beyond a strong personality and solid musicianship, he or she should exhibit charisma emanating from a deep involvement within the *samba* world.

Whenever the position is vacant, a new director is appointed by the school's president, often after consultation with other players and respected *mestres*. As consensual as it may sometimes seem, the final choice may be contested either overtly or, more characteristically, through gossip.

A director's tenure may last a lifetime or only a handful of years, depending on several factors, but mainly on the *samba* school's administration and personal health. In the first case, he or she is usually lured by another *mestre de bateria*.

Not only *samba* school members, but virtually anybody considered proficient in their instrument of choice may ask for a chance or be nominated by a third party to join the *bateria*. Whenever either of these occur – and such requests are made much more often than positions become available – the potential member may be asked to join the *bateria* for one or two rehearsals, during which he or she is evaluated by the *mestres*. The director-master, however, has the last word. All members are expected to parade, and their total number is generally prescribed at about 300. Circumstances such as sickness, unexpected trips or, not unusually, imprisonment (a recurrent event in the lives of the underprivileged in many situations of extreme inequality) lead the actual number of pageant participants to vary. Sometimes, despite a lack of available positions, the director-master may decide to include a few new *batedores* for one reason or another. If, for instance, they have proven mastery of their respective instruments, their participation may reinforce a section that the director feels is in need of more volume or consistency. Social origins are varied, but there is a predominance of players who either live or were raised in and around the vicinity of the *samba* school. As all schools are strongly tied to poor residential areas, this means that the majority of players come either from the lumpen-proletariat or else from unskilled, low-paid sectors of the working class, many of the latter shifting back and forth between the formal and the so-called informal sector of the economy. But one will occasionally find representatives of intermediate or even upper strata in a *bateria*, as a side effect of the aforementioned transformations involving the field of the *escolas de samba* from the 1960s onward. Accordingly, it is unusual to spot clerks, public workers, foreign professionals, physicians, lawyers or middle-class rock musicians amidst *bateria* players.

Within the *bateria*, a correlation exists between professions and their corresponding social status and the ethnic division of labor that characterizes Brazilian society in general. Therefore, blacks and mulattoes usually constitute the majority in the lower social ranks, while a 'whitening effect' is felt in the progressive upgrading toward the middle and upper classes. Social and ethnic origins alone, however, are not empowering assets within a *samba* school section, where a single mistake by an individual member during a performance can produce total disarray. The question of competence is far more relevant in determining the downplayed yet existing hierarchy within the *bateria* (see below). Still, at given points in time, social/ethnic origins may play a significant role in aesthetic or stylistic turns.

The *bateria ala* (wing) is largely a male domain. Males are noticeably predominant with relatively few spots occupied by women. Although the first known example of a female participant – Dagmar da Silva Pinto, who played *reco-reco* (scrapper) and *chocalho* (rattle) in the Portela *samba* school – comes from the 1940s, only by the last two decades of the twentieth century did female participation in *baterias* increase significantly. Mestre Tião from the Unidos de Cabuçu bateria, for example, reported that, in 1980, he had dismissed the only two women participants. Shortly afterward, however, he noticed the male players' growing indifference toward the smaller handheld instruments known as *miudezas* (i.e., minutiae, small handheld percussion), such as the *chocalho* and the *tamborim* (small frame drum). He then reconsidered the matter and even began to encourage female players to take those instruments up. In 1989 and 1990 Unidos do Cabuçu had 30 women members (the record number among all *escolas*), most of whom were in the *miudezas* section.

Conclusion

Samba has played and still plays a key part in cultural debates on race relations, identity and social power in Brazil and abroad, not to speak of its many and analytically interesting music and dance structural aspects. Therefore, multidisciplinary scholarship on the subject will certainly continue to expand, adopting new approaches, uncovering new data and shedding light on the intricate aspects of both its national and international scopes.

SAMUEL ARAÚJO

Samba-canção

Samba-canção emerged around the end of the 1920s in the context of the Brazilian musical theater and was characterized by the expression of a sentimental mood similar to that of the eighteenth- and nineteenth-century *modinhas.* The first recordings of *samba-canção* were issued soon after its emergence, as early as 1928, but the first turning point in the consolidation of the genre was to come in the same year with the great success of the song 'Linda flor,' by Henrique Vogeler and Luís Peixoto, performed in the musical theater play *Miss Brasil*, and recorded the following year by singer Araci Cortes (Tinhorão 1986), one of four recordings made within two years (Thompson 2002).

Contemporary journalist and music researcher Marisa Lira (cited in Tinhorão 1986) defines two basic features of *samba-canção* that separate it from the *samba* song-and-dance genre: a slower tempo (decreased from ca. 100 quarter notes per minute to ca. 80) and the melodic characteristics of *modinha* (wide melodic leaps, emulating operatic models). Tinhorão, however, argues that Lira may have overemphasized the links between *modinha* and *samba-canção* and suggests that the latter may have developed simply as a rhythmically interesting song form performed outside of Carnival season. Tinhorão's point is supported by an analysis of selected recordings of *samba-canção* made by major radio star Orlando Silva between 1935 and 1940. As opposed to the polyrhythmic *samba* song comprising several interlocking ostinato patterns (a Carnival season trademark), the typical rhythmic framework of *samba-canção* in this sample is contributed by the *pandeiro* (tambourine), which plays the only remaining pattern of the Carnival *samba* alone. The tempo is indeed somewhat slower than the tempo of Carnival *sambas*, but undoubtedly livelier than in sentimental songs in general.

Beyond this point, the future of *samba-canção* became closely tied to that of *bolero* in Brazil, which first became popular there in the 1930s, paving the way for the first Portuguese-language versions of mainly Mexican *bolero* lyrics recorded by Brazilians. By the 1940s *boleros* in the Mexican style were written and sung by Brazilians (see Santos et al. 1982), both as a ballroom genre and as a sentimental song type for private listening. The production of new, Brazilian-made *boleros* increased dramatically from 1941 onward, and included the eventual proliferation of genre names such as *bolero-canção*, suggesting the development of hybrid forms. This popularity, however, faced strong criticisms from sectors whose ideological discourses defended 'appropriate Brazilian music.' One researcher of Brazilian popular music, for instance, argued that the late-1940s fusion of *bolero* with *samba-canção* was responsible for the overshadowing of the latter in the national musical scene (Tinhorão 1986). This argument assumed: (1) the only difference between post-1940s *samba-canção* and the Latin American *bolero* was semantic; and (2) the importance and popular prestige of *samba-canção* simply vanished after its presumably integral assimilation of *bolero* patterns.

By the 1940s Brazilian *bolero* and *samba-canção* had become barely distinguishable practices in textual, musical and social terms. A few common aspects in the production and consumption of both genres may have eased the merger: (a) the contents of their texts, typically dealing with love impasses, anger, privation and humiliation, but also with social mobility in ambiguous ways; (b) the fact that both genres were popular as ballroom dance genres in medium-to-slow tempo and duple meter; (c) their prestige at a time when ballroom dancing was widespread in Brazil, cutting across more rigid class and/or ethnic boundaries; (d) their common instrumentation, using either orchestral settings or a small ensemble of guitar(s) and light percussion. In the guitar ensembles, the *requinto* came from the Mexican *bolero* while the *cavaquinho* was emblematic of Brazilian *samba-canção*. Similarly, the use of congas brings to mind standard *bolero* patterns, while the *pandeiro* indicates a *samba-canção*. This latter distinction, however, is often blurred, since congas and *pandeiro* are played together in some performances.

Best-selling recording stars of the 1940s and 1950s such as Dalva de Oliveira, Nelson Gonçalves, Ângela Maria and Anísio Silva typically sought to follow the dramatized performance style of international *bolero* stars such as Gregorio Barrios, Pedro Vargas or Lucho Gatica. This dramatized style has continued to be very popular in Brazil into the twenty-first century, despite the negative reactions of music critics and many trained musicians who have come to regard it as a form of sentimentalism and nostalgia or even as a pathological demonstration of bad taste in music, employing terms to classify it such as 'dor-de-cotovêlo' (heartache, 1960s), 'cafona' (kitsch, 1970s) or 'brega' (another term for kitsch, used from the 1980s on). But despite all ideological arguments invoked against it, the wide popularity of the *bolero*/*samba-canção* connection, in all its ambiguity, has persisted as a visible social fact. Evidence is provided by the repertoires of Brazil's best-selling recording stars, that is, romantic singers – such as Cauby Peixoto, Ângela Maria, Roberto Carlos, Waldick Soriano, Altemar Dutra and Nelson Ned – or the so-called *sertanejos* (the Brazilian equivalent of US country music) – Chitãozinho e Xororó, Milionário e José Rico, Zezé di Camargo e Luciano and many others. Moreover, as these artists' recordings in Spanish from the 1970s now reach fans of 'Latin music' in other parts of the world, songs with a *bolero* flavor 'made in Brazil' somehow reinforce the genre's global reputation today.

In addition to these popular recordings, a sophisticated *bolero*/*samba-canção* practice developed in affluent nightclubs of the 1950s (with songwriters such as Dolores Duran and Antonio Maria), drawing upon more complex harmonies and with more elaborate texts that evoked a certain sense of bohemian detachment from mundane life. This vogue may perhaps be explained, on the one hand, by the successive influences of bebop and, particularly, cool jazz, driving Brazilian musicians little-by-little into similar performance styles and, on the other, by the increasing textual and musical sophistication found in popular *sambas-canções* such as those written by Lupicínio Rodrigues (Araujo 1999).

The sophisticated nightclub version of *samba-canção* produced a considerable impact on younger songwriters of the mid-1950s, such as Vinícius de Moraes, Antonio Carlos Jobim and Johnny Alf, later known as the creators of *bossa-nova*, and it further developed the careers of João Bosco, Nana Caymmi and many others.

SAMUEL ARAÚJO

Samba de Roda

Samba de roda is a general name used to designate a set of folk musical and chorographical practices found in different regions of Brazil. The most popular and still widely practiced *samba de roda* tradition is, however, that found in the northeastern state of Bahia, especially in its region called Recôncavo. Bahian *samba de roda* has many locally specific names such as *samba corrido*, *samba-chula*, *samba de barravento* and *samba de viola,* corresponding to particular styles that, in spite of sharing many constitutive traits, present some variations in terms of form, instrumentation and dance organization.

Historical records since the seventeenth century make reference to elements of this Bahian tradition that is considered one of the main sources from which urban *samba* was later (i.e., in the late nineteenth century) developed in Rio de Janeiro.

As its name directly suggests, *samba de roda* is performed with a group of (traditionally, female) dancers forming a circle (*roda*), in the center of which solo dancers take turns. As in many other Afro-Brazilian forms of round-dance, when the solo dancer ends her performance she invites another person from the circle to take her place in the center with a characteristic movement of the belly (*umbigada* – literally meaning: navelpush).

The musical instruments used in Bahian *samba de roda* performances are different combinations of hand percussions and drums (simply depending on what instruments are available) – the *pandeiro* (tambourine) and the *prato-e-faca* (a plate scraped with a table knife) being the more traditional ones. In some specific forms of *samba de roda,* a central instrument is the five double-string guitar called the *viola.* A smaller and handcrafted type of *viola,* called the *machete,* was common in the past. This instrument is nowadays very rare, being substituted by the industrialized *viola* (used throughout the country), a *cavaquinho* (ukulele-like, four-string guitar) or a guitar. Musical instruments, however, are not indispensable to a performance of *samba de roda*. It is in fact common for it to be performed with the singing accompanied only by handclaps repeating characteristic rhythmic patterns in ostinato.

The singing of *samba de roda* is syllabic and organized in a call-and-response form (a soloist singing the call – sometimes called *chula* – and all the participants singing the response – in some places also called *relativo*). The verses are sung in unison or in parallel thirds. The basic harmonic accompaniment, if an instrument such as a *viola* or a *cavaquinho* is used, is made of alternating dominant and tonic chords.

Samba de roda is performed on a great variety of social occasions both sacred and profane. Among the former, it is practiced within the context of Afro-Brazilian religious rituals (the different forms of *candomblé*) and during Catholic festivals, highly influenced by Afro-Brazilian beliefs and practices (such as the *festa de Nossa Senhora da Boa Morte* [Our Lady of Good Death festival] in the town of Cachoeira). Within *candomblé*, different forms of *samba de roda* (usually defined by specific names such as *samba de caboclo* and *samba de marujo*) represent the appropriate music for the ritual dance of some types of spiritual entities not pertaining to the African-derived pantheons (*caboclos* [Amerindian spiritual entities], *boiadeiros* [cowboys] and *marujos* or *manos* [sailormen]). *Samba de roda* is also often performed after the end of *candomblé* ceremonies, marking, in a relaxed and joyful mood, the return to a profane dimension. On these occasions, *samba de roda* songs and dance are usually accompanied only by handclaps, since the use of the sacred drums is allowed only for religious performances.

Samba de roda is also very commonly performed by *capoeira* practitioners at the end of their danced martial performance.

In 2005, ratifying the claim made by local cultural organizations, UNESCO declared Bahian *samba de roda* a 'Masterpiece of the Oral and Intangible Heritage of Humanity.' While this important international recognition acknowledges it only as an ancient tradition deserving to be preserved, *samba de roda* has always been very alive and dynamic. It has influenced other musical practices and, adopting new elements from the global popular music industry, has successfully entered the regional and national markets. Since the late 1970s its rhythm and melodic construction have been incorporated by *blocos afro* into a powerful new formula that changed the Bahian black Carnival. During the 1990s *samba de roda* groups with catchy melodies and lyrics, sensual choreographies and pop music instrumentation (such as 'É o tchan,' 'Terra samba' and 'Harmonia do samba') achieved a huge national success. This new style called 'pagode baiano,' in spite of its current decreased national appeal, continues to be still very popular in Bahia in the twenty-first century.

Samba-Reggae

Samba-reggae is a style of drumming and percussion characterized conceptually and musically by an intention on the part of the *blocos afro* – Afro-centric Carnival organizations in the city of Salvador da Bahia, northeast Brazil – to reclaim Afro-Brazilian sounds and practices. *Samba-reggae*'s rhythm was created by the *blocos afro* in the early 1980s. Built upon a dialogue between drumming and percussion instruments and vocals (*samba-reggae* did not begin to see the incorporation of melodic instruments until nearly a decade after its appearance), it gained both national and international renown and took on particular resonance because of the social and ideological context in which it was generated.

The term '*samba-reggae*' first arose in 1986 to describe the specific musical style of the *bloco afro* Olodum and was broadened to include the closely related drum and percussion music of other *blocos afro* after that. The first recording of what is now generally considered to be *samba-reggae* was Ilê Aiyê's *Canto negro* (1984). The style first penetrated Brazil's national music market with the 1987 release of Olodum's *Egito, Madagascar.*

The Role of *Blocos Afro*

The *blocos afro* who were responsible for originating *samba-reggae* are cultural units standing in solidarity with black people and culture, their activities traditionally centring on the preparation for and participation in Carnival. They arose around the end of the 1970s and the early 1980s in Salvador da Bahia. The first *bloco afro* was Ilê Aiyê, founded in 1974, with membership limited to people of African descent, a controversial challenge to Brazil's ideal of a racial democracy (Crook 2009, 212). Their participation in the 1975 Carnival would have a permanent impact on Salvador's Carnival, leading to numerous other *blocos afro* being formed shortly thereafter. Olodum was founded in 1979 and in 1983 was joined by master drummer Neguinho do Samba (1955–2009), one of the most influential figures in the history of *samba-reggae*. He developed some of *samba-reggae*'s classic rhythms and was the originator of the practice of playing the *repique* (lightweight tom-tom) with two long, thin sticks, later to become the norm in *samba-reggae* music.

Blocos afro were conceived as sites where ethnic issues could be brought to the fore and their members could consciously express their condition as blacks, which they did through an elaborate aesthetic system celebrating Africa in a variety of ways. Based in various neighborhoods around the city, the movement of blacks within the spaces created by the *blocos afro* can be generically viewed as a 'reinvention of Africa.'

The *blocos afro* paint their images of Africanness primarily through the incorporation of Afro-Brazilian religious elements into their music and performances. In particular, the vast repertoire of the Bahian *candomblés* (Afro-Brazilian religious organizations) serves as a rich source of material, adapted for secular use by the *blocos afro*. The basis of their music is drumming and percussion, which in the *candomblé* temples is performed on the *atabaques* (tall, freestanding wooden hand drums). Taking cues from mythical narratives, the song lyrics deal with the history of the African people. Another important factor in the conceptualization of the lyrics is the use of expressions in African languages. The names of the *blocos afro* themselves –Ilê Aiyê, Olodum, Ara Ketu, Muzenza, Malê Debalê and so forth – are, for the most part, derived from Yoruba phrases or, less often, Bantu ones.

The presence of *candomblé* can also be seen in the dances of the *blocos afro*. In accordance with the African tradition of the inseparability of music and dance, the *blocos* recreate the dances of the Orixás (*candomblé* deities). In the *candomblés*, it is through dance that the Orixás are incarnated, taking on characteristics relating to their respective origin myths and telling the story of how society is organized. Within the *blocos afro*, these ritual dances are stylized and freely interpreted.

Another aesthetic feature setting the *blocos afro* apart is their attire, to which they pay great attention. Carnival costumes are designed based on specific parade themes and these are almost always related in some way to African peoples. In addition, raffia fibers and conch and triton shells are used, and hair is creatively styled; these characteristics serve to augment further the sense of Africanness.

The *blocos afro* articulate an Afro-Bahian aesthetic and their activities are indicative of an important shift:

the production of black culture in Brazil, built upon the increasing popularity of its percussive aspects, moving beyond its traditional contexts such as *candomblé*, *capoeira* and Carnival and into the realm of the media, forming a narrow bridge into the music industry and the production of *axé-music*. The pivotal factor in this process is the invention of *samba-reggae*, the rhythm of the *blocos afro*.

Musical Characteristics

The drums used by the *blocos afro* are membranophones of various types and sizes. A *samba-reggae* ensemble, which can include up to 300 drums, is arranged in the following way: a set of Cuban-style *timbales* for the *mestre* (leader); in the front row, three *repiques*; in the middle row, a *tarol* (shallow snare drum), a *timbau* (tall conical hand drum) and the *surdos* (bass drums) including one *marcação de uma* and two *marcação de duas*; and in the back row, two *surdões* (large bass drums). The leader uses the *timbales* to conduct the entire band; the *surdões* in the back row lay down the base of the rhythm, supported by the *marcação de duas*, who follow the *marcação de uma*; the *tarol* or snare drum provides the base for the *repique*, which in turn provides the base for all other instruments in the band; and the *timbau* is an independent instrument emphasizing improvisation. The recordings of Ilê Aiyê provide a good illustration of *samba-reggae*'s percussive style in its original form.

By the early 1990s many groups were including melodic instruments in the ensemble: the keyboard, which defines the song's melodic structure, the guitar, which functions in much the same way as the *repique*, and the saxophone, which embellishes the arrangements with ornamental solos. The groups also include bass, though in a rather intermittent manner, implying that the bass does not seem to have a specific function within the ensemble; structurally, *samba-reggae* can do without the bass in any case since its low notes are easily drowned out by the power of the *surdões*. A typical arrangement is one in which the drumming group leads on foot, followed by a sound truck carrying the amplified singer and melody instruments. A good example of the transformation of the *samba-reggae* aesthetic with the introduction of melodic instruments is Olodum's 1993 recording *O movimento*.

A Hybrid Aesthetic

Samba-reggae's hybrid aesthetic is the result of the intermingling and re-enactment of various cultural manifestations present in the Atlantic area that originated in and served as a refuge for the African diaspora. The genre is the product of these cultural and informational exchanges, and its references can be pinpointed.

The primary wellspring of *samba-reggae* lies in the musical resources of Bahia itself: the sacred rhythms of *candomblé* and the musics of various secular cultural practices, which came together in the context of Bahia's Carnival, as a result of an interweaving of *candomblé* and the urban *sambas*. According to Crook (2009, 214), *samba* was slowed down and made to sound more syncopated and relaxed to infuse it with greater Africanness.

Another important reference point is Africa, which has always been seen by black Bahians as a permanent and accessible store of information and source of inspiration. Exchanges with African countries were vital not only as a means of expanding the musical resources of the black groups who invented the genre, but also for the tracing out of various 'Africas' fundamental to the imaginary of the *blocos afro*.

Samba-reggae also references the Caribbean. Cuban music was heard in Salvador, mainly via recordings and the radio, as of the 1950s and significantly influenced local percussionists. In the 1970s Salvador, the city with the largest black population in the world outside Africa, embraced reggae as the diaspora's main vehicle for communication. Idols such as Bob Marley and Jamaican symbols and attitudes were adopted there. The genre's very name is a clear indication of this cultural hybridity. To understand fully the incubation of *samba-reggae,* however, it is necessary to look to the United States and to the soul music of musicians such as James Brown and the Jackson Five, and to the Black Power slogans celebrating ethnic pride and evoking an idealized image of black people. The struggle of blacks for a better position within American society did not pass unnoticed by the *blocos afro*.

With this mix of aesthetic and political-ideological references, the Carnival output of the *blocos afro* went beyond musical expression: it became an entire social movement. *Samba-reggae* stood as a powerful tool for political activism and became the main source of cultural capital for the *blocos afro* in their struggle, through aesthetic means, for equality between blacks and whites in Bahian-Brazilian society.

Since the early 1980s *samba-reggae* has moved thousands of young people to attend *blocos afro* rehearsals in order to sing, dance and contribute to the reaffirmation of the strength and beauty of Afro-Bahian culture. However, the mobilization of the black community is not solely due to the attraction of *samba-reggae* band rehearsals. Many other activities taking place within the communities also play vital roles. Much work is done in offering educational opportunities, even on a digital level, to both children and adults in the form of courses, seminars and workshops in music and dance, where children's drum and percussion groups are formed and Afro-Bahian choreographies are created. The more structured organizations also offer other activities such as classes in *capoeira*, a Brazilian art form combining music, dance and martial arts and viewed as a legitimate expression of black culture, and in theater where black authors can receive training.

Further Developments

According to Crook (2009, 221), the success of Olodum's *Egito, Madagascar* helped to increase dramatically the coverage of Salvador's Carnival in the national media. Pop groups in Bahia, such as Reflexu's and Banda Mel, soon began laying electric instruments over *samba-reggae* rhythms adapted to drumset. In the early 1990s *samba-reggae* beats were instrumental in the development of a new hybrid genre of Brazilian pop music called *axé-music*. Daniela Mercury's 1991 *axé-music* album *Daniela Mercury* featured the song 'Swing da cor,' marked by liberal use of *samba-reggae* rhythmic support. This song was a national hit and it, along with Mercury's second album *O canto da cidade* (1993), propelled the music of the *blocos afro* to the national Brazilian mainstream.

This style of music has also penetrated into the realms of international pop and world music. Olodum stands as a good example of this. They appeared on Paul Simon's song and video 'The Obvious Child' in 1990, then in 1995 on Michael Jackson's song and video 'They Don't Care About Us.' The collaboration with Paul Simon marked the entrance of *samba-reggae* into the international music sphere and launched Olodum's international touring career, which has continued to this day. Their 1997 album *Liberdade* includes songs in English and Bambara and an integration of the band's signature drum and percussion with electronic sounds. Another artist achieving international recognition is Margareth Menezes, who toured at length with David Byrne in 1989–90. *Samba-reggae* has been featured in compilations of Brazilian music put out by world music labels. Many drum and percussion bands in cities around the world taking their cues from Brazilian styles feature *samba-reggae* as one of their core rhythms.

Samba-reggae is delineated as much by traditional Brazilian percussion as it is by international references received through the media and through the networks of the people of Salvador. The city's connection to the cultural and political output of the black Atlantic diaspora only continues to increase.

Sanjuanito

The *sanjuanito* or *sanjuán* is a song-dance genre of pre-Hispanic origin popular throughout the highland region of Ecuador. In the northern highland province of Imbabura, the *sanjuanito* is performed during the Inti Raymi festivity (summer solstice), which coincides with the Roman Catholic feast day on 24 June for Saint John, after whom the genre is named. Indigenous peasants thank the *Pachamama*, or Earth Mother, with music, dance and food for the harvest she has bestowed. Because there are musical similarities between the *sanjuanito* and the Peruvian *huayno*, some scholars believe that the former is derived from the latter. Both musical genres have a lively character, binary meter, pentatonic-based melodies and prominence of the minor mode. The *sanjuanito,* however, differentiates from the *huayno* in the moderate use of syncopated rhythms and proliferation of four sixteenth-note rhythms, both uncharacteristic of the *huayno*.

There are two types of *sanjuanito*: the indigenous *sanjuanito* and the *sanjuán de blancos* (*sanjuán* of white people), also known as *sanjuanito mestizo* (mixing of indigenous and Hispanic cultures). They diverge in musical structure, uses, functions and social context. The former is an instrumental piece played in ritual contexts with two indigenous cane flutes (considered male and female instruments in the Andean cosmovision). They play short heterophonic melodies, which are repeated with slight variations to the accompaniment of a *bombo* (double-headed bass drum played with a mallet). Participants dance in circles around the musicians on the eve of Saint John's Day. The *sanjuanito mestizo* is more elaborate in structure (a binary form, usually with sections formed by eight-beat phrases). The instrumentation may include guitar, accordion, violin, *rondador* (a single-row Ecuadorian panpipe) or flute. The lyrics are sung in Spanish and/or Quichua.

In the area of Cotacachi in the province of Imbabura, *sanjuanitos* are played on an indigenous harp without pedals, often referred to as a diatonic harp because it is tuned to one particular scale. A *golpeador* (beater) marks the beats on the soundboard with the hands. Afro-Ecuadorian ensembles from the Chota Valley, province of Imbabura, also perform *sanjuanes* with guitars and a *bomba* (two-headed drum performed with bare hands). Very popular in this region is the *banda mocha*, a brass-band-like ensemble formed by guitars, gourds used as vocal resonators, orange leaves played with the lips, transverse flute, *pingullo* (vertical cane flute), *bombo*, *güiro* (scraper) and snare drum. Pan-Andean ensembles made up of various types of panpipes, *quena* (a notched-end flute), guitars, *bombo* and *charango* (a small high-pitched lute with a round back) include *sanjuanitos* in their international repertoire of Andean music. Otavaleños (indigenous people from the northern highland town of Otavalo), who are known as the 'Andean entrepreneurs' (Meich 2002) for their ability to sell their textiles, handcrafts and music in Europe and the United States, have popularized the *sanjuanito* in folkloric renditions for pan-Andean ensembles. Prominent groups from this region include Charijayac, Ñanda Mañachi and Grupo Peguche. Other renowned Ecuadorian ensembles in the 1970s were Los Huayanay and Jatari.

The *sanjuanito* is also danced to as a folk dance in non-ritual contexts such as the *baile de cintas* (ribbon dance). A tall pole with colorful ribbons hanging from its top is placed in the center of a square. In the choreography, the participants dance in circles in such a way as to weave the ribbons in a braid, and then move in the opposite direction to unweave the ribbons. All instruments usually play the same melodic line and the harmonization is based on simple chord progressions (I-V-I).

Sanjuanitos mestizos were very popular in the first half of the twentieth century, as demonstrated by the numerous music scores for military bands found in the Fondo Musical Vaca, a music archive of the Banco Central del Ecuador. An urbanized version of the *sanjuanito* has entered the national music anthology. National music performers from the highland region, such as Dúo Benítez-Valencia and Hermanas Mendoza-Suasti, recorded *sanjuanitos* in the 1940s and 1950s for Discos Granja. The performances on these recordings were arranged for acoustic guitars and sometimes also the accordion. In the 1980s the *sanjuanito* was modernized with arrangements for electronic instruments and percussion. These renditions, pejoratively called *chichera* or *chicha* (indigenous corn beer) music for their association with indigenous people and their social contexts, are popular among rural peasants and the urban poor.

With the massive exodus of Ecuadorians to Europe and the United States in the late twentieth century, the *sanjuanito* has acquired national and international visibility among Ecuadorian migrants living abroad. Ecuadorian popular singers produce and disseminate this music through radio and television programs on VHF channels. New indigenous artists, such as Ángel Guaraca and Bayron Caicedo, sing the new *sanjuanitos* that they write to the accompaniment of recorded tracks. By contrast, music bands such as Rock Star and Star Band perform live music. Los Conquistadores, a group from the city of Ambato, had enormous success with a modern cover of the song 'Mi conejito' (My Little Rabbit) in the early 2000s. With *double entendre* lyrics and a catchy melody, this *sanjuanito* became a hit song performed by soloist singers, music bands and a variety of ensembles. Producciones Zapata and Producciones Calle were the pioneer recording companies commercializing this style of 'people's music' in the 1970s and 1980s. With the advent of more affordable production equipment, both music bands and soloist singers have begun selling independent recordings at their performances.

Academic composers such as Segundo Luis Moreno (1882–1972), Luis Humberto Salgado (1903–77), Corsino Durán (1911–75) and Gerardo Guevara (b. 1930) have stylized and inserted this dance in their nationalist works for piano and orchestra, especially in the Ecuadorian Suite (a medley of Ecuadorian national dances). Salgado composed his 'Sanjuanito futurista' for piano, combining the pentatonic melodies and rhythmic patterns of the traditional *sanjuanito* with the dodecaphonic technique. Salgado considered this piece as the highest expression of musical development in Ecuador, referring to the transition of music from tritonic scale (three tones, typical of indigenous music in the Amazon region) to pentatonic (five tones) to diatonic (seven tones) to the chromatic scale (twelve tones). Other cyclic works by Salgado that incorporate the *sanjuanito* are the *Symphonic Variations for Orchestra* and *Ecuadorian Symphony* (Symphony No. 1), whose first movement is a *sanjuanito* written in a sonata form, following the classical structure of the first movement of the Viennese symphony.

Sarandunga

Sarandunga is a three-part complex of Afro-Dominican music and dance performed for the late-June celebration of San Juan Bautista in the southcentral city of Bani. The instruments and rhythms of *sarandunga*, and the organization of the black *cofradia* (religious brotherhood) of San Juan Bautista in Bani, are unusual in the Dominican Republic, likely due to greater West African (Dahomey) influence in this city when compared to stronger Congo-Angola presence elsewhere in the country. In addition to accompanying all-night dancing and festivity, music is performed in a morning processional to a river where water rituals are held. For the virtuosity and gracefulness of its dances, and the distinct religious syncretism of its associated rituals, *sarandunga* has attracted attention of local scholars and folklore presenters, although to date available documentation is slim.

The three small drums of *sarandunga,* also called *tambores de San Juan*, are played along with two metal scrapers (*güiro/guayo*) and voices. The drums are double-headed with goatskin, held vertically between the knees while seated, and played on the upper drumhead with the hands. One *tambor* is slightly larger and lower sounding than the others, but unlike most Afro-Dominican drumming, the most extensive improvisation is performed on one of the *tambor chiquitos,* whereas the *tambor grande* is designated for establishing rhythmic groove and guiding the ensemble. The improvisatory part is characterized by the sharp timbre of slapping the drumhead. In the supporting parts, resonating open tones and dampened drum presses are most common. With the exception of processional music, *sarandunga* is played at a rapid tempo and voices typically alternate solo and chorus every two to four beats.

There are three characteristic rhythms in *sarandunga,* each associated with a different repertoire of songs, two of which accompany dances, and one for the processional and special altar rituals. The latter is the *morano,* a Spanish-style religious romance with African-like chorus response and accompaniment by *tambores*. It is played in a medium tempo triple-meter rhythm, and in improvised order the soloist sings traditional quatrains of six-syllable verses, separated by a repeated quatrain refrain. Especially in the *morano,* texts speak descriptively and reverently of San Juan Bautista, water symbolism and the origins and lineage of the religious brotherhood. The somewhat slower and less frequently performed of the two dances is the *jacana*, which is meant to showcase the older veteran dancers and important members of the brotherhood. Most of the danced songs, however, are played to a third and fastest rhythm which has no special title, but is sometimes called *capitana* both in reference to the female 'captain' of the festivities and to a song in the repertoire. In most of the danced repertoire, the solo vocalist fills the lines with floating phrases and the chorus sings over vocables or just a couple of words.

The dance is a symbolic pursuit dance derivative of the *kalenda*, a dance associated with courtly social structure documented in Hispaniola since the late seventeenth century which demonstrates both Congolese and Spanish influences. *Sarandunga* dance is the most virtuosic of several Afro-Dominican dances derivative of the *kalenda*, including *baile de palos* and *baile de congo.* The *sarandunga* dancing incorporates more turns and footwork similar to the Spanish *zapateo*.

Saya

Saya is a traditional Afro-Bolivian generic system made up of song, dance and music, related to other equally ancient African forms such as the *tundiki* and the *nsaya*. It has been documented from the sixteenth century to the present mainly in the area of Yungas, Department of La Paz, which is a stretch of forest between the valleys that descend the eastern slopes of the Andes and extend to the Amazon basin. In the present era, *sayamoderna* (modern *saya*) has constituted part of the repertoire of neofolkore groups such as Los Kjarkas, an ensemble which is considered one of the most genuine representatives of Bolivian identity (Céspedes 1993). In 1991 the ensemble released the album *Tecno Kjarkas*, which included compositions oriented toward the mixing of sonorities and genres in the search for a more commercial, danceable and modern style that they called 'tecno andino.'

Saya is a representative expression of the *zambos*, an ethnic group resulting from the hybridization of the cultures of the Aymara and African-American peoples who occupied the lowest social-cultural rank in the complex and heterogeneous process of South American *mestizaje*. The *saya negra* (black saya) had a magic ritual meaning linked to the ancient dances of sexual initiation, and fecundity has influenced the *sayamoderna* and the *saya de caporales*. According to Rigoberto Paredes (1977), during the last century dark-skinned and indigenous mestizos viewed this practice as a rite of passage to puberty. Given the appropriateness of the licentious dance, the community acknowledged the new social status of the youth who participated by saying 's/he has danced.'

The function of *saya* was essentially to communicate, and as such it carried the imprint of the *griots* and the talking African drum. The Afro-descendants preserved their social organization through music, song, dramatic performance and dance, all these expressions symbolizing an ancestral hierarchical order. This hierarchy is also represented in the placement and beats of the three drums: the major, the medium and the small, or *gangingo*. The *rascas* – scrapers (also known as *guancha* or *req' o req'o*) – and the rhythmic pattern of the rattles complete the exclusively masculine instrumental formation of the *saya*.

The main protagonist is the *caporal*; he demonstrates his authority by dancing with a whip in his hand. Currently this figure is represented by the leaders and rank chiefs who hold power within the *saya*, called *fraternidades* (fraternities). Meanwhile, the women form a circle and sing in the characteristic sub-Saharan style, call-and-response, *a cappella*, mid-pitched with nasal intonations.

The genre is shaped by class, race, ethnic and nationality conflicts. Colonialism imposed the use of the Spanish language for the stanzas, and the *sayamoderna* also retains the peasant outfit of Aymara and Hispanic influence worn by the *zambo* slaves in the rural estates. Added to these elements is the *criollo* Andean instrumentation (*quena*, *zampoña*, *wancara* and *charangos* with electro-acoustic devices), which in folklorized versions of the *saya* has justified the perception of popular musicians that it is a folkloric genre. This folklorization, which is achieved through the introduction of Andean instruments, is a choreographic-musical expression that forms part of the repertoire which has been legitimized by the state and the public (audiences and consumers) as being 'national music.' Discourses about the dance, rhythm and sonority of *saya* highlight the genre's involvement in the process of construction of a Bolivian national identity; it is a sign of 'Bolivianness.' (For an example of a performance of *saya* which begins in a traditional way, with drums, whistles and voices, and becomes 'folklorized' by the introduction of Andean instruments, see Los Kjarkas' performance [1] of 'Saya morena' in YouTube listing below.)

During the 1990s the Yunga communities (of Chicaloma, Coroico, Mururata, Chijchipa, Coscoma, among others) organized themselves into movements aimed at reclaiming black identity and culture. For example, the *Movimiento Cultural Saya Afroboliviano* (founded in 1988) produced music recordings and videos and contributed in this way to its recuperation and dissemination in educational settings, in national and European festivals.

The lyrics of *saya* recall the hardships endured by the *zambos* in the past, since they were the ethnic group most severely affected by violence and exclusion. Frequently, the words include a refrain paying homage to General Isidoro Belzú who abolished slavery in the middle of the nineteenth century. The rhythm of *saya* is linked to the traditional Andean *huaynos* (of picaresque character or of Carnival) known as *huaynos sayanos*, which are the basis of the *caporales*, a very popular genre in Peru, Bolivia and Argentina that displaced the authentic representatives of the Afro-Yunges *saya*. (see *caporales* entry.)

Los Kjarkas, a group adored by Bolivians, made *la saya de caporales* fashionable in Bolivia in the 1990s and known internationally. In its popular urban version, the dominant elements are the call-and-response singing, the *criollo* Andean instruments combined with percussion, whistles, *güiros* and electronic effects. Other national musical groups such as Sayanta, Tupay, Yara, Los Kory Huaras, Amaru, Grupo Femenino Bolivia, Proyección and Iberia have also participated in the process of hybridization of *saya* that has taken place, highlighting the romantic dancing qualities, recreating the costume and the choreography with performances and dramatized scenes, in line with the requirements of the music recording industry for its widespread massive and mass-media commercialization and the aesthetic of the entertainment industry. (For a performance in the hybridized style of *saya moderna*, see Los Kjarkas' performance [2] of 'Saya morena' in YouTube links below.)

Gilka Wara Céspedes (1993) researched an emblematic case of generic mutation. 'Llorando se fue' (She Left in Tears) (recorded by Los Kjarkas as a *saya*, without any major commercial impact) was plagiarized and recorded as a *lambada* in 1989. Translated into several languages, it broke the record of sales and traveled around the world by being marketed as tropical music for discotheques. (For further information, see *lambada*.)

As a consequence of constant migratory movements, Peruvian and Argentine groups have emerged, interpreting traditional and modern 'remixed' *sayas* (mixed with the basic elements of techno music) and making the genre suitable for consumption within the Bolivian community by means of radio broadcasting stations and community or private dance halls.

Itinerant vendors also sell illegal or pirated recordings and videos in various digital formats that are accessible to the popular sectors of the region.

Seis

Seis (which literally means 'six') is a body of Puerto Rican song and dance that, like its close relative *aguinaldo*, is one of the backbones of Puerto Rican *jíbaro* or peasant music. Though much about its origins is obscure, *seis* appears to have originated as a liturgical dance, later developing into the multiplicity of sung and danced variants that exist in the twenty-first century. Such is the breadth of music that the term covers that, in the words of Malena Kuss, 'the semantic field of the *seis*… exceeds the boundaries of genre in the totality of its vocal and choreographic manifestations' (2007, 152). *Seis* is performed with a basic instrumentation of Puerto Rican *cuatro*, guitar, *güiro* and *bongó*. In earlier times Puerto Rican *tiples* (small chordophones), *bordonúas* (a type of bass guitar) and *güícharos* (güiro), as well as *vihuelas* and maracas were used. The development of the *seis* occurred mainly in the isolated communities of the mountainous regions of Puerto Rico, where the *jíbaro* lived. (*Jíbaro*, a pejorative term given to peasants for their alleged ignorance due to lack of schooling, for their rustic manners, postures and speech, as well as their reduced contact with urban areas, is nevertheless an icon of Puerto Rican national culture.)

History

Much of the history of Puerto Rican music is incomplete and imprecise, due to a lack of documentation and the absence of specialists during the time in which traditional music was gestating. In addition, in the first centuries of colonization, visiting chroniclers were not interested in the music – Puerto Rico was not a *virreinato* or a capital of economic importance until the nineteenth century. Fernando Callejo Ferrer, writing about the Catholic church (1971 [1915]), asserts that, 'in having associated with them [i.e., the churches], around that time (1515–1898), all the manifestations of human knowledge, and most importantly the artistic ones, it is logical to infer that the church was also the cradle of the musical art of Puerto Rico' (36).

Seises trace their origin to the liturgical dances that were part of the celebrations of Christmas and Corpus Christi that still exist in places such as Seville, Spain (Very 1962). According to Noel Allende Goitía (interview with author), in the eighteenth century even the most advanced churches did not have enough pews for the entire congregation; thus, only distinguished or rich parishioners and their families were allowed to sit, while the rest participated in the mass standing. When upbeat service music was played, the standing congregation would naturally move to the rhythm and dance. In the argot of the Catholic Church at the time, 'seis' referred to the ensemble or children's choir that carried the treble lines (soprano and alto) during service music. *Seises* were also danced in traditional events such as those of the Saltarines de Cádiz.

The 'seises' (boys and girls, or young female slaves whose movements were more sensual than those made by children) and their music were very well liked, so much so that the bishops in their written communications with the Holy Church often ordered the elimination of this music due to the disturbance that it would incite during masses. Church musicians were amateurs of darker complexions; only the *maestros de capilla* (chapel masters) were educated and salaried. Their instruments included *chirimías* (double-reed wooden instruments similar to the oboe), *pífanos* (fifes), *vihuelas de mano* (*vihuela* of five to six courses played with the fingers), *arpas de mano* (small harps) and small percussion instruments; in some rare cases an organ, bow instruments or other types of instruments were available. In the nineteenth century, through the military bands that visited Puerto Rico, band instruments became available to these musicians. Writing in 1691 to the King of Spain, the bishop of Puerto Rico, Fray Francisco Padilla, offers a detailed description of what troubled the clergy:

> The fathers of the Dominican Friars have complained to me that the dances occurring during Christmas Eve in the Cathedral degenerate into an annoying noise toward the morning. Your Highness knows that in Peru we also have those dances; the practice comes from Spain, and it is important to proceed cautiously so as to avoid causing any harm to religious sentiment. On a large rug, six children [the choirboys, called *seises*] danced religious dances; they were dressed in white and crowned with flowers. Next to the altar was a musician, dressed in black, playing a harp. [After the priest dismissed the mass], two men dressed in black, with guitars, replaced the harpist at the side of the altar. Six young mulatto girls, around fifteen years old, took positions on the rug before the altar, dressed in white gauze, crowned with flowers and holding tambourines in their right hands. The mulattas began to dance to the music of the guitars; their movements were correct, but a voluptuous and sensual air permeated the crowd there. When the dance and the *villancicos* ended, the audience applauded. At the end of the offering, the people gathered in different places inside the temple to dance *fandanguillos con zapateados* (stamping *fandanguillos*). (Coll y Toste 1928, 175–8; quoted in Allende Goitiá 2006, 137–8)

Allende Goitía goes on: 'Subsequently, according to Coll y Toste, the bishop issued an order forbidding the dance in the church' (2006, 138).

A widely accepted theory is that after the ban *criollos* could not remain silent and inactive, and continued this tradition of dance and music outside of the church, especially in the more isolated regions, haciendas and homes where the opportunity to celebrate any church festivity using 'religiosity and the mandate' as an excuse to organize a dance was never ignored. At that time the *rosarios cantaos* (sung rosaries) and the *promesas* or *velorios de reyes* were celebrated just as they are today. Custom dictated that after these celebrations were over, all iconography must be hidden from view before dancing commences. Festivities would go on until the small hours of the following morning. This tradition continued until at least the end of the 1970s. (From interviews with musicians, singers, families and other mountain residents, conducted by the author between 1990 and 2005.)

A church mandate urged cities, towns and communities to offer religious representations in the form of plays – a fact that reveals the development and the exchange of genres between the Americas and Europe. There are a few examples of European chapel masters and composers who assimilated rhythms, dialects and songs belonging to local *indianos* (colloquial name given to Spanish immigrants in America;

a pejorative or an admiring term depending on the context) and black communities, immortalizing them in written form as a testament to this phenomenon. Among these musicians we find Gaspar Fernández (1566–1629), a Portuguese composer and organist at the cathedrals of Guatemala and Puebla, Mexico, who collected and composed black and Nahuatl music; Antonio de Salazar (c.1650–1715), chapel master at the cathedrals of Puebla and Mexico City in Mexico, who was born in Spain and became one of the most important composers of the Mexican *virreinato*; and Ignacio de Jerusalem y Stella (1710–69), an Italian-born composer and violinist residing in Mexico.

The assimilation of local musics by Europeans coincided with the introduction of plays from the Spanish *Siglo de Oro* (Lope de Vega, Calderón de la Barca, among others) and the emergence of the sung *décima*, especially in the *Autos sacramentales* (theater works on religious subjects that, in addition to acting and drama, also featured song and dance), which were well received among *criollos*, *peninsulares* and *mestizos*.

What we know of *seis* in the nineteenth century comes largely from the book *El gíbaro*, by Manuel A. Alonso (1849), which helped to disseminate and popularize the genre throughout the island, where the level of isolation of most communities was high (see also Aguinaldo). *Seises*, *cadenas* and other dances became favorites among the *jíbaros* (not so for city dwellers, who preferred *danzas* and *fandangos*). In his discussion of Alonso's book, Alvarez (2001) writes:

> The other group of dances classified as *bailes de garabato* were *jíbaro* dances – that is, our peasant dances. The *garabato* was and still is a wooden hook used by farmers to cut using a machete, and the symbol of the peasant working class. Among these dances were *fandanguillo*, *sonduro*, *cadenas*, *caballos*, and *seis*. Although Alonso mentions that the preferred dance during the first half of the nineteenth century was the *cadenas*, by the second half of the century *seis* had become the preferred dance among *jíbaro* communities … [t]he *seis* is the Puerto Rican musical genre with which the octosyllabic *décima* is sung.

The *Décima* as Hallmark of *Seis*

The poetic form most commonly linked to *seis* is that of the *décima*, which originated in Spain and was brought to Latin America by soldiers, sailors and others and became part of the oral tradition. Consisting of stanzas of ten octosyllabic lines, *décima* became popular in Puerto Rico both as a written and an improvised form.

According to official documents, by 1824 *décimas* were being improvised for the nuptials of kings, for birthdays and for carnivals, as evidenced in the collected works of educated poets in the nineteenth century. But it was not until the end of the nineteenth century that the *décima* became the principal form, with many Puerto Rican poets, among them Virgilio Dávila, Luis Llorens Torres, Ángel Pacheco Alvarado and others, publishing *décimas*. In the rural areas, meanwhile, the *décima* and the *copla* had become the most important form of expression of the *jíbaros* living in the mountains. By the end of the century the *jíbaros*, regardless of the illiteracy that was commonplace, could make, recite and improvise *décimas*, surprising many of the literate and educated people who came into contact with them. J. Aldon Mason (1918) collected over 1,000 *glosas* (initial quatrain and four *décimas*, ending with each line of the original quatrain).

Between 1910 and 1942 the vast majority of the recordings of *seises* with *décima* poetic texts were made by Puerto Rican musicians in New York. Often the text expressed patriotic or protest sentiments, something that was not permissible in Puerto Rico itself because of political censorship.

Instrumentation

In *El gíbaro* the author writes that in earlier times *seises* utilized *tiples*, *cuatro antiguo*, *bordonúa*, *vihuelas*, maracas and *güícharo*. Modern day instrumentation consists of Puerto Rican *cuatro*, guitar, *güiro* and bongó, although many ensembles incorporate *congas*, *timbales*, bass, flutes and piano. Many recordings made between 1930 and 1960 also featured a trumpet, clarinet, *pandereta* (a single-headed, handheld frame drum used in *plenas*) or accordion. The Puerto Rican *cuatro* has been the principal instrument associated with *seis* (see Laureano 2001). The best period for the recording of *cuatro* and *jíbaro* music was between 1950 and 1970, when the outstanding interpreters showed off their talents. For example, in 1963 the US label Ansonia recorded the LP *Los decanos de los cantores* by Natalia Rivera and Chuito el de Bayamón, widely recognized as an outstanding recording of both *seises* and *aguinaldos*.

Radio arrived in Puerto Rico in 1922, but it was not until the 1930s that it became affordable and therefore accessible. A Sunday programs called *Las Industrias Nativas* (Native Industries) aired for the first time in 1922 and became the first show on which the Puerto Rican *cuatro* was played; the show featured more *jíbaro* music in the 1930s, creating popular performers out of figures such as *cuatrista*

Ladislao Martínez (Maestro Ladí), singers Chuíto el de Bayamón, Chuíto el de Cayey and Natalia Rivera, as well as guitarist Felipe R. Goyco (Don Felo) and Claudio Ferrer on the *güiro*. In New York, a large colony of Puerto Ricans performed *seises* in multiple venues in the city, aided by radio stations. Something very similar happened in Puerto Rico, where in addition to programs featuring *jíbaro* music, the news featured *trovadores* improvising on the day's events discussed on the radio. But the invasion of rock, pop and Latin music (salsa) was strongly felt in the country and tempered the younger generation's interest in the instrument and in *jíbaro* music. Thanks, however, to the efforts made by the Instituto de Cultura Puertorriqueña (ICP) and of Dr Francisco López Cruz from 1965 on, the instruction of and performance on the Puerto Rican *cuatro* became widespread. With the advent of the *nueva canción* movement across much of Latin America, interest in *seis* was renewed, with the incorporation of elements from rock, pop and salsa. In addition to the mass use of the Puerto Rican *cuatro* by the ICP, the new sounds of ensembles such as Alborada (Danny Rivera and friends), Haciendo Punto en Otro Son, Moliendo Vidrio, Ráfaga and Roy Brown y Aires Bucaneros incorporated the *cuatro* and *seises* into their soundscapes.

Types of *Seis*

In Puerto Rico there exist more than 150 different types of *seis*, each type taking its name from a function, dance, place, person or other association. The best known, and one of the oldest, is *seis chorreao*. With a harmonic structure of I-IV-V7-V7, it is among the most festive of the styles and is found in parallel with old music such as *chaconas*, *guarachas*, *gallardas napolitanas* and *jácaras* (see, for example, Antonio Valente (1530–85), 'Gallarda Napolitana' with *vihuela*, recorded by Jordi Savall and Hespérion XXI). This *seis* is the first individual type to be named as such in Alonso's *El gíbaro*. It is also mentioned as being very popular around 1880 by Callejo Ferrer (1971 [1915]). *Seis chorreao* was the first *seis* to appear in notated form, under the name 'Canto jíbaro' in the 'Aires del país' suite by Juan Morel Campos (1893). This piece includes the most popular melodies at that time. In the early twentieth century violinist and dance music composer Julián Andino and his Orchestra used the *seis chorreao* as an opening and closing theme in its dances, adding a part of the *seis zapateo*.

The *seis chorreao* was recorded as early as 1909 on Edison cylinder recordings by Puerto Rican artist soprano Gracia López (with Jorge H. Santoni); a year later, Orquesta Cocolía, led by Domingo Cruz also recorded a *seis chorraeo* for Columbia in San Juan, Puerto Rico (composed by Julián Andino), as did the duet Parrilla y Carrillo (accompanied by *bordonuas*, *tiple* and *güiro*). This *seis* also appears in the cylinder field recordings made by J. Alden Mason (Puerto Rico 1914–16), and in the Victor recording of the Orquesta Tizol that features the piece 'El valor' by Julián Andino, who also plays and improvises on the violin (San Juan, Puerto Rico 1917; the piece is very similar to 'Canto jíbaro' in Morel Campos's 'Aires del país' [1896]). Los Jardineros recorded several versions of the *chorreao* for Okeh between 1927 and 1939.

As the oldest style, *seis chorreao* has many variants, and many stages of development can be identified up until the 1930; the phenomenon of regional isolation caused each area of the island to mold a different version of the same *seis*, until radio began to bring some standardization. The following *seises chorreaos* present the same harmony: 'Fajardeño,' 'de Bayamón,' 'Marumba' or 'Sucu- sucu,' 'de Andino,' 'de Pepe Ornéz (tintillo),' 'Zapateo,' 'de Ceiba' and 'de Oriente,' among others. The *seis chorreao* continues to be performed today without many changes since the day it was first mentioned in Alonso's book.

'Seis del Dorado,' 'Borinqueño,' 'de Comerío,' 'con décima,' 'de la Serranía' and 'tierra adentro' all have a i-iv-V7 harmonic structure. In the minor mode, some, like the *seis con décima*, are favorites among the *trovadores*, especially when improvising *décimas*. This can be seen in some of the recordings by Los Jardineros (1927–39) and Canario (1927).

Seises aguarachaos (meaning *seises* that are similar to *guarachas*) are *seises* with syncopated accompaniment with the strong accent on the fourth beat. Their standard harmonic progression is I-V7. Examples are 'Mariyandá,' 'Tumbao,' 'Seis son,' 'Seis Villarán,' 'Viequense' and 'Cante Jondo de Vieques.' Other traditional *seises* include 'Mapeyé,' which was originally a dance, and 'Enramada' (after the dance); both feature the 'Andalusian cadence' (i-VII-VI-V7). (Several sources involved with the Ballet Folklórico Areyto de Puerto Rico have suggested to the author that these dances have a different step from those mentioned previously, and present a marked African influence.)

Two other types deserve a mention. *Seises creados* (created *seises*) include 'Antillano,' 'Canto Serrano y Villarán' (Chuito el de Bayamón), 'Pampero y Gaucho' (Luisito Morales), 'Tango y Montebello' (Arturito Avilés), 'Yumac' (Nerí Orta), 'Celinés' (Germán Rosario), 'Seis cimarrón' (Juan Ortíz, 'El Indio de Bayamón') and others. *Seises importados* (imported *seises*) are *seises* that adapt musical genres from elsewhere. These genres include *joropos* and *llaneras*, *cantos veracruzanos* (introduced into Puerto Rico by the singer Ramito), *milongueros* (based on 'Los ejes de mi carreta' [The Axles of My Wagon] by Atahualpa Yupanuqui and adapted by Luis Miranda), *puntos cubanos*, *seises morunos* (Moorish *seis*), etc.

Seis Today

Through the years *seises* have lost their connection to dance, which now can only be found in folkloric dance companies in Puerto Rico. What has remained strong is the sung part of the *seis* as well as the improvisational practice. Every year new albums are recorded with performers and *trovadores* of peasant music; *trovador* competitions are abundant in various regions of the island, and television and radio campaigns use *seises* in their advertisements.

Trovadores offer classes specifically for children – *trovadores* such as Luis Daniel Colón, Arturo Santiago Obrador, Omar Santiago and Luz Selenia Tirado are among those who work for the continuation of the *seis* and *décima* tradition. In addition, many public schools and municipal institutions have emphasized the importance of incorporating *trova* instructions into their projects.

ORLANDO LAUREANO (TRANSLATED
BY PAMELA NARBONA JEREZ)

Seú

The Seú is a harvest ritual that emerged on Curaçao during slavery. Due to shortcomings of climate and poor soil conditions, Curaçao never became a true plantation island, but, rather, a lucrative slave depot. Of the many Africans who passed through this depot from 1662 to 1863, only some 2,300 remained behind, quartered within the *landhuisen* ('plantation houses') located on the grounds of estates they served. With rainfall infrequent and crop-growing difficulty, the colonizing Dutch found it hard to feed this population and allotted enslaved Africans small plots of land within plantation grounds upon which they were expected to grow their own food. The Seú ritual evolved as a vehicle for ensuring successful harvests, performed prior to planting and again at harvest-time.

Finding traditional Seú in contemporary Curaçao is rare – the ritual has since evolved into a commercialized event, culminating with a parade in the city of Willemstad on Easter Monday. Participants dance the traditional *wapa*, a rhythmic, shuffling dance utilizing movements mimicking the act of planting and harvesting. Traditional dress is expected: women wear bright-laced dresses with colored scarves tied around their waists, often carrying produce-laden baskets on their heads; and men don white shirts and white pants, with colorful handkerchiefs tied around their necks.

The songs in contemporary Seú include a rich tradition of work songs, sung in *Seshi* (a variant of the local Creole language *Papiamento*) or *Guene* (a mixture of Afro-Portuguese dialects of the African west coast). Many of the instruments remain loyal to traditional origins. The conch or *kachu* (cow's horn) continues to open each song, which, as was believed during slavery, could incite the ritual entrance of agricultural deities. The *chappi*, too, remains prominent. Indigenous to Curaçao, this instrument is made from the metal end of a common garden hoe, struck with an iron bar. Considered a symbol of life and fertility, the *chappi* would play the distinct Seú rhythm (an eighth note followed by a quarter note, another eighth note, and two quarter notes), which served as accompaniment to enslaved laborers marching around the garden.

Traditionally, a water drum was used. Called *seú*, it made specific use of a wooden wash tub, which was filled about three-quarters full of water, and on top was floated a large calabash half. With the tub serving as resonator, the calabash was hit with two pieces of wood with small pieces of cloth tied to their ends; or it was tapped with the fingertips. The overall tone of the drum was quiet, its timbre muffled and somewhat indistinct. With the practice of Seú banned during slavery, the water drum emerged as a popular choice among ritual participants. Today, however, the *barí* is preferred, a barrel drum integral to the *Tambú* ritual. Unlike the *seú*, a special harness could be attached to the *barí*, enabling it to be worn by drummers and played as part of the parade procession.

By the early 2000s the Seú, now organized through the Curaçao Department of Culture, had vastly grown in popularity, involving over 2,500 participants and attracting audience numbers equal to – or even surpassing – those in attendance at Carnival.

Shanto

Guyanese musician Bill Rogers (Augustus Hinds, 1906–84) is credited with the creation of the term 'shanto' during the late 1920s. A conflation of shanty and calypso was intended to mark the distinctiveness of a popular Guyanese style. The term 'shanty' referred to work songs, especially those created by Guyanese of African ancestry who worked in the extractive industries in Guyana's hinterland industries – gold mining, timber cutting, charcoal burning and balata bleeding. The term 'shanto' was also a deliberate effort to resist the 'indiscriminate use of the word calypso to label every style of West Indian composition' (Hinds 2008, 30).

Shanto is a distinct product. Bill Rogers described it as 'an improvisation of words and music with an Afro-West Indian beat with satirical comments on people, events and things … accentuating colloquial language and [distinctively Guyanese] topics' (ibid., 30). Stylistically, shantos have very long lines and more verses than the Trinidadian calypso.

During the 1930s the 'bargee/bhagee' beat became synonymous with shanto. Sometimes the terms were used interchangeably. According to Gordon Rohlehr:

> The beat of the Bhagee was very infectious, and the major dance bands all played it during intermission, when people would dance to it and sang the ditties. It was also played at the end of dances, resembling in this respect the leggo in Trinidad of the same period, which came after people had danced the Lancers, Waltz, Fox Trot and Charleston. (1990, 144)

Bill Rogers was the most versatile and productive composer and performer of shantos. Many of the shantos he composed during the early 1930s commented on the social and economic conditions that the poor and working-class population was experiencing in urban British Guiana. He became the first Guianese to sign a recording contract and in November 1934 he recorded 28 songs for RCA's Bluebird label in the United States. Among them were 'The West Indian Weed Woman' (which provided an almost exhaustive list of British Guianese ethno-botanicals and their curative and restorative attributes), 'Bhagee' and 'Ugly or Pretty Woman.'

'The West Indian Weed Woman' became a hit during the first international calypso wave of the 1930s and was re-released in the 1950s, the 1970s, and again in the late 1990s. Harry Belafonte and singers in the Bahamas, Jamaica, Barbados and Trinidad have also covered the song. 'Bhagee' was not only a recipe for preparing that variety of 'Calloo' ('Buy four cents of the caterpillar bush/Buy a penny coconut oil …'), it could be seen, like P.M. de Weever's 1901 song 'Me Cawfee in de Mawnin,' as a contemporary commentary of the prevailing diet and conditions of working people during the depression era.

Rogers' dexterity with the East Indian culinary practices and Hindi came from growing up in multiracial Charlestown, a ward in south Georgetown. Also recorded in 1934 were 'Sugar, Cent a Pound,' 'Kingston Dead Cow' and 'Silver Bangle Dipped in Gold.' 'Sugar, Cent a Pound' spoke about the sale of sugar salvaged from a schooner that sank at a local wharf, while 'Kingston Dead Cow' reflected on the speed with which the carcass of a cow, which had drowned in the Demerara River near Kingston, was butchered and distributed. Both recordings were commenting on the cost of food and the extremes to which poor people went to get them. 'Silver Bangle Dipped in Gold' was a commentary on the dress styles of urban women, especially the pretentious use of imitation gold jewelery. Rogers's 1934 recordings represent an incisive reflection on the issues that dominated Guyanese society during the late 1920s and early 1930s.

Bill Rogers was not the only composer and performer of shantos in British Guiana during the early 1930s. Among the other more popular figures were Joe Coggins, Zeda Martindale and Ralph Fitz Scott. Gordon Rohlehr has also identified Cyril Lamprey, Johnny Murray, Papsi Corrica, Bandula, Red Ants, Lall and Ezekiel as other performers (1990, 142). Shantos were performed in rum shops, at dances, during vaudeville shows, and starting with Rogers's recordings in 1934, some were released on international record labels such as Bluebird, Decca and Okeh.

Shantos have served as 'searchlights' and 'loudspeakers' illuminating and commenting on what was transpiring at all levels of the society – in the high places, on the middle rounds of society and, to quote Rohlehr, with the 'bedraggled proto-proletariat existing at the rotting edges of the society' (1990, 145). The songs of Coggins, Martindale and Scott are incisive explorations of the intersection of urban and hinterland British Guiana during the 1930s. Joe Coggins's 'Me an Me Neighbor Don't 'gree' commented on the rags-to-riches-to-rags cycle that so many of the hinterland workers, especially those who worked in the gold and diamond field – pork-knockers – experienced during the 1930s. Zeda Martindale's 'Captain Put Me Ashore' was also about pork-knockers. In this shanto, he refers to a Barbadian contract worker expressing fear as he experienced the awesome rawness of the rapids and waterfalls that had to be surmounted to reach the gold and diamond field. By the

1950s the song became known as 'Itanamie' and has a prominent place in Guyana's repertoire of folk songs. Ralph Fitz Scott's 'Bush Woman Come to Town' provides a list of the graphic names of some of the hinterland prostitutes.

The shanto style also traveled beyond Guyana. Bill Rogers was a touring performer and toured Dutch Guiana, Trinidad, Barbados, the United States and Canada during the 1930s. Rohlehr has argued that Roger's shanto style, 'his feel for the dramatic situation, and his talent for narrative … and his employment of long lines crammed with words and syllables and his extended choruses … fed into the musical and lyrical collective unconscious of the Calypso world to become a definite influence on [Trinidadian calypsonians such as Lord] Melody' (1990, 144). This influence is also evident in the compositions and styles of Lord Beginner and Lord Caresser.

In the early twenty-first century the shanto continues to be recognized as a distinct Guyanese genre and an annual Shanto Competition is held during Mashramani (the celebration of Guyana becoming a republic). Since the1990s the dominant performer has been 'Young Bill Rogers' (Roger A. Hinds), the son of the late 'Bill Rogers' (Augustus Hinds).

VIBERT CAMBRIDGE

Ska

Ska (pronounced 'skya' by many Jamaicans) first emerged as a musical and dance style in the late 1950s and early 1960s in the Kingston, Jamaica area. This was a time when the working class and the poor were increasingly attracted to Rastafarianism, and all levels of society were excited at the prospect of independence after over 450 years of colonial rule. The result was a general exploration and assertion by Jamaicans in many ways of who they were and where they came from, expressed as an inward-turning celebration of Jamaican culture and 'blackness' (Witmer 1981, 113).

Local musicians responded to this *zeitgeist* by creating ska – a 'modern' sound with traditional roots, combining elements from US R&B, jazz and rock with Jamaican folk and religious musical practices. The modern qualities include the use of contemporary popular song structures, solo and group vocal styles influenced by US R&B vocalists and an instrumental approach strongly rooted in R&B of the late 1950s/early 1960s with a touch of jazz and rock. The traditional qualities include a rhythmic, melodic and body movement style strongly influenced by Jamaican Pukkumina/Revival practices, and the use of Jamaican folk hand percussion. The fusion of these two approaches resulted in a synthesis that was viewed by Jamaicans as a new, locally created up-tempo approach to R&B dominated by Jamaican traditional elements that reflected the optimism and perspective of a new country emerging after 400 years of Colonial rule.

Ska bands adopted specific features from jump blues, US R&B, jazz and rock, especially their rhythmic and timbral approaching which blues harmony and melody were predominant. The biggest influence from Jamaican folk and religious musical practices was the emphasis on consistent offbeat accents, which Jamaican musicologists label 'afterbeats' – discussed below. These musical accents were found in mento (a Jamaican folk music that combines Anglo-Celtic melodies and harmonies with syncopated bass lines and accompaniments that employ strong afterbeat accents – discussed below) and Pukkumina/Revival (a syncretic blend of Christian religious practices with West and Central African ones, including music and movement elements along with occasional hand drums). The ska dancing and movement style was initially strongly rooted in Pukkumina/Revival rituals and was also intertwined with the emergence and characteristics of the musical elements of ska.

Origins, Etymology and Main Characteristics

Because of poor documentation and conflicting accounts by participants (Katz 2003, 1–63), ska's precise musical origins are difficult to establish, but there is documentation that the style and the term 'ska' emerged around 1959 in Kingston recording studios, and was in common usage by 1961 to refer to a musical and dance style (Barrow and Dalton 2001, 4). Although there is no authoritative definition of 'ska,' the most compelling one is that it was an onomatopoeic word used by musicians and producers to describe its characteristic afterbeat, accents (i.e., short sounds between main beats) (see Example 1) usually played by guitars, keyboards and/or horns.

Example 1: Afterbeat accents

Because of its frequent conflation with 'upbeats' and 'backbeats,' however, the term 'offbeats' is considered problematic by Jamaican musicologist Garth White and American musicologist and reggae bassist Luke Ehrlich, who suggest using 'afterbeat' for the consistently accented sounds between beats in Jamaican folk, religious and popular music (White 1982b, 38; Ehrlich 1982, 55). Afterbeats, which are typically louder and heavier than sounds on the beats, sustain the harmony from the previous beat, rather than anticipating the harmony of the following beat. (See 'Reggae' entry for further discussion.)

Ska's other predominant musical characteristics include features shared with African-American R&B and late-1950s rock 'n' roll in terms of instrumentation, rhythmic approach and vocal style. Ska ensembles employ jazz- and/or R&B-style instrumentation (piano, acoustic/electric guitar, acoustic bass, drum kit and a horn section including saxophones, trumpets and trombone). A swing or shuffle style is most frequently used, with beats often subdivided simultaneously in both two and three parts by different instruments (similar to the rhythmic approach of mid-1950s rock 'n' roll recordings such as Elvis Presley's 'Jailhouse Rock' [1957] and Chuck Berry's 'Rock and Roll Music' [1957]). Similar to R&B and rock arrangements, ska backbeats (heavy second and fourth beats in a 4/4 meter) are consistently accented much more strongly than beats one and three, but because ska drummers often play backbeats with synchronized snare drum and bass drum, the result is a much louder and heavier sound than in R&B. An additional uniquely Jamaican drumming approach is a frequent omission of the bass drum on beats one and three, in contrast to R&B and rock drummers who almost always play the bass drum on these beats. Bass lines are usually performed on acoustic bass and consist of quarter-note jazz-style walking bass lines that stress each beat along with occasional phrase endings and accents that emphasize afterbeats. Ska tempos are usually brisk (c. 120–30 beats per minute). In terms of vocal style and arrangements, ska songs are sung most often by a solo vocalist (sometimes with harmony vocals) in a style that synthesizes melodic, rhythmic and timbral elements from African American R&B, gospel and rock with a Jamaican rhythmic orientation that emphasizes afterbeats and places extra weight on backbeats.

Ska displays a number of rhythmic, melodic, harmonic and corporeal elements that are rooted in Jamaican folk and religious musics. The afterbeat and strumming style of ska guitar, and the occasional afterbeat orientation of bass patterns are strongly influenced by banjo/guitar and rhumba box rhythms in mento – a Jamaican folk music that synthesizes melodic, harmonic and structural elements from traditional European folksongs and Christian hymns (with a melodic and rhythmic orientation rooted in West African secular and religious music). Musicologists such as White (1984) and Ehrlich (1982) have labeled ska's rhythmic style as a 'neo-African' polyrhythmic orientation because of its derivation from Jamaican musics such as Buru, Jonkonnu (a Jamaican neo-African tradition featuring fife and drums that synthesizes elements from West African harvest festivals and traditional British Mumming traditions practiced during the Christmas season, a combination of parading, miming, fife and drums – Ryman 1984a, 1984b; White 1984, 63–4; Wynter 1970) and nyabinghi. These styles are all rooted in the musical practices and West African folk and religious retentions of Jamaican Maroons since the mid-sixteenth century (Carty 1988; Ryman 1983). Ska's melodic, harmonic and rhythmic style is also derived from quadrille, Revival hymns, Jamaican work songs and singing game songs, in which sonic and corporeal elements are often intertwined, strongly influenced by Revival afterbeat handclapping patterns and 'trumping' movements (explained below). The resulting sound-movement gestalt creates strongly felt, but often silent (or weakly sounded) beats coupled with sonically heavy afterbeat accents.

Most analysts of Jamaican culture (Barrow and Dalton 2001, 35–47; Bradley 2000, 61–4; Carbone 2007; Hebdige 1987, 51–61; Katz 2003; Reckford 1977, 9–13 and 1998; White 1984, 64–5) prioritize Rastafarianism in ska's development. While Jamaican dancer and scholar Cheryl Ryman (1983, 149) affirms that the Rastafarian influence on the development of Jamaican popular music cannot be overstated, a few other scholars, such as O'Gorman (1986, 160–1, 1987), argue that claims regarding the Rastafarian influence are exaggerated and, in some instances, inaccurate. Ska innovators, however, insist that nyabinghi – Rastafarian music and rituals – was central to ska's birth (McCarthy 2007, 167). Oswald 'Count Ossie' Williams, a Rasta drummer who was the prime originator of the nyabinghi musical style, performed at many private and public gatherings in West Kingston's Trenchtown area. Many Jamaican jazz musicians (including members of the Skatalites, the 1960s studio band that played on many early proto-ska and ska recordings) attended or participated in these performances and cite Ossie's experiments blending jazz with nyabinghi and other Jamaican musics as a main inspiration for the Jamaicanization of American R&B (Clarke 1980, 53–4; Foehr 2000, 88–91; Katz 2003, 33–4, 38–9, 59; Reckford 1977, 1998; White 1982b, 39; 1984, 57–8, 62–4).

Caribbean/Latin characteristics (primarily rhythmic elements from *bolero*, *rumba*, *merengue* and calypso grooves and patterns) appear occasionally in ska, especially in bass and percussion parts. Examples may be found in instrumental recordings by the Skatalites and their members (Carbone 2007) such as '(Music Is My) Occupation' and 'Latin Goes Ska' (Skatalites 1964), 'Mesopotamia' (Skatalites 1964), 'Bongo Tango' (Roland Alphonso 1964) and 'Phoenix City' (Roland Alphonso 1967).

Many of the earliest ska records were based on, or were local variations of, US R&B recordings of the late 1940s to the mid-1950s, adopting the rhythmic orientation of artists such as Dave Bartholomew, Fats Domino, Rosco Gordon, Louis Jordan, Little Richard and Professor Longhair and the vocal approach of Sam Cooke, the Drifters and Jackie Wilson. Because of these origins, some analysts conclude that ska was merely an imitation of US R&B, but others (Bilby 1995; Barrow and Dalton 2001, 6–29; Bergman et al. 1985, 22–3; Chang and Chen 1998, 22–9; McCarthy 2007; White 1984, 62–4; 1998, 18) argue that its Jamaican and Caribbean features indicate a substantially different aesthetic orientation from R&B, especially when dancers' and musicians' body movements are also considered.

Proto-Ska (Early Ska)

Ska's initial creators were mostly Jamaican dance band and jazz musicians and record producers guided primarily by the aesthetic preferences of members of the lower classes who frequented DJ dances run by companies that became known as 'sound systems' (Barrow and Dalton 2004, 11–18; Davis 1982; Stolzoff 2000; Veal 2007). The most popular musics at sound system dances were US jump blues and New Orleans R&B. With the rise of rock 'n' roll in the mid-1950s, many US R&B artists (e.g., Jackie Wilson, the Drifters and Sam Cooke) adopted a more lush style, and the availability of up-tempo, rhythmic R&B dance-oriented records diminished in Jamaica. The most successful sound system operators (e.g., Clement 'Coxsone' Dodd, Arthur 'Duke' Reid and Prince Buster [Cecil Campbell]) hired Jamaican jazz and commercial musicians to create recordings in the older R&B style to play in the dance halls. Many of these musicians were Rastafarians who earned their living playing Jamaican folk musics (e.g., mento, Buru, Jonkonnu, Pukkumina/Revival and nyabinghi) and foreign hit songs at local dances, in clubs and in tourist resorts in urban centers. They learned to play foreign hits from American recordings and local and US radio stations – whose programming was dominated by Top 40 record charts – or from US sheet music and stock dance band arrangements. Initially, Jamaican-tinged R&B recordings – many of which were instrumentals – (known as 'Jamaican Blues,' 'half-blues,' 'Blue beat,' 'Jamaican rock,' 'Jamaican Boogie' or 'Jamaican R&B') were only pressed as acetates for use by DJs. When ska became mainstream in the early 1960s, some of these early recordings were mass-produced and sold commercially.

Jamaican boogie recordings allowed musicians to experiment in the studio, sometimes resulting in a Jamaican variant of R&B that became more popular at Sound System dances than US R&B. Because these experiments ultimately led to ska, Jamaican musicologist Garth White (1982b, 38) calls these R&B variations 'proto-ska.' The most popular proto-ska artists (and representative songs) were vocal recordings, such as Laurel Aitken's 'Boogie In My Bones' (1959), Theophilus Beckford's 'Easy Snappin' (recorded

1956, released 1959), Wilfred 'Jackie' Edwards's 'Tell Me Darling' (1960), Owen Gray's 'Midnight Track' (1962) and the Folkes Brothers' 'Oh Carolina' (1960). Although most proto-ska recordings used the same instrumentation, vocal approach and song style as US R&B combos, Jamaican musicians often added some or all of the Jamaican and Caribbean characteristics listed above. The most prominent added traits were stronger afterbeat accents and heavier backbeats than those utilized in US R&B. 'Oh Carolina' also features the polyrhythmic nyabinghi drumming of Oswald 'Count Ossie' Williams, a Rastafarian musician, which is atypical for the proto-ska style. Although some artists later also emphasized more pronounced Jamaican and neo-African features in the rocksteady and reggae styles which developed out of ska between 1966 and 1969 (e.g., Prince Buster's 'Hard Man Fe Dead,' Lee Perry's 'People Funny Boy,' Toots and the Maytals' 'Six And Seven Books of Moses' and 'Sweet and Dandy,' Burning Spear's 'Door Peep' and Bob Marley and the Wailers' 'Rastaman Chant'), some analysts (e.g., Bilby 1995, 158; Chang and Chen 1998, 25; Roberts 1998; White 1982a, 1982b, 1982c, 1984, 1998) believe that most proto-ska recordings were the result of musicians' cultural preferences, rather than deliberate attempts to create 'a new style.' Many musicians heard similarities between R&B afterbeats and those found in Jamaican musics, and they 'Jamaicanized' R&B while adding other local touches. The results were pleasing to both the musicians and their audiences at a time when all things Jamaican were embraced and celebrated, with independence looming on 6 August 1962.

Mainstream Jamaican Ska

By the time Jamaica became independent ska had become a mainstream style, due to several synchronous factors. In 1959 radio station JBC (Jamaican Broadcasting Corporation) went on the air with a mandate to promote Jamaican culture. By 1961, with the advent of cheap transistor radios, 90 percent of households in urban centers and 66 percent of those in rural areas had radios (Bradley 2000, 92). After many proto-ska and early ska records received airplay on two shows hosted by bandleader Sonny Bradshaw, sales soared. Because of this exposure, within two months the Top 30 was dominated by Jamaican releases (Bradley 2000, 89). Most of the earliest ska recordings that were popular hits were in a relatively rough and unpolished style. As their popularity rose, ska songs were increasingly incorporated into the repertoire of established Jamaican mainstream dance bands such as Byron Lee and the Dragonaires, whose audiences were primarily middle and upper classes. These upper-class renditions were much more homogeneous in nature, with refined and polished productions and arrangements, and smoother rhythms.

Although there were many ska songs with conventional romantic popular themes, such as Stranger (Cole) and Patsy (Todd)'s 'When I Call Your Name' (1963), Derrick and Patsy's 'Housewives Choice (aka) You Don't Know' (1961), the Gaylads' 'Whap Whap' (1963) and Jiving Juniors' 'Sugar Dandy' (1962), overall, the ska repertoire was extremely eclectic. Some songs celebrated Jamaica's independence and identity, notably Jimmy Cliff's 'Miss Jamaica' (1962), Lord Creator's (Kenrick Patrick) 'Independent Jamaica' (1962), Derrick Morgan's 'Forward March' (1962) and Byron Lee and the Dragonaires' 'Jamaican Ska' (1964). There were ska arrangements of non-Jamaican hit songs, traditional folksongs, mento and even children's songs. Some of the non-Jamaican ska covers include Baba Brooks's 'Watermelon Man' (1963), Byron Lee and the Dragonaires' 'Sloopy' (1964) and Carlos Malcolm and the Afro-Jamaican Rhythms' 'Bonanza Ska' (1964). The biggest ska hit was Millie Small's 'My Boy Lollipop' (a Jamaicanized version of US artist Barbie Gaye's 1957 R&B hit) recorded in 1964, which sold over 7 million copies worldwide. It was recorded in England, featuring a large British swing band, and arranged and produced by noted Jamaican guitarist Ernest Ranglin. The resulting style was closer to the smooth mainstream ska stylings of Bryon Lee and the Dragonaires than the rougher approach taken by the Skatalites.

Ska-styled folksongs and mento hits include Baba Brooks's 'River Bank' (1963) and 'Sly Mongoose' (1964), Carlos Malcolm and the Afro-Jamaican Rhythms' 'Rucumbine' (1963) and Eric 'Monty' Morris's 'Sammy Dead Oh' (1964). Morris also had a hit with a ska arrangement of the nursery rhyme 'Humpty Dumpty' (1961). Given the significance of religion and spirituality for the average Jamaican in the early 1960s, ska songs with religious sentiments, biblical references or a philosophical orientation were quite popular, including Clancy Eccles's ska treatment of a Revival hymn, 'River Jordan' (1964), Jimmy Cliff's 'King of Kings' (1963), Delroy Wilson's 'Lion of Judah' (1963), Desmond Dekker and the Aces' 'Honour Your Mother and Father' (1963) and Prince Buster's 'Wash Wash' (1963).

Former proto-ska producer and newly elected Minister of Culture Edward Seaga promoted ska as Jamaica's national music because of its blending of traditional Jamaican elements in a modern new style. With a background as a folklorist, he felt that ska (as both a music and dance style) was an ideal symbol of

Jamaica as a vibrant new country open for business that was ready to take its place on the world stage. In 1964 the government produced a promotional film (*This is Ska!*) which was shown at the 1964 World's Fair in New York and which featured many top ska artists performing live, as well as a professionally choreographed demonstration of ska dancing. After Seaga encouraged upper-class society bands such as Byron Lee and the Dragonaires, Carlos Malcom and his Afro-Jamaican Rhythms and the Eric Deans Orchestra to add ska to their live performances and recordings, ska became popular with Jamaican middle and upper classes.

Main Architects of the Ska Style

While the earliest participants in Count Ossie's jam sessions disagree about the initial architects of the ska style, the following producers and musicians created the most influential proto-ska or ska recordings (Katz 2003, 1–64). Many influential ska producers were also DJs, such as Prince Buster (who was also a singer/songwriter), 'Coxsone' Dodd, Arthur 'Duke' Reid and Tom ('The Great Sebastian') Wong. Other notable producers include Chris Blackwell (who produced 'My Boy Lollipop' and later all of Bob Marley and the Wailers' internationally successful 1970s recordings), Leslie Kong, Byron Lee and Edward Seaga (later the Prime Minister of Jamaica between 1980 and 1989).

Many instrumentalists made important contributions as studio musicians and in live concerts. The Skatalites was the premier ska ensemble that played on the majority of ska recordings, working for all of the above producers at different times, with saxophonists Roland Alphonso, Cedric Brooks, Tommy McCook and Lester Sterling and trombonist Don Drummond contributing many original instrumental compositions, often featuring nyabinghi rhythms. Notable ska instrumentalists also include bassists Lloyd Brevett (whose style became an influence in the rocksteady era 1966–8), Cluet Johnson (who played on most of the proto-ska recordings) and Byron Lee (who introduced the electric bass to Jamaica in late 1965). Prominent drummers were Arkland 'Drumbago' Parks and Lloyd Knibb (probably the most versatile Jamaican drummer, who was fluent in all Jamaican folk, Caribbean and Latin styles, as well as rock and funk). Other influential ska musicians include electric guitarists Lynn Taitt and Jerome 'Jah Jerry' Haines; keyboardists Gladstone 'Gladdy' Anderson and Jackie Mittoo; hand percussionists Noel 'Zoot'/'Skully' Simms and Arthur 'Bunny' Robinson who often emphasized nyabinghi rhythms along with trombonists Vin Gordon and Rico Rodriquez (who moved to England in the early 1960s and became a member of UK ska band the Specials in the late 1970s) and trumpeters Baba Brooks (who specialized in ska versions of mento songs), Alphonso 'Dizzy' Reece and Johnny 'Dizzy' Moore.

The following recordings were significant ska hits between 1964 and 1966 (usually with backing supplied by the above instrumentalists): the Maytals' 'Pain in My Belly' (1965), Derrick Morgan's 'Blazing Fire' (1965), Prince Buster's 'Al Capone' (1965) and the Wailers' 'Simmer Down' (1964) and 'It Hurts to Be Alone' (1965).

In 1964 Coxsone Dodd opened Studio One, the first major Jamaican recording studio, and he established a house band (the Skatalites). Most of the Skatalites were graduates of the wind band program at West Kingston's Alpha Boys School, where they learned traditional European classical and military band music, contemporary big band and popular styles, and acquired reading, ensemble and improvisational skills. Many graduates became professional musicians and joined swing, military and/or jazz bands; most also performed in Jamaican religious and/or mento groups. These experiences generated technical fluency in, and aesthetic understandings of, neo-African, Jamaican, Latin American, Caribbean, European and African-American practices that allowed them to synthesize these musics into new Jamaican styles (Witmer 1987, 19, McCarthy 2007, 43). In addition to providing backing accompaniments for many recordings during the ska era, the Skatalites also had a number of their own hit recordings: 'Eastern Standard Time' (1964), 'Ball of Fire' (1965), 'El Pussycat' (1965), 'Guns of Navarone' (1965) and Don Drummond and the Skatalites' 'Man In The Street' (1965).

British Ska in the Early to Mid-1960s

Spearheaded by 'My Boy Lollipop,' ska became popular in the British Jamaican diaspora, notably in the London area, where it was also embraced by the mod subculture (Hebdige 1987). The Skatalites' and Prince Buster's recordings were especially popular, and Buster moved to England and collaborated and recorded with British R&B keyboardist/vocalist Georgie Fame. In 1967 two ska singles appeared on the British pop charts: Prince Buster's 'Al Capone' and the Skatalites' 'Guns of Navarone.' This strong reception created a British market for live performance and record sales, and a steady stream of imported Jamaican records and British ska recordings. Because local British records were released primarily on the Blue Beat and Island labels, 'Blue Beat' became a nickname for ska in Britain. Other Jamaican musicians (such as trombonist Rico Rodriguez) either emigrated to England or spent considerable time there.

Ska Dancing and Jamaican Movement Style

When introduced in the early 1960s, ska was also a dance style – of which there were three types (Wynter 1970, 47). The first consisted of movements derived from Pukkumina/Revival rituals and folk dances which all possess sonic and corporeal afterbeat accents. This type of ska dancing involved the transplantation and transformation of traditional religious forms into something modern and urban. In the same way that traditional West African secular and religious music and related movements were often similar, if not identical, Jamaicans also generally did not distinguish between the two, nor did they find this blending of the secular and the religious strange or offensive (O'Gorman in Johnson and Pines 1982, 42). The basic ska posture was derived from Pukkumina/Revival movements: torso bent forward, sometimes almost horizontal, with one leg placed forward and slanting outward. Arms were held straight out, moving backward and forward with loosely doubled fists pumping down and up, while the head and shoulders jerked forward and backward; this was called 'trumping.' When the torso was raised and straightened, the weight was shifted to the other leg, which was moved forward.

Other movements originated from the riding and whipping part of a Jonkonnu movement called Jockey's Dance. The arms were bent from the elbow, and the fists were held in the front as if holding 'reins.' The entire body also moved forward and back in a jogging motion. With bent knees, this 'riding' motion was controlled primarily from the pelvis. One hand went behind to 'whip' one's horse, swinging suddenly and dramatically forward to crack the whip, after which the 'riding' resumed (Ryman 1984a, 1984b; Wynter 1970).

Finally, dancers incorporated many movements from domestic activities such as washing clothes and bathing (Reckford 1998, 237). Jamaican dance expert Cheryl Ryman (1983, 149) sees a Buru influence in many ska movements, and folklorist Mike Alleyne (1988, 118) notes that the folk ska dance style was sometimes called 'footsy' or 'legs' because of the way some dancers vibrated their legs and feet. This movement style is visible in many West African dances and also in movement routines by African American performers like Earl 'Snake Hips' Tucker and James Brown.

The second ska dance style was a choreographed version of Pukkumina/Revival and folk movements created by professional dancers hired by the Jamaican government to create a Jamaican version of 'The Twist' as part of Seaga's plan to present a distinct Jamaican cultural identity to attract tourists and investors to Jamaica. Compared to the folk style, this choreographed style (seen in *This is Ska!*) was extremely restrained, simplified and repetitive (White 1984, 75). The third ska dance style blended the folk and choreographed versions, along with steps from R&B dances, including Jive, and the Twist (Davis and Simon 1977, 103).

End of the Ska Era and Later Manifestations

The ska era ended around 1966 due to several synchronous factors (McCarthy 2007, 211–2, 257–9). In late 1965, during a sharp economic downturn, the Skatalites disbanded. Most producers utilized smaller ensembles that employed a looser, more polyrhythmic, neo-African approach to accompany a new dance called the rocksteady, whose movements required a slower, less frantic style. Although ska never vanished completely, after reggae emerged in 1968 it appeared less often in Jamaican artists' live performances, and rarely on their records or in the dance halls.

However, in the mid-1970s ska experienced a resurgence in England when British youth embraced it during a period of high unemployment that also produced punk, a stripped-down back-to-basics rock style. Many British punk bands (e.g., the Specials, Madness, the Clash and the English Beat) played cover versions of early Jamaican ska hits. Some also wrote original songs that combined punk and ska, and sometimes reggae. Compared to Jamaican ska, British ska (often nicknamed Two-Tone after the record label shared by many of its artists) retained strong afterbeat accents (although fewer overall), but employed faster tempos, smaller ensembles (usually with only one or two horns), more prominent guitars, a bass and drum style with strongly accented first and third beats (Hebdige 1982). Although Two-Tone was more popular in Britain than in the rest of world (at this time), it experienced a revival during the third wave of ska resurgence.

The late 1980s and early 1990s saw a third ska wave, when some US punk bands played in a style similar to that of the Two-Tone groups (e.g., Goldfinger, Let's Go Bowling, Save Ferris, the Mighty Mighty Bosstones, No Doubt, Operation Ivy, Rancid and Sublime). However, by the mid-1990s, when the Seattle Grunge sound became the dominant commercial sound, third wave ska decreased in popularity.

In the twenty-first century ska has maintained its popularity in select foreign and nonmainstream markets, suggesting that a fourth wave is possibly underway. Since 1988 Japan's Tokyo Ska Paradise

Orchestra (modeled after the Skatalites) has achieved massive Asian popularity with a mix of cover versions of early ska hits and original ska compositions. They have also achieved some worldwide success, with their ska arrangements of video game theme songs such as 'Pedorazu (the Tetris theme)' and 'Black Jack,' from the PlayStation 2 game *Sly Cooper and the Thievius Raccoonus.* There have been new ska fusions such as 'salska,' a mix of salsa and ska by groups such as La Ruda from France, and 'skakakore,' a synthesis of ska, rap and hardcore by Puerto Rican and Latin American artists such as Mexico's La Maldita Vecindad y los Hijos del Quinto Patio who fuse ska with *chachachá* and *bolero*. Third wave-style 'skacore' has also been adopted by dozens of US Christian bands such as Five Iron Frenzy and Insyderz. Since ska has been popular for almost 50 years, and enough time has passed since the third wave for a new generation to discover its frantic energy, it may be just a matter of time before ska becomes mainstream once again.

Soca

Soca is a style of popular dance music that emerged in Trinidad and Tobago in the 1970s and went on to become the dominant form of dance music in that country, particularly during the annual Carnival. The goal of the musicians who were involved in the development of soca was to reinvigorate the Trinidadian calypso and make it more interesting in terms of its rhythm and musical structure. Innovation has continued to be a feature of the music. Soca was also a response to musical imports from North America, as well as to other Caribbean musical genres that were becoming hugely successful abroad, particularly reggae. Soca emerged at a time when adventurous musical fusion had become the norm in Trinidad and Tobago, and its emergence coincided with Trinidad's oil boom years (1973–80) and the optimistic atmosphere that resulted from the citizenry's increased standard of living and purchasing power. Since the late twentieth century artists from other parts of the West Indies, particularly Barbados, have made important contributions to soca.

Calypso has always embraced a range of singing styles, but soca represented a significant departure in terms of rhythm, tempo and instrumentation. It was the lyrics of soca, however, that attracted the greatest controversy. Soca and related varieties of 'party music' in Trinidad have consistently generated severe criticism from academics, journalists and, more broadly, an older generation of Trinidadians, because in their view it does not have 'meaningful' lyrics. Ultimately, it is a type of party music in which the verbal artistry of calypso is replaced by hook-driven verses and choruses, and led by flashy and sexy lead singers, who command their audience to 'jump up,' 'take a wine,' 'free up,' 'display,' 'breakway,' 'charge,' 'get on bad' and, generally, 'make bacchanal.'

The Development of Soca

One of the key innovators of the soca music style was the calypsonian Lord Shorty (Garfield Blackman, later Ras Shorty I), along with his musical arranger, Ed Watson. In many interviews, Shorty said that calypso was 'dying' and he wanted to renew and reinvigorate calypso in order to compete with foreign dance music such as reggae, funk and soul (Guilbault 2007, 1723). Shorty expressed the desire to blend Indian and African rhythms, suggesting to Ed Watson that he add East Indian percussion instruments, particularly the *dholak* and *dhantal* of Hindu folk and popular music, to his musical arrangements. Shorty called his new style 'sokah' in order to emphasize the Indian contribution, and introduced it to the world with his song 'Indrani' in 1973. In addition to the 'Indian rhythms,' this song and others of the same period are clearly influenced by Hindi film music, which was broadcast on local radio stations for short periods each day (Niranjana 2006, 1412). These innovations were met with negative criticism from both the Afro-Creole and Indo-Trinidadian communities. Afro-Trinidadians felt that Shorty was ruining the calypso, and Indo-Trinidadians assumed that 'Indrani' was meant as a parody of their culture (Guilbault 2007, 173).

Shorty responded by asking Watson to change his arrangements and transfer the Indian rhythmic patterns to the drum set, iron and congas of the calypso rhythm section. The result was the album *Endless Vibrations* (1975). At the same time, journalists writing about Shorty's music changed the spelling from sokah to soca, assuming that Shorty was blending soul with calypso music. Since Shorty did not protest, the new spelling became standard. The new sound, which along with the extra percussion foregrounded the bass, Hammond B3 organ and electric guitar, earned Shorty a devoted following of fans and awakened the interest of other musicians. Although initially resistant to Shorty's innovations, older calypsonians such as The Mighty Sparrow (Slinger Francisco) and Lord Kitchener (Aldwin Roberts) realized the popularity of the soca sound, and wrote compositions in the new style. One of the most successful soca songs during this early period was Lord Kitchener's 'Sugar Bum Bum,' arranged by Ed Watson and released in 1978 (Guilbault 2007, 173–4).

As soca became more popular, Shorty became disillusioned with the Trinidadian music scene, changed his name to Ras Shorty I and with his family started creating faith-based music. Mixing soca and gospel, Shorty named this style jamoo, meaning 'Jah music.' Following his death in 2000, Shorty's children, most notably his eldest daughter Abbi Blackman, and sons Eldon, Sheldon and Issac Blackman have continued his legacy.

Thanks to the large populations of West Indians in North American cities such as Toronto and New York, and in the British Isles, soca quickly came to international attention. Ironically, perhaps, the best-known soca song of the 1980s was 'Hot Hot Hot,' recorded by the singer Arrow (Alphonsus Cassell), who was from Montserrat, not Trinidad. The song was later brought to the attention of American audiences by the novelty singer Buster Poindexter (David Johansen). This success opened the way for other artists in foreign markets, particularly for the winner of the 1986 Trinidad road march (the competition held during the carnival parade) David Rudder, via his album *This is Soca*. Interestingly, Rudder developed a style of soca that is more socially conscious than that of his contemporaries, and he has remained an artist who does not feel bound to the conventions of the Trinidadian music scene.

By the early 1990s soca had become the most common form of music in Carnival fêtes and the preferred form of music to accompany mas bands (mas is the term for masquerade in Trinidad and Tobago) on Carnival Monday and Tuesday. A turning point occurred when the calypsonian Super Blue (Austin Lyons) won the road march three years in a row (1991–93) with an energized form of soca featuring faster tempos, instructions to dancers and shorter call-and-response vocal phrases and melodic hooks. This is the 'jump and wave' music that came to dominate Carnival dance music. In 1993 the Soca Monarch competition was instituted as a way to offer a platform for this distinctive style of calypso, which had not fared well in the state-run Calypso Monarch competitions. Hosted by the Caribbean Prestige Foundation, with financial support from various corporate enterprises, the Soca Monarch has grown from a local event into an international contest.

By the late 1990s several notable soca artists were no longer competing in Soca Monarch or other recognized song competitions. Among them were David Rudder and Machel Montano, who focused instead on building international careers. As a result, Rudder and Montano have become the most commercially successful recording and performing artists in the early twenty-first century Trinidadian music scene, and have even collaborated with each other on several projects. While Rudder has created a unique style that resists easy classification, Montano is an innovator who works with many different artists and in every style of soca, from ragga to rapso to chutney. At various times, Montano has worked with artists from other parts of the Caribbean, including Shaggy, Beenie Man, Buju Banton, Wyclef Jean and reggaeton artist Pitbull. In 2011 Montano decided to make a comeback and competed in the International Soca Monarch competition, which he won along with the road march competition that year.

The last decade of the twentieth century saw the emergence of the 'soca diva.' Female singers have always been an important part of soca bands as frontline singers, but in 1999 one of them, Sanelle Dempster, finally won the road march with 'the River.' Other important female artists include 'soca queen' Alison Hinds, who is from Barbados, Denise 'Saucy Wow' Belfon, Destra Garcia and Super Blue's daughter Faye-Ann Lyons, who won the road march competition in 2003 and 2008 with 'Display' and 'Get On.' Although the International Soca Monarch competition has a number of women who compete, the award of first prize to Faye-Ann Lyons in 2009 marked the first time that a woman had won the top prize.

Stylistic Features

Like its parent genre, calypso, soca is flexible in terms of its instrumentation, rhythmic framework and musical form. The main feature that distinguishes soca from other forms of calypso is that it is intended as an upbeat dance music that encourages audience participation and enjoyment. Although nearly all soca songs have a lead vocal, the vocal line typically works as another instrument to enhance the polyrhythmic texture and 'groove' of the musical arrangement. The contemporary sound of soca is due in large part to the particular tastes of individual arrangers and bandleaders, who include Leston Paul, Errol Ince, Frankie McIntosh, Wayne Bruno and Pelham Goddard.

The instrumentation for live soca performances regularly features what Trinidadians call a 'brass band.' The name comes from the horn section of the ensemble, which typically includes one or two saxophones, trumpets and trombones. Over time, keyboard instruments have come to replace the horn lines, and some 'brass bands' have no brass at all, while others have band members who switch between brass and other instruments. The rhythm section of a soca band includes electric guitar, keyboards, drum set and bass. As in reggae, the bass player plays a very active role in the ensemble. Depending on the tastes of individual bandleaders and arrangers, acoustic percussion such as congas may be included. A band's frontline singers are typically chosen both for their vocal talents and their physical attractiveness and stamina, as a typical night during the Carnival season may include performing at three or four fêtes before morning comes.

On sound recordings, many arrangers use electronic keyboard, drum machines and other digital technology in place of brass players and drummers. The primary reason for this is that songs have to be produced quickly and inexpensively to ensure radio airplay by the start of the Carnival season. This has led to complaints regarding the disposable nature of the songs, and the fact that audiences will settle for 'fast food music,' when artists could be producing more substantial and creatively interesting music. In some cases there has been a movement toward creating 'riddims' – in the same fashion as Jamaican reggae – over which several different singers record vocals for a song compilation. This is not universal and seems reserved for certain producers such as Machel Montano and Chinese Laundry (Tony Chow Lin On).

The flexibility of song structure found in calypso is found also in soca, but unlike in the older form, shorter verse and chorus structures predominate. There also tend to be far fewer verses than in the type of songs sung in the calypso tent, and these verses tend to be shorter in length, usually four to eight lines. Musical 'hooks' and 'riffs' play a major role in soca.

In the more fast-paced songs, artists often seek to add a musical surprise in the arrangement. There might be a new musical bridge unrelated to previous material. Hooks and melodies from different types of popular songs are common and help draw the audience further into the musical performance, as for example in 'Nah Going Home' by Barbadian singer Biggie Irie (2007), the chorus of which is based on that of U2's 'I Still Haven't Found What I'm Looking For.' This practice of musical quotation is controversial, but seems to add to the success of particular soca songs.

Throughout the 1990s further experimentation created new variations on soca music. Jamaican dancehall had gained enormous popularity among Trinidadian youth, who called it 'dub.' This led to the development of ragga soca, which is characterized by a slower tempo and a vocal delivery similar to that of dancehall, and which offered Trinidadian artists a way of competing with the Jamaican sound. Chutney soca also emerged during the same decade, reformulating Shorty's innovative blending of East Indian music and instruments such as the *dholak* and *tassa* with Afro-Creole musical expressions. Most chutney soca artists are Indo-Trinidadians, and hence more accepted by the Indo-Trinidadian community. However, several Afro-Trinidadian artists have experimented with chutney soca, most notably Machel Montano and Denise Belfon.

Soca Lyrics

Soca places far more emphasis on call-and-response than do other forms of calypso. A typical song has a series of memorable choruses or choric lines that the audience can sing in response at appropriate times. Often these choric responses are local expressions (and this may be the actual title of the song): 'Display,' 'Ent,' 'Yeah Right,' 'Follow the Leader,' 'Dust Dem,' 'Get to Hell Outta Here,' 'Clear de way,' 'Nah Going Home' or 'Pack Yuh Bags.' When calypsonians sing in social commentary mode, their songs tend to have a predictable verse/chorus structure. Soca sets up an entirely different structure of feeling. While most soca songs do have verses, there is more emphasis on choruses or choric lines that involve the audience in a musical dialogue with the performers. Though there are repeating musical units, the effect is additive because there is usually more than one chorus. Soca artists such as Super Blue and Machel Montano tend to perform tunes that are a series of choruses, with hardly any verse at all.

Alongside the creation of original verses and choruses, it has become common in soca to use quotations from preexisting musical sources. Material might be drawn from another popular song ('can you feel it, can you feel it, can you feel it,' 'every step you take, every move you make') or a children's game song ('there's a brown girl in the ring, tra la la la la') – even an old-time calypso ('old lady walk a mile and half and she tailaylay'). Singers are the choreographers of the fête and of the Carnival mas band – the crowd follows their energy and vice versa. In live performance, the frenzy of the crowd inspires the singers to improvise new choruses and commanding new dance moves to match the energy of the crowd. The result is an intense call-and-response arrangement that helps people to do and feel the same thing at the same time – to have the same experience and sense of community through a continually unfolding musical structure. One could say that the true form of soca is live performance, and that sound recordings are merely a way for audiences to become familiar with the songs before they experience them live.

The critique of soca offered by aficionados of 'true calypso' (who can often be found airing their views in the local press) is that these 'wine and jam' songs are bringing the culture down, celebrating decadent bodily display rather than elevating the mind. What lyrics there are, they say, are little more than aerobics instructions, or else vastly unsubtle descriptions of male-female sexual interplay. Defenders of the style point out that Carnival has always had both songs for the mind, such as social commentary calypsos, and songs for the body, which move people during Carnival fêtes, or down the road in the celebration of Carnival masquerade.

In the early twenty-first century, soca refers to a complex of styles, in addition to the aforementioned ragga soca and chutney soca. Older songs, such as 'Endless Vibrations' and 'Sugar Bum Bum' tend to be regarded as 'back in times music' (oldies). 'Power soca' refers to a style that has a very fast tempo (160 beats per minute or higher) with 'command' lyrics that engage dancers with different dance instructions. This style seems to be a direct response to Carnival mas. Mas on Carnival Monday and Tuesday is accompanied by big trucks that follow masqueraders on the road – with a soca band and lead singers sitting or standing on top, encouraging their mas band to wine, jump and wave, and show their enthusiasm, thus winning points with the judges. A contrasting style, called 'groovy soca,' has a moderate tempo (100–120 beats per minute) with lyrics that address a variety of topics, from Carnival itself to romance and sexual interplay. In 2008 the International Soca Monarch competition began to showcase both power soca and groovy soca, crowning a monarch in each of these two categories. Women have been more successful in the Groovy Soca Monarch competition, with Michelle Sylvester winning the top prize in 2004 and 2005, and Faye-Ann Lyons winning in 2009.

Diffusion

In addition to Trinidad and Tobago, soca is also found in Barbados, Grenada, St Vincent and the Grenandines, St Lucia, Antigua and the French Antilles, particularly Martinique and Guadeloupe. The Caribbean diaspora in North America and the United Kingdom also embraces soca as a key symbol of homeland and its annual Carnival celebrations. Since the 1980s soca music has also found success outside the West Indian market in North America and the United Kingdom. Some hit songs include 'Hot Hot Hot,' recorded by the singer Arrow and later Buster Poindexter, 'Tiney Winey' by Byron Lee and the Dragonaires, 'Dollar Wine' by Colin Lucas, 'Follow the Leader' by Soca Boys (originally recorded by Nigel and Marvin Lewis) and 'Who Let the Dogs Out' by Baha Men (originally sung by Anselm Douglas). Thus despite its critics, soca has come to dominate the dance and party music of Carnival in the West Indies and its diaspora and in certain cases has reached worldwide audiences.

HOPE MUNRO SMITH

Son

Originally a nineteenth-century rural form played by poor Afro-Cubans from the east of the island, *son* became an urban dance music emblematic of Cuban national identity in the first decades of the twentieth century. It is often claimed to be the one Cuban musical style that demonstrates equal amounts of Hispanic and African influence. According to eminent Cuban musician and musicologist Odilio Urfé, the *son* is 'el exponente sonoro más sincrético de la identidad cultural nacional' (the most syncretic, sonorous symbol of national cultural identity) (Orovio 1992, 456).

In terms of instrumentation, the *son* has been developed in different orchestral formats over the years, from duet and trio to the larger *sexteto*, *septeto*, *conjunto* and *sonora* formations, but the emblematic instruments are *tres*, *maracas* and *bongo*. Traditional *son* is characterized by a *clave*-based rhythmic-melodic organization (*clave* is a 5-note syncopated ostinato that serves as a rhythmic organizing principle for all instrumental parts in *son* and *son*-related styles; see Example 1 below). A refrain or *estribillo* is sung over a repeated pattern called a *montuno* or *guajeo* played on the *tres* guitar (a Cuban guitar with three sets of double strings) with an accompanying pattern called *tumbao* on string bass (both organized around the *clave*), *maracas* and a bongo *martillo* (hammer) pattern (see Example 4 below). The open *montuno* section, which normally comes after an introduction and verses, features a vocal soloist called a *sonero* who improvises *pregones* (vocal improvisations), collective *coros* (vocal choruses), as well as trumpets playing *inspiraciones* (short improvised phrases), riff-like *mambo* and *diablo* figures and solos.

As a form *son* has lent itself well to other styles and instrumentations and continues to be influential in the early twenty-first century, not so much through its original orchestration styles but rather through its pervasive influence on other Cuban popular musics, salsa and other Caribbean and Latin American musical forms worldwide. There is therefore a '*son* aesthetic' where the *clave*-based patterns called *montuno*, *guajeo* and *tumbao* all align with the percussion to support the vocalists and soloists while maintaining a danceable beat.

Origins

There has been much speculation about the origins of Cuban *son* but the general consensus is that it evolved in the late nineteenth century in the eastern part of the island known as Oriente. Robin Moore (1997, 89) notes that little is known about these earlier rural forms of *son* and that the genre's transition from a rural eastern form to a working-class urban form in Havana in the 1920s remains poorly documented to date. Moore also notes that *son* is related to other eastern regional forms such as *changüi* and *sucu-sucu* (Moore 1997, 89). *Son*'s relationship to these regional varieties is explored in more depth in the work of Benjamin Lapidus (Lapidus 2008) and Juliet E. Hill (Hill 2008). Some scholars (León 1974; Lapidus 2008) view *son* as part of a complex encompassing a variety of regional 'folk' styles such as *changüi, nengón* and *sucu-sucu*, while others view these folk styles as parallel to rather than part of the *son* style. Most accounts of the origins of *son* mention that, in Oriente, small bands made up of *tres*, guitar and singers, called *bungas*, played at country fiestas (*guateques*) performing *estribillos del monte* or refrains from the mountains (Robbins 1990, 185). These groups consisted of Afro-Cuban working-class musicians who worked on farms during the day and performed at fiestas by night. The early *son* bands of the late nineteenth and early twentieth centuries developed from these *bungas,* adding the *bongos* and the *botija* (side-blown jar) or *marimbula* (large, resonating, wooden box with metal prongs) to the formation. The *botija* and then later the *marimbula* performed the bass role before the double bass took over in popularity in the later *son* bands of the 1920s (Sublette 2004, 341). Played by Afro Cubans who also performed *rumbas* and sacred forms such as *Santería* and *Abakuá*, *son* (as with the *bungas*) was associated with lower-class, black Cubans and, until recordings promoted the style in the 1920s, *son* remained a marginal form viewed by the white ruling classes (and by some members of the black middle classes) as threatening and subversive (Moore 1997, 95).

The rural *son* spread to other parts of the island via troops from Oriente traveling across the country during the various wars of independence that raged on and off between 1868 and 1902 (Gott 2004). Thus *son* began to be played in urban settings such as in the *solares* (tenement blocks occupied by poor Afro-Cuban workers). Blanco (1992, 9, cited in Moore 1997, 3) notes that soldiers were deliberately placed away from their home towns in the first decade of the twentieth century, following American military intervention in 1908. For example, the renowned *tres* player Isaac Oviedo, according to his son Ernesto Oviedo (cited in Miller 2011), learned *tres* from a *tresero* from Santiago de Cuba who had settled in Matanzas after the wars of independence. Additionally, in the first part of the twentieth century a rural exodus occurred in which many musicians left the countryside to find work in Havana, as did Isaac Oviedo who moved to the capital in the 1920s with his *son* band Septeto Matancero (*Roots of Rhythm* DVD, 1991). This second wave of migration was also due to socioeconomic factors as many farms either were destroyed or bought up by foreign companies during the Wars of Independence, with agricultural workers forced to seek alternative employment in the capital Havana and other urban centers (Moore 1997, 92).

Son developed from these smaller rural groups into the urban *sexteto* and *septeto* formats of the 1920s and 1930s (and then later into the *conjunto* and *sonora* bands of the 1940s and 1950s). While the lineups were augmented, the musical elements characteristic of the *son* style (*clave*, *tumbao*, *montuno*, *guajeo* and *estribillo*) remained constant. How and why these changes in instrumentation occurred is still the subject of conjecture, but other musical forms have been shown to have contributed to *son*'s development. For example, vocal-based genres such as *coros de clave* (Afro-Cuban choral ensembles) and *trova* (a related working-class song tradition from Oriente favoring the *bolero* style) are connected to *son* in terms of lyrical content, use of guitars and vocal delivery. Due to racial prejudice against the use of percussion, *trova* songs were often more acceptable than the more dance-orientated *son* bands with their percussion-driven, 'clavecized' aesthetic. While all early *son* styles featured vocals, guitars and hand percussion (usually *clave* and *maracas*), the *bongos* (a double-headed Afro-Cuban hand drum) were not always used in the earlier *son* groups prior to the 1920s because they were viewed as 'primitive' and deemed immoral by many due to their association with Afro-Cuban religions. Hand drums were even banned by law for a time by the Menocal administration during the second decade of the twentieth century (Moore 1997, 96). According to Urfé (in Orovio 1992, 457) *son* from Oriente arrived in Havana in 1909, brought by soldiers from the Ejército Permanente (Permanent Army). The Trío Oriental, a group from within this army comprised of the three musicians Guillermo Castillo, Carlos Godínez and Ricardo Martínez, went on to form Cuarteto Oriental with the Havana-based *bongo* player Alfredo Boloña. This group then developed into the larger *son* ensembles Los Apaches (1913–18), Sexteto Habanero (1920) and Septeto Boloña (1923) (Robbins 1990,186).

Related Styles

Sublette notes the influence of *rumba* in the *bongo* performances on the early *son* recordings of the 1920s, remarking that many *bongoceros* were also *rumberos* and practitioners of Afro-Cuban religious music. Similarly he notes the influence of the *coros de clave* in conjunction with the sacred music of *Santería* on the *son* vocal style (Sublette 2004, 363–4). In the early part of the twentieth century the song-based *trova* tradition from Oriente used two voices (*voz primera* and *voz del segundo*) and this vocal style was also adopted in the *son*. This form of vocal performance continues to be influential in *son* and salsa formats today, with male tenor voices preferred. *Trova* songs were performed without *bongos* and the romantic *bolero* style of song was favored in *casas de la trova*, whereas *son* was played primarily for dances at fiestas. The main difference between *trova* and son, therefore, is that the former is guitar and vocal-led music intended for listening with a focus on strophic form while *son* music involves an augmented lineup including bass and percussion (*bongos*, *maracas* and *clave*) due to its primary function as dance music. Many musicians performed both *trova* songs and *sones* and the genres are closely related, with recordings in the first two decades of the twentieth century featuring small groups either from the guitar and vocal-led *trova* tradition from Oriente (as exemplified by Trío Matamoros), or *son* groups initially performing without a *bongo* player (as exemplified on the *Out of Cuba* recording compiled by the British Library Sound Archive, 2004). According to Ernesto Oviedo, when he was performing *son* in his father Isaac Oviedo's band in the 1940s and 1950s, *son* musicians from Oriente's *casas de la trova* (*trova* clubs) preferred *son* performed without *bongo* in contrast to the more percussion-based Havana *son* bands (Miller 2009).

Trova, like *son*, originated in Oriente in the nineteenth century before spreading to the rest of the island through the same patterns of migration mentioned earlier. Composer, guitarist and singer Miguel Matamoros, however, was invited to Havana from Santiago de Cuba by a prominent politician in the Zayas administration in the 1920s in order to perform at high society parties known as *encerronas* or 'lock-ins' (Moore 1997, 100). This custom of rich white Cubans such as the Bacardí and Lendoya families (Muguercía 1985, 70) hiring *bungas* and *son* bands for private parties was prevalent both in Oriente and Havana during the 1910s (Robbins 1990, 185). Trío Matamoros performed and recorded percussion-light *son* and *bolero* songs and performed a more *trova*-influenced *son* than the *sextetos* and *septetos* in the late 1920s and 1930s. Their *trova*-style singing, combined with *son montuno* performance using *maracas* and *clave* accompaniment, made them ideal for radio diffusion rather than live performance, where, without amplification, they could not compete with the louder *sexteto* and *septeto* formats (Sublette 2004, 368). Matamoros's most famous compositions are the classic *son* numbers 'Lagrimas negras' (Black Tears) (recorded in Havana in 1931) and 'Son de la loma' (*Son* of the Hill) (recorded in New York in 1928), which continue to be played by *son* and *charanga* groups today. Similarly, another singer of the time, Antonio Machín, rose to fame through recordings made in New York and disseminated throughout the United States and Europe in the 1930s.

Son Sextetos and *Septetos*

The 1920s saw the rise of the *sonsexteto* and *septeto* and their popularity was due in large part to the fact that US record companies (Victor, Brunswick and Columbia) were recording *son* groups in Havana (using portable studios) or in New York studios extensively at this time and were disseminating this style of *son* music internationally. Victor and Columbia record companies had started to make field recordings in Havana as early as 1904 (Quintana 1954, 65), initially recording stage artists, opera stars and dance orchestras (Moore 1997, 102). Brunswick was the first company to be interested in recording *son* groups in the mid-1910s, recording the Boloña *sexteto* between 1916 and 1918, with Victor and Columbia following suit (Moore 1997, 102). One of the first *son sextetos* to be recorded by Victor Records in Havana was made in 1918 and consisted of members from the groups Los Apaches and Cuarteto Oriental. This band is listed by Victor as Sexteto Habanero Godínez and would later become known as Sexteto Habanero in 1920 (Sublette 2004, 335–6). The *sexteto* format consisted of *tres*, guitar, *maracas*, *bongos*, *clave* and vocals; the *septeto* added the trumpet. Later *son conjunto* groups of the 1940s added more trumpets to the formation due in part to innovations by bandleader Arsenio Rodríguez, but also because of the growing popularity of US jazz bands on the island. *Son* became popular throughout Cuba due to the recordings and radio broadcasts initially of Trío Matamoros, Cuarteto Machín and early *sextetos* and *septetos* such as the Sexteto Habanero and Septeto Nacional de Ignacio Piñeiro among others. There were 62 radio stations in Cuba in 1933, with the first nationwide radio station broadcasting from 1922 (Moore 1997, 103). During the 1920s and 1930smass media exposure of *son* via the phonograph and the radio led to a gradual acceptance of *son* by all of Cuban society and the new *sexteto* and *septeto* bands became particularly popular at this time, both in Cuba and internationally.

Arsenio Rodríguez and the *Son Conjunto*

One of the most important figures in the development of *son*, Arsenio Rodríguez, known as 'El Ciego Maravilloso' (The Blind Marvel), was a blind bandleader, arranger, composer and also arguably the most famous *tres* player of all time – an innovator in terms of instrumentation, composition and *tres* technique. It is impossible to discuss *son* without mentioning his name.

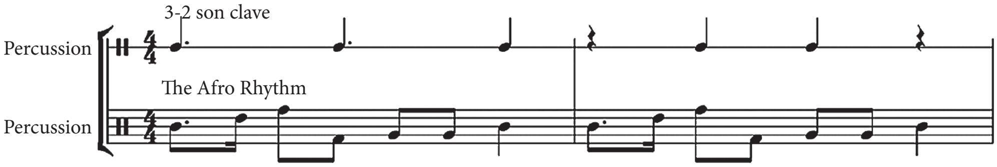
Rodríguez moved from Güines to Havana in 1926 and performed with various *son* bands before setting up his own group Septeto Bóston in 1928. In 1933 he joined the Septeto Bellamar (later becoming its musical director) and performed at *academias de baile* like the Sport Antillano (Garcia 2006, 33–4). These dance academies were associated with prostitution; middle- and upper-class white men paid for 'dance instruction' there from mulatta women. While these venues were stigmatized, many important *son* musicians played in them and useful contacts were formed, particularly in the area of recording contracts (Garcia 2006, 34). As a teenager Rodríguez had studied *tres* 'en la calle' (in the street) with Sexteto Habanero's *tres* player Carlos Godínez and with Isaac Oviedo but later developed his own distinctive style. Initially playing rough working-class venues in Havana in the late 1920s and 1930s he established his *conjunto* 'Arsenio Rodríguez y su Conjunto' in 1940, recording for RCA Victor in the same year. From then on his fame spread through his live performances and radio broadcasts on stations such as Mil Diez. His band later formed part of 'Los Tres Grandes' or 'The Big Three' promoted on Havana's Radio Salas in the late 1940s. The three bands, which regularly performed for live studio audiences, were Arsenio Rodríguez y su Conjunto and two *charanga orquestas*: Arcaño y sus Maravillas and Melodías del 40.

In the 1940s Arsenio Rodríguez transformed the *septeto* into a *conjunto* with the addition of piano, two (then later three) trumpets and *congas*, and he infused the *son* with musical and lyrical references to Afro-Cuban culture. While other bands added piano and an extra trumpet due to the influence of *charangas* and jazz bands respectively to their *septetos* in the late 1930s (Septeto Gloria Cubana was the first *conjunto* to incorporate the piano, according to Blanco [1992, 34]), Rodríguez was the bandleader who most popularized the new lineup through his performances, recordings and radio broadcasts. The addition of the congas represented the more Afro-Cuban *rumba* element of the *conjunto* and Rodríguez's band was renowned for a particular *estilo negro* or 'black sound' and a hard-driving *son montuno* style. The term *conjunto* was initially used to refer to any type of *son* group but as Arsenio's band popularized the *conjunto* format in the early 1940s the term came to be used to describe *son* bands with the specific *conjunto* lineup, which now included in its entirety two (later three) trumpets, *tres*, piano, two vocalists doubling *maracas* and *clave*, *bongos*, *congas* (*tumbadoras*) and bass. According to Eddie Zervigon Cuban *charanga* flautist and bandleader of New York-based Orquesta Broadway, any 1940s band that featured 'accompaniment' in the form of either violins or saxophones was known as an *orquesta* and ones without were known as *conjuntos* (Zervigon 2012).

In addition to changes in lineup and performance style, Rodríguez was also a prolific composer of *sones*, *afrocubanos* (Afro-Cuban-influenced *son*) and *guaguancos* (in this case *rumba*-influenced *son*). Angry at the racial prejudice he faced in Cuba (where high society venues maintained policies of hiring all-white bands and cabarets and radio stations such as CMQ refused to broadcast his *conjunto*), he infused his *son montunos* with an Afro-Cuban aesthetic that contrasted many of the exoticized recordings of *son* popularized by the US record and film industry of the 1930s and 1940s, with lyrics that referred to African religions and Afro-Cuban street slang (see Moore 1997, 109–13 for a more in-depth analysis of the cultural scene in Havana between 1920 and 1940). Rodríguez're-Africanized' and 're-appropriated' stylized Afro-Cuban elements from the vernacular theater to produce a *son* infused with a Cuban form of black pride.

Rodríguez revolutionized *son* through his compositions and arranging style, where the texture and tempo of a *son* was gradually increased in the manner of an Afro-Cuban *Santería* religious ceremony. A *son*'s climax was created by a *cierre* (break) introducing trumpet *moñas* (improvised riffs) to increase the intensity and create what Arsenio called his '*diablo*' section.

Rodríguez's composition 'Bruca manigua' (Harsh Land) remains a staple of *son* repertoire today and exemplifies his musical and lyrical references to Afro-Cuban culture. For example, in 'Bruca manigua' he juxtaposes the Afro rhythm (see Example 1) with



Example 1: The Afro Rhythm or *Tango-Conga* pattern with *clave*

clave, and includes references to the Afro-Cuban *Santería* religion (Garcia 2006). Moore refers to this pattern as a *tango-conga* pattern used in the stylized *comparsas* (street parade music) of the popular theater (*teatro vernáculo*) in the 1920s (Moore 1997, 73).

Alongside Spanish, Rodríguez uses 'neo-bozal' (a form of Creole Spanish used by African slaves), Kikongo and Abakua African languages to recount the hardships of an African slave in Cuba: 'Yo son Carabalí (I am Carabali), negro de nación (black man of a nation [from Africa]), sin la libertad (without freedom), no pue'o vivi' (I cannot live), Mundele cabá, (white man finished off), con mi corazón, (my heart), tanto maltráta, (so mistreated), cuerpo ta'furi eh (they kill the body).' According to Sublette, *fuirí* means 'death' and *mundele* means 'white man' in both Kikongo and Abakuá languages (Sublette 2004, 444–6). Thus Rodríguez's use of words in African languages together with Afro-Cuban references in his *sones* can be seen as the coded expressions of a black underclass (Moore 1997, chapter 4).

Rodríguez went to the United States in 1947 in the hope of having an operation to restore his eyesight, and although this did not happen he performed there and returned several times before moving to the United States permanently in 1952 (Garcia 2006). He then performed regularly at New York's Palladium throughout the 1950s. His composition 'Bruca manigua' was performed and recorded in New York in 1937 by the Xavier Cugat orchestra, although many of the Afro-Cuban references would not have been understood by international audiences of the time. In fact, middle-class Cuban listeners would also not have understood the Afro-Cuban references, protests and *double-entendres* hidden in Arsenio's music.

Rodríguez's compositions have been recorded by numerous artists including a 2004 tribute recording of his works by trumpeter Guajiro Mirabal of Buena Vista Social Club which covers many of his best-known works including 'El reloj de pastora' (The Shepherdess's Watch), 'Para bailar el montuno' (To Dance the Montuno) and 'Apurruñenme mujeres' (Embrace Me, Women) among others (*Buena Vista Social Club*, 2004).

While Rodríguez's *tres* playing was groundbreaking, his pianist Lili Martínez equally transformed the role of the pianist in the *son conjunto* with his virtuosic soloing. Martínez was the first pianist whose live performances were described with the complimentary term 'alambres dulces' (sweet strings), an accolade previously reserved for guitarists' solos, according to Radio Cadena presenter Arsenio Depestre (Miller 2011; also see Garcia 2006). When Rodríguez moved to the United States in 1952, one of his trumpet players, Félix Chappottín took over Rodríguez's band and renamed it Chappottín y sus Estrellas. Chappottín was also influential in the development of the *son* in the *conjunto* format having started his career in Septeto Habanero. His composition 'Yo como candela' remains a staple of the *son conjunto* repertoire today although he is mostly acknowledged for being one of the most important trumpet innovators in Cuban music (Davies 2003, 79–80).

An offshoot of Rodríguez's *conjunto* format is the *sonora*. *Sonoras* such as Laíto y su Sonora and La Sonora Matancera are characterized by smoother brass lines played at a lower pitch than the traditionally high *tessitura* of the *conjunto* trumpets. Sonora Matancera, initially a *sexteto* formed in 1924 transformed into a smooth-style *conjunto* in the 1940s and its sound became influential in Cuba and also in the United States when the band moved there in 1960 (Orovio 1992, 460).

Musical Characteristics

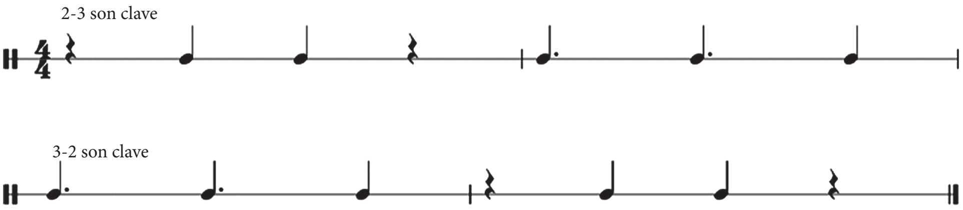
While the *son*'s orchestral formats have changed over the years, certain aspects of the music have remained constant. The form, for example, typically consists of two parts: an introduction and verse section featuring a composed introductory part of four or eight bars followed by several sung verses sometimes featuring a middle eight and chorus before the *montuno* section of the second half. The *montuno* section is the open part of the arrangement where the *estribillo* or refrain (also known as *coro*) and responsorial improvisations take place. Improvisations in the open *montuno* section are initially taken by the vocalist as *pregones* (vocal improvisations), followed by trumpet *inspiraciones* (short improvised phrases). Longer solos are then taken by lead trumpet, *tres*, piano or *bongos*, depending on the arrangement and *son* band formation. The *son montuno* style as opposed to *son* style usually has a shorter introduction and truncated verse section (or sometimes no verses at all) with a focus on the open *montuno* section with its vocal call-and-response and instrumental solos.

Lyrics in the *son* range from daily life commentary to *pregones* (street vendor cries), *bolero*-style love songs (where *bolero* percussion patterns often mix with *son*), gossip, satire and risqué *double-entendres*. Although *pregón* was a separate style in the nineteenth century, the term is now used for a certain style of vocal improvisation in the *son* or for particular tunes with lyrics that use street vendor refrains. 'El manicero' (The Peanut Vendor) for example, is often described as a *son-pregón* as it is built around a peanut vendor's words. *Pregones* are very typical of Cuban culture and often appear as short vocal improvisations or as *coros* and refrains. The *guaracha*, although also previously a separate form developed from the nineteenth-century *teatro bufo* (Orovio 1992), has largely the same musical elements as *son* although the tempo is a little faster. It is now defined by its lyrics which are deliberately humorous as in the case of the famous *guaracha* 'Maria Cristina me quiere gobernar' (María Cristina Wants to Govern Me) by Ñico Saquito, which is about a hen-pecked husband who will do anything for love except have a bath.

Son melodies and rhythms are organized around a two-bar *clave* rhythm. In *son* the *clave* is often played on two *clave* sticks whereas in other lineups the *clave* pattern tends to be implied rather than actualized. The *clave* can be played in two directions (described as 2-3 and 3-2, with the numbers referring to how many strokes are heard per measure in the first and second measures) and it is common for verses to be in 3-2 and for the later *montuno* sections to be in 2-3 *clave* (see Example 2).

Even the vocals conform to accentuations in this organizing rhythm, as exemplified by the following musical example of 'El manicero' where the 'and of 2' on the 3-side of the *clave* (known as the *bombo*) is emphasized in all parts in the second and fourth measures (see Example 3).

In terms of instrumental roles, the *maracas*, *bongos* and *clave* form the percussive base over which the *tresguajeo* (which can also be referred to as a *montuno* or *tumbao*), piano *montuno* (in the *conjunto*), guitar and bass *tumbao* are played; these patterns all align around *son clave* to form one melodic-rhythmic unit. The *bongos*, in addition to playing a fixed *martillo* pattern may add embellishments and fills, particularly in the *montuno* section, whereas the *maracas* and *clave* maintain the same patterns throughout. The *bongos* pattern is shown in Example 4 below.



Example 2: 2-3 *clave* and 3-2 *clave*

Key to hand strokes is F = Fingers, P = Palm, O = Open.
Upper Stave = smaller 'macho' (male) drum, lower stave = larger 'hembra' (female) drum

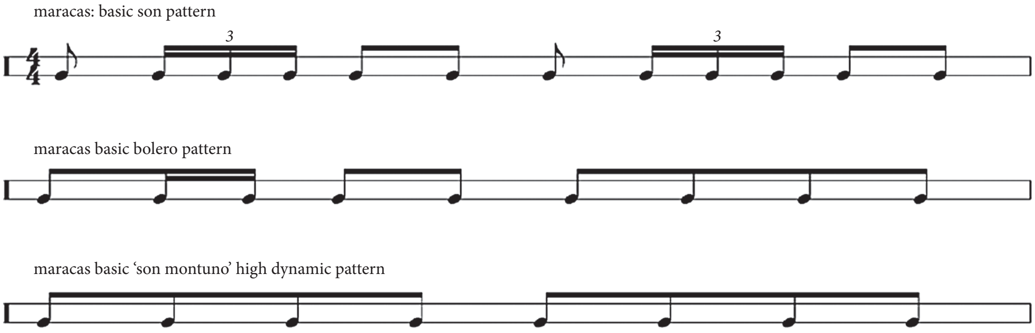
Example 4: The *bongos martillo* pattern

Due to the close relationship between *trova* and *son* as mentioned earlier, maracas often use *bolero* patterns in *sones*, as in Example 5 below.

The guitar has a more subtle accompanying role. Contrasting its freer interpretive role in the verses section it often plays chords on the offbeats in the *montuno* section (see Example 6).

The trumpets play melodies on the introductions and codas, along with composed backing figures under the vocalist's lines during the verses. Trumpets also play figures called *mambo* or *moña*, often of 8 or 16 bars duration, which are precomposed or improvised phrases employed in order to increase intensity and bring the song to a climax (Arsenio Rodriguez referred to these as *diablos*; see Garcia 2006, 47). An example of this occurs in 'Mi son mi son' by Lili Martínez as performed by Chappottín y Sus Estrellas (Cuni 1999). The trumpet *mambo* in Example 7 is repeated amidst a shortened vocal *coro* at the end of the arrangement as the lead trumpet breaks away from this figure with short *inspiraciones* bringing the piece to an exciting finish.

The term *montuno* is used to describe both the second part of a *son* form and the *clave*-governed piano and *tres* patterns. The *tres* pattern is also referred to by musicians as a *guajeo* or a *tumbao* and sometimes



maracas: basic son pattern

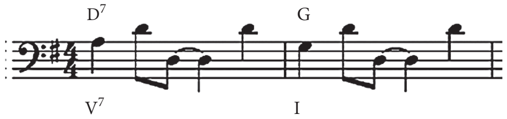
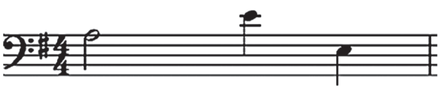
Example 8: The specific *tumbao* from 'Mi son mi son' with *tresillo* and anticipated bass

the piano *montuno* is also referred to as *guajeo*. Thus Cuban musicians often refer to *clave*-governed patterns as *tumbaos*, *guajeos* or *montunos*. Most commonly the term *tumbao* is used to refer to bass or *conga* patterns, *montuno* for piano patterns and *guajeo* for *tres* or violin figures. Various bass line patterns or *tumbaos* are used in *son,* from the well-known *tresillo* and anticipated bass line to the more square *bolero* and more springy *guaracha tumbao* (see Examples 8–10).



Example 9: The *guaracha*-style bass *tumbao*



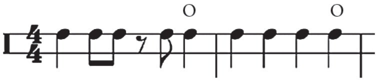
Example 10: The basic *bolero*-style *son tumbao*

In practice these patterns are combined and embellished according to specific arrangements.

The Influence of *Son* on Other Dance Band Formations:

The piano had been used for some time in the *charangas francesas* (dance bands made up of five-key wooden flute, three violins, piano, double bass, *conga*, *güiro*, *timbales* and vocalists) before it was added to the *son conjunto*. These *charanga* dance *orquestas* originated at the turn of the twentieth century and continued the *danzón* repertoire of the nineteenth-century *orquestas típicas* (brass, woodwind and strings-led town bands). The piano had a major improvising role in *charanga orquestas* such as the one led by pianist Antonio María Romeu in the 1920s and 1930s and many *charanga* pianists joined *son conjuntos* in the 1940s, adding *charanga* elements to the *son* style. Similarly, as the *son* gained more popularity, the *charangas* in turn were influenced by *son* to include an extended *montuno* section, *tresguajeos* transferred and adapted to the violins and increased solo opportunities for the flute in the *montuno* section (from the 1930s onward).

Also, the *estudiantina* groups of Oriente (originally a late nineteenth-century group made up of itinerant student musicians) fused the *orquesta típica*'s *danzón* with the *son*, using the *baqueteo* pattern of the *danzón* as a substitute for the *son clave* rhythm (Example 11).



Key: O = Open sound

Example 11: 3-2 *danzón baqueteo* **(**featuring the *cinquillo* five-beat pattern in the first bar)

The *estudiantina* fused elements from the *son* and the *danzón* using timpani *criollo* (similar to the *charanga timbales*), *claves* (often playing the *danzón baqueteo* pattern), two vocalists, trumpet, *maracas* (or *güiro* from the charanga lineup), *tres* and guitar.

Throughout the course of *son*'s development other popular dance band formats such as the *charanga*, the '*mambo*' big bands of Pérez Prado and Benny Moré, and the Cuban-styled jazz bands, were also performing. All these formations incorporated *son* elements to a large extent from the 1930s onward. *Charangas* performed *danzones* in the first part of the twentieth century and then, due to the influence of *son* and Afro-Cuban religious musics, developed a new style of *danzón* called *danzon de nuevo ritmo* in the late 1930s. This new *danzón* featured an extended *montuno* section, vocal *coros* and longer improvisations, as in the *son conjunto* arrangements. Performing alongside these *charanga* dance bands were Cuban 'jazz' bands that played not only US jazz styles but also foxtrots, *danzones*, *chachachás*, *boleros* and *sones*. Music of the vernacular theater and cinema also influenced the repertoire of these *son*, *charanga,* big band (*bandas gigantes*) and 'jazz' dance bands, and all the while the influence of Afro-Cuban music (secular *rumba* and religious *Santería* and *Palo Monte*) subtly pervaded all of these musics. The *son* surpassed the *charangas* in popularity in the 1920s and 1930s with the *mambo* big bands of Pérez Prado later eclipsing the popularity of the *son conjunto* for a time in the 1940s. The *charanga, son conjunto, banda gigante* (Cuban big band) and Cuban jazz bands of the 1940s eventually came to play each others' styles (*son, son montuno, bolero, mambo, pachanga* and so on) and *sones* are now played by practically all Cuban dance band formations. *Son* classics such as 'Pare cochero' (Stop, Coachman), 'Son de la loma' and 'La Negra Tomasa' ('Bilongo') are equally known as *charanga* classics, and 'Bilongo' is also a staple of many salsa bands. Groups such as Orquesta Casino de la Playa and Orquesta Cosmopolitan performed big band arrangements of *son* numbers throughout the 1930s, 1940s and 1950s and singer Benny Moré and his Banda Gigante probably did more to popularize the *son* in big band form than any other artist. Benny Moré, known as the *Bárbaro del Ritmo* (the barbarian of rhythm), attained legendary status in Cuba and Mexico where he performed with Pérez Prado's band before leading his own *banda gigante* featuring *son*, *bolero* and *mambo* styles.

The musical flexibility of *son* has enabled it to join with other styles such as the *bolero* and the *cha-cha-chá* to form hybrid styles such as the *son-cha*, *guajira-son* and the *bolero-son*. Benny Moré performed in a variety of big band and *conjunto* formats (Orquesta de Mariano Mercerón, Conjunto Benny Moré, Orquesta Rafael de Paz and Orquesta de Pérez Prado) whose repertoire included hybrid varieties of *son* such as *guaracha-mambo*, *guajira-son*, *son montuno*, *guaracha afro*, *montuno-mambo* and *afro-mambo*. Thus although distinctions can be made between styles such as *son*, *son montuno*, *bolero*, *danzón*, *chachachá*, *mambo* and *rumba*, these boundaries are more fluid than definitions and histories of these styles have often suggested. The same Cuban musicians performed *rumba*, *danzón* and *son* in different bands, performing at high-class cabarets and hotels one night, and then black social clubs, beer gardens (such as La Polar and El Tropical), lower-class *academias de baile* (dance schools) or informal *rumbas* (Afro-Cuban parties where *rumba* was danced and sung) in *solares* (tenement block housing) the next. Both Benny Moré and Carlos Embale, for example, were adept at performing both *son* and Afro-Cuban *rumba* and an Afro-Cuban sensibility pervades all their *son* performances. Other famous Cuban *son* singers who felt at ease in both big band and *conjunto* formats include Miguel Cuní, Carlos Embale, Pío Leyva (a *guarachero*) and Manuel Licea (Puntillita). Carlos Embale was a singer with Trío Matamoros, Septeto Boloña and Septeto Nacional and many traditional *son* musicians like Embale were also practitioners of Afro-Cuban syncretic religions such as *La Regla de Ocha* (*Santería*) or *Palo Monte*.

US *Rhumba* Craze

The term *rhumba* (even when spelled without the 'h') was used in the United States to refer to a 1930s craze for commercialized *son* forms that were unrelated to the Afro-Cuban *rumba* genre. In addition to the *sextetos* and *septetos* such as Sexteto Habanero, recorded by RCA Victor, and Ignacio Piñeiro's Septeto Nacional, recorded by rival company Columbia Records, *trova*-style and big band *son* were also recorded. These records not only sparked the *r(h)umba* craze but created a surge in sales of Cuban music (records and sheet music) internationally. While RCA Victor was present in early twentieth-century Cuba, the majority of the recordings occurred in New York, where Cuban artists such as Rita Montaner and Machín were featured alongside famous hotel bands of the day such as Xavier Cugat and his Waldorf Astoria Orchestra, Vicente Sigler y su Orquesta and Don Azpiazu's Orchestra (Miller 2006). The *son-pregón* 'El manicero' by Moises Simons was recorded by Trío Matamoros (1929), Antonio Machín (1930) and Rita Montaner (1928) and became widely known. Machín sang it in Don Azpiazu's Orquesta, a famous big band of the day which performed in large hotels in both Havana and New York, and RCA Victor recorded their version of 'El manicero' on 13 May 1930 (Díaz 2002). An exoticized image of Cuba based around Machín's rendition of 'El manicero' and a dubbed version of the song by Mexican actress Lupe Vélez in the 1931 Hollywood film *Cuban Love Song* helped create a vogue for all things Cuban in the United States, Latin America and Europe (Sublette 2004, 399–402). The tourist industry in Havana, particularly during US prohibition from 1920 to 1933, also helped popularize Cuban *son* (Moore 1997) with Americans attending cabarets and stage shows featuring Afro-Cuban performers. While recordings of *son sextetos* and *septetos* alongside more *trova*-style *son* groups such as Trío Matamoros were famous outside of Cuba, they also continued to be popular within Cuba through live performances and radio broadcasts. Their international popularity led to *son*'s gradual acceptance by Cuba's ruling and middle classes, with Afro-Cuban elements (such as the *bongos*) gradually deemed more acceptable in dance band formations.

There are various theories as to why this wave of popularity for Cuban *son* was renamed *rhumba* in the United States. James Robbins (1990, 188) has put forward the idea that the later addition of the *congas* to the *son conjunto*, an instrument associated with the Afro-Cuban *rumba*, is possibly why *son* was promoted as *rhumba* in the United States. It is more likely, however, that *sones* were called *rumbas* due to the references in *sones* to the secular *rumba* and to Afro-Cuban religions such as *Palo Monte* and *Santería* (Moore 1997, chapter 4). Additionally, exhibition dancers in the hotel and club cabarets of Havana incorporated aspects of Afro-Cuban dance such as the *conga* and the *guaguancó* into their stage acts (Moore 1996, chapter 6). The above facts may therefore have contributed to this confusion over the terms *rumba*, *rhumba* and *son*. While the 1920s *Afrocubanismo* movement (valorizing and idealizing Afro-Cuban art forms) had its parallel in the Harlem Renaissance, much of the *r(h)umba* craze presented an exoticized and stylized version of Cuban culture which catered to United States and European audiences. *Son* was to develop in a different, less essentialized way within Cuba itself, however, through the innovations of Arsenio Rodríguez and his new *son conjunto* in the late 1930s and early 1940s.

The *Son* and Salsa Controversy

When Arsenio Rodríguez moved to New York in the early 1950s the term 'salsa' had yet to be invented. It was only when United States ties with Cuba were severed following the 1959 revolution that musical exchanges between Cuba and New York ceased to be two-way, with the US-imposed economic embargo coming into force in the early 1960s. Nevertheless, Rodríguez undoubtedly influenced the development of salsa in New York as his *conjunto* formation was used as a template for many of the earlier bands of the 1950s and 1960s. Puerto Rican bandleader Eddie Palmieri, for example, took the *conjunto* format and approach but initially substituted trombones for trumpets in his first band La Perfecta. In an interview in 2006 for the University of Wisconsin-Madison's radio station, Eddie Palmieri maintained that this choice of instrumentation was due to the fact that in the 1950s and 1960s all the best trumpet players of the style were already taken by the Palladium *orquestas* such as those of Tito Puente and Tito Rodríguez. Eddie's brother, pianist Charlie Palmieri, who had his own *charanga* band, La Duboney, described La Perfecta as a 'Trombanga' as it used the trombones in a similar way to the *charanga* violins as a riff base for the improvising five-key *charanga* flute (Berríos-Miranda in Waxer 2002). This trombone and flute-led *conjunto* came to represent a distinct New York flavor which was also taken up by NuYoricans Ray Barretto, Willie Colón and Manny Oquendo with his Conjunto Libre. Prior to these developments in the 1950s and 1960s, however, Cuban musicians had already been working in the United States since the 1920s and 1930s. In the 1940s, for example, Machito and his Latin jazz ensemble were playing *mambo* and percussionist Chano Pozo introduced Cuban rhythms into Dizzy Gillespie's Latin jazz band.

In 1964 the New York Fania record label was created by Dominican-born bandleader Johnny Pacheco and lawyer Jerry Masucci and they coined the term 'salsa' to market their own brand of Latin music (Steward 1999, 61). As a marketing term often applied to Cuban music, this has led to arguments over definitions of Cuban *son* and salsa and over ownership rights. There are obvious similarities between *son* and salsa in terms of *clave* organization, *montuno* section, improvisation styles, *mambos* and *moñas* but the execution and lyrics of salsa are different in that they deal with aspects of life in the barrios of New York rather than Cuba. New York also produced a harder-edged, faster tempo style of Cuban music, particularly after the embargo took place, as Latin musicians catered to a very different, mixed Latino audience. The influence of African-American music also accounts for harmonic differences, as, for example, the Cuban *mambo* over a dominant seventh V7 became a V7-IV progression in the New York *charangas* (Miller 2012). Most agree that Cuban *son* lies at the root of salsa but that it has been modified and adapted as musicians in the United States, particularly in New York in the 1960s and 1970s adapted it and made it their own. From New York, salsa spread to Latin American countries, becoming a transnational genre (Waxer 2002).

The *Son* in Post-Revolutionary Cuba

Since the revolution the government has supported traditional *son* in terms of salaries for musicians and the continuation of traditional *son* bands via *empresas* (state-run employment agencies) such as Empresa Benny Moré and Empresa Ignacio Piñeiro. Septeto Nacional is still active today with different personnel, as is Conjunto Chappottín y sus Estrellas. However post-revolution *nueva trova* and music with more overt political messages were initially the more favored genres (Moore 2006) as dance music was viewed as decadent and linked to pre-revolutionary times. A *son* revival band, Sierra Maestra, was set up by Juan de Marcos Gonzalez in the late 1970s in order to revive and update the *son* repertoire. The band continues to tour abroad, in 2010 featuring outstanding young virtuosic *son* trumpet player Yelfris Valdés. Since the 1960s Los Van Van has taken elements from *son* and *charanga* and fused them with rock, funk and other 'foreign' styles, paving the way for *timba* bands in the 1990s who similarly fused a *son* aesthetic (*montuno* and call and response) with more cosmopolitan styles. *Sonero* Adalberto Álvarez in Son 14 and in his later group Adalberto Álvarez y Su Son has updated the *son* to include both salsa and *timba* influences. The *timba* style was most popular in 1990s Cuba and, while related to Los Van Van'sstyle, *timba* combines elements from *son* and salsa but also incorporates

African-American forms such as rap and funk. Kevin Moore describes this change as 'salsa with attitude' (Moore 2010, 13).

A *son* revival of a different sort occurred with the Buena Vista Social Club phenomenon of the 1990s when the group Buena Vista Social Club was formed by Juan de Marcos González and American producer/guitarist Ry Cooder for a recording project and film of the same name. The band was formed through a reassembling of veteran Cuban musicians from the dance band era such as singer Puntillita from the big band Orquesta Julio Cueva, pianist Ruben Gonzaléz from the *charanga* Orquesta América and Arseñio Rodríguez y Su Conjunto, guitarist and singer Francisco Repilado (aka Compay Segundo) from the duo Los Compadres, singer Omara Portuondo from Cuarteto d'Aida and trumpeter Guajiro Mirabal, a stalwart of Cuban big bands such as the Riverside Orchestra of the Tropicana. The success of the film and recording has led to many younger musicians performing this repertoire for tourists in Cuba but has not led to any real evolution in style.

In the early twenty-first century the preferred musical genre among younger Cubans is reggaeton, while older Cubans still prefer more traditional *son* and *charanga* music. There has been a backlash against the success of Buena Vista Social Club mainly from within Cuba which relates more to the political arena than to the music itself (Moore 2006, 132). Regardless of political ideology, most acknowledge that the musicianship and warmth of these musicians is part of the project's success and it has raised the profile of Cuban *son* once again on the world stage, introducing many younger Europeans to traditional Cuban dance music styles for the first time.

Son (Mexico)

Sixty percent of Mexican folk music, according to Mexican folklorist Vicente T. Mendoza (1894–1964), is derived from the music performed in *tonadillas* (also, *tonadillas escénicas*), local theater pieces that were popular around the turn of the nineteenth century (Mendoza 1956). In the mode of the Italian intermezzo, the *tonadilla* was a short dramatic work that offered the opportunity to perform local songs – generally termed *sones* – and to dance local dances. *Sones* were Spanish in form and local in flavor. They were created in the poetic molds of *coplas*, *seguidillas* and other stanzaic forms favored in Spain. Their content spoke to the interests of local people, embodying the perspective of mestizos (people of mixed race and culture) and *criollos* (Creoles of European heritage, but born and raised in New Spain, as pre-Independence Mexico was called). The mestizo *son* was the product of the New Spain experience, born of the blend of peoples from markedly different cultural regions of Spain, Africans of many backgrounds brought as slaves and indigenous people from dozens of cultures and language groups.

Etymologically, the term '*son*' comes from the Latin word '*sonus*,' meaning a 'concerted noise which we perceive with the sense of hearing, especially that which is executed with art or music' (Sheehy 1979, 18). Through the years '*son*' has come to mean the music for a popular dance or the dance itself, strictly instrumental music or simply a particular tone pitch (ibid., 18–21).

Description

The word *son* as applied to music in Mexico has been vague and general as well as precise. Spanish dictionaries from Mexican colonial times (1521–1810) define it as 'sound' or in a musical context, 'tune' In 1766 a document from Spanish Inquisition records suggested a honing of the word's meaning in Mexico to denote musical songs or dances of local people, as they condemned 'El chuchumbé' as a lewd and lascivious song and dance of the period that contributed to the corruption of public morals (Sheehy 1979, 23). Presumably, the source of offense was sexual innuendo and suggestive dance movements. The innate rebelliousness of the *son* likely contributed to its popularity, particularly as dissatisfaction with Spanish rule and as home-grown expressions aligned with the growing hunger for independence. A decree emitted by the Holy Inquisition against the same *son* was sufficiently ignored by the locals that the authorities were forced to announce another one in 1779.

While *son* came to signify specific musical traditions in other countries as well, such as Colombia, Cuba, the Dominican Republic and Guatemala, in Mexico it assumed the most central and widespread role in folk music of the nineteenth century and most of the twentieth. By the early nineteenth century, *son* had come to mean folk melodies. In the early twenty-first century the national corpus of *sones* might be distinguished in purpose, form, style and repertoire along two lines. The more marked division is between indigenous and mestizo *sones*. Indigenous song and dance contributed to the making of mestizo *son*, but also produced its own *son* tradition, which is central to ritual events. Music called by the European-derived word *son* is central to these ritual events across a wide swath of indigenous communities. In keeping with the events to which they are linked, these *sones* tend to be simple in form, lengthy and repetitive. A *son* may be a single short melody or a pair of short melodies repeated over and over. Often, several or many *sones* may be strung together, with the change from one to another marking a shift in the ritual dancing to which the *sones* are tied. Ritual *son* performance may be lengthy, perhaps half an hour or more.

Within mestizo *son* the main differentiator is region of origin. Many culturally distinctive regions emerged out of the colonial experience of *mestizaje* (racial and cultural mixing), reflecting geographical barriers and transportation routes, the social ties of local economies, period of settlement, social isolation, local cultural antecedents and so forth. In general, the *son* is more rooted in regions settled during colonial times, particularly those located in the wide central area stretching from the Gulf of Mexico in the east to the Pacific in the west. A regional *son* tradition might have its own signature instrumentation, playing techniques, singing style, repertoire and performance settings. The majority of mestizo *sones* are marked by vigorous rhythms appropriate for couple-dancing and exhibit a triple-meter feel, spiced with *hemiola* rhythmic ambiguity, called *sesquiáltera* in the colonial Spanish world. Most are strophic songs with sung verses based on *coplas* (poetic stanzas of four to six octosyllable lines and simple rhyme schemes such as abcb) alternating with instrumental introduction and interludes. Men tend to dominate *son* performance, though women's participation has increased in modern times in several *son* traditions.

After the Revolution (1910–17) Mexico embarked on a program of unifying the country through developing and teaching canons of regional folklore performance traditions. Beginning around 1921 Education Secretary José Vasconcelos, for example, promoted a cultural nationalism which included the performance in public schools of the 'Jarabe Tapatío' (known to many as the Mexican Hat Dance) from the western state of Jalisco (Pérez Montfort 1994). From the 1930s through the 1950s, the burgeoning industries of radio, film, recordings and television privileged certain regional *son* traditions over others. As Mexican society underwent a massive shift from rural to urban, some regional *son* styles were encouraged by folk movements or by successful local folk economies.

Types of *Son*

The most prominent of Mexican *son* traditions by far is that of the *mariachi* ensemble, which performs a variety of regional *sones*, particularly the *son jalisciense*. The *mariachi* ensemble is associated with the Bajío region of Mexico which includes the states of Jalisco, Michoacán and Nayarit, and the modern ensemble emerged in the first half of the twentieth century from localized traditions in these regions. As *mariachi* musicians migrated to Mexico City and made their way into commercial recordings, radio and film, the *mariachi* ensemble evolved to appeal to commercial and urban tastes. Films in particular cemented the image and sounds of the *mariachi* in the public's mind as an emblem of Mexican national character and heritage. The elegant suits (called 'trajes de charro'), large-brimmed *sombreros* and macho image became the standard. The instrumentation expanded to eight or more musicians playing violin, trumpet, *guitarrón* (six-stringed bass guitar), *vihuela* (five-stringed guitar with a spined, convex back) and standard six-stringed guitar. The singing took on an operatic, bold, bel canto sound, in keeping with the training of the actor-singer movie stars the *mariachi* accompanied, such as Jorge Negrete and Pedro Infante. Groups such as Mariachi Tapatío and Mariachi Vargas de Tecalitlán produced recordings of *sones* that were played on the radio, in films and in live performances. In the 1950s Vargas and several other Mexico City-based professional groups produced successful long-playing albums of *sones*, helping establish a broadly popular repertoire of them. Folkloric dance groups seized on certain *sones*, in particular 'El son de la negra' (The *Son* of the Dark-Skinned Woman), as standards, establishing its primacy in the national folk music canon.

The southern coastal plain of the eastern Gulf state of Veracruz is home to the *son jarocho*. *Jarocho* is the term given to the region's people, perhaps deriving from colonial militia carrying *jaras* 'clubs,' although its origins are a matter of some dispute and other meanings have been suggested (see Sheehy 1997, 47–8; Pérez Montfort 1995, 160–1). José María Estévez, in *El museo mexicano* of 1843–46, wrote of *sones* performed at dance parties called *fandangos* (Sheehy, 1979, 36) and in the 1907 novel *Pajarito* (1907), by the Tlacotalpan native Cayetano Rodríguez Beltrán (1866–1939), '*fandango*' is defined as a '*baile de tarima*,' a dance performed on top of an overturned wooden box or crate; the *tarima* causes the sounds of the hammering footwork to become amplified. According to Pérez Montfort, 'during the construction of Mexican independence [the *fandango*] acquired a dimension that mixed certain local tendencies with the first nationalist songs [and] served as a way to affirm one's own need for belonging – whether it be to the *mestizo* or the *criollo* societies – in rejection of the *gachupín*, or foreign, culture.' Thus the *fandango* played an important part 'as a *mestizo* contribution in the forging of local values, in opposition to the cultural hegemony that the Spaniards had achieved' (1991, 44–5).

Older contemporary musicians speak of informal gatherings in small towns and ranches, with local people strumming guitars called *jaranas*, playing countermelodies or solos on the guitar called *guitarradeson* (also, *jabalina* and *requintojarocho*), a larger plucked guitar called *leona*, a diatonic harp with 32–36 strings, a *pandero* (tambourine) in the area of Tlacotalpan and other instruments. In the 1940s and 1950s *conjuntos* *jarochos* were featured in popular films, on radio and recordings, and in cabaret shows in Mexico City performing stylized versions of *sonjarocho* tailored for urban audiences. Harpist Andrés Huesca, performing with his brother Víctor, and Lino Chávez and his Conjunto Medellín, both commercially successful in Mexico City, were emblematic of this urban *sonjarocho*, which had enormous impact on *son* performance back in Veracruz. These musicians often shortened *son* performance to fit the standard three-minute record band length, streamlined the instrumentation to harp, *requinto jarocho*, and the largest of the *jaranas*, and occasionally added guitar.

Beginning in the late 1970s Gilberto Gutiérrez, his brother Ramón and his group Mono Blanco helped spark an urban folk music movement known as the *jaraneros* (*jarana* players). Its followers returned to the tradition's deepest roots and incorporated nearly abandoned instruments such as the *quijada* 'donkey jawbone' rattle, and *mosquito* (miniature *jarana*). They eschewed the urban 'Lino Chávez' style and invited elder rural musicians to perform with them. At the turn of the twenty-first century, swelling interest in the African component of Mexico's cultural past cast additional attention to the *son jarocho*, highlighting the historical concentration of African slaves in the region and the proximity to Afro-Caribbean culture.

The *son huasteco* was another regional tradition that made its way into the popular media and public consciousness during the *costumbrista* (adhering to regional customs) vogue of the 1930s through 1950s. It takes its name from the geographical region known as La Huasteca, overlapping the states of Tamaulipas, Veracruz, San Luis Potosí, Hidalgo and Puebla. A trio of instruments provides the core of the *son huasteco* sound: violin, *jarana* (also, *jarana huasteca*) and *huapanguera* (also, *guitarra quinta*). The violin plays fixed melodies associated with a particular *son* and may improvise extensively between sung portions. The *jarana* and *huapanguera* are strummed in a percussive fashion, hammering out a driving, triple-meter rhythm suitable to dancing called *zapateado* (from *zapato*, shoe). Singing style is distinguished by its high tessitura and occasional falsetto breaks that embellish the vocal melody. Singers, usually following the five- or six-line *copla* poetic form, may improvise texts reflecting the performance circumstances at hand. The dance preferably takes place on a resonant, raised, wooden dance floor or *tarima* (the same term as used in connection with *son jarocho* to refer to a wooden box). The term *huapango*, thought to derive from the Nahuatl word cuauh-panco, meaning 'on top of the wood,' may apply either to the dance event (similar to *fandango* elsewhere) or to the *son huasteco* itself. A distinction is made between *huapango* and *son huasteco*; while *son huasteco* implies the more fluid *son* with improvised verses and violin interludes, *huapango* tends to refer to composed pieces with fixed texts and instrumental melodies. Elpidio Ramírez, known as 'El Viejo Elpidio' (Old Man Elpidio), and Nicanor Castillo and others who followed their example contributed to the stylistic and commercial transformation of the *son huasteco* by composing and copyrighting Huastecan-style *huapangos*, bringing broader public recognition to the *sonhuasteco* through their recordings and media appearances.

The west Mexican *tierra caliente* ('hotlands') region overlaps portions of the states of Michoacán and Guerrero and is home to two *son* traditions. In Michoacán, the *soncalenteño* (also, *son planeco*) is a strophic song with each sung section commonly consisting of a changing *verso* ('verse') followed by a repeated or less changing *estribillo* ('refrain'). Singing may soar into an extraordinarily high pitch range. The *conjunto dearpa grande* ('large harp combo') accompanies the *son* and consists of harp, two violins and two regional guitars. The *arpa grande* ('big harp') is a large diatonic harp with around 36 strings played by a standing musician. The harpist plucks the low-pitched strings vigorously with one hand and plays melody in the upper strings with the other. Two violins perform in parallel thirds or sixths with little vibrato and little or no improvisation. The guitars that provide the *son*'s chordal and rhythmic drive are the *vihuela* – similar to, but often smaller than, the mariachi *vihuela* – and the *jarana* (also, *guitarra de golpe* 'struck guitar'), a flat-backed, deep-bodied, five-stringed guitar. While the *conjunto de arpa grande* with its style of *son* is historically related to the *mariachi* ensemble in sound and repertoire, in the early twenty-first century it is a 'country cousin' of its more urbanized neighbor. Remaining rooted in rural regional life, it continues to enjoy popularity and commercial viability among *calenteños*.

The Guerrero portion of the *tierra caliente* is the origin of the *son calentano*. Less prominent nationally than the styles of *son* mentioned above, it nevertheless is an important cultural marker and a part of the national folkloric canon of regional traditions. Since the near disappearance of the local diatonic harp during the twentieth century, the *son calentano* has been performed by an ensemble sometimes called *conjunto de tamborita*, comprising a *tamborita* (small two-headed drum played with two sticks), violin, *guitarrón* and guitar (e.g., a five-stringed *vihuela* or six-stringed guitar). Violin playing may include improvisation along with fixed melodies associated with certain *sones*. The group's repertoire includes *sones*, *gustos* and *chilenas*. *Sones* tend to be the most rhythmically vigorous and improvisatory of the three. *Chilenas* derive from the Chilean *cueca*, brought to the region in the mid-nineteenth century.

Bandas, bands of brass, woodwind and percussion instruments, have taken on a number of regional characters since their rise to prominence in the second half of the nineteenth century, and most include *sones* in their repertoires. Among the most prominent are the *banda sinaloense* from Sinaloa state, the *tamborazo zacatecano* of Zacatecas, and the many indigenous *banda* traditions (such as Zapotec, Mixtec and Chinantec) of Oaxaca and neighboring states. While the Mexican *son* is rooted in regional *mestizo* tradition and indigenous ritual life, the rise and omnipresence of electronic media and folk music movements have propelled the *son* to national and international arenas, in which it plays the role of a marker of regional identity in a national folkloric canon or a significant niche in the much broader repertoire of professional musical groups.

Son de los Diablos

El son de los diablos is an Afro-Peruvian 'devil' dance. The practice was documented in the nineteenth and early twentieth centuries, especially by the watercolor paintings of Peruvian artist Pancho Fierro (1807–79) (Palma 1935). By at least the nineteenth century blacks in *cofradías* (organizations affiliated with the Catholic Church) masqueraded as devils in Cuasimodo and Corpus Cristi processions inherited from Spain. After the Church banned devil characters in 1817, *el son de los diablos* resurfaced in Carnival's secular street celebrations (Fuentes 1925 [1867]; Tompkins 1981, 256–8).

In certain neighborhoods during Carnival, groups of eight to ten costumed *diablos* marched in *cuadrillas*, led by a *diablo mayor* who wore a large mask and carried a whip, and accompanied by musicians. Fierro's paintings depict a harp, plucked guitar-type instrument*, cajita* and *quijada*. The *cajita* is a small wooden box with a hinged top, suspended from the player's neck by a rope. The player alternately opens and closes the top of the *cajita* and hits its side with a stick or bare hand. The *quijada*is the jawbone of a donkey, horse or mule. It is alternately hit with the fist, causing the molars to buzz in their sockets, and scraped or struck with a mallet or stick. By the twentieth century the harp had been eliminated (Jiménez Borja 1939; Santa Cruz 1970a, 41). According to Nicomedes Santa Cruz, at one time the *diablos* wore bells, adding percussive jingles (1970a, 41).

In the early twentieth century *cuadrillas* marched through the streets in formation, bending and straightening their bodies while moving their shoulders and waists to the strum of the guitar. The *diablo mayor* kept the dancers in line by cracking his whip. *Diablos* danced a *zapateo* (Peruvian tap dance) for spectators in exchange for money and/or bottles of rum (Jiménez Borja 1939). *Cuadrillas* also performed narrative choreographic figures including the Departure from Hell, the Lost Devil and various cross-shaped formations (Jiménez Borja 1939; *Son de los diablos*, 1988). By the late twentieth century, staged performances usually included a *zapateo* contest.

The status of *el son de los diablos* during the twentieth century is unclear. Some maintain that the practice ended in the 1920s (Santa Cruz 1963, 1970a, 41; Tompkins 1981, 260), but Jiménez Borja (1939) affirmed that the dance survived in the Cocharcas neighborhood in the late 1930s, and former *diablo* mayor Pedro 'Chumbeque' Joya remembers dancing with his *cuadrilla* until 1958 (*Son de los diablos* 1988).

In 1956 Peruvian folklorist José Durand revived *el son de los diablos* for the debut performance of his Afro-Peruvian revival group, the Pancho Fierro company (Feldman 2006, 26–42). To recreate the musical accompaniment, Durand consulted with three former *diablo*s: Manuel 'Manucho' Mugarra, Cecilio Portugués and Pedro Torres. Guitarist Vicente Vásquez elaborated upon the fragments these consultants remembered, and an entire musical accompaniment was created, beginning with an all-*quijada* prelude (Santa Cruz 1970a, 25). Variations of the resulting accompaniment were used in subsequent performances (Tompkins 1981, 267–8). *Cajita* and *quijada* patterns combine to create a characteristic percussive 'swing' feel, exhibiting a duple pulse with internal subdivisions somewhere between two- and three-beat groupings. The associated guitar melody contains hemiola-like phrases (see Feldman 2001, 73; 2006, 36; Tompkins 1981, 267; León Quirós 2003, 167).

There is disagreement regarding what, if any, song was performed to this accompaniment before the revival. The Pancho Fierro company performance featured a song that José Durand had learned in childhood (see his documentary *El señor de la jarana*, 1979), with lyrics about a monkey. This song dated from 1850 according to Durand, and the chorus contained vocables that aligned exactly with the traditional parts for *cajita* and *quijada* (Tompkins 1981, 268). However, some later recordings of the music employed vocal cries but no lyrics, while others use a *festejo* song called 'El son de los diablos,' composed by Fernando Soria and Filomeno Ormeño after the street performances had ceased, with lyrics that describe the Carnival dance. Jiménez Borja's detailed description of the street procession and its music (1939) does not mention any song, and ex-diablo mayor Pedro 'Chumbeque' Joya remembered yet another song (*Son de los diablos*, 1988).

Since the Pancho Fierro show, *el son de los diablos* has reemerged as staged folklore and street theater. Prominent black Peruvian artists, including Victoria Santa Cruz and Perú Negro, staged it in the 1970s, and Lima's Movimiento Francisco Congo worked with Chumbeque and Grupo Cultural Yuyachkani to reconstruct the street procession for Carnival from 1987 to 1990 (R. Romero 1994, 322; *Son de los diablos*, 1988). In 2000 several schools and professional companies in Lima performed the dance, and members of Grupo Teatro de Milenio and Yuyachkani taught the children of rural El Guayabo to perform it as part of a cultural outreach program.

Son de Pascua

The *son de pascua* (literally, Easter *son*) is a short, joyous piece originally intended to be played during Christmas holidays at Catholic churches in Guatemala, where Easter embraces not only the celebrations of Christ's resurrection, but his nativity also. It is a type of *Ladino son* (instrumental pieces created by Guatemalan *Ladinos* – the mestizo Spanish-speaking population of Guatemala) which uses rhythmic and melodic elements borrowed from traditional Mayan Indian *marimbasones,* but stylized and regularized to conform with Western taste.

Sones de pascua are the earliest *Ladino sones* known to date. They arose toward the middle of the eighteenth century within the Catholic Church, being played by instrumental chamber groups usually consisting of two violin parts, string bass and horns. The first cultivators of the genre were the organist Mateo Álvarez (fl. ca. 1750) and his disciples Ventura Portillo (b. 1751), Narciso Trujillo (fl. ca. 1780) and Vicente Sáenz (1756–1841). These *sones* appeared at a time when Mayan Indian *marimbas* were being accepted inside churches, thus allowing them to influence Guatemalan sacred music. The same influence is also evident in some Christmas vernacular *villancicos* of the time, by Raphael Antonio Castellanos (d. 1791), chapel master at the Guatemalan Metropolitan Cathedral from 1765 to 1791. (The *villancico* was a popular Spanish form consisting of a refrain and various stanzas adopted by New World composers for use in church for diverse occasions of the liturgical year). In order to capture the color of Indian music, Castellanos also incorporated into his *villancicos* indigenous pre-Hispanic Indian instruments such as the *Xul* (cane flute) and the *tun* (slit drum).

By the end of the eighteenth century, still in the colonial period, *sones de pascua* had acquired an educational function. Due to their simplicity and short length, they were ideal pieces to help apprentices to learn music and to prepare them to play divertimentos (more extended and difficult instrumental pieces in the growing classical style). They were also used as models to train beginners in composition.

Toward the beginning of the nineteenth century the *Ladino* population took *sones de pascua* out of the church, where they gained acceptance as dance music at parties and as a music to play while strolling in the evening, complete with profane lyrics. The development provoked scandal among the conservatives. In reaction, Eulalio Samayoa (1770–1855), a defender of scholasticism and of purity in sacred music practice, also considered a pioneer symphonist in the Americas, wrote a series of *sones* in classical style which came to be regarded as the most sophisticated examples of the genre (Example 1). These pieces were also played in the cathedral to commemorate the Virgin Birth. Samayoa's *sones* show characteristic *hemiola* and accompaniment patterns of the traditional *son*, using vivid 6/8 or 3/8 meters, enriching the harmonic content and melodic interest by the inclusion of secondary dominants, full cadence progressions and giving the bass leading passages in a classic and graceful style.

Other representatives of the genre in the mid-nineteenth century were Juan de Jesús Fernández (1795–1846), who produced collections of *sones de pascua* that have great grace and local flavor, Jose Antonio Aragón (fl. ca. 1847) and Remigio Calderón (fl. ca. 1850.) The conductor and composer José Escolástico Andrino (d. 1861) took the practice to the neighboring country of El Salvador, where it was continued by his disciple Rafael Olmedo (1837–97) at the end of the century.

By that time a renewal of *son de pascua* had taken place in Guatemala as a consequence of the increasing *Ladino* interest in the *marimba*, which had evolved locally from its simple diatonic form to the double chromatic *marimba*. This improvement made possible the expansion of the *marimba* repertoire, not only through the arrangements of international piano saloon music but also of local piano and orchestral *sones*, which were well received by the Guatemalan public.

Among the composers who wrote piano *sones de pascua* that were popularized by *marimba* ensembles is Anselmo Sáenz (fl. ca. 1860), a pioneering promoter of opera in Guatemala. He composed the *son El pavo* (The Turkey) which became popular as far afield as Paris and London. The violinist and composer Salvador Iriarte (1856–1908) wrote a collection of *sones de pascua.* Among the most popular are *La Nochebuena* (Christmas Eve) and *La enhorabuena* (The Congratulation) (Example 2). These festive *sones,* written in 6/8 meter, exhibit more elaborate melodies in binary structures, preserving in a pure form the national desire to entertain and add color to Christmas and New Year celebrations in the first years of the twentieth century. In the early twenty-first century they continue to be played by chromatic *marimba* groups and at private homes hosting Christmas processions called *posadas*, to celebrate the birth of Jesus.

IGOR DE GANDARIAS

Son Jarocho

The *son jarocho* is a music and dance tradition from the southcentral, or *Sotavento*, region of the state of Veracruz in Mexico. Within this *son jarocho* area several subregional styles exist, largely distinguished by instrumentation, tempo and rhythm. Along the central coast, in and near the city of Veracruz, quick tempos with lively rhythms are performed by an ensemble principally made up of harp and *jaranas*; a bit further south, in the town of Alvarado, the *requinto jarocho* is usually used instead of the harp; and the *pandero* (tambourine) is practically synonymous with the town of Tlacotalpan. Further south, in the Tuxtlas region, slower tempos, sedate rhythms and *jaranas* of many varying sizes are almost exclusively performed.

With a few prominent exceptions, the *son jarocho* is characterized by ambiguous 6/8 meters with 2 against 3 *sesquiáltera* rhythms, predominantly tonic-subdominant-dominant harmonic structures, strophic forms with abba textual organization, descending and symmetrical melodic shapes, antiphonal singing, and instrumental introductions and interludes. Vocal timbre is distinctively nasal, pieces are sung syllabically and, as a means to denote endings, the last stanza is frequently sung in unison. The dance, or *zapateado*, alternates between soft foot movements and hard pounding on a wooden *tarima* (platform).

The origins of the term '*jarocho*' are greatly disputed. '*Jara*' may have come from an Arabic word meaning 'arrow' or 'spear' – the Colonial military in Veracruz used spears as weapons; the suffix '*-ocho*' would have had a pejorative significance. Another possibility comes directly from the Spanish; in certain parts of Spain a '*jarocho*' was a loud and insolent person. Later, the term came to refer to the illiterate peasants of the *Sotavento* countryside; currently, it is used to distinguish anyone from the area of a simple and generous nature.

The roots of *son jarocho* most likely begin with Spanish music and dance forms, particularly those imported from seventeenth- and eighteenth-century Andalusia that were adopted and adapted by locals. This Spanish influence quickly mixed, however, with other elements, especially from Afro-Caribbean culture, to produce a unique musical hybrid along the Mexican Gulf coast which would lead to the *son jarocho* style.

With respect to repertoire, travelers from the nineteenth and early twentieth centuries made mention of traditional *sones* that continue to be popular among twenty-first-century musicians and dancers. *Sones* such as 'El palomo' ('The Dove'), 'Los enanos' ('The Dwarves'), 'La petenera' (roughly meaning 'The Impertinent One'), 'El butaquito' ('The Little Easy Chair'), 'El trompito' ('The Little Toy Top'), 'El durazno' ('The Peach') and, particularly, 'La bamba' (perhaps an Africanization of the word 'banda,' meaning 'The Sash') are found in the writings of Frances Calderón de la Barca, José María Esteva, Antonio García Cubas and Guillermo Prieto (see Sheehy 1979; also Kohl 2007). Observations on the music and dance made by these and other authors could easily be mistaken for contemporary descriptions of the tradition.

The mid-twentieth century saw an increase in importance of the *son jarocho* through political and commercial influences. The *veracruzano* Miguel Alemán, president of Mexico from 1946 to 1952, conspicuously used *son jarocho* ensembles throughout both his political campaign and his presidency. About the same time, the music was included in several films, including Ismael Rodríguez' *Los Tres Huastecos* and Walt Disney's *Los Tres Caballeros* (originally, *The Three Caballeros*); in radio broadcasts, such as those produced by Raúl Hellmer for Radio UNAM; and in commercial recordings, such as those produced by Peerless Records. In addition, the early US rock 'n' roller Ritchie Valens had a hit with his version of 'La Bamba' in 1958. The *son jarocho* reproduced in many of these productions, however, is today considered part of a political and commercial establishment which does not represent the original cultural or musical nature of the tradition.

The latter part of the twentieth century saw a resurgence in the southern subregional styles which continues to this day. Groups such as Mono Blanco and Son de Madero, among others, have searched for more culturally and personally authentic expressions of *son jarocho* which have led them to use certain musical instruments such as the *quijada* and *marimbol* as well as to emphasize other characteristics like slower tempos and more relaxed rhythms. Ironically, this exploration has sometimes resulted in stylistic innovations with the inclusion of saxophone, Cuban percussion and other musical elements from classical, jazz and popular music.

Recordings of recent interpretations of *son jarocho* can be found on labels such as Urtext, Corason Records and Folkways, and also government-sponsored institutions such as the Instituto Veracruzano de Cultura and the Instituto Nacional de Antropología e Historia, and several independent labels.

RANDALL C. KOHL

Son Nica

The *son nica* is a folk-rooted popular music genre based in the lowland region of southwestern Nicaragua where the majority of the nation's population resides. It is almost always sung and, however many instruments might be included in the performing ensemble, the guitar is featured to bring out the principal characterization of the genre: a triple meter with the guitar playing a sharp staccato downbeat followed by two fully strummed ones. The overall effect is a somewhat evenly accented triple meter, for the strong attack of the first beat is offset by the silence for most of the beat from dampening the strings, and the less accented second and third beats ring out from the full strumming on open strings.

Reflecting Nicaragua's relatively small size within Latin America, urbanized popular music emerged within the context of a media that developed much later than in larger national economies. As a result, popular music in Nicaragua – and indeed the rest of Central America – was strongly influenced by a type of Mexican cultural sub-imperialism that substantially inundated the region with the type of music promoted by Mexico's cultural industry to represent that nation, most notably the *canción ranchera*. This musical form found little competition from the embryonic Nicaraguan radio and record industry. The near monopoly of availability of recordings of *canción ranchera* was reinforced by the domination of Mexican cinema, which entered its golden age around the 1940s and which featured multiple *canción ranchera* musical interludes. The impact of Mexican styles into the 1950s is shown by the songs of Tino López Guerra, the most popular composer of that decade whose output is nearly indistinguishable from other *canciónes rancheras*. What became known as the *son nica* was a deliberately created nationalist response to this situation that can be traced to one musician, Ramón Arnoldo Zapata Zúniga, known as Camilo Zapata (1917–2009), who in 1934 composed 'Caballito chonteleño' (Little Horse from Chontales), the first of a string of songs with the genre's identifiable traits. As the genre became popular, the current title of *son nica* became fixed – a conscious choice, as *son nica* pioneers viewed Nicaragua as approximating the size of one of the cultural areas of Mexico and therefore deserving its own *son* or stylistic form, much as the region around Jalisco in Mexico has the *son jaliciense*, Vera Cruz the *son Jericho* and so on.

To achieve this musical emblem of local culture, Zapata borrowed selected stylistic features from the repertoire of the *marimba de arco* trio, a diatonic 22-keyed *marimba* always played with guitar (and smaller *guitarilla*) accompaniment. The music of the *marimba de arco* trio offered several advantages as a foundation for a localized popular music form, but foremost among them was that it provided the accompaniment for the principal folk dance centered around Masaya, a major city in the populous lowlands. Part of the appeal of the *son nica* is its relationship with the *marimba de arco* music as a touchstone of tradition for southwestern Nicaragua. *Marimba de arco* musicians are identified as *indigos*, a slippery classification that is as much based on class as on ethnicity, and a 1940s urban mestizo folklore movement in Masaya promoted the *baile de la marimba* (dance of the marimba) as an indigenous-based 'national dance.' Zapata's choice of musical traits resonated and benefitted from this nationalist movement. In addition to the strumming pattern of the guitar in the *marimba de arco* trio, Zapata's compositions are almost entirely in major keys with almost no use of minor chords. Such a preponderance of major tonality is a marked feature of the Nicaraguan *marimba*'s folk dance repertoire, but it is fairly unusual in Mexican and Latin American music. The melodic contour of *marimba de arco* pieces inspired the melodic shape of many of Zapata's songs. Finally, many *son nica* songs, especially those by Zapata, include a quick repetition of words in passages of compressed rhythmic activity. These sections imitate the *zapateado* sections in *marimba de arco* pieces that accompany rapid heel-to-floor dance movements in the folk dance. These musical traits (see Scruggs 1999, 2002) combined with lyrics that referred to particularly Nicaraguan characters and situations and used a vernacular Spanish typical of Nicaraguan vocabulary.

Zapata's songs achieved an unprecedented level of acceptance throughout the southern lowlands and enjoyed a certain degree of exposure throughout the rest of western Nicaragua as well. Not having a strong singing voice, Zapata only sporadically recorded himself, but his compositions were made famous by other groups, beginning with the original Trio Monimbó in the mid-1940s. The interpretations by a visiting Paraguayan group in 1969, Los Zorzales Guaraníes (The Guarani Thrushes), remain quite popular despite the salient sound of their wholly un-Central American harp. In the 1960s Zapata's continued *son nica* output was joined by contributions from singer-songwriters such as Victor Manuel Leiva (1925–95), and especially Jorge Isaac Carvallo (b. 1931) and Otto de la Rocha (b. 1936). Carvallo's and de la Rocha's individual compositions and their recording and performance collaborations, their most notable recording being their commercially successful 1971 LP *Nicaragua canta*, effectively cemented the *son nica*'s status as Nicaragua's most commercially lucrative and socially emblematic song form. The hit song, 'Posol con leche' (Posol, a corn-based drink, mixed with milk), updated the *son nica*, with Carvallo moving to an electric guitar and the addition of a chromatic non-Nicaraguan *marimba* (the latter played, however, very much in the *marimba de arco* style by an 'indio' Masayan, Alfronso Flores [known as Tun Tun]). Written by musician and important entrepreneur Luis Felipe Andino, the song was released on his own label around 1970 on the LP *Viva Santo Domingo*, and the lyrics describe the raucous annual saint's day celebrations in the capital city, Managua. The song's tempo is slightly faster than normally used in the folk dance and de la Rocha shouts out in the recording '¡Bailelo!' (Dance to it!), part of a successful fusing in this and other songs of *son nica* rhythms with urban dancing and more frenetic movements and abandon. The *son nica*'s acceptance was further deepened by the immense popularity of songs by Carlos Mejía Godoy later in the 1970s, beginning with the 1973 album *Cantos a flor de pueblo* (a play on words that roughly means 'Songs That Emanate, and/or Are Obviously From the Regular People') that contained several songs of enduring popularity.

It was at this height of popularity of the *son nica* that an open debate erupted around it. Carvallo accused Mejía Godoy of betraying appropriate national song form by overstepping stylistic boundaries. He cited the song 'Alforja campesina' ('Peasant Saddlebag') from *Cantos a flor de pueblo* for being too fast and prominently using a minor key, bringing it therefore too close to Mexican style. Mejía Godoy simply responded that perhaps the song was not a *son nica*, but maintained the appropriateness of the various styles on his first album and his next one, *En la calle del enmedio* (literally, 'In the Back Alley,' which also connotes 'letting oneself go' or 'ignoring convention'). Carvallo's insistence that the *son nica* was the only correct vehicle for genuine Nicaraguan singer-songwriters was implicitly rejected by the nation's musicians who increasingly drew from a wide stylistic palette within Latin America. For example, the only new political group able to record under Somoza, Grupo Pancasán, included just two *son nica* songs out of eight on their second album, *Vamos haciendo la historia* (We Are Making History) (1980), and one of those, 'Adelante Nicaragua' (Forward, Nicaragua), clearly borrowed from Carlos Mejía Godoy's 'Alfora campesina' in its alteration between major and minor tonalities. Carvallo's argument that the *son nica*'s correct parameters had been violated was, however, tacitly accepted, for songs identified as *son nica* have rather strictly adhered to the characteristics that Camilo Zapata's songbook established.

The *son nica* received one last boost in popularity during the first euphoric years of the new Sandinista-led government in 1979. The celebration of cultural markers viewed as traditional, such as the mushrooming of neighborhood and semiprofessional Dance of the Marimba groups, both increased the *son nica*'s popularity and furthered a process of its folklorization. The success of Carvallo and de la Rocha in the 1970s and Carlos Mejía Godoy soon afterward marked the apogee of the *son nica* as a popular musical form that was considered current and was used at least to some extent for popular dancing. For national musical artists from the mid-1980s onward, the *son nica* has essentially played the role of a traditional song form that complements their more innovative and cosmopolitan repertoire that mostly draws from other Latin American and global styles. Among many examples, on his popular album *Solo sueños* (Just Dreams) singer-songwriter Luis Pastor uses the *son nica*, with synthesized *marimba* in parts, on the song whose lyrics speak directly to Nicaraguan identity, 'Somos Nicas' (We Are Nicaraguans) (Pastor n.d.[1999].) Camilo Zapata received multiple honors from the 1980s onward, including collaborative recordings of his songs (*Abridores de caminos* [Trailblazers]; *Se hace Camilo al andar …*) and is now widely known as The Father of the *Son Nica*.

T. M. SCRUGGS

Sones Guatemaltecos

Sones guatemaltecos (Guatemalan *sones*) constitute a sizeable and varied body of traditional ritual and dance music pieces, which originated in Guatemala during the colonial period of the sixteenth to nineteenth centuries. They exhibit a mixture of Indian, European and African elements, whose function, structure and specific characteristics depend on the ethnic, geographic and musical components of the cultural context in which they are practiced. There are two main group types of Guatemalan *sones*: the traditional (Mayan Indian) *son,* widespread around the country (the Mayan civilization, one of the most highly developed ancient cultures in the world, flourished between 1500 BC and 1450 AD in Guatemala, Honduras and México; by 2010 Indians constituted 40 percent of the Guatemalan population, with 21 linguistic groups, each culturally differentiated, living mainly in poor rural areas); and the *Ladino son,* which is derived from the first, being created and practiced by *Ladinos* (the mestizo Spanish-speaking population, who live mainly in urban areas).

Mayan Indian Son

These anonymous pieces, historically tied to Mayan Indian cultures, are also called regional or ancient *sones.* They are transmitted orally by older generations mainly within family environments. Their antiquity is a consequence of the survival and continued re-elaboration of pre-Hispanic Mayan cultural elements through the Catholic tradition that was imposed by the Spaniards at the time of conquest. An African contribution came later in the form of *marimbas*, which were brought to Guatemala via the African slave trade in the sixteenth century, and were adopted by Indians.

Traditional *sones* are performed at annual religious and festive celebrations in different villages, following the Christian or Mayan calendar. On religious occasions they are charged with spiritual and ritual significance, serving as vehicles of communication with God and the ancestors. Elsewhere, they are played for ceremonies, processions and traditional dances, but also during festive celebrations in private homes, where they perform ritual or entertainment functions according to circumstance.

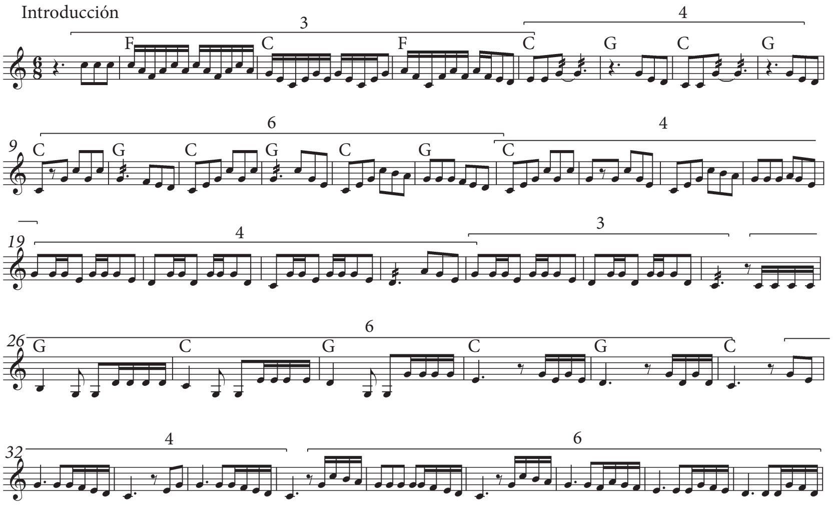
The wide assortment of Indian *sones* has not been thoroughly studied. Its variety comes from the multiplicity of musical ensembles and the particular ethnic group that plays them. *Marimba* groups are the most popular. Indians play *marimba de tecomates* (gourd *marimba*) and diatonic *marimba de cajones* (*marimba* with wooden box resonators). The first uses calabashes as resonant boxes, each tuned to its own pitch, while the latter uses wooden oblong boxes as resonators. Among the *Q'eqchi'* group in the Verapaz region of the central highlands, some *marimbas* have resonators made of bamboo. The number of musicians ranges from one for the *marimba de tecomates* to three or four for the *marimba de cajones*. In a group of three, one plays the bass, a second the harmonic accompaniment and the third, the leader of the group, takes the melody.

Traditional *marimba sones* are organized, under European influence, using tonal principles of construction, that is, diatonic melody, homophonic texture and accompaniment based on simple harmonic triadic progressions (tonic–dominant). Rhythmically, they often use *sesquialtera* patterns (3/4 and 6/8 simultaneously) between melody and accompaniment, and simple triple or compound double meters. A frequent accompaniment pattern, either in 3/8 or 6/8, shows the bass and the chords playing a single rhythmic figure, omitting the strong beats (Example 1).

The particular musical style of traditional *sones* not only depends on these structural parameters but also relies on the timbre of the Guatemalan instruments and the way they are played. As with its African models, the Guatemalan *marimba* makes a buzzing sound (called *charleo*), created by the vibration of a thin membrane made of pig's intestine, which is fastened with beeswax to a hole at the bottom of each resonator. In addition, the instrument's tuning, even though diatonic, usually does not fit into an absolute reference, allowing microtonal pitches.

Details of the musicians' performance are usually dependent on the type of occasion and the ability of the leader to introduce variations. The musical form is always open-ended and is characterized by a series of variations on a given scheme, the total length of which depends on the ritual context. One common feature is the breaking of regular structures, as can be observed in the *son* 'Cinco Pesos' practiced among the *Kaqchikel* group from Sololá (a province in the western highlands) (Example 2). It is a succession of phrases of different lengths, predominantly in pairs (the second a varied repetition of the first), with occasional extra repetitions or single phrases. Variation is also shown in the beginnings of phrases and in shifting chord progressions (i.e., from I, I, V, V to I, V, V, I or vice versa).

Example 1: Common rhythmic accompaniment patterns in traditional *marimba son*



Example 2: Son 'Cinco Pesos' (excerpt). Marimba Alma Sololateca: Victoriano Jiatz, Manuel Jiatz and Mario Jiatz. (*Music from Guatemala*, 1999. Vol. 1, Track 1)

Vida Chenoweth in her study of *K'iche'marimbasones* at San Jorge la Laguna, a village in the Sololá area, affirms that the asymmetry of form and flexibility of duration shown by the pieces she studied are governed by the leader's decisions (Chenoweth 1964, 80–2).

Some instruments that are used to play traditional *sones* have pre-Columbian Mayan origin, such as the *tun* (slit drum), apercussion instrument made of a hollowed-out tree trunk with two vibrating tongues played with two rubber-tipped mallets, producing two different pitches. Among the *Q'eqchi'* the *tun* appears in combination with the *Xul or Xolb*, another pre-Columbian instrument which is an end-blown open flute of cane. In many regions of the country the *Xul* is extensively used to play traditional *sones* in company with a *tamborón* (big drum).

In contrast there are string ensembles, such as the *Zaraband* group from the *Q'eqchi'* area, who use local, handmade versions of the colonial prototypes of European string instruments. They are the *rabe*, a rustic, three-string violin played with a loose, horsehair bow smeared with resin, the *guitarrilla,* a small, fretless guitar having the half of a calabash as a resonating box and the *arpa*, a wooden harp with around 30 strings made from fishing cord, suspended over a wooden resonating box that serves also as percussion instrument. It is beaten with a cloth-padded stick by an extra musician. The violinist holds his instrument against his chest using a non-vibrato, predominantly *détaché* (separate bows) playing style. He occasionally uses double strings, one kept open as a drone while the other takes the melody. Frequently, these traditional *sones* consist of repeated phrases in simple, rounded, binary form or chains of phrases repeated over and over on a simple harmonic frame, including I, IV and V degrees.

Another common Indian ensemble that plays sones is the duo of *chirimía* (a local shawm of Moorish origin introduced by the Spaniards at the time of conquest) and drum. It occurs in the western highlands, where important groups of *K'iche,' Kaqchikel* and *Kanjobal* people live. The ensemble usually accompanies the *Conquest Dance* (a warlike drama dance depicting the fight between Indians and the conquering Spaniards, ending with the Indians' forced submission to the Christian laws). There is a special *son* for every character participating in the dance. Here, Indians distinguish between *sones* to dance and *marches* to walk. The drummer usually plays a rhythmic formula in a fixed meter (ranging from three to six beats per measure) in a loose tempo. Superimposed upon that rhythm, the *chirimía* plays a fluid diatonic melody outlining tonic and dominant harmonies, varying its pace between the limits of free rhythm, with suspended movement on certain notes, and a fixed pulse that eventually coincides and communicates with the drum. Some notes of the melody are out of tune. Matthias Stöckli has verified that the desire to use irregular, free and loose rhythmic, tonal and pitch relations is a consistent pattern of musical behavior in traditional *chirimía*–drum ensembles. Furthermore, these non-Western canons are reproduced in different cultural Indian contexts, separated from each other by long distances (Stöckli 2005, 86–8).

Ladino Son

Ladino sones are pieces created and performed by *Ladinos,* who use rhythmic and melodic features of Mayan Indian *marimba sones* but stylize them, adjusting them to absolute pitch, and imposing regular phrases and metric schemes according to the taste and practice of Western music. The first *Ladino sones* heard were *sones de pascua* (Easter *sones*), intended to be performed at Christmas time. (In Guatemala Easter refers not only to celebrations of Christ's resurrection but to his nativity also). They arose in the mid-eighteenth century within the sphere of the Catholic Church.

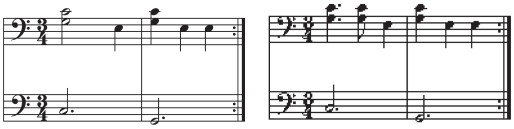
Later in the eighteenth century the keyboard *son galante* (gallant *son*) emerged. This refined and graceful *son* was used alongside minuets and fandangos by the Guatemalan colonial bourgeoisie in their baroque dance tradition, as well as for learning music. Toward the end of the nineteenth century, at the time when the popularity of salon music and dance reached its peak, the *son galante* developed orchestral variants that competed with waltzes and mazurkas in ballrooms where the capital's upper classes entertained themselves.

Toward the end of the nineteenth century the *marimba* increased in popularity among the *Ladinos,* who developed the simple diatonic *marimba* into the chromatic double *marimba* in Quetzaltenango (the country's second city, located in the western highlands). This improvement not only opened the way for the salon piano repertoire to be played by *Ladino marimba* groups but also, with the government support, enabled a nationalistic flag to be hung on *marimba* music, leading to an expansion of *Ladino sones*. The leaders of this movement were the members of the Quetzaltequian families Hurtado, Bethancourt and Ovalle (hegemonic families of *marimba* players during the first half of the twentieth century in Guatemala.) The *marimba* became the Guatemalan national musical instrument in 1978.

Since the 1930s *Ladino* radio stations and *Ladino* schools have promoted *Ladino sones* as the authentic

Guatemalan *son*, a notion that has become popular even in Indian contexts. Their influence and acceptance by indigenous musicians has produced a creative refluxus or flowing back, generating intermediate expressions that have transcended national borders, as is illustrated by the work of Antonio Malín, an Indian composer from Jacaltenango (in the northwest of the country) whose *marimba sones* partake of both Indian and *Ladino* features, going back and forth between local and national feelings.

Two principal types of *Ladino sones* are distinguishable, mainly on the basis of tempo. The slow one called *son típico* (typical *son*) has melancholic melodies in 3/4 meter and a characteristic rhythmic accompaniment pattern made up of bass and harmony combinations (Example 3). Quicker tempos result in lively *sones* known as *Sones Chapines* in 3/8 or 6/8 meters. These use the same rhythmic patterns, reduced by half. Both types use regular phrases and diatonic melodies in simple binary or ternary forms. Basic chord progressions (I, IV and V degrees) are also common.



Example 3: *Ladino son* accompaniment patterns

Another type of *son* played by chromatic *marimba* groups is the *Barreño,* which is characterized by two alternating sections. The first, in 3/4 meter and a moderately quick tempo, has a particular arpeggiated accompaniment figure similar to an Alberti bass, while the second, in 6/8 meter and a quicker tempo, uses regular accompaniment patterns.

The golden age of the salon music repertoire, with its rich variety of *sones* played by chromatic *marimba*s, occurred in the early twentieth century. By mid-century it was in public decline, being gradually replaced by commercial music repertoires from the United States and other Latin American countries, promoted by the mass media. In the early twenty-first century, the practice of *Ladino marimba sones* is maintained mainly through *marimba* groups and school programs supported by the government.

Since the beginning of the twentieth century both the Mayan Indian and *Ladino sones* have been used as a nutritious source of inspiration for piano and symphonic works. From the 1970s to date they have been incorporated into electro-acoustic compositions.

IGOR DE GANDARIAS

Spouge

Spouge is one of two indigenous musics of the island of Barbados. While tuk music has its history in slave society, spouge music was the creation of an individual twentieth-century musician, Dalton Bishop (Jackie Opel). Musicians have often remarked that spouge is reggae played backward, but its shuffling offbeat created by the snare and foot drum on the contemporary trap set gives it its distinctive signature. It spread from Barbados to the eastern and southern Caribbean during the early to mid-1970s, but remained predominantly a local music associated with the Independence movement of the late 1960s and 1970s.

Dalton Bishop was born in the island of Barbados during the 1930s. He changed his name to Jackie Opel when he migrated to Jamaica in 1962 in search of a more fertile cultural environment in which to pursue his career, one which would allow his talent to be better appreciated and nurtured. In Jamaica he performed with the legendary Skatalites, and recorded with Coxsone Dodd's Studio One. He became a leading performer of ska music, influencing younger emerging artists, including Bob Marley.

When Opel returned to Barbados in the late 1960s, he introduced audiences and musicians to the new rhythm which he had developed in Jamaica, and which he called spouge. Musically, the music of spouge sits somewhere between reggae and calypso in terms of its overall inflection. The main instruments are the repetitive cow bell, the strumming guitar, the lazy bass and the lilting offbeat snare pattern. Spouge soon gained popularity and over time it was played by many local combo bands, including the Blue Rhythm Combo, the Troubadours, the Checkmates, the Organisation, Flatbush, Super Eight, the Dynamics and the Sandpebbles. Spouge found an even longer lifeline in gospel music, Joseph Niles and the Gospel Comforters being its main exponents. It was also popular throughout the eastern Caribbean, as well as in Guyana in the southern Caribbean. In Barbados it depended on radio for its dissemination, but a relatively active entertainment sector and the presence of a healthy number of combos and performing musicians made sure that the music was heard at social and cultural functions during its heyday.

By the mid- to late 1970s interest in spouge music started to wane. Among the various reasons that have been suggested for this the main one is that the music was monotonous and so could not sustain interest, hence the radio stations did not support its dissemination any further. The criticism is not entirely fair. Although spouge is defined by formulaic, repetitive treatment on key instruments like the cowbell, drums and guitars, there were in fact several interpretations and variations within the music during the 1970s. The group called Draytons Two performed what was known as raw spouge, Cassius Clay's brand was called dragon spouge, and the Caucasian group, the Sandpebbles, played a pop-inflected type of spouge. Other reasons for its decline included: its originator, whose idiosyncrasies were hardly embraced by the mainstream, the heavy dependence on covers and the failure of most composers to create original spouge lyrics, the worldwide impact of disco music and the DJ, together with the replacing of live bands by sound systems, and the absence of a critical tradition to support the kinds of practices being undertaken in the island as it emerged from centuries of unbroken British colonial rule. By the mid-1980s spouge music was a thing of the past, a music of nostalgia. It was to be heard mostly during the month of November when Barbados celebrated its Independence Day.

During the 1980s some attempts were made at revitalizing the music, but these achieved only limited success in terms of stimulating national interest. Richard Stoute's 1985 single 'Mr. Rich Man' was said to have sold fewer than 100 copies. Recordings such as the 1990s *Spouge Revival* album, reissued 1970s music by the regional pressing and publishing company West Indies Record Limited (WIRL) and fusions with soca by Tony 'Commander' Grazette failed to realize substantial results. There were calls for spouge music to be included in some big way into the tourist-oriented Crop Over festival, but these suggestions were not entertained at the official level of government, where the Crop Over festival is controlled.

Spouge has remained submerged in some of the other forms of popular music that come out of Barbados. There are noticeable traces in the work of selected artists such as Gabby and Red Plastic Bag and producers such as the Grammy-nominated Nicholar Brancker, Eddy Grant, Chris Allman and Darron Grant. It is not absolutely clear what percentage of this spouge fusion is deliberate, or how much of it springs spontaneously from individuals who were influenced by the Barbadian sound of the 1970s.

In the first decade of the twenty-first century there was continued lobbying for some form of national spouge festival, but there were very few substantial attempts to release spouge music. The influential WIRL company sold the rights to its large catalogue of Barbadian music, which included a healthy number of spouge recordings, to a North American interest. Subsequently, there were reissues of older spouge recordings, for example the 2003 *Spouge Recollections* album featuring, among others, the Draytons Two. The 2002 National Cultural Foundation (NCF) compilation album *Spouge Alive* represented the most ambitious project for revitalizing spouge in the early to middle years of the decade. The album was criticized by some for its noninclusion of a greater number of authentic spouge acts, and for its inclusion of the spouge fusion of newer and younger artists, leading some spouge practitioners of the 1970s and some aficionados to complain that the album was not really a spouge album. The album did not perform particularly well in terms of sales or airplay, even though it sought to capture traces of traditional spouge, while projecting a new sound for the future.

CURWEN BEST

Steelband Music

The steel pan (or simply pan, also referred to sometimes as steel drum) was invented in Trinidad around 1940 by young men from poor neighborhoods in Port of Spain who used it to play in Carnival percussion bands. Through competition between rival neighborhoods, steelbands developed quickly into melodic ensembles that could play diverse repertoires. Following Trinidad's independence from England in 1962 the steelband was promoted as a symbol of Trinidad's national culture, and became popular around the world. Although its status as 'popular music' is debatable according to some criteria (since it has not had significant dissemination on recordings and radio and is first and foremost a community music phenomenon), the steelband developed in close association with calypso and other Trinidadian popular styles, and the steel pan has been used in a variety of recorded music in many different parts of the world.

Steelband Beginnings

Steelbands first took shape in the late 1930s through the substitution of metal containers for the bamboo stamping tubes of the *tamboo bamboo* ensembles that provided music for the lower-class Carnival. This was done by young men who sought to distinguish themselves from older bamboo players and to outdo their rivals during competitive music-making and display. One band that was widely remembered for this innovation was Alexander's Ragtime Band (formerly the Newtown Boys Bamboo Band), which came out on the road with all-metal instruments for Carnival in 1939. Other accounts point to less public beginnings for the steelband as early as 1935, but there is no clear evidence that metal bands in the 1930s featured melodic pans. A number of accounts suggest that the first melodic pans were tuned around 1941, just as a wartime ban on Carnival began, and developed in relative obscurity until public performances resumed at the end of the war. In March 1946 the playing of several popular melodies on a steel pan (including 'God Save the Queen,' 'Ave Maria' and several calypsos) was unequivocally documented in newspaper reports of Winston 'Spree' Simon's performance at the first postwar Carnival celebration.

The playing of such recognized melodies distinguished the steelband from earlier percussion ensembles, and made the steel pan the first Afro-Trinidadian instrument that was widely acknowledged by the dominant classes to be musical. Drums, *tamboo bamboo* and tin pan bands that preceded the steelband did not play 'music,' that is, as this word was understood in colonial Trinidad in 1940. Despite public alarm caused by the noise and frequent violence that erupted between rival steelbands, panmen took encouragement from the new recognition for their musical achievement, and in their enthusiasm to impress they learned to play a wide variety of repertoires, including calypso, mambo, film songs, pop music and 'classics' (European art music).

The ambition to prove the instrument and to show up rival bands drove rapid changes in steel pan tuning in the 1940s and 1950s. Early steel pans featured just three or four notes, pounded up with a broomstick from the inside of a paint can, biscuit drum or other metal container. High-pitched 'ping pongs' (named for the sound they made) were accompanied by lower-pitched pans such as the 'tenor kittle' that was tuned with the notes of a major triad; and in the late 1940s Neville Jules, tuner for the Trinidad All Stars, created a 'tune boom' that could play three or four bass notes. As the number of instruments in contrasting registers expanded, so did the number of notes on a single pan, until Invaders' tuner Ellie Mannette created a fully chromatic ping pong. Lower-pitched 'background' pans (including tune boom, grumbler, *cuatro* and guitar) were limited to a few large notes, since each player could carry only one pan while walking on the road. With the advent of stage instruments tuned in multiple sets around 1950, however, background pans also became chromatic. In 1956 North Stars' tuner Anthony Williams created wheeled racks to take his chromatic bass pans on the road and other steelbands followed suit thereafter, playing the same instruments on the road and the stage.

The modern steel pan is made from the bottom of a 55-gallon oil barrel pounded into a concave shape, tuned in sets that range from a single tenor pan, to double seconds and triple guitars, to bass sets that comprise as many as 12 individual barrels, and are played with rubber-tipped mallets that enhance the bell-like sustain of the notes. The names of modern steel pans also reflect the ambition of steelband musicians to have their instruments taken seriously: the ping pong has become the tenor, the boom has become the bass and other pans have taken names such as guitar and cello.

Social Transformation of the Steelband

During the late 1940s and 1950s middle-class participation transformed the social and cultural status of pan. This transformation was dramatic both for its speed and for the deeply ingrained prejudices that were challenged in the process. Fear of steelbands had its roots in European fears of 'African' expressive culture, especially its unruly public manifestations during Carnival dating from the emancipation of slaves in 1838. The development of the steelband also coincided with World War II, during which American troops were stationed in Trinidad, and many steelbands took their names and their combative spirit from American war movies and westerns: Desperadoes, Bar 20, Tripoli, North Stars, Casablanca, Destination Tokyo, Invaders, Renegades. Despite the real problem of steelband violence, however, some progressive middle-class Trinidadians promoted the steelband as a distinctive local art form and encouraged the panmen's musical efforts.

One of the most formative encounters between panmen and formally trained musicians took place in the Trinidad All Steel Percussion Orchestra (TASPO), whose musical director was a Barbadian police band director, Lieutenant Joseph Griffith. TASPO was formed in 1950 by a Government Steelband Committee to promote cooperation between panmen from rival neighborhood bands. Their performance at the Festival of Britain in 1951 brought rave reviews from the English press and new opportunities for the steelband at home, including a new steelband category in Trinidad and Tobago's annual Music Festival. The Music Festival not only encouraged steelbands to expand their repertoire of classics, but also gave them more opportunities for feedback from formally trained musicians, including judges.

In addition to such advisory roles, a more active form of middle-class participation in steelbands emerged in the early 1950s, when boys from some of Port of Spain's most prestigious schools began to form their own groups. These so-called 'college boy bands' were at first discouraged by alarmed parents and school teachers. But their popularity surged in the wake of TASPO's success and they quickly became the darlings of middle-class Trinidadians, who hired them to play at fêtes and danced behind them on the road at carnival. College boy bands such as Dixieland and Silver Stars lowered the barriers to middle-class participation in the public carnival, and steelband fever swept across a broad social spectrum in the 1950s.

The 1950s also saw the beginning of gender integration in pan, a less prominent development than the college boy phenomenon, but one that presaged dramatic changes to come. With few exceptions, women in the 1950s played in all-female bands, the most popular of which was Girl Pat Steel Orchestra, which began rehearsing in the home of a middle-class school girl named Hazel Henley in 1951. Girl Pat found a niche playing for a variety of social and cultural events, including Beryl McBurnie's dance shows at the Little Carib Theater, government functions and fundraisers. Many members of Girl Pat played piano and read music and contributed in some degree to the band's arrangements. This musical expertise gave Girl Pat an advantage, and also made middle-class girls in general useful to the established steelbands as competition adjudicators, arrangers and coaches.

Since the 1970s steel pan training in the schools, combined with formal ties between school and community bands, has resulted in an infusion of young, educated pannists into the established steelbands in Trinidad. It is common in the early twenty-first century for students to learn first in their school steelbands and then to join established community bands, often making this transition while they are still in school. Participation by schoolchildren has transformed the rough and tumble culture of many panyards, though the degree of participation by schoolchildren varies significantly from one band to the next. In general, however, the ranks of community steelbands in Trinidad are increasingly filled by young people, many of them women, who were introduced to steel pan in their schools.

Steelband, Calypso and Panorama

In the early 1960s, with steelband violence on the wane, the steelband surpassed brass band music in popularity to become the heartbeat of carnival for lower- and middle-class Trinidadians alike. While calypso music was also an important carnival tradition, it was still enjoyed mainly in live performances at calypso 'tents' (the term that was still used at the turn of the twenty-first century for theaters and other buildings that replaced the actual tents that housed early twentieth-century calypso shows); and calypsonians were eager to augment their reputations through 'road marches' that the steelbands rendered for dancers on Carnival day. In this regard, some people were dismayed by the diversity of the steelbands' repertoire, especially the fashion for 'bomb' tunes, which were arrangements of classical music, film music and pop songs in carnival dancing style. Calypsonians, led especially by Lord Kitchener, responded by increasing the formal and harmonic complexity of their songs to make them better suited for instrumental arrangement. In this way the steelband had an important influence on calypso music.

A concerted effort was also made to pressure steelbands to play calypso, especially through the Panorama steelband competition, which began in 1963 at the first post-independence Carnival. The rules of Panorama required steelbands to play calypsos from the current year, in order to integrate the Carnival arts and display a distinctively Trinidadian culture at the national festival. Steelbands responded with elaborate arrangements that were very different from those they played on the road for dancers. Pan Am North Stars' arranger Tony Williams, for example, used key changes (modulation) and theme and variation form in his winning arrangements for the first two Panoramas. In the wake of North Stars' success, other arrangers – including Bobby Mohammed (Cavaliers), Clive Bradley (Desperadoes), Earl Rodney (Harmonites), Ray Holman (Starlift) and Jit Samaroo (Renegades) – added new ideas to generate a distinctive set of musical conventions for Panorama, including theme and variation, modulation, harmonic substitutions, breaks and jams (passages in which exciting rhythmic and melodic licks are played over a repeating bass line and chords). In this way steelband arrangers found ways to innovate within the constraints of the Panorama competition, and continued to integrate musical ideas from non-calypso repertoires.

The time required to rehearse an elaborate 10-minute Panorama arrangement took its toll, however, on the ability of steelbands to play for Carnival fetes and masquerade. Adding to this, the steelbands' dominance on the road was challenged in the late 1970s by DJ trucks, flatbeds carrying massive speakers that play recorded music at earthshaking volume. As the new purveyors of the road march, DJ trucks exerted a different musical influence on calypso, and especially on a new type of music called soca. Soca songs dispensed with the long narrative texts of calypso (as had many road marches even before soca), stressed rhythm and studio sound effects, and used catchy call-and-response choruses that invited Carnival revelers to participate. This emphasis on rhythm and participation harkened back to older Carnival music traditions, and indeed to the early days of the steelband; but soca provided little harmonic and melodic material for modern steelbands to work with, and its overpowering bass sounds, as experienced through DJ truck speakers, were an attraction that steelbands could not hope to match. The advent of DJ trucks and soca music thus undermined the role of steelbands on the road and caused them to turn most of their attention to Panorama.

These developments also contributed to the growth in popularity of the 'own tune,' the practice of steelband arrangers writing their own compositions for Panorama. An early precedent for this was set in 1972 by Starlift's arranger Ray Holman, who recorded his own composition, 'Pan on the Move,' as a song so as to comply with the rules of the competition, then arranged it for steelband (the only commercially available recording was the Starlift steelband version). With the advent of soca music's more limited harmonic variety this strategy gained more appeal, and it caught on widely when Phase II Pan Groove won Panorama in 1987 and 1988 with own tunes by arranger Len 'Boogsie' Sharpe. In the 1990s the line between own tunes and calypsos became blurred, as steelband arrangers often had their original compositions recorded by popular singers such as Super Blue, Denyse Plummer and even the Mighty Sparrow. While the requirements of Panorama differ from the requirements of calypso and soca, these repertoires still overlap, as steelband own tunes are recorded by calypso and soca artists, and some of those artists continue to pitch their songs to steelbands.

International Spread of Steelband and Soloists

Following the invention of the steel pan in Trinidad in the early 1940s, the steelband spread to other countries. By the early 1950s steelbands had sprung up in Antigua, the US Virgin Islands and elsewhere in the Caribbean. The steel pan was also popularized by the US Navy Steelband, which was founded in Puerto Rico in 1957 and appeared on the Ed Sullivan Show in 1958. Ellie Mannette played an important role in the spread of steelbands in schools in the United States after he moved to New York in 1967, and eventually founded the University Tuning Project in 1992to train players and tuners at the University of West Virginia. Community steelbands have also spread along the paths of Trinidadian emigration, in cities with large Caribbean populations such as New York, Toronto and London, where they participate in Trinidad-inspired Carnival celebrations and steelband competitions. Traveling Trinidadian steelbands and pannists have also sparked interest in the steel pan in non-Caribbean communities. Tuner and player Ralph Richardson, for example, helped to build a large network of steelbands in Switzerland, beginning in the 1970s. Similarly, Rudy Smith inspired a significant steelband scene in Sweden. The steelband has taken root in Australia, Japan and Taiwan as well.

One of the forces driving the international spread of pan is the professional ambition of Trinidadian pan soloists whose living depends on performing and teaching internationally. From the earliest days of the steelband there have been talented individuals who made a reputation as soloists, such as Carleton 'Zigilee' Constantine, whose name is recorded in Lord Kitchener's 1946 calypso, 'The Beat of the Steelband.' In the 1950s and 1960s players such as Emmanuel 'Corbo Jack' Riley (Invaders) or Belgrade Bonaparte (Southern Symphony) thrilled panyard audiences with virtuosic improvisations played over full steelband accompaniment. Those who aspired to solo careers, however, had to look outside Trinidad for year-round work. These have included: Othello Molineaux, who made groundbreaking fusion recordings with Jamaican pianist Monty Alexander and US bassist Jaco Pastorius in the 1980s; Earl Rodney, whose tasteful steel pan work graces calypso recordings by Lord Kitchener and others from the 1970s and 1980s; Rudy Smith, who has performed extensively in Scandinavia since the 1970s and made a number of jazz steel pan recordings; Robert Greenidge, who played the pan solo on the extended version of Grover Washington Jr.'s 'Just the Two of Us' in 1980, and who has played regularly with pop singer Jimmy Buffet since then; Ken 'Professor' Philmore, who does frequent performances and workshops internationally; Ray Holman, who taught at the University of Washington as visiting artist in the late 1990s, does numerous school and university workshops, and recorded his own solo CD; Ron Reid, who taught at the Berklee School of Music in Boston and has recorded two excellent solo steel pan CDs; and the most prodigiously gifted pan soloist, Len 'Boogsie' Sharpe, who performs and arranges internationally extensively and has made a handful of recordings. Credit is also due to US pannist Andy Narell, whose innovative recordings from the 1970s onward blended Caribbean styles with jazz and helped create a niche for pan on radio and in the international recording industry. A younger generation of steel pan soloists includes Liam Teague, who teaches at Northern Illinois University, and others who may be poised to make an impact on popular music internationally.

Suripop

Suripop (or SuriPop) is the name of a biennial songwriting contest in Suriname intended to foster local talent. Since 1982, the year the contest was first held, the term Suripop has become more broadly associated with particular musical characteristics and with music created with a national audience in mind.

Through this competition, a genre of distinctly Surinamese popular music was able to take root. Because the genre developed partly in response to the format and ideals of the contest, a description of the former necessarily includes background information on the latter. The Suripop song festival, organized by the Stichting ter Bevordering van Kunst en Kultuur in Suriname [Foundation for the Advancement of Art and Culture in Suriname], emerged seven years after Suriname gained independence from the Dutch in 1975. It was developed in an effort to strengthen the body of shared national culture and to nurture local talent. Suriname is remarkably diverse, with sizeable Hindustani, Creole, Chinese, Maroon and Javanese populations that remain socially and culturally distinct. In Suripop, performers and listeners have had an alternative to music with a strong affiliation with an ethnic subgroup, or music imported from Europe, the Caribbean, the United States and elsewhere (despite stylistic connections with some of that music).

The Suripop festival and competition are held biennially in Paramaribo, Suriname’s capital city. Initially, it was held every year, but after 1984 organizers decided to hold it every other year because of the cost. At the culminating event of the festival, the finalists perform live and the winner is announced. The contest takes place over several months: for Suripop XV in 2008, songs were submitted in March and the winner was announced in August.

Contest applicants hail from all of Suriname’s major ethnic groups. They are able to compete more than once, but are discouraged from applying several years in a row in order to encourage newcomers. All entries are kept confidential. From the applicant pool, a selection committee chooses 12 finalists, who are all given a cash prize, professionally recorded and included on a Suripop compilation album. Videos and singles of these finalists are then distributed to local TV and radio stations in anticipation of the announcement of the winner at the Suripop festival several months later. Although Suripop songs are featured on the TV and radio all year round, during the competition the recent song submissions are featured so that the public is familiar with the contest entries by the time the final decision is reached. All finalists receive cash compensation in exchange for song royalties; second- and third-place winners receive a larger amount, and the winner receives the largest cash prize and the Jules Chin a Foeng trophy. This trophy, made for the competition by Suralco (the Surinamese division of the Alcoa aluminum company), has become the symbol of the competition and festival, and is featured on the cover of every Suripop compilation.

Songs tend to emphasize shared elements of Surinamese culture and subject matter that is widely applicable across the population. They are intended to appeal to a multiethnic listenership and a diversity of ages as well. While a Suripop song will occasionally be in Dutch or English, the majority are sung in Sranan, a widely spoken Surinamese Creole language. Popular song themes include romantic relationships, the beauty of the natural landscape, or a broad social message. (For instance, in Bromki fu Tamara, a popular Suripop single composed by Claudia Heide and Simone Blitin, the overall message is to support younger generations – 'the flowers of tomorrow need time to grow.') Songs are often highly sentimental, diatonic, mid-tempo, with a relatively thin rhythmic texture. They share many stylistic characteristics with pop ballads in Europe or the United States, including vocal techniques, melodic tendencies and song form. Although the above features have stayed relatively consistent throughout the competition's history, there are a number of Suripop songs that do not conform to all these characteristics. For example, the 12 2008 finalists included two up-tempo dance songs ('Perres Perres Pindas' and 'Mi Dushi'), a song with a religious message ('Opo Wiki Kari'), and a song performed in English by a trio of female vocalists ('A Song of Life').

The Suripop competition is first and foremost for songwriters, with a secondary focus on the singer. The instrumental accompaniment is not given as much consideration by the judges, in part because not all applicants have access to the same resources and also because of the emphasis placed on the words. Synthesized backing tracks are common. Although the prizes are awarded to the song's composer rather than the performer, a number of singers have become associated with this type of music and have helped solidify a Suripop sound. These include Patricia van Daal and Powl Ameerali. Women and men both compete as songwriters and singers. Notably, a higher proportion of women are involved in Suripop than in many other popular genres within the country, possibly because Suripop is a studio-based music, free from the rigors of touring or any disreputable association with local nightlife.

In addition to the compilation CDs issued at the conclusion of every competition, a 10-year compilation of favorites was issued in 1992 and a 'Best of Suripop' album was released in 2004. The accumulation of final entries since 1982 now constitutes a considerable body of music, and many of the earlier Suripop hits are still broadcast regularly. Beyond these recordings, however, there are many other songs that are popularly classified as Suripop. Some of these may have been contest submissions that did not make it to the final round of competition, while others are created independently of the competition but termed Suripop because they are intended for a Surinamese audience and they share stylistic similarities with songs entered in the competition. It is difficult to distinguish the official entries from those that were created independently of the competition because song entries are kept confidential, and only the dozen finalists have their songs circulated with a specific affiliation with the festival.

The characteristic shared by all Suripop songs is that they are intended for a national audience, and thus how a song is distributed also plays a part in how it is classified. Suripop and local media channels have a symbiotic relationship that fosters a national ethos, despite the enduring social and ethnic distinctions that have made it so difficult for such a diverse population to cohere. By playing Suripop songs and music videos, a television or radio station can enhance its reputation as serving a specifically national audience; likewise, a song may become associated with a national audience and a Suripop aesthetic if it is aired on a program that regularly plays Suripop songs. In a country where ethnic groups remain distinct from each other, Suripop is one of the most successful efforts to create a shared form of popular entertainment.

CORINNA CAMPBELL

Surjapop

Surjapop, an acronym formed from *Surinaamse-Javaanse pop* (Surinamese-Javanese pop) and pronounced sur-ya-pop, is a genre of popular music of the Javanese diaspora in Suriname and their secondary diaspora in the Netherlands. It first emerged in the early 1970s in and around the capitol city of Paramaribo. Other names for *surjapop*, used more commonly in the past, are *pop jawa* (which has come to be used more for Javanese pop from Indonesia) and *suripop jawa*, which is to be distinguished from the separate phenomenon of *suripop*.

To understand better the social significance and aesthetic development of *surjapop*, one must consider its emergence within the context of a number of converging historical factors. The growth in the urban migration of Afro-Surinamese Creoles which followed emancipation in 1863 and their subsequent replacement with the massive influx of Asian indentured laborers – starting with Chinese (over 2,500 brought from 1853 to 1870), then Hindustani British Indians (over 34,000 from 1873 to 1916) and finally Javanese (nearly 33,000 from 1890 to 1939) – resulted in a situation in which over 40 percent of the colony's increasingly diverse, multiethnic and politically opposed population of 385,000 were living in greater Paramaribo in the early 1970s. *Surjapop* emerged around the time of Suriname's independence in 1975 as part of a growing cultural nationalism, initiated by the Creole Wie Eegie Sanie movement in the 1950s, which coupled the desire for a democratic independent nation free from colonial servitude with the potential of mass-media technologies in ways that would allow non-Dutch cultural expressions and ideas about self-determination to be heard and respected.

For Javanese, the cultural nationalism expressed through much of the early *surjapop* was fraught with tension between maintaining a Javanese identity inextricably tied to ideas of tradition/history and embracing a Surinamese identity (dominantly Creole) and a future-oriented role in shaping the new nation. In their experiments to create a modern sound that was both Javanese and Surinamese, early Javanese bands such as T-Group-75, Astaria Combo, the TS Combo and Irama Aslie, fronted by singers such as Marlene Maridjan, Ragmad Amatstam, Oesje Soekatma and Eddy Assan, drew from three major influences: Javanese pop from Indonesia, Surinamese Creole *bigi poku* and US rhythm and blues, each significant in their own way to Surinamese-Javanese identity politics.

From their first arrival in Suriname, the indentured Javanese commemorated their homeland by maintaining traditional Javanese customs, language, dances and music, and most had planned to return to Java. Beginning with the postwar resumption of oceanic trade in the 1950s, they imported recordings of traditional *gamelan* and *kroncong* as well as the latest modern music from the newly independent Indonesia. Javanese businesses and organizations bought time on radio stations to broadcast Javanese music and promote their products and objectives. As flights to Suriname became more regular and affordable in the 1970s, organizations raised funds by arranging concerts for pop artists from Indonesia such as Koes Rini, Ervina, Titiek Sandora, Moechsin, Mus Mulyadi and Waldjinah to perform in areas of Suriname with concentrations of Javanese.

Thus, while developing a modern popular music which maintained a Javanese identity, it is not surprising that the Surinamese-Javanese drew much from the pop of their Indonesian-Javanese contemporaries, including the same *pop jawa* genre label. This early Javanese pop combined a slow-to-medium tempo 4/4 rock or 16-beat, filled in with *kroncong*-style rhythmic content ('and-2-and,' 'and-4-and'), with simple harmonic progressions, R&B-style bass patterns, and melodies and themes derivative of *langgam jawa* (a Javanese adaptation of *kroncong*) and *lagu dolanan* (light-hearted Javanese songs). Early hits such as Maridjan's 'Kembang Melati' (1978) and 'Abote Djandjie' (1978) are imitative in melody, arrangement and *langgam*-esque style of the songs of Mus Mulyadi and Waldjinah.

Other contemporary hits, such as Amatstam's 'Hallo Paramaribo' (1979), Maridjan's 'Odjo Nglarake Ati' (1978) and Assan's 'Oen Egie Denki' (1979), embraced the more clearly Surinamese-identified Creole *kaseko* style, while Amatstam's 'Mi Lobi Sranan' (1979) pronounced love for Suriname in a slow R&B style. However, whether these *surjapop* prototypes drew more heavily from Indonesian, Surinamese Creole or American influences, whether they were sung in Javanese or Surinamese Creole languages, or whether they addressed sentiments of love or topical social issues, they were more than industrial moves to capitalize on newly affordable/available mass media technologies and electric instruments. They were youthful statements of Javanese-Surinamese pride in a modern idiom – contentions of Javanese ability to move beyond the traditional *gamelan*, *terbangan* and *kroncong* music associated with old-fashioned, conservative, traditional Dutch subjects clinging to an allegiance to Java. They were assertions of Javanese desire to modernize, embrace Suriname as their own and participate in the newly independent nation as Javanese Surinamers.

Around the same time that *surjapop* was developing in Paramaribo, masses of Surinamers (over 140,000 during the 1970s), a significant number of them Javanese, emigrated to the Netherlands. They established sizeable communities in Rotterdam, Amsterdam and The Hague, proffering both an extended market audience and promotional capital for *surjapop*. Many of the accomplished Javanese musicians, such as Ngoesman (Oesje) Soekatma, Ragmad Amatstam and Eddy Assan, emigrated to the Netherlands and were able to develop *surjapop* further there. For those in the Netherlands, the emotional content of songs that mattered most was their connection to Suriname. However, their departure from Suriname was felt as a 'brain drain' by aspiring musicians.

During the 1980s civil war and heightened, even violent, ethnic tensions slowed cultural production in Suriname and Javanese youth gravitated more toward the American and European hard rock and pop broadcast on MTV. While *surjapop* bands continued to perform at private parties, this was a low point in their visibility. The effect of this turbulent period was to undo some of the nationalistic solidarity by reinforcing ethnic differences.

In the 1990s, as the sociopolitical climate stabilized, a second generation of young Javanese musicians formed bands such as the Kasimex House Band, Music Lovers, Musical Youth, Smooth, Final Step and Mantje's House Band. A younger generation of musicians was also invited from Indonesia, beginning in 1996 with Didi Kempot, who was an immediate success among Javanese-Surinamers both young and old with his simple Javanese poetics and upbeat sound influenced by *campur sari* (a genre of modernized *gamelan*). Kempot inspired the new generation of Javanese musicians and reinvigorated *surjapop*. The founding of Radio Garuda in 1996 and subsequent establishment of three other Javanese-owned, operated and patronized radio stations in Paramaribo (Mustika, Percaya and Bersama) further promoted the development of *surjapop*.

These Javanese-Surinamese bands not only continued the *surjapop* tradition into the twenty-first century but also diversified their repertoire, mastering more danceable styles such as salsa, soca, reggae, *merengue*, *zouk* and reggaeton. At first covering the latest Caribbean hits, they eventually blended aspects of these various styles to make songs with Javanese lyrics, confounding strict stylistic definition of the *surjapop* genre. As these bands have become the most stylistically versatile bands in Suriname, their audiences and opportunities to tour abroad have expanded.

SATHYA BURCHMAN

Swing Criollo

Swing criollo is a popular dance form in Costa Rica, in which the dance steps of US swing are adapted to Colombian *cumbia* music. Emerging in the 1960s in the popular suburban dancing spots of major cities, including the capital San José, it followed a long-established tradition of fusions between United States and South American forms in a Central American country known for such cultural interactions.

The precise origins of *swing criollo* are unclear, as its components have been part of the musical spectrum in Costa Rica since the early days of radio broadcasting in the 1920s and 1930s, when both US swing and Colombian *cumbia* were being programmed by the Costa Rican radio stations from the very moment radio was established in the country. Despite the coexistence of these musics on the air, no evidence of connections being made between the two can be found until at least two decades later. A broadly accepted hypothesis affirms that *swing criollo* began to emerge in the 1950s, when Costa Rican truck drivers who had driven to the United States introduced swing dance steps to dance halls in Costa Rica. It is also possible that this experience had been reinforced by Hollywood movies, shown in Costa Rica, showing the swing dances in the United States.

Swing criollo took root in the urban dance halls and centers of the lower reaches of Costa Rican society, known as *ollas de carne* (meat pots)), after a type of soup of peasant origin, widely recognized as a folkloric icon. The analogy with the dance halls where *swing criollo* flourished might have been a reference to the perception that these events attracted certain loose sexual approaches. In due course the dance became adapted to wider sectors of Costa Rican society, but by the 1970s *swing criollo* was being labeled as common and associated with the mob, to the point that in some dance halls signs clearly warned: 'swing dancing forbidden.' (For a fascinating insight into the dances and social reaction to them, see the 2003 documentary by Gabriela Hernández, *Se prohibe bailar swing* [Swing Dancing Is Forbidden]).

Swing criollo does not have its own particular local music; there is no music produced in Costa Rica that works as a counterpart for the dancing of swing steps. Most of the repertoire takes the form of *cumbias* from Colombia or Mexico. In other words, *swing criollo* is a particular form of dancing the *cumbia* but has not developed as a local musical form.

One consequence of this situation is that the lack of a local music for *swing criollo* dancing produces a sense of alienation: the local product has to depend on outside intervention, in the form of Colombian and Mexican music, and this prevents it from fulfilling its potential. That said, some twenty-first-century musical groups such as Rialengo Taboga Band and Cantoamérica are including original *cumbia*-type music in their repertoires which could eventually be part of the music for *swing criollo* and could help to reduce that feeling of alienation.

The Dance

It is evident that what is danced in Costa Rica has not been taken systematically from US swing dancing. Rather, it is an adaptation, a recreation and a reinvention of the original forms, transformed via the popular creativity of the spontaneous dancers. A brief description of the dance form could be: partners hold one hand while they execute a series of quick steps, almost jumping rhythmically on each foot in turn, then releasing one hand to hold the other, while making turns. The man starts with the left foot and the woman with the right. On the third beat of the music the hand is held, combined with a little hop. The original swing steps have been enriched or substituted by those of *cumbia* and even salsa.

In musical terms, US swing and Colombian *cumbia* show a similar metric rhythmic structure (4/4) and the patterns in the *cumbia* rhythm carried by the congas are very similar to those carried by the snare drum in swing. Also, the patterns of the *güiro* in the *cumbia* are similar to those executed by the cymbal in swing. Such similarities led to easy adaptation of the dance movements and encouraged the formation of the hybrid dancing style.

Swing Criollo Today

The common repertoire of a typical *swing criollo* event may include artists such as Chuco Pinto, Los Españoles, Chon Arauza, Sonora Dinamita, Cumbia Kings, Los Vázquez, Hugo Blanco or Los Sonor, among others. The main promoter of this popular dance, and icon of *swing criollo*, is Ligia Torijano. Ligia has succeeded in exporting Costa Rican *swing criollo* to many places in the world, including the United States, Asia and Europe, and has dedicated over 30 years to the promotion of *swing criollo* in Costa Rica itself. In 1997 she founded her company La Cuna del Swing, with which she has toured in Costa Rica and abroad. Torijano's mission to keep alive this dance has led her to teach youth and adults all over the country by means of dancing centers and dance schools.

Despite its 50-year history *swing criollo* is still in the process of consolidation. It continues to be a favorite dance of those sections of society with lower incomes, and its appeal extends to some middle-class people, including university students and intellectuals.

In a country still in the process of reviewing its identities and the roles of the different social and ethnic groups within those identities, any forced inclusion of all classes under the banner of a national dance remains problematic.

MANUEL MONESTEL

Takirari

Takirari (or *taquirari*) is a musical genre and a dance of the eastern region of Bolivia that includes the departments of Santa Cruz de la Sierra, Ben and part of Pando. The origin of the genre is uncertain. According to José Díaz Gainza (1977), it is derived from an earlier musical expression that was deeply embedded among the Guaraní indigenous people. In the nineteenth century this music spread among the farmlands and mixed with *criollo* (Creole) and mestizo dances ('*saraos*') that were accompanied by *pífano* (fife) and *tamboril* (snare drum). In the early twentieth century the *takirari* took hold in villages and towns, undergoing a new hybridization process that led to its emergence as the popular modern form known today.

The rhythmic structure of *takirari* – in 2/4 with widespread use of syncopation – is used as the basis for other popular songs and it is related to the *wayño* (*huayño*), *carnavalito*, *cumbia* and Bolivian romantic song among other genres characteristic of the border zones shared by Argentina, Bolivia, Brazil and Paraguay. The boundaries between *wayño*, *carnavalito* and *takirari* are not always clearly defined. Depending on the context, a piece can be assigned to any one of these generic denominations. In folkloric festivals as well as in Carnival celebrations in the Puna zone and in the Quebrada de Humahuaca in Argentina these three genres are presented as a potpourri to encourage the audience to join in collective dance. The fluid boundaries between the genres evidence the flexibility acquired by the modes of interpretation of this regional repertoire. The three genres share a duple rhythmic base and the reiteration of a rhythmic pattern (an eighth followed by a sixteenth), but while in the traditional and anonymous *wayño* and *carnavalito* heterometric rhythmic phrases and Andean pentatonic scales predominate, *takiraris* – created for mass consumption in Bolivia and Argentina – may be structured upon mestizo modes derived from the Andean pentatonic scale, or may also present melodies in major or minor mode responding to European influences. Although its formal structure is free, *takirari* can have two or three repeated melodic sections. In most *takirari* instrumental arrangements, the *wayño* and *carnavalito* influence can be identified by the rhythmic pattern played on either the *wancara* or Creole *bombo* and the side-drum.

The mestizo origin of *takirari* is evidenced by the instrumental ensemble, which features contributions from Andean and *criollo* culture, and from the jungle plains of the 'nación camba' (camba nation – a term coined by the multiethnic *criollo*, mestizo and indigenous population of eastern Bolivia that has historical, political and ideological connotations linked to separatist feelings in the region, which clamors for its autonomy and national power within the democratic frame. Camba is also used as a nickname for the place of birth and for the folk music expressions of the *criollos* of Santa Cruz de la Sierra; in addition, it can be used to refer to people of African descent [from Angola] who were brought as slaves starting in the seventeenth century in the tropical regions of Bolivia and Paraguay).

Stylistic differences are evident between the Argentine and the Bolivian *takirari*. For example, the texts in Bolivian *takirari* allude to the landscape and culture of the tropical region where they exist, while Argentine *takiraris* describe scenes from the Carnaval de la Puna Jujeña (Carnival of the Puna region of Jujuy). Nonetheless, the themes in both often depict romantic situations. Even though the instrumental combinations are diverse, the melodic design and sonority are unmistakable features of the genre. Its traditional instrumentation includes *quena*, *charango*, guitar or accordion, mandolin, violin and voices with accompaniment by percussion instruments including bongo, *cabasha* (a gourd that is shaken or rubbed), maracas or *güiro*.

The tempo of the *takirari* dance can be either fast or moderate. The dance is performed by independent embracing couples with free choreography and figures similar to those of the *wayño*, combining a dragged, measured step with a light, almost tiptoed one and abrupt movements from the hips. The costumes worn by the dancers in staged presentations consist of *tipoy* (long, shiny, Guarani indigenous costume) with flowers on the head for the women. Men wear a white shirt, ankle-length trousers and a wide hat. The *takirari* character is cheerful and sentimental.

The performance style popularized by Bolivian singer Gladys Moreno, which featured solo singing, orchestra and choirs, was established as a canon for the modernized versions of *takirari* of the 1960s and 1970s. This style of performing the *takirari* lies at the intersection between the melodic and the folkloric: during successive processes of musical hybridization the genre incorporated attributes from other regional genres such as the *huayno*, and from circum-Caribbean musics that seem to have influenced the taste of producers from multinational labels and of the public in Latin American countries. The *takirari*, which until then was perceived as a folkloric genre, fused itself with foreign rhythms and sonorities – for instance, in 'Quise darte' (I Wanted to Give You) by R. Becerra the singing became more sensual, resembling the romantic repertoire commercially catalogued as 'tropical' music; the percussion and brass sections were enlarged; and the instrumental contracantos (i.e., a type of descant or additional voice) emulated the melodic patterns of the *ranchera mexicana* ending the song with its characteristic *cha-cha-chá.* Similarly, in the famous *takirari* 'Viva Santa Cruz' by Gilberto Rojas one can recognize the sonority of a *morenada*, a traditional Andean genre.

In relation to the words of the modern songs, romantic lyrics stand out, frequently interspersed with passionate reciting in the manner of *telenovelas* performed by duets, as demonstrated by 'Perdóname' (Forgive Me), interpreted by Gonzalo Hermosa and Eva Ayllón on Los Kjarkas' 1997 album *Por siempre* (For Ever). Lyrics may also evoke the tropical landscape as in 'Oh, Cochabamba querida!' (O Dear Cochabamba!) by Jaime del Río, considered a regional anthem. The lyrics of the popular 'Sombrero de saó' (Straw Hat) by Pedro Shimose, recorded by Gladys Moreno in 2004, make reference to stereotyped characteristics attributed by the *kollas* to the *camba culture* – laziness, shamelessness and so on. (The term 'kolla' refers to the person who is self-ascribed as belonging to the original peoples of Qoyasuyu – that is, to the south region [one of the four dominions] of the Tawantinsuyu, commonly known as the Inca Empire. 'Kolla' also refers to the culture that maintains ancestral Andean traditions and preserves the use of Quechua language; in their construction of identity *kollas* differentiate themselves from *criollos* and *gauchos* as well as from the *camba*.)

The *takirari* 'Los Reyes Magos' (The Magi) of the *Misa Criolla* (Creole Mass) by Ariel Ramírez (1964), in which the Magi offer *arrope* (syrup), honey and a poncho of alpaca wool to the baby Jesus, was used on TV commercials. There the image of Saint Balthazar (the *Cambá* Saint) refers to the popular Afro-Argentine cult that existed in the colonial era and still continues in the province of Corrientes.

On records, *takirari* shares space with other genres, and can also be used as the base for romantic ballads as well as *folclore*. The numerous musical groups, players and composers who have cultivated the genre in Bolivia and Argentina include William Centellas, Gilberto Rojas, Percy Ávila, Antonio Pantoja, Gladys Moreno, Alfredo Coca, Los Kjarkas, Tupay, Guisela Santa Cruz, Zulma Yúgar, Gladys Moreno, Ernesto Cavour, Jaime Torres, Chango Rodríguez, Horacio Guarany, Los Nocheros, Los Tekis, Llajtaymanta, Ensamble 2 and La trama.

NANCY M. SÁNCHEZ (TRANSLATED BY PAMELA NARBONA JEREZ AND ZUZANA PICK)

Tambora

In northern Colombia, traditional chants and dances intertwine in a genre known as *baile cantado* (chanted dance), generally performed by a vocal soloist (*cantador* or *cantadora*), a mixed choir, a percussion ensemble and danced by one couple. *Tambora* and *bullerengue* are two of the best-known chanted dances. Besides their differences in context, all the dances differ from one another in certain instrumental and formal aspects, but primarily in the rhythmic patterns performed.

Tambora is an ancestral tradition observed by inhabitants of Loba, a region located around the banks of the Magdalena River at the intersection of Cesar, Bolivar and Magdalena departments. This land was originally populated by Chimila and Malibu Indians, and during the Spanish Colonial regime Africans, brought to the Americas as slaves, left an indelible mark, as they did in much of Hispanic America. Under the influence of a long Spanish domination, villagers of Loba used to celebrate Catholic religious feasts with *tambora*, from Saint Catherine's Day until Epiphany, thus making it a Christmas celebration, a tradition that has been continued in some villages. Like other forms of traditional music, *tambora* has also been performed in secular contexts, with narrative and descriptive lyrics of everyday live experiences, related to the 'amphibian culture' described by Orlando Fals Borda (1986), where land and water conditioned peasants' way of living, in a geographical area known as the Mompox Depression.

In this context, *tambora* is a polysemic term used to designate the celebration itself, the music and dance performed in it, the choral and percussion ensemble, and the most common rhythmic pattern played along certain chants. It may also refer to a cylindrical, double-headed drum played with two thick drumsticks, one of which strikes the drumhead while the other hits the wooden side. This drum is also found in many other types of Colombian music, and has probably given its name to the whole event. Thus the same generic term, *tambora,* is used to indicate the repertoire to be played and danced at a particular celebration.

The *tambora* ensemble is an orchestra comprising a solo singer, a mixed chorus and at least two percussion instruments: *tambora* and *currulao*. The *currulao* is a conical, single-headed drum, played with palms and fingers, similar to other drums found in the Colombian Caribbean region. Along with handclapping it is also possible to use *tablitas* (small boards) to accentuate the pulse of the music, and the *guache*, a tubular metal cylinder with dried seeds inside producing a special sound when shaken. This last instrument has replaced the maracas used in the past.

A solo *cantadora* or *cantador* sings the melody, the choir responds with handclapping and the percussionists play repetitive rhythmic patterns. These patterns are known as *golpes* or *toques*, and they identify the many different rhythmic variants found in this music. The most common ones are: *tambora* (also known as *tambora tambora* or *tambora golpeada*), *tambora alegre*, *tambora redoblada*, *berroche*, *guacherna* and *chandé*.

The dance is usually performed by a single couple. The woman maintains a moderate posture, with her body straight, face upright, one arm extended holding the low part of the *pollera* (long skirt), while the other rests on the waist. The man, wearing a hat '*concha 'e jobo*,' follows her with open arms. He leans forward a little and bounces from side to side, making free and sometimes exaggerated movements, following the woman, simulating courtship and exciting the crowd. In certain chants the couple mime the lyrics. *Tambora* rhythms (*golpeada, alegre* and *redoblada*) are danced in the same way, with a constant circular or spiral movement, except during the *abozao*. In this section, which takes place either at the beginning, in the middle or at the end of the piece, both dancers stay still facing each other while chorus and percussion shorten the rhythmic cycles by half. The *berroche* does not include the *abozao* section and is danced in a freer manner, with a frontal position, and circular and linear movements. The *guacherna* and the *chandé* differ from other rhythms in that their pulses have a ternary subdivision. Neither of the two uses the *abozao* section. They are usually performed while the orchestra goes around the village looking for musicians, alcoholic beverages or money to go on with the feast. However, they may also be performed in one specific area, in which case the dancers face each other and change places every once in a while in a movement called the 'eight.'

GUILLERMO CARBÓ

Tambú

Tambú is an African-inspired music and dance ritual that developed during slavery on the islands of the Netherlands Antilles. Although Bonaire and Aruba lay a certain amount of claim to the Tambú, in the modern era it is most often associated with the island of Curaçao, the largest of the Netherlands Antilles. Through the centuries, Tambú has experienced multifarious reincarnations – transformations that in the end not only transcended but eclipsed what was presumably the ritual's African-centered archetype. It has stepped up to fill a diversity of social roles and purposes both sacred and secular. As sacred ritual, Curaçaoan Tambú evolved into an avenue for facilitating the worship of deities and affording communion with ancestors. On the secular side, Tambú became tantamount to an oral newspaper, a medium for the documentation of local news and gossip, and for its dissemination to the island's distant corners. More recently, the continuing evolution of Tambú has produced a legendary Curaçaoan New Year's event through which the bad luck perceived to have accrued during the previous year may ostensibly be driven away. During the so-called Tambú Season, Curaçaoan youth revel in what they have come to consider party music.

Whatever its function, sacred or secular, Tambú maintains the same performance practices. Typically, it is announced by a lead singer (*pregon*), who calls people to the ceremony with a short, declamatory *a capella* introduction (*deklarashon introduktorio*). The Tambú that follows may be said to reflect a binary form, consisting of two main sections: the *habrí* and *séru*. During the *habrí*, the *pregon* communicates the performance-specific Tambú message while the audience and chorus keeps quiet, paying their undivided attention, careful not to miss even a word. The second section, or *séru*, commences with a hand wave or vocal call from the *pregon* to let audiences know they are now free to dance and join in. Dancing with one heel grounded in place, participants utilize the toes of the free foot to stomp rhythmically, enhancing the already complex *séru* rhythmic line.

The modern Tambú drum or *barí* ('barrel') is made from pieces of wood glued into a cylinder shape, its top spanned with sheepskin. It is played with a closed hand technique, while at least two iron instruments (known collectively as *herú*) are also played. During the *habrí* section, performance protocol dictates that the *herú* serve as timekeepers while the *barí* drummer is free to improvise. In the *séru*, however, these roles are reversed. Now the *barí* is expected to maintain the downbeat while the *herú* provide quick, repetitive triplet phrases interspersed with episodes of improvisation. The most commonly used *herú* is the *chpapi*, an indigenous instrument made from the metal end of a garden hoe, which, hit repeatedly with an iron bar, has its origins in the harvest ritual Seú.

Although Tambú's binary form connotes, on one hand, a definite structural symmetry, its actual phraseology seldom maintains a uniformity of length. Instead, asymmetrical phrases generate pulse rhythms that more precisely conform to the rhythmic speech patterns of the local creole language, Papiamento, with Tambú's intervallic relationships and modal melodies reflecting the common tonal inflections of spoken Papiamento.

With a rising number of Curaçaoans migrating to the Netherlands, commercialized parties featuring Tambú have become increasingly popular overseas. Fueled by the Netherlands' growing cultural diversity, the Dutch Tambú parties emerged alongside Turkish, Moroccan and Surinamese parties as part of a trend among Holland's ethnic youths to organize get-togethers by and for a single ethnic group. The Dutch Tambú parties have continued to widen in scope, however, with contemporary singers who live in the Netherlands composing Tambú texts that expressly convey the challenges specific to the Curaçaoan migrant experience.

Tamunangue

Tamunangue is a secular music and dance cycle that takes place in a folk religious context in the Western State of Lara, Venezuela. It is connected with the adoration of Saint Anthony. This genre has hardly figured in the commercial music industry context, but it is considered to lend prestige to the repertoires of *grupos de proyección* (popular organized staged folk groups) due to its humorous, eye-catching character. In addition, *tamunangue* sometimes is adopted by artists who perform Latin American *canción de protesta* (protest song) and arranged for popular orchestras.

The term *tamunangue* has been disseminated by scholars and journalists, and it derives from the name of a particular drum of the Lara region. Nevertheless, the genre's original name is *sones de negros* (literally, musical expressions of black people).

Since the 1940s, when a particular aesthetic presentation style developed, the female participants in *tamunangue* usually wear long, wide and flowery skirts or dresses. The men complete their attire with a hat. Since the 1980s both men and women carry a wooden stick. Before entering the dance, the performers, two by two, arrange their sticks in the sign of the cross before the image of Saint Anthony. In this way they indicate their willingness to sacrifice themselves in order to serve him.

Before the dance cycle, the performers customarily hold a ceremonial wake for the saint, singing polyphonic *salves* and praying. Next they perform *La Batalla* (The Battle), an elegant and skillful game played by two men with sticks. In the meantime the other participants sing 'Adoration of Saint Anthony.' Now begins the *tamunangue* dance as such. They always follow the same sequence: *Yiyivamos*, *La Bella*, *La Juruminga*, *La Perrendenga*, *Poco a Poco*, *Galerón* and *Seis Figureao.* These pieces may be categorized into types with musical and choreographic similarities. One type (*La Bella*, *Galerón*, *Seis Figureao*) is sung by consecutive duos in two voices and danced by successive couples in free choreography; only in the *Seis* are the figures of the three participating couples coordinated. In the other type (*Yiyivamos*, *Juruminga*, *Perrendenga* and *Poco a Poco*), a soloist singing partially improvised texts is answered by a chorus. The independent dance couple translates the often humorous songs into movements and actions, generally linked to the peasants' work and lives.

The music is performed on instruments characteristic of the Lara region. Chords are performed by an ensemble of strummed stringed instruments of the lute family featuring frets along the fingerboard: the *cinco*, *mediocinco*, *requinto* and *cuatro.* These instruments differ in size, number of strings and tuning. All play basically the same fundamental harmonies and ternary rhythms, and each instrument contributes its unique sound to the composite variety of timbres. The string ensemble is accompanied by a large skin drum, played by one player with the hands in a horizontal position, while another musician strikes the drum's wooden body with two sticks. Another drum, this one double-headed, is played with two drumsticks, accompanied by a pair of maracas shaken in one hand.

Some theories (Guss 2000; Gonzalez 1993; Aretz 1970 [1956]) support the idea that the historical dance of the Christians and Moors was reinterpreted in the *tamunangue*. In Latin America, people consider Saint Anthony to be black, in spite of his Caucasian appearance, because of his role in the fusion of the races. So he must defeat a horde of unfaithful invaders and create a new type of people: the mestizo. In this sense all seven dances of the *tamunangue* represent not only an ethnic conflict between black and white, but also a matter of power and domination, where all wild and indomitable phenomena can be civilized and domesticated (Guss 2005, 209). For instance, in the dances a foal becomes an obedient horse, the ground yields fruits and the woman pleases the man.

In the early twenty-first century, Saint Anthony's devotees have been growing in number in Venezuela, especially in urban environments and among the middle classes. These devotees conserve the tradition of organizing complex meetings to keep their promise to the saint by playing, singing and dancing *tamunangue.*

Tango

The word 'tango' describes a dance, a song and a purely instrumental music form. It was born and developed in the Río de la Plata area and its two most important cities, Buenos Aires (Argentina) and Montevideo (Uruguay), but the center of its activity has always been Buenos Aires. It originated in a process that culminated at the end of the nineteenth century, shaped by different elements: the musical activity of black slaves on the Atlantic coast of South America and the modifications that they made to European music; other genres including the American *tango* (*tango americano*), the *habanera* and the *milonga*; and popular music melodies of Argentina. *Tango* built upon these influences but was new in its rhythm, structure and melody.

One of *tango*'s most original aspects is its choreography. *Tango* is danced by a couple in a close embrace, with *quebradas* (swaying hips), *cortes* ('cuts,' pause or interruption in the movement) and more or less consistent choreographic figures, combined and performed in a totally improvised form.

Any *tango* can be danced, whether it is a song or instrumental. A large number of *tango* pieces of instrumental origin later included lyrics and many others were composed with lyrics, or began with lyrics around which music was composed. *Tangos* with lyrics are often called *tango canción*, though this denomination does not refer to a specific subgenre of *tango.* Some others are called *tango romanza*, when they are predominantly instrumental and melodic, and *tango milonga*, when they are more rhythmically oriented.

The history of *tango* may be divided into five stages:

1. The *Guardia Vieja* (Old Guard), from its origins to 1920. This stage comprises the *tango*'s beginnings and its consolidation as a differentiated genre. In this stage, the *tango* was strongly based in its place of origin and also spread worldwide by traveling musicians and later by recordings;
2. The *Guardia Nueva* (New Guard), from 1920 to 1935, in which *tango* made a qualitative leap due to its melodic, harmonic and interpretive development and in which different interpretive schools arose;
3. The Golden Age, from 1935 to 1955, in which a large number of high-level orchestras appeared and the popularity of *tango* dancing and of its performers, singers, instrumentalists and bandleaders was enormous. The most significant developments took place in the 1940s.
4. The *Nuevo Tango* (New Tango) period, from 1955 to 1985. This stage began with the avant-garde movement, but the decline of the traditional genre also took place. The common denominator of the genre in these years was a great struggle between the traditionalists and the avant-garde led in an almost univocal form by Astor Piazzolla, along with a general process of decay and diminished popularity that only began to change in the mid-1980s.
5. The rebirth of *tango*. From 1985 to the early twenty-first century there was a renaissance of activity and new *tango* styles and musicians emerged.

The Old Guard: Origins to 1920

It is very difficult to ascertain with accuracy the origin of *tango*. Various elements contributed to a process that took place during the latter years of the nineteenth century, leading eventually to the emergence of a genre that was given the name 'tango.' The single work in the musicological field that explores thoroughly all the precedents that converged into *tango* is the *Antología del Tango Rioplatense, Vol. 1* (ATR-1) (Novati 1980), carried out by the Instituto Nacional de Musicología 'Carlos Vega' of Argentina, which is followed in this article to explain the origins. This work treats both Montevideo and Buenos Aires as a single geographic area. No serious study can be carried out on *tango* without bearing in mind this research, either to follow it or to criticize it. The research centered on the analysis of a sample of 700 sheet music pieces and over 500 recordings (78 rpm faces), widely representative of the genre until 1920. The sheet music samples dated from almost 1890 to 1920, when *tango* was already established as a genre, so analysis was not able to display the process of its origin, but rather the traits that the new genre presented in its notated form.

There is no precise documentation of the nineteenth-century process that resulted in the development of *tango* in the Rio de la Plata area (in Buenos Aires and Montevideo). The diverse elements mentioned in ATR-1 concerning the origins of *tango* are: the music of Africa; the musical activity of black Argentinians; the *tango americano* and the *habanera*; the *tango español* or *tango andaluz*; the *milonga*; the folk and popular melodic themes and phrases of Argentina. There is some documentation to support theories regarding the influence of the *tango americano* and *habanera*, *milonga*, and folk and popular melodies and music of Argentina, while claims regarding the influence of Andalusian, African and black Argentinian music have proved more difficult to support with tangible evidence.

Given the lack of substantive evidence, there has been some debate regarding the possible influence of African-derived music on the origins of *tango*. Musicologists who analyzed *tango* music and dance around 1900, when *tango* was already popularized, did not find what they considered to be African traits (cf. ATR-1), and scholarly investigation has produced no documented evidence of African roots. Musicologists Carlos Vega (2007 [1966], 32) and Jorge Novati (1980, 2) are among those who do not consider the *tango* to be of African origin. Further, historical documentation in sources such as newspapers, traveler testimonies and police reports is limited to descriptions of the modification of European patterns such as, the transformations that the *contradanza* underwent in Cuba (Carpentier 1972, 142), which gave origin to what was alternately called *habanera*, *tango american*o or simply *tango* (Novati 1980, 2–5).

Because of the relatively low number of Afrodescendants in Argentina and the historical processes whereby black Argentinian culture has been marginalized, it may be argued that the absence of documentation of black influences is to be expected and does not necessarily mean there were no black influences. While the number of blacks in Argentina is much smaller than other regions of North and South America, there were times when the black population of the city of Buenos Aires reached 10 percent. In Montevideo, by comparison, by the early nineteenth century the black population was 50 percent. The slave trade began in Argentina in 1590, and 35,000 enslaved Africans were brought between 1590 and 1790 (Novati 1980, 2). However, by the first half of the nineteenth century black and Creole populations diminished, due to the decrease in slave traffic as well as the death of blacks serving in the army (Lobato and Suriano 2000, 93; 208). The first national census in 1869 did not report the ethnic composition of the population, which led to black invisibility and obliteration of black Argentinian culture in the hegemonic discourse (Cirio 2008). The cultural activities of Afro-Argentinians did not cease during this period, but they remained in home-based, private practices that currently are very difficult to recover.

Thus, the idea of the African and/or black Argentinian origin of *tango* is broadly supported in non-academic publications. One serious, but unconfirmed, theory regarding the possible influence of black music of Argentina on the origins of *tango* was that in Buenos Aires certain pieces named *candombe*, of African derivation, are similar melodically and rhythmically to *milonga* and early *tango* (Old Guard), and thus may be predecessors (Cirio 2007). Coriún Aharonián (2007, 68) affirms that the music of black slaves probably influenced *tango*'s origins, at least in Montevideo. In fact, Goldman (2008) studied documents of Afro-Uruguayan societies from the period between 1870 and 1890 in Uruguay and found documentation of the presence of Uruguayans of African descent in the environments where the *tango rioplatense* was later born, and he noted that music and dance that emerged in the 1870s shared traits with what decades later was consolidated as *tango rioplatense*. The thesis of African origin may also derive from the fact that the word *tango* (or *tambo*) was related from very early times to musical practices of blacks in the Americas. The term's use has been documented from Rio de la Plata to the Gulf of Mexico with a similar meaning: lodging, sale, party and meeting.

Regarding influence from Andalusia, Argentinian musicologist Carlos Vega developed a hypothesis that holds that a certain Andalusian *tango* gave birth to the Argentinian *tango*. The authors of ATR-1 consider this hypothesis poorly documented and invalid, although the ATR-1 authors accept many of Carlos Vega's other findings on *tango* (Kohan 2007). Much of Vega's work on *tango* was unpublished, though accessible in the files of the INM at the time, but has since been published (Aharonián 2007).

Pablo Kohan (2007) argues that Carlos Vega favored the idea of the Spanish origin of *tango* because he supported a pro-Hispanic trend (promoted by official sectors that sought to build Argentine national identity with strong links to European models) that was growing at the beginning of the twentieth century in Argentina as a reaction against massive immigration. Vega's theory, stressing the Spanish origins of Argentinian social dances and minimizing the influence of the music and dance of local populations, is located in the process of the establishment of the emblems of Argentine nationality that began after 1930 when *tango* had already reached its status as a cultural symbol of Argentina (Garramuño 2007).

The elements for which documented evidence has been clearly identified in the process of the creation of the genre are: (a) the *tango americano* or *habanera*; (b) the *milonga*; and (c) the motives and melodic popular airs of the Rio de la Plata area.

Tango americano or *habanera* originated in the *contradanza*, a music-and-dance genre of European origin that came to the Americas with French and Spanish settlers and had developed its own Cuban form by the turn of the eighteenth century. From the *contradanza* came the *habanera* (also called *tango*, but not yet the *tango* of the Rio de la Plata region), with African influences. The *habanera* returned as a novelty to Europe, where it took the name *tango americano*. This *tango americano* spread widely in Spain and the Americas beginning in the middle of the nineteenth century. In Europe, it bifurcated into two genres: the *habanera* (a ballroom dance by an embracing couple) and the *tango americano* (spread mainly in the theater), which had no specific choreography.

The *habanera* in its European ballroom dance form came from Europe to Rio de la Plata in the first half of the nineteenth century, in two variants: (a) a ballroom dance consecrated in Paris and (b) a version that spread among the popular classes in marginal dancing venues (mainly brothels). This latter version came by ship across the Atlantic, mainly from Cuba to Montevideo, Uruguay, brought by sailors and passengers. Its choreographic style was characterized by a 'broken' (*quebrado*), hip-shaking style of dancing and a close embrace. This *habanera*, which is considered to be one of the sources for the origin of *tango*, did not disappear with the emergence of the Rio de la Plata *tango*, but it did not survive for long.

The *milonga* already existed around 1880 as a musical entity in its own right both in Argentina and Uruguay. The word was also associated, in both Argentina and Uruguay, with danceable music or a place for dancing, and it was regarded as music of the *compadrito* or lower-class person (inhabitant of the urban outskirts). The *milonga* was a dance of the popular classes with no ballroom version. Several of its features were adopted by *tango*: the displacement of accents, the beginning of themes on upbeats, and the brief and descending melodies. Also, the *milonga*'s choreography was in the broken (*quebrado*) style. The *milonga* spread through the popular theater (*género chico*), by means of the *payadores* (vocalists who improvised a recitation or singing with guitar accompaniment) who used it as background for their lyric improvisations. At the circus it was the favorite genre to accompany satirical texts. Around 1890 it was already mentioned in dictionaries (Granada 1890, 282) as dance and as song. It was in vogue until toward the end of the nineteenth century and later it endured as a folk genre in the countryside.

Finally, traditional motives were commonly used, providing evidence of *tango*'s character as collective cultural asset. These elements include rhythmic designs, melodic movements, cadences and folk melodic airs. The denomination of *tango criollo* appeared but the difference between the latter and other *tangos* was purely nominal.

Toward the end of the nineteenth century *tango* was well developed as an emerging genre and presented the following musical aspects: the *habanera* rhythm in the accompaniment (dotted eighth note, sixteenth note and two eighth notes) and elements of 'broken' rhythm (rests, syncopation, displacements of accents and upbeat phrases). From the listener's perspective, these characteristic elements were typically employed as unexpected rhythmic devices. The characteristics of early *tango* can be appreciated in the compilation of recordings published in the ATR-1 that includes recordings from 1907 to 1920. Some interesting recordings also are kept in the Lehman Nietsche collection of the Berlin Museum (García 2006). Once established as a genre, *tango* developed following its own logic. Its distinctive choreography contributed greatly to its dissemination, both in Rio de la Plata and abroad. The history of *tango* as dance began in the early years of the twentieth century. By that time *tango* was already popular, described in Rio de la Plata newspapers as a fashionable piece in Carnival dances. The *habanera* still was present, but soon thereafter fell into oblivion. The seriousness of the dance (sometimes confused with sadness) became a well-known characteristic.

In addition to the Carnival balls, the dance was practiced beginning around 1890 at recreational societies with their own orchestras called *rondallas* (comprised of *bandurrias*, violin and guitar). In brothels, music was performed by the early great pianists/composers of *tango*, including Manuel Campoamor, Rosendo Mendizábal, Alfredo Bevilacqua and Enrique Saborido. *Tango* was also found in restaurants or summer resorts, where it was danced at night with small ensembles, in the dance halls (*academias*) where customers paid to dance and at rather sordid dancing venues in the Palermo district.

Beginning in 1901 there was a profusion of *tango* sheet music for piano published in Buenos Aires, coinciding with the import of pianos and mechanical playing machines (cylinders and discs). Between 1905 and 1910 *tango* was described as a common practice and the first criticisms of its social atmosphere appeared, characterizing it in newspapers and magazines as lewd and libertine, when commenting on the dance at Carnival. Other dances, including *habanera*, polka, mazurka and *cuadrilla*, disappeared. *Tango* choreography underwent a double change: it was simplified for the common people, and it became more difficult as a contest dance.

Tango groups began to include the *bandoneón*, a type of German concertina named after its creator, Heinrich Band. The *bandoneón* arrived in Argentina around the 1880s and was included in *tango*'s accompanying instrumental ensemble, the *orquesta típica*, between 1905 and 1907. In 1907 the first recordings of *tangos* were performed by military bands and *tango* singers (not exclusively devoted to the genre), generally singing simple lyrics of costumbristic, humorous or picaresque type. The first recorded orchestral *tangos* were performed by quartets with *bandoneón*, violin, flute and guitar, such as the Greco Orchestra that in 1910 made the first recording of an *orquesta tipica criolla*: the *tango* 'Rosendo.' The international companies that recorded *tango* in these years were Columbia and Victor. Local labels included Atlantic, Era and Phono D'Art, among others.

Tango's first international diaspora occurred between 1900 and 1914, resulting from *tango* dancer Casmiro Ain's demonstrations in Paris and London in 1903 and the subsequent arrival in 1907 of the first Argentine *tango* musicians to Paris to make recordings for the 'Argentine market (Villoldo and Gobbi). At the time, *tango* was viewed by Europeans asseductive because of its dance style, not its music. Dance academies were founded in Paris and the aristocratic circles of the city become enthusiastic promoters of the genre, although the dance was subjected to several modifications in order to make it more 'decent.' In 1910 *tango* entered the aristocratic Paris dance halls, brought by performing artists of *varieté* and music hall and by young Argentine elites. Beginning in 1912 *tango* was very popular, and between 1913 and 1914 there was a true 'tangomanía' in Paris. Soon dance teachers proliferated there. In Paris, musicians and publishers preferred to write their own *tangos*, and the first written codifications of *tango*'s dance appeared in Paris.

With the prestige of victory in Paris, *tango* began its journey through the great capitals and cities, including Rome, London, Tokyo and New York (Pelinski 2000; Savigliano 1995). World War I imposed a break, but in 1919 the *tango* fashion reappeared with renewed energy in Europe. Due to the Parisian success, after 1911 the practice of *tango* became widespread in Argentina, through sheet music, dance books, records and dancing teachers. The Buenos Aires elite felt compelled to learn it and to answer for its acceptance or rejection. New ensembles appeared, including those of Eduardo Arolas and Roberto Firpo, and the pianola entered the country.

Beginning in the early twentieth century, *tango*'s musical form was divided in 95 percent of cases into three sections of 16 bars comprised of four phrases each. The third section was also called *trio*. The different sections displayed neighboring tonalities, whereas the rate of harmonic change was quite slow and concentrated around the tonic, dominant and subdominant, with secondary dominants. At first only a few *tangos* were sung, because *tango* was mainly a dance. Therefore melodies were ample and not fit for singing, frequently structured with arpeggios. *Tango* is musically defined by the motive; the mere stating of a motive represents in advance the character of a *tango* piece. The motives include accents that contrast with metric convention, entrances on the upbeat and syncopation.

Around 1915 the choreographic panorama of *tango* was formed by three subspecies: the *tango criollo*, whose basic characteristics were improvisation and invention along with a variety of figures; the smooth (*liso*) *tango*, which altered the *tango criollo* by suppressing figures; and ballroom *tango*, the product of local systematizations with European influences.

Around 1920 quartets with *bandoneón*, guitar, flute and violin were modified. Piano replaced guitar, winds disappeared and the groups increased their number, sometimes to six members.

In the Old Guard period groups did not play written arrangements. Performance practice involved playing according to previous agreements between the musicians. Sections were repeated without variation as many times as necessary to fill the three-minute time allotted for recordings. During this stage there were no differentiated styles and more or less all ensembles played in the same way.

Toward the end of the period some gradual changes took place. The rigid 2/4 formula of dotted eighth note, sixteenth note, two eighth notes, began to alternate with the uniform beat of four eighth notes in 4/8 (that would be standardized in just a short time), although *tango* was still written in 2/4. On the other hand, some melodies narrowed their scope and new melodic designs appeared that set the conditions for the vocal *tango* (Kohan 2010).

The New Guard, 1920–35

During the New Guard period, *tango* matured as a form and distinct stylistic and interpretive schools emerged. By 1920 Orquesta Típica Select, led by bandoneonist Osvaldo Fresedo, inaugurated a more modern sound that announced a new style, exemplified in recordings such as 'Don Esteban' (Sir Steven) and 'El taura' (The Brave Man), which was already being developed by Eduardo Arolas (see, for example, the Arolas recording 'Moñito' [Little Bow]). Recordings from this period demonstrate a clear differentiation of roles between instruments and arrangements that allow the showcasing of each instrument type. The orchestra fronted by Fresedo, along with those led by pianists Juan Carlos Cobián and Carlos Vicente Geroni Flores, experimented with innovations from 1918 to 1924 (see, for example, Fresedo's recording 'Los dopados' [The Doped Ones], Cobián's 'Shusheta' [Playboy] and Flores' 'La pecadora' [The Sinner]). Finally in 1923 Julio De Caro formed a sextet that would define the *tango* canon of the New Guard, contributing the major orchestral innovation during the New Guard era. De Caro's style became the basis for the mainstream of progressive *tango*. De Caro arrangements include instrumental solos, sections in which only the *bandoneón* or piano play and counterpoint between the violins and *bandoneóns*. The *bandoneóns* lead entire sections with the accompaniment of other instruments. The melody is played with an intense rubato. Examples of these features may be heard on De Caro's recordings of 'Todo corazón' (All Heart) and 'Amurado' (Forsaken).

New orchestral styles arose, with a basic division between the 'traditional' Old Guard style and 'progressive' new groups, mainly those conducted by Julio De Caro and Osvaldo Fresedo. The progressive groups incorporated a new and rich instrumental output and had the explicit goal of raising *tango* to a superior musical level while retaining its popular essence and danceable features. The traditional style, mainly represented by Francisco Canaro and Roberto Firpo, remained tied to the older approach to orchestral performance, including straight, rigid demarcation of four beats and clear exposition of melodic lines in perfectly danceable versions.

Both traditional and progressive *tango* compositions were still in two or three sections of 16 bars in ABACA or ABCBA forms and all their possible variants but soon the third section disappeared, and the new *tangos* composed in the 1920s comprised only two sections. For variety, composers used different instrumental combinations, different bridges between sections, and variants in the accompaniment rhythm. In general traditionalists created one instrumental scheme for a section that was repeated each time the section returned. On the other hand, progressivists tended to employ a greater variety of resources.

Typical compositional characteristics of the New Guard era may be heard in the recordings of works by its major orchestras. De Caro, who set the tone for the era, recorded 420 sides of 78-rpm discs from 1924 to 1953. All of them have continued to be available but only a few were reissued by the labels that recorded them (RCA Victor, Brunswick, Odeon, Pathe). For instance, Euro Records have reissued several recordings from the Victor series. These recordings demonstrate how the group never repeated a section with the same instruments, used numerous bridges between sections, added secondary melodies and frequently employed instrumental solos and dynamic variation. The orchestration almost as a rule was varied every two bars. This atomization in the orchestral writing was rich and complex but simultaneously logical, systematically incorporating a series of resources typical of *tango*: '*fraseos*' (articulated phrasing) of the violins and *bandoneóns* (melodic segments in a strongly rubato style), '*lloros*' of *bandoneóns* (prolonged clashes of minor seconds), and anticipations and suspensions at phrase endings.

Roberto Firpo recorded about 2,700 sides of 78-rpm discs between 1912 and 1941 for the Odeon label. Not all of those recordings have continued to be available; only about 50 percent are preserved in the hands of collectors. Firpo's *tango*s (such as Tata viejo' [Old Grandpa] and 'Cuando llora la milonga' [When the *Milonga* Cries]) typically displayed slow tempos, with few simple bridges, violins in legato, little use of secondary melodies and the piano in a leading function. The style of Francisco Canaro was still more conservative with four eighth notes to the bar and strict adherence to the published piano sheet music. The use of instruments across sections is repetitive, which may be heard in recordings including 'Cuesta arriba' (Uphill) and 'Yo no se qué me han hecho tus ojos' (I Don't Know What Your Eyes Have Done to Me). Canaro recorded 3,700 tracks from 1915 to 1969, a large number of which are still preserved. Neither Canaro nor Firpo has been favored with systematic reissues, and as a general rule only 'greatest hits' and pieces so labeled have been made commercially available. By comparison, bandoneonist and bandleader Osvaldo Fresedo's *tango*s display a polished orchestral sound, highlighting the violins with few instrumental solos and brief secondary countermelodies and bridges. Generally, he obtained variation with dynamic resources. Fresedo recorded 1,150 sides of 78-rpm discs between 1917 and 1957, and 100 tracks in 33 rpm from 1958 to 1980. The last recordings have been made available, but the huge volume of production from the period between 1917 and 1928 (more than 700 sides) has been reissued more slowly.

Composers Juan Carlos Cobián and Enrique Delfino began to produce new *tangos* with more singable melodic lines that some specialists describe as t*ango romanza*. A new type of lyric for *tango* as a song was established, with a plot or story line. The first and model example of this new *tango* style is 'Mi noche triste' (My Sad Night, lyrics by Pascual Contursi and music by Samuel Castriota).

At the same time the figure of the *tango* singer arose as a star in the singing world. *Tango* with vocals had two streams. The orchestras used an *estribillista* (refrain singer, crooner), who sang only one section of the lyrics, generally in the central section of the piece. On the other hand, there were specialized *tango* singers such as Carlos Gardel or Ignacio Corsini, who sang *tangos* with orchestra or guitar accompaniment. There were other well-known singers including Charlo or Marambio Catán, but they did not reach the popularity or number of recordings of Gardel or Corsini. During this stage, between 1920 and 1935 alone, the two singers recorded an approximate total of 1,400 songs. All of these records have continued to be available, but only Gardel has been awarded systematically chronological reissues. It was also a period of great female singers who doubled as movie idols, including Rosita Quiroga, Azucena Maizani, Ada Falcón and Mercedes Simone.

The New Guard incorporated larger orchestras with more skilled musicians, and the continued activity provided stability while at the same time avoiding routine and repetition. Repertoires were enlarged and all the orchestras made a great number of recordings.

The *orquesta típica* developed a standard ensemble of two *bandoneóns*, two violins, piano and double bass. The orchestration was not performed strictly from written notation. While musicians used a piano score, they added countermelodies, and *bandoneóns* employed special features such as rubati and anticipations. It was not until about 1932 that professional arrangers such as Julio Rosemberg, Julio Perceval and Gutiérrez del Barrio wrote charts for the renowned orchestras.

In the New Guard *tango* was no longer a phenomenon of the urban outskirts and was accepted both by popular and aristocratic classes. It was possible to hear it in bars, cabarets, cinemas, theaters and ballrooms. It spread through piano sheet music copies, magazines including lyrics, recordings and radio. In this professionalized stage, managers became necessary and author copyrights were established. *Tango*'s peak in popularity was evidenced by the great number of concerts and venues for listening and dancing. From 1926 to 1928 *tango* orchestras made 800 annual recordings, a number never again attained, and in the period 1920–1935 a total of 8,000 recordings were made (of which approximately 20 percent were made by the progressive orchestras).

In 1929 the economic crisis deeply affected the popular masses that supported *tango* and suddenly the *tango* vogue disappeared. The recorded output fell dramatically to a level of approximately 150 annual recordings in 1933. The people withdrew from *tango*; they no longer danced it. In fact, the first written history of *tango*, published in 1936, regarded *tango* as something that was coming to an end (Bates 1936). Only the most important orchestras survived. Many musicians organized small groups in the Old Guard style, launching a 'revival' that led the public to regard *tango* as something historical that was no longer in vogue.

The Golden Age, 1935–55

Beginning in the mid-1930s, and as the world economic crisis was abating and industrial growth was taking place, *tango* returned to the dancing venues (clubs and carnival dance halls) with a renewed energy. New cabarets opened, and *tango* entered what would later be seen as a Golden Age, in which it was established as an easily danceable style. Orchestras grew to an average of 12 musicians, arrangements were very carefully disposed and the work of professional arrangers was considered very important. Singers also grew in importance and sometimes became more famous than the orchestras. Orchestral styles were derived from those in the New Guard. Most important, dancing and hearing *tango* was now a widespread cultural phenomenon.

Dancers were strongly attracted by a new style with faster tempi and straight demarcation of the beat, provided by Juan D'Arenzio's orchestra, based at the Chanteclair cabaret. New audiences frequenting cabarets were formed by the emerging bourgeoisie, a result of industrialization. At its peak in the 1940s this *tango* boom provided work for all the musicians of the last decades as well as a new generation. Under the presidency of Juan Domingo Perón, beginning in 1946, mass culture became industrialized: a national cinema, the radio and the recording industry, all of which has begun in the previous decades, grew significantly in size and were closely linked to *tango*. *Tango*'s apex of success and popularity in the 1940s is parallel to the peak of Peronism, although there is no direct relationship between the two. By that time *tango* was consumed massively by the middle and lower classes.

During this renaissance the traditional sextets gave rise to an enlarged instrumental formation, still named '*orquestas típicas*': four *bandoneóns,* four violins, sometimes viola and violoncello, piano and double bass. As Decarean sextets languished around 1935, violinist Juan D'Arienzo, who had led a sextet in 1928, began to develop a new style ideal for dancing (within the traditional trend): simple phrasing and instrumentation and a marked rhythm, four beats to the bar. The simplicity of this style was deplored by admirers of the baroque style of the progressive outfits, but the 1940s would not have been the same for *tango* without the presence of D'Arienzo's orchestra and others that adopted his style, including Rodolfo Biagi, Alfredo De Angelis and Héctor Varela. Between 1935 and 1975 D'Arienzomade approximately 1,000 recordings for Victor, almost all of which have been reissued.

D'Arienzo's orchestra contributed to the formation of a new *tango* public. Later the orchestras derived from the progressive schools benefitted from this new audience. At the start of the 1940s there were several progressive orchestras: Alfredo Gobbi, Osvaldo Pugliese and Aníbal Troilo were formed based on Decarean aesthetics, along with the orchestras of Pedro Laurenz and Lucio Demare that were already playing with the same style (their recordings have been reissued).

In the progressive field the emblematic figure of the 1940s was Aníbal Troilo, bandoneonist, bandleader and composer. Troilo was the incarnation of bohemia in *tango*; he was a composer of very well-known *tangos* and he was also a *bandoneón* player and leader of his own *orquesta típica*. The singers of his orchestra were exemplary; passing through the ranks of the Troilo Orchestra assured a singer of the success needed to later begin an independent career. Troilo successively employed vocalists including Francisco Fiorentino, Alberto Marino, Floreal Ruiz and Edmundo Rivero. Troilo's orchestra is perhaps considered the most important of this era, due to the choice of repertoire for both instrumentalists and vocalists, Troilo's own compositions and his delicate *bandoneón* solos. This orchestra pioneered a style that became deeply rooted in *tango*, contrasting the less complex presentation of D'Arienzo and the other traditionalists.

Thus Troilo became the mainstream of progressive *tango*, softening the Decarean style but without losing its essence. As a *bandoneón* player, he cultivated a distinctive style that combined profundity and intimacy, sensuality and drama, without superficial virtuosity and impregnated with sincere emotion. As a composer he wrote classic pieces, especially those written in collaboration with the poets Homero Manzi and Cátulo Castillo. The music and evocative poetry combine to describe landscapes and people of Buenos Aires, as demonstrated in recordings including 'Garúa' (Fog), 'La última curda' (The Last Drunkenness), 'Che bandoneón' (Hey Bandoneon) and 'Sur' (South). Between 1938 and 1970 he recorded over 400 songs for RCA, TK and Odeon, and his discography has been completely reissued on CD (in chronological editions).

Pugliese, like Troilo, can be regarded as one of the most outstanding figures in the history of *tango*. He organized his first orchestra in 1936 but disbanded it shortly afterward. A new attempt in 1939 was successful and his orchestra continued working for 50 years. During the 1940s it was one of the most active and popular, and it toured throughout the world beginning in 1959. With his Decarean orchestra, Pugliese shared with Troilo the vanguard of the new progressive style of the 1940s. His orchestra displays a strong pulse, an extensive use of rubato and *divisi* of the violins and *bandoneóns* in rich counterpoint, with arrangements usually conceived by him. He was not a prolific composer; and he devoted himself mainly to instrumental *tango*. One of his first *tangos* was 'Recuerdo' (Memory) (1923) which became a classic. Afterward he forged a new compositional modality with *tangos* such as 'Negracha' (Black Woman), 'La Yumba' (an onomatopoeic term that describes a particular way to accentuate the beat) and 'Malandraca' (Little Rascal) developed from brief, reiterated and varied themes. Pugliese recorded more than 400 songs for Odeon, Stentor and Philips between 1943 and the early 1980s, and has been accorded systematic reissues of nearly his entire *oeuvre*.

Alfredo Gobbi's orchestra style is Decarean but combined with the Di Sarli style, which was an early influence for Gobbi, especially in its rhythmic aspect. After several attempts, Gobbi launched his own orchestra in 1942 and began to record in 1947 for Victor, ultimately producing around 80 recordings (all of them reissued) within which there are 16 orchestral renditions that are widely considered to be among the best *tango* recordings of the 1940s. 'Camandulaje' (Scoundrels) and 'El Andariego' (The Drifter) are his most memorable compositions. He led the orchestra from the violin stand, and his solos displayed a great mastery and perfect command of the effects created by Julio De Caro.

The activity of the genre in the 1940s was very intense. In addition to Troilo, Pugliese, Gobbi and the Decarean orchestras (and also De Caro, who continued with his orchestra until the mid-1950s) and D'Arienzo and other traditional orchestras, the field was marked by the continuation of the progressive line led by Fresedo (and its derivatives, such as Di Sarli) and the continuing traditionalist orchestras of the Old Guard, such as those of Canaro and Firpo.

Fresedo's orchestra polished its use of nuances, and when he included the arrangements written by Héctor Artola and Argentino Galván he obtained a very interesting orchestral result (see, for example, versions such as 'Te llama mi violín' [My Violin Calls You] and 'Mariposa' [Butterfly]) based on the timbre of a large ensemble of strings and *bandoneóns*, and a very prominent use of the piano in rhythms, leading melodies, counterpoints and bridges. Fresedo further polished his melodic and sumptuous orchestrations with the unusual use of harp, drums and vibes to produce special timbral effects. Followers of his school were Carlos Di Sarli and Miguel Caló among others. In the 1940s the most acclaimed vocalists working with his orchestra were Ricardo Ruiz and Oscar Serpa.

Derived from Fresedo's style, the orchestra fronted by pianist Carlos Di Sarli was highly regarded by dancers because of its beat, which favored medium and slow tempos. Di Sarli's orchestra also highlighted the strings and the piano rhythms. The orchestra's notable singers included Roberto Rufino, Jorge Durán, Alberto Podestá and Oscar Serpa. Di Sarli was not a prolific composer. His most memorable compositions are 'Milonguero Viejo (Fresedo)' (Old Milonguero) and 'Bahía Blanca' (White Bay). In the orchestra his piano had a strong presence and he favored the strings over the *bandoneóns*. Between 1928 and 1958 he recorded 382 sides of 78-rpm discs for Victor, TK and Philips. Those recorded for Philips (the last ones he made) comprise a good compendium of his style. His discography has not been systematically reissued.

A magnificent synthesis of influences of Troilo and Di Sarli is evidenced in the music of the Francini-Pontier orchestra co-led by violinist Enrique Mario Francini and bandoneonist Armando Pontier. It began its appearances in 1945 and performed until 1955 when the leaders split off to lead their own orchestras. Argentino Galván and, sometimes, Astor Piazzolla were responsible for the arrangements. They recorded approximately 130 tracks on 78-rpm discs, most of which have subsequently been reissued. 'Tigre viejo' (Old Tiger) is a good example of their recorded works.

Horacio Salgán began with his orchestra in 1944 and elaborated an unprecedented new language within the Decarean conception. That orchestra folded without making any recordings, and he founded a more successful one in 1950. The piano performed both as soloist and as rhythmical/harmonic support, with syncopation and counterpoint between orchestral units in an essentially *tango*-based style. Salgán's recordings were released in a chronologically disjunct fashion and they alternated orchestra, duo and quintet renderings. Many of them have been confusingly reissued. The fact that he recorded every number more than once with the same arrangement contributes to the confusing nature of his whole recording *oeuvre* (taking into account all his groups, at least 250 recordings). He is also important as a composer; his *tango* 'A fuego lento' (At Slow Fire) is a good example of his style.

During the 1940s the *orquestas típicas* included only male singers. However, several female singers acted as independent figures. For example, the legendary singer Mercedes Simone, who began in 1925, continued evolving as a soloist. Other singers with great popular acclaim were Libertad Lamarque, Carmen Duval and María de la Fuente, among a large number of outstanding figures in vogue in the decade.

Lyricists of the 1940s made advances in *tango*'s poetic complexity and lyrical content. Homero Manzi depicted suburban landscapes with simple language but with metaphors of high flight. Some of his masterpieces are 'Sur' (South), 'Milonga triste' (Sad *Milonga*), 'Tal vez será mi alcohol' (Perhaps It Will Be My Alcohol) and 'Barrio de tango' (Neighbourhood of *Tango*). Enrique Santos Discépolo brought *tango* to a new reflective dimension and bitingly criticized contemporary society, demonstrating skepticism and hopelessness in his lyrics of deep dramatic quality ('Cambalache' [The Junk Shop], 'Uno' [One], 'Cafetín de Buenos Aires' [Little Buenos Aires Café] and 'Canción desesperada' [Desperate Song]). Cátulo Castillo belonged to the so-called Boedo School that valorized the past. Among the most important pieces of his *oeuvre* are 'Luna llena' (Full Moon), 'Café de los angelitos' (Café of the Little Angels), 'Tinta roja' (Red Ink) 'Patio mío' (My Patio), 'María,' 'La última curda' and 'A Homero' (To Homero). Homero Expósito was influenced by the opposing influences of the evocative romanticism of Manzi and the sarcastic dramatic quality of Discépolo. A nonconformist innovator, he scattered his *tangos* with literary figures, as exemplified by 'Naranjo en flor' (Orange in Flower), 'Absurdo' (Absurd) and 'Afiches' (Posters).

Another fundamental figure, Enrique Cadícamo, began writing *tango* lyrics in the 1920s and was influenced by Celedonio Flores and later by the school of Boedo. He demonstrated mastery in his descriptions and in both tragic and comic subject matters, as well as in ironic or evocative depiction. Examples of his work include 'Pompas de jabón' (Soap Bubbles) 'Muñeca brava' (Dazzling Babe), 'Che papusa oí' (Hey Babe Listen) and 'Anclao en París' (Stuck in Paris). After 1930 he wrote *tangos* such as 'Nostalgias,' 'La casita de mis viejos' (The Little House of My Elders), 'Santa Milonguita' and 'Nieblas del Riachuelo' (Clouds of Riachuelo). Other important lyricists of the time were Horacio Sanguinetti, Jose María Contursi and Francisco García Jiménez.

From around 1950 the opposition of the middle and upper classes to the Perón regime became more noticeable. The middle class moved away from *tango* because it was something 'national' and all that was national was associated with 'the people' and Peronism (Matamoro, 215). The working class followed *tango* faithfully, but the 1950s marked the decline of the great figures of the genre. After 1955, when President Perón was overthrown, *tango*'s fall was accelerated with the import of mass culture products, including musical ones, made in the United States.

The *Nuevo Tango* Period, 1955–85

Around 1955 a turning point in the history of *tango* took place. President Peron's fall caused deep changes in the cultural policy. The borders were open to industrialized cultural products mainly from the United States. The effect on *tango* was not immediate, but shortly afterward *tango* was no longer the most popular music in Argentina.

The amount of activity carried out in connection with *tango* had become formidable and it was not interrupted all at once. In the late 1950s and early 1960s *tango* still enjoyed some of the popularity it had experienced in the previous decade. However, a new phase began in the 1960s which was to last until the mid-1980s, characterized by the abandonment of dancing and a transformation of *tango* music for listening with more intellectualized content, pigeonholed as a marginal manifestation of popular culture. From the mid-1980s on a gradual renaissance took place that in turn led to a sort of peak in the twenty-first century, but *tango* never recovered its massive popularity.

Three essential streams coexisted in *tango* in the late 1950s: the surviving *orquestas típicas*, chamber groups (duets, trios, quartets, etc.) and the vanguard outfits (such as the one led by Astor Piazzolla). The main protagonists were still the *orquestas típicas* and the greatest singers. *Tango* continued to be dances assiduously, even though the influence of new foreign dances was felt concurrently. The scene was dominated by the great orchestras of the 1940s: Troilo, those of Pugliese, Gobbi and Salgán. Other orchestras that were less renowned but very accomplished included those of Enrique Francini, Alberto Mancione, Stampone-Federico, Eduardo del Piano and Joaquín Do Reyes. More traditional orchestras, such as those of D'Arienzo or De Angelis, also maintained a presence. By the end of the decade, the singers with the greatest public appeal were Edmundo Rivero, Floreal Ruiz, Alberto Marino and a great number of other singers performed with orchestras or guitar accompaniment.

In 1953 the quartet fronted by Troilo with guitarist Roberto Grela garnered unexpected acclaim. This group was the precedent for a great number of trios and quartets that would be formed in the 1960s because of the increasing difficulty of paying for orchestras. This difficulty was not due to the economic context, which by these years was fairly good, but because the *tango* public was not large enough to support a full orchestra of 12 musicians through ticket sales alone.

The participation of Astor Piazzolla outside of the mainstream in the late 1950s is important. He abandoned the typical orchestra lineup and established the ensemble that combined solo *bandoneón* with string orchestra. He evolved as composer and arranger, studied with Nadia Boulanger in France, and thereafter was temporarily based in the United States. Piazzolla's influence is demonstrated by the role of the *bandoneón* as a soloist in the orchestra and by the division of the compositions in two-part form: an A-section that emphasizes rhythmic aspects and broken melodic lines, with frequent use of ostinatos and contrapuntal resources and a B-section with a moderate tempo and singable lines. This form precluded the possibility of regarding *tango* as a danceable piece. Among Piazzolla's prolific works, this form may clearly be heard in 'Adios Nonino' (Goodbye Nonino). Piazzolla was at the core of the *nuevo tango* and continued using Decarean resources throughout his career, adding academic musical procedures without straying from *tango*'s essence. He used new timbre combinations as well as unconventional effects and sounds (in some groups he included percussion), electronic instruments and experiments with an electronically amplified *bandoneón*. Piazzolla's discography comprises 985 entries (Saito 1988). Nearly all the recordings have been made available on CD, but chronologically haphazard reissuing makes it difficult to follow their progression without a guide.

Between 1955 and 1958 in Buenos Aries Piazzolla created the Octeto Buenos Aires, which elicited a negative reaction from traditional *tango* followers, because it was very modern in style, but which, for the younger *tango* musicians and an audience of connoisseurs, was the manifestation of a radical departure from traditional *tango*. In some way, the vanguard of the 1960s and new *tango*, as it would later be understood, began with the recordings of the Octeto Buenos Aires. The music of the Octeto was absolutely revolutionary. Contrapuntal textures, aggressive harmony, melodic freedom in arrangements based on traditional *tangos* and the modification of the harmonic basis shifted the traditional *tango* in an unprecedented way.

In the early 1960s the name '*nuevo tango*' (new *tango*) came into use to distinguish the production of Astor Piazzolla. In a 1961 radio interview Piazzolla stressed that he was developing a music that he denominated *nuevo tango* and announced the imminent creation of a national movement, of which later there were no specific hints. But the name *nuevo tango* remained in use to designate the music of Piazzolla and its followers.

In the 1960s the first landmark of importance for the avant-garde movement was the formation of Piazzolla's quintet. With this group, whose structure was absolutely new, Piazzolla established a model for eventual followers of his aesthetics that could not be absorbed when he introduced the more radical and aggressive Octeto Buenos Aires. The music composed by Astor Piazzolla for this quintet already contained the advanced style that would characterize him throughout his career, without substantial changes. The quintet was his favorite lineup with which he worked most. Piazzolla had demonstrated with his octet that he was able to play a different *tango*, totally instrumental, abandoning singable versions and danceable music. Now he continued that trajectory, and in so doing he consolidated the *nuevo tango*, as he called it, beyond the traditional and progressive trends. Drawing on Decarean roots, Piazzolla inaugurated a vanguard that lasted until the 1990s with successive stylistic changes.

Thus at the beginning of the 1960s three main types of *tango* groups were established: the typical orchestras, the small groups and the vanguard combos. As *tango* activity declined, the traditional stream, catering almost exclusively to dancers, suffered the most. With the death of the bandleaders who had kept it going, such as Canaro and D'Arienzo, it became more and more relegated to the sidelines and its exponents were practically reduced to only two orchestras that went on playing for many years, the one led by De Angelis and the one headed by Varela, with an increasingly diminished following in only marginal places.

Astor Piazzolla not only led the avant-garde stream but also had a profound influence on the musicians who continued working with and developing *tango*. However, for musicians and consumers of traditional *tango*, Piazzolla's work contained elements of heresy, which resulted in an ongoing controversy about its authenticity. During the 1960s the main orchestras still continued developing their activity, somewhat distancing themselves from Piazzolla's influence, without doing so entirely (a great number of his compositions were recorded by Troilo, Basso, Fresedo and Francini-Pontier). Other important orchestras were disbanded soon after the beginning of this stage (those of Gobbi, for example) and still others had a very short life, in spite of their importance and recordings (Francini-Pontier, Joaqquín Do Reyes). These orchestras emphasized the orchestral virtues fitting the Decarean or Fresedean stylistic streams while still making danceable versions.

Argentina had been rich in raw materials in the 1940s. Its prosperity began to decline when Europe began its reconstruction after World War II. The massive broadcasting of fashionable foreign music, mainly North American, and the gradual impoverishment of the country's economy resulted in the identification of this failure with everything connected to national identity. *Tango*, the music of Buenos Aires, could not avoid guilt by implication. To listen to or to dance to *tango* music was considered shameful and old-fashioned by 1965. Recording companies canceled the contracts of many *tango* orchestras. After 1955 the Buenos Aires middle class disowned *tango* and warmly accepted the music of the Argentine interior, folk music and foreign music.

Derived mainly from the Troilo style, *tango* orchestras that did not promote dancing began to appear influenced in some aspects by Piazzollian aesthetics. These orchestras adapted to the disappearance of the *tango*-dancing public and learned instead to play an attractive repertoire for cafe-concert audiences. In their arrangements, the orchestras now alternated danceable sections with others of a greater rhythmic flexibility, and they used slow tempos with space to showcase the instrumental solos. These orchestras were not long-lived, but they appeared in popular venues and they recorded often. The orchestras led by Baffa-Berlingieri and Piro were derived from the Troilean style. The one led by Leopoldo Federico (also Troilean but with Di Sarli's and Salgán's influences) stood out because of its rhythmic drive. The one fronted by Berlingieri spotlighted the piano and took some elements such as phrasing and harmonies from jazz.

Some *tango* singers remained popular, but their songbooks were based almost exclusively on the *tango* of the 1940s, since not many pieces attained the level of popularity reached in that decade. Edmundo Rivero, Roberto Rufino, Alberto Podestá, Julio Sosa and, especially, Roberto Goyeneche, were some of the stand-out singers, along with the younger voices of Raul Lavié and Rubén Juárez. These new interpreters sang well-known classic numbers but also needed new songwriters able to capture the reality of their time. In the 1960s *tangos* were written by Héctor Negro, Osvaldo Avena and Juan Carlos Lamadrid.

In the 1970s Eladia Blázquez began her prolific *tango* output, and Horacio Ferrer with Piazzolla released an original series of songs, *tangos* and ballads. Finally in the 1980s Juanca Tavera with Osvaldo Tarantino and Ferrer with Garello were considered the most outstanding composers in this genre.

The typical *tango* orchestras were practically extinguished by the 1970s. Only the one led by Pugliese, which made frequent tours abroad, and those headed by Leopoldo Federico and Atilio Stampone regularly appeared at the tourist nightclubs. *Tango* orchestras (*orquestas tipicas*) were hard to maintain and did not reach a wide following. The Orquesta del Tango de Buenos Aires (initially conducted by Carlos García and Raúl Garello) and the Juan de Dios Filiberto Orchestra were funded by the Municipality of Buenos Aires. The main record labels reissued the hits of the 1940s, and the criteria were almost always commercial since many remarkable recordings were never published in LP. The radio broadcasters, in general, followed these criteria.

The *tango* mainstream moved toward small ensembles (sextets, quintets, quartets and trios). In this type of group the *bandoneón* is never absent (except for rare exceptions such as the 1966 Osvaldo Manzi trio with piano, electric guitar and double bass). Also present are violins, piano and double bass, and frequently electric guitar. This same quintet framework was adopted by Salgán in 1960 with the Quinteto Real, when he expanded the piano-electric guitar duo he had shared with De Lio. First they added a violin (Enrique Mario Francini) and a double bass (Rafael Ferro) and finally Pedro Laurenz joined them on *bandoneón*.

As for the trios, *bandoneón*, piano and double bass are quite frequent (examples include Trío Contemporáneo, founded in 1968, Federico-Berlingieri-Cabarco, founded in 1971, Vanguatrío, founded in 1971 and Mosalini-Beytelman-Caratini, founded in 1983). There is also *bandoneón*, guitar and bass (e.g., Eduardo Rovira's trio, founded in 1966); guitar trios (such as the Palermo Trio, founded in 1967) or the combination of *bandoneón,* guitar and piano (e.g., Los Tres de Buenos Aires, founded in 1962).

There were quartets of diverse combinations: *bandoneón*; violin, cello or guitar; piano or guitar; and double bass: Cuarteto Reynaldo Nichele (established in 1961), Eduardo Rovira (est. 1975), Osvaldo Requena (est. 1979), Cuarteto Colángelo (est. 1971) and Cuarteto Orlando Trípodi (est. 1974). In this relocation of *tango* in chamber versions, the Decarean stream adopted a lineup very close to the typical orchestra: a sextet with two *bandoneóns*, two violins, piano and double bass.

With regard to the sextets, one of the finest was the Sexteto Tango that branched off from the Pugliese Orchestra in 1968. Its style was quite similar to Pugliese's, and all of its members were arrangers and composers. The Sexteto Mayor began to appear in 1973, also within the progressive style.

Beginning in 1960 various groups with a similar lineup and a similar aesthetic view about the treatment of *tango* appeared under the influence of Astor Piazzolla Nuevo Tango: the groups led by Eduardo Rovira, Rodolfo Mederos, Dino Saluzzi, Hugo Baralis, Néstor Marconi, Juan Carlos Cirigliano and Raúl Cosentino. Few of these contributed something new to the genre, despite the fact that their recordings had great musicality and interpretive quality. Two leaders/composers, however, deserve to be highlighted: Rovira and Mederos.

Eduardo Rovira, renowned as a remarkable musician, was influenced by Piazzolla but also followed his personal style, with a greater inclination toward academic language and forms. For that reason some of his compositions were perceived as lacking the strength and persuasion considered inherent in *tango*. His ensembles included: his *tango* orchestra (1950s); Octeto de la Plata (founded 1957); Agrupación de Tango Moderno (founded 1960); his trio (founded 1965) and a quartet (founded 1974).

Rodolfo Mederos, also considered an outstanding musician, was much more influenced by Piazzolla's musical personality but always strived to demonstrate his different approach, alternately including and discarding influences from other musical sources, especially rock. Among his most important works is 'Las veredas de Saturno' (The Paths of Saturn), based on Eduardo Arolas's *oeuvre*; his rendition of Gardel's *tangos* for *bandoneón* and string orchestra (1990) and his quintet (1992).

Another important bandleader and composer of the 1960s and 1970s was Atilio Stampone. He began as a pianist in Piazzolla's *tango* orchestra of the 1940s and the octet in 1955. He later formed an important orchestra that he co-led with Leopoldo Federico and whose main arranger was Argentino Galván. In 1961 he fronted a new orchestra with outstanding instrumentalists in which the influences of Horacio Salgán, Anibal Troilo and Piazzolla were combined. In the 1970s Stampone attempted to modify his style by adopting academic forms and techniques from different schools and times (Impressionism, Baroque) along with phrasings, chords and rhythms from jazz in order to mix them with the language of traditional *tango*. But the general result was hybrid and heterogeneous, because all these elements were not well integrated into the *tango* language.

The Rebirth of *Tango*: From 1985 to the Twenty-First Century

In the 1980s there were still some venues for dancing, but they were considered marginal. Danceable *tango* was presented as a show, with professional dancers and more or less elaborated choreographies. *Tango* also was used by many choreographers of contemporary ballets. Due to the international acclaim of the 'Tango Argentino' show, a musical play featuring *tango* music and dance staged by Claudio Segovia and Hector Orezzolli which was performed to great acclaim in Paris (1983), on Broadway (1985–86) and around the world, interest in the theatrical version of *tango* revived worldwide and new dance halls opened in Buenos Aires. However, this new fan-base for *tango* did not include the popular classes, and the dance halls were patronized by the cultured middle class.

Between the 1960s and 1990s the number of musicians devoted to the genre decreased. Performers, old or young, seemed unable to attract a new public. In the 1980s there was deep concern about the lack of new *bandoneón* players to learn *tango*'s special features, performance nuances and other secrets from the apparent last generation of instrumentalists. *Tango* may be performed without a *bandoneón*, but the genre with the total absence of *bandoneóns* is not considered possible. While the threat of a *tango* without *bandoneón* players did not come to fruition, a generational breach of about 20 years does exist.

Meanwhile the Piazzolla-influenced vanguard trend continued with a small output never surpassing its model or establishing a style that moved away from the original. During the years in which *tango* was nearly hibernating, only a few institutions and individuals preserved tradition. Very important is the work of the Escuela de Música Popular de Avellaneda where Rodolfo Mederos teaches, along with the bandoneonists Daniel Binelli, Nestor Marconi and Julio Pane.

Partly due to the success of 'Tango Argentino's intensification of worldwide interest in *tango* and its reopening of the international market for *tango* musicians, and partly because a new generation of musicians gradually began to be attracted by a language that was being lost but which they considered to be their own, a renaissance finally arrived by the mid-1990s. Little by little, new performers and composers with new ideas arose, who, in general, did not subscribe to Piazzolla's aesthetics. New singers also emerged. The new interpreters tended to avoid the solution brought by the Piazzollean vanguard and focused on traditional *tango* songbooks or on the *tango* styles that prevailed between the 1930s and the 1950s. They aspired to follow the classic *tango* model and eschewed changes of the general sound.

In the early twenty-first century there are several schools: one continues the Piazzollean line with groups including the quintet La Camorra, and those led by Marcelo Nisinman and Sonia Posetti. Another trend within modern *tango* accepts certain Piazzollean premises but is closer to the type of harmonic and formal elaboration of the quartets and quintets of the 1970s. A third stream, very interesting and promising, is derived from the Pugliese style but pushed to an extreme and radicalized in its rougher aspects. In this stream there are groups such as the Orquesta Típica Fernández Fierro and Astillero sextet. Onstage, their attitude and appearance is influenced more by rock than by traditional *tango*, appealing to *tango* fans as well as a rock audience. There are also some eclectic groups, such as Quasimodo Trio, that combine free composition with strongly *tango*-based traits.

Finally, it is important to mention the international migrations of *tango*, which have been important because they have contributed to the resurgence of *tango* in its place of origin. The first time that *tango* relocated was before World War I, as previously stated, giving birth to a dance hall *tango* (either European or North American) that throughout time has followed a path almost independent of the Argentine *tango*. In the 1970s a great number of musicians began to be exiled (for economic or political reasons) and, with them, *tango* relocated to European cities such as Paris, Amsterdam, Berlin, and also to Tokyo, New York and Montreal. The *tango* resulting from these musicians' relocation includes copies of sub-styles; new versions of the classic *tango*; and its stylistic fusion, generally combining jazz, erudite music and *tango* (Pelinski 2000).

With regard to discography, approximately 24,000 *tango* tracks were recorded between 1907 and 2010. Some editions are hard to find, even in Argentina. Others have a wider distribution, such as Piazzolla's recordings. With some previously cited exceptions, major recording labels have not been systematic about the global reissuing of the material. Some semicommercial labels, including those run by Akihito Baba and Yoshihira Oiwa (Japan), *El Bandoneon* label, located in Barcelona, Spain, and *Euro Records*, a label established in Buenos Aires, are filling the gaps in reissues of the main repertoire. In 2010 what was commercially available could be found on the internet, while old recordings that had not been reissued were less available because they were still managed by collectors, both in Buenos Aires and Montevideo.

Tango in Uruguay

While *tango's* origin and early development was primarily Argentinian, and its principal production site was in Buenos Aires, *tango* is situated more broadly in the Rio de la Plata area (see Enrique Haba in Binda 2005). In particular, Montevideo, the capital city of Uruguay, has long constituted a *tango* scene (Cohen 1999) that paralleled that of Buenos Aires. Nevertheless, since *tango* production was so prolific in Buenos Aires, it is very common to speak of an 'Argentinian *tango*' (*tango argentino*). In fact, while the Uruguayan and Argentinian markets were always unified as a record-buying public for *tango*, almost all of the records were produced by Argentinian musicians (Binda 2005). However, both cities are part of a sociocultural region, and *tango* belongs to that region. Referring to the *tango* as 'Argentinian,' then, obscures the fact that an important part of the history of *tango* took place in Uruguay (Aharonian 2007). Thus, rather than an Argentinian *tango*, a *tango rioplatense* may be said to exist.

In Uruguay, by 1890 there was a *tango* '*orillero*' (from the urban outskirts) in Montevideo suburbs, similar to that of Buenos Aires (Ayestaran 1967). The practice of *tango* unfolded similarly in Buenos Aires and Montevideo between 1890 and 1900, in marginal (suburban) venues. By 1910 the genre was accepted by Montevideo's middle class. Instrumental groups of three or four people played *tango* in cafes, and some orchestras performed it more seriously (not necessarily in a strictly popular style) in Carnival balls (Fornaro, Ilarraz and Agustoni 2002). However, it was difficult for Uruguayans to organize and maintain *tango* orchestras without the participation of Argentinian musicians, since specialized *tango* musicians were not yet living in Uruguay. In fact, it was not until 1916 that Alberto Alonso organized the first Uruguayan *tango* quartet. In addition, only three Uruguayan *tango* orchestras recorded in the early twentieth century, between 1917 and 1929: Alonso-Minotto (in 1917) including the *tango* 'La cumparsita' (The Little Band), Minotto (in 1922), including the *tango* 'Fruta prohibida' (Forbidden Fruit) and Donato-Zerrillo (in 1929), including 'Se va la vida' (Life Goes On).

Between 1930 and 1950 there was a great boom in *tango*'s popularity in Uruguay, similar to what was occurring in Argentina, with an intense presence of Argentinian orchestras. After that period, the public for the genre declined, only to resurface by 1990, again in parallel with Buenos Aires. *Tango* remains very popular in Uruguay, with a strong presence of the genre on the radio (even more than in Argentina). *Tango* dance is also very popular in Uruguay.

The main icons of *tango* in Uruguay are Carlos Gardel, Enrique Matos Rodríguez, Francisco Canaro and Julio Sosa. Despite the fact that Gardel was raised in Buenos Aires and launched his early career in Argentina, he is a local hero for Uruguayans. While Uruguayans claim that Gardel was born in Uruguay, Argentinians believe that he was born in France, and recent research confirms this theory (Barsky and Barsky 2005). Uruguayan Enrique Matos Rodríguez, born in Uruguay, was the composer of 'La Cumparsita,' one of the most famous *tangos*. Francisco Canaro also was born in Uruguay, and was one of the most prominent musicians, composers, bandleaders and promoters of *tango.* He established his career in Argentina and became a citizen of Argentina in 1940. Finally, Julio Sosa was a Uruguayan *tango* singer who became an idol both in Argentina and Uruguay between 1960 and 1964. He lived and worked in Buenos Aires, where he died in 1964 in a car accident.

Written Publications About *Tango*

The *tango*, in its literary and musical aspect, has generated many interpretations and analysis. They include panegyrics, monographic essays, and numerous biographies and autobiographies of composers, writers, musicians and singers. It is only recently that *tango* has become an academic subject, addressed by sociologists, historians and anthropologists. Strictly musical analysis is the least developed. Most studies and other publications are published in Argentina, but important works have also emerged outside Argentina, in many cases by Argentinian researchers living abroad (Cámara 2002; Savigliano 1995; Pelinski 2000).

The first history of *tango* was written in 1936 by two journalists, Héctor and Luis J. Bates. While this volume is not very well documented and includes mistakes that were repeatedly reproduced by many writers, its great value is that it includes several interviews with the leading composers, musicians and singers of early *tango*. A pioneer in *tango* studies was Argentinian musicologist Carlos Vega (1898–1966) who introduced early studies of urban popular music in Argentina (Vega 1966) and whose uncompleted research on *tango* was published posthumously (2007). Another important early resource, as stated earlier, is the first volume of *Antologia del* *tango rioplatense*, which studies *tango*'s origins and early development up to 1920. The second volume, which covers the period from 1920 to 1935, is being completed by a group of researchers at the Instituto Nacional de Musicología 'Carlos Vega' in Argentina. Pablo Kohan (2010) published a study of the music styles of *tango* composers between 1920 and 1935, while Binda and Lamas (2008) is a well-documented account of early *tango* and society. A comprehensive series of entries is included in the *Diccionario de la música española e hispanoamericana* (1999–2002), providing an overview of the history, schools and main composers and directors of *tango*. *Nuevo tango* is studied in a compilation of articles about Piazzolla's music (García Brunelli 2008) and contemporary *tango* has generated several monographs, some of which were compiled (Liska 2012) or published in specialized musicological reviews. Recent approaches include performance studies (Cecconi 2009; Liska 2009; García Brunelli 2012).

In addition to the musicological literature, there are many popular works about *tango* and gender, *tango* dance, *tango* and society and *tango* lyrics. In fact, publishing about *tango* is a very profitable industry, with about 200 books published yearly in Argentina about *tango* and related themes (Marchini 2007), few of which are considered academic sources. Among the nonacademic sources, Horacio Ferrer's dictionary (1980) and history (1960) provides an overview of the history and style of the genre. The extensive *Historia del tango*, with specialized works collected by Pampin (1976–2012), sometimes lacks accuracy but is considered in other ways to be a good first resource. An extensive study of bandoneonists who have worked in the genre beginning in 1910 was published by Zucchi in four volumes (1998–2008). Still a work in progress, Zucchi's study is considered very useful and well documented, including discographical information, interviews and discussions of style. Regarding the biographical works, worth mentioning are the autobiographies of Francisco Canaro (1999) and Julio De Caro (1964) for their historical and documentary value, and Astor Piazzolla's (Collier and Azzi 2000) and Carlos Gardel's (Barsky and Barsky 2004; Collier 1986) among other biographies. Finally, a bibliographic dictionary of musicians from Argentina has been edited by Donozo (2007).

Two interesting articles by Aharonian (2007) and Fornaro and Agustoni (2002) focus on *tango* in Uruguay. The latter includes references to additional bibliographic sources, including a book about Uruguayan folk music (Ayestaran 1967) and a comprehensive essay about *tango* by Daniel Vidart (1967). A recent work by Goldman (2008) studies the relationship between the dances and music practiced by Afro-Uruguayans between 1870 and 1890 and the *tango rioplatense* established in 1900.

Discographical sources include several publications by Nicolás Lefcovich (1980, 1981 and so on), which provide information about recordings (label, record and matrix numbers, dates, authors and genres), including the recordings of the principal orchestras and singers from 1920 to 1960. A brief guide to *tango* recordings and their availability has been published by García Brunelli (2010). The website *Todotango* (www.todotango.com) provides short biographical articles about musicians in Spanish and English, along with scores and recordings.

Conclusion

At the beginning of the twenty-first century the *tango* renaissance is in the hands of perhaps less than a hundred young musicians, only a few more than those that shaped its origin (Ferrer 1999). In spite of *tango*'s prolonged history of crisis, it remains in vogue as an inevitable component of the identity of Uruguayans and Argentinians. In the twenty-first century historical styles are being recovered, generating positive expectations about future developments. Local demand has encouraged the recruitment of musicians and international interest has assured a sufficient market to maintain musicians' activity. With a dynamic definitively anchored in its place of origin and generating more or less related spinoff versions in other places of the world, *tango* has endured as one of the best-known and complex popular music forms (instrumental, sung or danced) in the world.

Teatro Danzante Cocolo

In the Dominican Republic, *cocolo* is a term for black migrant workers from the anglophone Lesser Antilles, including St Kitts and Nevis, Anguilla, British Virgin Islands, Antigua and others. Tens of thousands of *cocolos* were contracted to work on Dominican sugar plantations between the 1880s and the 1920s. Many of these eventually settled in the south-east of the country in the vicinity of San Pedro de Macorís and La Romana and retained distinct cultural practices, although discrimination, economic hardship and gradual integration into Dominican society subsequently led to their decline. *Teatro danzante cocolo* represents the preservation and revival of *cocolo* tradition. It synthesizes British-derived dramatic narratives of medieval origin with carnivalesque Afro-Caribbean costuming, dance and humor, and instrumental musical accompaniment including *bombo* (bass drum), *redoblante* ('kettle drum'), *ting-a-ling* (triangle) and *cocola* (transversalflute). *Cocolos* like to call each of the dramatic acts *lecciones* because, in addition to the motives of entertainment, they impart social and religious messages.

The musical ensemble resembles the British-derived military fife and drum band, although, as in the music of Jonkunnu and other Anglo-Caribbean masquerade ensembles, what is played also reflects strong African and Afro-Caribbean influences. For example, in the *Suite el Momíse,* the musical form resembles a seventeenth-century European minuet, yet the tetratonic (4-note) scale is more typically African. In other pieces, the *cocola* melody and percussion parts make frequent use of syncopations, additive rhythms and polyrhythmic interactions reflecting African influences. While a number of songs were originally sung as well as played instrumentally, now most of the pieces are interpreted by the *cocola* player. In general, the *bombo* drum provides a steady pulse, the *ting-a-ling* accents the offbeat and fills in the duple subdivisions, and the *redoblante* alternates subdued rolls with sharp attacks falling between the short and rapid melodic sequences of the flute. In some pieces, the *redoblante* may be played with considerable syncopation and rhythmic virtuosity. Depending on the action of the dancers, there are several variations on the basic rhythmic combination and distinct flute motifs. In their improvisations, *cocolo* flautists delight in the art of subtle rhythmic and tonal permutation of cellular tetratonic and pentatonic fragments.

Of the variety of dance dramas that *cocolos* introduced to the Dominican Republic, only three have continued to be performed regularly – Momíses (Mummies), Guloya (or David and Goliath) and Wild Indians. Momíses involves an encounter between a giant, a king, a deceased citizen and a doctor (or traditional healer), ending in a battle between the giant and king, and the miraculous revival of the deceased. It is associated particularly with Carnival season, though it is also performed for the *fiesta patronal* of San Pedro de Macorís at the end of July. The name Guloya is a Hispanic linguistic transformation of Goliath and has been adopted by Dominican spectators as the name for the *cocolo* dance-drama based on the biblical legend of David and Goliath.

It ceased to be performed in the late 1950s, but in the early twenty-first century was revived by *cocolo* masqueraders. Guloya has the largest cast of characters of the three dance dramas (up to 27), and is performed traditionally on Christmas Day. To the annoyance of the *cocolos,* through persistent error on the part of the press Guloya has come to be confused with the *cocolos* and their dance-drama tradition as a whole. The third dance drama, Wild Indians, is performed without dramatic narrative, instead showcasing a creative fusion of virtuosic African-influenced dance movements – with feather headdresses and axes, romantically symbolizing the spirit of indigenous peoples – and, typically, a dose of *cocolo* humor. This appropriation of the figure of the 'Indian' in *cocolo* tradition has parallels elsewhere in black Atlantic cultures, such as the Mardi Gras Indians of New Orleans, *Candomblé de Caboclo* of Bahia, Brazil and the division of Indian spirits in Afro-Dominican *Vodú*.

In recognition of its historical significance, its importance to *cocolo* identity, its artistic distinction and excellence, and the risk of its disappearance, UNESCO in 2005 proclaimed *Teatro danzante cocolo* a masterpiece of the oral and intangible heritage of humanity. This international honor has prompted some efforts by Dominican folklorists and the *Secretaría de Estado de Cultura* to work with the *cocolos* to document as well as preserve the tradition.

Tecnobrega

Conceived in the first years of the twenty-first century by music producers, DJs and popular musicians from the periphery areas of Belém (the capital of Pará State, East Amazonia, Brazil), *tecnobrega* is a type of techno music characterized by fast pace, prominent percussion, use of computer technologies to manipulate sounds, and numerous connections to various popular music genres and to specific songs that became popular via radio, television and other mass media.

Despite featuring instruments such as electric guitar, keyboards and bass (particularly in band performances), *tecnobrega* is primarily associated with music production in home studios, where producers (nonmusicians, according to Western criteria) use computers, rapid internet and free 'pirate' software downloaded from the World Wide Web for digital handling activities such as mixing (sound superimposition), sampling (digital appropriation of sound patterns) and looping (repetition of musical excerpts). When these processes have been completed, music files are saved on computers for further usage in a variety of contexts: in the studio, in *tecnobrega* band performances, in popular multimedia parties for thousands of people, called 'festas de aparelhagem' (equipment parties), and for making cheap CDs to sell informally in the center of Belém, in parts of the region of Pará where local people take holidays and which also attract tourists, and at popular events inside or outside the city of Belém where crowds gather.

In band performances of *tecnobrega*, musicians and dance groups share the stage. At parties, on the other hand, the stage is occupied only by DJs, who control enormous metallic sound machines called 'aparelhagens.' Inside the machines are computers and a variety of electronic devices through which DJs play music and activate visual effects such as artificial steam, colored lights and hydraulic movements.

Tecnobrega also represents an alternative 'model of business' (Vianna 2003), in which strategies of music production, circulation and consumerism are unconnected to the direction taken by the official phonographic industry and its traditional musical market, as can be seen for example in relation to copyright observance and to the contracts mediating economic rules between artists and big companies. This alternative model may in part be a cause or a consequence of two of *tecnobrega*'s features: first, the repertory, which is based around versions of existing songs, including international pop music, Brazilian funk (Herschmann 2005; Vianna 1987), regional folk music such as *carimbó* (Guerreiro do Amaral 2003; Maciel 1983) and rock styles, among others; and secondly, a label of aesthetic 'bad taste' that has been conferred historically on any of the country's music, the sounds and lyrics of which are judged to be tacky (*brega*) because of their excessive romanticism and their fussy yet easy poetry. Consequently, *tecnobrega* could mean literally techno-tacky or techno-kitsch.

Tecnobrega results from two correlated musical movements. At a local level, its immediate source is *brega-calypso*, a form of music in which electric guitar sounds may combine with Latin American and Caribbean influences from *merengue*, *zouk*, *bolero*, *cúmbia* (see Costa 2004), *soca* and *calipso* from Trinidad and Tobago. On a national level its source is *brega*, widely considered to be emotional and 'low-quality' music that has diffused across the whole of the country since the1960s and which was influenced by *Jovem Guarda*, the musical movement that was the equivalent in Brazil of the Beatles-led rock developments in Europe and the United States.

After its apogee, *Jovem Guarda* lost ground at the beginning of the 1970s among the intellectual middle classes in big cities and their patronage shifted to music whose singers protested against the military dictatorship which had ruled Brazil since 1964. (Araújo 1987; Araújo 2002; Fróes 2000; Napolitano 2001). As a result, *Jovem Guarda* migrated to country areas, while in large urban centers it 'kept a loyal public among the poorest people in society, …, going on to be called pejoratively by the name *brega*' (Vianna 2003; author's translation). However, according to ethnomusicologist Samuel Araújo (1987, 1999), any music suggesting 'grotesque' content could be classified by *brega*. Or perhaps *brega* and *tecnobrega* have never existed as defined music genres, as the idea of 'bad music' is entirely a social construct (Frith 2004).

The problem of defining *tecnobrega* as a music genre can be illustrated by some of its different rhythmic styles. All retain the same simple 2/4 tempo, and the main rhythmic cellule is represented in Example 1.

Four styles can be identified: (1) the style for 'festas de aparelhagem,' which emphasizes rhythmic/melodic computational sound effects and fast tempi; (2) the romantic *tecnobrega*, which keeps up a speedy tempo and balances melodic/percussive sounds and romantic lyrics; (3) *tecnomelody,* which explores the deceleration of the beat and the melodic lines of the vocalist(s); and (4) the sound of *cybertecnobrega*, which focuses on percussive effects (bass and drumming beats) and vocals, instead of synthesized melodies from the guitar and other instruments.

Tecnocumbia

The term '*tecnocumbia*' denotes a musical style that attained national prominence in Peru, and to a lesser extent other South American countries, in the late 1990s. *Tecnocumbia* artists perform music based partially on a *cumbia* template, but the use of the prefix '*tecno-*' is not directly related to the term 'techno' as it is generally used in reference to dance musics of Europe and North America. Instead it indicates that recordings and performances foreground the sounds of electronic instruments, particularly synthesizers and electronic percussion. Artists also borrow heavily from 'tropical' Caribbean styles, such as *salsa* and *vallenato*, and from Brazilian *toadas*.

As a social phenomenon, *tecnocumbia* marked a radical departure from earlier Peruvian *cumbia* styles, such as *chicha* music. While the latter has historically been consumed largely by working-class citizens, and the country's Andean migrant population in particular, *tecnocumbia* attained a large national audience among the more affluent classes as well. Such success has been variously interpreted as resulting from the style's distinctive sound, its cosmopolitan imagery, its conspicuous sensuality, its prior success in neighboring countries, and the way that it severed the links between *cumbia* music and an Andean identity that is still stigmatized in many quarters. It came to be closely associated with now-disgraced politician Alberto Fujimori, who prominently included *tecnocumbia* songs and live performances in his fraudulent 2000 presidential campaign. Though it fell drastically in national profile after his ousting from power and his subsequent flight from the country, it retains a significant presence. This is particularly true in the burgeoning cities of the Peruvian Amazon, where 'tropical' styles have long taken root, and *tecnocumbia* has been adopted as a symbol of regional pride.

While this entry focuses largely on artists from Peru, many artists have a significant following in Ecuador, and smaller scenes have taken root in Bolivia and Chile. In Argentina, where many Peruvian *chicha* artists relocated after the decline of that *cumbia*-derived style's popularity in the early 1990s, the music of local *tecnocumbia* groups such as Ráfaga has been closely tied to the *cumbia villera* style of Buenos Aires. In Paraguay, a local variant called '*cachaca*,' also related to *cumbia villera*, became very popular between the mid-1990s and 2004, in renditions by groups such as Máximo Cumbieros and Kchiporros.

The Emergence and Development of *Tecnocumbia*

The precise nature of the links between the earlier Peruvian *chicha* style and *tecnocumbia* is not universally agreed upon, and in fact many commentators have asserted that *tecnocumbia* is little more than a late twentieth-century development within *chicha* itself, with the name changed to avoid *chicha*'s unpalatable reputation. Nevertheless, it is clear that an important intermediary stage between these two styles or sub-styles of Peruvian '*música tropical*' took place in Buenos Aires, where many *chicha* musicians and impresarios moved in the early 1990s. Initially establishing groups that played *cumbia*-based music similar to the *chicha* produced in Peru, largely for audiences of Peruvian and Bolivian migrants, relocated *chicha* artists quickly adopted elements of the Argentinian capital's *cumbia villera*, on the one hand, and took advantage of the city's superior production facilities, on the other. In the process, *chicha* records became much slicker, more conspicuously upbeat, less guitar-based and overall less consciously 'Andean' in sound and style. All of these factors, as well as the cachet of its links to a relatively 'modern' nation such as Argentina, aided in the style's assimilation by non-Andean listeners, upon its reemergence in Peru in the late 1990s.

Tecnocumbia made an initial impact in Peru in 1998, with the mass media's 'discovery' of performer Rossy War. Born Rosa Guerra, and raised in the Amazonian city of Puerto Maldonado, War had already attained moderate commercial exposure in Bolivia, Chile and Argentina. When Peru's media began to report on this unrecognized performer who had nevertheless attained international success, and with it a certain cosmopolitan cachet, her song 'Nunca pensé en llorar' ('I Never Thought that I Would Mourn') became a standout hit. Local commentary focused, in the first instance, on War's aura of internationalism, evoked both musically and via performative elements, which contrasted with the perceivedly parochial nature of earlier Peruvian musics. In fact, her interpretation of *cumbia* music seemed to derive from the widely successful Mexican variant instead of either Colombian or Peruvian styles, a connection consciously cultivated by the singer's husband and artistic manager, Tito Mauri. The connection was further emphasized by War's frequent appearance in (Mexican) *norteña*-style outfits, and her singing voice, which was strikingly similar to that of Mexican singer Ana Gabriel. Commentators also played up War's jungle origin, suggesting a link between her 'tropical' musical style and the supposed sensuality of the region's residents. Such self-consciously 'tropical' imagery was novel in the field of Peruvian popular music, and it served to link the style in the public imagination with successful pan-Latin American 'tropical' musics such as salsa and *merengue*. As such, a considerable part of the style's appeal seemed to lie in the way that it assured audiences that Peruvians, too, could legitimately claim the cosmopolitan 'tropical' identity associated with such styles.

War's success opened a path for similarly inclined artists, most of whom featured similar musical or performative elements. Many were new performers, but others were groups or individuals with long careers in other styles, especially *chicha*, who took advantage of the new genre category to redefine themselves effectively as '*tecnocumbia*' artists. Sometimes this redefinition was accompanied by a striking stylistic shift, but in other cases artists made merely cosmetic changes to their existing practices. Finally, entrepreneurs emerged very quickly to 'manufacture' groups, auditioning young performers, pairing them with effective songwriters, and creating marketable imagery that revolved around the notions of tropicalism and sensuality that came to define the style in the public sphere.

Regional tendencies emerged quickly within the field of *tecnocumbia*, often deriving from the way that the emergent style was grafted onto local musical templates.

Sociopolitically, *tecnocumbia* was noteworthy for three reasons. First, its national success among people of virtually all classes and backgrounds was unusual, though perhaps not salutary, given that it depended upon stripping ethnically undesirable 'Andean' associations from Peruvian *cumbia* music. Secondly, in becoming a public vehicle for regional identity in the Amazon, it marked the belated emergence of the jungle, a region that has traditionally languished behind Peru's coastal and Andean regions, into the national consciousness. Finally, the style was unique for the extent to which it became linked to a specific political figure and his followers. *Tecnocumbia* artists including Rossy War and Ruth Karina, among others, variously sang songs to, for, with and about Alberto Fujimori. War appeared onstage with the dictator in his 2000 election campaign, which was enlivened by Fujimori's own *tecnocumbia* song entitled 'El ritmo del Chino,' in reference to his Peruvian nickname. Such associations are probably responsible for the style's retreat from the public sphere after Fujimori's fall from power. It never disappeared, however; it continues to be widely popular within the Amazon, where such associations are less important than the style's clear local roots, and it continues to be associated with the remnants of Fujimori's power base within the country. In 2007 the style seemed poised to make something of a comeback after members of the group Néctar were tragically killed while on tour in Argentina, and media coverage of the aftermath launched it back into the national consciousness.

Musical Structure and Style

It is not universally agreed that *tecnocumbia* constituted a radical departure from earlier Peruvian *cumbia* styles. Some commentators and musicians have interpreted the adoption of the term by aspiring musicians and marketers as a callous attempt to 'sanitize' *cumbia* of its links to *chicha*, and to the country's still-marginalized Andean community. In fact, hard and fast lines are often difficult to draw between *chicha*, *tecnocumbia* and other 'tropical' styles performed in Peru. *Tecnocumbia* initially targeted the same audience as *chicha*, and it was initially disseminated via the same media channels. Moreover, many *chicha* artists of long standing, as well as many artists considered to be performers of '*música tropical*' more generally, either adopted elements of *tecnocumbia*, or else switched wholesale to a *tecnocumbia* format, resulting in a marked heterogeneity of sound. Given all of these factors, there is some support for interpreting the term as a categorical device designed to create an artificial distance between *tecnocumbia* and other Peruvian *cumbia* variants. For this reason, certain commentators have preferred to describe all of these styles as 'Peruvian tropical music.'

Further complicating any discussion of *tecnocumbia* is the existence of strong regional subvariants, which include styles centered in the south, the northeastern Amazonian region and the north coast. Performers centered in the country's southern region, including Rossy War and the group Néctar, have perhaps been less averse than others to adopting sounds that recalled *chicha* music, such as electric guitars and the synthesized timbres of Andean instruments. By contrast, the *norteño* (northern) style, associated with the coastal region of Piura, is influenced by a long-standing regional preference for 'tropical' music combos performing salsa, Colombian *cumbia* and other pan-Latin American dance musics. Emblematic *norteño* artists such as Agua Marina and Armonía 10 retained the horn sections playing Colombian *cumbia*-style fills that had typified both groups for decades. A distinct northern subvariant adopts elements of musical genres from nearby Ecuador, such as the *pasillo*. In both cases, groups are typified by a rotating lineup of virtually indistinguishable singers, a 'weepy' (*llorón*) singing style, and a strong thematic emphasis on tragic love. A final tendency, associated with the northeastern jungle region and the cities of Pucallpa and Iquitos in particular, is best emblematized by performers Euforia and Ruth Karina. The music of these groups is self-consciously 'danceable' and relentlessly upbeat, and groups rely heavily upon jungle imagery in both song lyrics and stage performance. In both respects, these groups can be seen as latter-day heirs to pioneering '*cumbia selvática*' ('jungle *cumbia*') groups of the late 1960s, such as Juaneco y su Combo and Los Mirlos, whose guitar-based style of *cumbia* music invoked precisely the same imageries and musical elements. However, the more recent performers also distinguish themselves by borrowing elements of Brazilian *toada* music from neighboring regions of the Amazon.

Despite such variation, a number of traits can be adduced to all performers that distinguish *tecnocumbia* from both *chicha* and other Latin American *cumbia* styles on musical grounds. Foremost among these is an avoidance of *chicha*'s musical markers, particularly that style's reliance upon undistorted electric guitars, and its use of the structures of Andean *huayno* music. Instead, *tecnocumbia* musicians favor conspicuously 'artificial'-sounding synthesizer settings, in contradistinction to both *chicha*-style guitars, and the brass and winds of early Colombian *cumbia*. Even in the style's northern subvariant, typified by the use of live brass sections, synthesized sounds play a prominent role in the musical texture. Usually, these synthesized sounds are rounded out by electric bass, light percussion and sometimes electric guitar.

Another distinctive feature of *tecnocumbia* is the use of sounds and techniques borrowed from other Latin American 'tropical' styles to augment the *cumbia* template. In part, this tendency is owed to artists such as Armonía 10, who already had long careers performing such repertoire, but there has also been an intentional drive on the part of newer composers to utilize such features. Composers have thus added occasional keyboard accompanimental patterns recalling *salsa montunos*, as in Rossy War's standout hit 'Nunca pensé en llorar,' though the complex interlocking *ostinati* and improvisational *descargas* typifying *salsa* recordings are entirely absent.

Overall song structures are highly variable, generally alternating vocal sections with catchy instrumental interludes, using a standard verse-chorus format, often enlivened by one or more contrasting bridge sections. They usually rely upon the basic acccompanimental framework of *cumbia* music, utilizing a binary 4-beat structure, with beats 1 and 3 strongly outlined by an arpeggiated bass line, and beat 2 (or beats 2 and 4) accented by keyboard and sometimes percussion. In all cases, percussion parts tend to avoid complex polyrhythm, and are usually limited to outlining either the basic *cumbia* pattern (a constant pattern of one-eighth and two-sixteenths), or a simple binary variant.

Vocally, the singing style tends to be simple, without conspicuous displays of virtuosity. Lyrics deal almost exclusively with themes of fun, dancing and partying, on one hand, and tragic or (more rarely) happy love, on the other. Unlike earlier Peruvian *chicha*, harmonic progressions are often varied and go well beyond basic alternation of major and minor tonic and dominants; likewise, melodies are generally diatonic rather than predominantly pentatonic, as in *chicha* music.

Tecnocumbia artists also distinguished themselves from earlier *chicha* musicians in performance, most often by relying upon imagery locally interpreted as 'tropical' and hence, in local terms, bearing the cachet of conspicuous cosmopolitanism. These tendencies are most marked in the jungle variant, where a notional 'sensuousness' is foregrounded via selfconsciously explicit dance moves and dancers wearing revealing clothing that is often inspired by traditional jungle motifs. In fact, the characteristics that perhaps go furthest toward distinguishing *tecnocumbia* from earlier Peruvian *cumbia* variants, and indeed most Peruvian musics, include the overwhelming prominence of female performers and the style's overt emphasis on sensuality. A majority of *tecnocumbia*'s most successful interpreters have been women, and the emphasis on frank female sexuality, as exemplified by the consciously explicit dance moves and scanty clothing generally associated with such performers, is sometimes interpreted as a self-conscious statement of sexual liberation. Such imagery is commonly linked to a discourse in which 'tropical' origin is closely associated with an uninhibited, anticonservative sense of bodily pleasure, often explicitly contrasted with the musical styles of other eras and regions. While a countervailing interpretation holds such imagery to be a mere reinscription of female objectification, it can hardly be denied that female performers have attained a leading public role within the *tecnocumbia* genre that contrasts greatly with all other Peruvian musics, with the possible exception of the related '*tecno-huayno.*'

Timba

Timba, also known as 'Cuban Salsa' or 'hyper salsa,' is a style of dance music that emerged in Cuba in the 1990s, primarily in the island's capital, Havana. It is characterized by the complexity, shrillness and aggressiveness of the music, lyrics and dance. *Timba* takes salsa, *son* and *rumba* as its starting point, using

Afro-Cuban rhythms that were rarely used until that moment in salsa and combining them in an original way with elements of funk, hip-hop, jazz, rock, rhythm and blues and disco. Song lyrics are mainly about love and sexual relations; moral and social problems derived from the crisis Cuba has experienced since the demise of the Soviet Union are sometimes addressed, but in a cynical rather than a critical or moralizing way. *Timba* language is typically rather macho and vulgar. The characteristic dance is in separated couples and the movements are reminiscent of the sexual act. *Timba* has contributed to the creation and establishment among the younger generations of new and powerful signs of Cuban identity and pride, different from those that mark official discourse.

History

The fall of the Soviet Union in the late 1980s brought about an unprecedented social, economic and ideological crisis in Cuba. Among those affected was one of the best generations of Cuban jazz and classical musicians, trained during the years of Soviet support. In order to stay afloat, these musicians enrolled in dance music bands, turning them into spaces for experimentation. The new social and economic conditions favored the redefinition of the relationship between the bands and their audiences, especially with the lowest and poorest classes. In this process, flute player and saxophonist Jose Luis Cortes played an essential role. In the late 1980s Cortes funded NG la Banda (Banda Nueva Generacion) with whom he made the mythical tour 'Gira por los Barrios de La Habana' in November 1989 to play concerts in poor neighborhoods. Songs such as 'La expresiva' and 'Los Sitios entero' (The Whole of Los Sitios [an area of Havana]) (on the group's album, *En la calle*, 1990) showed a new pride in belonging to the poor and marginalized neighborhoods of Havana. Toward 1993 La Charanga Habanera burst onto the musical scene, causing a huge sensation among teenagers with their funk riffs and the sound of the electric drums, combined with *salsa romantica* (romantic salsa). Its singers exchanged instruments without interrupting their playing, combining acrobatic dance with rap and break-dance moves and challenging audacity, while singing in a hip-hop style. Songs such as e 'El temba' (The Old Man), 'Superturística' (on the album *Pa' que se entere la Habana (*1996) and 'Chen Chen' (on *Tremendo delirio*, 1997) dealt with the new materialism imposed on certain sectors of Cuban youth by the crisis, the relationship of couples based on economic interests, and the widespread hypocrisy and social cynicism.

Issac Delgado developed a more romantic style, with less aggressive lyrics of higher literary quality. Toward 1994 one of the first open references to Afro-Cuban religions was made in songs such as 'Vengo con Ire' (I Come with Good Luck ['Ire' is a Yoruba dialect word]) and 'Dime tu lo que sabes' (Tell Me What You Know) (from the 1993 album *Con ganas*). A key musician in the consolidation of *timba* at this time was Manolin, known as 'El Medico de la Salsa.' His songs motivated Cuban youth to feel like winners despite the harsh conditions of their lives, helping them to construct a special subjectivity, a fantasy of power, self-sufficiency and arrogance in the midst of this tremendous crisis. Manolin's records broke sales records and the tickets for his concerts sold for the highest prices ever seen in Cuban dance music. He went on to bend the unwritten rules of the great Cuban bands such as Los Van Van and La Charanga Habanera, by stealing their audiences and at the same time earning their respect (Maestro 2004). Other bands developing *timba* at the same time included Paulito y su elite (later renamed Paulito F. G.) with a more romantic style, Klimax with a complex style of jazz funk, Bamboleo, whose female singers used the same challenging and macho rhetoric as the male bands, and Manolito y su Trabuco, who preserved the sound of the classical *charanga*. In late 1997 Juan Formell lined up the Dream Team-Timba Cubanaby promoting the most important stars of *timba* internationally, in the wake of the increasing enthusiasm for Cuban music created by Buena Vista Social Club and its pre-revolution musical genres (Roy 2003, 184 and 198). In the early twenty-first century orchestras such as Los Angeles de la Habana, Sello L. A., Azucar Negra and Chispa y los Complices have continued to develop different variants of the genre.

Musical Infrastructure

To overcome the economic crisis of the early 1990s, caused by the disappearance of the socialist world on which Cuba depended economically, the Cuban government boosted the tourism industry. Dance music was a key element in tourist resorts and it motivated the development of an unprecedented infrastructure for this music by Castro's regime. In April 1995 the first Casa de la Música de la EGREM opened, a concept that was to challenge the hegemony of the hotel cabarets. The economic opportunity permitted the establishment in Cuba of Spanish record companies such as Magic Music, Eurotropical and Caribe Productions, which managed a distribution deal with Spanish EMI. Artists such as Issac Delgado signed with US record companies, despite the US embargo against the island. Radio and television gave great prominence to *timba* music. At the beginning of *timba*'s success, the bands were allowed to manage their contracts by themselves, to charge in dollars and to organize presentations on the international stage. This greater international prominence helped introduce the new 'Cuban salsa' to the Latin American and the European market. In the mid-1990s the government reorganized the structure of the music industry in order to gain more control over it.

Style

Timba songs have a two-part structure. The first section consists of stanzas and is in narrative form. The second section (*montuno*) is longer and in a responsorial style: a solo singer improvises *guias* (individual verses, cries or exclamations) that alternate with chorus lines. The chorus lines constitute the most important part of the song. The style of the second section is completely different from that of the first. Each chorus line frequently derives semantically and structurally from the previous chorus line. The interventions by the brass instruments between choruses are called *mambos*.

The rhythmic base of *timba* is made up of an electric bass or baby bass; a piano playing the characteristic ostinati of *salsa* music called *tumbaos;* and the percussion section, which includes drums, *tumbadoras*, *pailas* (kettledrums), claves, bell and *güiro*.' The horn section includes trombones, trumpets and saxophone. A second keyboard plays the *contratumbao.* Orchestras usually have singers whose voices have different characteristics. Some orchestras, for example Van Van and Manolito y su Trabuco, introduce instruments used in old *charanga* orchestras such as the violin and the violoncello.

The music is complex and constantly imitates and references other musical genres or musical styles. In the first part, references to genres and styles such as classical *son*, romantic or soft ballad, orchestral *bolero* or *bolero-son* may appear. The bridge usually contains rhythmical and stylistic breaks in which the percussion takes the lead while the *contratumbao* plays riffs drawn from techno music, rock, jazz or traditional Cuban music such as the *guajeos* of *danzon*. The music in the *montuno* draws on elements of funk, soul, hip-hop, rhythm and blues, rock, jazz or reggae, Latin jazz, *rumba*, *conga*, reggaeton and other genres from the Caribbean and from African-American music. There are continuous, astonishing and elaborated breaks or rhythmical cadences which are synchronized neither with the harmony nor with the melodic cadences.

The piano's *tumbaos* are varied, chromatic, multidirectional and fragmented. The bass lines recall the riffs of funk, rock or the formulas of ritual or *rumba* drums. The arrangements of the metal section are reminiscent of the orchestrations of funk bands such as Earth, Wind & Fire, Chicago, Kool and the Gang, The Temptations, etc. that were very popular in Cuba during the 1980s.

Lyrics

Timba lyrics are extremely macho and at times disrespectful toward women. Even when the songs are sung by women, the singers assume male roles and sing in a macho style. The songs typically refer to situations experienced during 'the special period,' the crisis that followed the collapse of the Soviet Union. The lyrics exhibit a cynical attitude toward problems and portray survival strategies which are morally compromising. They refer ambiguously to sexual tourism and to relationships with foreigners for economic or survival reasons, to the new materialism and the eagerness to obtain and spend dollars, and to the ostentation of material goods and physical beauty. In order to avoid censorship, bands refer to these by introducing metaphors, popular sayings or fragmented stories that all young people can recognize, but which are never mentioned explicitly. While the most common topic is love and sexual relations, many songs deal with the Afro-Cuban religions, confirming the pride of practicing them in the only officially atheist country of Latin America.

In structural terms, the first section of the song narrates stories or describes a particular situation or state of affairs. In the *montuno* section, the chorus introduces phrases that reflect on the narration in the first part. The chorus and solo singer use intertextual mechanisms that constantly refer to the choruses of others songs and genres.

Dance

Timba can be danced in the traditional style of couple dancing known as *casino.* However, the norm is for men and women to dance apart. The woman takes the lead by performing provocative and frenzied dances like *despelote*, *batidora* or *tembleque* (all of them consisting in frenetic movements of the whole body especially the waist and the hips), in which the energetic movements imitate sexual intercourse. The dance portrays the direct sexuality of the lyrics. It is also possible to see imitations of the gesticulation and movements of profane Afro-Cuban dances (such as the *vacunao* of the *rumba guaguanco* or the acrobatic movements of *rumba columbia*) and of Afro-Cuban rituals. Sometimes the dancers perform challenging masculine choreographies, adopting moves from rap and other African-American genres. *Timba* musicians and followers adopt the look of 'tough guys.' They have an array of body piercing, sunglasses, tattoos, and gold earrings, necklaces and teeth; their attire usually consists of shirts with their sleeves torn apart or gym shirts, fitted trousers and brand-name sneakers combined with clothes with religious connotations.

Censorship

Despite the fact that *timba* played an important role in the economic recovery of the country in the 1990s, it became problematic for the government. *Timba* musicians became the most visible face of the classes that became richer during the crisis. Their public extravagance and audacity sometimes directly contradicted some of the official slogans. Likewise, there were some topics reflecting social problems that were well known to everybody but which, officially speaking, could not be mentioned in the media. In the mid-1990s the song 'La bruja' (The Witch) by NG la Banda (1994) received scathing attacks from the Cuban Women Federation for 'offending the Cuban woman' and it was censored by the media. What really bothered authorities about the song was that it referred to sexual tourism without criticizing it (Perna 2005a, 149–75). In 1997 La Charanga Habanera was given a six-month suspension for 'excesses' committed at its concert during the 14th Youth World Festival organized by the Young Communist League. It is believed to have been an 'exemplary' punishment, a warning call to all the *timba* orchestras. What the group's performance demonstrated was the contradiction between official discourse and the day-to-day lives of Cuban youth. After a number of laws against corruption and prostitution were approved, a police campaign was launched. It ended with the closing of prestigious nightclubs and dance halls such as the Palacio de la Salsa (Perna 2005a, 192–6). In 1997 Manolin, el Medico de la Salsa, released 'Que le llegue mi Mano' (That My Hand Reaches Him) and in 2001 released 'El puente' (The Bridge), both songs calling for reconciliation between Cubans from the island and from Miami. The pressure on the musician ended with his permanent exile in the United States in May 2001.

Meaning

Timba songs articulate elements from different musical genres and styles into combinations that operate as *narrative schemes* which interact with the lyrics and the dance in a semiotic way. The result is a composition of narratives that convert into musical and corporal speech on the fantasies, wishes and frustrations of the young people in present-day Cuba. *Timba* is a semiotic scaffolding by means of which Cuban young people reorganize symbolically the aggressiveness and frustrations brought about by the shortages and problems in their daily lives (López Cano 2004a and 2007). At the same time, they construct networks of renewed Cuban pride and signs of identity in which the elements (real or idealized) of African roots gain special significance (Perna 2005b). *Timba* exudes irony, feelings of revenge and cynicism, all of which disarm the hypocrisy that denies the corruption and the everyday problems and looks at the survival strategies with harshness but does not judge them. It allows young people to see and use their bodies as 'cultural capital,' one of the few possessions they can manage, with excess and without the mediation of the omnipresent state (López Cano 2005a and 2005b). *Timba* rebuilds the wholeness of the fragmented self of people who are obliged to make use of several contradictory discourses in order to survive.

Tinku

The term 'tinku' refers to an ancient Andean ritual from the Potosi region of Bolivia and to modern urban versions developed in the context of Carnival and other festivities. Modern choreographed versions of *tinkus* are performed in Bolivia as well as in Argentina – principally in the provinces of Salta, Córdoba and Buenos Aires, where a large number of Bolivian immigrants reside and continue to recreate the genre. *Tinku* means 'encounter' in the Quechua language. Each year, various farming communities, especially the ones in the north of Potosí, in central southern Bolivia, celebrate *tinku*, the modern expression of a ritual that originated in the communities of the Laimes, Jukumaris, Machas and Pocoata. The ritual, with its attendant ceremonial dance and music, has attracted the attention of state and indigenous authorities as well as artists, anthropologists, reporters and tourists.

The rite consists of celebrations that last for many days, with ceremonies that culminate in a battle between neighboring groups, symbolizing the search for balance between two complementary sectors or halves of an *ayllu* (communal indigenous territory) or between opposite *ayllus*. The violent and occasionally bloody fight is inclusive of all sectors and ages, including men, women and children of the same community but of different ethnic groups who confront each other with beatings and stone blows with the objective of fertilizing Pachamama with their own blood. (For the altiplanic peoples of the Andes, Pachamama is a religious and cosmological vision of the world and of human beings that often appears in syncretic form. It can also be conceived of as an intangible deity who takes the form of an old woman with human needs and vices; this is why she receives offers of drinks, tobacco, coca leaves and food – satisfying her guarantees prosperity and a good harvest season. This traditional act of devotion has spread to urban areas, even large cities, and is practiced by *criollo* sectors as well as by people with no Andean ancestry.) Despite its violent nature, the encounter brings longstanding ethnic bonds into the present day and also functions as a way of memorializing a central notion in the Andean worldview, the idea of the complementarity of opposites that extends to all sociocultural practices.

In the traditional dance the different groups usually march toward the place of encounter to the rhythm of the *julajula* (ceremonial music played with Andean aerophones in hocket-style melodic alternation, in pairs of 4- and 3-cane flutes, called respectively *arca* and *ira*). *Wayños* are also interpreted with *charangos* and *guitarrones*. As a symbol of the battle and defense of territory, the *tinku* dance is an artistic representation, a simulation of the battle that communities in Potosi (Ayllu) have maintained for religious reasons. It incorporates powerful movements, with arms shaking and punching in the air and rhythmically marked dance steps landing on the ground. The defined rhythm accompanies walking with marked steps and an attitude of stalking the opponent. Every other phrase of 8 or 16 bars contains a rhythmic formula that marks when the dancers must change direction or the bumping of heads in battle. This gesture is accompanied by the shout 'huh!' or 'shoh!' which is audible in recordings (see, for example, the Lucha ritual de Tinku-Takanakuy Boliviano-Potosi, listed in the YouTube references below). Melodies in major or minor harmonic modes alternate with pentatonic scales. (Voices employing parallel motion in intervals of thirds, fourths and fifths are a frequently used technique in Andean instrumental and vocal arrangements.)

In the early 1980s another version of *tinku* emerged in the Carnival at Oruro, in central Bolivia, when some young university students from the middle classes organized themselves into 'folkloric fraternities' to participate in mass urban events. This street representation developed in conjunction with Carnivals held on commemorative dates such as patriotic anniversaries and religious festivities. It is found today in the Bolivian cities of Oruro and La Paz and in the Argentine regions and cities that host a high percentage of Bolivian immigrants, such as the province of Salta, Buenos Aires and Capital Federal, and continues to extend into other regions and continents where Bolivian residents are found.

In these urban contexts, where folkloric *tinku* is presented as spectacle, neither the dance nor the music corresponds with the original forms. However, the costume and the gestures are preserved in the typical male battle that takes place during the state of drunkenness of the authentic *tinkus*. The modern *tinku* (danced to at carnivals and also in discos and at parties) employs drums, bass, keyboard and electronic effects, *sikus*, *zampoña*, *chajchas*, guitar and *charangos*.

Tinkus are also composed with another rhythmic base. For example, at the Festival Internacional de la Canción de Viña del Mar in 2008, the Grupo Femenino Bolivia participated with the *tinku* 'Falso amor' (by Siria Vera Cano), with more romantic subject matter and a more stylized, less 'warrior-like' performance. Among the renowned groups who have composed and interpreted *tinku* since the 1980s are Tupay, Amaru, Los Kjarkas, Grupo Andino, Los Masis, Llajtaymanta, Norte Potosí, Kala Marka, Vitamina Brass. The popular versions that famous groups such as Los Kjarkas perform on stage at folkloric festivals, theaters or stadiums, as well as works written for dance troupes to perform during the spectacular carnival parades organized by the industries of culture and tourism, are performances produced for commercial purposes and mass consumption. In these versions, folk symbols and components converge with those that are modern, popular and urban. The syncretism and hybridization of the sound is displayed in the music: for instance, when traditional Andean wind instruments such as the *quenacho*, *zampoña*, *charango* and *wancara* are mixed with instruments that are characteristic of rock and pop such as the sax, electric bass and drum kit. The genre allows for a high degree of sound hybridization and so, like other regional and transnational genres such as *cumbia*, remains relevant in Bolivia, Peru and Argentina. Performers and consumers of *tinkus* perceive the genre as being simultaneously popular, traditional and folkloric. This is because their symbolic content evokes the local traditions of Potosí while at the same time, due to its energetic nature, it generates experiences of physical contact ('pogoing,' the act of jumping and pushing each other while dancing) similar to those that occur in rock communities. This explains the massive adherence to the genre on the part of the younger population. *Tinku*'s multiplicity of functions and meanings enables people to dance it in groups in discotheques or to accept it, in official contexts, as a national folkloric dance, as is the case with 'Celia' (anon.), one of the best-known *tinkus* of all time.

Toada

Toada is used throughout Brazil to indicate any simple song. It is related to the Portuguese verb *toar*, meaning, 'to sing a simple song.' It is a generic term and many times appears as a synonym for *moda,* or song. Its main characteristics are its simplicity and its binary (verse-chorus) structure. The word appears with greatest frequency in the popular musical vocabulary of north and northeastern areas of Brazil (where it is sometimes interchanged with *chula*) and it is also commonly found in folkloric traditions, such as the *folguedos* (*bumba-meu-boi* and *chegancas*, for instance).

Marcondes (2003) points to numerous authors, such as Renato Almeida and Oneyda Alvarenga (two great folklorists), who have defined *toada* by the short lyrics which deal with themes such as love, comic situations or which display poetic techniques such as plays with words. *Toada* cannot therefore be defined in musical terms, except to emphasize its simplicity. A *toada* can be sung without any accompaniment or with just a single string instrument such as an acoustic guitar, a *viola* (a kind of acoustic guitar) or a *rabeca* (a kind of fiddle). It can be performed solo, as a duet (with much use of intervals in thirds) or by groups of people. The importance of simplicity is maintained by the binary verse-chorus form.

Toada's simplicity has made it a symbol of Brazilian folk and traditional music. When a popular composer wants to make a reference to traditional music in a composition he or she will often include the word *toada* in the title. In the same way, references to *toada* in the lyrics of MPB (*música popular brasileira*) compositions (such as those of Gilberto Gil and Milton Nascimento) are very common.

Some authors have pointed to the *toada*'s melancholic aspect, which is reinforced by its typically slow tempo (see, for example, Câmara Cascudo 2001). This aspect of *toada* places it on a side of Brazilian culture that non-Brazilians seldom see. It does not appear in official discourse about the country, which is dominated by the rhythmic and entertaining aspects of carnival and dance (Saliba 1998). Because its character is antithetical to this discourse, its use is very common in the rural areas, where it is connected symbolically to regional characteristics, in opposition to the idea of national identity that is constructed around the urban areas and their dance elements. *Toada* can be understood, therefore, as a side of Brazilian culture that is linked more closely to song than to dance – to the moon than to the sun – and to melancholy than carnival (Oliveira 2007).

ALLAN DE PAULA OLIVEIRA

Tobas

The dance of the Tobas is a neofolklore music-and-dance genre of ancient origin popular in Bolivian street carnivals, in particular that of the Oruro carnival. The dance, which was known as 'dance of the Ch'unchus' in earlier times, portrays the indigenous people of the Amazonian jungle as warriors or warlocks in a parade of fictitious and exaggerated characters. The Tobas are very popular in folk festivals thanks to their imposing figures and acrobatic ability, which they display in an energetic street dance that presents an imagined version of Amazonian ethnic groups.

Ch'unchus or Savage Indians

Since the time of Tahuantinsuyo (pre-Incaic era in fifteenth- and sixteenth-century South America), the ritual representation of indigenous people in the lowlands has been a cultural constant among Quechuas and Aymaras of the Andes. Thus, there are two ancient names for these representations: *Ch'unchus,* from the Quechua meaning 'barbaric' or 'wild'; and *Chunchus* or *Chiriguanos*, a name given by the Incas in the early sixteenth century to Guarani war prisoners who had been transferred to the highlands of Vilcanota as punishment, 'where they received the name of *Chiriguaná* ("scared by the cold")' (Espinoza Soriano 1997, 103). Raoul and Marguerite D'Haucourt described the dance in 1925:

> In Bolivia, these dances are common among the Quechua and the Aymara. There, as in Peru and Ecuador, we encountered the *Morenos* [i.e., black slaves], the dancers; to these, according to P. Walle, add the *Pacoches* and *Huacas-Tocoris* who represent a comic bullfight; the *Tundiques* as well as the *Chunchos* and *Chiriguanos* – war dances where the executers carry a fake jaguar skin on their backs and gesticulate with a solid club in their hands replacing the ancient *maccana* (D'Hancourt 1990 [1925], 134).

This complex network of ritual Andean dances representing Amazonian warriors possibly emerged in memory of ancient confrontations with jungle inhabitants. The dance has been recorded in documents dating back to the eighteenth century. More recently, performances of the dance of the Ch'unchus have been documented in the south-Andean regions of Cusco and Puno in Peru; Huaros near Lima; Llacanora in Cajamarca; Paucartambo near Cusco, as well as other places (Romero 1987, 18–19). Similarly, the dance can have other denominations: 'In some places, the dance took on different names such as *shapish* in the department of Junín; *anti* or *antichuncho* and *shaqcha* in Ancash; and *qhapac chuncho*, *wayri chuncho* and *qara chuncho* in Cuzco' (Arredondo Calderón 1999, 695). The music, instrumentation, dance and costuming will vary according to the region, from indigenous instruments such as *tarkas* (wooden recorder), *pinkillos* (wooden or bone flute), *quenachos* (larger version of the traditional *quena*, a bamboo flute) and *tambores* (drums), to instruments of mestizo origin such as the harp, *quena* and violin. Nonetheless, Peruvian *chunchus* retain basic elements from the ancient dance:

> In each place the *chuncho* is represented according to the image that the people have of them. However, the use of feathers, mirrors, arrows, and spears is generalized. In many places the *chuncho* involves the use of a mask (or a veil in the case of women). In most places the *chuncho* is a dance exclusive to men, though in some cases such as the *antichunchos* in Ancash, or the dance of the *chunchachas* in Cuzco, participation is exclusive to women (Arredondo Calderón 2000, 695).

In the city of Tarija in the south of Bolivia the *ch'uncho* maintains similar characteristics. Every first Saturday in September during the *Fiesta de San Roque* (a celebration of Saint Roch, patron saint of Tarija) *Chunchos promesantes* dance on the streets (Sánchez Canedo 1999, 693). *Chunchos promesantes* perform the dance of the Ch'unchus to fulfil a promise made to their patron saint in exchange for divine favors. These parades accompany the procession of San Roque, who has been honored since at least the sixteenth century, when he is believed to have saved the region from the scourge of the plague (Varas Reyes 1976). The allegorical presence of the Ch'unchus in the south of Bolivia is probably due to its proximity to the land of the Guarani and the Toba, bellicose tribes who fought against colonial cities and Franciscan missions (Ruiz and Citro 2002). These tribes were pejoratively nicknamed 'chiriguaná' and 'ch'unchu' by the Incas, who considered them to be barbaric. (In fact, the word *chunchu* continues to carry this connotation.)

The Ch'unchus from Tarija perform a series of choreographies accompanied by an ideophone called *flecha* ('arrow'), an instrument made out of a piece of wood that has small bamboo shoots attached to it that collide with the wood when shaken, producing a sound that is associated with the *promesantes* (Vacaflor Dorakis 2005). Other regional instruments involved in the celebration include: *caña* (a long cane with a leather membrane on one end that is played like a trumpet); *tambor redoblante* (drum that keeps the beat for the dancers); and *quenilla* and *camacheña* (small flutes). The *promesantes* are male. Their costumes are elaborate and have three main components: a turban, which is decorated with tall, colorful feathers that stand vertically over the head, with a cape and veil attached to it completely covering the dancer's head and face; a *ponchillo* ('small poncho'), a type of rain cape made with delicate fabric that is richly ornamented; and a *pollerín* ('small skirt') to cover the dancers' legs. In Tarija, the Ch'uncho represents an indigenous leper who covers his face with a veil and announces his arrival with the sound of the *flecha*. However, the tall feathers have been an Andean emblem of native chiefs for centuries. The aesthetic of the *Chunchos promesantes* is most likely a mix of colonial Catholic as well as pre-Hispanic emblems and narratives.

The Tobas in Oruro: A Popular Fantasy Is Born

Throughout the twentieth century, the *Carnaval de Oruro* (Oruro Carnival) played a culturally dynamic role in shaping the aesthetic of the dance of the Ch'unchus. In fact, the dance experienced a complex transformation year after year during the 'Antruejo de Los Andes' (i.e., the three days preceding the beginning of Lent), another name given to the Carnival. While the dance of the Ch'unchus must have existed in the nineteenth century, the ensemble Gran Conjunto Tradicional de Tobas, Chunchos, Cambas y Chipayas de la Zona Sud was not founded until January 1917. The group was created under a simpler name, Conjunto Folklórico Tobas, and was directed by Tomás Cáceres and later by his son Donato Cáceres (*El Diario*, 6 August 1975). The dance was practiced among cart owners or haulers (Beltrán Heredia 1956, 25). According to Montes Camacho, the Tobas ensemble

> employs an agile, masculine, and athletic step, initially they were also known as 'Chunchos' due to the costuming that covered them from head to toe with multicolored feathers, holding a spear 'Nonta' [Chonta] (i.e. palm tree wood) on the right hand and a hatchet on the left; on their backs they carried beautiful conches and 'phuros' [or colored feathers] and their feet were partially covered by leather sandals (1986, 47–8).

The success of this institution allowed them to traveled internationally – in 1920 they traveled to Peru, 'demonstrating the steps of the toba, camba, chuncho, salto Bolívar, cullawis, and others' (*El Diario*, 6 August 1975). In 1923 this dance ensemble also participated in the Fiesta de La Tirana, the annual festival in honor of the Lady of Mount Carmel in the northern town of La Tirana in Chile (ibid.). The presence of this and other Bolivian dance ensembles may have triggered a Chilenization of the Ch'unchus in the northern regions of Chile (Gonzalez Miranda 2006). By the 1950s the Tobas were described as follows:

> They wear masks made with braided wires and from afar they give the impression of a forest of tropical feathers. They carry these [feathers] on their heads, belts, wristbands, and shin guards. Their attire is light: long pink pants, a satin shirt under an 'espaldera' or small cape, and a knee-length corduroy skirt in green, light-blue, red, or orange. They adorn their heads with cardboard turbans that have stained rhea or cock feathers. The clothes are appropriately decorated with a few mirrors, glass beads, and simple embroideries to allow for the energetic movement that will be directed by the tribal chief with the aid of a whistle. Preceding the tobas are the 'monos' ('monkeys') and 'pumas' ('cougars') that carry little parrots from eastern Bolivia. … They use 'chontas' (i.e. palm tree wood), sticks painted in red and white, as spears which they handle with tremendous skill, and they jump and turn so high one could say they have wings on their talons (Beltrán Heredia 1956, 19).

As this text shows, the old Tobas closely resemble the Ch'unchus from Tarija, though they already show some of the aesthetic transformations common to the Oruro Carnival. Although Beltrán Heredia asserts that their music was monotonous, their dancing was varied. Montes Camacho maintains that, until the 1960s, the *tobas* dance did not have an accompanying band and that 'the dancers simultaneously danced and performed their own melodies with *quenas* and a type of *pinquillo*' (Montes Camacho 1986, 48). However, it was the third president of the institution, Germán Quiroga Terrazas, who made it possible for the dance to be transformed. Quiroga 'modified the compositions by the ensemble, giving the opportunity to students – and starting in 1965, to young ladies – to participate in the group; formed two groups, one for *chunchos* and the other for *tobas*' (ibid.). In the early 1970s the Tobas de Oruro started implementing new steps and drastically transforming the costumes. With the addition of a brass ensemble as accompaniment the dancers were now able to display a series of acrobatic steps, including high jumps, which became characteristic of the dance. The musicians also began to create music especially for the Tobas, giving rise to a new musical genre that continues to be attached to the dance.

In 1976 the creation of the ensemble Conjunto Artístico Tobas Uru-Uru strengthened the youthful nature of the dance of the Tobas. In 1977 new characters were introduced into the choreography by the young and athletic dancers: 'the *cambas* and *chipayas*, the latter as an homage to a pure race native to this department, the Chipayas' (Montes Camacho 1986, 49). By the 1980s the dance of the Tobas had turned into one in which the wildest fantasies about Amazonian peoples were allowed. Thus, 'perhaps in search for originality they added dancers dressed in leather loincloths, adorned with bones and feathers, armed with spears, arrows, and hatchets supposedly in the manner of the Toba Indians' (Sánchez Patzy 2002, 316). However, a fundamental element of these transformations was the Hollywood genre of the western: spontaneously, many dancers and choreographers began to identify the Tobas with the 'redskin Indians' that were common in American

Western films of the 1950s. As a result, the Toba hatchet (which had been the *chonta* spear or the 'flecha' of the *chunchos promesantes*) was replaced by the tomahawk attributed to Native Americans. In some cases, the turbans (which had become increasingly taller) were replaced by feather headdresses similar to those worn by Sioux chiefs. The traditional mask also changed with time: through the 1950s the original veil was substituted by a mask representing a smiling Spaniard that had delicate features and a thin mustache. By the 1960s, however, the mask had begun to change into a caricature of a native, featuring a pronounced aquiline nose, salient cheekbones, full lips in a ferocious smirk and small, threatening eyes. In summary, the costume portrayed a bloody native – a picture fueled by a series of popular misconceptions and incentivized by the images from American Western films.

The Music of an Imagined Jungle

The music of the Tobas evolved in tandem with the transformations in the dance. In 1956 Beltrán Heredia wrote that the Zona Central de Oruro ensemble performed at the Carnival with 18 dancers and a band of six *quenas*, one *tambor* and one *bombo* (bass drum). Almost all of the members were cart owners from the city (1956, 25). The involvement of young college students facilitated the progressive stylization of the genre. Following cultural trends in the 1960s the Tobas began to dance accompanied by brass ensembles, which provided a brighter sound to their high jumps and energetic choreographies. In the 1970s some composers of Bolivian neofolklore started writing music in the style of the *tobas*. This music was performed by professional ensembles of singers, *quenas*, *zampoñas*, *charangos*, guitars and bombos. As a genre, the *tobas* were relatively unimportant until the 1980s, when the ensemble K'alamarka (founded in 1984 under the leadership of Hugo Gutiérrez and Rodolfo Choque) recorded the songs 'Bolivianita' ([1989] 1992) and 'Ama Amazonas' (1992) in France. The songs were written in the style of the *tobas* and became a national as well as international success. Since then, the music of the *tobas* has been imitated in countries such as Chile and Peru, and in Bolivia and Ecuador this led to the assimilation of this Bolivian neofolklore genre with the traditional Ecuadorian *sanjuanito.* In all cases, the staging, lyrics, sound effects and video clips of the Tobas constructed a false image of the jungle environment and its inhabitants, an aesthetic that was closely associated with the New Age movement and was colored by prejudices and distorted values concerning the native population of the Amazonian jungle.

Tonada Chilena

The Chilean *tonada* is a lyrical genre of mestizo origin and Hispanic lineage that has been traditionally associated with a feminine quality.

The *tonada* is a strophic monody that is accompanied by one or two strummed guitars, or by a guitar and a harp. In rural areas in the central regions of Chile the *tonada* is the most prominent form of musical expression. In these areas, women, song, poetry and the guitar have coexisted as an indivisible unit for centuries. Starting in the nineteenth century the *tonada* became associated with a broad range of social situations such as weddings, communal work, sporting events, funeral, social gatherings, and summer and leisure time. Since then, the practice of *tonadas* has been circumscribed to an area similar to where it is practiced today, extending east to west from the Andes Mountains to the coastline, and north to south from the city of Copiapó to the shores of the Bío-Bío river and the Araucanía. Nonetheless, the core of this tradition is located in the provinces of Cachapoal, Colchagua and the Maule region. This area was the crucible for the Hispanic-Picunche *mestizaje* that gave rise to the Chilean hacienda and the *huaso* culture. Historically, the *huaso* (or Chilean cowboy) has been the agrarian representation of local identity associated with the rustic and vernacular horseman of the Central Valley of the country. The fostering of the *tonada* has remained strong in this 'huaso' region and the genre has influenced others that came later such as the *cueca*, *vals*, *habanera*, *jota* and *mazurka*.

The *tonada* can also be found in the westcentral region of Argentina in the area comprising the province of San Juan in the north and the rural areas of Neuquén and Malargüe in the south; here, Chilean idiomatic expressions find their corresponding Argentinian version. This closeness is related to the origins of the genre: *tonadas* emerged as a distinctive musical practice in the territory corresponding to the former Kingdom of Chile, which until 1776 included the region of Cuyo. This gave rise to the hypothesis that the *tonada* originated in Cuyo and entered Chilean territory in 1817 when troops fighting for independence crossed the Andes Mountains. However, it is important to note that the army that crossed into Chilean territory was made up of male soldiers and that the *tonada* in its Chilean guise is a type of song which is eminently feminine, similar to how it is perceived in Malargüe and Neuquén, where female singers insist that the roots of the *tonada* are Chilean.

The texts of the *tonada* reflect the strong influence of the Spanish Golden Age in colonial territories, although many texts were written by anonymous authors. Predominant themes include unrequited, hurt or betrayed love. There is also a variety of intervening themes such as the picaresque, the comic, the witty and the religious, as well as themes associated with recreational, festive, ritual or ceremonial functions. Depending on the function, context and occasion, the *tonada* is presented under denominations such as: *esquinazo* when it is sung as a greeting to someone celebrating a name day; *parabienes* (congratulatory) when it is dedicated to a bride and groom at a wedding; and *canción a Manuelito* (Song to Manuelito) when it is offered to the Infant Jesus at the manger during Christmas. These differences occur only in the peasant *tonada* at the textual and functional levels, preserving its formal normativity both in the literary and musical parameters.

The oldest and most common form of the *tonada* is strophic, consisting of a sequence of formal and metrically equal *coplas* linked by a brief instrumental transition or interlude. The *copla* is organized into four octosyllabic lines, preferably with a consonant rhyme in the even verses (2-4). Although the majority of *tonadas* consist of *coplas* that are structurally independent from each other, an important number of them make use of the *coleo*, an aesthetic device proper to the rural *tonada* whereby a *copla* starts with the repetition of the fourth line of the previous verse or '*cola*,' adding grace and a sense of continuity to the text (see Example 1).

I
Por todas partes donde ando
Ando por ver si te veo
Pero tu no echai de ver
El amor que yo te tengo

II
El amor que yo te tengo
Cuando yo te estoy mirando
Pero cuando te retiras
Mis ojos quedan llorando

III
Mis ojos quedan llorando
Y en vano son mis pasiones
Porque veo que conmigo
Quieres probar intenciones

IV
Quieres probar intenciones
Yo muy bien lo hecho de ver
Ándate tú con quien quieras
Déjame a mí padecer

Example 1: Illustrating how a *copla* starts with the fourth line of its predecessor

The *tonada* also features less common literary devices from *canto a lo poeta* (i.e., a Chilean musical genre rooted in the troubadour and trouvère traditions of the Middle Ages) and the *verso en décimas* (i.e., a literary device comprised of 10 octosyllabic lines) such as the *copla glosada*, where a theme presented in the opening stanza is repeated in other lines with mirror rhymes (see Example 2) and *versos por número* (numbered stanzas) (see Example 3). The *tonada* is also comprised of an indefinite number of *coplas*, but in general no fewer than three or more than seven lines are ever sung, even if the piece has more than that. The conclusion is always given by means of a *cogollo* (lit., heart of a plant), or line alluding to the realm of flowers or plants (Example 3).

I
Suspiros del corazón
Van a tu poder mi vida
Por pensar en ti los doy
A todas horas del día

II
No puedo en esta ocasión
Ver tus graciosos candores
Te mando por portadores
Suspiros del corazón

III
Muy alegre y complacido
Recibe estos mensajeros
Que con el aire ligero
Van a tu poder mi vida

IV
Siempre suspirando estoy
En tan angustiada calma
Que estos suspiros del alma
Por pensar en ti los doy

V
Tú no sabís dueño mío
Que la esperanza no pierdo
Por eso a vuestro recuerdo
A todas horas del día

Example 2: *Copla glosada*

I
La *una* te prometo
A las *dos* mi dulce encanto
A las *tres* mi vida mida
Me hallo padeciendo tanto

II
En *cuatro* nada te advierto
En *cinco* te hago un pedido
En *seis* te hago un encargo
Que no me echís al olvido

III
En *siete* te estoy queriendo
En *ocho* preciosa flor
En *nueve* no me desprecies
Me has de hacer ese favor

IV
En *diez* días de mi vida
En *once* reloj pulido
En *once* reloj pulido
Que no me echís al olvido

V
Señoritas y señores
Verde cogollo de hortensia
Trabajo es poner amores
Donde no hay correspondencia

Example 3: *Versos por número*

Musical Description

Commonly, the *tonada* is in 6/8 with occasional hemiolas in 3/4. The melody is always in a major scale with signs of modal scales, and it is developed mainly through tonic (I) and dominant (V or V7) chords following a I–V–I progression. The subdominant (IV) appears less frequently and when it is present it is usually in the progression I–IV–I–V–I. In addition, the melody is organized in a single musical period of two phrases – the first expansive in character, where leaps of a fourth and major intervals dominate; and the second contractive in character, where intervals of a third and smaller predominate. Another characteristic feature is its phrasing, which highlights a repetitive pattern that is commonly (a–a–b–a) and (a–a'–b–a). Less common are (a–a–b), (a–b–a) and (a–b–b) (see Example 4 below).

The guitar accompaniment is a structural component of the *tonada*; thanks to its timbre and harmonic function the guitar creates a sound environment and an ordering which, through preludes, interludes and bridges segments and prepares the entrance of each *copla*. Thus, in Example 5 below, an instrumental prelude or interlude plus a melodic period (*período*) constitute a cycle (*ciclo*), which is the smallest unit of the *tonada*'s strophic form:

Example 5: Structure of a *ciclo*

In urban areas the *tonada* is accompanied by guitars tuned in E (E–B–G–D–A–E). In rural areas, a variety of tuning systems exist that simplify the use of the instrument through transposition and contribute to an archaic and traditional sonority. This sonority is characterized by harmonic functions that are combined with modal scales derived from open triads, or from the lowest pitch in the tonic chord that is maintained in the dominant as a pedal point (see Example 6).

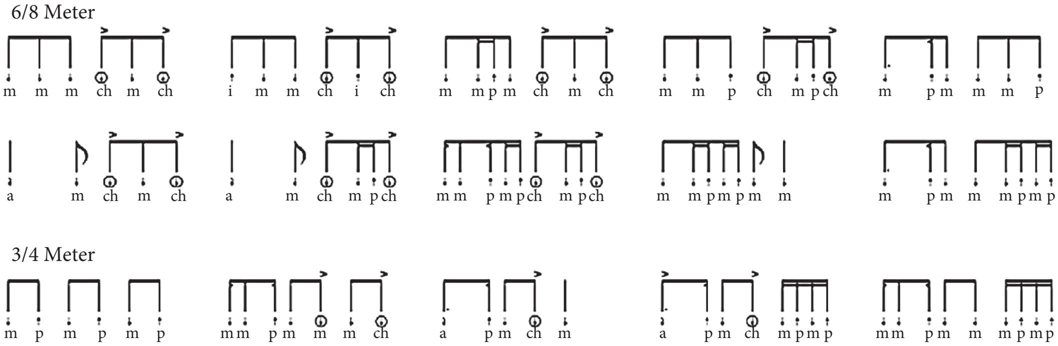
Example 6

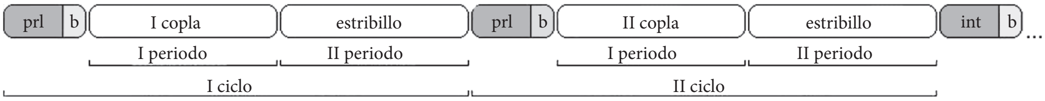
In addition to the richness of tuning systems, there exist accompaniment techniques that require virtuosic handling of the instrument. Some of these techniques include: *charangueado*, *sangorreado*, *punteado*, *trinado*, *picoteado* and *deslizado*. Nonetheless, the most common technique is the strumming, which allows for the manipulation of rhythms in 6/8 and 3/4 and the alternative use of articulations common to the genre. There are more than 20 different types of strumming patterns for 6/8 and over 10 for 3/4. Some of these strumming patterns are given in Example 7 below.

Although the *tonada* is related to other influential genres such as the *triste* and the *estilo*, by the end of the nineteenth century the genre experienced an important formal variation with the addition of a refrain (*estribillo*). This addition is related to the formal structure of the songs that gained popularity on the stage in Chile during those years. The *tonada* with refrain consists of a sequence of *coplas* that are alternated with a refrain whose length and form differ from the *copla*. This process was influenced by the Spanish *cuplé* and *jota* (see Example 8 below).

In the 1920s, when the *cuplé* was at its highest peak, the *tonada* began to be recorded and became, along with the *cueca,* a successful pairing for the national recording industry. As González Rodríguez and Rolle Cruz point out (2005), one of the earlier recordings of Chilean music was the tonada 'Serenata amorosa,' recorded in 1906 by Fonografía Artística-Efraín Band as a late example of 'salon' and 'casas de canto' music in the new century. From that point until the



Example 7: Guitar strumming patterns



Example 8: Structure of *tonada* with refrain (*estribillo*)

early 1950s different male 'huaso' groups and others recorded dozens of pre-composed urban *tonadas*, such as 'El martirio' (The Torture) (ca. 1910); 'Al pie de una guitarra' (To the Sound of a Guitar) (Julio Toro 1928); 'Abran quincha, abran cancha' (Open Fences, Open Fields) (1931) and 'Ay agüita de mi tierra' (Oh Water from My Land) (1932) (Los Cuatro Huasos); 'En Chillán planté una rosa' (In Chillán I Planted a Rose) (Esther Martínez 1939); 'Oro purito' (Pure Gold) (1939), 'Cantarito de Peñaflor' (The Little Vase from Peñaflor) (1940) and 'Rosita de Cachapoal' (Little Rose from Cachapoal) (1942) (Nicanor Molinare); 'Rayo de luna' (Moonlight) (1939) and 'Camino agreste' (Rugged Road) (1950) (Luis Aguirre Pinto); and 'Ende que te ví' (Since I Saw You) (1940) (Luis Bahamonde), all of them commonly recorded by RCA Víctor and EMI Odeón (González Rodríguez and Rolle Cruz 2005, 385–94). This brought about other changes as well: men started to participate actively in the performance of *tonadas* either as solo performers or members of duos, quartets or in mixed ensembles; compositions in minor modes and of tonal character appear; unusual modalities of accompaniment appeared such as piano, accordion and even radio orchestras made their debut. After centuries as a social practice, by the mid-twentieth century the *tonada* had become an important emblem of nationalist discourse of life-affirming, racial and environmentalist nature. This character emerged from valorization by folklorists and hegemonic segments of the *tonada* as a long-established tradition in Chilean society.

Tonada Cuyana

Tonada cuyana is one of the most popular genres in the region of Cuyo, Argentina, which includes the provinces of Mendoza, San Juan and San Luis. *Tonadas* ('tunes') are songs which are considered by those who perform them to be the ultimate sign of regional identity. Along with the *cueca cuyana* ('cueca from Cuyo') and perhaps to a lesser degree the *gato* and *vals*, the *tonada cuyana* belongs to a musical complex known as 'música popular cuyana de base tradicional' (traditional popular music from Cuyo). Performers involved in this musical complex are called 'tonaderos,' a name which reveals the high degree of sociocultural identification that these artists give to the *tonada* as a representative of all the other genres.

Contemporary History of the Musics from Cuyo and the Cultural Industry

Although is it possible to trace the history of *cuecas* and *tonadas* back 200 years (Aretz 1952; Draghi Lucero 1938; Rodríguez 1938; Vega 1944, 1953, 1956), these genres are strongly linked to the cultural industry of the 1930s, a decade associated with the *refundación contemporánea de la música popular cuyana* (contemporary rebirth of Cuyo's popular music) (Sánchez 2004, 2006). This was a process in which the crystallization of new forms and the construction of new meanings gave rise to modern referents that are still recognized today.

These genres became widely popular after a group of performers from Cuyo settled in the Argentine capital of Buenos Aires in the 1930s to take advantage of the new spaces created by the radio and record industries. Thanks to these new resources and to the fact that Buenos Aires is the center of political and economic power, these artists were able to legitimize their careers and to make regional music available throughout the country.

This first generation of musicians (Fluixá 1960) was responsible for the crystallization of the music. They included: Hilario Cuadros (Los Trovadores de Cuyo), Buenaventura Luna (La Tropilla de Huachi Pampa), Carlos Montbrun Ocampo (Las Alegres Fiestas Gauchas), and Alberto Rodríguez and Ismael Moreno. In moving to the capital, making recordings and finding their way in the communication media, these artists showed great determination and a shrewd sense of opportunity. They especially embraced radio broadcasting – some even became radio hosts and used their shows to promote their own albums. The labor carried out by these artists was preceded by the so-called 'precursores' (i.e., 'precursors') Saúl Salinas and Alfredo Pelaia (Vega 1938) who shared airtime with the emerging genre of the *tango porteño* as well as other provincial musics in the early twentieth century.

The early mediatization of the music contributed greatly to the crystallization of its structures, instrumental formats and interpretive styles; eventually, this led to the appearance of a canon after which local music productions were shaped in order to sound 'cuyano.' There were surely other ways to make Cuyoan music, but the asymmetric relationship that was established between mediatized music and the possibilities for dissemination caused the standardization of a few forms and the disappearance of others. Traditional practice became entangled with practices and spaces of the mediatized world, accelerating the circulation of the music and creating unlikely connections that were unthinkable in earlier times. The references were now in the radio and in recordings.

Years later, noted composer and performer Félix Dardo Palorma emerged as a nexus between the early mediatized stage and the consolidation stage that followed. Starting in the mid-1940s artists such as Antonio Tormo played a key role in the strengthening of the genres from Cuyo in terms of circulation and widespread reception. Tormo and his Cuyoan musicians became the first stars of Argentine *folklore* (or *folclore*). Other notable artists included the ensembles of the brothers Arce and of the brothers Arancibia Laborda.

The characteristic virtuosity of the accompanying guitarists elevated and legitimized this music on a national level. The most outstanding artists were José Zabala, Alfredo Alfonso, Remberto Narváez, Santiago Bértiz and Tito Francia, among others. While virtuosity was an asset, it also contributed to the isolation of *cuecas* and especially of *tonadas* in the provincial context where performers did not operate under the same interpretive codes.

In the mid-1950s several events affected national awareness of this music. The silencing of Tormo following the military dictatorship that ousted Perón in 1955, the deaths of Luna in 1955 and Cuadros in 1956, and the settling of Montbrun Ocampo in Mendoza in 1956, together dealt a harsh blow to Cuyoan music in Buenos Aires and, as a consequence, in the entire country. By the 1960s the presence of Cuyoan music on a national level had waned considerably, having been replaced by ensembles from the northern regions of Argentina (e.g., Los Chalchaleros) as well as American and later British rock music. During this process musicians holding a more traditionalist view continued to cultivate *tonadas*. These so-called 'continuadores' (i.e., 'those who continue') included, among many others, Clemente Canciello (Cantares de la Cañadita) and Santos Rodríguez (Las Voces del Plumerillo). On the other hand, some musicians adopted a more critical stance and called for a renovation of compositional practices. Such was the case, for example, with Tito Francia (García 2006) and Nolo Tejón in the 1960s; Saúl Quiroga and Ernesto Villavicencio in the 1970s; and more recently Jorge Viñas in the 1980s and Fabiano Navarro in the 1990s.

Following the so-called '*boom del folklore*' of the 1960s, music from the northern and northcentral regions of the country became privileged by the industry and state cultural policies, a trend which gained traction in the 1960s, became more intense in the 1990s and has continued well into the twenty-first century.

The answer to the gradual decrease in visibility of the Cuyoan genres on a national level lies in the return to the regional circuit. However, this does not imply a return to traditional procedures. Rather, what has happened is the re-dimensioning and re-signification of global practices on a local scale, with modes of dissemination which are paramediatic and labyrinthine. In the ultralocal circuit industrial practices (radio, recordings and live performances) are present but on a much smaller scale. Consequently, these mediations become neutralized: musicians record their CDs, which they sell themselves directly to their followers, and artists are featured on the radio but by stations with a limited frequency and hence a restricted audience. This ultralocal circuit was defined in the 1980s by the abundant production of self-funded albums; the appearance of local recording studios; the existence of small labels and independent publishers; the airtime provided by specialized AM and FM radio stations; the organization of neighborhood *peñas* (i.e., popular street music festivals); and the tense relationship with massive musical spaces such as large festivals, the hegemonic recording industry, national communication media and the state's cultural politics.

The names *cueca* and *tonada* are used to designate two important events: the Fiesta Nacional de la Tonada ('National Festival of the Tonada') (in Tunuyán since 1972) and the Fiesta Nacional de la Cueca y el Damasco ('National Festival of the Cueca and Damasco') (in La Dormida since 1974). Both festivals attract more than 150,000 spectators every year. Nevertheless, these events have prioritized the appearance of young stars of the *Folklore Joven* (Young Folklore) since the mid-1990s, featuring artists such as Soledad, Luciano Pereyra, Los Nocheros and El Chaqueño Palavecino; paradoxically, none of these artists perform Cuyoan genres. Authentic performers of *tonadas*, *cuecas*, *valses* and *gatos* such as El Trébol Mercedino, Las Voces del Chorrillero, Juanita Vera, Los Navarro, Los Manantiales and Los Hermanos de la Torre have occupied secondary slots in these festivals and sometimes have not been hired at all.

Although these genres moved fluidly between traditional and mediatized spaces for decades, today they have been marginalized from the market. However, their names continue to be exploited in festivals, appealing to the sociocultural identity traditionally attached to them even though they have suffered a significant emptying of their content. In summary, these genres have been replaced by the music and artists being promoted from Buenos Aires.

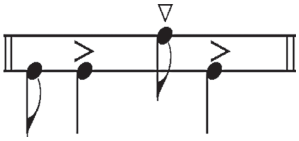
REGIONAL RELEVANCE	GREAT NATIONAL RELEVANCE	LOSS OF NATIONAL VISIBILITY	MARGINALIZATION FROM THE CENTRALIZED INDUSTRY

Figure 1: Cuyoan popular music with a traditional base and the Argentine cultural industry

Some Structures that Define the *Tonada Cuyana*

Unlike *cuecas*, *tonadas* are songs that are not meant to be danced to. The absence of choreography makes the formal structure of the *tonada* varied at both micro- and macrolevels. In addition, the genre has maintained a dialectic relationship with other popular genres such as *estilo*, *triste*, *vals*, *zamba* and *cueca*, incorporating structures and modalities characteristic of these genres into its compositions. This phenomenon makes classification and analysis difficult (Jacovella 1969; Martí 2004). However, the structure of the accompaniment reveals a specific rhythm that homogenizes a large number of compositions and renditions from the mediatized stage; this rhythm is one of the main characteristics of the most widely known *tonada* from the time of consolidation onward (see Example 1).



Example 1: Strumming of the guitarrón or guitar in a *tonada cuyana*. Top line: high strings. Bottom line: low strings. Inverted triangle: click or snap

The *tonadas* that are accompanied by this strumming pattern on the instrument, functioning as rhythmic-harmonic support, are those which the experts recognize as *tonadas cuyanas*. (For information with regard to instrumentation and timbral choices in popular music from Cuyo – considerations which also apply to the *tonada* as member of a larger musical complex – see the entry on *cueca cuyana*.)

The macrolevel structure of the contemporary *tonada cuyana* often features three sections of similar music but different lyrics (see Figure 2 below).

Section three generally involves the singing of a *cogollo,* a dedication which is sung over the same musical and literary structures but with the addition of the dedicatee's name between verses. This is often the most emotive section in the song, which ends with a *rallentando* and an arpeggiated chord. Some recordings feature *tonadas* with only two sections, similar to most Argentine folk genres. However, when these works are performed live the third section involving the *cogollo* is added.

At the micro-level structure, following the instrumental introduction (normally played by the guitars and often in a virtuosic manner) two very different themes appear in the singing line. These themes are often in neighboring tonalities and are connected by a brief instrumental section. The second theme often reappears with the same text in other sections and may function as a refrain. Also, the title of the song is frequently taken from one of the lines in this text.

One of the oldest and most popular forms features an 18-measure 'Song' (Canción) section. Two examples are the songs 'Quien te amaba ya se va' (The One Who Loved You Is Leaving Now), an anonymous song compiled by Alberto Rodríguez and Juan Draghi Lucero (1938); and 'La tonadita cuyana' (The Little Tune from Cuyo) by the most representative composer of the crystallization stage, Hilario Cuadros (see Figure 3).

M	(voice) *a* (6 mm.)	*Inst. nexus* (2 mm.)	(voice) *b* (4 mm.)	(voice) *a* (6 mm.)
	A (8 mm.)		*B* (10 mm.)	
L	*Verse 1* (3 octosyllabic lines)		*Verse 2* (5 octosyllabic lines)	

Figure 3: 18-measure 'Song' section of a *tonada cuyana*. 'Quien te amaba ya se va' (anon.) and 'La tonadita cuyana' (Hilario Cuadros). Lyrics (L), Music (M)

The absence of choreography allows for these 18 measures to be organized in any manner. In Roberto Quiroga's song 'Se fueron los sueños míos' (My Dreams Are Gone), the structure (Fig. 4) corresponds to the renditions by Los Caballeros de Cuyo and by the solo artist Angelita Aguilera. Roberto Quiroga was a member of Cantares de la Cañadita, one of the ensembles following the more traditionalist vein of the 'continuadores.'

M	(voice) *a* (4 mm.)	(voice) *b* (4 mm.)	(voice) *c* (2 mm.)	*Instr. nexus* (2 mm.)	(voice) *d* (4 mm.)	(voice) *c* (2 mm.)
	A (12 mm)				*B* (6 mm)	
L	*Verse* (5 octosyllabic lines)				*Refrain* (3 octosyllabic lines)	

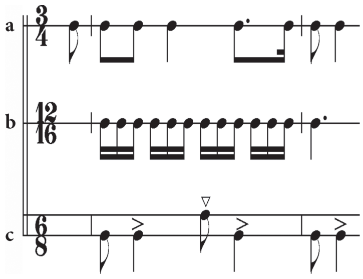
Figure 4: Another organization of the 18-measure 'Song' section of a *tonada cuyana*. 'Se fueron los sueños míos' (Roberto Quiroga), also known as 'Son penas mías nomás'

(opening strumming) Instrumental introduction (4–12 mm.)	Song With brief instrumental sections between verses (18–28 mm.)	Instrumental interlude (similar to the intro) (4–12 mm.)	Song With brief instrumental interludes between verses (18–28 mm.)	Instrumental interlude (similar to the intro) (4–12 mm.)	Song With brief instrumental sections between verses (18–28 mm.)
Section One		Section Two		Section Three	

Figure 2: Macrolevel structure of *tonada cuyana*

Unlike the *cueca*, the harmonic structure of the *tonada* is not standardized. However, both genres possess similar general characteristics, such as: the use of the major mode; the combination of I, IV and V chords and the use of secondary dominants, especially V/IV and V/V; the presence of passing diminished chords; and harmonic passages that are clearly demarcated by 2- or 4-measure cadences.

Vocal lines are set in 6/8 in alternation with 3/4, and are organized in verses of 3 to 6 octosyllabic lines. Frequently, either the melody or the accompaniment leaves 6/8 (the voice often ends phrases in 3/4, or the *guitarrón* ceases the strumming marking the bass in quarter notes), producing a metric contrast between the two. Occasionally three compatible metric strata are superimposed creating a complex polymetric texture (Example 2). The moderate tempo (54 to 62 dotted-quarter beats per minute) allows for the frequent duplication of instrumental melodies. The tempo reflects the profound and transcendent connotations of the *tonada*, where themes of unrequited love, longing for lost love and long-lasting relationships are prevalent. One of the privileged themes of this genre is the *tonada* itself as a signifier of sociocultural identity.



Example 2: Polymetric texture of the *tonada cuyana*. (a) Vocal melody in 3/4; (b) Contrapuntal guitar melody in 12/16; and (c) *Guitarrón* strumming in 6/8

Examples of self-referential *tonadas* are: 'La tonadita cuyana' (The Little Tune from Cuyo) by Cuadros/Lucero (1952); 'Las tonadas' by Palorma (1968); 'La tonada jamás morirá' (The Tonada will Never Die) by Valles/Villavicencio (1982); 'Regreso a la tonada' (Return to the Tonada) by Francia/Tejada Gómez (1972); and 'Ándale tonada' (Go on Tonada) by Viñas (1973).

The fact that *tonadas* are not associated with a dance allowed for freedom in their execution. In the un-mediatized context of *peñas* and in the home *tonadas* create a solemn and intimate mood. The mix of its earnest character, transcendent meanings and slow tempo have made the *tonada* a genre that is not popular in mediatized situations (Sánchez 2005b); instead, *gatos* and *cuecas* are much more frequent in large festivals, thanks to their upbeat, cheeky and festive character.

Tonada Potosina

Derived from the *huayño* (a pre-Hispanic genre of Andean music), the *tonada potosina* is a traditional Bolivian musical genre from an extensive geographical area that encompasses more than the department of Potosí in Bolivia. It is a generic denomination designating musical genres that use for accompaniment *guitarillas* and *charangos*, stringed instruments developed from those brought by the Spanish conquistadors. The particularity of the *charangos* and *guitarrillas*, which is in turn the defining feature of the *tonada potosina*, is a harmonic conception, the interval relations and the melodic-rhythmic functions of the instruments. The *tonadas* develop in the modal music area. The instruments are tuned in different pentatonic modes which in turn correspond to the agricultural calendar. In this way, the various musical genres are incorporated into ways in which Andean cultures comprehend and view the world. The modes and tunings are divided in accordance with two major periods: rainy and dry. At the same time, each corresponds to particular celebrations. For instance: one Temple (tuning) for sowing, another for harvesting, another for Easter etc.

In general, the *tonada potosina* gives prominence to the feminine voice in higher registers while men are charged with the interpretation on stringed instruments. *Tonadas* are normally in duple meter with tendencies toward irregularities. The structure and form of *tonadas* are determined by melodic phrasing and by the harmonic progression.

One of the most distinguished interpreters of traditional forms of Quechua music, among them the *tonadas potosinas*, is the Bolivian singer Luzmila Carpio. Born in the community of Qala Qala, Ayllu Panacachi, in the department of Potosi, Bolivia, Carpio, whose voice is noted for its ability to reach very high notes, learned how to sing following the oral traditions of her indigenous Quechua community. As well as being a singer, Carpio is a *charango* player, composer and author. She has recorded for the labels Discolandia and Pro Audio in Bolivia, and Acords Croisés in France.

Tonada Tarijeña

This Bolivian musical genre, specifically from the department of Tarija, has the generic name of *chapaqueada* or *copla chapaca*. Two dimensions are taken into account to identify the historical sources of this musical genre. On the one hand, there are enough distinctive features in the *coplas*, or couplets, to associate them with the Spanish couplet tradition, mainly that of the Spanish romances. On the other hand, sufficient arguments have been made which retrace the *coplas* to the singing tradition of the Inca Empire. The *tonada chapaca* is a form of alternating singing during which a series of arguments and questions are produced that can contain festive, celebratory or amorous content.

One of the main characteristics of this genre of spoken song is its improvised poetry that consists in creating a discourse within an established framework related to rhythmic and melodic structures of the *tonada* that correspond to determined periods in the year.

Because it is part of a musical calendar and matches the agricultural schedule, the *tonada chapaca* has four basic patterns corresponding to Carnival, Easter, holidays and All-Saints Day.

In general, the *tonada* operates in a tetratonic environment and in rural areas it is accompanied by wind instruments such as the *caña* or the *erke*, a small drum with double patches called *caja* and also occasionally by violins. The number of lines and their repetition in each stanza vary according to the occasion on which they are performed. In general, there are four forms divided into four types of *tonadas*. In the first, each stanza has four lines of either six or eight syllables and the first two lines are repeated. The second combines rhymed octosyllabic lines with pentasyllabic lines. The third consists of two rhymed heptasyllabic lines. The fourth form consists of two heptasyllabic lines, one tetrasyllabic line, and a last line of eight syllables. These are rhythmic structures of versification in the *tonada tarijeña* that are related, for example, to those of the Arawikus of Inca origin, which featured four octosyllabic lines.

Some *tonadas* exist within the framework of Mesoamerican music – they feature harmonic adaptations of diatonic scales and different harmonic structures with I-IV-V-I progressions. Examples of these *tonadas* include those interpreted by Los Montoneros de Méndez, a group from Tarija, founded in 1967 by Hugo Monzón, whose music was highly politicized. Other important examples can be found in the music of Tarijan-born singer and songwriter Ernesto 'Sapito Mealla' and the ensemble Las de San Lorenzo.

Tonada de Toros

Tonadas de toros (bull songs) are unaccompanied improvisatory songs structured by alternating solo and chorus within a poetic rhyme scheme and are associated with the extensive pilgrimage networks concentrated in the eastern provinces of the Dominican Republic. They may function variously as an introit ritual, as a vehicle for sharing cultural wisdom and jest, or simply as a challenge to produce clever rhymes. Within a relatively well-defined style, new songs are composed and added to the repertoire each year during a few months prior to the two largest pilgrimages in August and December.

The *tonadas* are called 'bull songs' not in reference to their texts, but rather to the pilgrimage networks which organize collection of bulls and alms donated to the Catholic Church. These lay brotherhoods (*cofradías*) are distributed across several connected provinces and call themselves, after the patron saints of the pilgrimage sites, the *Commissarios de la Vírgen de Altagraciay Cristo Rey de los Milagros*. According to most accounts, the bull-donation pilgrimages of the Commissarios date to the early twentieth century, as presumably do the *tonadas de toros.* Apart from this, bull donations likely had an earlier Dominican history, as might various improvisatory verbal genres (such as *décima* and *chuin*), but there is no earlier record specifically of the *tonadas de toros.*

In a typical *tonada,* an established melody composed of several phrases, a stanza end-rhyme scheme and repeating refrain provide the foundation, while singers take turns improvising between two to six lines of (usually) octosyllabic verse, making sure to rhyme the last word of their last verse with the ending of the prior singer. After each singer has tried a few rounds, they may substitute a new rhyming pattern, but continue uninterrupted on the same *tonada* and its refrain for 20 or 30 minutes or longer. Clever verses, especially the final turn of phrase leading to the end-rhyme, always provoke an eruption of approval and a round of ritual handshakes. With the exception of the ritualized introit *tonada*, and the religiously themed *tonada de la Vírgen*, most songs are oriented to secular topics. The *tonada* melodies are sung with gusto and throaty resonance, and are neither harmonized nor interpreted in meter. In a similar manner to eastern *palos*, the opening of the refrain is often sung over vowels rather than words. In the ranchlands where the genre is based, *tonada* singers are mostly men, whereas the women predominate in the *salves.*

The *tonadas* are not only sung during the pilgrimages (at nightly fiestas *en route* to the sanctuary), but more extensively during the alms collection period that begins a few months earlier. These occasions for singing include organized meetings of the *Commissario*, visits to donors' houses and sponsored all-night *serenades.* Devotees of the *Vírgen de Altagracia* or *Cristo Rey* may also incorporate *tonada* singers in their personal *promesa*, typically an annual celebration honoring the saint at which *palos* or *salves* are also performed. During these pre-pilgrimage events, new songs are composed based largely on reworking old material. On the pilgrimage route itself, large numbers of people converge at nightly stopovers, where *tonadas* are sung alongside *salves* and *palos,* and as is the Dominican custom, religious devotion runs parallel with festive dancing and drinking. The *tonada* tradition persists in the twenty-first century as music identified with the *Commissario* and their activities. They are sung today by a dwindling network of perhaps a few dozen elders, yet over the course of a year are heard by thousands of Dominicans. The *Commissario* and their unique musical genre are cyclically regenerated through association with a massive national cultural phenomenon – the tens of thousands of Dominicans who are devoted to the *Virgín de la Altagracia* and participate in pilgrimages to Higuey.

DANIEL C. PIPER

Tondero

The *tondero* is a music and dance genre associated with Afro-Peruvian and mestizo populations in the departments of La Libertad, Lambayeque and Piura on the northern coast of Peru. The dance is generally considered to be a northern rural relative of the *marinera*, and similarities between these genres can be heard in the types of percussion and guitar accompaniment patterns and seen in the choreography. The *tondero* appears to date from the mid-eighteenth century. The popularity of the genre spread beyond its region of origin, as references to the dance and song lyrics were known in other parts of coastal Peru and even in Spain. It is unclear exactly how the genre developed.

One of the more popular theories, although one that has been difficult to substantiate beyond a few etymological similarities, is that the dance was derived from an older dance form known as the *zaña* that was predominantly associated with the Afro-Peruvian population from the northern Peruvian region of the same name.

The genre is characterized by a three-section form: the *glosa* performed in a minor key, the *canto* or *dulce* played in the relative major key and the *fuga* that returns to the original minor key. Afro-Peruvian influences are evident in the use of call-and-response singing and the syncopated guitar accompaniment that generally alternates between 3/4 and 6/8. Melodically, the *tondero* exhibits a number of features similar to those of highland indigenous and mestizogenres, such as the occasional use of pentatonic melodies and cadences that descend to the third degree of either the tonic or dominant chord. *Tondero* lyrics tend to be of a sentimental nature, most often romantically waxing poetic about the beauty of places and people (most often women) from the northern coastal region. The genre is generally accompanied by two guitars that alternate between elaborate finger-picked melodies in parallel thirds and a trademark bass line that rises stepwise from the first to the third scale degree. Percussion accompaniment is provided by either a *cajón* (box drum) or in some cases, particularly in the region of Zaña, a gourd drum known as the *checo*. Other instruments are also common, including harps, clarinets, saxophones and violins.

From a choreographic standpoint, the *tondero* is a courtship dance in which partners in male-female couples, holding handkerchiefs, continually flirt with each other, the male gently advancing while his female partner turns away. Since the 1970s the institutionalization of the *tondero* as a form of regional folklore has led to the emergence of a more stylized version of the dance that is often performed in regional and national dance competitions. In this performance context, the dance is accompanied by large brass bands or military bands that perform instrumental versions of the *tondero*. The choreography and style of dress have also become more standardized to highlight the perceived rustic character of the dance. Movements tend to be shorter and less grand in scale than those seen in the competition-style *marinera* and both dancers usually perform barefoot, with simpler costumes evocative of nineteenth-century rural peasant dress. In the early twenty-first century, the *tondero* is still actively performed and danced at a variety of festive events on the northern coast, within the context of regional and dance competitions and occasionally as part of the repertoire of *criollo* musicians in the city of Lima.

Toré

Toré is a ritual with music, found in the northeastern *sertão* (backcountry) of Brazil. It is part of a greater complex of rituals which spread from the time of the dissolution of missionary villages in northeastern Brazil, especially in the nineteenth century. Its practice among many indigenous peoples of the region (such as the Kalankó/AL, Pankararu/PE, Geripankó/AL, Karuazu/AL, Katokin/AL, Xukuru/AL, Fulni-ô/AL, Pipipã/AL, Kambiwá/PE, Tremembé/CE, Kiriri/BA, Tuxá/BA, Pankararé/BA among others) offers evidence of its popularity, and it is also known beyond the region by Indians and non-Indians.

Historically, *toré* has often been linked to a wind instrument present among indigenous populations of the Amazon during Brazil's colonial period (1500–1822). Recently, it has become associated with the study of cultural performance, linked more specifically to the issue of the ethnic identity of the indigenous populations of the northeastern backcountry (part of the study of ethnogenesis, which has developed into a huge field of study in Brazil), and as such has become an object of ethnomusicological study (Pereira 2004).

Toré as a Musical Event

In a *toré* event, the songs are based mainly on the voice, but also on the way in which the participants stomp on the floor ('pisada') (Herbetta 2006). A good interpreter of *toré* will 'push the wheel' ('puxa a roda') – that is, give momentum to the ritual – for a long time and will be one who knows a large repertoire of songs (for more on Kalankó terminology, see Herbetta 2006). The *maracá* (a type of shaker) is also used. The aim of the performance is to open contact between participants and the spiritual entities, the *encantados* (enchanted), the ancestors, who have been transformed into beings who protect the community.

The song is structured around 'call and response,' in which the singer sings two lines and the participants respond with two more, plus a few variations. The song ends with a shout, issued by the singer and repeated by other participants. The *toré* performed by the Kalankó, Koyupanká, Katokinn, Karuazu and Geripankó (below) is an example:

> *Singer:*
> Caboclo de pena,
> não pisa no chão;
> *Participants:*
> Peneira no ar,
> que nem gavião
>
> Or
>
> *Singer:*
> Em cima daquela serra,
> tem um terreiro de preá;
> *Participants:*
> Canta homem, canta mulher,
> e os índios que chegam lá.

Often an accompaniment is formed from a play of wordless vowels and syllables, such as

> Lê lê lê eio há há
> Há há he Eio a há há

In this respect *toré* resembles *praia*, another ritual from the same area, in which meaningless chants constitute basic cells, which are the basis of variation throughout the piece.

The chant can evolve from improvisation, and a minimum of three chants or multiples of this number should always be sung. Each chant lasts from 3 to 22 minutes, and the *toré* itself lasts the entire night.

In most cases the dance is arranged as a 'core-periphery,' in which the singers are placed in the center of the circle and the participants around the periphery. The center indicates the sacred area, where the *encantados* live, and the periphery is designated as where the Indians live. It is always performed counterclockwise, either in single or double file. The steps consist of spins and turns. The singers and the best dancers remain in the center of the circle and in the periphery are the other participants who sing the response. The musical-choreographic arrangement reflects ideas of rank, seniority and prestige. In some places, people still dance in a straight line and move toward the singer. Alternatively, in a movement reminiscent of the *praiá*, the participants move in and out as the tempo becomes faster.

The Use and Status of *Toré*

Toré has an important role within the communities where it is found, both for aesthetic reasons and because it is linked with the political process of identity classification. It is important to note that classification and reclassification of identity has been common in the region since the 1930s, a process which led to some populations coming to be identified as indigenous and others ceasing to be identified in that way.

Toré as described above is a mark of 'Indianness.' The songs that are sung during the various events by a particular group are learned by those present and reproduced in various other communities, as a result of which a few groups have the same repertoire. *Toré* can occur inside the village, where its music acts as a pivot system that mediates between the universes of language arts (myth and poetry), plastic-visual expression (drawing, body painting and others) and choreography (dance) (Herbetta 2006). It can also be performed outside the village, where it assumes external political significance and acts as a distinctive demonstration of identification; in this way, *toré* has been regularly performed as a cultural practice in many northeastern cities, especially in the interior – which means it has been performed over a huge region. It may also be sung during the day-to-day – at work, in the countryside, during leisure times or to put children to sleep. As a ritual, *toré* is practiced all week but especially on Saturday evenings.

Toré is generally seen as the preferred musical genre in the communities in which it is practiced, belonging to a system of preferences that includes other genres such as *forró*, *arrocha*, *coco*, *reisado*, *brega* and international genres – all of which find favor in the northeastern countryside. It is placed in opposition to other genres, including urban ones, such as rock 'n' roll, for example, which the communities dislike. In this system of musical preferences, *toré* is classified as the one they most like.

In this context, it is important to note that *toré* has been recorded. This process started a few years ago thanks to the spread of digital technology and the appropriation by the indigenous population of the notion that the dissemination of this music is important.

Influences and Relationships

In terms of sonority, *toré* does not appear to mix with other Brazilian genres, with a few exceptions such as that which occurs among the Kapinawá from Pernambuco, for example, who started to play *toré* after *samba de coco*, mixing both (Albuquerque 2004; Pereira 2004). However, within the communities mentioned earlier other sonorities are also present. If the sonority of *toré* does not mix with other musical genres of the *sertão*, it nevertheless has many musical influences at its base. For instance, a Portuguese tradition is present in its gestures, which approximate to the songs of praise and lamentation and resemble Western practice. (This topic was addressed in other studies of Amerindian music of the northeastern *sertão* in Herbetta 2011.) According to Albuquerque (2004, 222) missionaries used European religious music – modified and as an element of attraction and catechesis – during the long evangelization process. This music then became one of the building blocks in the process of indigenous musical creation. Also evident are elements of African tradition, especially with regard to rhythm. It is important to emphasize the influence of an Amerindian musicality, found in much of the TBAS (Terras Baixas da América do Sul – 'South American Lowlands'), in structures such as the call-and-response and in the freer character of some sentences.

As for *toré*'s own influence, it is possible that it may have had a role in the formation of many other musical genres characteristic of the region, such as *coco*. This topic, however, is controversial. For Gallet (1934), there is no relationship between *toré* and other musical genres of the Brazilian North-east. This assertion, however, has since been questioned by Siqueira (1951). According to this author, northeastern music excels in creativity – and indigenous music is at the base of its (i.e., NE music's) creation. In this sense, Siqueira's analysis gives rise to the discussion between the musical permutations of indigenous music and of Brazilian music. For him, backcountry music of the North-east constitutes a 'new aesthetic' that is admirable (ibid., 85) and that possesses a vast number of melodic procedures.

Thus, some musical features of *tore*, such as ending on a third and the descending tendency, are also markers in some *sertanejo* and northeastern genres. With regard to the melodic material of *toré*, a third normally appears in strategic positions, connecting sentences or being used as an ending. Notable too are the procedures of melodic composition, such as the profusion of arpeggios, ornamentation, rhythmic interplay between singer and chorus, and also between men and women.

Conclusion

The *toré* ritual occurs more than ever today, but does so in a complex way, in dialogue with the modern world. For some, however, denying this evident relationship between the indigenous and the popular is a way of denying the 'Indian-ness' of the region and of Brazil.

Toríl

The *toríl*, Spanish for 'bullring,' is a genre of central Andean folk music associated with bullfights and other ritual activities involving livestock. Though typically only performed during these seasonal events, the genre has been a staple in the repertoire and recordings of popular Andean folk musicians in Peru since the mid-twentieth century.

The *toríl* bears a close identification with the Mantaro Valley region of central Peru, where it is also known as the *santiago*. The term *santiago* refers to the Catholic Saint James, widely associated in this region with tutelary deities called *wamanis* or *apus* who are believed to inhabit local mountains, and whose feast day (25 July) coincides with the season for marking livestock. *Santiago* music is performed during the *herranza*, the ritual for marking livestock, as well as during bullfights and the extensive preparations for regional civic-religious festivals. The *toríl* is also popular at similar events farther south in the Peruvian departments of Ayacucho, Apurímac and Huancavelica.

Toríl music is typically performed by small ensembles featuring several distinct instruments: spiral cow-horn trumpets, known by their Quechua name *waqrapuko*, the *tinya* (a small, handheld stick drum played by women since precolonial times) and the Western violin. In certain contexts and areas, the genre may also be performed by harp-violin duos, with the harp assuming a largely rhythmic role, or by a 10- to 15-member saxophone orchestra known as an *orquesta típica*. Nonetheless, the *waqrapuko* remains the *toríl*'s signature instrument, performed in pairs tuned in unison or a third apart. Due to the inherent limitations of this instrument, *toríl* melodies are usually tritonic and rooted in the lower notes of the harmonic series. A final distinguishing feature of the genre is the steady, medium tempo pulse played on the *tinya* drum.

Individual *toríl* tunes may be performed as strictly instrumental pieces, but most are based on songs. Song texts during ritual functions are usually situational, drawn from long-standing tradition and thematically focused on the animals themselves. Outside of ritual contexts, lyrics to *toriles* may also address contemporary themes, including love, lost love and even political commentary (see *Mountain Music of Peru, v.2*), but songs about cattle predominate.

Recordings of the genre first began circulating in the late 1950s, at the beginning of the 'golden age' (1950s–1970s) of Andean folk music recordings in Peru (see Romero 2001). Recordings by stars of that era, as well as newer songs by contemporary rural performers, continue to surge in popularity every year in late July and early August during the festival season; these recordings are listened to both as popular entertainment and, at times, to supplant live performance during ritual events. Numerous popular musicians in Peru, such as Manuelcha Prado ('Torovelay'), have also paid homage to the genre by fusing its characteristic melodies and rhythm with new instrumentation and musical aesthetics drawn from transnational popular styles.

Tropicália

Tropicália may be understood as a 'cultural moment' (Süssekind 2005) in late 1960s Brazil that was manifest in nearly all realms of artistic production, especially in popular music, but also in the visual arts, theater, film and literature. In the realm of music, it did not denote a particular style, but rather a certain attitude toward the Brazilian song tradition, international pop and cultural modernity. At the time, Brazil was ruled by a military dictatorship, which entered its most repressive phase in 1968. *Tropicália* formulated a critique of authoritarian rule and conservative social values, but is not generally regarded as a manifestation of 'protest music.' Although the Tropicalist phenomenon was brief, it would have a lasting impact on Brazilian popular music and remained a point of reference for innovative musicians into the twenty-first century. Furthermore, nearly all of the original Tropicalists continued to be active as professional musicians, public intellectuals and highly influential cultural agents.

The core group of Tropicalist musicians – Caetano Veloso, Gilberto Gil, Tom Zé and Gal Costa – were from the northeastern state of Bahia and began to perform together in the state capital, Salvador, in 1964. The poet José Carlos Capinan and graphic designer Rogério Duarte, also from Bahia, and poet Torquato Neto, from the state of Piauí, contributed song lyrics and conceptual guidance. After migrating south in the mid-1960s, the so-called *grupo baiano* formed a creative alliance with São Paulo-based artists, including a group of avant-garde composers, most notably Rogério Duprat, and the psychedelic rock band Os Mutantes, featuring Rita Lee, Arnaldo Baptista and Sérgio Baptista. On one level, Tropicalist music may be understood as a meeting of musicians from Bahia, a center of Afro-Brazilian culture, and from São Paulo, the largest and most industrialized Brazilian city. In the genesis of *Tropicália*, Rio de Janeiro also played a role, most notably in the realm of the visual arts. The Carioca (i.e., from Rio de Janeiro) artist Hélio Oiticica coined the term *Tropicália* as the name of an environmental installation, or *ambiente,* created for the Nova Objetividade Brasileira exhibit of 1967. At the suggestion of a filmmaker, Luis Carlos Barreto, Caetano Veloso appropriated Oiticica's title for a song recorded in the following year that was to provide the namesake for a larger cultural phenomenon.

Situating the Tropicalists

Given the multidisciplinary character of the Tropicalist moment in Brazilian arts, it is difficult to identify essential values in terms of form and content, but it is possible to make a few general observations. *Tropicália* was a cultural response to the specific contradictions and tensions of Brazilian modernity, formulated in the mid-twentieth century as a combination of national development, economic modernization, social advancement, political democratization and cosmopolitan cultural expression. The military regime that came to power in 1964 with support from the United States was committed to a program of conservative modernization, an array of economic, social and political measures that favored international capitalist interests. The regime was committed to industrial development and infrastructural modernization, but invested little in programs fomenting social equality.

In the late 1950s, when most of the future Tropicalists reached young adulthood, Brazil was a formal democracy with a government that was committed to a program of state-sponsored modernization, symbolized most dramatically by the construction of Brasília, a new capital designed as a local response to the International Style of architecture. A mid-century constructivist avant-garde had emerged in São Paulo around *concretismo,* which found expression in poetry and visual arts as a challenge to earlier formulations of Brazilian artistic modernity. An *auteur* cinema on a par with the best productions from Europe was beginning to coalesce under the banner of Cinema Novo. In the realm of art music, or *música erudita,* European émigré composers and their Brazilian acolytes championed dodecaphonic, concrete and aleatory music over the neo-Romantic nationalist students of Heitor Villa-Lobos. Meanwhile, a group of cosmopolitan musicians and poets based in Rio de Janeiro developed *bossa nova*, a new style of *samba* that incorporated complex harmonies gleaned from jazz and classical music. Many of the Tropicalist musicians remember João Gilberto's 1958 recording of 'Chega de saudade' ('No More Blues'), the first *bossa nova* hit, as a milestone event in their early artistic development.

In various ways, all of these cultural manifestations related, however obliquely, to the hopeful logic of developmentalism premised on the idea that Brazil was emerging as a modern, industrialized nation. The concrete poet Augusto de Campos (1974) expressed this idea succinctly in claiming *bossa nova* was a 'finished product,' unlike the 'raw material' of folklore. By the early 1960s, however, an economic crisis brought to the fore progressive forces calling for revolutionary social change. Young musicians, including *bossa nova* enthusiasts, began to incorporate elements of urban *samba* and rural folk styles and composed lyrics that addressed themes of social inequality and injustice. In poetic circles, the concretist avant-garde was critiqued for its excessive formalism and distance from the social and political concerns of the left. In response, the concretists liked to quote Russian vanguardist Vladimir Mayakovksy: 'Without revolutionary form, there is no revolutionary art.'

Many middle-class artists of this generation, including Gil, Capinan and Tom Zé, participated in the People's Centers of Culture (CPC), a left-wing organization affiliated with the National Students Union (UNE) that sought to mobilize society through music and theater performances. When the military regime came to power in 1964, it effectively shut down the CPC, but a vibrant left-wing protest culture flourished in the major cities, most notably among university and high school students. At the same time, Brazil witnessed the emergence of a national rock movement, dubbed *iê-iê-iê,* involving mostly working-class artists who were largely impervious to the left-wing nationalism that dominated university life. By the mid-1960s, there was considerable tension between rock 'n' roll singers such as Roberto Carlos and Erasmo Carlos and the defenders of popular music understood to be authentically national and socially engaged who rallied under the banner of *Música Popular Brasileira* (MPB). In this context, MPB referred specifically to urban post-*bossa nova* popular music, often with lyrics of literary merit, which successfully mediated between received notions of tradition and modernity. It was not a genre, like *samba*, rock or jazz, nor even a style, like *bossa nova*, but rather a musical hybrid that connoted class position, educational level and political sympathies. MPB artists and consumers, for example, tended to shun both *iê-iê-iê* and lowbrow romantic music (or *música cafona*) as emotionally hollow and politically alienated. In the mid-1960s emerging MPB stars such as Chico Buarque, Edu Lobo, Elis Regina, Naná Caymmi, Sérgio Ricardo and Geraldo Vandré reached a mass audience on competitive televised music festivals – the Festival da Música Popular Brasileira on TV Record of São Paulo and the Festival Internacional da Canção on TV Globo in Rio de Janeiro.

The Eruption of *Tropicália*

Caetano Veloso and Gilberto Gil achieved critical and popular acclaim in the 1967 TV Record festival with the songs 'Alegria, Alegria' and 'Domingo no parque' (Sunday in the Park), respectively, which they described as the 'universal sound' or *som universal.* Both songs initially met with disfavor among sectors of the live audience, which typically favored performances with acoustic instruments that drew heavily on Brazilian musical traditions, including *samba*, *marcha* and *baião*. In the final round, Gil and Veloso won over the audience with songs backed by rock musicians using electric instruments, but were still recognized as essentially 'Brazilian.' Gil's performance, 'Domingo no parque,' was particularly notable in the way it juxtaposed Os Mutantes and the percussionist Dirceu, who played the *berimbau,* a one-string bowed instrument of Angolan origin used in *capoeira,* an Afro-Brazilian dance/fight to musical accompaniment. Standing center stage with acoustic guitar in hand, Gil seemed to mediate sonically and visually between 'modernity' and 'tradition' in a way that pleased fans of MPB. Within a few months, the musical movement initiated by Veloso and Gil was dubbed 'Tropicalismo' by journalist and producer Nelson Motta.

Later in the following year, with the Tropicalist musical movement in full swing, Tom Zé won first prize at the 1968 TV Record festival with 'São, São Paulo' and Gal Costa received third prize with 'Divino maravilhoso' (Divine Marvelous), a rock song featuring a vocal performance that brought to mind Janis Joplin. The Tropicalists contributed decisively to the growing acceptance of rock music and electric instrumentation. Left-wing nationalists, however, continued to jeer their music at the televised music festivals largely because the tropicalists were using electric instruments and incorporating elements of rock, which they associated with US cultural imperialism. Gil and Veloso were disqualified in the eliminatory rounds of the 1968 Festival Internacional da Canção when they performed aggressively countercultural rock songs, 'Questão de ordem' [Question of Order] and 'É proibido proibir' [It's Forbidden to Forbid]. Veloso's live performance with Os Mutantes was particularly notorious for his long diatribe against the audience as it jeered the musicians, summed up in the phrase: 'If you are the same in politics as you are in aesthetics, we're done for.' In a nutshell, Veloso expressed the Tropicalist critique of the nationalist left, a critique that resonated with earlier battles waged by the concrete poets relating aesthetic experimentation, cultural nationalism and social critique.

Some of the most important Tropicalist songs, such as 'Tropicália' (Veloso), 'Geléia Geral' (Gil-Neto) and 'Parque industrial' (Tom Zé), may be understood as national allegories that juxtapose signs of underdevelopment and backwardness with signs of ultramodernity. Marxist critics, most notably Roberto Schwarz (1970), were troubled by their approach to history that was seemingly 'atemporal' or even 'absurd' because it offered no clear solution to Brazil's social contradictions. For other critics, such as Celso Favaretto (1979), the Tropicalist allegory was effective precisely because it refused dialectical resolution, thereby generating a fragmentary and indeterminate image of Brazil that could be used to critique uneven modernization. The Tropicalists were acutely attuned to the structural changes brought on by the military regime, its development program and its repressive mechanisms and found incisive ways of representing these transformations and their effect on everyday life in Brazil.

In 1968–9 the Tropicalists issued several solo albums and one collective manifesto, *Tropicália, ou Panis et Circensis* (1968), a concept album inspired by the Beatles' *Sergeant Pepper's Lonely Hearts Club Band*. Like the wider field of MPB, *Tropicália* was not a new genre or style, but rather a pastiche of diverse musical forms, national and international, dated and ultramodern. At its core, Tropicalist music may be understood as a rereading, both reverential and ironic, of the tradition of Brazilian popular song in relation to international pop music and avant-garde experimentation. Tropicalists drew from a wide variety of musical traditions, including *samba*, *bossa nova*, *baião* (a northeastern dance music), *capoeira* music, British invasion rock, psychedelia, Brazilian *iê-iê-iê,* Spanish American *bolero* and *cha cha chá*, and classical music. In his memoir, Veloso described the Tropicalist approach:

> Instead of working together to find a unified sound that would define the new style, we preferred to utilize one or more sounds that were already recognizable from commercial music, so that the arrangement would be an independent element that would enhance the song but also clash with it. In a way, what we wanted to do could be compared to the contemporary practice of sampling, and the parts we were combining were 'ready-mades' (2003, 101–2).

In drawing from a wide variety of musical forms, the Tropicalists sought to overcome narrowly defined ideas of cultural authenticity defended by left-wing nationalists. They were interested, above all, in the phenomenon of 'pop music' and its relation to youth culture, consumer society and musical tradition.

In their musical project, the Tropicalists found theoretical support in *antropofagia* (cultural cannibalism), first formulated and articulated by modernist provocateur Oswald de Andrade in his 'Manifesto antropófago' (1928). They had been introduced to the work of Andrade by the concrete poets, who were then re-editing his works and reviving his critical and poetic legacy. For Andrade, the metaphor of cannibalism, inspired by coastal Indians known to devour their captive enemies, including Portuguese colonizers, provided a model for cultural production that was neither subservient to metropolitan trends in Europe nor defensive or narrowly nationalistic. For the Tropicalists 40 years later, the idea of cannibalism provided a model for revitalizing the Brazilian song tradition in light of contemporary developments in international pop. As Veloso remarked in *Tropical Truth,* 'The idea of cultural cannibalism fit us like a glove. We were eating the Beatles and Jimi Hendrix' (2003, 156). Tom Zé, however, has recently disavowed a connection to Oswaldian *antropofagia,* arguing instead that *Tropicália* was a product of the collision between Western modernity and a sedimented Iberian Mozarabic culture brought over to northeastern Brazil during the colonial period (1999).

Although the Tropicalists were most vehemently criticized by artists and critics of the nationalist left, they also aroused the suspicions of the military regime for their anarchic, countercultural attitude toward authority. In late December 1968 Veloso and Gil were arrested, put in a military prison and then confined to house arrest in Salvador until they departed for exile in London, where they would stay until 1972. By 1969 *Tropicália* was over, but some of the fundamental qualities that oriented its practice – the critical dialogue with international cultural practices and projects and the attempt to fuse avant-garde practices and popular culture – continued to inform artistic practice in Brazil into the twenty-first century.

Tropicalist Legacies

We may speak of a Tropicalist revival in Brazilian popular music, although there has been an ongoing debate about the movement's influence and legacy. In 1993 Gil and Caetano recorded *Tropicália 2*, a collaborative project that commemorated the movement while seeking to reaffirm its contemporary relevance. The most powerful track on this recording, 'Haiti,' was set to a slow rap beat and denounced police violence aimed at black youth while raising pointed questions about the meaning of citizenship in Brazilian society. Tropicalist music also found an international audience, especially in the United States and the United Kingdom, in the 1990s. Reissued Tropicalist records from the late 1960s began to circulate abroad and attracted enthusiastic attention from critics and musicians, who were especially drawn to the psychedelic experiments of Os Mutantes, who reunited for performances in the United States and United Kingdom in 2007.

Most of the original Tropicalists have continued to produce critically acclaimed and commercially successful music for audiences at home and abroad into the 2000s. In the 1990s Tom Zé received critical acclaim and attracted a new generation of fans at home and abroad following a series of recordings produced by David Byrne for his Luaka Bop label. He toured with Chicago-based group Tortoise in 1999 and was the subject of two acclaimed documentaries, *Fabricando Tom Zé* (2007) and *Tom Zé: Astronauta Liberado* (2009). Veloso developed a highly successful artistic career while also intervening frequently in public debates over politics, sexuality, race and culture in Brazil. Since the 1980s Gilberto Gil has balanced an artistic career with public service. He was appointed Minister of Culture for the Lula government in 2003 and subsequently gained tremendous visibility, both nationally and internationally, as an advocate for cultural development. Gil has been particularly active in promoting cultural citizenship in Brazil by establishing production centers, or *pontos de cultura,* in poor communities, advocating the use of free open-source software, and democratizing intellectual property laws and regulations. It would be difficult to find counterparts of the same generation from other national contexts with comparative levels of influence. Many of the incisive interventions in Brazilian popular music in the early 2000s have been indebted to the Tropicalists and their spirit of radical eclecticism rooted in local traditions, yet fully engaged with international popular music.

CHRISTOPHER DUNN

Tropipop

Tropipop, short for tropical pop music, appeared in 1993 in Colombia when singer Carlos Vives combined elements from traditional *musica tropical* (tropical music) with different aspects of pop, rock, *soca* and the international electronic music scene. Building on the success of a television soap opera chronicling the life of local composer Rafael Escalona, Vives recorded an album titled *Clásicos de la provincia*, which included many of the songs from the series. In it, he updated a popular accordion-based Colombian music genre, the *vallenato*, integrating it with a wide array of elements from contemporary national and international popular music. Fusion was nothing new in Colombia. In the 1960s and 1970s groups such as Génesis or Malanga had combined Colombian rhythms and rock, with mixed results. In the case of Vives, however, his recordings struck gold. His later hit 'Carito' (2001), which narrates the story of a schoolboy's crush on his English teacher, a Bostonian, is signaled as a cornerstone and template for much of the production of *tropipop*.

Though Vives himself followed *Clásicos de la provincia* with albums such as *La Tierra del olvido* (The Land of Forgetfulness) (1995), *Tengo fe* (I Have Faith) (1997) and *El Amor de mi tierra* (The Love of My Country) (1999), that involved substantial experimentation, exploring new ways to enhance the Colombian musical tradition, much of the immediately ensuing production was limited to acts such as Café Moreno, Moisés Angulo, Madre Monte and Karamelo playing traditional tunes with a contemporary sound and an explicit commercial interest. By around 2005, while preserving the same character, efforts were being made to embody increased musical complexity and a more polished sound, with acts such as Cabas, Bacilos, Bonka, Lucas Arnau, Mauricio y Palo de Agua, Fonseca, San Alejo, Fanny Lu, Pernett, Jerau and Wamba, many of whom have been nominated for or received Latin Grammys, Billboard or Lo Nuestro Awards and even Spain's Principales. To a certain extent, *tropipop* marks a struggle on the part of the major recording labels (EMI Music, Universal and Sony) to hold on to a market which is increasingly influenced, in Colombia as elsewhere in Latin America, by greater access to local recording facilities (where albums can be recorded for a few thousand dollars), the rise of independent labels (such as ECM [a Colombian label, not connected to ECM in Europe], Silent Sound and Millenium), and widespread piracy. In addition, not everything produced lacks quality, as is evident in recordings by fusion bands such as Sidestepper, Doctor Krápula or Mojarra Eléctrica, which have been praised by critics.

The year 2007 marks the climax of this sound, when, after heavy airplay and television coverage, signs of a backlash against *tropipop* became apparent. Typical criticism centered on the poor quality of lyrics, the abuse of rhythms and the lack of an original, autochthonous sound. Generally speaking, *tropipop* bands are viewed as improvised, middle-class ensembles – a group of kids from a high school in Bogotá or any other urban area – lacking any kind of mystique or dedication to the preservation of a cultural tradition. According to critics, the homogeneity of their production makes it hard to distinguish between different bands and vocalists. Nevertheless, as a cultural product, *tropipop* represents a shift in the musical tastes of a new Colombian generation, accustomed to massive concerts and outdoor performances, in distinct contrast to the ballroom dance tradition of their forebears. In the end, *tropipop* ratifies the vitality of the Colombian urban experience, which, despite celebrating its folk roots, seeks to rework and renovate many of the musical boundaries of the past.

HÉCTOR FERNÁNDEZ L'HOESTE

Trova

Trova is an umbrella term denoting the type of music produced in Cuba by singer-songwriters called *trovadores* ('troubadours'). *Trovadores* are most recognized as singer-guitarists performing love songs, yet the exponents of *trova* also include pianists, rock musicians and performers of the politically and socially oriented *nueva trova* movement of the 1960s and 1970s. A tradition dating back to the late nineteenth century, the name *trova* comes from *trovador*, a term referencing the European tradition of composer-performers of the Middle Ages. The term does not in itself represent a genre, yet it represents one of the primary modes of performance of the Cuban *canción* (song) and the *bolero*, and it also encompasses the music of politically conscious singer-songwriters during the Cuban Revolution. The early *trovadores* of the late nineteenth century participated in the creolization of European romantic and patriotic songs, creating a uniquely Cuban style of performance which persists to this day.

The antecedents of *trova* date back to the eighteenth and nineteenth centuries and include a variety of European singing and performance styles. These include the Spanish *tonadillas escénicas* (theater shows mixing song and dance) and *zarzuelas* (dramatic shows with sung and spoken scenes), French and Italian opera, and European patriotic songs and salon music.

Unlike today, Santiago de Cuba in the nineteenth century was a busy international port, receiving an influx of foreign visitors and immigrants. This was the birthplace of *trova.* In the late nineteenth century serenading itinerant musicians accompanied themselves on guitar, singing songs about love, patriotism and the beauty of the countryside. These musicians were spurred by the wealth of European song styles popular in Cuba during the colonial era. A strong influence of French opera and romantic songs was present in Santiago de Cuba, a result of its proximity to Haiti, a French colony until 1804. Beginning in the final years of the eighteenth century during the Haitian Revolution, Santiago de Cuba received masses of French-speaking immigrants from its neighbor, as exiles fled the bloody war. Italian romantic song also left its mark in Santiago de Cuba via Italian artists who stopped off in the city during trips between Mexico or the United States and Europe. European patriotic music, spurred by the wave of nationalism in the continent in the nineteenth century, also became popular in Cuba, as the movement for independence from Spain took place.

The singing styles of operatic arias, European romantic salon music and the patriotic texts of European anthems were adapted by the poor working classes of Santiago de Cuba, who began to sing their own Cuban versions of these genres. At first, Cuban versions simply replaced the texts of the European versions, borrowing the melodies of the original songs. Eventually, innovative *trovadores* such as Pepe Sánchez

– the father of Cuban *trova* and the *bolero* – developed a distinct Creole mode of performance. The practice of singing to the accompaniment of guitar was a Hispanic influence, notably popular among immigrants in Cuba from southern Spain or the Canary Islands. The guitar at the time was considered an instrument of the poor or working class, just as it was in Spain, and became the primary mode of accompaniment for the exponents of the first era of the *trova*, often referred to as *trova tradicional* or *vieja trova*.

Vieja Trova

The second half of the nineteenth century witnessed the crystallization of many elements that now symbolize Cuban culture. During this time Cuba was involved in a struggle for independence, slavery was coming to a slow end on the island, and various Creole musical forms coalesced, such as the *danzón* and *rumba*. These Creole musical styles resulted from a mixture of African and European influences, reflecting the ethnic conglomeration of the island. *Trova* however – in its early form – represents a Cuban adaptation of European romantic song expressed through accompaniment by the Spanish guitar. Its primary performers came from the poor working classes, and were often of ethnically diverse backgrounds themselves.

Trova was born in the late nineteenth century, first cultivated by singer-guitarists – mostly young men – from Santiago de Cuba. *Vieja trova* ('old *trova*') is a common term used to distinguish the style of the first wave of *trovadores*, beginning in the late nineteenth century with the birth of *trova* and continuing through the 1940s. This style of *trova* (although not yet known by this name until after the first decade of the twentieth century) reached its peak of popularity in the early twentieth century, after which a new generation of singer-performers would move in a new direction, influenced increasingly by jazz techniques and North American crooners of the 1940s and 1950s.

Some of the most important exponents of *vieja trova*, born primarily during the 1880s, belonged to a social circle of musicians and performed for each other and others in informal gatherings. Thus many of them were acquainted with and had been taught or influenced by Pepe Sánchez, recognized as the precursor of the *trova* movement. Again, these early *trovadores* belonged for the most part to the working class, specifically tied to the profession of cigar rolling.

Cigar rollers, having a repetitive and sedentary job, often had a designated 'reader' who read to them as they worked. As an alternative form of entertainment, the workers often sang while rolling. As they worked side by side in large rooms, their coworkers listened to and participated in songs. Individuals would improvise and compose new songs *a cappella* during the workday, then get together in the evenings to perfect them. After work hours, they would add guitar accompaniment, since the guitar was a popular instrument among the urban working classes. They collaborated, learning singing and guitar skills from each other and workers of other professions. Other unemployed performers were *bohemios* or 'bohemians,' and preferred to wander the streets or travel from town to town (Sublette 2004).

All of these early *trovadores*, belonging as they did to the lower classes, performed in the corresponding social arena, singing in the streets, parks, cafés, restaurants or at parties, often for little or no pay. Another important site of performance was the *peña*: an informal performance gathering. A *peña*, often hosted by a musician, could take place in a house, apartment building patio, bar or other public or private area, and featured regular performances of *trovadores*.

Textual and Musical Characteristics

The first generation of *trovadores* was largely only semiliterate, due to their underprivileged social and economic circumstances. Despite this limitation, they strove to make use of the best vocabulary and grammar possible in their compositions. Their lyrics were simple, informal and direct. They were also sincere, and contained simple metaphors and lots of description. Themes included patriotism, women, nature (especially the Cuban countryside), love, satire and humor. The beginning of Pepe Sánchez's 'Tristeza,' written around 1885 and recognized as the first Cuban *bolero* (whose origins are *not* tied to the Spanish *bolero*), illustrates these tendencies (De Boleros 2012; all translations are the author's):

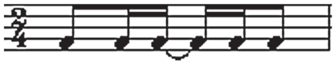
> Tristeza me dan tus penas, mujer.
> Profundo dolor, no dudes de mí.
> No hay pena de amor que deje entrever
> cuánto sufro y padezco por ti …
>
> Your troubles make me sad, woman.
> Deep pain, do not doubt me.
> There is no penalty of love that can suggest
> How much I suffer and suffer because of you …

By the 1920s, however, the *trova* became more popular among the various social and economic classes, and texts became more elaborate. The verses of poets such as José Martí were often used as lyrics.

Musically, the earliest *trovadores* placed their primary emphasis on melody and text; the music was meant for listening rather than for dancing. The *bolero* and the *canción* were central to the repertoire of early *trovadores*, although they also performed other popular genres of the time, such as *claves* (a Cuban sentimental song genre in triple meter which became defunct by the mid-twentieth century) and danceable *guarachas*. The *bolero* featured a regular rhythmic accompaniment and evolved into a romantic dance genre when *son* and jazz groups began interpreting it in the early twentieth century. On the other hand, the *canción* did not adhere to a rhythmic formula and never became a danceable genre.

Trovadores performed solo or as a singing duo, accompanied by one or two strummed guitars played by the singer(s). Harmonies were based on thirds and sixths, a harmonic characteristic inherited from Hispanic music and prevalent in a number of other Cuban musical genres. The *voz prima* or *primera* sang the main melody, while the *segundo* harmonized a sixth below the *prima*. The *segundo* was recognized as the more difficult of the two, and expert *segundo* singers such as Francisco Repilado 'Compay Segundo' distinguished themselves by the harmonic variations they made with the *prima*.

While the *canción* did not have a typical rhythmic pattern, the *bolero* did. Originally, in *trova*, the *cinquillo* – a rhythmic cell used in the *contradanza*, *habanera* and *danzón* – dominated the rhythm of the sung melodies in *boleros*, while the guitar strummed a repeating monorhythmic pattern. Yet the *cinquillo* soon came to be used in the guitar's accompaniment pattern as well. The composers accommodated the melodies of their lyrics to fit the *cinquillo* rhythm. Thirty-two-bar phrases were the norm, with an introduction and interlude, and chords were based on simple triads.



Example 1: *Cinquillo*

By the 1910s and 1920s, as texts became more elaborate and verses of poets were put to music, it became less desirable to fit all lyrics into the rhythmic mold of the *cinquillo*. Thus the *cinquillo* was slowly eliminated in the melodies of *trovadores* and replaced with greater melodic and rhythmic freedom for song lyrics. Composers also took liberties with melodic phrases, no longer adhering closely to the 32-bar norm. The influence of guitarists such as Sindo Garay contributed to the harmonic enrichment of *trova*, as performers experimented with new chordal accompaniments. Garay, for example, began to incorporate chromaticism into his accompaniments after being exposed to phonograph recordings of Wagner's music (Sublette 2004, 299). During this time, pianists began entering the scene as composer-performers, expanding musical possibilities beyond those presented by the guitar's accompaniment. During the ensuing decades (1920s–1940s), the presence of composer-pianists and the advent of the radio in Cuba contributed to the growing popularity, permanence and acceptance of *trova* repertoire by helping to bring the music to a wider audience (Giro 2007).

In 1929 'Aquellos ojos verdes' ('Green Eyes') by pianist-composer Nilo Menéndez (1902–87) became the first Cuban *bolero* to gain international recognition. The piece was almost immediately translated into English and later performed by US artists such as Nat King Cole and the Jimmy Dorsey Orchestra. Menéndez's composition also represents a move away from the previous schematic characteristics of *trova*, entirely abandoning the use of the *cinquillo* and incorporating influences from Debussy and jazz in its harmonies. Menéndez had been exposed to these influences during a stay in New York City, where he had collaborated with jazz musicians. This piece, along with others by artists such as Alberto Villalón and René Touzet, widened the melodic and harmonic possibilities for the *bolero* and *canción* in Cuba (Giro 2007).

US jazz was perhaps the most influential foreign music in Cuba in the early twentieth century. Due to Havana's musical ties with the nearby port of New Orleans and its proximity to Florida, United States and Cuban jazz orchestras came to have a constant presence in the Cuban capital, especially after the 1920s. Some popular and influential jazz bands in Cuba included Casino de la Playa, Orquesta Riverside and Los Hermanos Castro, and musicians Tommy Dorsey and Frank Sinatra who were among many US artists who performed in Havana's nightclubs. US tourists flooded the capital city, filling the hotels and casinos, which were owned primarily by US businessmen. As many of these tourists preferred to enjoy their own music, famous entertainers from the United States were frequently on the bill. While not all sectors of Cuban society had access to these types of performances, many musicians obtained US jazz records through African-American sailors stationed in Havana.

In the 1930s Joaquín Codina (1907–75) and Vicente 'Guyún' González Rubiera (1908–87) transformed the style of guitar accompaniment in *trova*. Drawing on the influence of jazz, they enriched harmonies, used larger and more complicated chords, and incorporated rhythmic and arpeggiated figures never before used. Furthermore, instead of employing constant strumming, guitar chords and melodic figures were freely dispersed and played as needed, a characteristic which was widely used among the musicians of *filin* in the ensuing decades.

In the 1940s the musical possibilities of the *bolero* continue to expand as the orchestration of groups interpreting popular music changed in Cuba. The sextets and septets of Cuban *son*, whose performers also interpreted *trova* repertoire, began to give way to *conjuntos* and big-band-style orchestras that incorporated new instruments into the orchestration, such as *tumbadoras* (*congas*), *timbales*, piano, saxophones and trombones. Although these groups did not perform the *bolero* in the *trovador* style *per se* (as an intimate expression of one or two singer-performers), they contributed to the dissemination of the *bolero* and widened the instrumental variations of accompaniments. Alongside these groups, pianist-composers such as Ignacio Villa 'Bola de Nieve' also gained popularity as performers of the *trova* repertoire.

Important *Trovadores*

José 'Pepe' Sánchez (1856–1918) is known not only as the creator of the Cuban *bolero*, but also as the father of *trova*. He was performing before *trova* was established as a style, and he was the teacher of many later *trovadores*. Sánchez established many of the earliest elements of *trova,* such as the 32-bar phrase, legato melodic lines, the slow tempo of the *bolero* and the style of singing accompanied by two guitars. Bearing the title of the creator of the Cuban *bolero*, Sánchez is thus a key figure in establishing this genre of romantic song (along with the already popular Cuban *canción*) as a cornerstone of *trova* repertoire. He also contributed to the popularization of singing in duos with sixth and third harmonies and to the strumming style of the guitar in early *trova*. He composed songs with superimposed melodies and lyrics featuring two independent and intertwined voices, which later became more prevalent in *trova* (Giro 2007).

Sindo Garay (1867–1968) is perhaps the most famous of the first generation of *trovadores*. He was taught by Pepe Sánchez and performed with him as a duo, dominating the performance of the *segundo* (second voice), which sings in parallel harmony with the primary voice. Garay is noted for his creativity as a *segundo* singer, incorporating melismas and frequent ornamentation into his melodies, and for his use of chromaticism in his guitar accompaniments. Born in Santiago de Cuba, he later went to Havana and wandered the streets as a bohemian. Among the first *trovadores* to migrate from Santiago to Havana, he is credited with bringing the style of singing of eastern Cuba to the capital. Garay also was among the first *trova* singers to record, making records in the first decade of the twentieth century with Edison and Victor recording companies (Sublette 2004).

Manuel Corona (1880–1950) was another notable *segundo* singer. Born in Las Villas province, he later moved to Havana. Rosendo Ruíz Suárez (1885–1983), like Garay, learned guitar from Pepe Sánchez and moved from Santiago de Cuba to Havana. Alberto Villalón (1882–1955) was one of the few *trovadores* with access to a musical education, due to his upper-class background. Learning guitar from Pepe Sánchez, he developed a technical approach to accompaniment, using passing notes and introducing the *punteado* ('picked') style of guitar accompaniment. Patricio Ballagas (1879–1920) did away with the strummed accompaniment to *boleros* and composed many songs with two superimposed voices, such as 'Nena' (Giro 2007).

Eusebio Delfín (1893–1965) was an upper-class white singer who introduced the *trova* style in social circles of the rich in the 1920s, a time when the guitar was still seen as an instrument of the lower classes. He contributed to the acceptance and popularization of the style among the young people of his social class. María Teresa Vera (1895–1965) is one of the few female *trovadoras* to gain popularity, yet is among the most notable singers of her time. She learned to play guitar from a cigar roller and sang *segundo*, establishing a new style that featured a male and female voice in duo (Sublette 2004).

Filin

In the second half of the 1940s a new generation of young *trovadores* established a new style of *trova* based on the heavy influence of jazz and North American singers. Although these influences had previously found their way into the compositions of *trovadores* of the 1920s and 1930s, this new generation transformed the style completely. This movement became known as *filin* and is considered part of the evolution of *trova* due to the fact that its creators and cultivators were singer-songwriters. Their repertoire was based on the *bolero* and *canción*, as were the repertoires of their predecessors. The name *filin* was given to the style by its primary exponents, referring to the English word 'feeling,' which they heard in North American songs. Upon discovering the meaning of the word, the young artists deemed it fit for describing their style. 'Feeling,' hispanicized to *filin*, reflected an emphasis on sentimentality and passion as well as ties to US jazz, which *filin* artists drew on for inspiration.

This style of interpretation was created by a group of young *trovadores* in Havana, many of whom were themselves the sons or daughters of *trovadores* of the earlier style. Among the first to form part of this group were Angel Díaz, César Portillo de la Luz, Luís Yáñez, Rosendo Ruíz Jr, José Antonio Mendez, Niño Rivera, Nico Rojas, Rolando Gómez and Elena Burke. These singer-songwriters met regularly at the home of Angel Díaz, whose father Tirso Díaz was a *trovador*. Angel had grown up hearing his father and other *trovadores* sing at his home. Angel and his friends, belonging to a younger generation heavily influenced by North American music, had a strong affinity for jazz. They obtained recordings of US artists such as Al Cooper, Chick Webb, Nat King Cole and Ella Fitzgerald by way of African-American marines in the port of Havana. The young Cubans emulated these jazz artists' singing styles and incorporated new musical elements into their previous informal musical background. They held regular *peñas* where they experimented with the new elements and exchanged ideas. This group was also influenced by left-wing politics, which was consistent with their rejection of the previous conventional and commercial ties of *trova*. In 1947 they began broadcasting the 'Feeling Club' show on Radio Mil Diez, a left-wing radio station sponsored by Communist party members (Sublette 2004).

The lyrics of *filin* were direct, poetic and expressive, making use of metaphors, colloquialisms and imagery. Yet perhaps the primary characteristic – both textually and musically – was its deep sentimentality. This was expressed through its intimate, speech-like singing style reminiscent of Nat King Cole, and a free rhythm which allowed for liberal interpretation of the text. The use of tempo rubato as opposed to the set rhythm of the *bolero* emphasized that the music was meant for listening, not dancing. While at first the accompaniments were provided by a guitar or piano and featured only one singer, other accompaniments and orchestrations soon appeared. The accompaniment itself was devised with an orchestral approach, owing much to the influence of jazz. Jazz influence together with that of European impressionism also spurred the appearance of new dissonances in the melodies. The musicians experimented with augmented and diminished chords and added 11ths and 13ths. Although they moved away from previous conventions of tonality, the tonic remained the tonal center.

The *filin* movement continued evolving with new artists in the 1950s and 1960s after which it gave way to a new stylistic variant of *trova.* Some of the most notable *filin* singers include César Portillo de la Luz (b. 1922), Marta Valdés (b. 1934), Frank Domínguez (b. 1927), Omara Portuondo (b. 1930) and Pablo Milanés (b. 1943), who later became an important figure in *nueva trova*.

Nueva Trova

Nueva trova ('new *trova*') refers to the movement of Cuban singer-songwriters who in the 1960s began to compose and perform songs expressing heightened social and political consciousness. This new generation of young *trovadores*, reflecting the Revolution's socialist values, rejected consumerism and the romantic, stereotypical approach to love songs of earlier *trova*. These young musicians were nonetheless linked to the tradition of *trova* through their roles as singer-songwriters, and particularly as singer-guitarists, as had been many of the original Cuban *trovadores*. In much the same way as *filin* artists had done, these performers took original approaches to creating music, drawing on the influences of their favorite artists. This movement was part of a larger trend in Latin America, in which young socially and politically conscious singer-activists were voicing protest through song, known as the *nueva canción latinoamericana* ('new Latin American song') or *canción de protesta* ('protest song'), which included such artists as Víctor Jara from Chile and Mercedes Sosa and Atahualpa Yupanqui from Argentina.

The popularity of protest music around the globe grew out of the difficult political and social circumstances of the mid-twentieth century, characterized by the struggles of the working-class masses and rural poor, and the spread of socialist ideas. Various sociopolitical movements, reflecting distinct historical, political, economic and social circumstances, were transforming societies around the globe. Many of these were played out on the international stage, and thus had both local and international repercussions. The Chinese Revolution of 1949 signaled the ultimate victory of the Communist Party and Mao Zedong in the Chinese Civil War. In the United States, the Civil Rights Movement represented the assertion of the black population and other marginalized groups in the face of historical oppression. In Latin America, dictatorships emerged as a consequence of social unrest and military coups. Further, areas such as Africa, which had long suffered under European domination, worked toward independence through anticolonial movements. Together, these movements represented a fundamental social, political and economic realignment of nations around the world, as the established orders of imperialism, colonialism, capitalism, human rights and racial equality were challenged.

In Cuba in the 1950s, social unrest simmered as Cubans became increasingly disillusioned with Fulgencio Batista's corrupt government and US economic – and, to some extent, political – imperialism. While the largely white Cuban middle class lived in relative economic comfort and US tourists flooded Havana's cabarets and casinos, the Cuban urban working class and rural population (among whom blacks and mulattoes made up a large percentage) were marginalized. Since the establishment of the independent Republic of Cuba in 1902, Cuba's political and economic interests were heavily influenced by the United States. The United States had aided Cuba in its fight against Spain and afterward positioned itself as a primary benefactor of the war, gaining control of Puerto Rico and intimate ties with the nascent Cuban government. During the first half of the twentieth century US economic investment in Cuba surged, with US competition often conflicting with local control. In the agricultural realm, the US-owned United Fruit Company came to control vast quantities of territories, extending its ownership into the means of production and transportation. Cuban small farmers suffered greatly from such corporate competition. Farmers, as well as similarly marginalized urban workers, grew increasingly disillusioned with Cuban political leaders. Further, problems such as mass-illiteracy, racial segregation and discrimination, and impoverished living conditions for the urban and rural poor reflected class and racial disparities.

The foundations of Cuban society were shaken when Fidel Castro Ruz overthrew Cuban president Fulgencio Bastista in 1959. Castro's Revolutionary government implemented socialism and disrupted US hegemony. Desegregation, agricultural reforms and mass-literacy campaigns, among other reforms, were especially applauded by their primary beneficiaries: the rural and working-class masses. During the first years of the Revolution, Cuban elites and the middle class became disillusioned with the socialist government, as private businesses were taken over, resources such as milk became scarce or rationed, and voicing political opposition became dangerous. This spurred many Cubans – mostly whites from the upper and middle classes – to flee their island and seek refuge in the United States, primarily in nearby Miami.

On the island, Revolutionary goals included the creation of a 'new socialist citizen' through education in which nationalist sentiment and Marxist-Leninist principles were central (Moore 2006, 142). While the government promoted what it regarded as revolutionary, Marxist-Leninist thinking by its citizens, this was intended to be used as external criticism – that is, directed at US imperialism and capitalism. The promotion of critical political thought in Cuba was not meant to generate internal critique, directed at Cuban society and the government itself. Yet as early *nueva trova* artists demonstrated, many Cubans, seeing themselves as true Revolutionary supporters, considered internal critique of national problems just as necessary as the international condemnation of imperialism and capitalism. Thus *nueva trova* is a product of the Revolution, an expression of rebellious youth challenging society who were later institutionalized by the very government that once censored them.

The three main artists credited with the creation of this new style were Silvio Rodríguez (b. 1946), Pablo Milanés and Noel Nicola (b. 1946). In the mid-1960s these young singer-guitarists, who were among the first generation educated in Revolutionary Cuba, began composing songs addressing the social and political problems of Cuba and performing them informally in public. At first, the government did not endorse these artists or others engaging in any form of political or social critique of the Revolution; they were seen as troublemakers, hippies and even counter-revolutionaries. In the late 1960s Rodríguez, Milanés and Nicola came together under Haydeé Santamaría, who helped encourage and direct their talent. Santamaría was an important political figure who directed activities at the Casa de las Américas (a government-run cultural center) and was a fan of the South American *canción de protesta*. By the 1970s the government altered its stance, realizing the powerful effect these artists had on young audiences. *Nueva trova* was subsequently institutionalized by the government, which allowed for increased state control over lyrical content and the ideological representations of the artists and their music. The movement reached its peak of popularity in the mid-1970s, lasting about a decade before a new generation of younger artists rose to replace it. By the 1990s the first generation of *nueva trova* artists were more marketable abroad than in Cuba (Moore 2006).

The embryonic phase of *nueva trova* in the 1960s comprised young and rebellious singer-songwriters performing outside the sphere of the government-controlled media. These artists wrote freely, expressing their questions and critiques of society through song. Singer/songwriters such as Silvio Rodríguez wrote songs which at times included risky lyrics openly challenging the government. These musicians were often seen by the new socialist government as problematic and many, such as Pablo Milanés and Silvio Rodríguez, were detained by authorities at some point. From the late 1960s until the early 1970s artists and intellectuals in Cuba faced severe censorship and limited freedom of expression. Foreign influences such as rock music – widely influential among the young generation of singers – were suppressed, as Revolutionary leaders feared cultural contamination by the capitalist societies of the United States and Europe. Before appearing on the media or releasing recordings, many artists were obligated to submit their music for screenings, insuring the lyrics did not contain questionable material. While several of these artists chose to avoid controversial issues, the singers of what would become *nueva trova* chose to take their chances (Moore 2006).

In the late 1960s Haydeé Santamaría took a group of these *trovadores* under her wing, even though they did not yet have the full approval of the government. Santamaría was able to do this because of her impeccable Revolutionary credentials – she had fought alongside Castro during the struggle against Batista. As a believer in the power of protest song, in 1967 she organized the *Primer Encuentro Internacional de la Canción Protesta* ('First International Protest Song Meeting'), which brought together Cuban and other Latin American performers in Havana. In the final resolution of this meeting, they expressed their support of the people and rejected the consumerism of capitalism, defining their duty as the discussion of social and political issues. For a few months from 1967 to 1968 in Cuba, a television show called '*Mientras Tanto*' ('Meanwhile') featured the young artists, with Rodríguez as a central figure. Other artists participating in the early festivals and meetings of the Cuban protest song included Martín Rojas, Vicente Feliú, Elena Burke, Belinda Romeu and groups such as Los Dimos. Thus the movement gained popularity in the 1960s, even while the government hesitated to endorse them (Moore 2006).

The year 1969 marked the beginning of the government's institutionalization of *nueva trova.* During the 1970s one factor which may have influenced Cuban leaders to accept and promote the style was Cuba's ties with other left-leaning Latin American governments that had realized the powerful force the protest song represented. It is important to note, however, that *nueva canción* outside of Cuba emerged as a protest against right-wing military dictatorships and often incorporated indigenous folk music, whereas *nueva trova* arose under a socialist government and drew on a more international, cosmopolitan sound. The dramatic change in the Cuban government's attitude helped bring *nueva trova* into the mainstream and brought greater recognition to the *trovadores*. The first government-sponsored organization employing *trovadores* was created in 1969: the Grupo de Experimentación Sonora del ICAIC ('Experimental Sound Group of the Cuban Institute of Cinematic Arts and Industry'). This ensemble's duties included composing and performing instrumental music for Cuban movies. The opportunity allowed artists greater respect and access to improve their musical education – including how to read and the basics of harmony – which later led to more elaborate orchestrations and instrumentations in *nueva trova* (Giro 2007).

In 1972 the government created the Movimiento de la Nueva Trova (MNT) under the direction of Leo Brouwer, allowing for better organization of *trovadores* and increased media access. The MNT included nationally registered members and directors and hosted its own festivals. It was at this time that the term *nueva trova* became official. '*Nueva*' labeled it as a new product of Revolutionary Cuba and highlighted its closeness to the Latin American *nueva canción*, while '*trova*' linked it to the nonthreatening Cuban tradition of *trovadores*. Songs previously seen as controversial and anti-Revolutionary were now praised as anthems of the Revolution. Yet with this newfound government support came new political pressures. While artists in the 1960s performed primarily outside the sphere of the media, *trovadores* now had to be careful about their lyrics if they wanted continued government support. Thus themes became less subversive while songs praising Cuba and the Revolution became more common, such as Milanés's song 'Amo esta isla' ('I Love This Island'). The song, released in 1982 on an album titled *Yo me quedo* ('I Am Staying'), tells of his love of the island and his refusal to abandon it for 'the continent.' It was written in response to Cubans who left for the United States during the Mariel boatlift.

The musical styles of *nueva trova* were eclectic, incorporating influences from *filin* and Cuban folklore as well as jazz and rock. During the 1960s and early 1970s many *nueva trova* artists, such as Milanés, Rodríguez, Nicola and Sara González, performed much of the time as solo singer-guitarists. The participation in the Grupo de Experimentación Sonora del ICAIC by Milanés, Rodríguez and Nicola endowed them with new musical skills and professional experience. In the 1970s and 1980s these three, along with other *nueva trova* artists, began experimenting with new sounds and larger orchestrations, including keyboards, electric guitars and synthesizers, mostly due to the influence of other Cuban and North American bands. Song themes centered on political and social commentary but also included patriotism and romance, albeit avoiding machismo and the stereotypical depictions of women present in earlier *trova*. The early *nueva trova* of the 1960s was perhaps most openly critical in its themes, sometimes directly challenging the Revolutionary government. This gave way to more passive approach in the late 1970s and after, during which 'safer' themes – those in tune with

Revolutionary ideals – were pursued, partially due to censorship and fear of reprimand. Further, by the 1980s and 1990s artists such as Milanés and Rodríguez had become superstars, enjoying an elite lifestyle supplemented by government perks, and were thus less in touch with the lifestyle and hardships faced by most Cubans (Moore 2006, 157).

Milanés had begun his career before the Revolution, performing in the 1950s with dance bands and as a singer of *filin*. This informed his style, which comprised an innovative approach to Cuban traditional music, drawing on elements of *son*, *jazz* and *rumba*. His dance band past gave Milanés experience working within a musical group, with Cuban dance band orchestration and dance genres such as *son*. As a *filin* artist, Milanés would have gained exposure to jazz techniques and the intimate singing style of the genre. Milanés, himself a mulatto, also had an interest in Afro-Cuban folkloric music, such as *rumba*. He collaborated with Afro-Cuban performers more than did other *nueva trova* artists, such as Rodríguez, a white performer. Robin Moore highlights these racially oriented tendencies by citing Milanés's collaboration with Afro-Cuban drumming ensemble Yoruba Andabo, Afro-Brazilian Milton Nascimento, and his promotion of young Afro-Cuban musicians, such as Gerardo Alfonso and Marta Campos. On the other hand, Rodríguez promoted white Cubans Carlos Varela and Santiago Feliú and collaborated with white Brazilian Chico Buarque (Moore 2006, 145–6). While Milanés performed at times as a solo singer-guitarist, much of his recorded music features a more expansive orchestration. For example, his song 'El breve espacio en que no estás' ('The Small Space in Which You Are Not Present'), released in 1985 on the album *Querido Pablo* ('Beloved Pablo'), features violin, piano, synthesizer, while Milanés's voice is foregrounded. His vocal style, like that of many other *trovadores*, is natural and intimate, and emphasizes emotion, refraining from drawing attention away from the lyrics with excessive melismas or other vocal acrobatics. An example of Milanés's incorporation of Cuban dance band influence is 'Amo esta isla' (I Love This Island), recorded in 1982 on the album *Yo me quedo* (I Am Staying), which features piano, violins, bass guitar, congas, bongos and vocal harmonies, with a *son*-based rhythm in 7/4 (rather than the normal 4/4 meter associated with *son*).

Rodríguez, perhaps the most famous of all the *nueva trova* artists, drew his primary influences from folk rock. Performing much of the time as a solo singer-guitarist, his style is highly influenced by artists such as Bob Dylan and Paul McCartney, and featured high-pitched vocals and asymmetrical phrases. His poetic approach to writing lyrics was complemented by surreal images and highly complex metaphors, a good example of which is the song 'Unicornio,' in which he describes losing his friend, the blue unicorn. This song, released in 1982 on an album of the same name, is an emotional lament, featuring solo voice and piano.

Rodríguez's 'Rabo de nube' ('Tail of the Tornado'), released in 1980 on an album of the same name, demonstrates the purposely ambiguous treatment of *nueva trova* texts. The song refers to the image of a tornado that creates mayhem and violence, yet also serves to clear away negative elements tormenting the protagonist. After, there remains a certain calm – a time for new aspirations and rebuilding (Benmayor 1981, 30). Hence the lyrics can be taken to refer to a social upheaval, in Cuba or abroad, or more simply to the loss of a romantic interest or loved one. Song lyrics like these were purposely left somewhat obscure, both in anticipation of censorship boards and for fear of reprisal for direct criticism of the Revolution.

Novísima Trova

A new generation of *trovadores* made its debut in the mid-1980s, influenced by the popular music of the time. Most were guitarists, and while some sang to the acoustic accompaniment of their instrument, others such as Carlos Varela took more of a rock band approach to their compositions. They dubbed their style *novísima trova* ('very new *trova*') in order to distinguish it from the previous generation of *nueva trova*, which had become less representative of protest. Artists Gerardo Alfonso, Rita del Prado, Carlos Varela and Gema y Pável are among the primary exponents of *novísima trova*. Their music mixed sounds from acoustic or electric guitar, rock, jazz, pop, hip-hop, Cuban folklore and *nueva trova* artists. Many of their compositions served to criticize the government, such as Varela's 'Guillermo Tell,' released in 1989 on the album *Jalisco Park*. The song references the story of William Tell, who made his son stand still with an apple on his head for target practice, thereby comparing Fidel Castro to the father and the Cuban people – particularly the younger generation – to the son being taken advantage of. In the song, which Varela performs solo with guitar, the son turns the tables, becoming the archer himself as he comes of age: 'Guillermo Tell, tu hijo creció; quiere tirar la flecha/Le toca a él probarsu valor usando tu ballesta' ('William Tell, your son has grown up; he wants to shoot the arrow/It is his turn to prove his valor with your crossbow') (Varela 1989).

Many *novísima trova* artists, such as the singing duo Gema y Pável, left Cuba during the *período* *especial* ('special period') of the early 1990s. This was a difficult time in Cuba, resulting from the collapse of the Soviet Union in 1989 the island's primary source of economic support. Basic resources, such as food, clothing and fuel became scarce, and massive blackouts, violent robberies and civil unrest spurred a new wave of Cubans to emigrate illegally. While some of these artists continue to perform in Cuba, others cultivate their art in Spain or the United States. The success and popularity of *novísima trova* did not last long, and although artists such as Varela still maintain a following, by the mid-1990s the attention of the Cuban masses was captured by the more marketable dance music of *timba* bands.

Conclusion

While *trova* has undergone many changes throughout its long history, each of its styles remains cultivated today. Silvio Rodríguez and Pablo Milanés perform in Cuba and abroad, although they are more popular among foreign audiences. *Novísima trova* artists also continue to record and perform on the island and in exile. On the other hand the performers of *filin* and *vieja trova* have passed into the realm of traditionalists. These styles are maintained primarily by musicians of older generations and are no longer widely popular among the Cuban public. Rather, these groups tend to cater to foreigners and the international market, a result of the tourism boom of the 1990s. During this time traditional Cuban *son* and *trova* became synonymous with the nostalgic depiction of the island cultivated by the Ministry of Tourism and foreign films and documentaries. A prime example of the latter is *Buena Vista Social Club*, a nostalgia-evoking documentary directed by Wim Wenders and released in 1999. In the film, musicians of Cuba's pre-revolutionary era, among whom were performers of *filin* and *vieja trova*, are 're-discovered.' These genres, along with 1950s-style *son*, were promoted in the film as neglected treasures of a bygone era of Cuban music. The international success of *Buena Vista* further contributed to foreigners' musical interest in Cuba and the cultivation of a nostalgic view of the island. In the early twenty-first century, tourists in Cuba continue to be serenaded by guitar-based trios and quartets specializing in *vieja trova* repertoire, *sones* and *guarachas*.

Tuk

Tuk music is indigenous to the eastern-most Caribbean island of Barbados. It is a percussion-based music that originally was played by a band of roving musicians, but by the late twentieth century had also become an electronic form, rendered by modern popular bands making use of the latest in digital technology. Tuk music has its origin in slave society and is characterized by intricate polyrhythmic interplay between its acoustic instruments. It has remained a local and regional music form, having little impact outside Barbadian, Caribbean and Caribbean diaspora carnivals such as Labor Day in New York, Caribana in Canada and Notting Hill Carnival in the United Kingdom.

Music and musical practices were a vital component of the cultures that enslaved Africans brought with them from West Africa to the Caribbean. During slavery, the mixture of African and European cultures on the plantation produced a range of distinctive yet related styles of music across the Caribbean archipelago. In Barbados, where slavery began in the late 1620s when the first British colonists arrived, tuk music was born of this experience. Some critical perspectives on the origin of tuk music suggest that the tuk band derived inspiration from British marching bands. It is, however, reasonable to propose that the music itself – that is, its inflections and style – was created even before Africans saw those bands. By 1806 there were bands of musicians who played their distinctive music, especially on festive occasions. In the late nineteenth century, with the formation of the friendly society called the landship, the tuk band became an associated troupe, providing the music to which the members of the landship danced and paraded wherever they were called to perform.

The modern tuk band is widely known as being made up of at least four instruments. The bass drum is worn strapped across the shoulder and played with a single mallet in one hand, while the other hand dampens the sound for added effect. The kettle drum is also worn across the shoulder and played with two sticks. The triangle/timpani/steel is held at the apex and beaten with another metal implement. The penny whistle is the only melody-producing instrument. It is approximately the same size as the piccolo and is pitched an octave above the flute. Tuk music is polyrhythmic. The bass drum is the primary time-keeping instrument.

The penny whistle carries the melody. The triangle's function is primarily to embellish the overall sound of the band; its high resonating timbre creates interesting contrast to the lower-pitched instruments. The kettle/share drum interplays with the bass drum. Together, these instruments are largely responsible for creating the tension, release and dynamics within tuk music.

In the late 1970s and thereafter, when interest in calypso music was rekindled in Barbados via the introduction of the annual tourist-oriented festival called Crop Over, the tuk band – but more so tuk music – found a renewed platform for its performance through an interface with technology and with calypso music.

Contemporary tuk music is played and interpreted by modern combo bands. The trap set, the bass guitar and other instruments such as digital synthesizers mimic the rhythmic inflection and tonal quality of the acoustic band, while freely adding samples of other forms of contemporary Caribbean and/or Western popular music. It is the rhythmic inflection of tuk music that mostly defines it, despite the fact that digital technology also facilitates the sampling and reproduction of original instruments. Tuk music cannot claim to have a distinctive vocal style or lyrical emphasis, except perhaps insofar as it is more often than not associated with celebration and revelry. Tuk has to some degree become submerged within the calypso and soca (dance-calypso) tradition and has therefore been disseminated via carnivals and festivals, FM radio and, more recently, via the internet and other new media.

There are artists such as Poonka who have worked assiduously to retain tuk as a viable autonomous music form within the range of musics being played in Barbados and the Caribbean. But there has been no genuine national acceptance of tuk as a viable music, although many more composers, musicians and producers have been producing tuk rhythms than they and the society seem to recognize. While some commentators have accused Eddy Grant of appropriating tuk music under his banner of ringbang, there is a general uncertainty, if not indifference, toward the conscious embracing and promoting of tuk music as a commercial music. In the early 2000s tuk music can be heard within the fast-paced, driving rhythms of post-soca music. This tuk music is usually carried by the drum set and the accompanying spared rhythmic bass patterns that drive the music of many leading Barbadian musicians, from the older generation in Red Plastic Bag, to the middle generation in Lil's Rick and the younger generation in Kimberley Inniss.

CURWEN BEST

Tumba

Tumba is a genre unique to Curacao and Aruba. Especially prevalent in Curacao, it is widely treated and discussed as the musical genre most emblematic of the island. Sharing many characteristics of the *son*-related genres (such as the salsas and socas that are widely found throughout the Caribbean), it uniquely foregrounds the local language of the Netherlands Antilles, Papiamentu (or Papiamento, as it is called in the Hispanophone world). It is the basis of a major annual festival in Willemstad, held during Carnival and closely integrated to the festivities surrounding it.

While related in many popular sources to *tambú*, an earlier musical genre that flourished among slaves in Curacao, *tumba* is, in fact, a separate genre that owes much more of its current musical characteristics to the Cuban *son*. Its distant historical origins lie in Western Africa, and a genre known as 'tumba' is known to have flourished among the slaves housed on the island since the seventeenth century. Like the other African-derived musics practiced on the island, *tumba* was officially repressed, because of its sensuous rhythms, the provocative dancing associated with it and the racy or accusatory lyrics associated with some of the songs; it finally enjoyed recognition only in the form of compositions of Curacaoan composer Jan Gerard Palm (1831–1906), often cited as 'fundador di músika di Kòrsou' ('founder of Curacaoan music'), who composed *tumbas* for piano alongside waltzes, danzas, polkas, marches and other such dance-based forms.

It has been estimated (Paula 1973) that roughly half of the population of the island emigrated to Cuba between 1917 and 1937 in search of work, many of them subsequently returning as Curacao increasingly became a locus for refining and transhipment of oil from neighboring Venezuela (which remains its major industry to this day). Many of the returning workers brought with them Cuban instruments and a knowledge of *son*-based performance (Gowricharn 2006). That oil-related activity also attracted many immigrants from the West Indies. With the rise and flourishing of a music industry on Curacao during the 1950s, many Cuban-influenced popular genres circulated throughout the island, mixing with local forms such as *tumba*. *Merengue* music from the Dominican Republic also made significant inroads into Curaçaoan musical life, including the style of *tumba*. The music was performed primarily at private parties celebrating occasions like Carnival, until after the 1969 popular revolt on the island, which rocked the foundations of Curaçaoan society and forced the government to integrate racially and abandon many of the privileges of colonization which had lingered since nominal independence from the Netherlands in 1954. Following that, the government began organizing a composition and performance contest for unpublished *tumba* songs, integrated with the celebration, in order to increase popular interest in the celebrations of Carnival, the first one taking place in 1971. Initially attracting only 10 contestants, the contest grew in popularity over the ensuing decades, moving to ever-larger venues and eventually being held in the purpose-built Curaçao Festival Center. The winning singer is crowned as 'Rei di Tumba' or 'Reina di Tumba' (king or queen of tumba), and the winning song, having been recorded during the festival, becomes the 'road march song' of the Gran Marcha that caps the Carnival week. There is also a children's *tumba* contest, the winner of which marches in the Children's parade. The contests are televised and broadcast on radio, with *tumba* music dominating the physical and media landscape of Willemstad for the duration of Carnival; other times of the year, although *tumba* is often discussed and advertised as the genuinely local musical genre, there is little performance of or listening to the music.

Stylistically, *tumba* most resembles *merengue de orquesta*, with similar instrumentation, as well as influences from Latin jazz. Its quick duple meter, intricate drum polyrhythms, frequent brass interjections and backing vocals also mark out influences from various salsas and socas that circulate freely throughout the region; all lyrics are delivered in Papiamentu, a point of pride among the many on the island who underline *tumba* as the uniquely Curacaoan music. Most songs are overall binary forms, with an initial section at a moderate tempo delivering most of the lyrics, generally in a quite standard verse/chorus (or verse/refrain) form, usually with an instrumental introduction; this section is often fairly brief and may include only one or two verses and/or choruses. The second section is an extended, mainly instrumental jam at a faster tempo, sometimes including brief sung interjections, fragmentary versions of the verses or choruses, or repetitions of a refrain. This second section is the occasion for the most vigorous dancing and often thus becomes the longer section of the song. Lyrics generally celebrate the character of Curaçao and its people, in ways consistent with the patriotic character of the festival as official culture and the ideological role of the music in forming Curaçaon identity.

'Much'i Otrabanda' ('Children of Otrabanda [the district of Willemstad in which the Gran Marcha takes place]'), the winning song of the 2001 competition, exemplifies a fairly typical *tumba* song, as Example 1 illustrates). The A section lasts, in this song, for 60 measures, while the B section, which includes some verse fragments within the jam, lasts for 146 measures. The tempo of the B section is considerably faster than that of the A section, which presents an instrumental introduction, followed by the chorus, the first verse, the second verse, a transitional 'Até! Atá!' ('Over there! Look!') and then the chorus once again. Instrumentation is typical for *tumba*, as well, with electric guitars and bass, electronic keyboards, a

Example 1: Two-part form in 'Much'i Otrabanda' (taken from Krims 2007) complete brass section (saxophones and trumpet), an array of hand-played drums and a drum kit.

While having little influence outside of Curacao, *tumba* plays a remarkably powerful role in the musical and social life of the island and also enjoys a status of being one of the anchors of its tourism industry.

ADAM KRIMS

Twoubadou

Twoubadou (from the French *troubadour*) is a term originally used to denote rural Haitian music that blends elements of Cuban string band music with those of Haitian topical song, a phenomenon that emerged in the early twentieth century. Traditionally, small *twoubadou* ensembles traveled in rural areas, performing for money while delivering biting social commentary to audiences. *Twoubadou* music quickly joined the wider body of rural populist music, called *mizik tipik* in Haitian Kréyol, and is thought today to be *natif-natal*, or an authentically Haitian genre (Averill 2009, 29). Additionally, the genre's commitment to social commentary has led it to develop into a powerful vehicle for political activism.

Twoubadou originated around the time of the US occupation of Haiti (1915–34), when technologies allowed increased communication between Haiti and Cuba (Averill 1997, 39). The radio and phonograph in particular made Cuban music readily available to Haitians in the 1930s. Haitian workers, who commonly traveled to Cuba to work the sugar harvest, strengthened communication ties between the islands (Largey 2006, 156). These workers returned to Haiti after the harvest, bringing with them the instruments and style of small Cuban string ensembles, which they blended with local song to beget *twoubadou* music.

Similar to small Cuban string ensembles, early *twoubadou* groups normally consisted of two to four chordophones (commonly guitars), *tanbou* (a barrel hand-drum), *tchatcha* (a shaker made from a gourd) and a *malimba* (a large box-lamella phone that served as the bass instrument, played by plucking metal keys suspended over a sound hole) (Averill 1997, 39). This instrumentation could also be supplemented by additional strings, including the *banza* (four-string banjo), *twa* (Latin *tres*) and occasionally accordion. The presence of the *bwa*, *clave*-like sticks, show further Cuban influences (Averill 2009, 29).

In addition to topical songs, *twoubadou* ensembles performed popular dance music from the late nineteenth and early twentieth centuries, and later frequently performed *konpa* and *mini-djaz* as well. *Twoubadou* groups became a fixture at rural dances, parties and celebrations. Their performances at *banbòchs*, weekend parties held under thatched roofs, made the term *mizik anba tonèl* (music under the arbor) synonymous with *twoubadou* music (Averill 2009, 30).

Use in Political Activism

Twoubadou took on a topical nature early on during the US occupation, similar to that of *simido* or *sanba* singers in *konbit* music. Although lyrics were commonly about lighter fare such as relationships and drinking, they also touched on poor living conditions and issues of the labor class.

Several generations of Haitians have embraced *twoubadou* music to show political resistance. This characteristic has become such an important aspect of *twoubadou* that now the term is used to designate any music that incorporates social commentary, one example being populist *méringues* of Kandjo. Kandjo used topical *méringues* in the latter half of the US occupation of Haiti to protest against the US presence. Several decades later, his music was labeled *twoubadou.*

In the 1970s *twoubadou* musicians including Toto Necessité, Rodrigue Milien and Jule Similien encouraged social activism against the Duvalier regime through their music. The *twoubadou* duo Manno Charlemagne and Macro Jeanty recorded protest songs in the 1970s and helped start a trend of *twoubadou*-styled political musical activism. Their label, Marc Records, released their album *Manno et Marco* in 1978, where they voiced their concerns on social issues. The song 'Pouki?' (Why) is an example of their lyrical style (Averill 1997, 128):

Pouki lavi pa separe	Why doesn't life separate things
Egalego fifti fifti	Equally, fifty-fifty?
Pouki reken kraze brize	Why does the shark bring such destruction
Gwo mak dan sou do ti pwason	Large tooth marks on the back of the little fish?

Because their label was based in New York and Montreal, Manno and Marco were able to record this song without censorship from the Haitian government. With their socially conscious lyrics, they nurtured *angaje* (engaged) music ideas. Music that included political and social commentary became a common and popular form of political protest against the Duvalier regimes (François from 1957 to 1971 and Jean Claude from 1971 to 1986).

In spite of *twoubadou*'s relatively recent entrance into the Haitian musical canon in the early twentieth century, the genre is generally perceived as a time-honored, distinctly Haitian tradition. Some sources posit that *twoubadou* can be traced back to the time of slavery, illustrating its cultural weight. One such claim appears in the liner notes of Atis Endependan's 1975 album *Ki sa Pou-n Fe?*, stating: 'We believe that a strong Haitian people's music exists, beginning with voodoo, rara, troubadours and other musical forms which had origins in slavery times …' (quoted in Averill 1997, 114). Statements such as this one show that although the specifics of the *twoubadou* genre are recent, the concept of roaming rural musicians in Haiti is long established.

Twoubadou ensembles still perform today, mostly in public settings. Groups roam crowded areas and ask for money in exchange for playing a wide range of repertoire; groups are expected to take song requests including *méringue*, *konpa* and *mini-djaz* genres. Today, *twoubadou* continues as a pillar of social commentary in music, and serves as a symbol of Haitian identity.

LAURA DONNELLY

Vallenato

Vallenato is accordion music from the Caribbean coastal region of Colombia. From local and obscure origins, in the last two to three decades of the twentieth century it became the best-selling Colombian style in the country, overtaking genres such as *porro* and *cumbia* in popularity and providing music for listening and dancing. It emerged out of long-standing Latin American traditions of versification that included ballads, rhyming verses (*coplas* and *trovas*), ten-line stanzas (*décimas*), work songs and poems, spoken or sung, often with a guitar (Bermúdez 1996). In the late 1800s accordions and harmonicas were imported into this Colombian region from Germany and they began to be used in this corpus of verses and songs, as well as to play other local styles such as *cumbia* and *porro*. The accordion was often employed by a *juglar* (wandering minstrel), perhaps accompanied by a small bongo-like hand drum (now known as a *caja*) and a ribbed scraper (*guacharaca*). Bermúdez (2005) argues for the residual retention of African traditions of social commentary in *vallenato* music and indeed many singers of the genre were of African descent, although European influences were also important. But he agrees with Gilard (1987b), who refutes the idea that *vallenato* was a truly narrative style.

Vallenato became popularized from the early to mid-twentieth century with both the guitar and the accordion, although the latter soon dominated the commercial style. *Vallenato* groups soon grew to incorporate bass guitars, more percussion and, later, electric instruments. Purists, however, insist on the 'traditional' lineup of accordion, *caja* and *guacharaca*. In the 1990s *vallenato* broke class and regional barriers to achieve new heights of popularity.

Vallenato is often divided into four subgenres: *son* (a slow rhythm in 2/4 time, often sung with a plaintive sound), *paseo* (slightly faster, but very similar to the *son* and also often a romantic lament), *merengue* (a more vivacious style, played to a faster tempo in 3/4 time, although with duple meter also present, which suggests that it may not derive from the Dominican *merengue* which is only in duple meter) and *puya* (a very rapid 2/4 rhythm which allows the accordionist to display virtuosity). The first three can be heard on *Alejandro Durán y su época de oro* (1980); the *puya*, 'Pedazo de acordeón' (written by Durán), can be heard on Carlos Vives's *Clásicos de la provincia* (1993). The dominant rhythmic ostinato, carried by the *guacharaca*, is like that of the *cumbia* (crochet, two quavers, crochet, two quavers), but other rhythmic patterns include versions of the *tresillo* (in 4/4 music, a three-note figure comprised of two dotted quarter notes followed by a quarter note), audible in the bass line, and variants on the *cinquillo* (a syncopated five-note cluster of quarter-eighth-quarter-eighth-quarter). Bermúdez (2005) states that the musical structure of *vallenato* is thus similar to that of many other styles of Afro-American and Caribbean popular music. Harmonically, the style remains close to the tonic and dominant. Although lyrically rich, it has become a popular dance style as well, with the *paseo* style permitting close-contact couple dancing.

History, Description and Changing Definitions

The label *vallenato* began to be applied to accordion music accompanying sung verses in the Caribbean coastal region from about the 1940s, shortly after the appearance of the particular type of button accordion that produced the distinctive *vallenato* sound (Bermúdez 1996, 116; Oñate Martínez 2003, 22–3). The term *vallenato* means 'born in the valley' and this is usually understood to mean Valledupar, a town in the northeastern part of the region, and its surrounding areas. In the early 1900s the term was used locally to refer not to music, but to local lower-class people (Quiroz Otero 1982). Indeed, some argue that the term derives from the term *ballenato* (baby whale), the patchy skin of which was said to resemble the mottled skin of local peasants who suffered from a local skin condition (Araújo Molina 1973, 52). However, accordion music was not particular to this region and could be found, in a patchy distribution, all over the Caribbean coastal region of Colombia from about 1900 (Londoño 1985, 127; Posada 1986, 20). Interviews with old players show they tend to refer to playing *son*, *merengue*, *puya* and *paseo* (Gutiérrez Hinojosa 1992).

The association of accordion music with *vallenato* and with the Valledupar zone is argued by Gilard (1987a) to have been a process of identity construction shaped by local political and economic processes (see also Wade 2000, 61–4, 177; Nieves Oviedo 2008). It is true that the region around Valledupar was important for the famous accordionists who originated there and are central to the *vallenato* family tree, including Chico Bolaños (1903–60), Pacho Rada (1907–2003), Emiliano Zuleta (1912–2005), Alejandro Durán (1919–89), Juan Pablo Valencia ('Juancho Polo,' 1917–78) and Leandro Díaz (b. 1928). But Bermúdez (2005) argues that *vallenato* is part of a pan-Caribbean musical tradition and Gilard argues that a mythology identifying the Valledupar as the cradle of *vallenato* emerged when local elites (including key song-writers in the *vallenato* corpus such as Rafael Escalona, Tobías Enrique Pumarejo, Freddy Molina and Gustavo Gutiérrez), who maintained friendships with local musicians of more plebeian origins, began to write songs for the accordion and also identify the music as a tradition particular to the locality. During this period of the 1930s and 1940s political and economic modernization was increasingly affecting the area, being pushed forward by President López Pumarejo, whose mother came from Valledupar. At the same time, the new radio stations and flowering record industry of the Caribbean coastal region, located in the port towns of Cartagena and Barranquilla, were providing a new stage for accordionists and guitarists playing verses and songs. The author Gabriel García Márquez, as early as 1948, was writing pieces in local newspapers lionizing *vallenato* and already defending its purity against commercialization (Wade 2000, 136). In the 1960s elites mounted political campaigns – which employed *vallenato* music for public relations purposes – for the region to be accorded the status of administrative department. Local elites had good connections in Bogotá and their petition was granted with the creation of the department of El Cesar. In 1968 an annual *vallenato* festival was established, which insisted on 'traditional' three-piece lineups (accordion, drum and scraper), and this festival has acted as the guardian of local traditions perceived as authentic.

Accordion music was seen as very plebeian for most of the twentieth century. *Vallenato*, often identified by subgenres (particularly *paseo*, *merengue* and *son*), began to gain popularity in the Caribbean coastal region, and to a lesser extent nationwide, in the 1940s and 1950s, but played on the guitar by, for example, Guillermo Buitrago (1920–49), who recorded extensively with the Cartagena-based firm Discos Fuentes. Early accordionists who recorded songs included Abel Antonio Villa and Luis E. Martínez. Unlike other genres of music from the Caribbean coastal region, such as *cumbia* and *porro*, that were taken up by jazz bands (ensembles similar in makeup to popular big-band orchestras all over the Americas), entered elite clubs and went on international tours, *vallenato* remained very regional and plebeian. Even in the Valledupar social club, accordions were banned as supposedly vulgar and too plebeian. As late as 1950 García Márquez, writing in a Barranquilla newspaper, had to explain to his readers that 'música Vallenata' came from the Valledupar region (Wade 2000, 177).

In the late 1950s and 1960s Los Corraleros de Majagual – basically a Discos Fuentes house band – made the innovation of combining the brass section of the established *cumbia* and *porro* orchestras with the accordion – in the hands of the talented and ambitious Alfredo Gutiérrez – to create a successful hybrid sound, branded as a new genre called the *paseaíto* and tailor-made for dancing, which gave the accordion greater publicity and a larger audience outside the Caribbean coastal region (Nieves Oveido 2008, 173–202).

Accordion *vallenato* music started to become successful nationwide in the 1970s, as record companies such as CBS, based in Bogotá, signed artists like singer Jorge Oñate (with Los Hermanos López), Los Hermanos Zuleta (brothers Emiliano and Poncho) and the singer Diomedes Díaz, whose popularity continued into the 2000s. In 1978 Medellín-based firm Codiscos signed El Binomio de Oro, which proved a huge success. The role of the Colombian drugs industry in the popularization of *vallenato* has been addressed, for example in Jeremy Marre's documentary *Shotguns and Accordions* (see also Marre and Charlton 1985), but is hard to assess. There is no doubt that the marijuana drug-traffickers of the 1970s who were based in the regions in and around Valledupar sponsored *vallenato* artists, and later, when the epicenter of the trade moved to Medellín, flew their favored groups to parties around the country. But it is difficult to measure the impact of this on a process of commercialization that was happening anyway, fueled partly by the migration of people from the Caribbean coastal region to the cities of the interior.

Vallenato in the late 1970s attracted audiences all over the country, although international appeal remained very limited. The genre had become increasingly romantic and the slower *paseo* subgenre dominated, with close couple-dancing. Lyrics tended to focus less on parochial events, people and places and *vallenato*'s traditional concern with love now became more abstract and generic, with a strong emphasis on lovesickness and pain. The band lineups became larger, including electric bass and keyboards, guitars, *timbales*, *conga* drum and backing singers. The genre became more standardized musically. The big artists often dressed in glitzy styles, with heavy use of sequins, and the music was widely considered, especially among the middle classes, to be 'music of maids and taxi-drivers,' schmaltzy and plastic. Many people, of both working and middle classes, would defend a more 'authentic' style of *vallenato*, as practiced by artists such as black accordionist Alejo Durán, who continued performing until his death in 1989. By the 1980s *vallenato* had become one of the best-selling genres in the Colombian national market and, in the 1990s, the big cities had radio stations that specialized in *vallenato*. There was some interest in the genre in Venezuela, among Hispanics in the United States and even in Japan, and in 1981 the Miami-based Cuban singer Roberto Torres fused *charanga* with old *vallenato* tunes.

In the 1990s a sea-change took place as *vallenato* of the 1950s and 1960s gained a new popularity and new adaptations of the style were marketed. In 1991 a TV drama about the life of legendary *vallenato* songwriter Rafael Escalona was a big success and led to the release of albums of cover versions of his music by the singer/actor from the Caribbean coastal region who had played the lead role, Carlos Vives (e.g., *Un canto a la vida*, 1991). Vives, previously a little-known singer of ballads, reinvented himself as a modernizing *vallenato* star, moved to the national record company Sonolux (owned by the major Colombian industrial and media conglomerate, Ardila Lulle) and released *Clásicos de la provincia* (1993), an album of old *vallenato* songs produced with elements of rock and reggae. This album smashed sales records, appealed to the middle-class youth (which before had generally avoided *vallenato*) and also sold well abroad (Fernández L'Hoeste 2007; Nieves Oviedo 2008: 214–27).

Vives pursued the rock-*vallenato* fusion recipe with further albums, won Grammy awards with *Déjame entrar* (Let Me In) (2001) and propelled *vallenato* as a name onto the international scene, stimulating other artists to do crossovers: Gloria Estefan's *Abriendo Puertas* (Opening Doors) (1995) includes salsa-*vallenato* fusions. In Monterrey, Mexico, *vallenato* has made an important impact and, from 1999, the city hosted its own accordion music festival, inviting Colombian stars; the Mexican *cumbia* artist, Celso Piña, included *vallenato* numbers in his CD, *Barrio bravo* (2001) (Blanco Arboleda n.d.; Fernández L'Hoeste 2005).

In the early 2000s *vallenato* is a genre that has consolidated its place in the Colombian popular musical scene, mainly in a form that retains strong continuities with the 1980s and 1990s. Innovations mostly involve fusions along the lines of Vives and, after him, Kaleth Morales, hailed, until his untimely death in 2005, as a key exponent of the so-called 'new wave' of *vallenato*, which retained the central roles accorded to the accordion, *guacharaca* and *caja* drum, but produced a more pop-rock sound that appealed to a wide cross-section of the Colombian youth audience.

Vals

The *vals* is an instrumental and vocal genre that developed in Latin America and that is descended from the European waltz. While the European waltz preserved a characteristic rhythm in three with an accent on the first beat, the Latin American *vals* incorporated a syncopated hemiola effect, which gave the music, as well as the dance, a more animated character.

The waltz arrived in the New World in the nineteenth century via France, Spain and England, and its arrival coincided with the beginning of the independence movements stirring throughout the continent. In 1750 a national dance emerged in the rural areas near Vienna, and especially in the taverns located near the Rhine river under the name *waltzen*, a term derived from the verb *walden* ('to roll') that was connected to the Latin word *volvere* meaning to return or to turn around in circles. The *waltzen* is believed to have evolved from, among other forms, Austro-Germanic peasant dances in 3/4 time called *landlers* that were danced during popular festivities in the Middle Ages.

In the nineteenth century a waltz craze emerged in Vienna and in the rest of Europe thanks to the musical revolution represented by the Strauss family and by Joseph Lanner. These musicians became the main figureheads of the new dance of the bourgeoisie and helped spread it to the popular classes. In France, the sung waltz was inspired by the instrumental waltz and became popular due to its literary and romantic nature. The French Revolution not only inspired political ideas for the establishment of a republic opposed to the monarchy, but also influenced many artistic manifestations including music, and in particular the waltz. In France, the waltz took on a romantic sense, demonstrated by the intimacy of couples and, more important, the addition of poetic lyrics to transform it into a sentimental song. The *mussette* and java waltzes, variants imbued with eroticism, appeared in popular sectors of society. When the waltz arrived in England in 1810 it was viewed by English high society as an indecorous form from 'corrupt' France.

The nineteenth century was the peak of Romanticism in Europe and America. Among the instruments that best expressed this artistic revolution was the piano, due to its versatility. In Madrid, Spain, as well as in Latin America, the piano is present in both concert halls and living rooms of the wealthy and popular families. In Boston, Massachusetts, the Boston waltz emerged as an elegant style that expanded through Latin America, inspiring composers of the nineteenth century in Cuba, Peru, Argentina and Uruguay (*vals boston*).

In each Latin American region where *vals* took hold, the genre developed its own flavor, repertoire, composers, performers and other characteristics. In many cases, the *vals* influenced the development of other local genres with other names. By way of example, this overview will first provide a detailed profile of the *vals* in Peru and Argentina, followed by a brief summary of the genre's manifestations in other South American countries (Ecuador, Chile, Colombia and Brazil) the Caribbean (Puerto Rico and Cuba) and finally in Mexico and Venezuela.

Vals Criollo (Peru)

The *vals criollo* dates from the turn of the twentieth century in Peru, where it is also known as *valse* or *vals*. While there have a been a number of popular waltz traditions in various parts of Peru, the term has come to refer generally to popular music practices associated with the city of Lima that occasionally also include repertoire from other regions, most notably the northern coast and the region of Arequipa to the south. Early incarnations of the *vals* were associated with Lima's working class, an ethnically diverse but culturally homogeneous community of blue-collar workers, artisans and artists that occupied that city's marginal neighborhoods.

In Peru, as elsewhere in Latin America, the *vals* is a local reinterpretation of the European waltz and other waltz-like rhythms that were imported from Europe during the nineteenth century. Popular belief sustains that the *vals* was derived directly from the Viennese waltz that become so popular in Europe during the twentieth century and later found its way to various parts of Latin America. There is certainly some evidence to suggest that a number of early *valses* were rhythmically influenced by the Viennese waltz. However, many other early compositions also bear strong similarities to other triple-meter genres such as the Spanish *jota*, the mazurka, a French version of the waltz known in Peru as the *javá*, and a variant that flourished in the United States during the first part of the twentieth century known as the Boston.

The early period of the *vals*, known as the *guardia vieja*, dates from the late nineteenth century to roughly the 1920s. During this time period the *vals* was predominantly performed in Lima's working-class neighborhoods and was generally looked down upon by the upper classes as an unrefined and crass form of popular entertainment. The main social context of the *vals* during that time was the *jarana*, an all-night, or sometimes multiple-night, neighborhood gathering organized to celebrate birthdays, anniversaries or other festive occasions. In these *jaranas*, local musicians took turns performing not only *valses* but also polkas, *marineras* and other popular genres of the time. At the time the *vals* was generally accompanied by one or two guitars (lutes and mandolins were also common in the early part of the twentieth century) that used a basic bass-strum-strum pattern known as the *tundete* to provide harmonic support for the singer. The themes of these *valses* were generally romantic in nature or related to current events.

By the 1920s the *vals* begins a transition out of the working-class neighborhoods. This parallels the emergence of a middle class in Lima that was partly populated by upwardly mobile individuals from these working-class environments. Some composers and performers begin to rework the *vals* in this new image, working hard to rid the genre of its bohemian reputation and transform it into a genre worthy of '*gente decente*' or so-called decent people. Composers including Felipe Pinglo (1899–1936) were credited with perfecting the *vals* to include lyrics of a more literary character as well as expanding its harmonic and melodic language by drawing from the familiarity that these composers also had with foreign musical genres including the *tango*, foxtrot, *bolero*, one-step and *canción ranchera*, all of which were increasingly popular in Lima after World War I. Pinglo's *vals* 'El Plebeyo' (The Plebeian) is often identified as the ideal type of the authentic and fully developed *vals criollo* because its poetic representation of working-class angst in the face of unbending adversity, for many, captures the essence of working-class life.

In the decades that followed, the *vals* was increasingly accepted by the middle class and even by members of the upper classes who had previously dismissed the genre as crass and lowbrow. *Centros musicales*, social organizations that sought to recreate the *jarana* environment of the turn of the twentieth century, became the training ground for a number of professional performers who went on to have successful careers first on live radio broadcasts and later as part of a growing local recording industry. The *vals* became a symbol of Limeño identity, conflating the jocular, celebratory and bohemian character associated with the working-class *jarana* of the turn of the twentieth century with the stoic narratives of loss and tragedy associated with the subsequent generation of composers. It also became synonymous with that of a broader *criollo* coastal culture that was redefined as being mainly rooted in Spanish cultural practices with some important, but nonetheless subordinate, cultural influences from other minority populations and mixed populations, in particular Afro-Peruvians.

By the 1950s Lima's demographic profile began to change as, due to a number of social and economic factors, large waves of mestizo and indigenous migrants came from the highland region of the country. This change was perceived as a threat by many *criollos* who felt that their city was becoming increasingly Andeanized and many *valses* began to reflect certain nostalgia for a Lima of yesteryear that they felt was beginning to fade away. Perhaps the best-known composer of this era was Chabuca Granda (1920–83) whose *valses* 'La flor de la canela' (The Cinnamon Flower) and 'Fina estampa' (Fine Appearance) painted a romantic and idealized image of old Lima and became anthems for what it meant to be *criollo*. There were other voices, however, such as Laureano Martínez Smart and later Luis Abanto Morales, whose *valses* spoke of the hardships of the new migrants in Lima. Composer Mario Cavagnaro also helped to promote an updated style of the *vals* by introducing contemporary slang and urban themes as a means of returning the genre to its working-class roots.

The success of the *vals* continued into the late 1970s thanks to a growing recording industry and cultural policies that required nightclub owners, radio and television stations to observe quotas in support of national music. *Valses* such as Augusto Polo Campos's 'Contigo, Peru' (With You, Peru) were even used as part of political campaigns calling for national unity among the various regions of the country. Yet, by the late-twentieth century Lima's cultural and ethnic makeup had changed and the *vals* no longer represented the experiences of the generations of migrants that came to be known as the new Limeños. In the early twenty-first century the *vals* is still actively performed by many Limeños in a variety of middle-class and working-class environments, even though its presence in the mass media and mainstream popular culture has decreased significantly. This, however, is not an indication of the waning of the genre but rather of its re-transition to a musical genre that once again is a marker of a particular local rather than regional or national identity. In fact, in recent years there has been a small but vital revival of the early-twentieth century neighborhood-based, working-class *vals* that has brought attention to previously unknown local composers and performers who were overshadowed by their professional and commercial counterparts, and to their grandchildren and great-grandchildren, many of whom continue to make a living as working musicians.

Vals Criollo **(Argentina)**

The presence of *vals* in Río de la Plata can be traced back to the beginning of the nineteenth century. However, it was not until the middle of the century that it became widespread as a ballroom dance. In Argentina, *vals* is the only genre that crosses two of the most important repertoires of popular music of the twentieth century: *tango* and folklore.

In a sketch showing the choreography of the *vals*, Carlos Vega identifies it as a European waltz from the early nineteenth century that is danced in pairs (Vega 1956, 65). He makes no mention of the presence of text (lyrics). The figure in which one foot slides to the side and front on the downbeat, while the other foot moves during the remaining beats of a 3/4 measure, was incorporated into three of the most important folk dances in Argentina: *cielito*, *pericón* and *media caña*.

In ballrooms the *vals* was danced like its European counterpart, with couples embracing and moving across the floor while turning at a fast pace. What is known as *vals* or *valsecito criollo* ('little creole waltz'), however, is a type of close couple dance in 6/4 time. Lauro Ayestarán describes *valsecito criollo* in Uruguay as 'a genre that has been turned into folk but that still needs to make the final step away from the civilized stage the way mazurka, *danza* or *habanera*, *chotis*, and polka did before …' (Ayestarán 1967, 78).

There are two main streams of *vals criollo*:

1. During the first half of the twentieth century many pieces were composed and published in simple scores for voice and piano. Many of these works were already part of the repertoire of the so-called 'orquestas típicas' ('typical orchestras') that performed *tangos* and waltzes, and of 'orquestras características' ('characteristic orchestras'), to which people danced *tangos*, *milongas*, *rancheras*, *pasodobles*, waltzes and a few *tarantelas* or foxtrots that were in fashion.

   Formally, this type of *vals criollo* has an A section that includes two verses, a B section with two verses of similar meter and occasionally a C section (labeled as a trio on the score) with a shorter stanza and contrasting musical material. Commonly, section A is in a minor key and either the B or C section is in the relative or parallel major. The form is closed by a return to A.

   Normally, melodies involve more than one octave and feature large leaps as well as instrumental idiomatic writing. Melodies often start with an upbeat of five eighth notes, and it is common to have a succession of several eight-note measures and to use melodic progressions as building blocks for musical ideas.

   The subject matter of *vals criollo* is often love and nostalgia for the loss of an idealized past: the old neighborhood, the absence of one's lover, the adored mother, etc. What Uruguayan author Idea Vilariño said about the *vals-canción* can be easily applied to the Argentine *vals criollo*:

   > They are always, or almost always, sentimental and delicate in their subject matter and use of language. They deal with treason, but in environments and circumstances that are neither undignified, bloody, nor miserable. It happens in gardens, parks, and dance salons. … She is never just a woman … but a bride … a beloved one. … The serenade is almost a theme. (Vilariño 1993, 11–13)

   Among the most notable performers in this group are the Gardel-Razzano duo, and composers such as Sebastián Piana, Cátulo Castillo, Enrique Maciel, Cristino Tapia, Tormo-Canales, Rosita Melo, Julián Gaio, Feliciano Brunelli, Anselmo Aieta, Enrique Cadícamo, among others.

2. The other stream of *valsecito criollo* is closer to the folk repertoire. In Argentina, the areas in which *vals criollo* is cultivated are: Mesopotamia (Entre Ríos, Corrientes, Misiones), where *vals* is performed mostly by accordion and/or bandoneon and guitars; Córdoba, in the center, where ensembles feature three to four singers that are accompanied on guitar; and in the west or Cuyo region (San Luis, San Juan and Mendoza), where ensembles commonly include several guitars and a *requinto* (a type of small guitar) to accompany the singer, which is the preferred formation for the performance of serenades.

   These *valsecitos criollos*, especially those from Córdoba, feature poetry with a varying number of stanzas which is set to music. These stanzas are shorter than those described in group (1). The formal structure of these works also varies – some have a refrain while others do not. Musically, they are generally divided into two similar sections, each with two or three different subsections that are repeated and alternated. The minor mode is more frequent in this type of *vals*, as are headless beginnings (i.e., without the first eighth). Rhythmically, hemiolas are prominent, as they are in most Argentine folk dances. The thematic content is similar to the first group with the addition of a few themes, such as the search for local flavor through characters or places in a city or town, as well as songs about the Virgin.

   The most notable composers of this type are: Rubén Darío Gamboa, Raúl Montachini, Ricardo Arrieta, Nicolás E. Soria, Buenaventura Luna, Hilario Cuadros, Andrés Chazarreta and Carlos Montbrun Ocampo. Among the soloists and ensembles of national renown are: Edmundo Cartos, Alberto Rodríguez, Hilario Cuadros, Buenaventura Luna, the Ocampo-Flores duo, Cristino Tapia, Antonio Tormo, Ariel Ramírez, Los Cantores del Alba, Los de Alberdi, Los del Suquía, Los 4 de Córdova, Los trovadores de Cuyo and Los Visconti.

During the first half of the twentieth century *valses* performed by the most popular 'typical' and 'characteristic' orchestras were featured in live performances and in radio stations such as LR 4 Splendid, LR 3 Belgrano, LR 1 El Mundo and LV 10 Radio Colón, of Buenos Aires. *Valses* were also published in simple scores for piano by Ricordi, Musical Korn-Intersong, Alfredo Perrotti, Peermusic Argentina, Crismar, etc.

After the success of the *Primer Festival Nacional de Folklore* (First Annual National Folk Music Festival) in 1961 in Cosquín, Córdoba, more festivals were created for the dissemination of folk music, such as Doma y Folklore in Jesús María, Festival de Peñas in Villa María, Festival de Folklore in Baradero, etc., most of them occurring during the summer months. These festivals showcase the most popular folk ensembles, some of which have remained active through the years and continue to perform with new members. During the 1960s and 1970s performances in *peñas* (popular local venues for folk music) were at their peak, triggering the highest gross sales of albums of this music by important labels like RCA Victor, Microfón, Music Hall, Columbia and Odeón.

Vals in Other South American Countries: Ecuador, Chile, Colombia, Brazil

In Ecuador the *vals criollo* of coastal origin gave rise to the *pasillo* – a type of *vals-canción* (sung waltz) that is slower and that has taken root in Ecuador and Colombia. Other *valses* in Ecuador and Peru are inspired by the Incaic *yaraví*. The coastal region contributed with the *amorfino* style. Among the most celebrated composers of *valses* in Ecuador, Marieta de Ventimilla, Virgilio Cornejo ('Guayaquil de mis amores' [My Beloved Guayaquil]) and Nicasio Safadi ('Virgen Pura' [Pure Virgin]) stand out. Within the European style notable composers are Carlos Amable, José Ignacio Ventimilla, Sixto María Durán and Carlos Solís. In the twentieth century the Ecuadorian singer Julio Jaramillo introduced the romantic styles through the *bolero*, *pasillo* and *vals*. The *pasillos* 'Mis flores negras' (My Black Flowers) by José Flores and Amable Ortiz, 'Sombras' (Shadows) and Rosario Sansores and Carlos Brito, and the *valses* 'Cuando llora mi guitarra' (When My Guitar Weeps) by Augusto Polo Campos, 'Ódiame' (Hate Me) by Rafael Otero, 'Fatalidad' (Fatality) by Laureano Martínez Smart and 'Alma M'ia' (My Soul) by Pedro Miguel Areco among many others were disseminated throughout Latin America thanks to Jaramillo's popularity.

In Chile, in the mid-nineteenth century the dances *maisito, resbalosa, palomita* and *minero* were danced in popular salons, while *vals* and *contradanza* conquered high-society salons. Eventually, these dances would also enter the popular repertoire. In rural areas the *vals* is blended with the *cueca* – the prototype of Chilean traditional dance. In the twentieth century composers Rosa García ('Dos valses de salon' [Two Salon Waltzes]) and Juan Orrego Salas ('Rústica' [Rustic]) were recognized as outstanding *valsistas*.

The *vals* was introduced in Colombia in the nineteenth century coming directly from Europe. Initially, the Colombian *vals* retained its Austrian bourgeois character, representing the social triumph of the bourgeoisie over the old feudal regime. Colonel John Hamilton notes in 1827 the presence of *vals* in Bogotá. This *vals* evolves through two figures: the *redondo*, of slow rhythm and European style, and the *capuchinada* with a faster tempo. It also greatly influenced the creation of the Colombian *pasillo*, which extended to Panama, Ecuador, Peru, Venezuela and Costa Rica where it is known as *pasillo guanasteco*. José Ignacio Perdomo confirms that the *capuchinada* turned dancers into 'true madmen, possessed by some sort of madness.' In 1897 the ensemble Lira Colombiana, directed by Pedro Morales Pino, aided the consolidation of various musical genres, especially the *pasillo*. Morales Pino was the author of the famous *valses* 'Alicia' and 'Mar y cielo' (Sea and Sky). In the twentieth century José Alejandro Morales disseminated his *valses* 'Al compás del amor' (To the Beat of Love), 'Amistad' (Friendship) and 'Pueblito Viejo' (Old Village).

In 1808 the Portuguese Royal Family introduced the *vals* to Brazil under the name *valsa*. Here, the dance acquired great fame both among the noble and the popular classes. In 1816 Sigismundo Neukomn, renowned Austrian composer and promoter of large galas in Vienna, traveled to Brazil to become a professor of music theory and composition. Among his students were Pedro I, future emperor of Brazil, and his wife Leopoldina. During Pedro I's reign (1822–31) Neukomn composed *valsas* that became popular across all social classes. Among the most renowned composers of *valsas* are Salvador Fábrega, Francisco Libario, Colá Joao Batista, Antonio Dos Santos Bocot, the academic Carlos Gomes, Ernesto Nazaret, Chiquinha Gonzaga and Anacleto Medeiros in the nineteenth century, and Milton Nascimientos, Caetano Veloso, Vinicios de Moraes ('Valsinha'), Antonio Carlos Jobim ('Eu te amo' [I Love You], written with Chico Buarque), Edu Lobo ('Valsa brasilera' [Brazilian Waltz]), Chico Buarque ('Valsa dos clowns' [Waltz of Two Clowns]) and Professor Heitor Villalobos.

Vals in the Caribbean: Puerto Rico and Cuba

In Puerto Rico, beginning in 1850, *vals* preserved the Viennese style. Composers of this style include Juan Morell Campos and Manuel Tavares, who, by the end of the nineteenth century and early twentieth century, made of the dance an elegant salon affair. Tito Henríquez, composer of *valses* and other genres, is considered to be one of the most inspired musicians of Puerto Rican origin of the twentieth century. He shares this title with *cuatro* player and *vals* master Colón Zayas.

In nineteenth-century Cuba, the Spanish Vicente Díaz de Comas published his Album Regio, which included a few *valses* that soon conquered salons throughout Havana. Among Cuban composers of *valses* the most prominent are Eduardo Sánchez de Fuentes, composer of the *valses boston* 'Horas tristes' (Sad Hours) and 'Todo esperanza' (All Hope), and Rogelio Barba, author of 'Inspirae' and 'Bouquet de orquídeas' (Orchid Bouquet). Ernesto Lecuona, one of the most revered Cuban composers and pianists of the twentieth century, wrote *valses* such as 'Vals de ensueño' (Dreamy Waltz), 'Vals del Yumuri' (Yumuri's Waltz), 'Vals del Ebro' (Ebro's Waltz), 'Vals de las flores' (Flower Waltz), the *vals-jota* 'Aragón and 'Damisela encantadora' (Charming Damsel) a *vals* that was widely disseminated through the whole of Latin America.

Vals in Mexico and Venezuela

Starting in the 1830s Mexico and Venezuela developed a type of concert *vals* for piano that was influenced by the syncopated rhythms of African popular music and of the Spanish *fandango*. The piano *vals* variant was and is known as *vals de salon* (salon *vals*) to differentiate it from the popular peasant *vals*, which was played with string instruments such as the *mandolina*, *cuatro* and guitar. The most noted Mexican composers of *vals de salon* are: Juventino Rosas, who wrote 'Sobre las olas' (Over the Waves) in the Viennese style; Felipe Villanueva, composer of 'Vals poético' (Poetic Waltz); Ricardo Castro and his 'Vals capricho' (Capricious Waltz); and Rodolfo Campodónico, the author of the waltz 'Cruz verde' (Green Cross) whose melody secretly identified the Zapatista army during the Mexican Revolution of 1910. The *vals mexicano* (Mexican waltz) influenced the creation of *rancheras* such as 'La Valentina,' a well-known *vals* during these revolutionary times. In the twentieth century Carlos Chávez, composer of 'Elegía' (Elegy) and Agustín Lara, author of many romantic songs such as the *vals* 'María bonita' (Beautiful María) that was dedicated to his beloved and movie starlet María Félix, rose to prominence.

In Venezuela, starting in 1850 the *vals* developed into a style with progressive syncopations that had a genuine *criollo* character, incorporating African-derived rhythmic percussion with European-style melodies. Other forms of the *vals* coexisted which had European as well as Latin American influences. The classic Viennese waltz was represented in the works of Pedro Elías Gutiérrez ('Geranio' [Geranium]); Laudelino Mejías ('Conticinio'), Francisco Paula de Aguirre ('Dama Antañona' [Lady from Old]) and Vicente Cedeño ('Castro en Margarita').

In the nineteenth century *vals* masters Felipe Larrazábal, Federico Villena, Rafael Isaza, Rogerio

Carballo, Ramón de la Plaza, Ramón Delgado Palacios and Heraclio Fernández contributed to the entrenchment of the piano *vals* in Venezuela. Pianist Teresa Carreño contributed with a more intimate, French-inspired *vals* that emphasizes the second beat, as in her work 'La corbeille des fleurs' (The Basket of Flowers). Other composers in this style were Manuel Guadalajara, Manuel Azpúrua ('El suspiro' [The Sigh]), Rafael Isaza ('El peregrino' [The Pilgrim]), Rogerio Carballo ('El favorito' [The Favorite]) and Meserón Aranda ('Las delicias del Edén' [Eden's Delights]). Federico Vollmer demonstrated his impeccable style in composition during the mid-1800s with *valses* such as 'Anita,' 'Isabel,' 'El reloj de la Catedral' (The Cathedral's Clock) and 'Jarro Mocho.'

In the twentieth century, within the French-inspired style were the *valses* 'Sombra en los médanos' (Shadow in the Dunes) by Rafael Sánchez López and 'Adiós Ocumare' (Farewell Ocumare) by Ángles M. Landaeta. Augusto Brandt's 'Besos en mis sueños' launched the *vals-canción*, which set itself apart from the syncopated language of the nineteenth-century *vals*. In 1930 Vicente Emilio Rojo founded the Escuela Nacionalista (Nationalist School), which counted among its notable students Antonio Estévez, Inocente Carreño, Razhés Hernández López, Gonzalo and Evencio Castellanos, and Antonio Lauro, a renowned guitarist and creator of the popular *vals* 'Natalia.'

In the 1930s Lionel Belasco introduced jazz variants into the *vals* creating a rich style; some of his works include 'Luna de Maracaibo' (Maracaibo Moon), 'Juliana' and 'San José.' The *vals-canción* was represented by Eduardo Serrano with his poetic *vals* 'Camurí'; Antonio Carrillo, composer of 'Como llora una estrella' (How a Star Weeps); José Ángel López with 'Juramento'; and Luis Alfonso Larraín with 'Amándonos.' Aldemaro Romero, the principal figure of the Onda nueva genre, wrote two great *valses*: 'Quinta Arauco' and 'De Conde a Principal.' José Enrique Serabia's 'Ansiedad' (Anxiety) gained international popularity, and Luis Laguna's 'Serenata' (Serenade) incorporated new harmonies influenced by *bossa nova*, which gave it a character of harmonic progressions where harmony prevails over melody. This type of *vals* is more appropriate for listening to than for dancing, evoking the nostalgia of the composer as well as the listener.

Vaneira

The *vaneira* is a popular musical genre found mainly in three states in the south of Brazil: Rio Grande do Sul, Santa Catarina and Paraná. It is one of the most significant of the genres that make up *música gaúcha*/*gauchesca*, which in its turn is best understood as a super-genre comprising and articulating different individual genres, including *bugio*, *rancheira* and *chamarra* (Hoffmann 2007). At the end of the nineteenth century, European dances such as the mazurka, waltz, polka and schottische, and the Cuban *habanera* were included in the repertoire of dances executed in the Brazilian *salões* (salons) and also in Rio Grande do Sul, where they replaced the old dances of *fandango* – a suite of dances executed during a rural party – that had been brought over by Portuguese settlers who came from the Azores in the eighteenth century (Lucas 1990).

Lucas (1990) describes the *vaneira* as a song genre in duple meter and in the major mode with the same melodic and rhythmic contour as the bass accompaniment in Cuban *habanera*. Tasso Bangel (1989) also emphasizes the movement of the bass as the *vaneira*’s most evident rhythmic characteristic. In this author’s opinion, such movement is characterized by the continuous demarcation of dotted eighth note/sixteenth note/two eighth notes, with a strong accent on the last eighth note of the duple meter. According to this definition, the *vaneira* is what Sandroni (2001) called a ‘tresillo paradigm’: three eighth notes, the first two of which are dotted (with some variations). This paradigm presided over Latin American popular music during the nineteenth century and the beginning of the twentieth century, and during the same period can also be found in several different musical genres such as the *maxixe*, the *lundu* and the *habanera* among others. The *habanera* was embraced in Brazil in 1870 (Sandroni 2005) and seems to be the predecessor of the *vaneira*. Lucas (1990) also associates the *vaneira* with the music of Havana.

In spite of its common occurrence in other states, the *vaneira* is known by most musicians as a genre originally from Rio Grande do Sul (a state in the extreme south of Brazil, bordering Argentina and Uruguay). Variations in name, such as *vaneirinha* and *vaneirão*, may occur, the main difference between these being the rhythm, which is slow in *vaneirinha* and fast in *vaneirão*. The *vaneira* is in a medium tempo.

In the early twenty-first century *vaneira* was often played in *salões*, *bailes* or parties (both in the big cities and in the countryside, far away from the metropolitan areas) and CTGs (Centros de Tradição Gaúcha), where people went for dancing more than for listening. Like other ballroom dances, *vaneira* is a linked couple dance.

The characteristic instrument of the *vaneira* is the accordion (also called *cordeona* or *gaita*). The other instruments are guitar, bass and drum set, or guitar and percussion. The first combination is mainly associated with groups who play in clubs, while the second is mainly found in the *festivais de música nativista* (regional music festivals).

KAIO DOMINGUES HOFFMANN AND FERNANDA MARCON

Vanguarda Paulista

'Vanguarda Paulista' was not a musical movement in itself, as its name might suggest, but rather the name coined by the press in the Brazilian city of São Paulo in the 1980s to refer to a generation of musicians whose music addressed itself to the city in a variety of ways. Among these musicians were Arrigo Barnabé, Itamar Assumpção, the groups Rumo, Premeditando o Breque (Premê) and Língua de Trapo, as well as names associated with these, such as the singers Eliete Negreiros, Vânia Bastos, Tetê Espíndola, Passoca, Hermelino Neder and Virgínia Rosa.

The diversity of ways in which these and other musicians of the time approached the depiction of Sao Paulo reflects the city's ambiguous position as a center known both for innovation (e.g., some of the names of well-known MPB composers and performers are inextricably associated with the city of São Paulo, such as Rita Lee, Tom Zé, Walter Franco, the rock groups Os Mutantes, Joelho de Porco, Titãs, etc.) and as a reference point for a more conventional kind of popular urban *samba* such as that developed with a particular local accent through the 1940s and 1950s.

Seen in this light, the songs of the Vanguarda Paulista can be seen as an attempt to resolve São Paulo's sense of internal conflict. The city is depicted in a variety of ways. It can appear in reinterpretations of old songs associated with the city, such as, for example, Paulo Vanzolini's *samba-canção* 'Ronda' (Round), Adoniran Barbosa's famous *samba* 'Vide verso meu endereço' (See Overleaf for My Address) and Geraldo Filme's *samba* 'Vá cuidar da sua vida' (Go Take Care of Your Life). The city can be suggested by the identity of the musicians associated with it, such as Tom Zé and Rita Lee. It can also be evoked through associations of the songs themselves with the city. There are songs composed by members of the Vanguarda Paulista that refer openly to the city, such as 'Ladeira da memória' (Memory's Slope (Rumo), 'São Paulo, São Paulo' (Premê), 'Sampa midnight' (Itamar Assumpção) and 'Na Mourato' (Lingua de Trapo), and others that speak to the city, including 'Clara Crocodilo' (Arrigo Barnabé), 'Nego Dito' (Itamar Assumpção) and 'Orgasmo total' (Arrigo Barnabé); both approaches constitute a São Paulo perspective on making music.

JOSÉ ADRIANO FENERICK (TRANSLATED BY MONA-LYNN COURTEAU)

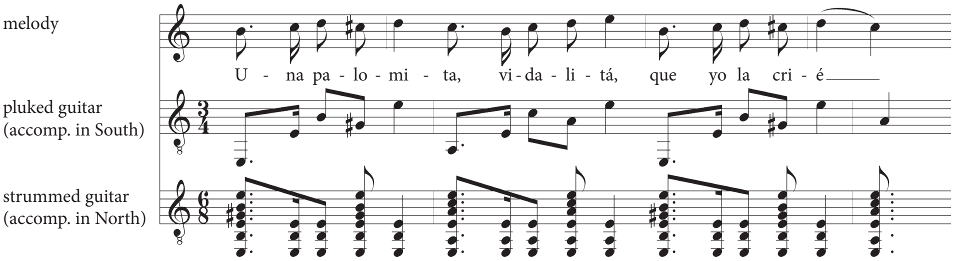
Vidala, Vidalita

The names *vidala*, *vidalita, coplas, yaraví*, *baguala* and several others make up a complex of song types originating from the North-Andean regions of Argentina. The nomenclature of the song complex in the rural tradition is by no means clear – in spite of the efforts of musicologists such as Carlos Vega and Isabel Aretz – but each of these types, including *vidala* and *vidalita*, was given a more or less distinct profile by the twentieth-century mass-mediated *folclore* movement.

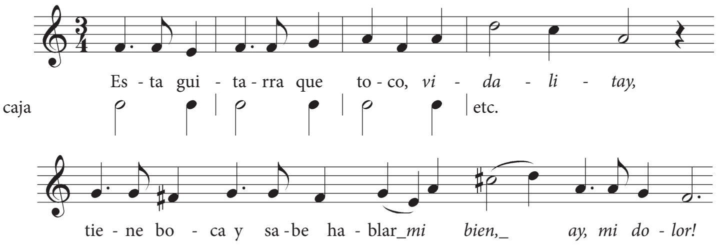
The rural *criollo* song called *vidala* or *vidalita* evidently had a long history, as Vega in his study of the genre mentions *vidalita* poems emphasizing popular events that occurred in the first half of the nineteenth century during the struggles between Unitarians and Federalists, thus inferring that the genre already existed during the ‘late colonial times with its diverse melodies and variations’ (1965, 226; translated by the editors). Within the body of rural song as Vega found it in the middle decades of the twentieth century, several variants of *vidalas* or *vidalitas* – as they are called indistinguishably by their practitioners in the various regions – can be found. The first variant is sung in two parts by women or mixed groups, accompanied by a small drum with two drumheads, called ‘*caja*’ or ‘*tambor*.’ For its melodic configuration, this variant uses scales of three, four, five or six steps as well as other ancient modalities. The movement is slow or moderate in binary meter. The texts consist of octosyllabic quatrains, with assonant or consonant rhymes linking the second and fourth lines, alternating or combined with short refrains in four- or five-syllable lines. The second variant is unison song by mixed groups with the *caja* as accompaniment. It has the same tonal qualities as the first variant, moderate movement and binary meter. Its poetic texts also combine hexasyllabic or octosyllabic lines with short refrains. Variants one and two are often incorporated into mass-mediated *folclore* as variants of *baguala*.

The third variant is designated *vidalita* of the ‘Pujllay’ (a *Carnaval* symbol), *vidalita chayera* or simply *chaya* (the latter being the most common label in the *folclore* movement), because it is played during the carnival period. It is sung in unison by a group accompanied by the *caja* and sometimes the guitar. It prefers the major key, fast movement and binary or ternary meter. The quatrains of hexasyllabic or octosyllabic lines are combined, as in the other variants already described, with short refrains.

A fourth variant, which Vega called ‘vidalita amorosa’ (vidalita of love), due to the thematic content of its lyrics, was disseminated by the ‘payadores’ (*gaúcho*-style minstrels) and the *folclore* movement in its early years and was popular in the ‘costumbrista’ theater (theater focusing on typical or picturesque local customs) and the circus in the mid-nineteenth century. It is sung by a single voice or a duo singing in parallel thirds and with guitar accompaniment. Composed in the minor key, it includes stanzas in hexameter lines with rhymes linking the second and fourth, and the refrain ‘vidalitá’ after the first and third. This form was made popular in Buenos Aires and the *pampas* in the 1890s through various arrangements (Example 1).



Example 1: *Vidalita*, with two accompaniment schemes from different regions



Es - ta gui - ta - rra que to - co, *vi - da - li - tay,*
caja
etc.
tie - ne bo - ca y sa - be ha - blar *mi bien, ay, mi do - lor!*

Example 2: Anonymous *vidala*

As standardized by urban writers, composers and performers of the twentieth and twenty-first centuries the *vidala* is a slow, meditative song in quatrains usually of octosyllabic lines, of which the second and fourth are linked by assonant rhyme; short refrains sometimes containing the word '*vidalita*' are interspersed within each stanza. The central conceit is that of *penas* (troubles), conceived more as a condition of existence than as pain stemming from concrete sources. The setting is often the loneliness of a solitary stroller, conducive to reflections on existence, the self, death, the inscrutability of feelings and an ever-present sorrow (Example 2).

The *vidala* is in 3/4 time, often with the first note dotted. Most phrases begin on the downbeat, even though this often leads to mis-accentuation of the words. The basic accompaniment (sometimes reduced to beating the *caja*) is an alternation of long and short notes; the pattern communicates its heavy thumping to the overall performance, which is usually sung and played with a noticeable *marcato*. Example 2 shows the beginning of a traditional *vidala*.

Singing by soloists or duos in thirds with a simple accompaniment is standard; however, the slow beat has induced several groups to support the melody with a display of full choral sonority and harmonic modulation (e.g., 'Subo' [I climb],' performed by Los Huanca Hua). Two repeatedly recorded pieces are 'Vidala del nombrador' (Vidala of the Namer) (Falú and Dávalos, recorded for example by Jairo) and 'Vidala para mi sombra' (Vidala For My Shadow) (Julio Espinosa, recorded, for example, by Los Fronterizos). The status of this genre as an unambiguous sign connotating sadness and depth of feeling has promoted the incorporation of *vidala* passages within other *folclore* types; in this capacity it was employed by Ariel Ramírez for the 'Kyrie' of his *Misa Criolla* (1965).

Vodou Music

Vodou music refers to a body of sacred dance music that developed its present character in Haiti in the years leading up to and following Haitian independence (1804). Contemporary Haitians perform it for ceremonies in Haiti and throughout the Haitian diaspora, primarily in other states of the Caribbean, in North America and in Europe. One may find *Vodou* music also on recordings and in the performances of music and dance troupes that specialize in the genre in theaters and educational institutions. Since the 1940s jazz and commercial bands, often motivated by nationalist agendas, have spiced their repertories with elements of Vodou music.

Vodou music displays a panorama of styles that both practitioners and scholars trace to Africa. Christopher Columbus claimed 'Hispaniola' for the Spanish crown in 1492, and by 1517 Charles V had legitimated in the West Indies the importation of African slaves to replace the rapidly declining indigenous (Taino) work force. France acquired the western third of Hispaniola circa 1697 and transformed it into the 'pearl of the Antilles' through successful investment in sugar and slaves. When revolution came to France in 1789, the Saint Domingue colony counted approximately half a million blacks and 30,000 each of whites and people of mixed blood (Fick 1990, 278n14). The Africans, primarily from the Guinea and Congo coasts, represented ethnic groups who spoke dozens of languages and practiced diverse music and dance styles. Martinican writer and politician Moreau de Saint-Méry (1958) documented several of the dances, including the popular 'Vaudoux' and the seditious 'Danse à Dom Pèdre' (the future Petwo rite, see below).

Historical Outline

Following independence and the creation of the state of Haiti, former slaves and people of mixed blood contended for power. The latter, often wealthy and educated, seized control of the central government in Port-au-Prince. The new elites identified with France and Roman Catholicism, despite a schism with the Vatican over the anticlerical stance of the first administration. The former slaves, now peasants and urban laborers, grafted Catholic elements learned during slavery onto their emergent Afro-Haitian religious practice. When the government signed a Concordance with the Vatican in 1860, clerics from Brittany established missions throughout Haiti and launched the first of many 'anti-superstition' campaigns. These efforts resulted in the translation of new Catholic elements, including chants, into neo-African practice, but they failed to conquer it (Desmangles 1992, 42–7).

Missionary work missed its goals because the schism had permitted the peasants to serve their ancestral spirits freely, albeit in a new configuration. A novel by Ignace Nau from 1837 recreates a sacred 'danse' ('dance') (2000, 63–7). Occupying discrete areas of the ritual space, 'les diverses sectes' ('diverse sects') perform their own unique music styles on unique instruments. Dédée Magritt, a nineteenth-century priest whose circle included participants in the subversive Bwa Kayiman ceremony of 1791, conveyed their testimony, underscoring the distinction between 'les cérémonies vodouesques' ('the vodou ceremonies') and the sacrifice of a swine at Bwa Kayiman (Julien 1991, 58). Generations of *Vodou* practitioners have understood the Bwa Kayiman ceremony as seminal Petwo rites. As the memory of specific African origins faded with successive generations of Haitians, the amalgamated faith recalled spiritual 'nations' subsumed within two branches: Rada (Guinea) and Petwo (Congo).

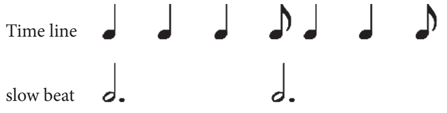
Invasion and occupation of Haiti by the United States from 1915 to 1934 stimulated dramatic cultural developments. Racial hostilities toward elites and the masses and the militant suppression of peasant resistance engendered a nationalist movement with a cultural wing variously called *indigènisme*, *noirisme* and *négritude* (similar to 'roots' and 'black consciousness' today). Jean Price-Mars, the movement's leading intellectual, applied the English 'folklore' to Haiti's oral traditions (1973, 49) and encouraged composers to blend its elements into classical and dance band music (Averill 1997; Largey 2006). During the 1940s the state established a Bureau of Ethnology for research and a National Theater for representation of folklore. Sacred Afro-Haitian music and dance constituted the greatest part of the folklore repertory (Honorat 1955; Yarborough 1959).

Stylistic Features

Vodou music in its sacred context serves the spiritual nations that brought the 'diverse sects' together in Haiti by representing them in sonic, visual and kinetic symbols and by attracting the forces within those nations to speak with a congregation through the medium of possession. Although regionalism characterizes Afro-Haitian music (Yih 1995), Port-au-Prince provides a useful version for study because the capital has attracted migrants from throughout the country and their combined practices compose a cohesive *regleman* (ritual ordering). A 'dance' (the most common name for a ceremony) begins with the balanced and formal Rada nations (Guinea coast, especially Benin), continues through the militant Nago (related to the Yoruba of Nigeria) and the hot and magical Petwo (from the Congo) and culminates in the chthonic and decadent but regenerative Gede nation (ancient Dahomey).

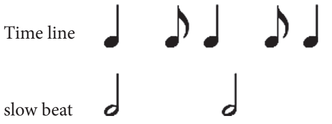
Music styles vary from nation to nation, but they share common features that contribute to their collective identification as a genre. Port-au-Prince instrument ensembles consist of a trio of single-headed drums of conical bore (*maman*, *segon* and boula, respectively, master, second and third drums), a clapperless iron bell struck from the outside (*ogan*) and a low-pitched frame drum (*bas* or *tanbourin*). The master drummer works with the priest or song leader, who signals ritual action and transitions with a rattle. Rada and Nago styles feature hardwood drums with cowskin heads anchored with pegs; the use of sticks for all three drums; and the *ason*, a bead-covered gourd rattle. Petwo and Gede styles use softwood drums with goatskin heads anchored with lacing; hand drumming for *maman* and *segon*; and the *tchatcha*, a seed-filled rattle. Pointing to an area that begs research, Master Drummer Frisner Augustin has called the drum a 'piano' in recognition of its broad tonal palette (personal communication). An ensemble pattern, full of motivic conversation among the instruments, coordinates with the society's call-and-response singing. *Vodou* songs, mostly anhemitonic-pentatonic or hexatonic within a narrow range, use phrases whose brevity and repetition patterns synchronize well with ritual action. The female voice tends to dominate all styles of *Vodou* song, as most initiates and many priests are women.

Vodou music styles, numbering more than a dozen without counting varieties, mark their distinctions primarily through rhythmic patterns that fit the contours of dance movement. The ideas of J. H. Kwabena Nketia (1974) about interpreting African music serve the analysis of *Vodou* rhythm well. Ensemble rhythms rest on a 'timeline,' or repeating ostinato that organizes the other rhythmic parts, typically expressed in the *ogan*. Most timelines encompass two slow beats that subdivide by two or three into medium and then fast beats. Drum and percussion strokes fall on all three levels of beat. Because subdivision is by two or three, hemiola (two against three) permeates the patterns and generates the offbeat feeling common to outsiders' perceptions of much music of western Africa. Not surprisingly, the two principal timelines in *Vodou* music distinguish the Rada and Petwo spiritual branches. The Rada timeline, ubiquitous in West Africa, spans two slow beats that fall into 12 at the level of the fast beat. In Example 1 a dotted half note equals one slow beat, and an eighth note one fast.



Example 1: The Rada timeline

The Petwo timeline in Example 2 likewise spans two slow beats but only eight fast, so a half note equals one slow beat. Note the absence of a stroke on the second slow beat. Five-stroke variations of this pattern (*quintolet* in French and *cinquillo* in Spanish) abound in the Caribbean.



Example 2: The Petwo timeline

While the *ogan* and third drum bracket *Vodou* styles, lead and second drums differentiate them, and they carry on a complex motivic interchange. A pattern called *kase* (break) distinguishes *Vodou* music most radically from other African and Afro-Caribbean musics. Using techniques of contrast (in phrasing, timbre, accent, etc.), the *kase* signals a dance movement designed to induce spirit possession.

The spirit of *Vodou* music, having attracted the interest of Haitian intellectuals and foreigners, has enlivened the scores of theater and dance companies formed since the Black Consciousness movement of the mid-twentieth century. The Haitian State created La Troupe Folklorique Nationale (The National Folkloric Troupe) in 1949 to represent Haiti in its national theater. The company became the model for other troupes, which continue to perform both in Haiti and the Haitian diaspora (Wilcken 1991). Most companies develop choreographed pieces based on traditional dances, order the music around floor patterns and use the *kase* as a structural device, but La Troupe Makandal in New York has challenged the distinction between sacred and secular in its simulated *Vodou* rites (Wilcken 2002). Beyond the theater, troupes provide such educational services as lecture-demonstrations, workshops and school residencies, and they play a lively role in the negotiation of cultural identity within immigrant communities.

Vocal and instrumental ensembles integrate elements of *Vodou* music in varying manners and to varying degrees. A series of studio recordings by Wawa (Jacques Fortère) rendered a broad selection of songs and drumming with minimal modification, and the popular Azor (Lénord Fortuné) has followed in this vein. Other groups, such as Sanba Yo and Sakad, seek fusion and hybridity. Starting in the late 1970s with the experiments of the '*sanba*' (a name adopted from oral tradition for composers and song leaders), middle-class musicians such as Lolo Beaubrun of Boukman Eksperyans and Richard Morse of RAM drew inspiration from foreign mass-mediated genres, particularly Jamaican reggae with its Rastafarian spirituality. (For a full discussion, see Averill 1997, especially chapters 4 and 5.) As the movement turned toward *Vodou* spirituality and matured into the commercially successful *mizik rasin,* or *racin* (roots music), through the 1980s and 1990s, chiefly under the flagship of the internationally hailed Boukman Eksperyans, it espoused the kinetics, the melodies and the rhythmic foundation of the springtime festival *Rara* to establish a traditional Afro-Haitian sound and look. *Rara* music uses the timeline of figure 2. Elizabeth McAlister (2002) convincingly highlights the spirituality of Haitian *Rara* and presents certain of its activities as Vodou practice.

The attention that *Vodou* music has garnered in recent decades is arguably a measure of its status as a genre. Using the word *Vodou* to name the Afro-Haitian religion is likewise recent among a people who, for generations, simply said, 'I serve the spirits,' or 'I beat the drum for the spirits,' or 'I sing for the spirits.' Factors contributing toward the recognition of this social space, its spiritual practice as religion and its music as a genre include black consciousness movements, the production of recordings, many of which circulate in bootleg form and, not least, the steadfast struggle of the Haitian people for freedom.

Vodou-Jazz

Vodou-jazz developed in Haiti in the 1940s, when local dance bands blended elements borrowed from big band jazz with traditional rhythms and melodies borrowed from the music of the Haitian *Vodou* religion. It played a significant role in the Haitian *noiriste* movement of the early to middle twentieth century, which promoted pride in the African-based traditions of Haiti.

At the beginning of the twentieth century well-off Haitians attended balls where European and local dances such as the *contredanse*, waltz, polka and *mereng* were played; instrumentation was either a solo piano or a French-influenced ensemble called *òkès bastreng*, similar to orchestras such as the Cuban *charanga* or the New Orleans Creole string band, comprising violin, cello and string bass augmented by clarinet or trombone.

The United States Marines invaded and occupied Haiti from 1915 to 1934, bringing North American popular culture with them. Novel, cosmopolitan music and dances such as the Charleston also arrived from Paris, where elite Haitians often traveled; Haitian jazz forays therefore developed in both Port-au-Prince and Paris. Haitian dance bands adopted tinges of jazz from African-American dance music, combining influences from artists such as James Reese Europe with elements borrowed from the vibrant Haitian military band tradition and local dance music such as *mereng*. Afro-Cuban dance music also exerted a significant influence. The term *djaz* came to signify any large dance band, and groups performed at cafés and bordellos, making a mark on the social life of the bourgeoisie (Averill 1997, 35–41).

A nationalist '*indigène*' ('indigenous') movement celebrating local, African-derived rural culture developed in opposition to the US occupation. Haitian medical doctor and folklorist Jean Price Mars, author of the inspiring book celebrating Haitian folklore *Ainsi parla l'oncle* (*So Spoke Uncle*) (1928), played a major role in this trend. Informed by a sense of Afro-diasporic pride influenced by Marcus Garvey and the Harlem Renaissance, local intellectuals noted commonalities between black North American music and Haitian culture. The embrace of local peasant culture and of African roots was new for the Haitian elites, who, despite their mixed African and European ancestry, were traditionally identified with their French rather than their African heritage. Moreover, despite its celebration of blackness, the *indigènisme* movement embraced a romanticized concept of the local peasantry rather than African-based Haitian culture as actually practiced in the countryside (Averill 1997, 41–5).

Indigènisme maintained momentum after the departure of the US Marines in 1934 and developed into *noirisme,* which, with support from the growing black middle class, emphasized pan-Africanism and an essentialist notion of black power. Influenced by *noirisme* and Price-Mars's call for the embrace of local arts, dance bands combined traditional *Vodou* rhythms and melodies with *mereng*, jazz and Afro-Cuban elements to create what came to be called *Vodou-jazz*. The new style was characterized by an accompanying timeline basic to *Vodou* drumming called *kata*, played on the Afro-Cuban *timbales* drums, which punctuated the typical jazz and Latin dance band instrumentation of trumpets, saxophones, piano and bass. In addition, bands used either a *tanbou* hand drum borrowed from traditional Haitian music or a Cuban *conga* drum. Usually, only one *tanbou* was used, but sometimes bands incorporated three, as is customary in *Vodou* rituals. While melodies were borrowed from traditional Haitian sources, just as often, bands incorporated jazz and Cuban elements (Averill 1997, 51–8; 1989, 217).

Founded in 1943, the best-known such group, Jazz des Jeunes, distinguished themselves through their espousal of *noirisme* in both song lyrics and musical style. Their song 'Anciens jeunes' (Ancient Youth), for example, celebrates the plethora of *Vodou* rhythms emanating from the various African ethnic groups forming the ancient backbone of traditional Haitian culture proclaiming that 'Petwo, ibo, kongo, djouba/ Are rhythms of our ancestors' (Super Jazz de Jeunes, *Saturday Night,* quoted in Averill 1997, 60). Jazz des Jeunes was honored at the 1949 Port-au-Prince bicentennial, and a few years later, sent by the government to represent Haiti in the United States and Canada. During this period, Orchestre Saïeh rose as Jazz des Jeunes's major competitor. More middle-class, and according to some, less authentic than Jazz des Jeunes, Orchestre Saïeh was noted for its sophisticated jazz arrangements, some of which were penned by Bobby Hicks, an American residing in Puerto Rico. In its quest for jazz authenticity, the band went so far as to bring jazz pianist Billy Taylor and saxophonist Budd Johnson to Haiti to provide musical instruction. With the rise of *noiriste* governments, the post-World War II period saw significant state support for *Vodou-jazz*, and the middle 1940s to the 1950s was called the *bèl epòk* due to its fertile nightlife scene (Averill 1997, 55–70).

In spite of changing tides in popular music, *Vodou-jazz* remained at the heart of Haitian tradition; as late as 1988 a Haitian journalist opined that 'when on speaks of Jazz des Jeunes, it is the Haitian soul that ones causes to vibrate' ([*sic.*] quoted and translated in Averill 1989, 219). As Gage Averill demonstrates, it is ironic that, while jazz came to Haiti with the neocolonialist US occupation, it dovetailed with nationalism and *noirisme* and thereby played a significant role in focusing the attention of the Haitian elites on local African-derived culture.

PAUL AUSTERLITZ

Volcanto

Volcanto is a term invented in the early 1980s in Nicaragua to name politically and socially conscious music created on the Central American isthmus. The name comes from conflating the words *volcán* (volcano) and *canto* (song), inspired by the geographical commonality of large volcanoes from Guatemala south to Costa Rica. The new generation of singer-songwriters hoped that *volcanto* would identify regional Central American political music in a similar way to what had been achieved with *nueva trova* for Cuba and *nueva canción* for Chile. In fact, the term never caught on regionally and came to denote political music produced in Nicaragua during and after the 1979–90 Sandinista revolutionary period. Despite some confused attempts in the early 1980s, eventually *volcanto* was rarely used to include the best-known Nicaraguan musicians of the 1980s, Carlos Mejía Godoy and to a lesser extent his brother Luis Enrique Mejía Godoy, as they had established their careers before the term was invented.

Nicaraguan *volcanto* musicians were located almost entirely within the majority Spanish-speaking population of mestizos (mixed Spanish and Amerindian race and culture) that inhabit the western two-thirds of the country. The newly popular English-Creole *palo de mayo* dance music of the African-Nicaraguan Creoles on the eastern Caribbean coastal region was politically significant (see Scruggs 1999) but the lyrics consistently came from a folk, traditional repertoire. A few songs with politically significant lyrics eventually were composed in a reggae style by Philip Montalván.

The flourishing of the various styles of music encompassed by the umbrella term *volcanto* is due to the exceptional position of Nicaragua from July 1979 to February 1990. This era remains a milestone in Central American history, the only time cultural workers committed to empowering the popular classes in the heat of dramatic social struggles received moral and at least some economic support from a national government. (In Latin America, only Cuba had a leftist-oriented popular movement hold state power for so long.) In addition, 1980s Nicaragua built upon the prolific legacy of socially engaged song produced, sometimes clandestinely, in the previous decade under the Somoza dictatorship, a musical corpus that through the 1980s and 1990s was the best-known Nicaraguan music within and outside the region. The US-sponsored contra war and economic embargo successfully bankrupted the Nicaraguan economy, as a result of which governmental support for the arts dried up and the nation's music industry as a whole was practically destroyed. Even before the electoral defeat of the Sandinistas in 1990 the Ministry of Culture had closed (1988) and the government music label ENIGRAC, which had released many LPs of politically relevant music in the early 1980s, was late in adjusting to cassettes and restricted in their recording efforts (Scruggs 1991). A concern bubbled up in the late 1980s that the *volcanto* movement had become increasingly associated with a circumscribed group of more cosmopolitan-oriented young Managuan musicians and distanced from the preferred musical styles of the majority population (see Scruggs 2002).

In the decades of the 1990s and 2000s full-blown neoliberal economics wreaked havoc on the popular classes and musical activity of all types was severely constricted. In addition, non-Nicaraguan cultural products were heavily promoted (Scruggs 2004). Post-1990 also brought on a massive emigration to more economically prosperous lands. The most important *volcanto* group, brother-sister Salvador and Katia Cardenal's Duo Guardabarranco (the national bird), suffered from Katia's emigration to Norway for a good portion of this period, and ended with Salvador's dying in 2010. In the late 1990s the Norwegian government (through Norad) began to provide some funding to the newly formed Asociación de Cantautores Nicaragüenses, ASCAN, facilitating performances and several cassette and CD compilations of various artists. Acoustic singer-songwriters continue to perform at small cafés and universities, and at the important concert space the Casa de los Mejía in the capital, Managua. An overall assessment of Nicaraguan socially conscious music since 1970, however, reveals that the key role that Carlos M. Godoy's music played from the mid-1970s to the early 1980s was not matched by his latter output, and new musical ensembles and singer-songwriters of similar caliber have yet to emerge within *volcanto* to bring music near to such a level of social importance.

T. M. SCRUGGS

Waila, *see* Waila (Volume VIII, North America)

Xaxado

Xaxado is a song-and-dance form from the northeastern Brazilian state of Pernambuco originally – and still predominantly – performed by men. Popular in some backlands areas of the state in the 1920s (Griz in Câmara Cascudo 2000), it began to be disseminated more widely via radio in the mid-1930s. Just like other 'satellite genres' (Tapajós 1995, 4) of *baião* it was popularized in an urbanized form by Pernambuco native Luis Gonzaga in the national media, in motion pictures and in vaudeville-type theater (*teatro revista*) in the 1940s and 1950s.

According to Câmara Cascudo (2000, 749–50) *xaxado* originated deep in the backlands of Pernambuco, from where it was

> disseminated throughout the interior of Bahia state by the outlaw known as Lampião and the other bandits (known as *cabras*) of his band. They would dance the *xaxado* in a circle, in a single-file line, one dancer behind the other, without spinning, advancing their right foot in three and four sideways movements and pulling the left foot in a quick and sliding tapping movement (author's translation).

The songs of insult (called *parraxaxá*) chanted by the *cangaceiros* (as those bandits were known) against the uniformed police soldiers were a forerunner of *xaxado* (ibid.). Not even the police repression of banditry, which occurred at that time, could prevent its expansion.

Opinions vary regarding the origin of the term. The most common version refers to the sound produced by the dragging of leather sandals across the floor by the dancers. On the other hand, for the inhabitants of the town of Serra Talhada (the birthplace of Lampião), the term '*xaxado*' originated from the words *xarar/xaxado*, an adaptation of *sachar/sachado*: the act of tilling the soil with a hoe to plant beans. The name of the dance would have resulted from a simulation of the movement of the hoe in the soil, in short cuts, to uproot weeds (http://video globo.com).

In Câmara Cascudo's view, the music probably derives from '*baião da viola*' performed by the *repentistas* (singers who improvise short poems and play music off the cuff*)* in a sort of duel between one improvised stanza and the other. It consists of a quatrain and a stanza, which is sung in unison by the group. Originally, the *xaxado* was danced without instrumental accompaniment. Men used to sing and dance, marking the strong beat of the 2/4 time with the butt of their rifle on the floor. The rifle, as Gonzaga himself is said to have put it, 'was the lady.'

Many accordion players, such as Luiz Gonzaga and others, released several versions of instrumental *xaxado*. Its first appearance on 78-rpm records (1952), with the title 'Xaxado,' resulted from a partnership between Luiz Gonzaga (1912–89) and Hervê Cordovil (1914–79). The lyric content summarizes its history:

Xaxado, meu bem xaxado	*Xaxado*, my darling xaxado
Xaxado vem do sertão	*Xaxado* comes from the *sertão* [backlands]
É dança dos cangaceiros	It's the dance of bandits
Dos cabras de Lampião	Of the *cabras* of Lampião
Quando eu entro no xaxado	When I start dancing *xaxado*
Ai meu Deus, eu num paro não	Oh my God, I just can't stop
Xaxado é dança macho	*Xaxado* is a man's dance
Primo do baião	It's a cousin *of baião*

Xaxado is also part of the repertoire of para-folkloric dance groups, among them are the Cabras de Lampião (Lampião's Bandits), in Serra Talhada, Pernambuco and Mira Ira in Fortaleza, Ceará. The latter group includes women in its performance.

Since the 1950s *xaxado* has been part of the musical genres performed in the *forró* houses – the first public venues aimed at listening to and dancing the repertoire from the Brazilian North-east – around the large cities in the southeastern region of the country. At first, these locales were used as a gathering place for northeastern migrants who were forced to leave their native lands because of the droughts of 1951–3 and 1958. Today, these *forró* houses are included in the tourism itineraries of any major Brazilian city.

Twenty-first-century *xaxado*, already adapted to the accelerated versions of the new *forró*, also reflects the influence of international trends, such as the song 'Xaxado chiado' (Sizzling *Xaxado*) (2002) by the rap artist Gabriel o Pensador.

ELBA BRAGA RAMALHO

Xote

Xote is a Brazilian genre derived from the schottische, a dance form originally from central Europe, which first arrived in Brazil in the mid-nineteenth century.

The modern Brazilian version is part of a long historical and musical process in which European dances, especially those coming to the South American continent via France in the 1850s, became nationalized (Kiefer 1990, 7). In the case of *xote*, the nationalization process was aided by the insertion of elements of music from the Brazilian North-east in the mid-1900s.

The transformative process began when 'the élites in Rio de Janeiro' (Câmara Cascudo 1999, 809–10) imported the schottische in the 1850s, from which point its development as a popular genre was gradual. *Xote* was appreciated more by art music practitioners and aficionados, such as those from Brazil's late romantic period in the second half of the 1800s, and those involved in the modernist movement of 1922. In the 1940s and 1950s, however, the record industry and the radio saw the potential of *xote* as a music for a nationwide audience. Only then was *xote* taken as a 'genuine' Brazilian popular music genre. Its place in the art music tradition did not disappear, however, and the heirs of those who regarded *xote* as art music continue to do so in the twenty-first century.

Early History in Brazil

According to Kiefer (1990, 27–8), the schottische that arrived in Rio de Janeiro in the 1850s, and was favorably received among court officials and aristocratic family gatherings, had a 'rhythm of accompaniment' that had 'a certain similarity with that of polka; the timing … , however, would be a little slower' (author's translation). Then, like everything new coming from abroad at that time, especially from Europe, the schottische had an effect on local scenes and soon caught on in less noble settings across the whole country, affiliating itself little by little to the lower social strata. Memorizing the music they heard and some of the dance movements they saw, these poorer segments of society even adapted the name of the original dance and music, first to 'chótis' and then to 'chote' or 'xote.' But this latter descriptive adaptation was a slow process; in Brazilian Portuguese it took almost a full century to be completed, a long time after the arrival of the original European form in Rio de Janeiro.

Although there were numerous schottische sheet music publications in the mid- to late 1800s, these cannot be compared quantitatively to the greater number of both waltz and polka scores available in Rio de Janeiro and in other major Brazilian cities at that time (Kiefer 1990). With their more colloquial titles, the polkas and waltzes of the time were more popular, but by the mid-1900s, however, in the north-east of the country, *xote* was experiencing greater popularization both as a dance form and as music, as a result of which it was also labeled as a northeastern tradition, running parallel to those of *forró*, *baião*, *xaxado* and the like. Indeed, if one takes account of northeastern accordionist Luiz Gonzaga's dominant role in the boom that more traditional northeastern music experienced from the 1940s up to the late 1950s, and the emergence of *forró* in that time as an umbrella genre, these musics can all be grouped under the larger genre.

Description

The schottische had always been seen as an erudite form of instrumental music. As soon as it was transformed into the more urban and popular *xote* in the 1940s, adding lyrics became a natural consequence. Composers' thematic choices varied in the 1940s and 1950s, with a slight preference for regional characteristics such as food, places, life in the country and personal comments on women's good or bad looks. In southern Brazil, there was a *xote* tradition which resurfaced – and remained strong for some time in folkloric settings – at the same time as the northeastern music hit the airwaves. Living in Rio de Janeiro, some artists from the south even claimed the paternity of the genre early in the 1940s, but by then Luiz Gonzaga had built a sufficiently strong position to be able to proclaim himself both as the father and the king of the genre all over the country.

In the Brazilian North-east, *xote* is performed in simple duple time, at a moderate tempo, with a 120-bass piano (or, more traditionally, an eight-bass button) accordion, a triangle and a *zabumba* drum. The latter looks like a side drum without snares (about the size of a bass drum) and is played with the usual drumstick on the upper side and a stick underneath. Except for its lyrics, this music is a true descendant of the original European schottische, the dance movements of which resemble those of the original polka (*xote*, like polka, is danced both by couples and in large groups), but which adapted itself to becoming the local dance music just as it had adapted itself musically.

Xote on 78rpm Records and on Radio

By the end of the 1940s, after Luiz Gonzaga's storming success with *baião*, northeastern music was enjoying a comfortable, dominating position in the heart of the Brazilian music industry. In his long career, Gonzaga recorded several *xotes*, among them 'No meu pé de serra' (At My Foot-of-the-Mountain Place, 1947), 'Mangaratiba' (1949), 'Adeus Rio de Janeiro' (Good-bye Rio de Janeiro, 1950), 'Cintura fina' (Slim Waistline, 1950), 'O xote das meninas' (The Girls' *Xote*, 1953), 'Riacho do Navio' (1955), 'Buraco de tatu' (Armadillo's Hole, 1956), 'O chêro da Carolina' (Carolina's Good

Smell, 1956) and 'Vida de vaqueiro' (A Cowherd's Life, 1960), all of them major hits broadcast nationally on the radio, directly from Rio de Janeiro to the rest of the country (Azevedo [Nirez] 1982). Radio and the record industry gave national recognition to the genre, but it should also be remembered that the artists' efforts in promoting the genre through the available media in the 1940s and 1950s also played an important part in the process.

There was also a nationalist feeling on the part of the artists, in reaction to the fact that during and after World War II the Brazilian music scene was flooded with US big band jazz and with all manner of major Spanish-speaking Caribbean and Latin American music genres, including the *bolero*, the *balada* and the *rumba*. These international genres even threatened the overwhelming omnipresence of *samba* in the Brazilian music industry, so that when the *xote* and other northeastern music genres, under the umbrella of *forró*, surfaced in the 1940s, they seemed to attract the public's attention first and foremost, because they were made in Brazil and sung in Brazilian Portuguese. These factors alone imply that *xote* and the other northeastern genres were – and still are – likely to bring a smile to Brazilian faces when it comes to identifying a truly national type of music.

Yaraví

The *yaraví* is an Andean song genre characterized by its slow tempo, minor tonality, frequent use of rubato and dramatic pauses, and a lyric emphasis on romantic or tragic themes of lost love and betrayal. Associated primarily with middle-class mestizos, the *yaraví* is found in urban settings in the highland regions of Ecuador and Peru, with significant regional variations in instrumentation and form. In Peru, it is particularly associated with the city of Arequipa, though it is also closely related to the *muliza* genre from the Cerro de Pasco region, and in still other areas, it is known as the *triste*.

As a mestizo genre, the *yaraví*'s origins date to at least the eighteenth century, though scholars presume that the term derives from the Quechua *harawi*, an indigenous vocal genre with pre-Hispanic roots also known for its evocative and nostalgic themes. A definitive historical link between the two genres remains elusive, however, and each is quite distinct in modern musical practice and social context. The first known historical reference to the *yaraví* proper was published in an acrimonious debate on the merits (or perceived lack thereof) of Andean autochthonous music in the Peruvian newspaper *Mercurio Diario* in the 1790s (quoted in Stevenson 1977), confirming both the genre's melancholy nature and its widespread popularity in the Andes during the late colonial period. That popularity continued well into the twentieth century, as evidenced by later scholarship on the genre's presence in cities from Quito, Ecuador, to Cuzco and Arequipa in southern Peru, where it was regularly performed in informal mestizo social gatherings as well as staged performances within the burgeoning *indigenista* folklore movement.

Structurally, the *yaraví* may be set in either a duple or triple meter, with short vocal stanzas marked by the heavy use of rubato, followed by more regimented instrumental cadences. It is usually performed either by a solo singer or in a harmonized duo, with accompaniment ranging from a single guitar to larger instrumental ensembles determined by regional traditions; in Cuzco, for instance, an accompanying group may include guitar, harp, violin, *kena* (an end-blown flute) and *charango* (a small guitar-type instrument). By the early twentieth century the addition of a *fuga de wayno*, or fast concluding section in the duple *wayno* (*huayno*) rhythm, also became common performance practice, and remains typical in the twenty-first century.

The *yaraví* reached its greatest audience during the mid-twentieth century 'golden age' of Andean music in Lima, when it frequently served as a break between longer sets of *waynos* and other dance genres on radio broadcasts and at live concert performances. LP albums by Andean folk music stars of the 1950s to 1970s typically included one or two *yaraví* tracks, and certain performers, such as renowned Ayacuchan *charango* player Jaime Guardia, made the genre their specialty. As noted, the *yaraví* took on a particular importance for the city of Arequipa as an expression of local identity, especially in the compositions of poet Mariano Melgar (1790–1815). Mid-twentieth-century recordings of Melgar's songs by groups such as Los Dávalos and Trio Yanahuara remain popular today (see *Glorias de la música arequipeña*).

Beyond its performance as a folk-popular genre, composers interested in exploring Andean folkloric themes have frequently created or set stylized versions of the *yaraví* for orchestra or chamber groups. Examples include Ecuadorian composer Luis Salgado's Sinfonía n. 1 'Ecuatoriana' (1945–9) and German-Peruvian composer Rodolfo Holzmann's 'Concierto para la Ciudad Blanca' (1949). The most famous work of this type is early-twentieth-century Peruvian composer Daniel Alomía Robles's score for the *zarzuela El condor pasa* (The Condor Flies Past), with its well-known melody based in part upon an existing *yaraví* entitled 'Soy la paloma que el nido perdió' (I Am the Dove Lost by the Nest).

Largely relegated to nostalgia events and performances at folkloric festivals in the early twenty-first century, periodic attempts are made to revive the genre's popularity among younger audiences. In 2007 Ayacuchan guitarist Julio Humala recorded an entire album of classic *yaravis* with singer Manuel Vásquez (*Yaraví*), with more planned, and the genre acquired new fans with Marino Martínez Espinosa's 'A Silvia del Mar,' winner of a national Peruvian song competition (I Festival Claro) and subsequent recording in 2008.

Yumbo

The *yumbo* is an indigenous musical genre and ritual dance of pre-Inca origin from the eastern slopes of the Andean mountains in Ecuador. It is also popular in the mid-highland region, especially in the provinces of Chimborazo and Cotopaxi. Originally, the term 'yumbo' denoted the inhabitants of the Amazonian rainforest to the east of the highlands; however, chroniclers and travelers have used this word indistinctively to refer to indigenous groups from both the Amazon and highland regions of Ecuador. The term, which in Quichua means 'sorcerer,' also refers to dancers at the Corpus Christi festivities, who dance in honor of the *Pachamama* (Mother Earth) to give thanks for the harvest she has bestowed.

Musicologist Segundo Luis Moreno described in his ethnographic writings a *yumbo* dance he observed in 1943, which he depicted as a gracious and elegant dance. The male dancers moved their feet back and forth with the upper body inclined toward the front. The dancers' outfits consisted of white clothing, with a colorful scarf around their necks and a belt around their waist. Across their chests each dancer carried a band ornamented with seashells, animal teeth and embalmed birds, as well as a two-meter-long lance in the right hand (Moreno 1996).

Musically, the *yumbo* is a fast-tempo dance of energetic character. It has a rhythmic pattern made up of sequences of short-long notes, which is usually transcribed as an accentuated eighth note followed by a quarter note in compound binary meter. Based on pentatonic scales, the traditional *yumbo* in the rural highlands is normally danced to the accompaniment of an indigenous cane flute and a drum played by the same person. With the introduction of the Spanish guitar and the process of miscegenation of Spanish and Amerindian cultures during the colonial period, the *yumbo* became more elaborate in terms of harmonic language and musical form. *Yumbo*s are usually performed in the context of indigenous carnivals and the Corpus Christi festivities. Despite the *yumbo*'s popularity in the mid-highland region, there are not many *yumbo* songs in the national music anthology. In the first half of the twentieth century academic composers stylized the *yumbo* dance in their nationalist works for piano or orchestra. Gerardo Guevara's 'Apamuy Shungo' has been recorded by the National Symphony Orchestra and is often performed in choral arrangement in national and international festivals.

Modern arrangements of the *yumbo* include synthesizers and percussion instruments, which renders the music more appealing to the young indigenous generations. A key figure in this process has been Ángel Guaraca, a charismatic indigenous singer from the highland city of Riobamba who appeared on the music scene in the early 2000s. His songs, often in the Quichua language, talk about the national pride of indigenous people, such as 'Ésta es mi tierra' (This Is My Land), a song that elevates the *poncho* as a national symbol of the (indigenous) nation. Guaraca sings to the accompaniment of recorded tapes, a common musical practice in Ecuador since the *tecnocumbia* boom of the early 2000s. His modernized renditions of the *yumbo* fall within a style of music known in Ecuador as *música chicha*, which is associated with an urbanized and stigmatized indigenous population.

Zamacueca

The *zamacueca* is a music and dance genre from coastal Peru. The dance is likely to have been a lower-class Afro-Peruvian and mestizo reinterpretation of European dances once favored by the aristocracy that had fallen out of vogue. Early references to the *zamacueca* date from the beginning of the nineteenth century and show that the dance was largely a social dance performed at parties and other celebratory events both in rural and urban areas, eventually also becoming popular among the upper classes. The dance, which was generally accompanied by a varying combination of guitar, *vihuela*, harp and *cajón* (box drum), was a courtship dance in which partners in a male-female couple flirted with each other while surrounded by a group of onlookers who sang, played musical accompaniment, clapped and shouted words of encouragement. The male dancer's attempts to seduce his female partner with his dance moves and complex footwork were the subject of much press during the nineteenth century, some delighting in the choreographed sensuality of the dance while others were scandalized by its perceived inappropriate lasciviousness. The *zamacueca* gained a great deal of popularity during the early nineteenth century not only in Peru but also in Chile, Argentina, Paraguay, Uruguay, parts of Mexico and Spain. Literary and pictographic references suggest that the genre developed a number of variants that were practiced by individuals from a variety of ethnicities and social backgrounds, with different variants emphasizing Afro-Peruvian, mestizo or *criollo* elements of the dance. By the mid- to late nineteenth century, some of these variants, including the *cueca* and the *chilena*, went on to become genres in their own right and began to displace the older *zamacueca*.

In the mid-twentieth century the *zamacueca* was recreated as part of the Afro-Peruvian music and dance revival that sought to validate the contributions of Afro-Peruvians to the development of Peruvian coastal culture. These recreations were largely informed by Nicomedes Santa Cruz's (1925–92) theory of the origin of the *zamacueca*, which has been criticized, most notably by Peruvian folklorist José Durand (1925–90), for having an overly Africanist bent. Looking mostly at the variants associated with the Afro-Peruvian population of the nineteenth century, Santa Cruz posited that the *zamacueca* was a black progenitor of later creolized coastal genres including the *marinera* and *tondero*. Present-day incarnations of the *zamacueca* share a number of similarities with the *marinera*, particularly in the *cajón* patterns used to accompany the dance, which is consistent with the idea that the former genre may have been the progenitor of the latter. The *zamacueca* differs from the *marinera* in its greater use of syncopated variations and rhythmic improvisation. However, it is not possible to ascertain whether these are features that date back to the nineteenth century or whether they are more recent innovations associated with the revival movement.

In the realm of dance, it is generally acknowledged that the choreography of the *zamacueca* was lost and Victoria Santa Cruz (b. 1922) is credited with having recreated it in the 1960s. In recent decades this choreography developed by Santa Cruz has been expanded, often inspired by nineteenth-century paintings and watercolors depicting the dance.

Since its revival in the 1960s, the *zamacueca* has been mainly performed by professional groups specializing in Afro-Peruvian traditions and taught in folklore and dance academies. Only a few compositions are primarily recognized as *zamacuecas*. Nevertheless, the contemporary version of the genre has become an important symbol of the endurance and influence of Afro-Peruvian music on coastal musical practices in general. This symbolic value has led a number of groups to perform *zamacueca* arrangements of *valses*, *marineras* and other costal genres as a means of rooting their repertoire in the Afro-Peruvian musical legacy.

JAVIER F. LEÓN

Zamba

Zamba is the most popular folk music-based genre in Argentina. Derived from the *zamacueca*, a dance that came from Lima in Peru by way of Chile around 1800, it acquired its hegemony over all other folkloric genres during the '*folclore* boom' in Argentina in the 1960s.

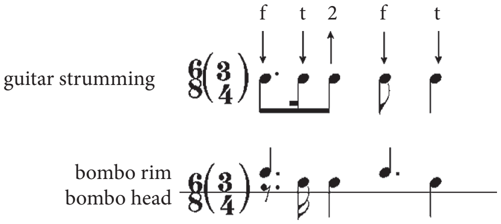
In the mid-nineteenth century *zamba* was danced all over the country, in rural and urban milieus. By 1900, however, upper classes considered it out of fashion, although (at least in the northern provinces) it would still be danced as a nightcap at the very end of a social gathering, after all the more fashionable genres had had their run. In the first decades of the twentieth century professional groups who brought *folclore* to lower and middle urban classes would often include *zambas*; it was perhaps the only genre popular both among the *campero* (country) singers, who represented the southern and central pampas in urban imagination, and the semiprofessional groups who brought the music and dances of the north-west to the city. The singers and composers of Cuyo (westcentral Argentina), who arrived in Buenos Aires in the 1930s, would also include *zambas* as a central staple of their repertoires. The absence of a more circumscribed regional ascription may have made possible the elevation of *zamba* to the status of national symbol around the middle of the twentieth century. The *folclore* boom was launched by the phenomenal success of a waltz-like *zamba* ('Angélica,' composed by Roberto Cambaré in 1958 and popularized by Los Cantores de Quilla Huasi), and the genre continued to dominate *folclore* festivals, programs and recordings until the 1990s, when the *chacarera* and its youth following disputed its dominance. Even then, however, the *zamba* continued to retain its privileged symbolic status.

Whereas its early specimens were for the most part instrumental (guitar, harp, violin, *bandoneón*), the *zamba* has come to be considered a song that may or not be danced. The form of the *zamba* is fixed in musical rather than literary terms: two parts (*primera* and *segunda*), each one provided with a 16-measure introduction and consisting of two ABB stanzas and a CDD (or CBB, or even ABB) refrain. Each letter in the scheme corresponds to an eight-measure phrase. The most regular lyrics consist of quatrains with assonant rhyme between the second and fourth lines (in the musical setting, the third and fourth verses are repeated), but irregular versification patterns are in fact more common, with line lengths of between 4 and 11 syllables, stanzas of 4 to 7 lines and line repetitions often replaced by new texts.

The subject matter of the lyrics is varied: love, praise and/or nostalgia for the native landscape/peoples, celebration of the genre itself, and historical events or figures are common themes. The language ranges between traditional *gauchesco* and modern urban everyday registers; a large portion was written by professional poets and includes far-flung avant-garde metaphors often verging on the surreal. As to its choreography, it is reputedly the most difficult of the traditional dances: fairly free in its steps, picaresque yet elegant in its gestures (with handheld kerchiefs that add to their suggestiveness), it represents a stylized pantomime of a suitor wooing his lady and finally winning her love.

The basic format for *zamba* performance is singing (one voice, or two in parallel thirds) with guitar and *bombo* accompaniment (the *bombo* is a cylindrical wooden bass drum that hangs from the shoulder of a standing *bombisto*). The northern traditions also incorporate the diatonic harp in addition to or in place of the guitar, and the violin as a melodic instrument, doubling the voice and performing introduction and interludes.

Example 1 shows the basic accompaniment ostinato of the *zamba*, in which the two hands of the *bombisto* highlight the basic hemiola pattern; Example 2 demonstrates some of the most common rhythmic variants in the melody: inversion of the dotted figure, anticipation of strong beats, hemiola effects at half-measure level and sixteenth-note runs.



f: 3rd, 4th and 5th fingers; t: thumb; 2: 2nd finger

Example 1: *Zamba*'s basic accompaniment pattern

Example 2: Some common rhythmic variants in melody

The history of *zamba* in the twentieth century is a paradigm for that of Argentinian *folclore* as a whole. Folk-song research (Vega 1991 [1952] and 1988 [1944] and Aretz [1952]) places it within the *zamacueca* complex, not always clearly separated from the other genres of the group (*cueca, chilena, marinera*). Early recorded examples (e.g., by the duo of Gardel and Razzano in the 1920s) are sung in a brisk tempo, but in the style of *tango* of the same period (rubato, with glissandi); at the time it was merely one more among many song types of the *campero* repertoire favored in Buenos Aires. Later, a slower tempo and melancholy character began to build a more distinctive profile. The groups of the boom years based in the northwestern province of Salta (Los Fronterizos, Los de Salta and Los Cantores del Alba), who maintained the more traditional moderate-to-fast renditions (= approximately 64 dotted quarter notes per minute in the recordings of 'La salamanca' by both Los Fronterizos [1959] and Los Cantores del Alba [1958]), were accused of denaturalizing the genre; slightly later, the emphasis on complex harmonies and interesting sonorities that characterized 'progressive' ensembles such as the Dúo Salteño and Los Trovadores del Norte resulted in extremely slow versions (44 dotted quarter notes per minute both in 'Balderrama' [1971] by the former and 'El Paraná en una zamba' [1965] by the latter).

All of the poets, composers, singers and instrumentalists who have cultivated Argentinian *folclore*, including those who specialize in local repertoires, have produced and performed *zambas.* A few traditional anonymous pieces, such as 'Zamba de Vargas,' a piece supposedly performed by the band of one of the armies at a battle in 1867, continue to be performed in recitals. Traditional stepwise melodies on simple harmonies and what Vega (1988 [1944]) called 'bi-modality' predominate in the *zambas* of those composers who, like Atahualpa Yupanqui, derived their stylistic conventions from first-hand acquaintance with the rural tradition. Most composers, however, have tended to highlight melodic intervals of a sixth that alternate with stepwise motion and triadic figures; the *zambas* of Eduardo Falú and Ariel Ramírez introduce some harmonic variety, mainly secondary dominants and other seventh chords; those of Cuchi Leguizamón are marked by complex sinuous melodies and dissonant and sometimes unexpected harmonies. The genre has been a favorite for experiments in combination: 'El antigal' (Ariel Petrocelli and Daniel Toro), for example, begins with a pentatonic melody, suggesting a connection to indigenous Andean peoples, and includes in the refrain a phrase in the style of a *vidala*. In the late twentieth century instrumental versions and accompaniments tended toward a jazz-like use of modal effects and complex chords.

Zapateo

The *zapateo* is a form of competitive tap dance associated with the central coastal region of Peru, particularly the departments of Lima and Ica. Historical references to the *zapateo* in Peru date from the early part of the eighteenth century. Descriptions of similar popular dances found in seventeenth-century Spain may suggest a possible place of origin. Early descriptions of the *zapateo* describe it as a dance featuring alternating percussive strikes of heel and toes to the musical accompaniment of a guitar, harp or other string instruments, features that are still evident in contemporary performance of the dance. While some of the historical references to the *zapateo* suggest that the dance may have been widely practiced by individuals of various social classes and ethnic backgrounds, by the turn of the twentieth century the practice of the dance was more generally confined to predominantly Afro-Peruvian populations in three main areas: the rural area of Aucallama in the province of Chancay and the city of Lima, both in the department of Lima, and the rural province of Chincha in the department of Ica to the south.

The dance is traditionally performed by two or more male dancers, each taking turns trying to outdo his rivals while accompanied by short rhythmic and melodic ostinatos that are specific to the genre, performed on a guitar. The rules of competition vary. The Lima/Chancay/Aucallama style has complex rules in which dancers lose points for repeating step combinations or for developing combinations that are deemed to lack cohesiveness by the individual in charge of adjudication. In contrast, the Chincha style has less strict rules and the winner is usually selected by the applause of the onlooking public. There are two main variations of the guitar accompaniment: one in major and one in minor, the former being the most commonly used. These, however, do not have any bearing on the type of dancing that is performed.

In the early twenty-first century most Peruvians generally identify the *zapateo* as an Afro-Peruvian genre. This has to do with the rise in popularity that the dance had in the second part of the twentieth century as part of the revival of Afro-Peruvian music and dance. In fact, the guitar accompaniments used by most performers today are based on those played by Vicente Vásquez, a key figure of the revival movement whose renowned family was originally from Aucallama. Vásquez's accompaniments were recorded on the historic LP *Socabón*, produced by revival leader Nicomedes Santa Cruz, and his knowledge of these and other Afro-Peruvian dances informed much of Santa Cruz's scholarship on the subject. The *zapateo* continues to be actively performed in the area of Chincha, where young boys often tap dance for the delight of tourists. The dance is less actively performed in the region of Aucallama. Most *zapateo* activity in the twenty-first century is centered among professional musicians in Lima. Since the 1990s it has become increasingly common for dancers to add their own dance combinations borrowed from Andean tap dance genres such as the *waylas*, or from American tap, flamenco and other styles. Women have also begun to perform *zapateo* professionally, but this practice still remains more the exception than the rule.

Zouk

Based on interactive pan-African and Caribbean rhythms and melodic patterns, *zouk* is an urban song of social commentary or love. First developed by three musicians from Guadeloupe in 1978 in Paris, *zouk* was not performed live until 1982 in the musicians' country of origin. Since 1984, when the band Kassav' from Guadeloupe and Martinique had a number one song 'Zouk-la sé sèl médikaman nou ni' (Zouk Is the Only Medicine We Have) on both French and Caribbean charts, *zouk* has been the most popular dance music of French Guyana, Réunion, Guadeloupe and Martinique (overseas departments of France located respectively in South America, Africa and the islands of the Lesser Antilles in the eastern Caribbean). To a lesser extent, *zouk* has also been popular in the English-speaking neighboring islands of Dominica and St Lucia, where a French-derived Creole is spoken.

The Development of *Zouk*

While touring the Caribbean region with the ensemble Les Vikings de Guadeloupe during the 1970s, the Guadeloupean bassist and sound technician Pierre-Édouard Décimus noticed that he heard hardly any French Caribbean music being played on the local radio stations. Instead, he often heard *cadence-lypso* from Dominica, Haitian *konpa* and Congolese rumba and *soukous*. Determined to counteract the Haitian influence, Décimus decided to emphasize 'the difference' that existed in French Caribbean music, with the aid of up-to-date technology. To accomplish his mission, he left Les Vikings, moved in 1978 from Guadeloupe to France and paired up with his brother, the bassist Georges Décimus. The brothers later approached a fellow Guadeloupean, rock guitarist Jacob Desvarieux, who was then beginning to develop a reputation for his studio work.

For their initial recordings, the trio released two Christmas and two carnival records under the name Soukoué Ko Ou, utilizing the Guadeloupean *gwo ka* (or *gwoka*) drum. After enlisting the support of Guadeloupean producer/musician Freddy Marshall, the trio released two albums, *Love and Ka Dance* (1979) and *Lagué moin* (1980), under the name 'Kassav'' and named their music 'zouk' (Berrian 2000, 44). The Guadeloupean and Martinican Creole name 'kassav' refers to a crushed cassava mixed with coconut and sugar to make a cake. Just as poison had to be extracted from the cake mixture before it could be eaten, the musicians believed that a similar process had to occur with French Caribbean music for it to be reformed. The term 'zouk' means a lively party with dancing and celebration in Martinican Creole. The band's decision to alternate or mix the two Creoles supported their pan-Caribbean orientation. The placement of the apostrophe after their name was a marketing device to attract attention to themselves – a band from two small French Caribbean islands, who intended to achieve commercial success by penetrating the international market.

Although the use of the *gwo ka* on the two albums had the effect of legitimizing the Guadeloupeans' musical roots, it took the musicians five more years (1979–83) to find the sound that would characterize *zouk* and establish them as a leading full-time professional band. After undergoing several formations, the musicians settled on a stable lineup of three singers and eleven instrumentalists, choosing to become multicultural by seeking other musicians from Martinique, Africa, France, Belgium and Corsica. Such an alliance shifted attention to hybridization and marked the conclusion of a successful search for top quality musicians. A horn section was added to create a rhythmically complex music with an international sound produced using state-of-the-art technology. The band then broke with precedence by hiring Jocelyne Béroard of Martinique, the first full-time woman soloist and composer for a French Caribbean band. Later, in 1986, Béroard was to become the first French Caribbean woman to be awarded a double French *disque d'or* (gold record) for her solo album *Siwo* (A Good Man).

Primarily a studio band, Kassav' did not perform its first live show until 1982 in Guadeloupe. Between *Love and Ka Dance* in 1979 and *Siwo* in 1986, Kassav' made 21 albums. The group's strategy was to put out 'one album a year, while individual members composed their own music and brought out solo albums' (O'Conner 1993, 13). Their 1984 song 'Zouk-la sé sèl médikaman nou ni' remained on the local hit chart in the French Caribbean for six months. On 22 June 1985, with no advance publicity, Kassav' performed at the Zénith, the prestigious concert hall in Paris, before a sold-out audience of 8,000, following this with tours of Asia, Europe, Africa and the Caribbean. By 1986 the band had reached superstar status after performing for four successive nights at the Zénith that year and receiving the first French gold record for 'Zouk-la sé sèl médikaman nou ni.' The song's message was that *zouk* has a healing power for the different cultural divisions among French Caribbean peoples (Winders 2000, 51). To express thanks for the support of its fans and pride in its Caribbean heritage, Kassav' performed a free concert in Guadeloupe on 23 February 1986 before an enthusiastic audience of 70,000. Coming from a region where the sale of 3,000 to 5,000 copies of a single album was a major success, Kassav' made history by being the first French Caribbean band to sell more than 200,000 copies worldwide of the Georges Décimus and Jacob Desvarieux album *Yélélé*.

In 1987 Desvarieux called on his colleagues in Kassav' to organize *Le Rêve Antillais* (The Antillean Dream), an annual talent contest in Guadeloupe. The aim of the contest was to bring to the forefront talented amateurs who would get to record with Kassav' (Scaramuzzo 1994, 52). The first contest ignited the career of Pascal Vallot. In the subsequent contests, held in Guadeloupe and Martinique in 1988 and 1992, contracts were promised to participants without Kassav's knowledge before the competitions took place, causing a radio station to withdraw its sponsorship. Next came the *zouk* extravaganza called the *Grand Méchant Zouk* (Big Bad Zouk), which took place in 1988 and in 1990 and featured Desvarieux with most of Kassav's musicians, together with artists such as Mario Canonge, Michel Alibo, Tanya St. Val, Tatiana Miath, Édith Lefel, Ronald Rubinel and Dédé Saint Prix. Although CD and video recordings of the live performances were made in Guadeloupe, Martinique, French Guyana and France, Desvarieux eventually withdrew from the project in protest against the greed of the promoters.

Kassav''s creation of *zouk* led to the emergence of numerous solo artists, bands and singing groups. The Expérience 7 team of Yves Honoré and Guy Houllier, the band for the Henri Debs recording studio in Pointe-à-Pitre, Guadeloupe during the 1980s, founded Zouk Machine, a trio of women singers. After two formations, the singers relocated to Paris, signed with BMG/Ariola and won a gold record for their 1989 *Maldon* album. The single 'Maldon' (Bad Deal) ranked number one on the French Caribbean Le Top Sun FM chart for nine weeks, becoming the best-selling *zouk* title at the time. Joëlle Ursull, a member of the first formation who left in 1987 to launch a solo career, recorded three albums: *Miyel* (1988), *Black French* (1990) and *Comme dans un film* (1993). When invited to be the first French Caribbean singer to represent France at the 1990 Eurovision musical competition, Ursull won second place for 'White and Black Blues,' a song on *Black French* (1990), and the second best *zouk* single after 'Maldon.'

Other singers – Tanya St Val and Gilles Floro of Guadeloupe, Édith Lefel and Eric Virgal of

Martinique and Chris Combette of French Guyana – also arrived on the scene. Tanya St Val made several popular albums between the late 1980s and the mid-1990s with the keyboard player/arranger Willy Salzedo. Before his untimely death in 1999, Floro released 15 albums, among which was the very popular *Kristal* (1995). Lefel, another singer who died young, was known for her romantic songs: 'L'anmou fou' (Foolish Love) and 'Sanglots' (Sobs). Combette, who made the popular duet 'Lonbraj an pèy mango' (Shade of a Mango Tree) with Béroard for *Duos de soleil, Vol. 1* (1997), is a self-taught guitarist who performs a wide range of Caribbean music and bossa nova. Since 1990 the singer Virgal has organized the annual *Le Chant des sirènes* (The Singing of Sirens), a summer festival during which women singers perform their current hits.

Stylistic Features

The success of a *zouk* song, according to Jocelyne Guilbault, depends on its danceability, its rhythmic drive and the catchiness of the chorus parts (1993, 15). *Zouk* also has two distinctive sub-styles: *zouk love* and *zouk chiré*. Based on a legato with a lyrical synthesizer and violins, *zouk love* is a slow-tempo version of *cadence-lypso*. It frequently mixes *zouk* with traditional music (*biguine* or mazurka) and contemporary sounds. For example, the 1988 'S.O.S. mémé' (S.O.S. Grandmother) duet with Ralph Thamar and Édith Lefel combines *zouk* and mazurka. Vocals are typically smooth and gentle on the ear and often feature call-and-response between the soloist and the chorus. Saint-Éloi, one of the two Kassav' singers to specialize in romantic *zouk love* ballads, uses a high-pitched, almost falsetto-like voice on 'Si cé oui' (If It's Yes). Whenever he sings in the upper register, the chorus responds with a downward vocal line. Another tenor, Jean-Philippe Marthély, uses a scat-singing technique on 'Sé pa djen djen' (It's Not a Joke), while focusing on the sound effects of the Creole language. On Kassav''s 'Nou ped chimen' (We Lost Our Way), a track on *K' to z* (2004), rhythms are built on top of each other with a flamenco guitar, a Latin beat and an accordion-like synthesizer sound.

Played at full volume, *zouk chiré* (hard-driving *zouk*) and its close relation *zouk beton* (hard *zouk*) have a brass section with a hard rock guitar, *tibwa* (a pair of wooden sticks keeping the timeline), trap and snare drums, a heavy bass and two synthesizers. One keyboard is used as a rhythmic instrument to reproduce what the percussion section plays; the second interjects melodic riffs at strategic points (Guilbault 1993, 139). Short phrases are played by the brass section. Careful attention is paid to balancing the varying timbres by mixing the bass, the bass drum and the chorus. Snippets of the *bèlè* drum of Martinique, the *gwo ka mendé* rhythm, Trinidadian soca, Haitian *konpa* and *Rara*, Jamaican reggae and African-American rhythm and blues, combined with the loud Carnival call, can be heard on the numerous fast-paced recordings. 'Un son aéré' (a sound from behind), as noted by Guilbault, is played 'to minimize the number of competing lines, played simultaneously, thus opening up musical space for catchy lead lines' (1993, 134). Electronic instruments, including samplers and the rhythm box, revitalize the music with improvised instrumental solos.

Kassav''s core members – Jean-Claude Naimro, Jean-Philippe Marthély, Georges Décimus, Patrick Saint-Éloi, Jocelyne Béroard, Jacob Desvarieux, Claude Vamur and Pierre-Édouard Décimus – have released successful individual CDs or joint projects while constantly experimenting with new sounds. For her 1991 *Milans* album, Béroard introduced *ragga-zouk*, a mixture of reggae and *zouk*, on the title song 'Milans' (Gossip). The dancehall singers Admiral T, Master MX and Lady Sweety have all performed live with Kassav.' Saint-Éloi used the acoustic guitar with a Brazilian flavor for *Zoukamine* (1995). When Kassav''s music became very popular in Latin America, the band fused salsa and *zouk* on *Un toque latino* (1998). Two of the 13 former hit songs remained in Creole ('Zouk-la …' and 'Difé soupapé'), but the others were adapted into Spanish with the aid of Spanish-born songwriter Etienne Roda-Gil. This project provided an important bridge between the French Caribbean and Latin American cultures.

Other musicians joined the search for new sounds. In their Zouk Machine compositions, Expérience 7 featured a soul music delivery on the lyrics, R&B on the guitar and a funky bass line. The Martinican group Kwak explored richer harmonies, orchestral diversity and Motown-type backing singers for *A dé, vlopé* (1994). Tanya St. Val fused soul and zouk to create *Soul Zouk* (1991). During the mid-1990s in Guadeloupe, the group Volt Face produced a mixture of hip-hop, African rhythms, *zouk* and reggae. Édith Lefel performed 'Si seulement' (If Only) accompanied by the Cameroonian Georges Séba's gospel choir. Jean-Michel Rotin imitated Michael Jackson's dance movements while singing 'Cigarèt' and other compositions.

Known for his movements in imitation of Michael Jackson, Rotin became one of the initiators of *la nouvelle génération du zouk* (the new *zouk* generation), also known as zouk R'n'B. A more commercial sound, it mixes *zouk* and *zouk*-related musical styles (such as *kizomba* or *kuduro* from Angola and *cabo love* from Cape Verde) and US R&B. Originating in Paris during the 1990s, zouk R'n'B is associated with artists such as Medhy Custos, Jane Fostin and Perle Lama, all of whom sing primarily in French. Custos of Guadeloupe performed the 2005 duet 'Pas de glace' (No Chill) with Jane Fostin, ex-member of Zouk Machine. In 2007 Custos's 'Elles demandent' (They Ask) made Billboard's European Hit 100 with the sale of 60,000 copies. Perle Lama of Martinique fused soul, reggae, R'n'B and *zouk* on her album *Miziksoleil* (2006), scoring an instant success with five top singles. Her sensual 'Femme du monde' (2010) held the number four spot of *Espace FM* radio list of top 20 *zouk* songs of 2010; it received the SACEM award for best song of the year (Jean-Pierre 2010).

Zouk Lyrics

During a radio interview for the 2009 Nuits d'Afrique music festival in Montreal, Canada, Béroard spoke about the careful attention that she and other members of Kassav' give to their lyrical Creole compositions about national pride, exile, music, the Caribbean landscape, self-love, romance and hope. The insistence upon Creole lyrics both legitimizes and elevates the status of Creole throughout the Caribbean region and elsewhere. Through live performances and recordings, *zouk* performers thereby 'encourage a collective voice that creates a feeling of confidence and credibility' (Berrian 2000, 41). One way in which this has clearly been reflected is in the increased presence of women soloists, who sing poignantly about women's issues.

Early in her career, Béroard spoke about the steps she took to break away from the stereotypical image of the submissive woman and her determination to move away from the cliché (Conrath 1986). In her interview with Berrian, she admitted that she was constantly looking for original texts (1999, 2). For her albums *Siwo* (1986), *Milans* (1991) and *Madousinay* (2003), she wrote about a woman's search for a good man ('Siwo') and the need for tenderness between a couple ('Atann'). Likewise, Édith Lefel, Tanya St. Val and Léa Galva have composed some of their own lyrics. Lefel's 'Somnifère' (Sleeping Pill) on Ronald Rubinel's *Jeux de dames* (1994) is about women who need to remove themselves from abusive relationships to find men who will respect them. In 'Fanm dous' (Soft Women), St. Val speaks about a woman's integrity and underlying toughness. Galva's 'Kontinué' (Continue) looks at a woman determined to overcome being abandoned by her husband. Then there is 'Fanm fo' (Strong Women), sung by Danielle René-Corail, Valérie Odinat and Léa Galva on Rubinel's *Jeux de dames, Vol II fanm fo* (1997), which has become almost an anthem to the strength of women.

For their part, male singers of *zouk love* often sing about the vulnerability of relationships and respect for women. In 'Bèl kréati' (Beautiful Creature), Marthély expresses his deep love for his wife. Saint-Éloi's 'Ki jan ké fè,' (What Am I Going to Do?) relates the story of an older man's desire for a younger woman. Jean-Claude Naimro's 'Ou chanjé' (You Have Changed) tells about a man who suspects his wife of having an affair. Harry Diboula reveals a man's longing for a special woman in 'Tu me manques' (I Miss You), while Gilles Floro's 'Karamel' (on the album *Kristal*, 1995) is a loving tribute to his daughter's happy, carefree childhood.

A widespread belief that *zouk* lyrics are not important has persisted among the French Caribbean public, but a close look at their content reveals the opposite. *Zouk beton* and *zouk chiré* songs, for example, cover a wide range of topics: the longing for one's island; the anguish of exile; the plea for social and racial tolerance; the careful selection of one's friends; and the prescription to cure societal ills. The attention that the songwriters pay to these topics has resulted in lyrics that have motivated the French Caribbean population to initiate economic strikes for better salaries; to accept Creole as a language; to resist assimilation into metropolitan French culture; and to mingle with other immigrant musicians to create new cultural boundaries. Caribbean *zouk* singers regularly perform in Africa, recording with Congolese, Cameroonian, Ivoirian and Senegalese musicians. When work almost came to a standstill during the 2009 January–February economic strikes across the French Caribbean, the strikers sang popular *zouk* and *gwo ka* songs for self-encouragement.

As soon as the French National Assembly had passed the 2001 Taubira Law identifying slavery as a crime against humanity, an outpouring of new songs about slavery and its aftermath occurred, among them Paulo Albin's 'Mové nèg' (The Bad Black), Saint-Éloi's 'Réhabilitation' and Kassav''s 'Doubout pikan' (Children, Stand Up, from the album *All UNeed Is Zouk*)). Each song was well received by French Caribbean people living in France and the Caribbean. Loriane Zacharie won the 2008 Prix de la Révélation at the SACEM Martinique for 'Lumina,' her composition cowritten with Claude Rodap for her album *Chimen mwin* (My Own Path). Zacharie sang about Lumina Sophie, the nineteenth-century woman who led a rebellion against French plantation owners and overseers.

International Impact of *Zouk*

During the 1980s Kassav' toured the African continent and the Caribbean region, where many of the band's albums were heavily pirated. As a result, the band's infectious music captivated many local African musicians, some of whom eventually migrated to Paris and founded *Afro-zouk*. Among the singers were Abéti Masikini and Sam Mangwana of Zaire. In 1986 Abéti, one of the first to adapt a synthesizer in Congolese music, sang 'Je suis fâché' (I Am Angry) with a digitized mixture of *zouk*, *konpa* and *soukous* (Stewart 2000, 194). Mangwana blended Congolese music with elements of *biguine*, *zouk*, Cuban salsa and Nigerian highlife on *Aladji* (1987). Monique Seka, the Ivorian queen of Afro-zouk, released *Ôkaman* in 1995 with Martinican singers Édith Lefel, Marie-Céline Chroné and Jean-Paul Pognon in the chorus.

International collaborations have continued into the twenty-first century. In 2003 the Guadeloupeans Jacob Desvarieux and Jocelyne Labylle teamed up with two Congolese singers, the rapper Passi and the *soukous* singer Cheela, for 'Laisse parler les gens' (Let the People Speak). The single, which had been the number one hit in Belgium, sold over a million copies and was nominated for the Victoires de la Musique award. Congolese rapper Kaysha has blended the rhythms of Africa and the Caribbean with electronic sounds to create the very romantic, sensual *candyzouk* as heard on *African Bohemian* (2003) and *Legendary* (2006). The multilingual singer coined the term himself, explaining that he uses different flavors of the same candy to add what he learned from one country to another, 'so people can always find an ingredient that they can relate to' (Ladybrille 2008). On his first hit single 'Bounce Baby,' on which he uses a sample from Kassav's 'Ou lé' (Do you want?), Kaysha raps in English, as he does also on 'Téléphone,' a *zouk* hip-hop duet with Jean-Michel Rotin.

First developed around 1989 in Rio de Janeiro, Brazil, *zouk-lambada* or Brazilian *zouk* is a popular dance style group in Australia, the Netherlands, Spain and some other European countries. Typically danced to either *zouk* or other music containing the *zouk* beat, it is a group of closely related dance styles evolved from the *lambada* dance.

Derived from *kizomba* music of Angola, *cabo-zouk*, sung in Cape Verdean Creole, is a slow, sensuous tempo of *zouk love* with an electronic percussion. Developed in the 1990s, it has been popularized by Cape Verdean singers such as Suzanna Lubrano and Philip Monteiro. Lubrano has worked with the Martinican zouk producer, Ronald Rubinel, on the compilations *Jeux de dames, Best of Vol. II* and *Zouk MeLove*. For two of her most recent albums, she has also cowritten *zouk* and zouk R'n'B songs with Rubinel and Desvarieux. Born in Senegal of Cape Verdean parents, Monteiro fuses *semba* and *zouk love* rhythms. Very sensual and with a romantic flow, Monteiro's love songs feature use of the auto tune to alter his voice whenever the pitch is raised or lowered. He jointly performs with Princess Lover of Martinique on the *cabo love* and *zouk* duet 'Joue pas' (Don't Play).

The US singer Jimmy Buffett, known for his so-called 'gulf and western' sound, which attempts to blend country music with Caribbean and Gulf of Mexico sounds and images, contacted Béroard of Kassav' for permission to use the melody of 'Kolé sere' (Dance Close). After obtaining her positive response, he composed 'Love and Luck' (1992) in which he repeats 'Kolé séré' four times but otherwise replaces the meeting of former lovers in the original with a loosely written song in English about a good luck charm.

Zouk and the Music Industry

Founded in 1972 by the musician Henri Debs in Guadeloupe, the label Henri Debs Productions, with its two recording studios, dominated and was responsible for most *zouk* recordings during the 1980s and 1990s, until his brother George Debs' GD Productions and other local recording companies opened their doors. From 1984 to 1987 Kassav' was under GD Productions in Martinique with no signed contract. After being courted by three major French companies, the band signed with CBS/Sony in 1987, staying with them until 2002. The pressing, marketing and distribution of their albums and those by other artists were done (and have continued to be done) by French recording companies in Paris. Sony, Sonodisc, Barclay, Moradisc, Déclic Communications, Ariola/BMG, Philips and Créon Music either signed some of the *zouk* artists or distributed their albums. In Guadeloupe and Martinique, Hibiscus Records, Déclic Communications and Chabine Productions have remained active despite the retirement of Henri Debs 1999 and the death of his brother Georges in 2001.

Unquestionably, *zouk* is very profitable, but a lack of vision on the part of the marketing division of CBS/Sony was partially responsible for preventing Kassav' making a major impact in the United States. The fact that Kassav''s lyrics are always in Creole was one excuse. Another could be found in the company's inability to classify *zouk* music. While working on the title song 'Difé soupapé' (Too Much Pressure) for the 1995 *Difé* album, Béroard and three other members of Kassav' flew to Los Angeles to work with the American sound engineer and American programmer. During the process of digital mixing and re-mastering the laying of the original track, the Americans concluded, according to Béroard, 'that Kassav's music belonged under the rubric of world beat, a classification rejected by Béroard as being too general and condescending' (Berrian 2005, 401). Sony eventually turned Kassav' over to the Tristar label, a subsidiary 'whose main goal was [to be] the US promoter of Sony artists who were successful outside of the States' (Scaramuzzo 1994, 53). When Kassav''s CBS/Sony contract finally ended in 2002, the band decided to be its own producers and to seek out record deals per album. That year also witnessed the departure of Saint-Éloi, who continued to pursue a very successful solo career until his death in September 2010.

Like the Americans and CBS/Sony, the French categorize *zouk* as world music. Although Martinicans and Guadeloupeans are French citizens, their *zouk* productions with Creole lyrics are not considered to be representative of French popular music. The musicians have remarked that the French music industry only accepts them as French musicians whenever it is convenient. For example, in 1988 Kassav' won the 1988 Victoires de la musique award for the best French band. Kassav' and other *zouk* artists who sing Creole lyrics have been adversely affected by the 1996 Pelchat Amendment to the 1994 Broadcasting Reform Act, which requires most of France's 1,300 FM radio stations to broadcast a minimum of 40 percent music in the French language. One half of the songs are to come from new talent and new productions. As Béroard explains, 'Although we are French musicians, we are not recognized as such, and we cannot easily ask for a quota within a quota' (Gallion 1998, 24). Prior to the Pelchat Amendment, 'broadcast quotas existed in the form of individual and informal agreements between French radio stations and the French government, with quotas ranging from as little as 7 percent to as much as 70 percent' (Petterson 2000, 112). Yet Radio Nova, Radio Média Tropical and MKM Radio Zouk, three Paris-based radio stations geared to the Francophone world, often play *zouk*. Fully aware of the law, many of the young R'n'B artists sing in French.

Conclusion

One of the major highlights of Kassav''s long career was the first French Caribbean Carnival, held on 21 June 1986 for the Fête de la Musique outside of Paris. The band performed before 250,000 spectators, serving as a landmark event and as an occasion of self-discovery and visibility for the large French Caribbean population of Paris (Winders 2000, 50). Since that time, in Europe, Francophone and Lusophone Africa, Asia and the French Caribbean enthusiasm for zouk music has not waned, despite the insistence of some critics that young French Caribbean singers treat *zouk* in a formulaic and unimaginative way (Scaramuzzo 1990, 27). On 16 May 2009 Kassav' celebrated its 30th year in show business with a live concert at the Stade de France on the outskirts of Paris before a mixed audience of 75,000. Kassav' and guest musicians incorporated theatrical staging – professional choreography, colorful costumes, a smoke machine, confetti and laser beams – and encouraged the audience to jump up and dance to stimulate the visual dimension of the *zouk* performance. *All U Need Is Zouk*, the title of Kassav''s 2007 CD, encapsulated the durability of a genre whose Creole lyrics and packaged productions are marketed to consumers all over the world.
